seemed to be, because as their eyes were at the side and not in front, one had the same difficulty in determining the direction in which they were looking as one has in the case of a hen or a fish. They conversed with one another in their reedy tones, that seemed to me impossible to imitate or define. The door behind us opened wider, and, glancing over my shoulder, I saw a vague large space beyond, in which quite a little crowd of Selenites were standing. They seemed a curiously miscellaneous rabble.

"Do they want us to imitate those sounds? " I asked Cavor.

"I don't think so," he said.

"It seems to me that they are trying to make us understand something."

"I can't make anything of their gestures. Do you notice this one, who is worrying with his head like a man with an uncomfortable collar? "

"Let us shake our heads at him."

We did that, and finding it ineffectual, attempted an imitation of the Selenites' movements. That seemed to interest them. At any rate they all set up the same movement. But as that seemed to lead to nothing, we desisted at last and so did they, and fell into a piping argument among themselves. Then one of them, shorter and very much thicker than the others, and with a particularly wide mouth, squatted down suddenly beside Cavor, and put his hands and feet in the same posture as Cavor's were bound, and then by a dexterous movement stood up.

"Cavor," I shouted, "they want us to get up!"

He stared open-mouthed. "That's it!" he said.

And with much heaving and grunting, because our hands were tied together, we contrived to struggle to our feet. The Selenites made way for our elephantine heavings, and seemed to twitter more volubly. As soon as we

were on our feet the thick-set Selenite came and patted each of our faces with his tentacles, and walked towards the open doorway. That also was plain enough, and we followed him. We saw that four of the Selenites standing in the doorway were much taller than the others, and clothed in the same manner as those we had seen in the crater, namely, with spiked round helmets and cylindrical body-cases, and that each of the four carried a goad with spike and guard made of that same dull-looking metal as the bowls. These four closed about us, one on either side of each of us, as we emerged from our chamber into the cavern from which the light had come.

We did not get our impression of that cavern all at once. Our attention was taken up by the movements and attitudes of the Selenites immediately about us, and by the necessity of controlling our motion, lest we should startle and alarm them and ourselves by some excessive stride. In front of us was the short, thick-set being who had solved the problem of asking us to get up, moving with gestures that seemed, almost all of them, intelligible to us, inviting us to follow him. His spout-like face turned from one of us to the other with a quickness that was clearly interrogative. For a time, I say, we were taken up with these things.

But at last the great place that formed a background to our movements asserted itself. It became apparent that the source of much, at least, of the tumult of sounds which had filled our ears ever since we had recovered from the stupefaction of the fungus was a vast mass of machinery in active movement, whose flying and whirling parts were visible indistinctly over the heads and between the bodies of the Selenites who walked about us. And not only did the web of sounds that filled the air proceed from this mechanism, but also the peculiar blue light that irradiated the whole place. We had taken it as a natural thing that a subterranean cavern should be artificially lit, and even now, though the fact was patent to my eyes, I did not really grasp its import until presently the darkness came. The meaning and structure of this huge apparatus we saw I cannot explain, because we neither of us learnt what it was for or how it worked. One after another, big shafts of metal flung out and up from its centre, their

heads travelling in what seemed to me to be a parabolic path; each dropped a sort of dangling arm as it rose towards the apex of its flight and plunged down into a vertical cylinder, forcing this down before it. About it moved the shapes of tenders, little figures that seemed vaguely different from the beings about us. As each of the three dangling arms of the machine plunged down, there was a clank and then a roaring, and out of the top of the vertical cylinder came pouring this incandescent substance that lit the place, and ran over as milk runs over a boiling pot, and dripped luminously into a tank of light below. It was a cold blue light, a sort of phosphorescent glow but infinitely brighter, and from the tanks into which it fell it ran in conduits athwart the cavern.

Thud, thud, thud, thud, came the sweeping arms of this unintelligible apparatus, and the light substance hissed and poured. At first the thing seemed only reasonably large and near to us, and then I saw how exceedingly little the Selenites upon it seemed, and I realised the full immensity of cavern and machine. I looked from this tremendous affair to the faces of the Selenites with a new respect. I stopped, and Cavor stopped, and stared at this thunderous engine.

"But this is stupendous!" I said. "What can it be for?"

Cavor's blue-lit face was full of an intelligent respect. "I can't dream! Surely these beings - Men could not make a thing like that! Look at those arms, are they on connecting rods?"

The thick-set Selenite had gone some paces unheeded. He came back and stood between us and the great machine. I avoided seeing him, because I guessed somehow that his idea was to beckon us onward. He walked away in the direction he wished us to go, and turned and came back, and flicked our faces to attract our attention.

Cavor and I looked at one another.

"Cannot we show him we are interested in the machine?" I said.

"Yes," said Cavor. " We'll try that." He turned to our guide and smiled, and pointed to the machine, and pointed again, and then to his head, and then to the machine. By some defect of reasoning he seemed to imagine that broken English might help these gestures. "Me look 'im," he said, "me think 'im very much. Yes."

His behaviour seemed to check the Selenites in their desire for our progress for a moment. They faced one another, their queer heads moved, the twittering voices came quick and liquid. Then one of them, a lean, tall creature, with a sort of mantle added to the puttee in which the others were dressed, twisted his elephant trunk of a hand about Cavor's waist, and pulled him gently to follow our guide, who again went on ahead. Cavor resisted. "We may just as well begin explaining ourselves now. They may think we are new animals, a new sort of mooncalf perhaps! It is most important that we should show an intelligent interest from the outset."

He began to shake his head violently. "No, no," he said, "me not come on one minute. Me look at 'im."

" Isn't there some geometrical point you might bring in apropos of that affair? " I suggested, as the Selenites conferred again.

"Possibly a parabolic -" he began.

He yelled loudly, and leaped six feet or more!

One of the four armed moon-men had pricked him with a goad!

I turned on the goad-bearer behind me with a swift threatening gesture, and he started back. This and Cavor's sudden shout and leap clearly astonished all the Selenites. They receded hastily, facing us. For one of those moments that seem to last for ever, we stood in angry protest, with a scattered semicircle of these inhuman beings about us.

"He pricked me!" said Cavor, with a catching of the voice.

"I saw him," I answered.

"Confound it!" I said to the Selenites; "We're not going to stand that! What on earth do you take us for?"

I glanced quickly right and left. Far away across the blue wilderness of cavern I saw a number of other Selenites running towards us; broad and slender they were, and one with a larger head than the others. The cavern spread wide and low, and receded in every direction into darkness. Its roof, I remember, seemed to bulge down as if with the weight of the vast thickness of rocks that prisoned us. There was no way out of it - no way out of it. Above, below, in every direction, was the unknown, and these inhuman creatures, with goads and gestures, confronting us, and we two unsupported men!

Chapter 15

The Giddy Bridge

JUST for a moment that hostile pause endured. I suppose that both we and the Selenites did some very rapid thinking. My clearest impression was that there was nothing to put my back against, and that we were bound to be surrounded and killed. The overwhelming folly of our presence there loomed over me in black, enormous reproach. Why had I ever launched myself on this mad, inhuman expedition?

Cavor came to my side and laid his hand on my arm. His pale and terrified face was ghastly in the blue light.

"We can't do anything," he said. "It's a mistake. They don't understand. We must go. As they want us to go."

I looked down at him, and then at the fresh Selenites who were coming to help their fellows. "If I had my hands free - "

"It's no use," he panted.

"No."

"We'll go."

And he turned about and led the way in the direction that had been indicated for us.

I followed, trying to look as subdued as possible, and feeling at the chains about my wrists. My blood was boiling. I noted nothing more of that cavern, though it seemed to take a long time before we had marched across it, or if I noted anything I forgot it as I saw it. My thoughts were concentrated, I think, upon my chains and the Selenites, and particularly upon the helmeted ones with the goads. At first they marched parallel with us, and at a respectful distance, but presently they were overtaken by three others, and then they drew nearer, until they were within arms length again. I winced like a beaten horse as they came near to us. The shorter, thicker Selenite marched at first on our right flank, but presently came in front of us again.

How well the picture of that grouping has bitten into my brain; the back of Cavor's downcast head just in front of me, and the dejected droop of his shoulders, and our guide's gaping visage, perpetually jerking about him, and the goad-bearers on either side, watchful, yet open-mouthed - a blue monochrome. And after all, I do remember one other thing besides the purely personal affair, which is, that a sort of gutter came presently across the floor of the cavern, and then ran along by the side of the path of rock we followed. And it was full of that same bright blue luminous stuff that flowed out of the great machine. I walked close beside it, and I can testify it radiated not a particle of heat. It was brightly shining,

and yet it was neither warmer nor colder than anything else in the cavern.

Clang, clang, clang, we passed right under the thumping levers of another vast machine, and so came at last to a wide tunnel, in which we could even hear the pad, pad, of our shoeless feet, and which, save for the trickling thread of blue to the right of us, was quite unlit. The shadows made gigantic travesties of our shapes and those of the Selenites on the irregular wall and roof of the tunnel. Ever and again crystals in the walls of the tunnel scintillated like gems, ever and again the tunnel expanded into a stalactitic cavern, or gave off branches that vanished into darkness.

We seemed to be marching down that tunnel for a long time. "Trickle, trickle," went the flowing light very softly, and our footfalls and their echoes made an irregular paddle, paddle. My mind settled down to the question of my chains. If I were to slip off one turn so, and then to twist it so ...

If I tried to do it very gradually, would they see I was slipping my wrist out of the looser turn? If they did, what would they do?

"Bedford," said Cavor, "it goes down. It keeps on going down."

His remark roused me from my sullen pre-occupation.

"If they wanted to kill us," he said, dropping back to come level with me, "there is no reason why they should not have done it."

"No," I admitted, "that's true."

"They don't understand us," he said, "they think we are merely strange animals, some wild sort of mooncalf birth, perhaps. It will be only when they have observed us better that they will begin to think we have minds"

"When you trace those geometrical problems," said I.

"It may be that."

We tramped on for a space.

"You see," said Cavor, "these may be Selenites of a lower class."

"The infernal fools!" said I viciously, glancing at their exasperating faces.

"If we endure what they do to us"

"We've got to endure it," said I.

"There may be others less stupid. This is the mere outer fringe of their world. It must go down and down, cavern, passage, tunnel, down at last to the sea - hundreds of miles below."

His words made me think of the mile or so of rock and tunnel that might be over our heads already. It was like a weight dropping, on my shoulders.

"Away from the sun and air," I said. "Even a mine half a mile deep is stuffy." remarked.

"This is not, anyhow. It's probable - Ventilation! The air would blow from the dark side of the moon to the sunlit, and all the carbonic acid would well out there and feed those plants. Up this tunnel, for example, there is quite a breeze. And what a world it must be. The earnest we have in that shaft, and those machines"

"And the goad," I said. "Don't forget the goad!"

He walked a little in front of me for a time.

"Even that goad - " he said.

"Well?"

"I was angry at the time. But it was perhaps necessary we should get on. They have different skins, and probably different nerves. They may not understand our objection - Just as a being from Mars might not like our earthly habit of nudging"

"They'd better be careful how they nudge me."

"And about that geometry. After all, their way is a way of understanding, too. They begin with the elements of life and not of thought. Food. Compulsion. Pain. They strike at fundamentals."

"There's no doubt about that," I said.

He went on to talk of the enormous and wonderful world into which we were being taken. I realised slowly from his tone, that even now he was not absolutely in despair at the prospect of going ever deeper into this inhuman planet-burrow. His mind ran on machines and invention, to the exclusion of a thousand dark things that beset me. It wasn't that he intended to make any use of these things, he simply wanted to know them.

"After all," he said, " this is a tremendous occasion. It is the meeting of two worlds! What are we going to see? Think of what is below us here."

"We shan't see much if the light isn't better," I remarked.

"This is only the outer crust. Down below - On this scale - There will be everything. Do you notice how different they seem one from another? The story we shall take back!"

"Some rare sort of animal," I said, "might comfort himself in that way while they were bringing him to the Zoo. ... It doesn't follow that we are going to be shown all these things."

"When they find we have reasonable minds," said Cavor, "they will want to learn about the earth. Even if they have no generous emotions, they will teach in order to learn. ... And the things they must know! The unanticipated things!"

He went on to speculate on the possibility of their knowing things he had never hoped to learn on earth, speculating in that way, with a raw wound from that goad already in his skin! Much that he said I forget, for my attention was drawn to the fact that the tunnel along which we had been marching was opening out wider and wider. We seemed, from the feeling of the air, to be going out into a huge space. But how big the space might really be we could not tell, because it was unlit. Our little stream of light ran in a dwindling thread and vanished far ahead. Presently the rocky walls had vanished altogether on either hand. There was nothing to be seen but the path in front of us and the trickling hurrying rivulet of blue phosphorescence. The figures of Cavor and the guiding Selenite marched before me, the sides of their legs and heads that were towards the rivulet were clear and bright blue, their darkened sides, now that the reflection of the tunnel wall no longer lit them, merged indistinguishably in the darkness beyond.

And soon I perceived that we were approaching a declivity of some sort, because the little blue stream dipped suddenly out of sight.

In another moment, as it seemed, we had reached the edge. The shining stream gave one meander of hesitation and then rushed over. It fell to a depth at which the sound of its descent was absolutely lost to us. Far below was a bluish glow, a sort of blue mist - at an infinite distance below. And the darkness the stream dropped out of became utterly void and black, save that a thing like a plank projected from the edge of the cliff and stretched out and faded and vanished altogether. There was a warm air blowing up out of the gulf.

For a moment I and Cavor stood as near the edge as we dared, peering into

a blue-tinged profundity. And then our guide was pulling at my arm.

Then he left me, and walked to the end of that plank and stepped upon it, looking back. Then when he perceived we watched him, he turned about and went on along it, walking as surely as though he was on firm earth. For a moment his form was distinct, then he became a blue blur, and then vanished into the obscurity. I became aware of some vague shape looming darkly out of the black.

There was a pause. "Surely! -" said Cavor.

One of the other Selenites walked a few paces out upon the plank, and turned and looked back at us unconcernedly. The others stood ready to follow after us. Our guide's expectant figure reappeared. He was returning to see why we had not advanced.

"What is that beyond there?" I asked.

"I can't see."

"We can't cross this at any price," said I.

"I could not go three steps on it," said Cavor, "even with my hands free."

We looked at each other's drawn faces in blank consternation.

"They can't know what it is to be giddy!" said Cavor.

"It's quite impossible for us to walk that plank."

"I don't believe they see as we do. I've been watching them. I wonder if they know this is simply blackness for us. How can we make them understand?"

"Anyhow, we must make them understand."

I think we said these things with a vague half hope the Selenites might somehow understand. I knew quite clearly that all that was needed was an explanation. Then as I saw their faces, I realised that an explanation was impossible. Just here it was that our resemblances were not going to bridge our differences. Well, I wasn't going to walk the plank, anyhow. I slipped my wrist very quickly out of the coil of chain that was loose, and then began to twist my wrists in opposite directions. I was standing nearest to the bridge, and as I did this two of the Selenites laid hold of me, and pulled me gently towards it.

I shook my head violently. "No go," I said, "no use. You don't understand."

Another Selenite added his compulsion. I was forced to step forward.

"I've got an idea," said Cavor; but I knew his ideas.

"Look here!" I exclaimed to the Selenites. "Steady on! It's all very well for you - "

I sprang round upon my heel. I burst out into curses. For one of the armed Selenites had stabbed me behind with his goad.

I wrenched my wrists free from the little tentacles that held them. I turned on the goad-bearer. "Confound you! " I cried. "I've warned you of that. What on earth do you think I'm made of, to stick that into me? If you touch me again - "

By way of answer he pricked me forthwith.

I heard Cavor's voice in alarm and entreaty. Even then I think he wanted to compromise with these creatures. "I say, Bedford," he cried, "I know a way! " But the sting of that second stab seemed to set free some pent-up reserve of energy in my being. Instantly the link of the wrist-chain

snapped, and with it snapped all considerations that had held us unresisting in the hands of these moon creatures. For that second, at least, I was mad with fear and anger. I took no thought of consequences. I hit straight out at the face of the thing with the goad. The chain was twisted round my fist.

There came another of these beastly surprises of which the moon world is full.

My mailed hand seemed to go clean through him. He smashed like - like some softish sort of sweet with liquid in it! He broke right in! He squelched and splashed. It was like hitting a damp toadstool. The flimsy body went spinning a dozen yards, and fell with a flabby impact. I was astonished. I was incredulous that any living thing could be so flimsy. For an instant I could have believed the whole thing a dream.

Then it had become real and imminent again. Neither Cavor nor the other Selenites seemed to have done anything from the time when I had turned about to the time when the dead Selenite hit the ground. Every one stood back from us two, every one alert. That arrest seemed to last at least a second after the Selenite was down. Every one must have been taking the thing in. I seem to remember myself standing with my arm half retracted, trying also to take it in. "What next?" clamoured my brain; "what next?" Then in a moment every one was moving!

I perceived we must get our chains loose, and that before we could do this these Selenites had to be beaten off. I faced towards the group of the three goad-bearers. Instantly one threw his goad at me. It swished over my head, and I suppose went flying into the abyss behind.

I leaped right at him with all my might as the goad flew over me. He turned to run as I jumped, and I bore him to the ground, came down right upon him, and slipped upon his smashed body and fell. He seemed to wriggle under my foot.

I came into a sitting position, and on every hand the blue backs of the Selenites were receding into the darkness. I bent a link by main force and untwisted the chain that had hampered me about the ankles, and sprang to my feet, with the chain in my hand. Another goad, flung javelin-wise, whistled by me, and I made a rush towards the darkness out of which it had come. Then I turned back towards Cavor, who was still standing in the light of the rivulet near the gulf convulsively busy with his wrists, and at the same time jabbering nonsense about his idea.

"Come on! " I cried.

"My hands! " he answered.

Then, realising that I dared not run back to him, because my ill-calculated steps might carry me over the edge, he came shuffling towards me, with his hands held out before him.

I gripped his chains at once to unfasten them.

"Where are they? " he panted.

"Run away. They'll come back. They're throwing things! Which way shall we go?"

"By the light. To that tunnel. Eh?"

"Yes," said I, and his hands were free.

I dropped on my knees and fell to work on his ankle bonds. Whack came something - I know not what - and splashed the livid streamlet into drops about us. Far away on our right a piping and whistling began.

I whipped the chain off his feet, and put it in his hand. "Hit with that!" I said, and without waiting for an answer, set off in big bounds along the path by which we had come. I had a nasty sort of feeling that these

things could jump out of the darkness on to my back. I heard the impact of his leaps come following after me.

We ran in vast strides. But that running, you must understand, was an altogether different thing from any running on earth. On earth one leaps and almost instantly hits the ground again, but on the moon, because of its weaker pull, one shot through the air for several seconds before one came to earth. In spite of our violent hurry this gave an effect of long pauses, pauses in which one might have counted seven or eight. "Step," and one soared off! All sorts of questions ran through my mind: "Where are the Selenites? What will they do? Shall we ever get to that tunnel? Is Cavor far behind? Are they likely to cut him off?" Then whack, stride, and off again for another step.

I saw a Selenite running in front of me, his legs going exactly as a man's would go on earth, saw him glance over his shoulder, and heard him shriek as he ran aside out of my way into the darkness. He was, I I think, our guide, but I am not sure. Then in another vast stride the walls of rock had come into view on either hand, and in two more strides I was in the tunnel, and tempering my pace to its low roof. I went on to a bend, then stopped and turned back, and plug, plug, plug, Cavor came into view, splashing into the stream of blue light at every stride, and grew larger and blundered into me. We stood clutching each other. For a moment, at least, we had shaken off our captors and were alone.

We were both very much out of breath. We spoke in panting, broken sentences.

"You've spoilt it all!" panted Cavor. "Nonsense," I cried. "It was that or death!"

"What are we to do?"

"Hide."

"How can we?"

"It's dark enough."

"But where?"

"Up one of these side caverns."

"And then?"

"Think."

"Right - come on."

We strode on, and presently came to a radiating dark cavern. Cavor was in front. He hesitated, and chose a black mouth that seemed to promise good hiding. He went towards it and turned.

"Its dark," he said.

"Your legs and feet will light us. You're wet with that luminous stuff."

"But - "

A tumult of sounds, and in particular a sound like a clanging gong, advancing up the main tunnel, became audible. It was horribly suggestive of a tumultuous pursuit. We made a bolt for the unlit side cavern forthwith. As we ran along it our way was lit by the irradiation of Cavor's legs. "It's lucky," I panted, "they took off our boots, or we should fill this place with clatter." On we rushed, taking as small steps as we could to avoid striking the roof of the cavern. After a time we seemed to be gaining on the uproar. It became muffled, it dwindled, it died away.

I stopped and looked back, and I heard the pad, pad of Cavor's feet

receding. Then he stopped also. "Bedford," he whispered; " there's a sort of light in front of us."

I looked, and at first could see nothing. Then I perceived his head and shoulders dimly outlined against a fainter darkness. I saw, also, that this mitigation of the darkness was not blue, as all the other light within the moon had been, but a pallid gray, a very vague, faint white, the daylight colour. Cavor noted this difference as soon, or sooner, than I did, and I think, too, that it filled him with much the same wild hope.

"Bedford," he whispered, and his voice trembled. "That light - it is possible -"

He did not dare to say the thing he hoped. Then came a pause. Suddenly I knew by the sound of his feet that he was striding towards that pallor. I followed him with a beating heart.

Chapter 16

Points of View

THE light grew stronger as we advanced. In a little time it was nearly as strong as the phosphorescence on Cavor's legs. Our tunnel was expanding into a cavern, and this new light was at the farther end of it. I perceived something that set my hopes leaping and bounding.

"Cavor," I said, "it comes from above! I am certain it comes from above!"

He made no answer, but hurried on.

Indisputably it was a gray light, a silvery light.

In another moment we were beneath it. It filtered down through a chink in

the walls of the cavern, and as I stared up, drip, came a drop of water upon my face. I started and stood aside - drip, fell another drop quite audibly on the rocky floor.

"Cavor," I said, "if one of us lifts the other, he can reach that crack!"

"I'll lift you," he said, and incontinently hoisted me as though I was a baby.

I thrust an arm into the crack, and just at my finger tips found a little ledge by which I could hold. I could see the white light was very much brighter now. I pulled myself up by two fingers with scarcely an effort, though on earth I weigh twelve stone, reached to a still higher corner of rock, and so got my feet on the narrow ledge. I stood up and searched up the rocks with my fingers; the cleft broadened out upwardly. "It's climbable," I said to Cavor. "Can you jump up to my hand if I hold it down to you?"

I wedged myself between the sides of the cleft, rested knee and foot on the ledge, and extended a hand. I could not see Cavor, but I could hear the rustle of his movements as he crouched to spring. Then whack and he was hanging to my arm - and no heavier than a kitten! I lugged him up until he had a hand on my ledge, and could release me.

"Confound it!" I said, "any one could be a mountaineer on the moon;" and so set myself in earnest to the climbing. For a few minutes I clambered steadily, and then I looked up again. The cleft opened out steadily, and the light was brighter. Only -

It was not daylight after all.

In another moment I could see what it was, and at the sight I could have beaten my head against the rocks with disappointment. For I beheld simply an irregularly sloping open space, and all over its slanting floor stood a forest of little club-shaped fungi, each shining gloriously with that

pinkish silvery light. For a moment I stared at their soft radiance, then sprang forward and upward among them. I plucked up half a dozen and flung them against the rocks, and then sat down, laughing bitterly, as Cavor's ruddy face came into view.

"It's phosphorescence again!" I said. "No need to hurry. Sit down and make yourself at home." And as he spluttered over our disappointment, I began to lob more of these growths into the cleft.

"I thought it was daylight," he said.

"Daylight!" cried I. "Daybreak, sunset, clouds, and windy skies! Shall we ever see such things again?"

As I spoke, a little picture of our world seemed to rise before me, bright and little and clear, like the background of some old Italian picture.

"The sky that changes, and the sea that changes, and the hills and the green trees and the towns and cities shining in the sun. Think of a wet roof at sunset, Cavor! Think of the windows of a westward house!" He made no answer.

"Here we are burrowing in this beastly world that isn't a world, with its inky ocean hidden in some abominable blackness below, and outside that torrid day and that death stillness of night. And all these things that are chasing us now, beastly men of leather - insect men, that come out of a nightmare! After all, they're right! What business have we here smashing them and disturbing their world! For all we know the whole planet is up and after us already. In a minute we may hear them whimpering, and their gongs going. What are we to do? Where are we to go? Here we are as comfortable as snakes from Jamrach's loose in a Surbiton villa!"

"It was your fault," said Cavor.

"My fault! " I shouted. "Good Lord!"

"I had an idea!"

"Curse your ideas!"

"If we had refused to budge"

"Under those goads?"

"Yes. They would have carried us!"

"Over that bridge?"

"Yes. They must have carried us from outside."

"I'd rather be carried by a fly across a ceiling."

"Good Heavens!"

I resumed my destruction of the fungi. Then suddenly I saw something that struck me even then. "Cavor," I said, "these chains are of gold!"

He was thinking intently, with his hands gripping his cheeks. He turned his head slowly and stared at me, and when I had repeated my words, at the twisted chain about his right hand. "So they are," he said, "so they are." His face lost its transitory interest even as he looked. He hesitated for a moment, then went on with his interrupted meditation. I sat for a space puzzling over the fact that I had only just observed this, until I considered the blue light in which we had been, and which had taken all the colour out of the metal. And from that discovery I also started upon a train of thought that carried me wide and far. I forgot that I had just been asking what business we had in the moon. Gold -

It was Cavor who spoke first. "It seems to me that there are two courses open to us."

"Well"

"Either we can attempt to make our way - fight our way if necessary - out to the exterior again, and then hunt for our sphere until we find it, or the cold of the night comes to kill us, or else -"

He paused. "Yes?" I said, though I knew what was coming.

"We might attempt once more to establish some sort of understanding with the minds of the people in the moon."

"So far as I'm concerned - it's the first."

"I doubt."

"I don't."

"You see," said Cavor, "I do not think we can judge the Selenites by what we have seen of them. Their central world, their civilised world will be far below in the profounder caverns about their sea. This region of the crust in which we are is an outlying district, a pastoral region. At any rate, that is my interpretation. These Selenites we have seen may be only the equivalent of cowboys and engine-tenders. Their use of goads - in all probability mooncalf goads - the lack of imagination they show in expecting us to be able to do just what they can do, their indisputable brutality, all seem to point to something of that sort. But if we endured -"

"Neither of us could endure a six-inch plank across the bottomless pit for very long."

"No," said Cavor; "but then -"

"I won't," I said.

He discovered a new line of possibilities. "Well, suppose we got ourselves into some corner, where we could defend ourselves against these hinds and labourers. If, for example, we could hold out for a week or so, it is probable that the news of our appearance would filter down to the more intelligent and populous parts -"

"If they exist."

"They must exist, or whence came those tremendous machines?"

"That's possible, but it's the worst of the two chances."

"We might write up inscriptions on walls"

"How do we know their eyes would see the sort of marks we made?"

"If we cut them - "

"That's possible, of course."

I took up a new thread of thought. "After all," - I said, " I suppose you don't think these Selenites so infinitely wiser than men."

"They must know a lot more - or at least a lot of different things."

"Yes, but -" I hesitated.

"I think you'll quite admit, Cavor, that you're rather an exceptional man."

"How?"

"Well, you - you're a rather lonely man - have been, that is. You haven't married."

"Never wanted to. But why - "

"And you never grew richer than you happened to be? "

"Never wanted that either."

"You've just rooted after knowledge?"

"Well, a certain curiosity is natural - "

"You think so. That's just it. You think every other mind wants to know. I remember once, when I asked you why you conducted all these researches, you said you wanted your F.R.S., and to have the stuff called Cavorite, and things like that. You know perfectly well you didn't do it for that; but at the time my question took you by surprise, and you felt you ought to have something to look like a motive. Really you conducted researches because you had to. It's your twist."

"Perhaps it is -"

"It isn't one man in a million has that twist. Most men want - well, various things, but very few want knowledge for its own sake. I don't, I know perfectly well. Now, these Selenites seem to be a driving, busy sort of being, but how do you know that even the most intelligent will take an interest in us or our world? I don't believe they'll even know we have a world. They never come out at night - they'd freeze if they did. They've probably never seen any heavenly body at all except the blazing sun. How are they to know there is another world? What does it matter to them if they do? Well, even if they have had a glimpse of a few stars, or even of the earth crescent, what of that? Why should people living inside a planet trouble to observe that sort of thing? Men wouldn't have done it except for the seasons and sailing; why should the moon people?..."

"Well, suppose there are a few philosophers like yourself. They are just the very Selenites who'll never have heard of our existence. Suppose a

Selenite had I dropped on the earth when you were at Lymphne, you'd have been the last man in the world to hear he had come. You never read a newspaper! You see the chances against you. Well, it's for these chances we're sitting here doing nothing while precious time is flying. I tell you we've got into a fix. We've come unarmed, we've lost our sphere, we've got no food, we've shown ourselves to the Selenites, and made them think we're strange, strong, dangerous animals; and unless these Selenites are perfect fools, they'll set about now and hunt us till they find us, and when they find us they'll try to take us if they can, and kill us if they can't, and that's the end of the matter. If they take us, they'll probably kill us, through some misunderstanding. After we're done for, they may discuss us perhaps, but we shan't get much fun out of that."

"Go on."

"On the other hand, here's gold knocking about like cast iron at home. If only we can get some of it back, if only we can find our sphere again before they do, and get back, then -"

"Yes?"

"We might put the thing on a sounder footing. Come back in a bigger sphere with guns."

"Good Lord!" cried Cavor, as though that was horrible.

I shied another luminous fungus down the cleft.

"Look here, Cavor," I said, "I've half the voting power anyhow in this affair, and this is a case for a practical man. I'm a practical man, and you are not. I'm not going to trust to Selenites and geometrical diagrams if I can help it. That's all. Get back. Drop all this secrecy - or most of it. And come again."

He reflected. "When I came to the moon," he said, "I ought to have come

alone."

"The question before the meeting," I said, "is how to get back to the sphere."

For a time we nursed our knees in silence. Then he seemed to decide for my reasons.

"I think," he said, "one can get data. It is clear that while the sun is on this side of the moon the air will be blowing through this planet sponge from the dark side hither. On this side, at any rate, the air will be expanding and flowing out of the moon caverns into the craters. ... Very well, there's a draught here."

"So there is."

"And that means that this is not a dead end; somewhere behind us this cleft goes on and up. The draught is blowing up, and that is the way we have to go. If we try to get up any sort of chimney or gully there is, we shall not only get out of these passages where they are hunting for us - "

"But suppose the gully is too narrow?"

"We'll come down again."

"Ssh!" I said suddenly; "what's that?"

We listened. At first it was an indistinct murmur, and then one picked out the clang of a gong. "They must think we are mooncalves," said I, "to be frightened at that."

"They're coming along that passage, said Cavor.

"They must be."

"They'll not think of the cleft. They'll go past."

I listened again for a space. "This time," I whispered, "they're likely to have some sort of weapon."

Then suddenly I sprang to my feet. "Good heavens, Cavor! " I cried. "But they will! They'll see the fungi I have been pitching down. They'll - "

I didn't finish my sentence. I turned about and made a leap over the fungus tops towards the upper end of the cavity. I saw that the space turned upward and became a draughty cleft again, ascending to impenetrable darkness. I was about to clamber up into this, and then with a happy inspiration turned back.

"What are you doing? " asked Cavor.

"Go on! said I, and went back and got two of the shining fungi, and putting one into the breast pocket of my flannel jacket, so that it stuck out to light our climbing, went back with the other for Cavor. The noise of the Selenites was now so loud that it seemed they must be already beneath the cleft. But it might be they would have difficulty in clambering in to it, or might hesitate to ascend it against our possible resistance. At any rate, we had now the comforting knowledge of the enormous muscular superiority our birth in another planet gave us. In other minute I was clambering with gigantic vigour after Cavor's blue-lit heels.

Chapter 17

The Fight in the Cave of the Moon Butchers

I DO not know how far we clambered before we came to the grating. It may be we ascended only a few hundred feet, but at the time it seemed to me we might have hauled and jammed and hopped and wedged ourselves through a

mile or more of vertical ascent. Whenever I recall that time, there comes into my head the heavy clank of our golden chains that followed every movement. Very soon my knuckles and knees were raw, and I had a bruise on one cheek. After a time the first violence of our efforts diminished, and our movements became more deliberate and less painful. The noise of the pursuing Selenites had died away altogether. It seemed almost as though they had not traced us up the crack after all, in spite of the tell-tale heap of broken fungi that must have lain beneath it. At times the cleft narrowed so much that we could scarce squeeze up it; at others it expanded into great drusy cavities, studded with prickly crystals or thickly beset with dull, shining fungoid pimples. Sometimes it twisted spirally, and at other times slanted down nearly to the horizontal direction. Ever and again there was the intermittent drip and trickle of water by us. Once or twice it seemed to us that small living things had rustled out of our reach, but what they were we never saw. They may have been venomous beasts

for all I know, but they did us no harm, and we were now tuned to a pitch when a weird creeping thing more or less mattered little. And at last, far above, came the familiar bluish light again, and then we saw that it filtered through a grating that barred our way.

We whispered as we pointed this out to one another, and became more and more cautious in our ascent. Presently we were close under the grating, and by pressing my face against its bars I could see a limited portion of the cavern beyond. It was clearly a large space, and lit no doubt by some rivulet of the same blue light that we had seen flow from the beating machinery. An intermittent trickle of water dropped ever and again between the bars near my face.

My first endeavour was naturally to see what might be upon the floor of the cavern, but our grating lay in a depression whose rim hid all this from our eyes. Our foiled attention then fell back upon the suggestion of the various sounds we heard, and presently my eye caught a number of faint shadows that played across the dim roof far overhead.

Indisputably there were several Selenites, perhaps a considerable number, in this space, for we could hear the noises of their intercourse, and faint sounds that I identified as their footfalls. There was also a succession of regularly repeated sounds - chid, chid, chid - which began and ceased, suggestive of a knife or spade hacking at some soft substance. Then came a clank as if of chains, a whistle and a rumble as of a truck running over a hollowed place, and then again that chid, chid, chid resumed. The shadows told of shapes that moved quickly and rhythmically, in agreement with that regular sound, and rested when it ceased.

We put our heads close together, and began to discuss these things in noiseless whispers.

"They are occupied," I said, "they are occupied in some way."

"Yes."

"They're not seeking us, or thinking of us."

"Perhaps they have not heard of us."

"Those others are hunting about below. If suddenly we appeared here - "

We looked at one another.

"There might be a chance to parley," said Cavor.

"No," I said. "Not as we are."

For a space we remained, each occupied by his own thoughts.

Chid, chid, chid went the chopping, and the shadows moved to and fro.

I looked at the grating. "It's flimsy," I said. "We might bend two of the bars and crawl through."

We wasted a little time in vague discussion. Then I took one of the bars in both hands, and got my feet up against the rock until they were almost on a level with my head, and so thrust against the bar. It bent so suddenly that I almost slipped. I clambered about and bent the adjacent bar in the opposite direction, and then took the luminous fungus from my pocket and dropped it down the fissure.

"Don't do anything hastily," whispered Cavor, as I twisted myself up through the opening I had enlarged. I had a glimpse of busy figures as I came through the grating, and immediately bent down, so that the rim of the depression in which the grating lay hid me from their eyes, and so lay flat, signalling advice to Cavor as he also prepared to come through. Presently we were side by side in the depression, peering over the edge at the cavern and its occupants.

It was a much larger cavern than we had supposed from our first glimpse of it, and we looked up from the lowest portion of its sloping floor. It widened out as it receded from us, and its roof came down and hid the remoter portion altogether. And lying in a line along its length, vanishing at last far away in that tremendous perspective, were a number of huge shapes, huge pallid hulls, upon which the Selenites were busy. At first they seemed big white cylinders of vague import. Then I noted the heads upon them lying towards us, eyeless and skinless like the heads of sheep at a butcher's, and perceived they were the carcasses of mooncalves being cut up, much as the crew of a whaler might cut up a moored whale. They were cutting off the flesh in strips, and on some of the farther trunks the white ribs were showing. It was the sound of their hatchets that made that chid, chid. Some way away a thing like a trolley cable, drawn and loaded with chunks of lax meat, was running up the slope of the cavern floor. This enormous long avenue of hulls that were destined to be food, gave us a sense of the vast populousness of the moon world second only to the effect of our first glimpse down the shaft.

It seemed to me at first that the Selenites must be standing on

trestle-supported planks, and then I saw that the planks and supports and their hatchets were really of the same leaden hue as my fetters had seemed - before white light came to bear on them. A number of very thick-looking crowbars lay about the floor, and had apparently assisted to turn the dead mooncalf over on its side. They were perhaps six feet long, with shaped handles, very tempting-looking weapons. The whole place was lit by three transverse streams of the blue fluid.

[I do not remember seeing any wooden things on the moon; doors tables, everything corresponding to our terrestrial joinery was made of metal, and I believe for the most part of gold, which as a metal would, of course, naturally recommend itself - other things being equal - on account of the ease in working it, and its toughness and durability.]

We lay for a long time noting all these things in silence. "Well?" said Cavor at last.

I crouched over and turned to him. I had come upon a brilliant idea. "Unless they lowered those bodies by a crane," I said, "we must be nearer the surface than I thought."

"Why?"

"The mooncalf doesn't hop, and it hasn't got wings."

He peered over the edge of the hollow again. "I wonder now ..." he began. "After all, we have never gone far from the surface - "

I stopped him by a grip on his arm. I had heard a noise from the cleft below us!

We twisted ourselves about, and lay as still as death, with every sense alert. In a little while I did not doubt that something was quietly ascending the cleft. Very slowly and quite noiselessly I assured myself of a good grip on my chain, and waited for that something to appear.

"Just look at those chaps with the hatchets again," I said.

"They're all right," said Cavor.

I took a sort of provisional aim at the gap in the grating. I could hear now quite distinctly the soft twittering of the ascending Selenites, the dab of their hands against the rock, and the falling of dust from their grips as they clambered.

Then I could see that there was something moving dimly in the blackness below the grating, but what it might be I could not distinguish. The whole thing I seemed to hang fire just for a moment - then smash! I had sprung to my feet, struck savagely at something that had flashed out at me. It was the keen point of a spear. I have thought since that its length in the narrowness of the cleft must have prevented its being sloped to reach me. Anyhow, it shot out from the grating like the tongue of a snake, and missed and flew back and flashed again. But the second time I snatched and caught it, and wrenched it away, but not before another had darted ineffectually at me.

I shouted with triumph as I felt the hold of the Selenite resist my pull for a moment and give, and then I was jabbing down through the bars, amidst squeals from the darkness, and Cavor had snapped off the other spear, and was leaping and flourishing it beside me, and making inefficient jabs. Clang, clang, came up through the grating, and then an axe hurtled through the air and whacked against the rocks beyond, to remind me of the fleshers at the carcasses up the cavern.

I turned, and they were all coming towards us in open order waving their axes. They were short, thick, little beggars, with long arms, strikingly different from the ones we had seen before. If they had not heard of us before, they must have realised the situation with incredible swiftness. I stared at them for a moment, spear in hand. "Guard that grating, Cavor," I cried, howled to intimidate them, and rushed to meet them. Two of them

missed with their hatchets, and the rest fled incontinently. Then the two also were sprinting away up the cavern, with hands clenched and heads down. I never saw men run like them!

I knew the spear I had was no good for me. It was thin and flimsy, only effectual for a thrust, and too long for a quick recover. So I only chased the Selenites as far as the first carcass, and stopped there and picked up one of the crowbars that were lying about. It felt comfortingly heavy, and equal to smashing any number of Selenites. I threw away my spear, and picked up a second crowbar for the other hand. I felt five times better than I had with the spear. I shook the two threateningly at the Selenites, who had come to a halt in a little crowd far away up the cavern, and then turned about to look at Cavor.

He was leaping from side to side of the grating, making threatening jabs with his broken spear. That was all right. It would keep the Selenites down - for a time at any rate. I looked up the cavern again. What on earth were we going to do now?

We were cornered in a sort of way already. But these butchers up the cavern had been surprised, they were probably scared, and they had no special weapons, only those little hatchets of theirs. And that way lay escape. Their sturdy little forms - ever so much shorter and thicker than the mooncalf herds - were scattered up the slope in a way that was eloquent of indecision. I had the moral advantage of a mad bull in a street. But for all that, there seemed a tremendous crowd of them. Very probably there was. Those Selenites down the cleft had certainly some infernally long spears. It might be they had other surprises for us. ... But, confound it! if we charged up the cave we should let them up behind us, and if we didn't those little brutes up the cave would probably get reinforced. Heaven alone knew what tremendous engines of warfare - guns, bombs, terrestrial torpedoes - this unknown world below our feet, this vaster world of which we had only pricked the outer cuticle, might not presently send up to our destruction. It became clear the only thing to do was to charge! It became clearer as the legs of a number of fresh

Selenites appeared running down the cavern towards us.

"Bedford! " cried Cavor, and behold! he was halfway between me and the grating.

"Go back!" I cried. "What are you doing -"

"They've got - it's like a gun!"

And struggling in the grating between those defensive spears appeared the head and shoulders of a singularly lean and angular Selenite, bearing some complicated apparatus.

I realised Cavor's utter incapacity for the fight we had in hand. For a moment I hesitated. Then I rushed past him whirling my crowbars, and shouting to confound the aim of the Selenite. He was aiming in the queerest way with the thing against his stomach. "Chuzz!" The thing wasn't a gun; it went off like cross-bow more, and dropped me in the middle of a leap.

I didn't fall down, I simply came down a little shorter than I should have done if I hadn't been hit, and from the feel of my shoulder the thing might have tapped me and glanced off. Then my left hand hit again the shaft, and I perceived there was a sort of spear sticking half through my shoulder. The moment after I got home with the crowbar in my right hand, and hit the Selenite fair and square. He collapsed - he crushed and crumpled - his head smashed like an egg.

I dropped a crowbar, pulled the spear out of my shoulder, and began to jab it down the grating into the darkness. At each jab came a shriek and twitter. Finally I hurled the spear down upon them with all my strength, leapt up, picked up the crowbar again, and started for the multitude up the cavern.

"Bedford!" cried Cavor. "Bedford!" as I flew past him.

I seem to remember his footsteps coming on behind me.

Step, leap ... whack, step, leap. ... Each leap seemed to last ages. With each, the cave opened out and the number of Selenites visible increased. At first they seemed all running about like ants in a disturbed ant-hill, one or two waving hatchets and coming to meet me, more running away, some bolting sideways into the avenue of carcasses, then presently others came in sight carrying spears, and then others. I saw a most extraordinary thing, all hands and feet, bolting for cover. The cavern grew darker farther up.

Flick! something flew over my head. Flick! As I soared in mid-stride I saw a spear hit and quiver in one of the carcasses to my left. Then, as I came down, one hit the ground before me, and I heard the remote chuzz! with which their things were fired. Flick, flick! for a moment it was a shower. They were volleying!

I stopped dead.

I don't think I thought clearly then. I seem to remember a kind of stereotyped phrase running through my mind: "Zone of fire, seek cover!" I know I made a dash for the space between two ~ the carcasses, and stood there panting and feeling very wicked.

I looked round for Cavor, and for a moment it seemed as if he had vanished from the world. Then he came out of the darkness between the row of the carcasses and the rocky wall of the cavern. I saw his little face, dark and blue, and shining with perspiration and emotion.

He was saying something, but what it was I did not heed. I had realised that we might work from mooncalf to mooncalf up the cave until we were near enough to charge home. It was charge or nothing. "Come on! " I said, and led the way.

"Bedford! " he cried unavailingly.

My mind was busy as we went up that narrow alley between the dead bodies and the wall of the cavern. The rocks curved about - they could not enfilade us. Though in that narrow space we could not leap, yet with our earth-born strength we were still able to go very much faster than the Selenites. I reckoned we should presently come right among them. Once we were on them, they would be nearly as formidable as black beetles. Only - there would first of all be a volley. I thought of a stratagem. I whipped off my flannel jacket as I ran.

"Bedford!" panted Cavor behind me.

I glanced back. "What?" said I.

He was pointing upward over the carcasses. "White light!" he said. "White light again!"

I looked, and it was even so, a faint white ghost of light in the remoter cavern roof. That seemed to give me double strength.

"Keep close," I said. A flat, long Selenite dashed out of the darkness, and squealed and fled. I halted, and stopped Cavor with my hand. I hung my jacket over my crowbar, ducked round the next carcass, dropped jacket and crowbar, showed myself, and darted back.

"Chuzz-flick," just one arrow came. We were close on the Selenites, and they were standing in a crowd, broad, short, and tall together, with a little battery of their shooting implements pointing down the cave. Three or four other arrows followed the first, then their fire ceased.

I stuck out my head, and escaped by a hair's-breadth. This time I drew a dozen shots or more, and heard the Selenites shouting and twittering as if with excitement as they shot. I picked up jacket and crowbar again.

"Now! " said I, and thrust out the jacket.

"Chuzz-zz-zz-zz! Chuzz!" In an instant my jacket had grown a thick beard of arrows, and they were quivering all over the carcass behind us. Instantly I slipped the crowbar out of the jacket, dropped the jacket - for all I know to the contrary it is lying up there in the moon now - and rushed out upon them.

For a minute perhaps it was massacre. I was too fierce to discriminate, and the Selenites were probably too scared to fight. At any rate they made no sort of fight against me. I saw scarlet, as the saying is. I remember I seemed to be wading among those leathery, thin things as a man wades through tall grass, mowing and hitting, first right, then left; smash. Little drops of moisture flew about. I trod on things that crushed and piped and went slippery. The crowd seemed to open and close and flow like water. They seemed to have no combined plan whatever. There were spears flew about me, I was grazed over the ear by one. I was stabbed once in the arm and once in the cheek, but I only found that out afterwards, when the blood had had time to run and cool and feel wet.

What Cavor did I do not know. For a space it seemed that this fighting had lasted for an age, and must needs go on for ever. Then suddenly it was all over, and there was nothing to be seen but the backs of heads bobbing up and down as their owners ran in all directions. ... I seemed altogether unhurt. I ran forward some paces, shouting, then turned about. I was amazed.

I had come right through them in vast flying strides, they were all behind me, and running hither and thither to hide.

I felt an enormous astonishment at the evaporation of the great fight into which I had hurled myself, and not a little exultation. It did not seem to me that I had discovered the Selenites were unexpectedly flimsy, but that I was unexpectedly strong. I laughed stupidly. This fantastic moon!

I glanced for a moment at the smashed and writhing bodies that were scattered over the cavern floor, with a vague idea of further violence, then hurried on after Cavor.

Chapter 18

In the Sunlight

PRESENTLY we saw that the cavern before us opened upon a hazy void. In another moment we had emerged upon a sort of slanting gallery, that projected into a vast circular space, a huge cylindrical pit running vertically up and down. Round this pit the slanting gallery ran without any parapet or protection for a turn and a half, and then plunged high above into the rock again. Somehow it reminded me then one of those spiral turns of the railway through the Saint Gothard. It was all tremendously huge. I can scarcely hope to convey to you the Titanic proportion of all that place, the Titanic effect of it. Our eyes followed up the vast declivity of the pit wall, and overhead and far above we beheld a round opening set with faint stars, and half of the lip about it well nigh blinding with the white light of the sun. At that we cried aloud simultaneously.

"Come on!" I said, leading the way.

"But there?" said Cavor, and very carefully stepped nearer the edge of the gallery. I followed his example, and craned forward and looked down, but I was dazzled by that gleam of light above, and I could see only a bottomless darkness with spectral patches of crimson and purple floating therein. Yet if I could not see, I could hear. Out of this darkness came a sound, a sound like the angry hum one can hear if one puts one's ear outside a hive of bees, a sound out of that enormous hollow, it may be, four miles beneath our feet...

For a moment I listened, then tightened my grip on my crowbar, and led the way up the gallery.

"This must be the shaft we looked down upon," said Cavor. "Under that lid."

"And below there, is where we saw the lights."

"The lights!" said he. "Yes - the lights of the world that now we shall never see."

"We'll come back," I said, for now we had escaped so much I was rashly sanguine that we should recover the sphere.

His answer I did not catch.

"Eh?" I asked.

"It doesn't matter," he answered, and we hurried on in silence.

I suppose that slanting lateral way was four or five miles long, allowing for its curvature, and it ascended at a slope that would have made it almost impossibly steep on earth, but which one strode up easily under lunar conditions. We saw only two Selenites during all that portion of our flight, and directly they became aware of us they ran headlong. It was clear that the knowledge of our strength and violence had reached them. Our way to the exterior was unexpectedly plain. The spiral gallery straightened into a steeply ascendent tunnel, its floor bearing abundant traces of the mooncalves, and so straight and short in proportion to its vast arch, that no part of it was absolutely dark. Almost immediately it began to lighten, and then far off and high up, and quite blindingly brilliant, appeared its opening on the exterior, a slope of Alpine steepness surmounted by a crest of bayonet shrub, tall and broken down now, and dry and dead, in spiky silhouette against the sun.

And it is strange that we men, to whom this very vegetation had seemed so weird and horrible a little time ago, should now behold it with the emotion a home-coming exile might feel at sight of his native land. We welcomed even the rareness of the air that made us pant as we ran, and which rendered speaking no longer the easy thing that it had been, but an effort to make oneself heard. Larger grew the sunlit circle above us, and larger, and all the nearer tunnel sank into a rim of indistinguishable black. We saw the dead bayonet shrub no longer with any touch of green in it, but brown and dry and thick, arid the M shadow of its upper branches high out of sight made a densely interlaced pattern upon the tumbled rocks. And at the immediate mouth of the tunnel was a wide trampled space where the mooncalves had come and gone.

We came out upon this space at last into a light and heat that hit and pressed upon us. We traversed the exposed area painfully, and clambered up a slope among the scrub stems, and sat down at last panting in a high place beneath the shadow of a mass of twisted lava. Even in the shade the rock felt hot.

The air was intensely hot, and we were in great physical discomfort, but for all that we were no longer in a nightmare. We seemed to have come to our own province again, beneath the stars. All the fear and stress of our flight through the dim passages and fissures below had fallen from us. That last fight had filled us with an enormous confidence in ourselves so far as the Selenites were concerned. We looked back almost incredulously at the black opening from which we had just emerged. Down there it was, in a blue glow that now in our memories seemed the next thing to absolute darkness, we had met with things like mad mockeries of men, helmet-headed creatures, and had walked in fear before them, and had submitted to them until we could submit no longer. And behold, they had smashed like wax and scattered like chaff, and fled and vanished like the creatures of a dream!

I rubbed my eyes, doubting whether we had not slept and dreamt these things by reason of the fungus we had eaten, and suddenly discovered the

blood upon my face, and then that my shirt was sticking painfully to my shoulder and arm.

"Confound it!" I said, gauging my injuries with an investigatory hand, and suddenly that distant tunnel mouth became, as it were, a watching eye.

"Cavor!" I said; "what are they going to do now? And what are we going to do?"

He shook his head, with his eyes fixed upon the tunnel. "How can one tell what they will do?"

"It depends on what they think of us, and I don't see how we can begin to guess that. And it depends upon what they have in reserve. It's as you say, Cavor, we have touched the merest outside of this world. They may have all sorts of things inside here. Even with those shooting things they might make it bad for us....

"Yet after all," I said, "even if we don't find the sphere at once, there is a chance for us. We might hold out. Even through the night. We might go down there again and make a fight for it."

I stared about me with speculative eyes. The character of the scenery had altered altogether by reason of the enormous growth and subsequent drying of the scrub. The crest on which we sat was high, and commanded a wide prospect of the crater landscape, and we saw it now all sere and dry in the late autumn of the lunar afternoon. Rising one behind the other were long slopes and fields of trampled brown where the mooncalves had pastured, and far away in the full blaze of the sun a drove of them basked slumberously, scattered shapes, each with a blot of shadow against it like sheep on the side of a down. But never a sign of a Selenite was to be seen. Whether they had fled on our emergence from the interior passages, or whether they were accustomed to retire after driving out the mooncalves, I cannot guess. At the time I believed the former was the case.

"If we were to set fire to all this stuff, I said, "we might find the sphere among the ashes."

Cavor did not seem to hear me. He was peering under his hand at the stars, that still, in spite of the intense sunlight, were abundantly visible in the sky. "How long do you think we've have been here?" he asked at last.

"Been where? "

"On the moon."

"Two earthly days, perhaps."

"More nearly ten. Do you know, the sun is past its zenith, and sinking in the west. In four days' time or less it will be night."

"But - we've only eaten once!"

"I know that. And - But there are the stars! "

"But why should time seem different because we are on a smaller planet? "

"I don't know. There it is!"

"How does one tell time?"

"Hunger - fatigue - all those things are different. Everything is different - everything. To me it seems that since first we came out of the sphere has been only a question of hours - long hours - at most."

"Ten days," I said; "that leaves -" I looked up at the sun for a moment, and then saw that it was halfway from the zenith to the western edge of things. "Four days! ... Cavor, we musn't sit here and dream. How do you think we may begin?"

I stood up. "We must get a fixed point we can recognise - we might hoist a flag, or a handkerchief, or something - and quarter the ground, and work round that."

He stood up beside me.

"Yes," he said, "there is nothing for it but to hunt the sphere. Nothing. We may find it - certainly we may find it. And if not -"

"We must keep on looking."

He look this way and that, glanced up at the sky and down at the tunnel, and astonished me by a sudden gesture of impatience. "Oh! but we have done foolishly! To have come to this pass! Think how it might have been, and the things we might have done!"

"We might do something yet."

"Never the thing we might have done. here below our feet is a world. Think of what that world must be! Think of that machine we saw, and the lid and the shaft! They were just remote outlying things, and those creatures we have seen and fought with no more than ignorant peasants, dwellers in the outskirts, yokels and labourers half akin to brutes. Down below! Caverns beneath caverns, tunnels, structures, ways... It must open out, and be greater and wider and more populous as one descends. Assuredly. Right down at the last the central sea that washes round the core of the moon. Think of its inky waters under the spare lights - if, indeed, their eyes need lights! Think of the cascading tributaries pouring down their channels to feed it! Think of the tides upon its surface, and the rush and swirl of its ebb and flow! perhaps they have ships that go upon it, perhaps down there are mighty cities and swarming ways, and wisdom and order passing the wit of man. And we may die here upon it, and never see the masters who must be - ruling over these things! We may freeze and die here, and the air will freeze and thaw upon us, and

then - ! Then they will come upon us, come on our stiff and silent bodies, and find the sphere we cannot find, and they will understand at last too late all the thought and effort that ended here in vain!"

His voice for all that speech sounded like the voice of someone heard in a telephone, weak and far away.

"But the darkness," I said.

"One might get over that."

"How?"

"I don't know. How am I to know? One might carry a torch, one might have a lamp - The others - might understand."

He stood for a moment with his hands held down and a rueful face, staring out over the waste that defied him. Then with a gesture of renunciation he turned towards me with proposals for the systematic hunting of the sphere.

"We can return," I said.

He looked about him. "First of all we shall have to get to earth."

"We could bring back lamps to carry and climbing irons, and a hundred necessary things."

"Yes," he said.

"We can take back an earnest of success in this gold."

He looked at my golden crowbars, and said nothing for a space. He stood with his hands clasped behind his back, staring across the crater. At last he signed and spoke. "It was I found the way here, but to find a way

isn't always to be master of a way. If I take my secret back to earth, what will happen? I do not see how I can keep my secret for a year, for even a part of a year. Sooner or later it must come out, even if other men rediscover it. And then ... Governments and powers will struggle to get hither, they will fight against one another, and against these moon people; it will only spread warfare and multiply the occasions of war. In a little while, in a very little while, if I tell my secret, this planet to its deepest galleries will be strewn with human dead. Other things are doubtful, but that is certain. It is not as though man had any use for the moon. What good would the moon be to men? Even of their own planet what have they made but a battle-ground and theatre of infinite folly? Small as his world is, and short as his time, he has still in his little life down there far more than he can do. No! Science has toiled too long forging weapons for fools to use. It is time she held her hand. Let him find it out for himself again - in a thousand years' time."

"There are methods of secrecy," I said.

He looked up at me and smiled. "After all," he said, "why should one worry? There is little chance of our finding the sphere, and down below things are brewing. It's simply the human habit of hoping till we die that makes us think of return. Our troubles are only beginning. We have shown these moon folk violence, we have given them a taste of our quality, and our chances are about as good as a tiger's that has got loose and killed a man in Hyde Park. The news of us must be running down from gallery to gallery, down towards the central parts. ... No sane beings will ever let us take that sphere back to earth after so much as they have seen of us."

"We aren't improving our chances," said I, "by sitting here."

We stood up side by side.

"After all," he said, we must separate. We must stick up a handkerchief on these tall spikes here and fasten it firmly, and from this as a centre we must work over the crater. You must go westward, moving out in semicircles

to and fro towards the setting sun. You must move first with your shadow on your right until it is at right angles with the direction of your handkerchief, and then with your shadow on your left. And I will do the same to the east. We will look into every gully, examine every skerry of rocks; we will do all we can to find my sphere. If we see the Selenites we will hide from them as well as we can. For drink we must take snow, and if we feel the need of food, we must kill a mooncalf if we can, and eat such flesh as it has - raw - and so each will go his own way."

"And if one of us comes upon the sphere?"

"He must come back to the white handkerchief, and stand by it and signal to the other."

"And if neither?"

Cavor glanced up at the sun. "We go on seeking until the night and cold overtake us."

"Suppose the Selenites have found the sphere and hidden it?"

He shrugged his shoulders.

"Or if presently they come hunting us?"

He made no answer.

"You had better take a club," I said.

He shook his head, and stared away from me across the waste.

But for a moment he did not start. He looked round at me shyly, hesitated. "Au revoir," he said.

I felt an odd stab of emotion. A sense of how we had galled each other,

and particularly how I must have galled him, came to me. "Confound it," thought I, "we might have done better!" I was on the point of asking him to shake hands - for that, somehow, was how I felt just then - when he put his feet together and leapt away from me towards the north. He seemed to drift through the air as a dead leaf would do, fell lightly, and leapt again. I stood for a moment watching him, then faced westward reluctantly, pulled myself together, and with something of the feeling of a man who leaps into icy water, selected a leaping point, and plunged forward to explore my solitary half of the moon world. I dropped rather clumsily among rocks, stood up and looked about me, clambered on to a rocky slab, and leapt again. ...

When presently I looked for Cavor he was hidden from my eyes, but the handkerchief showed out bravely on its headland, white in the blaze of the sun.

I determined not to lose sight of that handkerchief whatever might betide.

Chapter 19

Mr. Bedford Alone

IN a little while it seemed to me as though I had always been alone on the moon. I hunted for a time with a certain intentness, but the heat was still very great, and the thinness of the air felt like a hoop about one's chest. I came presently into a hollow basin bristling with tall, brown, dry fronds about its edge, and I sat down under these to rest and cool. I intended to rest for only a little while. I put down my clubs beside me, and sat resting my chin on my hands. I saw with a sort of colourless interest that the rocks of the basin, where here and there the crackling dry lichens had shrunk away to show them, were all veined and splattered with gold, that here and there bosses of rounded and wrinkled gold projected from among the litter. What did that matter now? A sort of

languor had possession of my limbs and mind, I did not believe for a moment that we should ever find the sphere in that vast desiccated wilderness. I seemed to lack a motive for effort until the Selenites should come. Then I supposed I should exert myself, obeying that unreasonable imperative that urges a man before all things to preserve and defend his life, albeit he may preserve it only to die more painfully in a little while.

Why had we come to the moon?

The thing presented itself to me as a perplexing problem. What is this spirit in man that urges him for ever to depart from happiness and security, to toil, to place himself in danger, to risk even a reasonable certainty of death? It dawned upon me up there in the moon as a thing I ought always to have known, that man is not made simply to go about being safe and comfortable and well fed and amused. Almost any man, if you put the thing to him, not in words, but in the shape of opportunities, will show that he knob as much. Against his interest, against his happiness, he is constantly being driven to do unreasonable things. Some force not himself impels him, and go he must. But why? Why? Sitting there in the midst of that useless moon gold, amidst the things of another world, I took count of all my life. Assuming I was to die a castaway upon the moon, I failed altogether to see what purpose I had served. I got no light on that point, but at any rate it was clearer to me than it had ever been in my life before that I was not serving my own purpose, that all my life I had in truth never served the purposes of my private life. Whose purposes, what purposes, was I serving? ... I ceased to speculate on why we had come to the moon, and took a wider sweep. Why had I come to the earth? Why had I a private life at all? ... I lost myself at last in bottomless speculations. ...

My thoughts became vague and cloudy, no longer leading in definite directions. I had not felt heavy or weary - I cannot imagine one doing so upon the moon - but I suppose I was greatly fatigued. At any rate I slept.

Slumbering there rested me greatly, I think, and the sun was setting and

the violence of the heat abating, through all the time I slumbered. When at last I was roused from my slumbers by a remote clamour, I felt active and capable again. I rubbed my eyes and stretched my arms. I rose to my feet - I was a little stiff - and at once prepared to resume my search. I shouldered my golden clubs, one on each shoulder, and went on out of the ravine of the gold-veined rocks.

The sun was certainly lower, much lower than it had been; the air was very much cooler. I perceived I must have slept some time. It seemed to me that a faint touch of misty blueness hung about the western cliff I leapt to a little boss of rock and surveyed the crater. I could see no signs of mooncalves or Selenites, nor could I see Cavor, but I could see my handkerchief far off, spread out on its thicket of thorns. I looked about me, and then leapt forward to the next convenient view-point.

I beat my round in a semicircle, and back again in a still remoter crescent. It was very fatiguing and hopeless. The air was really very much cooler, and it seemed to me that the shadow under the westward cliff was growing broad. Ever and again I stopped and reconnoitred, but there was no sign of Cavor, no sign of Selenites; and it seemed to me the mooncalves must have been driven into the interior again - I could see none of them. I became more and more desirous of being Cavor. The winged outline of the sun had sunk now, until it was scarcely the distance of its diameter from the rim of the sky. I was oppressed by the idea that the Selenites would presently close their lids and valves, and shut us out under the inexorable onrush of the lunar night. It seemed to me high time that he abandoned his search, and that we took counsel together. I felt how urgent it was that we should decide soon upon our course. We had failed to find the sphere, we no longer had time to seek it, and once these valves were closed with us outside, we were lost men. The great night of space would descend upon us - that blackness of the void which is the only absolute death. All my being shrank from that approach. We must get into the moon again, though we were slain in doing it. I was haunted by a vision of our freezing to death, of our hammering with our last strength on the valve of the great pit.

I took no thought any more of the sphere. I thought only of finding Cavor again I was half inclined to go back into the moon without him, rather than seek him until it was too late. I was already half-way back towards our handkerchief, when suddenly -

I saw the sphere!

I did not find it so much as it found me. It was lying much farther to the westward than I had gone, and the sloping rays of the sinking sun reflected from its glass had suddenly proclaimed its presence in a dazzling beam. For an instant I thought this was some new device of the Selenites against us, and then I understood.

I threw up my arms, shouted a ghostly shout, and set off in vast leaps towards it. I missed one of my leaps and dropped into a deep ravine and twisted my ankle, and after that I stumbled at almost every leap. I was in a state of hysterical agitation, trembling violently, and quite breathless long before I got to it. Three times at least I had to stop with my hands resting on my side and spite of the thin dryness of the air, the perspiration was wet upon my face.

I thought of nothing but the sphere until I reached it, I forgot even my trouble of Cavor's whereabouts. My last leap flung me with my hands hard against its glass; then I lay against it panting, and trying vainly to shout, "Cavor! here is the sphere!" When I had recovered a little I peered through the thick glass, and the things inside seemed tumbled. I stooped to peer closer. Then I attempted to get in. I had to hoist it over a little to get my head through the manhole. The screw stopper was inside, and I could see now that nothing had been touched, nothing had suffered. It lay there as we had left it when we had dropped out amidst the snow. For a time I was wholly occupied in making and remaking this inventory. I found I was trembling violently. It was good to see that familiar dark interior again! I cannot tell you how good. Presently I crept inside and sat down among the things. I looked through the glass at the moon world

and shivered. I placed my gold clubs upon the table, and sought out and took a little food; not so much because I wanted it, but because it was there. Then it occurred to me that it was time to go out and signal for Cavor. But I did not go out and signal for Cavor forthwith. Something held me to the sphere.

After all, everything was coming right. There would be still time for us to get more of the magic stone that gives one mastery over men. Away there, close handy, was gold for the picking up; and the sphere would travel as well half full of gold as though it were empty. We could go back now, masters of ourselves and our world, and then -

I roused myself at last, and with an effort got myself out of the sphere. I shivered as I emerged, for the evening air was growing very cold. I stood in the hollow staring about me. I scrutinised the bushes round me very carefully before I leapt to the rocky shelf hard by, and took once more what had been my first leap in the moon. But now I made it with no effort whatever.

The growth and decay of the vegetation had gone on apace, and the whole aspect of the rocks had changed, but still it was possible to make out the slope on which the seeds had germinated, and the rocky mass from which we had taken our first view of the crater. But the spiky shrub on the slope stood brown and sere now, and thirty feet high, and cast long shadows that stretched out of sight, and the little seeds that clustered in its upper branches were brown and ripe. Its work was done, and it was brittle and ready to fall and crumple under the freezing air, so soon as the nightfall came. And the huge cacti, that had swollen as we watched them, had long since burst and scattered their spores to the four quarters of the moon. Amazing little corner in the universe - the landing place of men!

Some day, thought I, I will have an inscription standing there right in the midst of the hollow. It came to me, if only this teeming world within knew of the full import of the moment, how furious its tumult would become!

But as yet it could scarcely be dreaming of the significance of our coming. For if it did, the crater would surely be an uproar of pursuit, instead of as still as death! I looked about for some place from which I might signal Cavor, and saw that same patch of rock to which he had leapt from my present standpoint, still bare and barren in the sun. For a moment I hesitated at going so far from the sphere. Then with a pang of shame at that hesitation, I leapt. ...

From this vantage point I surveyed the crater again. Far away at the top of the enormous shadow I cast was the little white handkerchief fluttering on the bushes. It was very little and very far, and Cavor was not in sight. It seemed to me that by this time he ought to be looking for me. That was the agreement. But he was nowhere to be seen.

I stood waiting and watching, hands shading my eyes, expecting every moment to distinguish him. Very probably I stood there for quite a long time. I tried to shout, and was reminded of the thinness of the air. I made an undecided step back towards the sphere. But a lurking dread of the Selenites made me hesitate to signal my whereabouts by hoisting one of our sleeping-blankets on to the adjacent scrub. I searched the crater again.

It had an effect of emptiness that chilled me. And it was still; Any sound from the Selenites in the world beneath, even had died away. It was as still as death. Save for the faint stir of the shrub about me in the little breeze that was rising, there was no sound nor shadow of a sound. And the breeze blew chill.

Confound Cavor!

I took a deep breath. I put my hands to the sides of my mouth. "Cavor!" I bawled, and the sound was like some manikin shouting far away.

I looked at the handkerchief, I looked behind me at the broadening shadow

of the westward cliff I looked under my hand at the sun. It seemed to me that almost visibly it was creeping down the sky. I felt I must act instantly if I was to save Cavor. I whipped off my vest and flung it as a mark on the sere bayonets of the shrubs behind me, and then set off in a straight line towards the handkerchief. Perhaps it was a couple of miles away - a matter of a few hundred leaps and strides. I have already told how one seemed to hang through those lunar leaps. In each suspense I sought Cavor, and marvelled why he should be hidden. In each leap I could feel the sun setting behind me. Each time I touched the ground I was tempted to go back.

A last leap and I was in the depression below our handkerchief, a stride, and I stood on our former vantage point within arms' reach of it. I stood up straight and scanned the world about me, between its lengthening bars of shadow. Far away, down a long declivity, was the opening of the tunnel up which we had fled, and my shadow reached towards it, stretched towards it, and touched it, like a finger of the night.

Not a sign of Cavor, not a sound in all the stillness, only the stir and waving of the scrub and of the shadows increased. And suddenly and violently I shivered. "Cav-" I began, and realised once more the uselessness of the human voice in that thin air. Silence. The silence of death.

Then it was my eye caught something - a little thing lying, perhaps fifty yards away down the slope, amidst a litter of bent and broken branches. What was it? I knew, and yet for some reason I would not know. I went nearer to it. It was the little cricket-cap Cavor had worn. I did not touch it, I stood looking at it.

I saw then that the scattered branches about it had been forcibly smashed and trampled. I hesitated, stepped forward, and picked it up.

I stood with Cavor's cap in my hand, staring at the trampled reeds and thorns about me. On some, of them were little smears of something dark,

something that I dared not touch. A dozen yards away, perhaps, the rising breeze dragged something into view, something small and vividly white.

It was a little piece of paper crumpled tightly, as though it had been clutched tightly. I picked it up, and on it were smears of red. My eye caught faint pencil marks. I smoothed it out, and saw uneven and broken writing ending at last in a crooked streak up on the paper.

I set myself to decipher this.

"I have been injured about the knee, I think my kneecap is hurt, and I cannot run or crawl," it began - pretty distinctly written.

Then less legibly: "They have been chasing me for some time, and it is only a question of" - the word "time" seemed to have been written here and erased in favour of something illegible - "before they get me. They are beating all about me."

Then the writing became convulsive. "I can hear them," I guessed the tracing meant, and then it was quite unreadable for a space. Then came a little string of words that were quite distinct: "a different sort of Selenite altogether, who appears to be directing the" The writing became a mere hasty confusion again.

"They have larger brain cases - much larger, and slenderer bodies, and very short legs. They make gentle noises, and move with organized deliberation...

"And though I am wounded and helpless here, their appearance still gives me hope " That was like Cavor. "They have not shot at me or attempted... injury. I intend -"

Then came the sudden streak of the pencil across the paper, and on the back and edges - blood!

And as I stood there stupid, and perplexed, with this dumbfounding relic in my hand, something very soft and light and chill touched my hand for a moment and ceased to be, and then a thing, a little white speck, drifted athwart a shadow. It was a tiny snowflake, the first snowflake, the herald of the night.

I looked up with a start, and the sky had darkened almost to blackness, and was thick with a gathering multitude of coldly watchful stars. I looked eastward, and the light of that shrivelled world was touched with sombre bronze; westward, and the sun robbed now by a thickening white mist of half its heat and splendour, was touching the crater rim, was sinking out of sight, and all the shrubs and jagged and tumbled rocks stood out against it in a bristling disorder of black shapes. Into the great lake of darkness westward, a vast wreath of mist was sinking. A cold wind set all the crater shivering. Suddenly, for a moment, I was in a puff of falling snow, and all the world about me gray and dim.

And then it was I heard, not loud and penetrating as at first, but faint and dim like a dying voice, that tolling, that same tolling that had welcomed the coming of the day: Boom!... Boom!... Boom!...

It echoed about the crater, it seemed to throb with the throbbing of the greater stars, the blood-red crescent of the sun's disc sank as it tolled out: Boom!... Boom!... Boom! ...

What had happened to Cavor? All through that tolling I stood there stupidly, and at last the tolling ceased.

And suddenly the open mouth of the tunnel down below there, shut like an eye and vanished out of sight.

Then indeed was I alone.

Over me, around me, closing in on me, embracing me ever nearer, was the Eternal; that which was before the beginning, and that which triumphs over

the end; that enormous void in which all light and life and being is but the thin and vanishing splendour of a falling star, the cold, the stillness, the silence - the infinite and final Night of space.

The sense of solitude and desolation became the sense of an overwhelming presence that stooped towards me, that almost touched me.

"No," I cried. "No! Not yet! not yet! Wait! Wait! Oh, wait!" My voice went up to a shriek. I flung the crumpled paper from me, scrambled back to the crest to take my bearings, and then, with all the will that was in me, leapt out towards the mark I had left, dim and distant now in the very margin of the shadow.

Leap, leap, leap, and each leap was seven ages.

Before me the pale serpent-girdled section of the sun sank and sank, and the advancing shadow swept to seize the sphere before I could reach it. I was two miles away, a hundred leaps or more, and the air about me was thinning out as it thins under an air-pump, and the cold was gripping at my joints. But had I died, I should have died leaping. Once, and then again my foot slipped on the gathering snow as I leapt and shortened my leap; once I fell short into bushes that crashed and smashed into dusty chips and nothingness, and once I stumbled as I dropped and rolled head over heels into a gully, and rose bruised and bleeding and confused as to my direction.

But such incidents were as nothing to the intervals, those awful pauses when one drifted through the air towards that pouring tide of night. My breathing made a piping noise, and it was as though knives were whirling in my lungs. My heart seemed to beat against the top of my brain. "Shall I reach it? O Heaven! Shall I reach it?"

My whole being became anguish.

"Lie down!" screamed my pain and despair; "lie down!"

The near I struggled, the more awfully remote it seemed. I was numb, I stumbled, I bruised and cut myself and did not bleed.

It was in sight.

I fell on all fours, and my lungs whooped.

I crawled. The frost gathered on my lips, icicles hung from my moustache, I was white with the freezing atmosphere.

I was a dozen yards from it. My eyes had become dim. "Lie down!" screamed despair; "lie down!"

I touched it, and halted. "Too late!" screamed despair; "lie down!"

I fought stiffly with it. I was on the manhole lip, a stupefied, half-dead being. The snow was all about me. I pulled myself in. There lurked within a little warmer air.

The snowflakes - the airflakes - danced in about me, as I tried with chilling hands to thrust the valve in and spun it tight and hard. I sobbed. "I will," I chattered in my teeth. And then, with fingers that quivered and felt brittle, I turned to the shutter studs.

As I fumbled with the switches - for I had never controlled them before - I could see dimly through the steaming glass the blazing red streamers of the sinking sun, dancing and flickering through the snowstorm, and the black forms of the scrub thickening and bending and breaking beneath the accumulating snow. Thicker whirled the snow and thicker, black against the light. What if even now the switches overcame me? Then something clicked under my hands, and in an instant that last vision of the moon world was hidden from my eyes. I was in the silence and darkness the inter-planetary sphere.

Chapter 20

Mr. Bedford in Infinite Space

IT was almost as though I had been killed. Indeed, I could imagine a man suddenly and violently killed would feel very much as I did. One moment, a passion of agonising existence and fear; the next darkness and stillness, neither light nor life nor sun, moon nor stars, the blank infinite.

Although the thing was done by my own act, although I had already tasted this very of effect in Cavor's company, I felt astonished, dumbfounded, and overwhelmed. I seemed to be borne upward into an enormous darkness.

My

fingers floated off the studs, I hung as if I were annihilated, and at last very softly and gently I came against the bale and the golden chain, and the crowbars that had drifted to the middle of the sphere.

I do not know how long that drifting took. In the sphere of course, even more than on the moon, one's earthly time sense was ineffectual. At the touch of the bale it was as if I had awakened from a dreamless sleep. I immediately perceived that if I wanted to keep awake and alive I must get a light or open a window, so as to get a grip of something with my eyes. And besides, I was cold. I kicked off from the bale, therefore, clawed on to the thin cords within the glass, crawled along until I got to the manhole rim, and so got my bearings for the light and blind studs, took a shove off, and flying once round the bale, and getting a scare from something big and flimsy that was drifting loose, I got my hand on the cord quite close to the studs, and reached them. I lit the little lamp first of all to see what it was I had collided with, and discovered that old copy of Lloyd's News had slipped its moorings, and was adrift in the void. That brought me out of the infinite to my own proper dimensions again. It made me laugh and pant for a time, and suggested the idea of a little oxygen from one of the cylinders. After that I lit the heater until I felt warm, and then I took food. Then I set to work in a very gingerly

fashion on the Cavorite blinds, to see if I could guess by any means how the sphere was travelling.

The first blind I opened I shut at once, and hung for a time flattened and blinded by the sunlight that had hit me. After thinking a little I started upon the windows at right angles to this one, and got the huge crescent moon and the little crescent earth behind it, the second time. I was amazed to find how far I was from the moon. I had reckoned that not only should I have little or none of the "kick-off" that the earth's atmosphere had given us at our start, but that the tangential "fly off" of the moon's spin would be at least twenty-eight times less than the earth's. I had expected to discover myself hanging over our crater, and on the edge of the night, but all that was now only a part of the outline of the white crescent that filled the sky. And Cavor - ?

He was already infinite.

I tried to imagine what could have happened to him. But at that time I could think of nothing but death. I seemed to see him, bent and smashed at the foot of some interminably high cascade of blue. And all about him the stupid insects stared...

Under the inspiring touch of the drifting newspaper I became practical again for a while. It was quite clear to me that what I had to do was to get back to earth, but as far as I could see I was drifting away from it. Whatever had happened to Cavor, even if he was still alive, which seemed to me incredible after that blood-stained scrap, I was powerless to help him. There he was, living or dead behind the mantle of that rayless night, and there he must remain at least until I could summon our fellow men to his assistance. Should I do that? Something of the sort I had in my mind; to come back to earth if it were possible, and then as maturer consideration might determine, either to show and explain the sphere to a few discreet persons, and act with them, or else to keep my secret, sell my gold,, obtain weapons, provisions, and an assistant, and return with these advantages to deal on equal terms with the flimsy people of the

moon, to rescue Cavor, if that were still possible, and at any rate to procure a sufficient supply of gold to place my subsequent proceedings on a firmer basis. But that was hoping far; I had first to get back.

I set myself to decide just exactly how the return to earth could be contrived. As I struggled with that problem I ceased to worry about what I should do when I got there. At last my only care was to get back.

I puzzled out at last that my best chance would be to drop back towards the moon as near as I dared in order to gather velocity, then to shut my windows, and fly behind it, and when I was past to open my earthward windows, and so get off at a good pace homeward. But whether I should ever reach the earth by that device, or whether I might not simply find myself spinning about it in some hyperbolic or parabolic curve or other, I could not tell. Later I had a happy inspiration, and by opening certain windows to the moon, which had appeared in the sky in front of the earth, I turned my course aside so as to head off the earth, which it had become evident to me I must pass behind without some such expedient. I did a very great deal of complicated thinking over these, problems - for I am no mathematician - and in the end I am certain it was much more my good luck than my reasoning that enabled me to hit the earth. Had I known then, as I know now, the mathematical chances there were against me, I doubt if I should have troubled even to touch the studs to make any attempt. And having puzzled out what I considered to be the thing to do, I opened all my moonward windows, and squatted down - the effort lifted me for a time some feet or so into the air, and I hung there in the oddest way - and waited for the crescent to get bigger and bigger until I felt I was near enough for safety. Then I would shut the windows, fly past the moon with the velocity I had got from it - if I did not smash upon it - and so go on towards the earth.

And that is what I did.

At last I felt my moonward start was sufficient. I shut out the sight of the moon from my eyes, and in a state of mind that was, I now recall,

incredibly free from anxiety or any distressful quality, I sat down to begin a vigil in that little speck of matter in infinite space that would last until I should strike the earth. The heater had made the sphere tolerably warm, the air had been refreshed by the oxygen, and except for that faint congestion of the head that was always with me while I was away from earth, I felt entire physical comfort. I had extinguished the light again, lest it should fail me in the end; I was in darkness, save for the earthshine and the glitter of the stars below me. Everything was so absolutely silent and still that I might indeed have been the only being in the universe, and yet, strangely enough, I had no more feeling of loneliness or fear than if I had been lying in bed on earth. Now, this seems all the stranger to me, since during my last hours in that crater of the moon, the sense of my utter loneliness had been an agony. ...

Incredible as it will seem, this interval of time that I spent in space has no sort of proportion to any other interval of time in my life. Sometimes it seemed as though I sat through immeasurable eternities like some god upon a lotus leaf, and again as though there was a momentary pause as I leapt from moon to earth. In truth, it was altogether some weeks of earthly time. But I had done with care and anxiety, hunger or fear, for that space. I floated, thinking with a strange breadth and freedom of all that we had undergone, and of all my life and motives, and the secret issues of my being. I seemed to myself to have grown greater and greater, to have lost all sense of movement; to be floating amidst the stars, and always the sense of earth's littleness and the infinite littleness of my life upon it, was implicit in my thoughts.

I can't profess to explain the things that happened in my mind. No doubt they could all be traced directly or indirectly to the curious physical conditions under which I was living. I set them down here just for what they are worth, and without any comment. The most prominent quality of it was a pervading doubt of my own identity. I became, if I may so express it, dissociate from Bedford; I looked down on Bedford as a trivial, incidental thing with which I chanced to be connected. I saw Bedford in many relations - as an ass or as a poor beast, where I had hitherto been

inclined to regard him with a quiet pride as a very spirited or rather forcible person. I saw him not only as an ass, but as the son of many generations of asses. I reviewed his school-days and his early manhood, and his first encounter with love, very much as one might review the proceedings of an ant in the sand. Something of that period of lucidity I regret still hangs about me, and I doubt if I shall ever recover the full-bodied self satisfaction of my early days. But at the time the thing was not in the least painful, because I had that extraordinary persuasion that, as a matter of fact, I was no more Bedford than I was any one else, but only a mind floating in the still serenity of space. Who should I be disturbed about this Bedford's shortcomings? I was not responsible for him or them.

For a time I struggled against this really very grotesque delusion. I tried to summon the memory of vivid moments, of tender or intense emotions to my assistance; I felt that if I could recall one genuine twinge of feeling the growing severance would be stopped. But I could not do it. I saw Bedford rushing down Chancery Lane, hat on the back of his head, coat tails flying out, en route for his public examination. I saw him dodging and bumping against, and even saluting, other similar little creatures in that swarming gutter of people. Me? I saw Bedford that same evening in the sitting-room of a certain lady, and his hat was on the table beside him, and it wanted brushing badly, and he was in tears. Me? I saw him with that lady in various attitudes and emotions - I never felt so detached before. ... I saw him hurrying off to Lympne to write a play, and accosting Cavor, and in his shirt sleeves working at the sphere, and walking out to Canterbury because he was afraid to come! Me? I did not believe it.

I still reasoned that all this was hallucination due to my solitude, and the fact that I had lost all weight and sense of resistance. I endeavoured to recover that sense by banging myself about the sphere, by pinching my hands and clasping them together. Among other things, I lit the light, captured that torn copy of Lloyd's, and read those convincingly realistic advertisements about the Cutaway bicycle, and the gentleman of private means, and the lady in distress who was selling those "forks and spoons."

There was no doubt they existed surely enough, and, said I, "This is your world, and you are Bedford, and you are going back to live among things like that for all the rest of your life." But the doubts within me could still argue: "It is not you that is reading, it is Bedford, but you are not Bedford, you know. That's just where the mistake comes in."

"Confound it!" I cried; "and if I am not Bedford, what am I?"

But in that direction no light was forthcoming, though the strangest fancies came drifting into my brain, queer remote suspicions, like shadows seen from away. Do you know, I had a sort of idea that really I was something quite outside not only the world, but all worlds, and out of space and time, and that this poor Bedford was just a peephole through which I looked at life? ...

Bedford! However I disavowed him, there I was most certainly bound up with him, and I knew that wherever or whatever I might be, I must needs feel the stress of his desires, and sympathise with all his joys and sorrows until his life should end. And with the dying of Bedford - what then? ...

Enough of this remarkable phase of my experiences! I tell it here simply to show how one's isolation and departure from this planet touched not only the functions and feeling of every organ of the body, but indeed also the very fabric of the mind, with strange and unanticipated disturbances. All through the major portion of that vast space journey I hung thinking of such immaterial things as these, hung dissociated and apathetic, a cloudy megalomaniac, as it were, amidst the stars and planets in the void of space; and not only the world to which I was returning, but the blue-lit caverns of the Selenites, their helmet faces, their gigantic and wonderful machines, and the fate of Cavor, dragged helpless into that world, seemed infinitely minute and altogether trivial things to me.

Until at last I began to feel the pull of the earth upon my being, drawing me back again to the life that is real for men. And then, indeed, it grew clearer and clearer to me that I was quite certainly Bedford after all,

and returning after amazing adventures to this world of ours, and with a life that I was very likely to lose in this return. I set myself to puzzle out the conditions under which I must fall to earth.

Chapter 21

Mr. Bedford at Littlestone

My line of flight was about parallel with the surface as I came into the upper air. The temperature of sphere began to rise forthwith. I knew it behoved me to drop at once. Far below me, in a darkling twilight, stretched a great expanse of sea. I opened every window I could, and fell - out of sunshine into evening, and out of evening into night. Vaster grew the earth and vaster, swallowing up the stars, and the silvery translucent starlit veil of cloud it wore spread out to catch me. At last the world seemed no longer a sphere but flat, and then concave. It was no longer a planet in the sky, but the world of Man. I shut all but an inch or so of earthward window, and dropped with a slackening velocity. The broadening water, now so near that I could see the dark glitter of the waves, rushed up to meet me. The sphere became very hot. I snapped the last strip of window, and sat scowling and biting my knuckles, waiting for the impact.

...

The sphere hit the water with a huge splash: it must have sent it fathoms high. At the splash I flung the Cavorite shutters open. Down I went, but slower and slower, and then I felt the sphere pressing against my feet, and so drove up again as a bubble drives. And at the last I was floating and rocking upon the surface of the sea, and my journey in space was at an end.

The night was dark and overcast. Two yellow pinpoints far away showed the passing of a ship, and nearer was a red glare that came and went. Had not the electricity of my glow-lamp exhausted itself, I could have got picked up that night. In spite of the inordinate fatigue I was beginning to feel,

I was excited now, and for a time hopeful, in a feverish, impatient way, that so my travelling might end.

But at last I ceased to move about, and sat, wrists on knees, staring at a distant red light. It swayed up and down, rocking, rocking. My excitement passed. I realised I had yet to spend another night at least in the sphere. I perceived myself infinitely heavy and fatigued. And so I fell asleep.

A change in my rhythmic motion awakened me. I peered through the refracting glass, and saw that I had come aground upon a huge shallow of sand. Far away I seemed to see houses and trees, and seaward a curve, vague distortion of a ship hung between sea and sky.

I stood up and staggered. My one desire was to emerge. The manhole was upward, and I wrestled with the screw. Slowly I opened the manhole. At last the air was singing in again as once it had sung out. But this time I did not wait until the pressure was adjusted. In another moment I had the weight of the window on my hands, and I was open, wide open, to the old familiar sky of earth.

The air hit me on the chest so that I gasped. I dropped the glass screw. I cried out, put my hands to my chest, and sat down. For a time I was in pain. Then I took deep breaths. At last I could rise and move about again.

I tried to thrust my head through the manhole, and the sphere rolled over. It was as though something had lugged my head down directly it emerged. I ducked back sharply, or I should have been pinned face under water. After some wriggling and shoving I managed to crawl out upon sand, over which the retreating waves still came and went.

I did not attempt to stand up. It seemed to me that my body must be suddenly changed to lead. Mother Earth had her grip on me now - no Cavorite intervening. I sat down heedless of the water that came over my

feet.

It was dawn, a gray dawn, rather overcast but showing here and there a long patch of greenish gray. Some way out a ship was lying at anchor, a pale silhouette of a ship with one yellow light. The water came rippling in in long shallow waves. Away to the right curved the land, a shingle bank with little hovels, and at last a lighthouse, a sailing mark and a point. Inland stretched a space of level sand, broken here and there by pools of water, and ending a mile away perhaps in a low shore of scrub. To the north-east some isolated watering-place was visible, a row of gaunt lodging-houses, the tallest things that I could see on earth, dull dabs against the brightening sky. What strange men can have reared these vertical piles in such an amplitude of space I do not know. There they are, like pieces of Brighton lost in the waste.

For a long time I sat there, yawning and rubbing my face. At last I struggled to rise. It made me feel that I was lifting a weight. I stood up.

I stared at the distant houses. For the first time since our starvation in the crater I thought of earthly food. "Bacon," I whispered, "eggs. Good toast and good coffee. ... And how the devil am I going to all this stuff to Lympne?" I wondered where I was. It was an east shore anyhow, and I had seen Europe before I dropped.

I heard footsteps scrunching in the sand, and a little round-faced, friendly-looking man in flannels, with a bathing towel wrapped about his shoulders, and his bathing dress over his arm, appeared up the beach. I knew instantly that I must be in England. He was staring most intently at the sphere and me. He advanced staring. I dare say I looked a ferocious savage enough - dirty, unkempt, to an indescribable degree; but it did not occur to me at the time. He stopped at a distance of twenty yards. "Hul-lo, my man! " he said doubtfully.

"Hullo yourself!" said I.

He advanced, reassured by that. "What on earth is that thing? " he asked.

"Can you tell me where I am?" I asked.

"That's Littlestone," he said, pointing to the houses; "and that's Dungeness! Have you just landed? What's that thing you've got? Some sort of machine?"

"Yes."

"Have you floated ashore? Have you been wrecked or something? What is it?"

I meditated swiftly. I made an estimate of the little man's appearance as he drew nearer. "By Jove! " he said, "you've had a time of it! I thought you - Well - Where were you cast away? Is that thing a sort of floating thing for saving life?"

I decided to take that line for the present. I made a few vague affirmatives. "I want help," I said hoarsely. " I want to get some stuff up the beach - stuff I can't very well leave about." I became aware of three other pleasant-looking young men with towels, blazers, and straw hats, coming down the sands towards me. Evidently the early bathing section of this Littlestone.

"Help!" said the young man: "rather!" He became vaguely active. "What particularly do you want done? " He turned round and gesticulated. The three young men accelerated their pace. In a minute they were about me, plying me with questions I was indisposed to answer. "I'll tell all that later," I said. "I'm dead beat. I'm a rag."

"Come up to the hotel," said the foremost little man. "We'll look after that thing there."

I hesitated. "I can't," I said. "In that sphere there's two big bars of

gold."

They looked incredulously at one another, then at me with a new inquiry. I went to the sphere, stooped, crept in, and presently they had the Selenites' crowbars and the broken chain before them. If I had not been so horribly fagged I could have laughed at them. It was like kittens round a beetle. They didn't know what to do with the stuff. The fat little man stooped and lifted the end of one of the bars, and then dropped it with a grunt. Then they all did.

"It's lead, or gold!" said one.

"Oh, it's gold!" said another.

"Gold, right enough," said the third.

Then they all stared at me, and then they all stared at the ship lying at anchor.

"I say!" cried the little man. "But where did you get that?"

I was too tired to keep up a lie. "I got it in the moon."

I saw them stare at one another.

"Look here!" said I, "I'm not going to argue now. Help me carry these lumps of gold up to the hotel - I guess, with rests, two of you can manage one, and I'll trail this chain thing - and I'll tell you more when I've had some food."

"And how about that thing?"

"It won't hurt there," I said. "Anyhow - confound it! - it must stop there now. If the tide comes up, it will float all right."

And in a state of enormous wonderment, these young men most obediently hoisted my treasures on their shoulders, and with limbs that felt like lead I headed a sort of procession towards that distant fragment of "sea-front." Half-way there we were reinforced by two awe-stricken little girls with spades, and later a lean little boy, with a penetrating sniff, appeared. He was, I remember, wheeling a bicycle, and he accompanied us at a distance of about a hundred yards on our right flank, and then I suppose, gave us up as uninteresting, mounted his bicycle and rode off over the level sands in the direction of the sphere.

I glanced back after him.

"He won't touch it," said the stout young man reassuringly, and I was only too willing to be reassured.

At first something of the gray of the morning was in my mind, but presently the sun disengaged itself from the level clouds of the horizon and lit the world, and turned the leaden sea to glittering waters. My spirits rose. A sense of the vast importance of the things I had done and had yet to do came with the sunlight into my mind. I laughed aloud as the foremost man staggered under my gold. When indeed I took my place in the world, how amazed the world would be!

If it had not been for my inordinate fatigue, the landlord of the Littlestone hotel would have been amusing, as he hesitated between my gold and my respectable company on the one and my filthy appearance on the other. But at last I found myself in a terrestrial bathroom once more with warm water to wash myself with, and a change of raiment, preposterously small indeed, but anyhow clean, that the genial little man had lent me. He lent me a razor too, but I could not screw up my resolution to attack even the outposts of the bristling beard that covered my face.

I sat down to an English breakfast and ate with a sort of languid appetite - an appetite many weeks old and very decrepit - and stirred myself to answer the questions of the four young men. And I told them the truth.

"Well," said I, "as you press me - I got it in the moon."

"The moon?"

"Yes, the moon in the sky."

"But how do you mean?"

"What I say, confound it!"

"Then you have just come from the moon?"

"Exactly! through space - in that ball." And I took a delicious mouthful of egg. I made a private note that when I went back to the moon I would take a box of eggs.

I could see clearly that they did not believe one word what I told them, but evidently they considered me the most respectable liar they had ever met. They glanced at one another, and then concentrated the fire of their eyes on me. I fancy they expected a clue to me in the way I helped myself to salt. They seemed to find something significant in my peppering my egg. These strangely shaped masses of gold they had staggered under held their minds. There the lumps lay in front of me, each worth thousands of pounds, and as impossible for any one to steal as a house or a piece of land. As I looked at their curious faces over my coffee-cup, I realised something of the enormous wilderness of explanations into which I should have to wander to render myself comprehensible again.

"You don't really mean -" began the youngest young man, in the tone of one who speaks to an obstinate child.

"Just pass me that toast-rack," I said, and shut him up completely.

"But look here, I say," began one of the others. "We're not going to

believe that, you know."

"Ah, well," said I, and shrugged my shoulders.

"He doesn't want to tell us," said the youngest young man in a stage aside; and then, with an appearance of great sang-froid, " You don't mind if I take a cigarette?"

I waved him a cordial assent, and proceeded with my breakfast. Two of the others went and looked out of the farther window and talked inaudibly. I was struck by a thought. "The tide," I said, "is running out?"

There was a pause, a doubt who should answer me.

"It's near the ebb," said the fat little man.

"Well, anyhow," I said, "it won't float far."

I decapitated my third egg, and began a little speech. "Look here," I said. " Please don't imagine I'm surly or telling you uncivil lies, or anything of that sort. I'm forced almost, to be a little short and mysterious. I can quite understand this is as queer as it can be, and that your imaginations must be going it. I can assure you, you're in at a memorable time. But I can't make it clear to you now - it's impossible. I give you my word of honour I've come from the moon, and that's all I can tell you. ... All the same, I'm tremendously obliged to you, you know, tremendously. I hope that my manner hasn't in any way given you offence."

"Oh, not in the least!" said the youngest young man affably. "We can quite understand," and staring hard at me all the time, he heeled his chair back until it very nearly upset, and recovered with some exertion. "Not a bit of it," said the fat young man.

"Don't you imagine that!" and they all got up and dispersed, and walked about and lit cigarettes, and generally tried to show they were perfectly

amiable and disengaged, and entirely free from the slightest curiosity about me and the sphere. "I'm going to keep an eye on that ship out there all the same," I heard one of them remarking in an undertone. If only they could have forced themselves to it, they would, I believe, even have gone out and left me. I went on with my third egg.

"The weather," the fat little man remarked presently, "has been immense, has it not? I don't know when we have had such a summer."

Phoo-whizz! Like a tremendous rocket!

And somewhere a window was broken. ...

"What's that?" said I.

"It isn't - ?" cried the little man, and rushed to the corner window.

All the others rushed to the window likewise. I sat staring at them.

Suddenly I leapt up, knocked over my third egg, rushed for the window also. I had just thought of something. "Nothing to be seen there," cried the little man, rushing for the door.

"It's that boy!" I cried, bawling in hoarse fury; "it's that accursed boy!" and turning about I pushed the waiter aside - he was just bring me some more toast - and rushed violently out of the room and down and out upon the queer little esplanade in front of the hotel.

The sea, which had been smooth, was rough now with hurrying cat's-paws, and all about where the sphere had been was tumbled water like the wake of a ship. Above, a little puff of cloud whirled like dispersing smoke, and the three or four people on the beach were bring up with interrogative faces towards the point of that unexpected report. And that was all! Boots and waiter and the four young men in blazers came rushing out behind me. Shouts came from windows and doors, and all sorts of worrying people came

into sight - agape.

For a time I stood there, too overwhelmed by this new development to think of the people.

At first I was too stunned to see the thing as any definite disaster - I was just stunned, as a man is by some accidental violent blow. It is only afterwards he begins to appreciate his specific injury.

"Good Lord!"

I felt as though somebody was pouring funk out of a can down the back of my neck. My legs became feeble. I had got the first intimation of what the disaster meant for me. There was that confounded boy - sky high! I was utterly left. There was the gold in the coffee-room - my only possession on earth. How would it all work out? The general effect was of a gigantic unmanageable confusion.

"I say," said the voice of the little man behind. "I say, you know."

I wheeled about, and there were twenty or thirty people, a sort of irregular investment of people, all bombarding me with dumb interrogation, with infinite doubt and suspicion. I felt the compulsion of their eyes intolerably. I groaned aloud.

"I can't! " I shouted. "I tell you I can't! I'm not equal to it! You must puzzle and - and be damned to you!"

I gesticulated convulsively. He receded a step as though I had threatened him. I made a bolt through them into the hotel. I charged back into the coffee-room, rang the bell furiously. I gripped the waiter as he entered. "D'ye hear?" I shouted. "Get help and carry these bars up to my room right away."

He failed to understand me, and I shouted and raved at him. A

scared-looking little old man in a green apron appeared, and further two of the young men in flannels. I made a dash at them and commandeered their services. As soon as the gold was in my room I felt free to quarrel. "Now get out," I shouted; "all of you get out if you don't want to see a man go mad before your eyes!" And I helped the waiter by the shoulder as he hesitated in the doorway. And then, as soon as I had the door locked on them all, I tore off the little man's clothes again, shied them right and left, and got into bed forthwith. And there I lay swearing and panting and cooling for a very long time.

At last I was calm enough to get out of bed and ring up the round-eyed waiter for a flannel nightshirt, a soda and whisky, and some good cigars. And these things being procured me, after an exasperating delay that drove me several times to the bell, I locked the door again and proceeded very deliberately to look entire situation in the face.

The net result of the great experiment presented itself as an absolute failure. It was a rout, and I was the sole survivor. It was an absolute collapse, and this was the final disaster. There was nothing for it but to save myself, and as much as I could in the way of prospects from our debacle. At one fatal crowning blow all my vague resolutions of return and recovery had vanished. My intention of going back to the moon, of getting a sphereful of gold, and afterwards of having a fragment of Cavorite analysed and so recovering the great secret - perhaps, finally, even of recovering Cavor's body - all these ideas vanished altogether.

I was the sole survivor, and that was all.

I think that going to bed was one of the luckiest ideas I have ever had in an emergency. I really believe I should either have got loose-headed or done some indiscreet thing. But there, locked in and secure from all interruptions, I could think out the position in all its bearings and make my arrangements at leisure.

Of course, it was quite clear to me what had happened to the boy. He had

crawled into the sphere, meddled with the studs, shut the Cavorite windows, and gone up. It was highly improbable he had screwed the manhole stopper, and, even if he had, the chances were a thousand to one against his getting back. It was fairly evident that he would gravitate with my bales to somewhere near the middle of the sphere and remain there, and so cease to be a legitimate terrestrial interest, however remarkable he might seem to the inhabitants of some remote quarter of space. I very speedily convinced myself on that point. And as for any responsibility I might have in the matter, the more I reflected upon that, the clearer it became that if only I kept quiet about things, I need not trouble myself about that. If I was faced by sorrowing parents demanding their lost boy, I had merely to demand my lost sphere - or ask them what they meant. At first I had had a vision of weeping parents and guardians, and all sorts of complications; but now I saw that I simply had to keep my mouth shut, and nothing in that way could arise. And, indeed, the more I lay and smoked and thought, the more evident became the wisdom of impenetrability.

It is within the right of every British citizen, provided he does not commit damage nor indecorum, to appear suddenly wherever he pleases, and as ragged and filthy as he pleases, and with whatever amount of virgin gold he sees fit to encumber himself, and no one has any right at all to hinder and detain him in this procedure. I formulated that at last to myself, and repeated it over as a sort of private Magna Charta of my liberty.

Once I had put that issue on one side, I could take up and consider in an equable manner certain considerations I had scarcely dared to think of before, namely, those arising out of the circumstances of my bankruptcy. But now, looking at this matter calmly and at leisure, I could see that if only I suppressed my identity by a temporary assumption of some less well-known name, and if I retained the two months' beard that had grown upon me, the risks of any annoyance from the spiteful creditor to whom I have already alluded became very small indeed. From that to a definite course of rational worldly action was plain sailing. It was all amazingly petty, no doubt, but what was there remaining for me to do?

Whatever I did I was resolved that I would keep myself level and right side up.

I ordered up writing materials, and addressed a letter to the New Romney Bank - the nearest, the waiter informed me - telling the manager I wished to open an account with him, and requesting him to send two trustworthy persons properly authenticated in a cab with a good horse to fetch some hundredweight of gold with which I happened to be encumbered. I signed the letter "Blake," which seemed to me to be a thoroughly respectable sort of name. This done, I got a Folkstone Blue Book, picked out an outfitter, and asked him to send a cutter to measure me for a dark tweed suit, ordering at the same time a valise, dressing bag, brown boots, shirts, hat (to fit), and so forth; and from a watchmaker I also ordered a watch. And these letters being despatched, I had up as good a lunch as the hotel could give, and then lay smoking a cigar, as calm and ordinary as possible, until in accordance with my instructions two duly authenticated clerks came from the bank and weighed and took away my gold. After which I pulled the clothes over my ears in order to drown any knocking, and went very comfortably to sleep.

I went to sleep. No doubt it was a prosaic thing for the first man back from the moon to do, and I can imagine that the young and imaginative reader will find my behaviour disappointing. But I was horribly fatigued and bothered, and, confound it! what else was there to do? There certainly was not the remotest chance of my being believed, if I had told my story then, and it would certainly have subjected me to intolerable annoyances. I went to sleep. When at last I woke up again I was ready to face the world as I have always been accustomed to face it since I came to years of discretion. And so I got away to Italy, and there it is I am writing this story. If the world will not have it as fact, then the world may take it as fiction. It is no concern of mine.

And now that the account is finished, I am amazed to think how completely this adventure is gone and done with. Everybody believes that Cavor was a

not very brilliant scientific experimenter who blew up his house and himself at Lympne, and they explain the bang that followed my arrival at Littlestone by a reference to the experiments with explosives that are going on continually at the government establishment of Lydd, two miles away. I must confess that hitherto I have not acknowledged my share in the disappearance of Master Tommy Simmons, which was that little boy's name. That, perhaps, may prove a difficult item of corroboration to explain away. They account for my appearance in rags with two bars of indisputable gold upon the Littlestone beach in various ingenious ways - it doesn't worry me what they think of me. They say I have strung all these things together to avoid being questioned too closely as to the source of my wealth. I would like to see the man who could invent a story that would hold together like this one. Well, they must take it as fiction - there it is.

I have told my story - and now, I suppose, I have to take up the worries of this terrestrial life again. Even if one has been to the moon, one has still to earn a living. So I am working here at Amalfi, on the scenario of that play I sketched before Cavor came walking into my world, and I am trying to piece my life together as it was before ever I saw him. I must confess that I find it hard to keep my mind on the play when the moonshine comes into my room. It is full moon here, and last night I was out on the pergola for hours, staring away at the shining blankness that hides so much. Imagine it! tables and chairs, and trestles and bars of gold! Confound it! - if only one could hit on that Cavorite again! But a thing like that doesn't come twice in a life. Here I am, a little better off than I was at Lympne, and that is all. And Cavor has committed suicide in a more elaborate way than any human being ever did before. So the story closes as, finally and completely as a dream. It fits in so little with all the other things of life, so much of it is so utterly remote from all human experience, the leaping, the eating, the breathing, and these weightless times, that indeed there are moments when, in spite of my moon gold, I do more than half believe myself that the whole thing was a dream.

...

Chapter 22

The Astonishing Communication of Mr. Julius Wendigee

WHEN I had finished my account of my return to the earth at Littlestone, I wrote, "The End," made a flourish, and threw my pen aside, fully believing that the whole story of the First Men in the Moon was done. Not only had I done this, but I had placed my manuscript in the hands of a literary agent, had permitted it to be sold, had seen the greater portion of it appear in the Strand Magazine, and was setting to work again upon the scenario of the play I had commenced at Lympne before I realised that the end was not yet. And then, following me from Amalfi to Algiers, there reached me (it is now about six months ago) one of the most astounding communications I have ever been fated to receive. Briefly, it informed me that Mr. Julius Wendigee, a Dutch electrician, who has been experimenting with certain apparatus akin to the apparatus used by Mr. Tesla in America, in the hope of discovering some method of communication with Mars, was receiving day by day a curiously fragmentary message in English, which was indisputably emanating from Mr. Cavor in the moon.

At first I thought the thing was an elaborate practical by some one who had seen the manuscript of my narrative. I answered Mr. Wendigee jestingly, but he replied in a manner that put such suspicion altogether aside, and in a state of inconceivable excitement I hurried from Algiers to the little observatory upon the St. Gothard in which he was working. In the presence of his record and his appliances - and above all of the messages from Cavor that were coming to hand - my lingering doubts vanished. I decided at once to accept a proposal he made to me to remain with him, assisting him to take down the record from day to day, and endeavouring with him to send a message back to the moon. Cavor, we learnt, was not only alive, but free, in the midst of an almost inconceivable community of these ant-like beings, these ant-men, in the blue darkness of the lunar caves. He was lamed, it seemed, but otherwise

in quite good health - in better health, he distinctly said, than he usually enjoyed on earth. He had had a fever, but it had left no bad effects. But curiously enough he seemed to be labouring under a conviction that I was either dead in the moon crater or lost in the deep of space.

His message began to be received by Mr. Wendigee when that gentleman was engaged in quite a different investigation. The reader will no doubt recall the little excitement that began the century, arising out an announcement by Mr. Nikola Tesla, the American electrical celebrity, that he had received a message from Mars. His announcement renewed attention to fact that had long been familiar to scientific people, namely: that from some unknown source in space, waves of electromagnetic disturbance, entirely similar those used by Signor Marconi for his wireless telegraphy, are constantly reaching the earth. Besides Tesla quite a number of other observers have been engaged in perfecting apparatus for receiving and recording these vibrations, though few would go so far to consider them actual messages from some extraterrestrial sender. Among that few, however, we must certainly count Mr. Wendigee. Ever since 1898 he had devoted himself almost entirely to this subject, and being a man of ample means he had erected an observatory on the flanks of Monte Rosa, in a position singularly adapted in every way for such observations.

My scientific attainments, I must admit, are not great, but so far as they enable me to judge, Mr. Wendigee's contrivances for detecting and recording any disturbances in the electromagnetic conditions of space are singularly original and ingenious. And by a happy combination of circumstances they were set up and in operation about two months before Cavor made his first attempt to call up the earth. Consequently we have fragments of his communication even from the beginning. Unhappily, they are only fragments, and the most momentous of all the things that he had to tell humanity - the instructions, that is, for the making of Cavorite, if, indeed, he ever transmitted them - have throbbed themselves away unrecorded into space. We never succeeded in getting a response back to Cavor. He was unable to tell, therefore, what we had received or what we had missed; nor, indeed, did he certainly know that any one on earth was

really aware of his efforts to reach us. And the persistence he displayed in sending eighteen long descriptions of lunar affairs - as they would be if we had them complete - shows how much his mind must have turned back towards his native planet since he left it two years ago.

You can imagine how amazed Mr. Wendigee must have been when he discovered his record of electromagnetic disturbances interlaced by Cavor's straightforward English. Mr. Wendigee knew nothing of our wild journey moonward, and suddenly - this English out of the void!

It is well the reader should understand the conditions under which it would seem these messages were sent. Somewhere within the moon Cavor certainly had access for a time to a considerable amount of electrical apparatus, and it would seem he rigged up - perhaps furtively - a transmitting arrangement of the Marconi type. This he was able to operate at irregular intervals: sometimes for only half an hour or so, sometimes for three or four hours at a stretch. At these times he transmitted his earthward message, regardless of the fact that the relative position of the moon and points upon the earth's surface is constantly altering. As a consequence of this and of the necessary imperfections of our recording instruments his communication comes and goes in our records in an extremely fitful manner; it becomes blurred; it "fades out" in a mysterious and altogether exasperating way. And added to this is the fact that he was not an expert operator; he had partly forgotten, or never completely mastered, the code in general use, and as he became fatigued he dropped words and misspelt in a curious manner.

Altogether we have probably lost quite half of the communications he made, and much we have is damaged, broken, and partly effaced. In the abstract that follows the reader must be prepared therefore for a considerable amount of break, hiatus, and change of topic. Mr. Wendigee and I are collaborating in a complete and annotated edition of the Cavor record, which we hope to publish, together with a detailed account of the instruments employed, beginning with the first volume in January next.

That will be the full and scientific report, of which this is only the popular transcript. But here we give at least sufficient to complete the story I have told, and to give the broad outlines of the state of that other world so near, so akin, and yet so dissimilar to our own.

Chapter 23

An Abstract of the Six Messages First Received from Mr. Cavor

THE two earlier messages of Mr. Cavor may very well be reserved for that larger volume. They simply tell, with greater brevity and with a difference in several details that is interesting, but not of any vital importance, the bare facts of the making of the sphere and our departure from the world. Throughout, Cavor speaks of me as a man who is dead, but with a curious change of temper as he approaches our landing on the moon. "Poor Bedford," he says of me, and "this poor young man "; and he blames himself for inducing a young man, "by no means well equipped for such adventures," to leave a planet "on which he was indisputably fitted to succeed" on so precarious a mission. I think he underrates the part my energy and practical capacity played in bringing about the realisation of his theoretical sphere. "We arrived," he says, with no more account of our passage through space than if we had made a journey of common occurrence in a railway train.

And then he becomes increasingly unfair to me. Unfair, indeed, to an extent I should not have expected in a man trained in the search for truth. Looking back over my previously written account of these things, I must insist that I have been altogether juster to Cavor than he has been to me. I have extenuated little and suppressed nothing. But his account is:-

"It speedily became apparent that the entire strangeness of our circumstances and surroundings - great loss of weight, attenuated but

highly oxygenated air, consequent exaggeration of the results of muscular effort, rapid development of weird plants from obscure spores, lurid sky - was exciting my companion unduly. On the moon his character seemed to deteriorate. He became impulsive, rash, and quarrelsome. In a little while his folly in devouring some gigantic vesicles and his consequent intoxication led to our capture by the Selenites - before we had had the slightest opportunity of properly observing their ways. ..."

(He says, you observe, nothing of his own concession to these same "vesicles.")

And he goes on from that point to say that "We came to a difficult passage with them, and Bedford mistaking certain gestures of theirs" - pretty gestures they were! - "gave way to a panic violence. He ran amuck, killed three, and perforce I had to flee with him after the outrage. Subsequently we fought with a number who endeavoured to bar our way, and slew seven or eight more. It says much for the tolerance of these beings that on my recapture I was not instantly slain. We made our way to the exterior and separated in the crater of our arrival, to increase our chances of recovering our sphere. But presently I came upon a body of Selenites, led by two who were curiously different, even in form, from any of these we had seen hitherto, with larger heads and smaller bodies, and much more elaborately wrapped about. And after evading them for some time I fell into a crevasse, cut my head rather badly, and displaced my patella, and, finding crawling very painful, decided to surrender - if they would still permit me to do so. This they did, and, perceiving my helpless condition, carried me with them again into the moon. And of Bedford I have heard or seen nothing more, nor, so far as I can gather, any Selenite. Either the night overtook him in the crater, or else, which is more probable, he found the sphere, and, desiring to steal a march upon me, made off with it - only, I fear, to find it uncontrollable, and to meet a more lingering fate in outer space."

And with that Cavor dismisses me and goes on to more interesting topics. I dislike the idea of seeming to use my position as his editor to deflect

his story in my own interest, but I am obliged to protest here against the turn he gives these occurrences. He said nothing about that gasping message on the blood-stained paper in which he told, or attempted to tell, a very different story. The dignified self-surrender is an altogether new view of the affair that has come to him, I must insist, since he began to feel secure among the lunar people; and as for the "stealing a march" conception, I am quite willing to let the reader decide between us on what he has before him. I know I am not a model man - I have made no pretence to be. But am I that?

However, that is the sum of my wrongs. From this point I can edit Cavor with an untroubled mind, for he mentions me no more.

It would seem the Selenites who had come upon him carried him to some point in the interior down "a great shaft" by means of what he describes as "a sort of balloon." We gather from the rather confused passage in which he describes this, and from a number of chance allusions and hints in other and subsequent messages, that this "great shaft" is one of an enormous system of artificial shafts that run, each from what is called a lunar "crater," downwards for very nearly a hundred miles towards the central portion of our satellite. These shafts communicate by transverse tunnels, they throw out abysmal caverns and expand into great globular places; the whole of the moon's substance for a hundred miles inward, indeed, is a mere sponge of rock. "Partly," says Cavor, "this sponginess is natural, but very largely it is due to the enormous industry of the Selenites in the past. The enormous circular mounds of the excavated rock and earth it is that form these great circles about the tunnels known to earthly astronomers (misled by a false analogy) as volcanoes."

It was down this shaft they took him, in this "sort of balloon" he speaks of, at first into an inky blackness and then into a region of continually increasing phosphorescence. Cavor's despatches show him to be curiously regardless of detail for a scientific man, but we gather that this light was due to the streams and cascades of water - "no doubt containing some phosphorescent organism" - that flowed ever more abundantly downward

towards the Central Sea. And as he descended, he says, "The Selenites also became luminous." And at last far below him he saw, as it were, a lake of heatless fire, the waters of the Central Sea, glowing and eddying in strange perturbation, "like luminous blue milk that is just on the boil."

"This Lunar Sea," says Cavor, in a later passage "is not a stagnant ocean; a solar tide sends it in a perpetual flow around the lunar axis, and strange storms and boilings and rushings of its waters occur, and at times cold winds and thunderings that ascend out of it into the busy ways of the great ant-hill above. It is only when the water is in motion that it gives out light; in its rare seasons of calm it is black. Commonly, when one sees it, its waters rise and fall in an oily swell, and flakes and big rafts of shining, bubbly foam drift with the sluggish, faintly glowing current. The Selenites navigate its cavernous straits and lagoons in little shallow boats of a canoe-like shape; and even before my journey to the galleries about the Grand Lunar, who is Master of the Moon, I was permitted to make a brief excursion on its waters.

"The caverns and passages are naturally very tortuous. A large proportion of these ways are known only to expert pilots among the fishermen, and not infrequently Selenites are lost for ever in their labyrinths. In their remoter recesses, I am told, strange creatures lurk, some of them terrible and dangerous creatures that all the science of the moon has been unable to exterminate. There is particularly the Rapha, an inextricable mass of clutching tentacles that one hacks to pieces only to multiply; and the Tzee, a darting creature that is never seen, so subtly and suddenly does it slay..."

He gives us a gleam of description.

"I was reminded on this excursion of what I have read of the Mammoth Caves; if only I had had a yellow flambeau instead of the pervading blue light, and a solid-looking boatman with an oar instead of a scuttle-faced Selenite working an engine at the back of the canoe, I could have imagined I had suddenly got back to earth. The rocks about us were very various,

sometimes black, sometimes pale blue and veined, and once they flashed and glittered as though we had come into a mine of sapphires. And below one saw the ghostly phosphorescent fishes flash and vanish in the hardly less phosphorescent deep. Then, presently, a long ultra-marine vista down the turgid stream of one of the channels of traffic, and a landing stage, and then, perhaps, a glimpse up the enormous crowded shaft of one of the vertical ways.

"In one great place heavy with glistening stalactites a number of boats were fishing. We went alongside one of these and watched the long-armed Selenites winding in a net. They were little, hunchbacked insects, with very strong arms, short, bandy legs, and crinkled face-masks. As they pulled at it that net seemed the heaviest thing I had come upon in the moon; it was loaded with weights - no doubt of gold - and it took a long time to draw, for in those waters the larger and more edible fish lurk deep. The fish in the net came up like a blue moonrise - a blaze of darting, tossing blue.

"Among their catch was a many-tentaculate, evil-eyed black thing, ferociously active, whose appearance they greeted with shrieks and twitters, and which with quick, nervous movements they hacked to pieces by means of little hatchets. All its dissevered limbs continued to lash and writhe in a vicious manner. Afterwards, when fever had hold of me, I dreamt again and again of that bitter, furious creature rising so vigorous and active out of the unknown sea. It was the most active and malignant thing of all the living creatures I have yet seen in this world inside the moon. ...

"The surface of this sea must be very nearly two hundred miles (if not more) below the level of the moon's exterior; all the cities of the moon lie, I learnt, immediately above this Central Sea, in such cavernous spaces and artificial galleries as I have described, and they communicate with the exterior by enormous vertical shafts which open invariably in what are called by earthly astronomers the 'craters' of the moon. The lid covering one such aperture I had already seen during the wanderings that

had preceded my capture.

"Upon the condition of the less central portion of the moon I have not yet arrived at very precise knowledge. There is an enormous system of caverns in which the mooncalves shelter during the night; and there are abattoirs and the like - in one of these it was that I and Bedford fought with the Selenite butchers - and I have since seen balloons laden with meat descending out of the upper dark. I have as yet scarcely learnt as much of these things as a Zulu in London would learn about the British corn supplies in the same time. It is clear, however, that these vertical shafts and the vegetation of the surface must play an essential role in ventilating and keeping fresh the atmosphere of the moon. At one time, and particularly on my first emergence from my prison, there was certainly a cold wind blowing down the shaft, and later there was a kind of sirocco upward that corresponded with my fever. For at the end of about three weeks I fell ill of an indefinable sort of fever, and in spite of sleep and the quinine tabloids that very fortunately I had brought in my pocket, I remained ill and fretting miserably, almost to the time when I was taken into the presence of the Grand Lunar, who is Master of the Moon.

"I will not dilate on the wretchedness of my condition," he remarks, "during those days of ill-health." And he goes on with great amplitude with details I omit here. "My temperature," he concludes, "kept abnormally high for a long time, and I lost all desire for food. I had stagnant waking intervals, and sleep tormented by dreams, and at one phase I was, I remember, so weak as to be earth-sick and almost hysterical. I longed almost intolerably for colour to break the everlasting blue..."

He reverts again presently to the topic of this sponge caught lunar atmosphere. I am told by astronomers and physicists that all he tells is in absolute accord with what was already known of the moon's condition. Had earthly astronomers had the courage and imagination to push home a bold induction, says Mr. Wendigee, they might have foretold almost everything that Cavor has to say of the general structure of the moon. They know now pretty certainly that moon and earth are not so much

satellite and primary as smaller and greater sisters, made out of one mass, and consequently made of the same material. And since the density of the moon is only three-fifths that of the earth, there can be nothing for it but that she is hollowed out by a great system of caverns. There was no necessity, said Sir Jabez Flap, F.R.S., that most entertaining exponent of the facetious side of the stars, that we should ever have gone to the moon to find out such easy inferences, and points the pun with an allusion to Gruyere, but he certainly might have announced his knowledge of the hollowness of the moon before. And if the moon is hollow, then the apparent absence of air and water is, of course, quite easily explained. The sea lies within at the bottom of the caverns, and the air travels through the great sponge of galleries, in accordance with simple physical laws. The caverns of the moon, on the whole, are very windy places. As the sunlight comes round the moon the air in the outer galleries on that side is heated, its pressure increases, some flows out on the exterior and mingles with the evaporating air of the craters (where the plants remove its carbonic acid), while the greater portion flows round through the galleries to replace the shrinking air of the cooling side that the sunlight has left. There is, therefore, a constant eastward breeze in the air of the outer galleries, and an upflow during the lunar day up the shafts, complicated, of course, very greatly by the varying shape of the galleries, and the ingenious contrivances of the Selenite mind. ...

Chapter 24

The Natural History of the Selenites

THE messages of Cavor from the sixth up to the sixteenth are for the most part so much broken, and they abound so in repetitions, that they scarcely form a consecutive narrative. They will be given in full, of course, in the scientific report, but here it will be far more convenient to continue simply to abstract and quote as in the former chapter. We have subjected every word to a keen critical scrutiny, and my own brief memories and

impressions of lunar things have been of inestimable help in interpreting what would otherwise have been impenetrably dark. And, naturally, as living beings, our interest centres far more upon the strange community of lunar insects in which he was living, it would seem, as an honoured guest than upon the mere physical condition of their world.

I have already made it clear, I think, that the Selenites I saw resembled man in maintaining the erect attitude, and in having four limbs, and I have compared the general appearance of their heads and the jointing of their limbs to that of insects. I have mentioned, too, the peculiar consequence of the smaller gravitation of the moon on their fragile slightness. Cavor confirms me upon all these points. He calls them "animals," though of course they fall under no division of the classification of earthly creatures, and he points out "the insect type of anatomy had, fortunately for men, never exceeded a relatively very small size on earth." The largest terrestrial insects, living or extinct, do not, as a matter of fact, measure 6 in. in length; "but here, against the lesser gravitation of the moon, a creature certainly as much an insect as vertebrate seems to have been able to attain to human and ultra-human dimensions."

He does not mention the ant, but throughout his allusions the ant is continually being brought before my mind, in its sleepless activity, in its intelligence and social organisation, in its structure, and more particularly in the fact that it displays, in addition to the two forms, the male and the female form, that almost all other animals possess, a number of other sexless creatures, workers, soldiers, and the like, differing from one another in structure, character, power, and use, and yet all members of the same species. For these Selenites, also, have a great variety of forms. Of course, they are not only colossally greater in size than ants, but also, in Cavor's opinion at least, in intelligence, morality, and social wisdom are they colossally greater than men. And instead of the four or five different forms of ant that are found, there are almost innumerable different forms of Selenite. I had endeavoured to indicate the very considerable difference observable in such Selenites of

the outer crust as I happened to encounter; the differences in size and proportions were certainly as wide as the differences between the most widely separated races of men. But such differences as I saw fade absolutely to nothing in comparison with the huge distinctions of which Cavor tells. It would seem the exterior Selenites I saw were, indeed, mostly engaged in kindred occupations - mooncalf herds, butchers, fleshers, and the like. But within the moon, practically unsuspected by me, there are, it seems, a number of other sorts of Selenite, differing in size, differing in the relative size of part to part, differing in power and appearance, and yet not different species of creatures, but only different forms of one species, and retaining through all their variations a certain common likeness that marks their specific unity. The moon is, indeed, a sort of vast ant-hill, only, instead of there being only four or five sorts of ant, there are many hundred different sorts of Selenite, and almost every gradation between one sort and another.

It would seem the discovery came upon Cavor very speedily. I infer rather than learn from his narrative that he was captured by the mooncalf herds under the direction of these other Selenites who "have larger brain cases (heads?) and very much shorter legs." Finding he would not walk even under the goad, they carried him into darkness, crossed a narrow, plank-like bridge that may have been the identical bridge I had refused, and put him down in something that must have seemed at first to be some sort of lift. This was the balloon - it had certainly been absolutely invisible to us in the darkness - and what had seemed to me a mere plank-walking into the void was really, no doubt, the passage of the gangway. In this he descended towards constantly more luminous caverns of the moon. At first they descended in silence - save for the twitterings of the Selenites - and then into a stir of windy movement. In a little while the profound blackness had made his eyes so sensitive that he began to see more and more of the things about him, and at last the vague took shape.

"Conceive an enormous cylindrical space," says Cavor, in his seventh message, "a quarter of a mile across, perhaps; very dimly lit at first and then brighter, with big platforms twisting down its sides in a spiral

that vanishes at last below in a blue profundity; and lit even more brightly - one could not tell how or why. Think of the well of the very largest spiral staircase or lift-shaft that you have ever looked down, and magnify that by a hundred. Imagine it at twilight seen through blue glass. Imagine yourself looking down that; only imagine also that you feel extraordinarily light, and have got rid of any giddy feeling you might have on earth, and you will have the first conditions of my impression. Round this enormous shaft imagine a broad gallery running in a much steeper spiral than would be credible on earth, and forming a steep road protected from the gulf only by a little parapet that vanishes at last in perspective a couple of miles below.

"Looking up, I saw the very fellow of the downward vision; it had, of course, the effect of looking into a very steep cone. A wind was blowing down the shaft, and far above I fancy I heard, growing fainter and fainter, the bellowing of the mooncalves that were being driven down again from their evening pasturage on the exterior. And up and down the spiral galleries were scattered numerous moon people, pallid, faintly luminous beings, regarding our appearance or busied on unknown errands.

"Either I fancied it or a flake of snow came drifting down on the icy breeze. And then, falling like a snowflake, a little figure, a little man-insect, clinging to a parachute, drove down very swiftly towards the central places of the moon.

"The big-headed Selenite sitting beside me, seeing me move my head with the gesture of one who saw, pointed with his trunk-like 'hand' and indicated a sort of jetty coming into sight very far below: a little landing-stage, as it were, hanging into the void. As it swept up towards us our pace diminished very rapidly, and in a few moments, as it seemed, we were abreast of it, and at rest. A mooring-rope was flung and grasped, and I found myself pulled down to a level with a great crowd of Selenites, who jostled to see me.

"It was an incredible crowd. Suddenly and violently there was forced upon

my attention the vast amount of difference there is amongst these beings of the moon.

"Indeed, there seemed not two alike in all that jostling multitude. They differed in shape, they differed in size, they rang all the horrible changes on the theme of Selenite form! Some bulged and overhung, some ran about among the feet of their fellows. All of them had a grotesque and disquieting suggestion of an insect that has somehow contrived to mock humanity; but all seemed to present an incredible exaggeration of some particular feature: one had a vast right fore-limb, an enormous antennal arm, as it were; one seemed all leg, poised, as it were, on stilts; another protruded the edge of his face mask into a nose-like organ that made him startlingly human until one saw his expressionless gaping mouth. The strange and (except for the want of mandibles and palps) most insect-like head of the mooncalf-minders underwent, indeed, the most incredible transformations: here it was broad and low, here high and narrow; here its leathery brow was drawn out into horns and strange features; here it was whiskered and divided, and there with a grotesquely human profile. One distortion was particularly conspicuous. There were several brain cases distended like bladders to a huge size, with the face mask reduced to quite small proportions. There were several amazing forms, with heads reduced to microscopic proportions and blobby bodies; and fantastic, flimsy things that existed, it would seem, only as a basis for vast, trumpet-like protrusions of the lower part of the mask. And oddest of all, as it seemed to me for the moment, two or three of these weird inhabitants of a subterranean world, a world sheltered by innumerable miles of rock from sun or rain, carried umbrellas in their tentaculate hands - real terrestrial looking umbrellas! And then I thought of the parachutist I had watched descend.

"These moon people behaved exactly as a human crowd might have done in similar circumstances: they jostled and thrust one another, they shoved one another aside, they even clambered upon one another to get a glimpse of me. Every moment they increased in numbers, and pressed more urgently upon the discs of my ushers" - Cavor does not explain what he means by

this - "every moment fresh shapes emerged from the shadows and forced themselves upon my astounded attention. And presently I was signed and helped into a sort of litter, and lifted up on the shoulders of strong-armed bearers, and so borne through the twilight over this seething multitude towards the apartments that were provided for me in the moon. All about me were eyes, faces, masks, a leathery noise like the rustling of beetle wings, and a great bleating and cricket-like twittering of Selenite voices.

We gather he was taken to a "hexagonal apartment," and there for a space he was confined. Afterwards he was given a much more considerable liberty; indeed, almost as much freedom as one has in a civilised town on earth. And it would appear that the mysterious being who is the ruler and master of the moon appointed two Selenites "with large heads" to guard and study him, and to establish whatever mental communications were possible with him. And, amazing and incredible as it may seem, these two creatures, these fantastic men insects, these beings of other world, were presently communicating with Cavor by means of terrestrial speech.

Cavor speaks of them as Phi-oo and Tsi-puff. Phi-oo, he says, was about 5 ft. high; he had small slender legs about 18 in. long, and slight feet of the common lunar pattern. On these balanced a little body, throbbing with the pulsations of his heart. He had long, soft, many-jointed arms ending in a tentacled grip, and his neck was many-jointed in the usual way, but exceptionally short and thick. His head, says Cavor - apparently alluding to some previous description that has gone astray in space - "is of the common lunar type, but strangely modified. The mouth has the usual expressionless gape, but it is unusually small and pointing downward, and the mask is reduced to the size of a large flat nose-flap. On either side are the little eyes.

"The rest of the head is distended into a huge globe and the chitinous leathery cuticle of the mooncalf herds thins out to a mere membrane, through which the pulsating brain movements are distinctly visible. He in is a creature, indeed, with a tremendously hypertrophied brain, and with

the rest of his organism both relatively and absolutely dwarfed."

In another passage Cavor compares the back view of him to Atlas supporting the world. Tsi-puff it seems was a very similar insect, but his "face" was drawn out to a considerable length, and the brain hypertrophy being in different regions, his head was not round but pear-shaped, with the stalk downward. There were also litter-carriers, lopsided beings, with enormous shoulders, very spidery ushers, and a squat foot attendant in Cavor's retinue.

The manner in which Phi-oo and Tsi-puff attacked the problem of speech was fairly obvious. They came into this " hexagonal cell" in which Cavor was confined, and began imitating every sound he made, beginning with a cough. He seems to have grasped their intention with great quickness, and to have begun repeating words to them and pointing to indicate the application. The procedure was probably always the same. Phi-oo would attend to Cavor for a space, then point also and say the word he had heard.

The first word he mastered was "man," and the second "Mooney" - which Cavor on the spur of the moment seems to have used instead of "Selenite" for the moon race. As soon as Phi-oo was assured of the meaning of a word he repeated it to Tsi-puff, who remembered it infallibly. They mastered over one hundred English nouns at their first session.

Subsequently it seems they brought an artist with them to assist the work of explanation with sketches and diagrams - Cavor's drawings being rather crude. he was, says Cavor, "a being with an active arm and an arresting eye," and he seemed to draw with incredible swiftness.

The eleventh message is undoubtedly only a fragment of a longer communication. After some broken sentences, the record of which is unintelligible, it goes on:-

"But it will interest only linguists, and delay me too long, to give the details of the series of intent parleys of which these were the beginning,

and, indeed, I very much doubt if I could give in anything like the proper order all the twistings and turnings that we made in our pursuit of mutual comprehension. Verbs were soon plain sailing - at least, such active verbs as I could express by drawings; some adjectives were easy, but when it came to abstract nouns, to prepositions, and the sort of hackneyed figures of speech, by means of which so much is expressed on earth, it was like diving in cork-jackets. Indeed, these difficulties were insurmountable until to the sixth lesson came a fourth assistant, a being with a huge football-shaped head, whose forte was clearly the pursuit of intricate analogy. He entered in a preoccupied manner, stumbling against a stool, and the difficulties that arose had to be presented to him with a certain amount of clamour and hitting and pricking before they reached his apprehension. But once he was involved his penetration was amazing. Whenever there came a need of thinking beyond Phi-oo's by no means limited scope, this prolate-headed person was in request, but he invariably told the conclusion to Tsi-puff, in order that it might be remembered; Tsi-puff was ever the arsenal for facts. And so we advanced again.

"It seemed long and yet brief - a matter of days - before I was positively talking with these insects of the moon. Of course, at first it was an intercourse infinitely tedious and exasperating, but imperceptibly it has grown to comprehension. And my patience has grown to meet its limitations, Phi-oo it is who does all the talking. He does it with a vast amount of meditative provisional 'M'm-M'm' and has caught up one or two phrases, 'If I may say,' 'If you understand,' and beads all his speech with them.

"Thus he would discourse. Imagine him explaining his artist.

"'M'm-M'm - he - if I may say - draw. Eat little - drink little - draw. Love draw. No other thing. Hate all who not draw like him. Angry. Hate all who draw like him better. Hate most people. Hate all who not think all world for to draw. Angry. M'm. All things mean nothing to him - only draw. He like you ... if you understand. ... New thing to draw. Ugly - striking. Eh?

"'He' - turning to Tsi-puff - 'love remember words. Remember wonderful more than any. Think no, draw no - remember. Say' - here he referred to his gifted assistant for a word - 'histories - all things. He hear once - say ever.'

"It is more wonderful to me than I dreamt that anything ever could be again, to hear, in this perpetual obscurity, these extraordinary creatures - for even familiarity fails to weaken the inhuman effect of their appearance - continually piping a nearer approach to coherent earthly speech - asking questions, giving answers. I feel that I am casting back to the fable-hearing period of childhood again, when the ant and the grasshopper talked together and the bee judged between them..."

And while these linguistic exercises were going on Cavor seems to have experienced a considerable relaxation of his confinement. "The first dread and distrust our unfortunate conflict aroused is being," he said, "continually effaced by the deliberate rationality of all I do." ... "I am now able to come and go as I please, or I am restricted only for my own good. So it is I have been able to get at this apparatus, and, assisted by a happy find among the material that is littered in this enormous store-cave, I have contrived to despatch these messages. So far not the slightest attempt has been made to interfere with me in this, though I have made it quite clear to Phi-oo that I am signalling to the earth.

"'You talk to other?' he asked, watching me.

"'Others,' said I.

"'Others,' he said. 'Oh yes, Men?'

"And I went on transmitting."

Cavor was continually making corrections in his previous accounts of the Selenites as fresh facts flowed upon him to modify his conclusions, and accordingly one gives the quotations that follow with a certain amount of

reservation. They are quoted from the ninth, thirteenth, and sixteenth messages, and, altogether vague and fragmentary as they are, they probably give as complete a picture of the social life of this strange community as mankind can now hope to have for many generations.

"In the moon," says Cavor, "every citizen knows his place. He is born to that place, and the elaborate discipline of training and education and surgery he undergoes fits him at last so completely to it that he has neither ideas nor organs for any purpose beyond it. 'Why should he?' Phi-oo would ask. If, for example, a Selenite is destined to be a mathematician, his teachers and trainers set out at once to that end. They check any incipient disposition to other pursuits, they encourage his mathematical bias with a perfect psychological skill. His brain grows, or at least the mathematical faculties of his brain grow, and the rest of him only so much as is necessary to sustain this essential part of him. At last, save for rest and food, his one delight lies in the exercise and display of his facility, his one interest in its application, his sole society with other specialists in his own line. His brain glows continually larger, at least so far as the portions engaging in mathematics are concerned; they bulge ever larger and seem to suck all life and vigour from the rest of his frame. His limbs shrivel, his heart and digestive organs diminish, his insect face is hidden under its bulging contours. His voice becomes a mere stridulation for the stating of formula; he seems deaf to all but properly enunciated problems. The faculty of laughter, save for the sudden discovery of some paradox, is lost to him; his deepest emotion is the evolution of a novel computation. And so he attains his end.

"Or, again, a Selenite appointed to be a minder of mooncalves is from his earliest years induced to think and live mooncalf, to find his pleasure in mooncalf lore, his exercise in their tending and pursuit. He is trained to become wiry and active, his eye is indurated to the tight wrappings, the angular contours that constitute a 'smart mooncalfishness.' He takes at last no interest in the deeper part of the moon; he regards all Selenites not equally versed in mooncalves with indifference, derision, or

hostility. His thoughts are of mooncalf pastures, and his dialect an accomplished mooncalf technique. So also he loves his work, and discharges in perfect happiness the duty that justifies his being. And so it is with all sorts and conditions of Selenites - each is a perfect unit in a world machine....

"These beings with big heads, on whom the intellectual labours fall, form a sort of aristocracy in this strange society, and at the head of them, quintessential of the moon, is that marvellous gigantic ganglion the Grand Lunar, into whose presence I am finally to come. The unlimited development of the minds of the intellectual class is rendered possible by the absence of any body skull in the lunar anatomy, that strange box of bone that clamps about the developing brain of man, imperiously insisting 'thus far and no farther' to all his possibilities. They fall into three main classes differing greatly in influence and respect. There are administrators, of whom Phi-oo is one, Selenites of considerable initiative and versatility, responsible each for a certain cubic content of the moon's bulk; the experts like the football-headed thinker, who are trained to perform certain special operations; and the erudite, who are the repositories of all knowledge. To the latter class belongs Tsi-puff, the first lunar professor of terrestrial languages. With regard to these latter, it is a curious little thing to note that the unlimited growth of the lunar brain has rendered unnecessary the invention of all those mechanical aids to brain work which have distinguished the career of man. There are no books, no records of any sort, no libraries or inscriptions. All knowledge is stored in distended brains much as the honey-ants of Texas store honey in their distended abdomens. The lunar Somerset House and the lunar British Museum Library are collections of living brains...

"The less specialised administrators, I note, do for the most part take a very lively interest in me whenever they encounter me. They will come out of the way and stare at me and ask questions to which Phi-oo will reply. I see them going hither and thither with a retinue of bearers, attendants, shouters, parachute-carriers, and so forth - queer groups to see. The experts for the most part ignore me completely, even as they ignore each

other, or notice me only to begin a clamorous exhibition of their distinctive skill. The erudite for the most part are rapt in an impervious and apoplectic complacency, from which only a denial of their erudition can rouse them. Usually they are led about by little watchers and attendants, and often there are small and active-looking creatures, small females usually, that I am inclined to think are a sort of wife to them; but some of the profounder scholars are altogether too great for locomotion, and are carried from place to place in a sort of sedan tub, wabbling jellies of knowledge that enlist my respectful astonishment. I have just passed one in coming to this place where I am permitted to amuse myself with these electrical toys, a vast, shaven, shaky head, bald and thin-skinned, carried on his grotesque stretcher. In front and behind came his bearers, and curious, almost trumpet-faced, news disseminators shrieked his fame.

"I have already mentioned the retinues that accompany most of the intellectuals: ushers, bearers, valets, extraneous tentacles and muscles, as it were, to replace the abortive physical powers of these hypertrophied minds. Porters almost invariably accompany them. There are also extremely swift messengers with spider-like legs and 'hands' for grasping parachutes, and attendants with vocal organs that could well nigh wake the dead. Apart from their controlling intelligence these subordinates are as inert and helpless as umbrellas in a stand. They exist only in relation to the orders they have to obey, the duties they have to perform.

"The bulk of these insects, however, who go to and fro upon the spiral ways, who fill the ascending balloons and drop past me clinging to flimsy parachutes are, I gather, of the operative class. 'Machine hands,' indeed, some of these are in actual nature - it is not figure of speech, the single tentacle of the mooncalf herd is profoundly modified for clawing, lifting, guiding, the rest of them no more than necessary subordinate appendages to these important mechanisms, have enormously developed auditory organs; some whose work lies in delicate chemical operations project a vast olfactory organ; others again have flat feet for treadles with ankylosed joints; and others - who I have been told are glassblowers

- seem mere lung-bellows. but every one of these common Selenites I have seen at work is exquisitely adapted to the social need it meets. Fine work is done by fined-down workers, amazingly dwarfed and neat. Some I could hold on the palm of my hand. There is even a sort of turnspit Selenite, very common, whose duty and only delight it is to apply the motive power for various small appliances. And to rule over these things and order any erring tendency there might be in some aberrant natures are the most muscular beings I have seen in the moon, a sort of lunar police, who must have been trained from their earliest years to give a perfect respect and obedience to the swollen heads.

"The making of these various sorts of operative must be a very curious and interesting process. I am very much in the dark about it, but quite recently I came upon a number of young Selenites confined in jars from which only the fore-limbs protruded, who were being compressed to become machine-minders of a special sort. The extended 'hand' in this highly developed system of technical education is stimulated by irritants and nourished by injection, while the rest of the body is starved. Phi-oo, unless I misunderstood him, explained that in the earlier stages these queer little creatures are apt to display signs of suffering in their various cramped situations, but they easily become indurated to their lot; and he took me on to where a number of flexible-minded messengers were being drawn out and broken in. It is quite unreasonable, I know, but such glimpses of the educational methods of these beings affect me disagreeably. I hope, however, that may pass off, and I may be able to see more of this aspect of their wonderful social order. That wretched-looking hand-tentacle sticking out of its jar seemed to have a sort of limp appeal for lost possibilities; it haunts me still, although, of course it is really in the end a far more humane proceeding than our earthly method of leaving children to grow into human beings, and then making machines of them.

"Quite recently, too - I think it was on the eleventh or twelfth visit I made to this apparatus - I had a curious light upon the lives of these operatives. I was being guided through a short cut hither, instead of

going down the spiral, and by the quays to the Central Sea. From the devious windings of a long, dark gallery, we emerged into a vast, low cavern, pervaded by an earthy smell, and as things go in this darkness, rather brightly lit. The light came from a tumultuous growth of livid fungoid shapes - some indeed singularly like our terrestrial mushrooms, but standing as high or higher than a man.

"Mooneys eat these?' said I to Phi-oo.

"Yes, food.'

"Goodness me!' I cried; 'what's that?'

"My eye had just caught the figure of an exceptionally big and ungainly Selenite lying motionless among the stems, face downward. We stopped.

"Dead?' I asked. (For as yet I have seen no dead the moon, and I have grown curious.)

"No!' exclaimed Phi-oo. 'Him - worker - no work to do. Get little drink then - make sleep - till we him want. What good him wake, eh? No want him walking about.'

"There's another!' cried I.

"And indeed all that huge extent of mushroom ground was, I found, peppered with these prostrate figures sleeping under an opiate until the moon had need of them. There were scores of them of all sorts, and we were able to turn over some of them, and examine them more precisely than I had been able to previously. They breathed noisily at my doing so, but did not wake. One, I remember very distinctly: he left a strong impression, I think, because some trick the light and of his attitude was strongly suggestive a drawn-up human figure. His fore-limbs were long, delicate tentacles - he was some kind of refined manipulator - and the pose of his slumber suggested a submissive suffering. No doubt it was a mistake for to

interpret his expression in that way, but I did. And as Phi-oo rolled him over into the darkness among the livid fleshiness again I felt a distinctly unpleasant sensation, although as he rolled the insect in him was confessed.

"It simply illustrates the unthinking way in which one acquires habits of feeling. To drug the worker one does not want and toss him aside is surely far better than to expel him from his factory to wander starving in the streets. In every complicated social community there is necessarily a certain intermittency of employment for all specialised labour, and in this way the trouble of an 'unemployed' problem is altogether anticipated. And yet, so unreasonable are even scientifically trained minds, I still do not like the memory of those prostrate forms amidst those quiet, luminous arcades of fleshy growth, and I avoid that short cut in spite of the inconveniences of the longer, more noisy, and more crowded alternative.

"My alternative route takes me round by a huge, shadowy cavern, very crowded and clamorous, and here it is I see peering out of the hexagonal openings of a sort of honeycomb wall, or parading a large open space behind, 01 selecting the toys and amulets made to please them by the dainty-tentacled jewellers who work in kennels below, the mothers of the moon world - the queen bees, as it were, of the hive. They are noble-looking beings, fantastically and sometimes quite beautifully adorned, with a proud carriage, and, save for their mouths, almost microscopic heads.

"Of the condition of the moon sexes, marrying and giving in marriage, and of birth and so forth among the Selenites, I have as yet been able to learn very little. With the steady progress of Phi-oo in English, however, my ignorance will no doubt as steadily disappear. I am of opinion that, as with the ants and bees, there is a large majority of the members in this community of the neuter sex. Of course on earth in our cities there are now many who never live that life of parentage which is the natural life of man. Here, as with the ants, this thing has become a normal condition of the race, and the whole of such eplacement as is necessary falls upon

this special and by no means numerous class of matrons, the mothers of the moon-world, large and stately beings beautifully fitted to bear the larval Selenite. Unless I misunderstand an explanation of Phi-oo's, they are absolutely incapable of cherishing the young they bring into the moon; periods of foolish indulgence alternate with moods of aggressive violence, and as soon as possible the little creatures, who are quite soft and flabby and pale coloured, are transferred to the charge of celibate females, women 'workers' as it were, who in some cases possess brains of almost masculine dimensions."

Just at this point, unhappily, this message broke off. Fragmentary and tantalising as the matter constituting this chapter is, it does nevertheless give a vague, broad impression of an altogether strange and wonderful world - a world with which our own may have to reckon we know not how speedily. This intermittent trickle of messages, this whispering of a record needle in the stillness of the mountain slopes, is the first warning of such a change in human conditions as mankind has scarcely imagined heretofore. In that satellite of ours there are new elements, new appliances, traditions, an overwhelming avalanche of new ideas, a strange race with whom we must inevitably struggle for mastery - gold as common as iron or wood...

Chapter 25

The Grand Lunar

THE penultimate message describes, with occasionally elaborate detail, the encounter between Cavor and the Grand Lunar, who is the ruler or master of the moon. Cavor seems to have sent most of it without interference, but to have been interrupted in the concluding portion. The second came after an interval of a week.

The first message begins: "At last I am able to resume this" it then

becomes illegible for a space, and after a time resumed in mid-sentence.

The missing words of the following sentence are probably "the crowd."
There follows quite clearly: "grew ever denser as we drew near the palace of the Grand Lunar - if I may call a series of excavations a palace.

Everywhere faces stared at me - blank, chitinous gapes and masks, eyes peering over tremendous olfactory developments, eyes beneath monstrous forehead plates; and undergrowth of smaller creatures dodged and yelped, and helmet faces poised on sinuous, long-jointed necks appeared craning over shoulders and beneath armpits. Keeping a welcome space about me marched a cordon of stolid, scuttle-headed guards, who had joined us on our leaving the boat in which we had come along the channels of the Central Sea. The quick-eyed artist with the little brain joined us also, and a thick bunch of lean porter-insects swayed and struggled under the multitude of conveniences that were considered essential to my state. I was carried in a litter during the final stage of our journey. This litter was made of some very ductile metal that looked dark to me, meshed and woven, and with bars of paler metal, and about me as I advanced there grouped itself a long and complicated procession.

"In front, after the manner of heralds, marched four trumpet-faced creatures making a devastating bray; and then came squat, resolute-moving ushers before and behind, and on either hand a galaxy of learned heads, a sort of animated encyclopedia, who were, Phi-oo explained, to stand about the Grand Lunar for purposes of reference. (Not a thing in lunar science, not a point of view or method of thinking, that these wonderful beings did not carry in their heads!) Followed guards and porters, and then Phi-oo's shivering brain borne also on a litter. Then came Tsi-puff in a slightly less important litter; then myself on a litter of greater elegance than any other, and surrounded by my food and drink attendants. More trumpeters came next, splitting the ear with vehement outcries, and then several big brains, special correspondents one might well call them, or historiographers, charged with the task of observing and remembering every detail of this epoch-making interview. A company of attendants, bearing and dragging banners and masses of scented fungus and curious symbols,

vanished in the darkness behind. The way was lined by ushers and officers in caparisons that gleamed like steel, and beyond their line, so far as my eyes could pierce the gloom, the heads of that enormous crowd extended.

"I will own that I am still by no means indurated. to the peculiar effect of the Selenite appearance, and to find myself, as it were, adrift on this broad sea of excited entomology was by no means agreeable. Just for a space I had something very like what I should imagine people mean when they speak of the 'horrors.' It had come to me before in these lunar caverns, when on occasion I have found myself weaponless and with an undefended back, amidst a crowd of these Selenites, but never quite so vividly. It is, of course, as absolutely irrational a feeling as one could well have, and I hope gradually to subdue it. But just for a moment, as I swept forward into the welter of the vast crowd, it was only by gripping my litter tightly and summoning all my will-power that I succeeded in avoiding an outcry or some such manifestation. It lasted perhaps three I minutes; then I had myself in hand again.

"We ascended the spiral of a vertical way for some time, and then passed through a series of huge halls dome-roofed and elaborately decorated. The approach to the Grand Lunar was certainly contrived to give one a vivid impression of his greatness. Each cavern one entered seemed greater and more boldly arched than its predecessor. This effect of progressive size was enhanced by a thin haze of faintly phosphorescent blue incense that thickened as one advanced, and robbed even the nearer figures of clearness. I seemed to advance continually to something larger, dimmer, and less material.

"I must confess that all this multitude made me feel extremely shabby and unworthy. I was unshaven and unkempt; I had brought no razor; I had a coarse beard over my mouth. On earth I have always been inclined to despise any attention to my person beyond a proper care for cleanliness; but under the exceptional circumstances in which I found myself, representing, as I did, my planet and my kind, and depending very largely upon the attractiveness of my appearance for a proper reception, I could

have given much for something a little more artistic and dignified than the husks I wore. I had been so serene in the belief that the moon was uninhabited as to overlook such precautions altogether. As it was I was dressed in a flannel jacket, knickerbockers, and golfing stockings, stained with every sort of dirt the moon offered, slippers (of which the left heel was wanting), and a blanket, through a hole in which I thrust my head. (These clothes, indeed, I still wear.) Sharp bristles are anything but an improvement to my cast of features, and there was an unmended tear at the knee of my knickerbockers that showed conspicuously as I squatted in my litter; my right stocking, too persisted in getting about my ankle. I am fully alive to the injustice my appearance did humanity, and if by any expedient I could have improvised something a little out of the way and imposing I would have done so. But I could hit upon nothing. I did what I could with my blanket - folding it somewhat after the fashion of a toga, and for the rest I sat as upright as the swaying of my litter permitted.

"Imagine the largest hall you have ever been in, imperfectly lit with blue light and obscured by a gray-blue fog, surging with metallic or livid-gray creatures of such a mad diversity as I have hinted. Imagine this hall to end in an open archway beyond which is a still larger hall, and beyond this yet another and still larger one, and so on. At the end of the vista, dimly seen, a flight of steps, like the steps of Ara Coeli at Rome, ascend out of sight. Higher and higher these steps appear to go as one draws nearer their base. But at last I came under a huge archway and beheld the summit of these steps, and upon it the Grand Lunar exalted on his throne.

" He was seated in what was relatively a blaze of incandescent blue. This, and the darkness about him gave him an effect of floating in a blue-black void. He seemed a small, self-luminous cloud at first, brooding on his sombre throne; his brain case must have measured many yards in diameter. For some reason that I cannot fathom a number of blue search-lights radiated from behind the throne on which he sat, and immediately encircling him was a halo. About him, and little and indistinct in this glow, a number of body-servants sustained and supported him, and

overshadowed and standing in a huge semicircle beneath him were his intellectual subordinates, his remembrancers and computators and searchers and servants, and all the distinguished insects of the court of the moon. Still lower stood ushers and messengers, and then all down the countless steps of the throne were guards, and at the base, enormous, various, indistinct, vanishing at last into an absolute black, a vast swaying multitude of the minor dignitaries of the moon. Their feet made a perpetual scraping whisper on the rocky floor, as their limbs moved with a rustling murmur.

"As I entered the penultimate hall the music rose and expanded into an imperial magnificence of sound, and the shrieks of the news-bearers died away. ...

"I entered the last and greatest hall....

"My procession opened out like a fan. My ushers and guards went right and left, and the three litters bearing myself and Phi-oo and Tsi-puff marched across a shiny darkness of floor to the foot of the giant stairs. Then began a vast throbbing hum, that mingled with the music. The two Selenites dismounted, but I was bidden remain seated - I imagine as a special honour. The music ceased, but not that humming, and by a simultaneous movement of ten thousand respectful heads my attention was directed to the enhaloed supreme intelligence that hovered above me.

"At first as I peered into the radiating glow this quintessential brain looked very much like an opaque, featureless bladder with dim, undulating ghosts of convolutions writhing visibly within. Then beneath its enormity and just above the edge of the throne one saw with a start minute elfin eyes peering out of the glow. No face, but eyes, as if they peered through holes. At first I could see no more than these two staring little eyes, and then below I distinguished the little dwarfed body and its insect-jointed limbs shrivelled and white. The eyes stared down at me with a strange intensity, and the lower part of the swollen globe was wrinkled. Ineffectual-looking little hand-tentacles steadied this shape on the

throne. ...

"It was great. It was pitiful. One forgot the hall and the crowd.

"I ascended the staircase by jerks. It seemed to me that this darkly glowing brain case above us spread over me, and took more and more of the whole effect into itself as I drew nearer. The tiers of attendants and helpers grouped about their master seemed to dwindle and fade into the night. I saw that shadowy attendants were busy spraying that great brain with a cooling spray, and patting and sustaining it. For my own part, I sat gripping my swaying litter and staring at the Grand Lunar, unable to turn my gaze aside. And at last, as I reached a little landing that was separated only by ten steps or so from the supreme seat, the woven splendour of the music reached a climax and ceased, and I was left naked, as it were, in that vastness, beneath the still scrutiny of the Grand Lunar's eyes.

"He was scrutinising the first man he had ever seen. ...

"My eyes dropped at last from his greatness to the ant figures in the blue mist about him, and then down the steps to the massed Selenites, still and expectant in their thousands, packed on the floor below. Once again an unreasonable horror reached out towards me. ... And passed.

"After the pause came the salutation. I was assisted from my litter, and stood awkwardly while a number of curious and no doubt deeply symbolical gestures were vicariously performed for me by two slender officials. The encyclopaedic galaxy of the learned that had accompanied me to the entrance of the last hall appeared two steps above me and left and right of me, in readiness for the Grand Lunar's need, and Phi-oo's pale brain placed itself about half-way up to the throne in such a position as to communicate easily between us without turning his back on either the Grand Lunar or myself. Tsi-puff took up position behind him. Dexterous ushers sidled sideways towards me, keeping a full face to the Presence. I seated myself Turkish fashion, and Phi-oo and Tsi-puff also knelt down above me.

There came a pause. The eyes of the nearer court went from me to the Grand Lunar and came back to me, and a hissing and piping of expectation passed across the hidden multitudes below and ceased.

"That humming ceased.

"For the first and last time in my experience the moon was silent.

"I became aware of a faint wheezy noise. The Grand Lunar was addressing me. It was like the rubbing of a finger upon a pane of glass.

"I watched him attentively for a time, and then glanced at the alert Phi-oo. I felt amidst these slender beings ridiculously thick and fleshy and solid; my head all jaw and black hair. My eyes went back to the Grand Lunar. He had ceased; his attendants were busy, and his shining superficies was glistening and running with cooling spray.

"Phi-oo meditated through an interval. He consulted Tsi-puff. Then he began piping his recognisable English - at first a little nervously, so that he was not very clear.

"'M'm - the Grand Lunar - wishes to say - wishes to say - he gathers you are - m'm - men - that you are a man from the planet earth. He wishes to say that he welcomes you - welcomes you - and wishes to learn - learn, if I may use the word - the state of your world, and the reason why you came to this.'

"He paused. I was about to reply when he resumed. He proceeded to remarks of which the drift was not very clear, though I am inclined to think they were intended to be complimentary. He told me that the earth was to the moon what the sun is to the earth, and that the Selenites desired very greatly to learn about the earth and men. He then told me no doubt in compliment also, the relative magnitude and diameter of earth and moon, and the perpetual wonder and speculation with which the Selenites had regarded our planet. I meditated with downcast eyes, and decided to reply

that men too had wondered what might lie in the moon, and had judged it dead, little recking of such magnificence as I had seen that day. The Grand Lunar, in token of recognition, caused his long blue rays to rotate in a very confusing manner, and all about the great hall ran the pipings and whisperings and rustlings of the report of what I had said. He then proceeded to put to Phi-oo a number of inquiries which were easier to answer.

"He understood, he explained, that we lived on the surface of the earth, that our air and sea were outside the globe; the latter part, indeed, he already knew from his astronomical specialists. He was very anxious to have more detailed information of what he called this extraordinary state of affairs, for from the solidity of the earth there had always been a disposition regard it as uninhabitable. He endeavoured first to ascertain the extremes of temperature to which we earth beings were exposed, and he was deeply interested by my descriptive treatment of clouds and rain. His imagination was assisted by the fact that the lunar atmosphere in the outer galleries of the night side is not infrequently very foggy. He seemed inclined to marvel that we did not find the sunlight too intense for our eyes, and was interested in my attempt to explain that the sky was tempered to a bluish colour through the refraction of the air, though I doubt if he clearly understood that. I explained how the iris of the human eyes can contract the pupil and save the delicate internal structure from the excess of sunlight, and was allowed to approach within a few feet of the Presence in order that this structure might be seen. This led to a comparison of the lunar and terrestrial eyes. The former is not only excessively sensitive to such light as men can see, but it can also see heat, and every difference in temperature within the moon renders objects visible to it.

"The iris was quite a new organ to the Grand Lunar. For a time he amused himself by flashing his rays into my face and watching my pupils contract. As a consequence, I was dazzled and blinded for some little time. ...

"But in spite of that discomfort I found something reassuring by

insensible degrees in the rationality of this business of question and answer. I could shut my eyes, think of my answer, and almost forget that the the Grand Lunar has no face. ...

"When I had descended again to my proper place the Grand Lunar asked how we sheltered ourselves from heat and storms, and I expounded to him the arts of building and furnishing. Here we wandered into misunderstandings and cross-purposes, due largely, I must admit, to the looseness of my expressions. For a long time I had great difficulty in making him understand the nature of a house. To him and his attendant Selenites it seemed, no doubt, the most whimsical thing in the world that men should build houses when they might descend into excavations, and an additional complication was introduced by the attempt I made to explain that men had originally begun their homes in caves, and that they were now taking their railways and many establishments beneath the surface. Here I think a desire for intellectual completeness betrayed me. There was also a considerable tangle due to an equally unwise attempt on my part to explain about mines. Dismissing this topic at last in an incomplete state, the Grand Lunar inquired what we did with the interior of our globe.

"A tide of twittering and piping swept into the remotest corners of that great assembly then it was last made clear that we men know absolutely nothing of the contents of the world upon which the immemorial generations of our ancestors had been evolved. Three times had I to repeat that of all the 4000 miles of distance between the earth and its centre men knew only to the depth of a mile, and that very vaguely. I understood the Grand Lunar to ask why had I come to the moon seeing we had scarcely touched our own planet yet, but he did not trouble me at that time to proceed to an explanation, being too anxious to pursue the details of this mad inversion of all his ideas.

"He reverted to the question of weather, and I tried to describe the perpetually changing sky, and snow, and frost and hurricanes. 'But when the night comes,' he ed, 'is it not cold?'

"I told him it was colder than by day. "'And does not your atmosphere freeze?'

"I told him not; that it was never cold enough for that, because our nights were so short.

"'Not even liquefy?'

"I was about to say 'No,' but then it occurred to me that one part at least of our atmosphere, the water vapour of it, does sometimes liquefy and form dew, and sometimes freeze and form frost - a process perfectly analogous to the freezing of all the external atmosphere of the moon during its longer night. I made myself clear on this point, and from that the Grand Lunar went on to speak with me of sleep. For the need of sleep that comes so regularly every twenty-four hours to all things is part also of our earthly inheritance. On the moon they rest only at rare intervals, and after exceptional exertions. Then I tried to describe to him the soft splendours of a summer night, and from that I passed to a description of those animals that prowl by night and sleep by day. I told him of lions and tigers, and here it seemed as though we had come to a deadlock. For, save in their waters, there are no creatures in the moon not absolutely domestic and subject to his will, and so it has been for immemorial years. They have monstrous water creatures, but no evil beasts, and the idea of anything strong and large existing 'outside' in the night is very difficult for them. ...

The record is here too broken to transcribe for the space of perhaps twenty words or more.

"He talked with his attendants, as I suppose, upon the strange superficiality and unreasonableness of (man) who lives on the mere surface of a world, a creature of waves and winds, and all the chances of space, who cannot even unite to overcome the beasts that prey upon his kind, and yet who dares to invade another planet. During this aside I sat thinking, and then at his desire I told him of the different sorts of men. He

searched me with questions. "And for all sorts of work you have the same sort of men. But who thinks? Who governs?"

"I gave him an outline of the democratic method.

"When I had done he ordered cooling sprays upon his brow, and then requested me to repeat my explanation conceiving something had miscarried.

"Do they not do different things, then?' said Phi-oo.

"Some, I admitted, were thinkers and some officials; some hunted, some were mechanics, some artists, some toilers. 'But all rule,' I said.

"And have they not different shapes to fit them to their different duties?"

"None that you can see,' I said, 'except perhaps, for clothes. Their minds perhaps differ a little,' I reflected.

"Their minds must differ a great deal,' said the Grand Lunar, 'or they would all want to do the same things.'

"In order to bring myself into a closer harmony with his preconceptions, I said that his surmise was right 'It was all hidden in the brain,' I said; 'but the difference was there. Perhaps if one could see the minds and souls of men they would be as varied and unequal as the Selenites. There were great men and small men, men who could reach out far and wide, men who could go swiftly; noisy, trumpet-minded men, and men who could remember without thinking. ... The record is indistinct for three words.

He interrupted me to recall me to my previous statements. 'But you said all men rule?' he pressed.

"To a certain extent," I said, and made, I fear, a denser fog with my explanation.

"He reached out to a salient fact. "Do you mean," asked, 'that there is no Grand Earthly?'

I thought of several people, but assured him finally there was none. I explained that such autocrats and emperors as we had tried upon earth had usually ended in drink, or vice, or violence, and that the large and influential section of the people of the earth to which I belonged, the Anglo-Saxons, did not mean to try that sort of thing again. At which the Grand Lunar was even more amazed.

"But how do you keep even such wisdom as you have?" he asked; and I explained to him the way we helped our limited [a word omitted here, probably "brains"] with libraries of books. I explained to him how our science was growing by the united labours of innumerable little men, and on that he made no comment save that it was evident we had mastered much in spite of our social savagery, or we could not have come to the moon. Yet the contrast was very marked. With knowledge the Selenites grew and changed; mankind stored their knowledge about them and remained brutes - equipped. He said this... [Here there is a short piece of the record indistinct.]

"He then caused me to describe how we went about this earth of ours, and I described to him our railways and ships. For a time he could not understand that we had had the use of steam only one hundred years, but when he did he was clearly amazed. (I may mention as a singular thing, that the Selenites use years to count by, just as we do on earth, though I can make nothing of their numeral system. That, however, does not matter, because Phi-oo understands ours.) From that I went on to tell him that mankind had dwelt in cities only for nine or ten thousand years, and that we were still not united in one brotherhood, but under many different forms of government. This astonished the Grand Lunar very much, when it was made clear to him. At first he thought we referred merely to administrative areas.

"Our States and Empires are still the rawest sketches of what order will some day be,' I said, and so I came to tell him. ... [At this point a length of record that probably represents thirty or forty words is totally illegible.]

"The Grand Lunar was greatly impressed by the folly of men in clinging to the inconvenience of diverse tongues. 'They want to communicate, and yet not to communicate,' he said, and then for a long time he questioned me closely concerning war.

"He was at first perplexed and incredulous. 'You mean to say,' he asked, seeking confirmation, 'that you run about over the surface of your world - this world, whose riches you have scarcely begun to scrape - killing one another for beasts to eat?'

"I told him that was perfectly correct.

"He asked for particulars to assist his imagination.

"But do not ships and your poor little cities get injured?' he asked, and I found the waste of property and conveniences seemed to impress him almost as much as the killing. 'Tell me more,' said the Grand Lunar; 'make me see pictures. I cannot conceive these things.'

"And so, for a space, though something loath, I told him the story of earthly War.

"I told him of the first orders and ceremonies of war, of warnings and ultimatums, and the marshalling and marching of troops. I gave him an idea of manoeuvres and positions and battle joined. I told him of sieges and assaults, of starvation and hardship in trenches, and of sentinels freezing in the snow. I told him of routs and surprises, and desperate last stands and faint hopes, and the pitiless pursuit of fugitives and the dead upon the field. I told, too, of the past, of invasions and massacres, of the Huns and Tartars, and the wars of Mahomet and the Caliphs, and of

the Crusades. And as I went on, and Phi-oo translated, and the Selenites cooed and murmured in a steadily intensified emotion.

"I told them an ironclad could fire a shot of a ton twelve miles, and go through 20 ft. of iron - and how we could steer torpedoes under water. I went on to describe a Maxim gun in action, and what I could imagine of the Battle of Colenso. The Grand Lunar was so incredulous that he interrupted the translation of what I had said in order to have my verification of my account. They particularly doubted my description of the men cheering and rejoicing as they went into (? battle).

"But surely they do not like it!" translated Phi-oo.

"I assured them men of my race considered battle the most glorious experience of life, at which the whole assembly was stricken with amazement.

"But what good is this war?" asked the Grand Lunar, sticking to his theme.

"Oh! as for good!" said I; 'it thins the population!'

"But why should there be a need - ?' ..

"There came a pause, the cooling sprays impinged upon his brow, and then he spoke again."

[At this point a series of undulations that have been apparent as a perplexing complication as far back as Cavor's description of the silence that fell before the first speaking of the Grand Lunar become confusingly predominant in the record. These undulations are evidently the result of radiations proceeding from a lunar source, and their persistent approximation to the alternating signals of Cavor is curiously suggestive of some operator deliberately seeking to mix them in with his message and render it illegible. At first they are small and regular, so that with a

little care and the loss of very few words we have been able to disentangle Cavor's message; then they become broad and larger, then suddenly they are irregular, with an irregularity that gives the effect at last of some one scribbling through a line of writing. For a long time nothing can be made of this madly zigzagging trace; then quite abruptly the interruption ceases, leaves a few words clear, and then resumes and continues for the rest of the message, completely obliterating whatever Cavor was attempting to transmit. Why, if this is indeed a deliberate intervention, the Selenites should have preferred to let Cavor go on transmitting his message in happy ignorance of their obliteration of its record, when it was clearly quite in their power and much more easy and convenient for them to stop his proceedings at any time, is a problem to which I can contribute nothing. The thing seems to have happened so, and that is all I can say. This last rag of his description of the Grand Lunar begins in mid-sentence.]

"...interrogated me very closely upon my secret. I was able in a little while to get to an understanding with them, and at last to elucidate what has been a puzzle to me ever since I realised the vastness of their science, namely, how it is they themselves have never discovered 'Cavorite.' I find they know of it as a theoretical substance, but they have always regarded it as a practical impossibility, because for some reason there is no helium in the moon, and helium..."

[Across the last letters of helium slashes the resumption of that obliterating trace. Note that word "secret," for that, and that alone, I base my interpretation of the message that follows, the last message, as both Mr. Wendigee and myself now believe it to be, that he is ever likely to send us.]

Chapter 26

The Last Message Cavor sent to the Earth

ON this unsatisfactory manner the penultimate message of Cavor dies out. One seems to see him away there in the blue obscurity amidst his apparatus intently signalling us to the last, all unaware of the curtain of confusion that drops between us; all unaware, too, of the final dangers that even then must have been creeping upon him. His disastrous want of vulgar common sense had utterly betrayed him. He had talked of war, he had talked of all the strength and irrational violence of men, of their insatiable aggressions, their tireless futility of conflict. He had filled the whole moon world with this impression of our race, and then I think it is plain that he made the most fatal admission that upon himself alone hung the possibility - at least for a long time - of any further men reaching the moon. The line the cold, inhuman reason of the moon would take seems plain enough to me, and a suspicion of it, and then perhaps some sudden sharp realisation of it, must have come to him. One imagines him about the moon with the remorse of this fatal indiscretion growing in his mind. During a certain time I am inclined to guess the Grand Lunar was deliberating the new situation, and for all that time Cavor may have gone as free as ever he had gone. But obstacles of some sort prevented his getting to his electromagnetic apparatus again after that message I have just given. For some days we received nothing. Perhaps he was having fresh audiences, and trying to evade his previous admissions. Who can hope to guess?

And then suddenly, like a cry in the night, like a cry that is followed by a stillness, came the last message. It is the briefest fragment, the broken beginnings of two sentences.

The first was: "I was mad to let the Grand Lunar know."

There was an interval of perhaps a minute. One imagines some interruption from without. A departure from the instrument - a dreadful hesitation among the looming masses of apparatus in that dim, blue-lit cavern - a sudden rush back to it, full of a resolve that came too late. Then, as if it were hastily transmitted came: "Cavorite made as follows: take-"

There followed one word, a quite unmeaning word as it stands: "uless."

And that is all.

It may be he made a hasty attempt to spell "useless" when his fate was close upon him. Whatever it was that was happening about that apparatus we cannot tell. Whatever it was we shall never, I know, receive another message from the moon. For my own part a vivid dream has come to my help, and I see, almost as plainly as though I had seen it in actual fact, a blue-lit shadowy dishevelled Cavor struggling in the grip of these insect Selenites, struggling ever more desperately and hopelessly as they press upon him, shouting, expostulating, perhaps even at last fighting, and being forced backwards step by step out of all speech or sign of his fellows, for evermore into the Unknown - into the dark, into that silence that has no end. ...

1. FILMER

In truth the mastery of flying was the work of thousands of men--this man a suggestion and that an experiment, until at last only one vigorous intellectual effort was needed to finish the work. But the inexorable injustice of the popular mind has decided that of all these thousands, one man, and that a man who never flew, should be chosen as the discoverer, just as it has chosen to honour Watt as the discoverer of steam and Stephenson of the steam-engine. And surely of all honoured names none is so grotesquely and tragically honoured as poor Filmer's, the timid, intellectual creature who solved the problem over which the world had hung perplexed and a little fearful for so many generations, the man who pressed the button that has changed peace and warfare and well-nigh every condition of human life and happiness. Never has that recurring wonder of the littleness of the scientific man in the face of the greatness of his science found such an amazing exemplification. Much concerning Filmer is, and must remain, profoundly obscure--Filmers attract no Boswells--but the essential facts and the concluding scene are clear enough, and there are letters, and notes, and casual allusions to piece the whole together. And this is the story one makes, putting this thing with that, of Filmer's life and death.

The first authentic trace of Filmer on the page of history is a document in which he applies for admission as a paid student in physics to the Government laboratories at South Kensington, and therein he describes himself as the son of a "military bootmaker" ("cobbler" in the vulgar tongue) of Dover, and lists his various examination proofs of a high proficiency in chemistry and mathematics. With a certain want of dignity he seeks to enhance these attainments by a profession of poverty and disadvantages, and he writes of the laboratory as the "gaol" of his ambitions,

a slip which reinforces his claim to have devoted himself exclusively to the exact sciences. The document is endorsed in a manner that shows Filmer was admitted to this coveted opportunity; but until quite recently no traces of his success in the Government institution could be found.

It has now, however, been shown that in spite of his professed zeal for research, Filmer, before he had held this scholarship a year, was tempted, by the possibility of a small increase in his immediate income, to abandon it in order to become one of the nine-pence-an-hour computers employed by a well-known Professor in his vicarious conduct of those extensive researches of his in solar physics--researches which are still a matter of perplexity to astronomers. Afterwards, for the space of seven years, save for the pass lists of the London University, in which he is seen to climb slowly to a double first class B.Sc., in mathematics and chemistry, there is no evidence of how Filmer passed his life. No one knows how or where he lived, though it seems highly probable that he continued to support himself by teaching while he prosecuted the studies necessary for this distinction. And then, oddly enough, one finds him mentioned in the correspondence of Arthur Hicks, the poet.

"You remember Filmer," Hicks writes to his friend Vance; "well, HE hasn't altered a bit, the same hostile mumble and the nasty chin--how CAN a man contrive to be always three days from shaving? -- and a sort of furtive air of being engaged in sneaking in front of one; even his coat and that frayed collar of his show no further signs of the passing years. He was writing in the library and I sat down beside him in the name of God's charity, whereupon he deliberately insulted me by covering up his memoranda. It seems he has some brilliant research on hand that he suspects me of all people--with a Bodley Booklet a-printing!--of stealing. He has taken remarkable honours at the University--he went through them with a sort of hasty slobber, as though he feared I might interrupt him before he had told me all--and he spoke of taking his D.Sc. as one

might speak of taking a cab. And he asked what I was doing--with a sort of comparative accent, and his arm was spread nervously, positively a protecting arm, over the paper that hid the precious idea--his one hopeful idea.

"'Poetry,' he said, 'Poetry. And what do you profess to teach in it, Hicks?'

"The thing's a Provincial professorling in the very act of budding, and I thank the Lord devoutly that but for the precious gift of indolence I also might have gone this way to D.Sc. and destruction . . ."

A curious little vignette that I am inclined to think caught Filmer in or near the very birth of his discovery. Hicks was wrong in anticipating a provincial professorship for Filmer. Our next glimpse of him is lecturing on "rubber and rubber substitutes," to the Society of Arts--he had become manager to a great plastic-substance manufactory--and at that time, it is now known, he was a member of the Aeronautical Society, albeit he contributed nothing to the discussions of that body, preferring no doubt to mature his great conception without external assistance. And within two years of that paper before the Society of Arts he was hastily taking out a number of patents and proclaiming in various undignified ways the completion of the divergent inquiries which made his flying machine possible. The first definite statement to that effect appeared in a halfpenny evening paper through the agency of a man who lodged in the same house with Filmer. His final haste after his long laborious secret patience seems to have been due to a needless panic, Bootle, the notorious American scientific quack, having made an announcement that Filmer interpreted wrongly as an anticipation of his idea.

Now what precisely was Filmer's idea? Really a very simple one. Before his time the pursuit of aeronautics had taken two divergent

lines, and had developed on the one hand balloons--large apparatus lighter than air, easy in ascent, and comparatively safe in descent, but floating helplessly before any breeze that took them; and on the other, flying machines that flew only in theory--vast flat structures heavier than air, propelled and kept up by heavy engines and for the most part smashing at the first descent. But, neglecting the fact that the inevitable final collapse rendered them impossible, the weight of the flying machines gave them this theoretical advantage, that they could go through the air against a wind, a necessary condition if aerial navigation was to have any practical value. It is Filmer's particular merit that he perceived the way in which the contrasted and hitherto incompatible merits of balloon and heavy flying machine might be combined in one apparatus, which should be at choice either heavier or lighter than air. He took hints from the contractile bladders of fish and the pneumatic cavities of birds. He devised an arrangement of contractile and absolutely closed balloons which when expanded could lift the actual flying apparatus with ease, and when retracted by the complicated "musculature" he wove about them, were withdrawn almost completely into the frame; and he built the large framework which these balloons sustained, of hollow, rigid tubes, the air in which, by an ingenious contrivance, was automatically pumped out as the apparatus fell, and which then remained exhausted so long as the aeronaut desired. There were no wings or propellers to his machine, such as there had been to all previous aeroplanes, and the only engine required was the compact and powerful little appliance needed to contract the balloons. He perceived that such an apparatus as he had devised might rise with frame exhausted and balloons expanded to a considerable height, might then contract its balloons and let the air into its frame, and by an adjustment of its weights slide down the air in any desired direction. As it fell it would accumulate velocity and at the same time lose weight, and the momentum accumulated by its down-rush could be utilised by means of a shifting of its weights to drive it up in the air again as the balloons expanded. This conception, which is still the

structural conception of all successful flying machines, needed, however, a vast amount of toil upon its details before it could actually be realised, and such toil Filmer--as he was accustomed to tell the numerous interviewers who crowded upon him in the heyday of his fame--"ungrudgingly and unsparingly gave." His particular difficulty was the elastic lining of the contractile balloon. He found he needed a new substance, and in the discovery and manufacture of that new substance he had, as he never failed to impress upon the interviewers, "performed a far more arduous work than even in the actual achievement of my seemingly greater discovery."

But it must not be imagined that these interviews followed hard upon Filmer's proclamation of his invention. An interval of nearly five years elapsed during which he timidly remained at his rubber factory--he seems to have been entirely dependent on his small income from this source--making misdirected attempts to assure a quite indifferent public that he really HAD invented what he had invented. He occupied the greater part of his leisure in the composition of letters to the scientific and daily press, and so forth, stating precisely the net result of his contrivances, and demanding financial aid. That alone would have sufficed for the suppression of his letters. He spent such holidays as he could arrange in unsatisfactory interviews with the door-keepers of leading London papers--he was singularly not adapted for inspiring hall-porters with confidence--and he positively attempted to induce the War Office to take up his work with him. There remains a confidential letter from Major-General Volleyfire to the Earl of Frogs. "The man's a crank and a bounder to boot," says the Major-General in his bluff, sensible, army way, and so left it open for the Japanese to secure, as they subsequently did, the priority in this side of warfare--a priority they still to our great discomfort retain.

And then by a stroke of luck the membrane Filmer had invented for his contractile balloon was discovered to be useful for the valves

of a new oil-engine, and he obtained the means for making a trial model of his invention. He threw up his rubber factory appointment, desisted from all further writing, and, with a certain secrecy that seems to have been an inseparable characteristic of all his proceedings, set to work upon the apparatus. He seems to have directed the making of its parts and collected most of it in a room in Shoreditch, but its final putting together was done at Dymchurch, in Kent. He did not make the affair large enough to carry a man, but he made an extremely ingenious use of what were then called the Marconi rays to control its flight. The first flight of this first practicable flying machine took place over some fields near Burford Bridge, near Hythe, in Kent, and Filmer followed and controlled its flight upon a specially constructed motor tricycle.

The flight was, considering all things, an amazing success. The apparatus was brought in a cart from Dymchurch to Burford Bridge, ascended there to a height of nearly three hundred feet, swooped thence very nearly back to Dymchurch, came about in its sweep, rose again, circled, and finally sank uninjured in a field behind the Burford Bridge Inn. At its descent a curious thing happened. Filmer got off his tricycle, scrambled over the intervening dyke, advanced perhaps twenty yards towards his triumph, threw out his arms in a strange gesticulation, and fell down in a dead faint. Every one could then recall the ghastliness of his features and all the evidences of extreme excitement they had observed throughout the trial, things they might otherwise have forgotten. Afterwards in the inn he had an unaccountable gust of hysterical weeping.

Altogether there were not twenty witnesses of this affair, and those for the most part uneducated men. The New Romney doctor saw the ascent but not the descent, his horse being frightened by the electrical apparatus on Filmer's tricycle and giving him a nasty spill. Two members of the Kent constabulary watched the affair from a cart in an unofficial spirit, and a grocer calling round the Marsh for orders and two lady cyclists seem almost

to complete the list of educated people. There were two reporters present, one representing a Folkestone paper and the other being a fourth-class interviewer and "symposium" journalist, whose expenses down, Filmer, anxious as ever for adequate advertisement --and now quite realising the way in which adequate advertisement may be obtained--had paid. The latter was one of those writers who can throw a convincing air of unreality over the most credible events, and his half-facetious account of the affair appeared in the magazine page of a popular journal. But, happily for Filmer, this person's colloquial methods were more convincing. He went to offer some further screed upon the subject to Banghurst, the proprietor of the New Paper, and one of the ablest and most unscrupulous men in London journalism, and Banghurst instantly seized upon the situation. The interviewer vanishes from the narrative, no doubt very doubtfully remunerated, and Banghurst, Banghurst himself, double chin, grey twill suit, abdomen, voice, gestures and all, appears at Dymchurch, following his large, unrivalled journalistic nose. He had seen the whole thing at a glance, just what it was and what it might be.

At his touch, as it were, Filmer's long-pent investigations exploded into fame. He instantly and most magnificently was a Boom. One turns over the files of the journals of the year 1907 with a quite incredulous recognition of how swift and flaming the boom of those days could be. The July papers know nothing of flying, see nothing in flying, state by a most effective silence that men never would, could or should fly. In August flying and Filmer and flying and parachutes and aerial tactics and the Japanese Government and Filmer and again flying, shouldered the war in Yunnan and the gold mines of Upper Greenland off the leading page. And Banghurst had given ten thousand pounds, and, further, Banghurst was giving five thousand pounds, and Banghurst had devoted his well-known, magnificent (but hitherto sterile) private laboratories and several acres of land near his private residence on the Surrey hills to the strenuous and violent completion--Banghurst fashion--of the life-size

practicable flying machine. Meanwhile, in the sight of privileged multitudes in the walled-garden of the Banghurst town residence in Fulham, Filmer was exhibited at weekly garden parties putting the working model through its paces. At enormous initial cost, but with a final profit, the New Paper presented its readers with a beautiful photographic souvenir of the first of these occasions.

Here again the correspondence of Arthur Hicks and his friend Vance comes to our aid.

"I saw Filmer in his glory," he writes, with just the touch of envy natural to his position as a poet passe. "The man is brushed and shaved, dressed in the fashion of a Royal-Institution-Afternoon Lecturer, the very newest shape in frock-coats and long patent shoes, and altogether in a state of extraordinary streakiness between an owlish great man and a scared abashed self-conscious boulder cruelly exposed. He hasn't a touch of colour in the skin of his face, his head juts forward, and those queer little dark amber eyes of his watch furtively round him for his fame. His clothes fit perfectly and yet sit upon him as though he had bought them ready-made. He speaks in a mumble still, but he says, you perceive indistinctly, enormous self-assertive things, he backs into the rear of groups by instinct if Banghurst drops the line for a minute, and when he walks across Banghurst's lawn one perceives him a little out of breath and going jerky, and that his weak white hands are clenched. His is a state of tension--horrible tension. And he is the Greatest Discoverer of This or Any Age--the Greatest Discoverer of This or Any Age! What strikes one so forcibly about him is that he didn't somehow quite expect it ever, at any rate, not at all like this. Banghurst is about everywhere, the energetic M.C. of his great little catch, and I swear he will have every one down on his lawn there before he has finished with the engine; he had bagged the prime minister yesterday, and he, bless his heart! didn't look particularly outsize, on the very first occasion. Conceive it! Filmer! Our obscure unwashed Filmer, the Glory of British science!

Duchesses crowd upon him, beautiful, bold peeresses say in their beautiful, clear loud voices--have you noticed how penetrating the great lady is becoming nowadays?--'Oh, Mr. Filmer, how DID you do it?'

"Common men on the edge of things are too remote for the answer. One imagines something in the way of that interview, 'toil ungrudgingly and unsparingly given, Madam, and, perhaps--I don't know--but perhaps a little special aptitude.'"

So far Hicks, and the photographic supplement to the New Paper is in sufficient harmony with the description. In one picture the machine swings down towards the river, and the tower of Fulham church appears below it through a gap in the elms, and in another, Filmer sits at his guiding batteries, and the great and beautiful of the earth stand around him, with Banghurst massed modestly but resolutely in the rear. The grouping is oddly apposite. Occluding much of Banghurst, and looking with a pensive, speculative expression at Filmer, stands the Lady Mary Elkinghorn, still beautiful, in spite of the breath of scandal and her eight-and-thirty years, the only person whose face does not admit a perception of the camera that was in the act of snapping them all.

So much for the exterior facts of the story, but, after all, they are very exterior facts. About the real interest of the business one is necessarily very much in the dark. How was Filmer feeling at the time? How much was a certain unpleasant anticipation present inside that very new and fashionable frock-coat? He was in the halfpenny, penny, six-penny, and more expensive papers alike, and acknowledged by the whole world as "the Greatest Discoverer of This or Any Age." He had invented a practicable flying machine, and every day down among the Surrey hills the life-sized model was getting ready. And when it was ready, it followed as a clear inevitable consequence of his having invented and made it--everybody in the world, indeed, seemed to take it for granted; there wasn't

a gap anywhere in that serried front of anticipation--that he would proudly and cheerfully get aboard it, ascend with it, and fly.

But we know now pretty clearly that simple pride and cheerfulness in such an act were singularly out of harmony with Filmer's private constitution. It occurred to no one at the time, but there the fact is. We can guess with some confidence now that it must have been drifting about in his mind a great deal during the day, and, from a little note to his physician complaining of persistent insomnia, we have the soundest reason for supposing it dominated his nights, --the idea that it would be after all, in spite of his theoretical security, an abominably sickening, uncomfortable, and dangerous thing for him to flap about in nothingness a thousand feet or so in the air. It must have dawned upon him quite early in the period of being the Greatest Discoverer of This or Any Age, the vision of doing this and that with an extensive void below. Perhaps somewhen in his youth he had looked down a great height or fallen down in some excessively uncomfortable way; perhaps some habit of sleeping on the wrong side had resulted in that disagreeable falling nightmare one knows, and given him his horror; of the strength of that horror there remains now not a particle of doubt.

Apparently he had never weighed this duty of flying in his earlier days of research; the machine had been his end, but now things were opening out beyond his end, and particularly this giddy whirl up above there. He was a Discoverer and he had Discovered. But he was not a Flying Man, and it was only now that he was beginning to perceive clearly that he was expected to fly. Yet, however much the thing was present in his mind he gave no expression to it until the very end, and meanwhile he went to and fro from Banghurst's magnificent laboratories, and was interviewed and lionised, and wore good clothes, and ate good food, and lived in an elegant flat, enjoying a very abundant feast of such good, coarse, wholesome Fame and Success as a man, starved for all his years as he had been starved, might be reasonably expected to enjoy.

After a time, the weekly gatherings in Fulham ceased. The model had failed one day just for a moment to respond to Filmer's guidance, or he had been distracted by the compliments of an archbishop. At any rate, it suddenly dug its nose into the air just a little too steeply as the archbishop was sailing through a Latin quotation for all the world like an archbishop in a book, and it came down in the Fulham Road within three yards of a 'bus horse. It stood for a second perhaps, astonishing and in its attitude astonished, then it crumpled, shivered into pieces, and the 'bus horse was incidentally killed.

Filmer lost the end of the archiepiscopal compliment. He stood up and stared as his invention swooped out of sight and reach of him. His long, white hands still gripped his useless apparatus. The archbishop followed his skyward stare with an apprehension unbecoming in an archbishop.

Then came the crash and the shouts and uproar from the road to relieve Filmer's tension. "My God!" he whispered, and sat down.

Every one else almost was staring to see where the machine had vanished, or rushing into the house.

The making of the big machine progressed all the more rapidly for this. Over its making presided Filmer, always a little slow and very careful in his manner, always with a growing preoccupation in his mind. His care over the strength and soundness of the apparatus was prodigious. The slightest doubt, and he delayed everything until the doubtful part could be replaced. Wilkinson, his senior assistant, fumed at some of these delays, which, he insisted, were for the most part unnecessary. Banghurst magnified the patient certitude of Filmer in the New Paper, and reviled it bitterly to his wife, and MacAndrew, the second assistant, approved Filmer's wisdom. "We're not wanting a fiasco, man," said MacAndrew. "He's

perfectly well advised."

And whenever an opportunity arose Filmer would expound to Wilkinson and MacAndrew just exactly how every part of the flying machine was to be controlled and worked, so that in effect they would be just as capable, and even more capable, when at last the time came, of guiding it through the skies.

Now I should imagine that if Filmer had seen fit at this stage to define just what he was feeling, and to take a definite line in the matter of his ascent, he might have escaped that painful ordeal quite easily. If he had had it clearly in his mind he could have done endless things. He would surely have found no difficulty with a specialist to demonstrate a weak heart, or something gastric or pulmonary, to stand in his way--that is the line I am astonished he did not take,--or he might, had he been man enough, have declared simply and finally that he did not intend to do the thing. But the fact is, though the dread was hugely present in his mind, the thing was by no means sharp and clear. I fancy that all through this period he kept telling himself that when the occasion came he would find himself equal to it. He was like a man just gripped by a great illness, who says he feels a little out of sorts, and expects to be better presently. Meanwhile he delayed the completion of the machine, and let the assumption that he was going to fly it take root and flourish exceedingly about him. He even accepted anticipatory compliments on his courage. And, barring this secret squeamishness, there can be no doubt he found all the praise and distinction and fuss he got a delightful and even intoxicating draught.

The Lady Mary Elkinghorn made things a little more complicated for him.

How THAT began was a subject of inexhaustible speculation to Hicks. Probably in the beginning she was just a little "nice" to him with that impartial partiality of hers, and it may be that to her eyes,

standing out conspicuously as he did ruling his monster in the upper air, he had a distinction that Hicks was not disposed to find. And somehow they must have had a moment of sufficient isolation, and the great Discoverer a moment of sufficient courage for something just a little personal to be mumbled or blurted. However it began, there is no doubt that it did begin, and presently became quite perceptible to a world accustomed to find in the proceedings of the Lady Mary Elkinghorn a matter of entertainment. It complicated things, because the state of love in such a virgin mind as Filmer's would brace his resolution, if not sufficiently, at any rate considerably towards facing a danger he feared, and hampered him in such attempts at evasion as would otherwise be natural and congenial.

It remains a matter for speculation just how the Lady Mary felt for Filmer and just what she thought of him. At thirty-eight one may have gathered much wisdom and still be not altogether wise, and the imagination still functions actively enough in creating glammers and effecting the impossible. He came before her eyes as a very central man, and that always counts, and he had powers, unique powers as it seemed, at any rate in the air. The performance with the model had just a touch of the quality of a potent incantation, and women have ever displayed an unreasonable disposition to imagine that when a man has powers he must necessarily have Power. Given so much, and what was not good in Filmer's manner and appearance became an added merit. He was modest, he hated display, but given an occasion where TRUE qualities are needed, then--then one would see!

The late Mrs. Bampton thought it wise to convey to Lady Mary her opinion that Filmer, all things considered, was rather a "grub." "He's certainly not a sort of man I have ever met before," said the Lady Mary, with a quite unruffled serenity. And Mrs. Bampton, after a swift, imperceptible glance at that serenity, decided that so far as saying anything to Lady Mary went, she had done as much as could be expected of her. But she said a great deal to other people.

And at last, without any undue haste or unseemliness, the day dawned, the great day, when Banghurst had promised his public--the world in fact--that flying should be finally attained and overcome. Filmer saw it dawn, watched even in the darkness before it dawned, watched its stars fade and the grey and pearly pinks give place at last to the clear blue sky of a sunny, cloudless day. He watched it from the window of his bedroom in the new-built wing of Banghurst's Tudor house. And as the stars were overwhelmed and the shapes and substances of things grew into being out of the amorphous dark, he must have seen more and more distinctly the festive preparations beyond the beech clumps near the green pavilion in the outer park, the three stands for the privileged spectators, the raw, new fencing of the enclosure, the sheds and workshops, the Venetian masts and fluttering flags that Banghurst had considered essential, black and limp in the breezeless dawn, and amidst all these things a great shape covered with tarpauling. A strange and terrible portent for humanity was that shape, a beginning that must surely spread and widen and change and dominate all the affairs of men, but to Filmer it is very doubtful whether it appeared in anything but a narrow and personal light. Several people heard him pacing in the small hours--for the vast place was packed with guests by a proprietor editor who, before all understood compression. And about five o'clock, if not before, Filmer left his room and wandered out of the sleeping house into the park, alive by that time with sunlight and birds and squirrels and the fallow deer. MacAndrew, who was also an early riser, met him near the machine, and they went and had a look at it together.

It is doubtful if Filmer took any breakfast, in spite of the urgency of Banghurst. So soon as the guests began to be about in some number he seems to have retreated to his room. Thence about ten he went into the shrubbery, very probably because he had seen the Lady Mary Elkinghorn there. She was walking up and down, engaged in conversation with her old school friend, Mrs. Brewis-Craven, and although Filmer

had never met the latter lady before, he joined them and walked beside them for some time. There were several silences in spite of the Lady Mary's brilliance. The situation was a difficult one, and Mrs. Brewis-Craven did not master its difficulty. "He struck me," she said afterwards with a luminous self-contradiction, "as a very unhappy person who had something to say, and wanted before all things to be helped to say it. But how was one to help him when one didn't know what it was?"

At half-past eleven the enclosures for the public in the outer park were crammed, there was an intermittent stream of equipages along the belt which circles the outer park, and the house party was dotted over the lawn and shrubbery and the corner of the inner park, in a series of brilliantly attired knots, all making for the flying machine. Filmer walked in a group of three with Banghurst, who was supremely and conspicuously happy, and Sir Theodore Hickle, the president of the Aeronautical Society. Mrs. Banghurst was close behind with the Lady Mary Elkinghorn, Georgina Hickle, and the Dean of Stays. Banghurst was large and copious in speech, and such interstices as he left were filled in by Hickle with complimentary remarks to Filmer. And Filmer walked between them saying not a word except by way of unavoidable reply. Behind, Mrs. Banghurst listened to the admirably suitable and shapely conversation of the Dean with that fluttered attention to the ampler clergy ten years of social ascent and ascendancy had not cured in her; and the Lady Mary watched, no doubt with an entire confidence in the world's disillusionment, the drooping shoulders of the sort of man she had never met before.

There was some cheering as the central party came into view of the enclosures, but it was not very unanimous nor invigorating cheering. They were within fifty yards of the apparatus when Filmer took a hasty glance over his shoulder to measure the distance of the ladies behind them, and decided to make the first remark he had initiated since the house had been left. His voice was just a little hoarse,

and he cut in on Banghurst in mid-sentence on Progress.

"I say, Banghurst," he said, and stopped.

"Yes," said Banghurst.

"I wish--" He moistened his lips. "I'm not feeling well."

Banghurst stopped dead. "Eh?" he shouted.

"A queer feeling." Filmer made to move on, but Banghurst was immovable.

"I don't know. I may be better in a minute. If not--perhaps . . . MacAndrew--"

"You're not feeling WELL?" said Banghurst, and stared at his white face.

"My dear!" he said, as Mrs. Banghurst came up with them, "Filmer says he isn't feeling WELL."

"A little queer," exclaimed Filmer, avoiding the Lady Mary's eyes. "It may pass off--"

There was a pause.

It came to Filmer that he was the most isolated person in the world.

"In any case," said Banghurst, "the ascent must be made. Perhaps if you were to sit down somewhere for a moment--"

"It's the crowd, I think," said Filmer.

There was a second pause. Banghurst's eye rested in scrutiny on Filmer, and then swept the sample of public in the enclosure.

"It's unfortunate," said Sir Theodore Hickle; but still--I suppose--
Your assistants--Of course, if you feel out of condition and disinclined--"

"I don't think Mr. Filmer would permit THAT for a moment," said Lady Mary.

"But if Mr. Filmer's nerve is run--It might even be dangerous for him to attempt--" Hickle coughed.

"It's just because it's dangerous," began the Lady Mary, and felt she had made her point of view and Filmer's plain enough.

Conflicting motives struggled for Filmer.

"I feel I ought to go up," he said, regarding the ground. He looked up and met the Lady Mary's eyes. "I want to go up," he said, and smiled whitely at her. He turned towards Banghurst. "If I could just sit down somewhere for a moment out of the crowd and sun--"

Banghurst, at least, was beginning to understand the case. "Come into my little room in the green pavilion," he said. "It's quite cool there." He took Filmer by the arm.

Filmer turned his face to the Lady Mary Elkinghorn again. "I shall be all right in five minutes," he said. "I'm tremendously sorry--"

The Lady Mary Elkinghorn smiled at him. "I couldn't think--" he said to Hickle, and obeyed the compulsion of Banghurst's pull.

The rest remained watching the two recede.

"He is so fragile," said the Lady Mary.

"He's certainly a highly nervous type," said the Dean, whose weakness it was to regard the whole world, except married clergymen with

enormous families, as "neurotic."

"Of course," said Hickle, "it isn't absolutely necessary for him to go up because he has invented--"

"How COULD he avoid it?" asked the Lady Mary, with the faintest shadow of scorn.

"It's certainly most unfortunate if he's going to be ill now," said Mrs. Banghurst a little severely.

"He's not going to be ill," said the Lady Mary, and certainly she had met Filmer's eye.

"YOU'LL be all right," said Banghurst, as they went towards the pavilion. "All you want is a nip of brandy. It ought to be you, you know. You'll be--you'd get it rough, you know, if you let another man--"

"Oh, I want to go," said Filmer. "I shall be all right. As a matter of fact I'm almost inclined NOW--. No! I think I'll have that nip of brandy first."

Banghurst took him into the little room and routed out an empty decanter. He departed in search of a supply. He was gone perhaps five minutes.

The history of those five minutes cannot be written. At intervals Filmer's face could be seen by the people on the easternmost of the stands erected for spectators, against the window pane peering out, and then it would recede and fade. Banghurst vanished shouting behind the grand stand, and presently the butler appeared going pavilionward with a tray.

The apartment in which Filmer came to his last solution was a pleasant little room very simply furnished with green furniture and an old

bureau--for Banghurst was simple in all his private ways. It was hung with little engravings after Morland and it had a shelf of books. But as it happened, Banghurst had left a rook rifle he sometimes played with on the top of the desk, and on the corner of the mantelshelf was a tin with three or four cartridges remaining in it. As Filmer went up and down that room wrestling with his intolerable dilemma he went first towards the neat little rifle athwart the blotting-pad and then towards the neat little red label

".22 LONG."

The thing must have jumped into his mind in a moment.

Nobody seems to have connected the report with him, though the gun, being fired in a confined space, must have sounded loud, and there were several people in the billiard-room, separated from him only by a lath-and-plaster partition. But directly Banghurst's butler opened the door and smelt the sour smell of the smoke, he knew, he says, what had happened. For the servants at least of Banghurst's household had guessed something of what was going on in Filmer's mind.

All through that trying afternoon Banghurst behaved as he held a man should behave in the presence of hopeless disaster, and his guests for the most part succeeded in not insisting upon the fact--though to conceal their perception of it altogether was impossible--that Banghurst had been pretty elaborately and completely swindled by the deceased. The public in the enclosure, Hicks told me, dispersed "like a party that has been ducking a welsher," and there wasn't a soul in the train to London, it seems, who hadn't known all along that flying was a quite impossible thing for man. "But he might have tried it," said many, "after carrying the thing so far."

In the evening, when he was comparatively alone, Banghurst broke down and went on like a man of clay. I have been told he wept, which must have made an imposing scene, and he certainly said

Filmer had ruined his life, and offered and sold the whole apparatus to MacAndrew for half-a-crown. "I've been thinking--" said MacAndrew at the conclusion of the bargain, and stopped.

The next morning the name of Filmer was, for the first time, less conspicuous in the New Paper than in any other daily paper in the world. The rest of the world's instructors, with varying emphasis, according to their dignity and the degree of competition between themselves and the New Paper, proclaimed the "Entire Failure of the New Flying Machine," and "Suicide of the Impostor." But in the district of North Surrey the reception of the news was tempered by a perception of unusual aerial phenomena.

Overnight Wilkinson and MacAndrew had fallen into violent argument on the exact motives of their principal's rash act.

"The man was certainly a poor, cowardly body, but so far as his science went he was NO impostor," said MacAndrew, "and I'm prepared to give that proposition a very practical demonstration, Mr. Wilkinson, so soon as we've got the place a little more to ourselves. For I've no faith in all this publicity for experimental trials."

And to that end, while all the world was reading of the certain failure of the new flying machine, MacAndrew was soaring and curvetting with great amplitude and dignity over the Epsom and Wimbledon divisions;

and Banghurst, restored once more to hope and energy, and regardless of public security and the Board of Trade, was pursuing his gyrations and trying to attract his attention, on a motor car and in his pyjamas-- he had caught sight of the ascent when pulling up the blind of his bedroom window--equipped, among other things, with a film camera that was subsequently discovered to be jammed. And Filmer was lying on the billiard table in the green pavilion with a sheet about his body.

2. THE MAGIC SHOP

I had seen the Magic Shop from afar several times; I had passed it once or twice, a shop window of alluring little objects, magic balls, magic hens, wonderful cones, ventriloquist dolls, the material of the basket trick, packs of cards that LOOKED all right, and all that sort of thing, but never had I thought of going in until one day, almost without warning, Gip hauled me by my finger right up to the window, and so conducted himself that there was nothing for it but to take him in. I had not thought the place was there, to tell the truth--a modest-sized frontage in Regent Street, between the picture shop and the place where the chicks run about just out of patent incubators, but there it was sure enough. I had fancied it was down nearer the Circus, or round the corner in Oxford Street, or even in Holborn; always over the way and a little inaccessible it had been, with something of the mirage in its position; but here it was now quite indisputably, and the fat end of Gip's pointing finger made a noise upon the glass.

"If I was rich," said Gip, dabbing a finger at the Disappearing Egg, "I'd buy myself that. And that"--which was The Crying Baby, Very Human--and that," which was a mystery, and called, so a neat card asserted, "Buy One and Astonish Your Friends."

"Anything," said Gip, "will disappear under one of those cones. I have read about it in a book.

"And there, dad, is the Vanishing Halfpenny--, only they've put it this way up so's we can't see how it's done."

Gip, dear boy, inherits his mother's breeding, and he did not propose to enter the shop or worry in any way; only, you know, quite unconsciously

he lugged my finger doorward, and he made his interest clear.

"That," he said, and pointed to the Magic Bottle.

"If you had that?" I said; at which promising inquiry he looked up with a sudden radiance.

"I could show it to Jessie," he said, thoughtful as ever of others.

"It's less than a hundred days to your birthday, Gibbles," I said, and laid my hand on the door-handle.

Gip made no answer, but his grip tightened on my finger, and so we came into the shop.

It was no common shop this; it was a magic shop, and all the prancing precedence Gip would have taken in the matter of mere toys was wanting. He left the burthen of the conversation to me.

It was a little, narrow shop, not very well lit, and the door-bell pinged again with a plaintive note as we closed it behind us. For a moment or so we were alone and could glance about us. There was a tiger in papier-mache on the glass case that covered the low counter--a grave, kind-eyed tiger that waggled his head in a methodical manner; there were several crystal spheres, a china hand holding magic cards, a stock of magic fish-bowls in various sizes, and an immodest magic hat that shamelessly displayed its springs. On the floor were magic mirrors; one to draw you out long and thin, one to swell your head and vanish your legs, and one to make you short and fat like a draught; and while we were laughing at these the shopman, as I suppose, came in.

At any rate, there he was behind the counter--a curious, sallow, dark man, with one ear larger than the other and a chin like the toe-cap of a boot.

"What can we have the pleasure?" he said, spreading his long, magic fingers on the glass case; and so with a start we were aware of him.

"I want," I said, "to buy my little boy a few simple tricks."

"Legerdemain?" he asked. "Mechanical? Domestic?"

"Anything amusing?" said I.

"Um!" said the shopman, and scratched his head for a moment as if thinking. Then, quite distinctly, he drew from his head a glass ball. "Something in this way?" he said, and held it out.

The action was unexpected. I had seen the trick done at entertainments endless times before--it's part of the common stock of conjurers--but I had not expected it here.

"That's good," I said, with a laugh.

"Isn't it?" said the shopman.

Gip stretched out his disengaged hand to take this object and found merely a blank palm.

"It's in your pocket," said the shopman, and there it was!

"How much will that be?" I asked.

"We make no charge for glass balls," said the shopman politely. "We get them,"--he picked one out of his elbow as he spoke--"free." He produced another from the back of his neck, and laid it beside its predecessor on the counter. Gip regarded his glass ball sagely, then directed a look of inquiry at the two on the counter, and finally

brought his round-eyed scrutiny to the shopman, who smiled.

"You may have those too," said the shopman, "and, if you DON'T mind, one from my mouth. SO!"

Gip counselled me mutely for a moment, and then in a profound silence put away the four balls, resumed my reassuring finger, and nerved himself for the next event.

"We get all our smaller tricks in that way," the shopman remarked.

I laughed in the manner of one who subscribes to a jest. "Instead of going to the wholesale shop," I said. "Of course, it's cheaper."

"In a way," the shopman said. "Though we pay in the end. But not so heavily--as people suppose. . . . Our larger tricks, and our daily provisions and all the other things we want, we get out of that hat. . . . And you know, sir, if you'll excuse my saying it, there ISN'T a wholesale shop, not for Genuine Magic goods, sir. I don't know if you noticed our inscription--the Genuine Magic shop." He drew a business-card from his cheek and handed it to me. "Genuine," he said, with his finger on the word, and added, "There is absolutely no deception, sir."

He seemed to be carrying out the joke pretty thoroughly, I thought.

He turned to Gip with a smile of remarkable affability. "You, you know, are the Right Sort of Boy."

I was surprised at his knowing that, because, in the interests of discipline, we keep it rather a secret even at home; but Gip received it in unflinching silence, keeping a steadfast eye on him.

"It's only the Right Sort of Boy gets through that doorway."

And, as if by way of illustration, there came a rattling at the door, and a squeaking little voice could be faintly heard. "Nyar! I WARN 'a go in there, dad-da, I WARN 'a go in there. Ny-a-a-ah!" and then the accents of a down-trodden parent, urging consolations and propitiations. "It's locked, Edward," he said.

"But it isn't," said I.

"It is, sir," said the shopman, "always--for that sort of child," and as he spoke we had a glimpse of the other youngster, a little, white face, pallid from sweet-eating and over-sapid food, and distorted by evil passions, a ruthless little egotist, pawing at the enchanted pane. "It's no good, sir," said the shopman, as I moved, with my natural helpfulness, doorward, and presently the spoilt child was carried off howling.

"How do you manage that?" I said, breathing a little more freely.

"Magic!" said the shopman, with a careless wave of the hand, and behold! sparks of coloured fire flew out of his fingers and vanished into the shadows of the shop.

"You were saying," he said, addressing himself to Gip, "before you came in, that you would like one of our 'Buy One and Astonish your Friends' boxes?"

Gip, after a gallant effort, said "Yes."

"It's in your pocket."

And leaning over the counter--he really had an extraordinarily long body--this amazing person produced the article in the customary conjurer's manner. "Paper," he said, and took a sheet out of the empty hat with the springs; "string," and behold his mouth was a string-box, from which he drew an unending thread, which when

he had tied his parcel he bit off--and, it seemed to me, swallowed the ball of string. And then he lit a candle at the nose of one of the ventriloquist's dummies, stuck one of his fingers (which had become sealing-wax red) into the flame, and so sealed the parcel. "Then there was the Disappearing Egg," he remarked, and produced one from within my coat-breast and packed it, and also The Crying Baby, Very Human. I handed each parcel to Gip as it was ready, and he clasped them to his chest.

He said very little, but his eyes were eloquent; the clutch of his arms was eloquent. He was the playground of unspeakable emotions. These, you know, were REAL Magics. Then, with a start, I discovered something moving about in my hat--something soft and jumpy. I whipped it off, and a ruffled pigeon--no doubt a confederate--dropped out and ran on the counter, and went, I fancy, into a cardboard box behind the papier-mache tiger.

"Tut, tut!" said the shopman, dexterously relieving me of my headdress; "careless bird, and--as I live--nesting!"

He shook my hat, and shook out into his extended hand two or three eggs, a large marble, a watch, about half-a-dozen of the inevitable glass balls, and then crumpled, crinkled paper, more and more and more, talking all the time of the way in which people neglect to brush their hats INSIDE as well as out, politely, of course, but with a certain personal application. "All sorts of things accumulate, sir. . . . Not YOU, of course, in particular. . . . Nearly every customer. . . . Astonishing what they carry about with them. . . ." The crumpled paper rose and billowed on the counter more and more and more, until he was nearly hidden from us, until he was altogether hidden, and still his voice went on and on. "We none of us know what the fair semblance of a human being may conceal, sir. Are we all then no better than brushed exteriors, whited sepulchres--"

His voice stopped--exactly like when you hit a neighbour's gramophone

with a well-aimed brick, the same instant silence, and the rustle of the paper stopped, and everything was still. . . .

"Have you done with my hat?" I said, after an interval.

There was no answer.

I stared at Gip, and Gip stared at me, and there were our distortions in the magic mirrors, looking very rum, and grave, and quiet. . . .

"I think we'll go now," I said. "Will you tell me how much all this comes to?

"I say," I said, on a rather louder note, "I want the bill; and my hat, please."

It might have been a sniff from behind the paper pile. . . .

"Let's look behind the counter, Gip," I said. "He's making fun of us."

I led Gip round the head-wagging tiger, and what do you think there was behind the counter? No one at all! Only my hat on the floor, and a common conjurer's lop-eared white rabbit lost in meditation, and looking as stupid and crumpled as only a conjurer's rabbit can do. I resumed my hat, and the rabbit lolloped a lollop or so out of my way.

"Dadda!" said Gip, in a guilty whisper.

"What is it, Gip?" said I.

"I DO like this shop, dadda."

"So should I," I said to myself, "if the counter wouldn't suddenly extend itself to shut one off from the door." But I didn't call

Gip's attention to that. "Pussy!" he said, with a hand out to the rabbit as it came lolloping past us; "Pussy, do Gip a magic!" and his eyes followed it as it squeezed through a door I had certainly not remarked a moment before. Then this door opened wider, and the man with one ear larger than the other appeared again. He was smiling still, but his eye met mine with something between amusement and defiance. "You'd like to see our show-room, sir," he said, with an innocent suavity. Gip tugged my finger forward. I glanced at the counter and met the shopman's eye again. I was beginning to think the magic just a little too genuine. "We haven't VERY much time," I said. But somehow we were inside the show-room before I could finish that.

"All goods of the same quality," said the shopman, rubbing his flexible hands together, "and that is the Best. Nothing in the place that isn't genuine Magic, and warranted thoroughly rum. Excuse me, sir!"

I felt him pull at something that clung to my coat-sleeve, and then I saw he held a little, wriggling red demon by the tail--the little creature bit and fought and tried to get at his hand--and in a moment he tossed it carelessly behind a counter. No doubt the thing was only an image of twisted indiarubber, but for the moment--! And his gesture was exactly that of a man who handles some petty biting bit of vermin. I glanced at Gip, but Gip was looking at a magic rocking-horse. I was glad he hadn't seen the thing. "I say," I said, in an undertone, and indicating Gip and the red demon with my eyes, "you haven't many things like THAT about, have you?"

"None of ours! Probably brought it with you," said the shopman--also in an undertone, and with a more dazzling smile than ever. "Astonishing what people WILL carry about with them unawares!" And then to Gip, "Do you see anything you fancy here?"

There were many things that Gip fancied there.

He turned to this astonishing tradesman with mingled confidence and respect. "Is that a Magic Sword?" he said.

"A Magic Toy Sword. It neither bends, breaks, nor cuts the fingers. It renders the bearer invincible in battle against any one under eighteen. Half-a-crown to seven and sixpence, according to size. These panoplies on cards are for juvenile knights-errant and very useful-- shield of safety, sandals of swiftness, helmet of invisibility."

"Oh, daddy!" gasped Gip.

I tried to find out what they cost, but the shopman did not heed me. He had got Gip now; he had got him away from my finger; he had embarked upon the exposition of all his confounded stock, and nothing was going to stop him. Presently I saw with a qualm of distrust and something very like jealousy that Gip had hold of this person's finger as usually he has hold of mine. No doubt the fellow was interesting, I thought, and had an interestingly faked lot of stuff, really GOOD faked stuff, still--

I wandered after them, saying very little, but keeping an eye on this prestidigital fellow. After all, Gip was enjoying it. And no doubt when the time came to go we should be able to go quite easily.

It was a long, rambling place, that show-room, a gallery broken up by stands and stalls and pillars, with archways leading off to other departments, in which the queerest-looking assistants loafed and stared at one, and with perplexing mirrors and curtains. So perplexing, indeed, were these that I was presently unable to make out the door by which we had come.

The shopman showed Gip magic trains that ran without steam or clockwork, just as you set the signals, and then some very, very valuable boxes

of soldiers that all came alive directly you took off the lid and said--. I myself haven't a very quick ear and it was a tongue-twisting sound, but Gip--he has his mother's ear--got it in no time. "Bravo!" said the shopman, putting the men back into the box unceremoniously and handing it to Gip. "Now," said the shopman, and in a moment Gip had made them all alive again.

"You'll take that box?" asked the shopman.

"We'll take that box," said I, "unless you charge its full value. In which case it would need a Trust Magnate--"

"Dear heart! NO!" and the shopman swept the little men back again, shut the lid, waved the box in the air, and there it was, in brown paper, tied up and--WITH GIP'S FULL NAME AND ADDRESS ON THE PAPER!

The shopman laughed at my amazement.

"This is the genuine magic," he said. "The real thing."

"It's a little too genuine for my taste," I said again.

After that he fell to showing Gip tricks, odd tricks, and still odder the way they were done. He explained them, he turned them inside out, and there was the dear little chap nodding his busy bit of a head in the sagest manner.

I did not attend as well as I might. "Hey, presto!" said the Magic Shopman, and then would come the clear, small "Hey, presto!" of the boy. But I was distracted by other things. It was being borne in upon me just how tremendously rum this place was; it was, so to speak, inundated by a sense of rumness. There was something a little rum about the fixtures even, about the ceiling, about the floor, about the casually distributed chairs. I had a queer feeling

that whenever I wasn't looking at them straight they went askew, and moved about, and played a noiseless puss-in-the-corner behind my back. And the cornice had a serpentine design with masks--masks altogether too expressive for proper plaster.

Then abruptly my attention was caught by one of the odd-looking assistants. He was some way off and evidently unaware of my presence-- I saw a sort of three-quarter length of him over a pile of toys and through an arch--and, you know, he was leaning against a pillar in an idle sort of way doing the most horrid things with his features! The particular horrid thing he did was with his nose. He did it just as though he was idle and wanted to amuse himself. First of all it was a short, blobby nose, and then suddenly he shot it out like a telescope, and then out it flew and became thinner and thinner until it was like a long, red, flexible whip. Like a thing in a nightmare it was! He flourished it about and flung it forth as a fly-fisher flings his line.

My instant thought was that Gip mustn't see him. I turned about, and there was Gip quite preoccupied with the shopman, and thinking no evil. They were whispering together and looking at me. Gip was standing on a little stool, and the shopman was holding a sort of big drum in his hand.

"Hide and seek, dad-da!" cried Gip. "You're He!"

And before I could do anything to prevent it, the shopman had clapped the big drum over him. I saw what was up directly. "Take that off," I cried, "this instant! You'll frighten the boy. Take it off!"

The shopman with the unequal ears did so without a word, and held the big cylinder towards me to show its emptiness. And the little stool was vacant! In that instant my boy had utterly disappeared? . . .

You know, perhaps, that sinister something that comes like a hand

out of the unseen and grips your heart about. You know it takes your common self away and leaves you tense and deliberate, neither slow nor hasty, neither angry nor afraid. So it was with me.

I came up to this grinning shopman and kicked his stool aside.

"Stop this folly!" I said. "Where is my boy?"

"You see," he said, still displaying the drum's interior, "there is no deception---"

I put out my hand to grip him, and he eluded me by a dexterous movement. I snatched again, and he turned from me and pushed open a door to escape. "Stop!" I said, and he laughed, receding. I leapt after him--into utter darkness.

THUD!

"Lor' bless my 'eart! I didn't see you coming, sir!"

I was in Regent Street, and I had collided with a decent-looking working man; and a yard away, perhaps, and looking a little perplexed with himself, was Gip. There was some sort of apology, and then Gip had turned and come to me with a bright little smile, as though for a moment he had missed me.

And he was carrying four parcels in his arm!

He secured immediate possession of my finger.

For the second I was rather at a loss. I stared round to see the door of the magic shop, and, behold, it was not there! There was no door, no shop, nothing, only the common pilaster between the shop where they sell pictures and the window with the chicks! . . .

I did the only thing possible in that mental tumult; I walked straight to the kerbstone and held up my umbrella for a cab.

"Ansoms," said Gip, in a note of culminating exultation.

I helped him in, recalled my address with an effort, and got in also. Something unusual proclaimed itself in my tail-coat pocket, and I felt and discovered a glass ball. With a petulant expression I flung it into the street.

Gip said nothing.

For a space neither of us spoke.

"Dada!" said Gip, at last, "that WAS a proper shop!"

I came round with that to the problem of just how the whole thing had seemed to him. He looked completely undamaged--so far, good; he was neither scared nor unhinged, he was simply tremendously satisfied with the afternoon's entertainment, and there in his arms were the four parcels.

Confound it! what could be in them?

"Um!" I said. "Little boys can't go to shops like that every day."

He received this with his usual stoicism, and for a moment I was sorry I was his father and not his mother, and so couldn't suddenly there, coram publico, in our hansom, kiss him. After all, I thought, the thing wasn't so very bad.

But it was only when we opened the parcels that I really began to be reassured. Three of them contained boxes of soldiers, quite ordinary lead soldiers, but of so good a quality as to make Gip altogether

forget that originally these parcels had been Magic Tricks of the only genuine sort, and the fourth contained a kitten, a little living white kitten, in excellent health and appetite and temper.

I saw this unpacking with a sort of provisional relief. I hung about in the nursery for quite an unconscionable time. . . .

That happened six months ago. And now I am beginning to believe it is all right. The kitten had only the magic natural to all kittens, and the soldiers seem as steady a company as any colonel could desire. And Gip--?

The intelligent parent will understand that I have to go cautiously with Gip.

But I went so far as this one day. I said, "How would you like your soldiers to come alive, Gip, and march about by themselves?"

"Mine do," said Gip. "I just have to say a word I know before I open the lid."

"Then they march about alone?"

"Oh, QUITE, dadda. I shouldn't like them if they didn't do that."

I displayed no unbecoming surprise, and since then I have taken occasion to drop in upon him once or twice, unannounced, when the soldiers were about, but so far I have never discovered them performing in anything like a magical manner.

It's so difficult to tell.

There's also a question of finance. I have an incurable habit of paying bills. I have been up and down Regent Street several times, looking for that shop. I am inclined to think, indeed, that in that

matter honour is satisfied, and that, since Gip's name and address are known to them, I may very well leave it to these people, whoever they may be, to send in their bill in their own time.

3. THE VALLEY OF SPIDERS

Towards mid-day the three pursuers came abruptly round a bend in the torrent bed upon the sight of a very broad and spacious valley. The difficult and winding trench of pebbles along which they had tracked the fugitives for so long, expanded to a broad slope, and with a common impulse the three men left the trail, and rode to a little eminence set with olive-dun trees, and there halted, the two others, as became them, a little behind the man with the silver-studded bridle.

For a space they scanned the great expanse below them with eager eyes. It spread remoter and remoter, with only a few clusters of sere thorn bushes here and there, and the dim suggestions of some now waterless ravine, to break its desolation of yellow grass. Its purple distances melted at last into the bluish slopes of the further hills--hills it might be of a greener kind--and above them invisibly supported, and seeming indeed to hang in the blue, were the snowclad summits of mountains that grew larger and bolder to the north-westward as the sides of the valley drew together. And westward the valley opened until a distant darkness under the sky told where the forests began. But the three men looked neither east nor west, but only steadfastly across the valley.

The gaunt man with the scarred lip was the first to speak. "Nowhere," he said, with a sigh of disappointment in his voice. "But after all, they had a full day's start."

"They don't know we are after them," said the little man on the white horse.

"SHE would know," said the leader bitterly, as if speaking to himself.

"Even then they can't go fast. They've got no beast but the mule, and all to-day the girl's foot has been bleeding---"

The man with the silver bridle flashed a quick intensity of rage on him. "Do you think I haven't seen that?" he snarled.

"It helps, anyhow," whispered the little man to himself.

The gaunt man with the scarred lip stared impassively. "They can't be over the valley," he said. "If we ride hard--"

He glanced at the white horse and paused.

"Curse all white horses!" said the man with the silver bridle, and turned to scan the beast his curse included.

The little man looked down between the melancholy ears of his steed.

"I did my best," he said.

The two others stared again across the valley for a space. The gaunt man passed the back of his hand across the scarred lip.

"Come up!" said the man who owned the silver bridle, suddenly. The little man started and jerked his rein, and the horse hoofs of the three made a multitudinous faint pattering upon the withered grass as they turned back towards the trail. . . .

They rode cautiously down the long slope before them, and so came through a waste of prickly, twisted bushes and strange dry shapes of horny branches that grew amongst the rocks, into the levels below. And there the trail grew faint, for the soil was scanty, and the only herbage was this scorched dead straw that lay upon the ground. Still, by hard scanning, by leaning beside the horses' necks and pausing ever and again, even these white men could contrive to follow after their prey.

There were trodden places, bent and broken blades of the coarse grass, and ever and again the sufficient intimation of a footmark. And once the leader saw a brown smear of blood where the half-caste girl may have trod. And at that under his breath he cursed her for a fool.

The gaunt man checked his leader's tracking, and the little man on the white horse rode behind, a man lost in a dream. They rode one after another, the man with the silver bridle led the way, and they spoke never a word. After a time it came to the little man on the white horse that the world was very still. He started out of his dream. Besides the little noises of their horses and equipment, the whole great valley kept the brooding quiet of a painted scene.

Before him went his master and his fellow, each intently leaning forward to the left, each impassively moving with the paces of his horse; their shadows went before them--still, noiseless, tapering attendants; and nearer a crouched cool shape was his own. He looked about him. What was it had gone? Then he remembered the reverberation from the banks of the gorge and the perpetual accompaniment of shifting, jostling pebbles. And, moreover--? There was no breeze. That was it! What a vast, still place it was, a monotonous afternoon slumber. And the sky open and blank, except for a sombre veil of haze that had gathered in the upper valley.

He straightened his back, fretted with his bridle, puckered his lips to whistle, and simply sighed. He turned in his saddle for a time, and stared at the throat of the mountain gorge out of which they had come. Blank! Blank slopes on either side, with never a sign of a decent beast or tree--much less a man. What a land it was! What a wilderness! He dropped again into his former pose.

It filled him with a momentary pleasure to see a wry stick of purple black flash out into the form of a snake, and vanish amidst the brown. After all, the infernal valley WAS alive. And then, to rejoice him

still more, came a little breath across his face, a whisper that came and went, the faintest inclination of a stiff black-antlered bush upon a little crest, the first intimations of a possible breeze. Idly he wetted his finger, and held it up.

He pulled up sharply to avoid a collision with the gaunt man, who had stopped at fault upon the trail. Just at that guilty moment he caught his master's eye looking towards him.

For a time he forced an interest in the tracking. Then, as they rode on again, he studied his master's shadow and hat and shoulder, appearing and disappearing behind the gaunt man's nearer contours. They had ridden four days out of the very limits of the world into this desolate place, short of water, with nothing but a strip of dried meat under their saddles, over rocks and mountains, where surely none but these fugitives had ever been before--for THAT!

And all this was for a girl, a mere wilful child! And the man had whole cityfuls of people to do his basest bidding--girls, women! Why in the name of passionate folly THIS one in particular? asked the little man, and scowled at the world, and licked his parched lips with a blackened tongue. It was the way of the master, and that was all he knew. Just because she sought to evade him. . . .

His eye caught a whole row of high plumed canes bending in unison, and then the tails of silk that hung before his neck flapped and fell. The breeze was growing stronger. Somehow it took the stiff stillness out of things--and that was well.

"Hullo!" said the gaunt man.

All three stopped abruptly.

"What?" asked the master. "What?"

"Over there," said the gaunt man, pointing up the valley.

"What?"

"Something coming towards us."

And as he spoke a yellow animal crested a rise and came bearing down upon them. It was a big wild dog, coming before the wind, tongue out, at a steady pace, and running with such an intensity of purpose that he did not seem to see the horsemen he approached. He ran with his nose up, following, it was plain, neither scent nor quarry. As he drew nearer the little man felt for his sword. "He's mad," said the gaunt rider.

"Shout!" said the little man, and shouted.

The dog came on. Then when the little man's blade was already out, it swerved aside and went panting by them and past. The eyes of the little man followed its flight. "There was no foam," he said. For a space the man with the silver-studded bridle stared up the valley. "Oh, come on!" he cried at last. "What does it matter?" and jerked his horse into movement again.

The little man left the insoluble mystery of a dog that fled from nothing but the wind, and lapsed into profound musings on human character. "Come on!" he whispered to himself. "Why should it be given to one man to say 'Come on!' with that stupendous violence of effect. Always, all his life, the man with the silver bridle has been saying that. If I said it--!" thought the little man. But people marvelled when the master was disobeyed even in the wildest things. This half-caste girl seemed to him, seemed to every one, mad--blasphemous almost. The little man, by way of comparison, reflected on the gaunt rider with the scarred lip, as stalwart as his master, as brave and, indeed, perhaps braver, and yet for him there was obedience, nothing but to give obedience duly and stoutly. . .

Certain sensations of the hands and knees called the little man back to more immediate things. He became aware of something. He rode up beside his gaunt fellow. "Do you notice the horses?" he said in an undertone.

The gaunt face looked interrogation.

"They don't like this wind," said the little man, and dropped behind as the man with the silver bridle turned upon him.

"It's all right," said the gaunt-faced man.

They rode on again for a space in silence. The foremost two rode downcast upon the trail, the hindmost man watched the haze that crept down the vastness of the valley, nearer and nearer, and noted how the wind grew in strength moment by moment. Far away on the left he saw a line of dark bulks--wild hog perhaps, galloping down the valley, but of that he said nothing, nor did he remark again upon the uneasiness of the horses.

And then he saw first one and then a second great white ball, a great shining white ball like a gigantic head of thistle-down, that drove before the wind athwart the path. These balls soared high in the air, and dropped and rose again and caught for a moment, and hurried on and passed, but at the sight of them the restlessness of the horses increased.

Then presently he saw that more of these drifting globes--and then soon very many more--were hurrying towards him down the valley.

They became aware of a squealing. Athwart the path a huge boar rushed, turning his head but for one instant to glance at them, and then hurling on down the valley again. And at that, all three stopped and sat in their saddles, staring into the thickening haze that

was coming upon them.

"If it were not for this thistle-down--" began the leader.

But now a big globe came drifting past within a score of yards of them. It was really not an even sphere at all, but a vast, soft, ragged, filmy thing, a sheet gathered by the corners, an aerial jelly-fish, as it were, but rolling over and over as it advanced, and trailing long, cobwebby threads and streamers that floated in its wake.

"It isn't thistle-down," said the little man.

"I don't like the stuff," said the gaunt man.

And they looked at one another.

"Curse it!" cried the leader. "The air's full of it up there. If it keeps on at this pace long, it will stop us altogether."

An instinctive feeling, such as lines out a herd of deer at the approach of some ambiguous thing, prompted them to turn their horses to the wind, ride forward for a few paces, and stare at that advancing multitude of floating masses. They came on before the wind with a sort of smooth swiftness, rising and falling noiselessly, sinking to earth, rebounding high, soaring--all with a perfect unanimity, with a still, deliberate assurance.

Right and left of the horsemen the pioneers of this strange army passed. At one that rolled along the ground, breaking shapelessly and trailing out reluctantly into long grappling ribbons and bands, all three horses began to shy and dance. The master was seized with a sudden unreasonable impatience. He cursed the drifting globes roundly. "Get on!" he cried; "get on! What do these things matter? How CAN they matter? Back to the trail!" He fell swearing at his horse

and sawed the bit across its mouth.

He shouted aloud with rage. "I will follow that trail, I tell you!" he cried. "Where is the trail?"

He gripped the bridle of his prancing horse and searched amidst the grass. A long and clinging thread fell across his face, a grey streamer dropped about his bridle-arm, some big, active thing with many legs ran down the back of his head. He looked up to discover one of those grey masses anchored as it were above him by these things and flapping out ends as a sail flaps when a boat comes, about-- but noiselessly.

He had an impression of many eyes, of a dense crew of squat bodies, of long, many-jointed limbs hauling at their mooring ropes to bring the thing down upon him. For a space he stared up, reining in his prancing horse with the instinct born of years of horsemanship. Then the flat of a sword smote his back, and a blade flashed overhead and cut the drifting balloon of spider-web free, and the whole mass lifted softly and drove clear and away.

"Spiders!" cried the voice of the gaunt man. "The things are full of big spiders! Look, my lord!"

The man with the silver bridle still followed the mass that drove away.

"Look, my lord!"

The master found himself staring down at a red, smashed thing on the ground that, in spite of partial obliteration, could still wriggle unavailing legs. Then when the gaunt man pointed to another mass that bore down upon them, he drew his sword hastily. Up the valley now it was like a fog bank torn to rags. He tried to grasp the situation.

"Ride for it!" the little man was shouting. "Ride for it down the valley."

What happened then was like the confusion of a battle. The man with the silver bridle saw the little man go past him slashing furiously at imaginary cobwebs, saw him cannon into the horse of the gaunt man and hurl it and its rider to earth. His own horse went a dozen paces before he could rein it in. Then he looked up to avoid imaginary dangers, and then back again to see a horse rolling on the ground, the gaunt man standing and slashing over it at a rent and fluttering mass of grey that streamed and wrapped about them both. And thick and fast as thistle-down on waste land on a windy day in July, the cobweb masses were coming on.

The little man had dismounted, but he dared not release his horse. He was endeavouring to lug the struggling brute back with the strength of one arm, while with the other he slashed aimlessly. The tentacles of a second grey mass had entangled themselves with the struggle, and this second grey mass came to its moorings, and slowly sank.

The master set his teeth, gripped his bridle, lowered his head, and spurred his horse forward. The horse on the ground rolled over, there were blood and moving shapes upon the flanks, and the gaunt man, suddenly leaving it, ran forward towards his master, perhaps ten paces. His legs were swathed and encumbered with grey; he made ineffectual movements with his sword. Grey streamers waved from him; there was a thin veil of grey across his face. With his left hand he beat at something on his body, and suddenly he stumbled and fell. He struggled to rise, and fell again, and suddenly, horribly, began to howl, "Oh--ohoo, ohoo!"

The master could see the great spiders upon him, and others upon the ground.

As he strove to force his horse nearer to this gesticulating,

screaming grey object that struggled up and down, there came a clatter of hoofs, and the little man, in act of mounting, swordless, balanced on his belly athwart the white horse, and clutching its mane, whirled past. And again a clinging thread of grey gossamer swept across the master's face. All about him, and over him, it seemed this drifting, noiseless cobweb circled and drew nearer him. . . .

To the day of his death he never knew just how the event of that moment happened. Did he, indeed, turn his horse, or did it really of its own accord stampede after its fellow? Suffice it that in another second he was galloping full tilt down the valley with his sword whirling furiously overhead. And all about him on the quickening breeze, the spiders' airships, their air bundles and air sheets, seemed to him to hurry in a conscious pursuit.

Clatter, clatter, thud, thud--the man with the silver bridle rode, heedless of his direction, with his fearful face looking up now right, now left, and his sword arm ready to slash. And a few hundred yards ahead of him, with a tail of torn cobweb trailing behind him, rode the little man on the white horse, still but imperfectly in the saddle. The reeds bent before them, the wind blew fresh and strong, over his shoulder the master could see the webs hurrying to overtake. . . .

He was so intent to escape the spiders' webs that only as his horse gathered together for a leap did he realise the ravine ahead. And then he realised it only to misunderstand and interfere. He was leaning forward on his horse's neck and sat up and back all too late.

But if in his excitement he had failed to leap, at any rate he had not forgotten how to fall. He was horseman again in mid-air. He came off clear with a mere bruise upon his shoulder, and his horse rolled, kicking spasmodic legs, and lay still. But the master's sword drove its point into the hard soil, and snapped clean across, as though Chance refused him any longer as her Knight, and the splintered end missed his face by an inch or so.

He was on his feet in a moment, breathlessly scanning the onrushing spider-webs. For a moment he was minded to run, and then thought of the ravine, and turned back. He ran aside once to dodge one drifting terror, and then he was swiftly clambering down the precipitous sides, and out of the touch of the gale.

There under the lee of the dry torrent's steeper banks he might crouch, and watch these strange, grey masses pass and pass in safety till the wind fell, and it became possible to escape. And there for a long time he crouched, watching the strange, grey, ragged masses trail their streamers across his narrowed sky.

Once a stray spider fell into the ravine close beside him--a full foot it measured from leg to leg, and its body was half a man's hand--and after he had watched its monstrous alacrity of search and escape for a little while, and tempted it to bite his broken sword, he lifted up his iron-heeled boot and smashed it into a pulp. He swore as he did so, and for a time sought up and down for another.

Then presently, when he was surer these spider swarms could not drop into the ravine, he found a place where he could sit down, and sat and fell into deep thought and began after his manner to gnaw his knuckles and bite his nails. And from this he was moved by the coming of the man with the white horse.

He heard him long before he saw him, as a clattering of hoofs, stumbling footsteps, and a reassuring voice. Then the little man appeared, a rueful figure, still with a tail of white cobweb trailing behind him. They approached each other without speaking, without a salutation. The little man was fatigued and shamed to the pitch of hopeless bitterness, and came to a stop at last, face to face with his seated master. The latter winced a little under his dependant's eye. "Well?" he said at last, with no pretence of authority.

"You left him?"

"My horse bolted."

"I know. So did mine."

He laughed at his master mirthlessly.

"I say my horse bolted," said the man who once had a silver-studded bridle.

"Cowards both," said the little man.

The other gnawed his knuckle through some meditative moments, with his eye on his inferior.

"Don't call me a coward," he said at length.

"You are a coward like myself."

"A coward possibly. There is a limit beyond which every man must fear. That I have learnt at last. But not like yourself. That is where the difference comes in."

"I never could have dreamt you would have left him. He saved your life two minutes before. . . . Why are you our lord?"

The master gnawed his knuckles again, and his countenance was dark.

"No man calls me a coward," he said. "No. A broken sword is better than none. . . . One spavined white horse cannot be expected to carry two men a four days' journey. I hate white horses, but this time it cannot be helped. You begin to understand me? . . . I perceive that you are minded, on the strength of what you have seen and fancy, to taint my reputation. It is men of your sort who unmake kings.

Besides which--I never liked you."

"My lord!" said the little man.

"No," said the master. "NO!"

He stood up sharply as the little man moved. For a minute perhaps they faced one another. Overhead the spiders' balls went driving. There was a quick movement among the pebbles; a running of feet, a cry of despair, a gasp and a blow. . . .

Towards nightfall the wind fell. The sun set in a calm serenity, and the man who had once possessed the silver bridle came at last very cautiously and by an easy slope out of the ravine again; but now he led the white horse that once belonged to the little man. He would have gone back to his horse to get his silver-mounted bridle again, but he feared night and a quickening breeze might still find him in the valley, and besides he disliked greatly to think he might discover his horse all swathed in cobwebs and perhaps unpleasantly eaten.

And as he thought of those cobwebs and of all the dangers he had been through, and the manner in which he had been preserved that day, his hand sought a little reliquary that hung about his neck, and he clasped it for a moment with heartfelt gratitude. As he did so his eyes went across the valley.

"I was hot with passion," he said, "and now she has met her reward. They also, no doubt--"

And behold! Far away out of the wooded slopes across the valley, but in the clearness of the sunset distinct and unmistakable, he saw a little spire of smoke.

At that his expression of serene resignation changed to an amazed

anger. Smoke? He turned the head of the white horse about, and hesitated. And as he did so a little rustle of air went through the grass about him. Far away upon some reeds swayed a tattered sheet of grey. He looked at the cobwebs; he looked at the smoke.

"Perhaps, after all, it is not them," he said at last.

But he knew better.

After he had stared at the smoke for some time, he mounted the white horse.

As he rode, he picked his way amidst stranded masses of web. For some reason there were many dead spiders on the ground, and those that lived feasted guiltily on their fellows. At the sound of his horse's hoofs they fled.

Their time had passed. From the ground without either a wind to carry them or a winding sheet ready, these things, for all their poison, could do him little evil. He flicked with his belt at those he fancied came too near. Once, where a number ran together over a bare place, he was minded to dismount and trample them with his boots, but this impulse he overcame. Ever and again he turned in his saddle, and looked back at the smoke.

"Spiders," he muttered over and over again. "Spiders! Well, well. . . . The next time I must spin a web."

4. THE TRUTH ABOUT PYECRAFT

He sits not a dozen yards away. If I glance over my shoulder I can see him. And if I catch his eye--and usually I catch his eye--it meets me with an expression.

It is mainly an imploring look--and yet with suspicion in it.

Confound his suspicion! If I wanted to tell on him I should have told long ago. I don't tell and I don't tell, and he ought to feel at his ease. As if anything so gross and fat as he could feel at ease! Who would believe me if I did tell?

Poor old Pyecraft! Great, uneasy jelly of substance! The fattest clubman in London.

He sits at one of the little club tables in the huge bay by the fire, stuffing. What is he stuffing? I glance judiciously and catch him biting at a round of hot buttered tea-cake, with his eyes on me. Confound him!--with his eyes on me!

That settles it, Pyecraft! Since you WILL be abject, since you WILL behave as though I was not a man of honour, here, right under your embedded eyes, I write the thing down--the plain truth about Pyecraft. The man I helped, the man I shielded, and who has requited me by making my club unendurable, absolutely unendurable, with his liquid appeal, with the perpetual "don't tell" of his looks.

And, besides, why does he keep on eternally eating?

Well, here goes for the truth, the whole truth, and nothing but the truth!

Pyecraft--. I made the acquaintance of Pyecraft in this very smoking-room. I was a young, nervous new member, and he saw it. I was sitting

all alone, wishing I knew more of the members, and suddenly he came, a great rolling front of chins and abdomina, towards me, and grunted and sat down in a chair close by me and wheezed for a space, and scraped for a space with a match and lit a cigar, and then addressed me. I forget what he said--something about the matches not lighting properly, and afterwards as he talked he kept stopping the waiters one by one as they went by, and telling them about the matches in that thin, fluty voice he has. But, anyhow, it was in some such way we began our talking.

He talked about various things and came round to games. And thence to my figure and complexion. "YOU ought to be a good cricketer," he said. I suppose I am slender, slender to what some people would call lean, and I suppose I am rather dark, still--I am not ashamed of having a Hindu great-grandmother, but, for all that, I don't want casual strangers to see through me at a glance to HER. So that I was set against Pyecraft from the beginning.

But he only talked about me in order to get to himself.

"I expect," he said, "you take no more exercise than I do, and probably you eat no less." (Like all excessively obese people he fancied he ate nothing.) "Yet,"--and he smiled an oblique smile--"we differ."

And then he began to talk about his fatness and his fatness; all he did for his fatness and all he was going to do for his fatness; what people had advised him to do for his fatness and what he had heard of people doing for fatness similar to his. "A priori," he said, "one would think a question of nutrition could be answered by dietary and a question of assimilation by drugs." It was stifling. It was dumpling talk. It made me feel swelled to hear him.

One stands that sort of thing once in a way at a club, but a time came when I fancied I was standing too much. He took to me altogether

too conspicuously. I could never go into the smoking-room but he would come wallowing towards me, and sometimes he came and gormandised round and about me while I had my lunch. He seemed at times almost to be clinging to me. He was a bore, but not so fearful a bore as to be limited to me; and from the first there was something in his manner--almost as though he knew, almost as though he penetrated to the fact that I MIGHT--that there was a remote, exceptional chance in me that no one else presented.

"I'd give anything to get it down," he would say--"anything," and peer at me over his vast cheeks and pant.

Poor old Pyecraft! He has just gonged, no doubt to order another buttered tea-cake!

He came to the actual thing one day. "Our Pharmacopoeia," he said, "our Western Pharmacopoeia, is anything but the last word of medical science. In the East, I've been told--"

He stopped and stared at me. It was like being at an aquarium.

I was quite suddenly angry with him. "Look here," I said, "who told you about my great-grandmother's recipes?"

"Well," he fenced.

"Every time we've met for a week," I said, "and we've met pretty often--you've given me a broad hint or so about that little secret of mine."

"Well," he said, "now the cat's out of the bag, I'll admit, yes, it is so. I had it--"

"From Pattison?"

"Indirectly," he said, which I believe was lying, "yes."

"Pattison," I said, "took that stuff at his own risk."

He pursed his mouth and bowed.

"My great-grandmother's recipes," I said, "are queer things to handle. My father was near making me promise--"

"He didn't?"

"No. But he warned me. He himself used one--once."

"Ah! . . . But do you think--? Suppose--suppose there did happen to be one--"

"The things are curious documents," I said.

"Even the smell of 'em. . . . No!"

But after going so far Pyecraft was resolved I should go farther. I was always a little afraid if I tried his patience too much he would fall on me suddenly and smother me. I own I was weak. But I was also annoyed with Pyecraft. I had got to that state of feeling for him that disposed me to say, "Well, TAKE the risk!" The little affair of Pattison to which I have alluded was a different matter altogether. What it was doesn't concern us now, but I knew, anyhow, that the particular recipe I used then was safe. The rest I didn't know so much about, and, on the whole, I was inclined to doubt their safety pretty completely.

Yet even if Pyecraft got poisoned--

I must confess the poisoning of Pyecraft struck me as an immense undertaking.

That evening I took that queer, odd-scented sandalwood box out of my safe and turned the rustling skins over. The gentleman who wrote the recipes for my great-grandmother evidently had a weakness for skins of a miscellaneous origin, and his handwriting was cramped to the last degree. Some of the things are quite unreadable to me--though my family, with its Indian Civil Service associations, has kept up a knowledge of Hindustani from generation to generation--and none are absolutely plain sailing. But I found the one that I knew was there soon enough, and sat on the floor by my safe for some time looking at it.

"Look here," said I to Pyecraft next day, and snatched the slip away from his eager grasp.

"So far as I--can make it out, this is a recipe for Loss of Weight. ("Ah!" said Pyecraft.) I'm not absolutely sure, but I think it's that. And if you take my advice you'll leave it alone. Because, you know--I blacken my blood in your interest, Pyecraft--my ancestors on that side were, so far as I can gather, a jolly queer lot. See?"

"Let me try it," said Pyecraft.

I leant back in my chair. My imagination made one mighty effort and fell flat within me. "What in Heaven's name, Pyecraft," I asked, "do you think you'll look like when you get thin?"

He was impervious to reason. I made him promise never to say a word to me about his disgusting fatness again whatever happened--never, and then I handed him that little piece of skin.

"It's nasty stuff," I said.

"No matter," he said, and took it.

He goggled at it. "But--but--" he said.

He had just discovered that it wasn't English.

"To the best of my ability," I said, "I will do you a translation."

I did my best. After that we didn't speak for a fortnight. Whenever he approached me I frowned and motioned him away, and he respected our compact, but at the end of a fortnight he was as fat as ever. And then he got a word in.

"I must speak," he said. "It isn't fair. There's something wrong. It's done me no good. You're not doing your great-grandmother justice."

"Where's the recipe?"

He produced it gingerly from his pocket-book.

I ran my eye over the items. "Was the egg addled?" I asked.

"No. Ought it to have been?"

"That," I said, "goes without saying in all my poor dear great-grandmother's recipes. When condition or quality is not specified you must get the worst. She was drastic or nothing. . . . And there's one or two possible alternatives to some of these other things. You got FRESH rattlesnake venom."

"I got a rattlesnake from Jamrach's. It cost--it cost--"

"That's your affair, anyhow. This last item--"

"I know a man who--"

"Yes. H'm. Well, I'll write the alternatives down. So far as I know

the language, the spelling of this recipe is particularly atrocious. By-the-bye, dog here probably means pariah dog."

For a month after that I saw Pyecraft constantly at the club and as fat and anxious as ever. He kept our treaty, but at times he broke the spirit of it by shaking his head despondently. Then one day in the cloakroom he said, "Your great-grandmother--"

"Not a word against her," I said; and he held his peace.

I could have fancied he had desisted, and I saw him one day talking to three new members about his fatness as though he was in search of other recipes. And then, quite unexpectedly, his telegram came.

"Mr. Formalyn!" bawled a page-boy under my nose, and I took the telegram and opened it at once.

"For Heaven's sake come.--Pyecraft."

"H'm," said I, and to tell the truth I was so pleased at the rehabilitation of my great grandmother's reputation this evidently promised that I made a most excellent lunch.

I got Pyecraft's address from the hall porter. Pyecraft inhabited the upper half of a house in Bloomsbury, and I went there so soon as I had done my coffee and Trappistine. I did not wait to finish my cigar.

"Mr. Pyecraft?" said I, at the front door.

They believed he was ill; he hadn't been out for two days.

"He expects me," said I, and they sent me up.

I rang the bell at the lattice-door upon the landing.

"He shouldn't have tried it, anyhow," I said to myself. "A man who eats like a pig ought to look like a pig."

An obviously worthy woman, with an anxious face and a carelessly placed cap, came and surveyed me through the lattice.

I gave my name and she let me in in a dubious fashion.

"Well?" said I, as we stood together inside Pyecraft's piece of the landing.

"'E said you was to come in if you came," she said, and regarded me, making no motion to show me anywhere. And then, confidentially, "'E's locked in, sir."

"Locked in?"

"Locked himself in yesterday morning and 'asn't let any one in since, sir. And ever and again SWEARING. Oh, my!"

I stared at the door she indicated by her glances.

"In there?" I said.

"Yes, sir."

"What's up?"

She shook her head sadly, "'E keeps on calling for vittles, sir. 'EAVY vittles 'e wants. I get 'im what I can. Pork 'e's 'ad, sooit puddin', sossiges, noo bread. Everythink like that. Left outside, if you please, and me go away. 'E's eatin', sir, somethink AWFUL."

There came a piping bawl from inside the door: "That Formalyn?"

"That you, Pyecraft?" I shouted, and went and banged the door.

"Tell her to go away."

I did.

Then I could hear a curious pattering upon the door, almost like some one feeling for the handle in the dark, and Pyecraft's familiar grunts.

"It's all right," I said, "she's gone."

But for a long time the door didn't open.

I heard the key turn. Then Pyecraft's voice said, "Come in."

I turned the handle and opened the door. Naturally I expected to see Pyecraft.

Well, you know, he wasn't there!

I never had such a shock in my life. There was his sitting-room in a state of untidy disorder, plates and dishes among the books and writing things, and several chairs overturned, but Pyecraft--

"It's all right, o' man; shut the door," he said, and then I discovered him.

There he was right up close to the cornice in the corner by the door, as though some one had glued him to the ceiling. His face was anxious and angry. He panted and gesticulated. "Shut the door," he said. "If that woman gets hold of it--"

I shut the door, and went and stood away from him and stared.

"If anything gives way and you tumble down," I said, "you'll break your neck, Pyecraft."

"I wish I could," he wheezed.

"A man of your age and weight getting up to kiddish gymnastics--"

"Don't," he said, and looked agonised.

"I'll tell you," he said, and gesticulated.

"How the deuce," said I, "are you holding on up there?"

And then abruptly I realised that he was not holding on at all, that he was floating up there--just as a gas-filled bladder might have floated in the same position. He began a struggle to thrust himself away from the ceiling and to clamber down the wall to me. "It's that prescription," he panted, as he did so. "Your great-gran--"

He took hold of a framed engraving rather carelessly as he spoke and it gave way, and he flew back to the ceiling again, while the picture smashed onto the sofa. Bump he went against the ceiling, and I knew then why he was all over white on the more salient curves and angles of his person. He tried again more carefully, coming down by way of the mantel.

It was really a most extraordinary spectacle, that great, fat, apoplectic-looking man upside down and trying to get from the ceiling to the floor. "That prescription," he said. "Too successful."

"How?"

"Loss of weight--almost complete."

And then, of course, I understood.

"By Jove, Pyecraft," said I, "what you wanted was a cure for fatness! But you always called it weight. You would call it weight."

Somehow I was extremely delighted. I quite liked Pyecraft for the time. "Let me help you!" I said, and took his hand and pulled him down. He kicked about, trying to get a foothold somewhere. It was very like holding a flag on a windy day.

"That table," he said, pointing, "is solid mahogany and very heavy. If you can put me under that---"

I did, and there he wallowed about like a captive balloon, while I stood on his hearthrug and talked to him.

I lit a cigar. "Tell me," I said, "what happened?"

"I took it," he said.

"How did it taste?"

"Oh, BEASTLY!"

I should fancy they all did. Whether one regards the ingredients or the probable compound or the possible results, almost all of my great-grandmother's remedies appear to me at least to be extraordinarily uninviting. For my own part--

"I took a little sip first."

"Yes?"

"And as I felt lighter and better after an hour, I decided to take the draught."

"My dear Pyecraft!"

"I held my nose," he explained. "And then I kept on getting lighter and lighter--and helpless, you know."

He gave way to a sudden burst of passion. "What the goodness am I to DO?" he said.

"There's one thing pretty evident," I said, "that you mustn't do. If you go out of doors, you'll go up and up." I waved an arm upward. "They'd have to send Santos-Dumont after you to bring you down again."

"I suppose it will wear off?"

I shook my head. "I don't think you can count on that," I said.

And then there was another burst of passion, and he kicked out at adjacent chairs and banged the floor. He behaved just as I should have expected a great, fat, self-indulgent man to behave under trying circumstances--that is to say, very badly. He spoke of me and my great-grandmother with an utter want of discretion.

"I never asked you to take the stuff," I said.

And generously disregarding the insults he was putting upon me, I sat down in his armchair and began to talk to him in a sober, friendly fashion.

I pointed out to him that this was a trouble he had brought upon himself, and that it had almost an air of poetical justice. He had eaten too much. This he disputed, and for a time we argued the point.

He became noisy and violent, so I desisted from this aspect of his lesson. "And then," said I, "you committed the sin of euphuism."

You called it not Fat, which is just and inglorious, but Weight. You--"

He interrupted to say he recognised all that. What was he to DO?

I suggested he should adapt himself to his new conditions. So we came to the really sensible part of the business. I suggested that it would not be difficult for him to learn to walk about on the ceiling with his hands--

"I can't sleep," he said.

But that was no great difficulty. It was quite possible, I pointed out, to make a shake-up under a wire mattress, fasten the under things on with tapes, and have a blanket, sheet, and coverlet to button at the side. He would have to confide in his housekeeper, I said; and after some squabbling he agreed to that. (Afterwards it was quite delightful to see the beautifully matter-of-fact way with which the good lady took all these amazing inversions.) He could have a library ladder in his room, and all his meals could be laid on the top of his bookcase. We also hit on an ingenious device by which he could get to the floor whenever he wanted, which was simply to put the British Encyclopaedia (tenth edition) on the top of his open shelves. He just pulled out a couple of volumes and held on, and down he came. And we agreed there must be iron staples along the skirting, so that he could cling to those whenever he wanted to get about the room on the lower level.

As we got on with the thing I found myself almost keenly interested. It was I who called in the housekeeper and broke matters to her, and it was I chiefly who fixed up the inverted bed. In fact, I spent two whole days at his flat. I am a handy, interfering sort of man with a screw-driver, and I made all sorts of ingenious adaptations for him--ran a wire to bring his bells within reach, turned all his electric lights up instead of down, and so on. The whole affair was extremely curious and interesting to me, and it was delightful

to think of Pyecraft like some great, fat blow-fly, crawling about on his ceiling and clambering round the lintels of his doors from one room to another, and never, never, never coming to the club any more. . . .

Then, you know, my fatal ingenuity got the better of me. I was sitting by his fire drinking his whisky, and he was up in his favourite corner by the cornice, tacking a Turkey carpet to the ceiling, when the idea struck me. "By Jove, Pyecraft!" I said, "all this is totally unnecessary."

And before I could calculate the complete consequences of my notion I blurted it out. "Lead underclothing," said I, and the mischief was done.

Pyecraft received the thing almost in tears. "To be right ways up again--" he said. I gave him the whole secret before I saw where it would take me. "Buy sheet lead," I said, "stamp it into discs. Sew 'em all over your underclothes until you have enough. Have lead-soled boots, carry a bag of solid lead, and the thing is done! Instead of being a prisoner here you may go abroad again, Pyecraft; you may travel--"

A still happier idea came to me. "You need never fear a shipwreck. All you need do is just slip off some or all of your clothes, take the necessary amount of luggage in your hand, and float up in the air--"

In his emotion he dropped the tack-hammer within an ace of my head. "By Jove!" he said, "I shall be able to come back to the club again."

The thing pulled me up short. "By Jove!" I said faintly. "Yes. Of course--you will."

He did. He does. There he sits behind me now, stuffing--as I live!--a third go of buttered tea-cake. And no one in the whole world knows--

except his housekeeper and me--that he weighs practically nothing; that he is a mere boring mass of assimilatory matter, mere clouds in clothing, niente, nefas, the most inconsiderable of men. There he sits watching until I have done this writing. Then, if he can, he will waylay me. He will come billowing up to me. . . .

He will tell me over again all about it, how it feels, how it doesn't feel, how he sometimes hopes it is passing off a little. And always somewhere in that fat, abundant discourse he will say, "The secret's keeping, eh? If any one knew of it--I should be so ashamed. . . . Makes a fellow look such a fool, you know. Crawling about on a ceiling and all that. . . ."

And now to elude Pyecraft, occupying, as he does, an admirable strategic position between me and the door.

5. MR. SKELMERSDALE IN FAIRYLAND

"There's a man in that shop," said the Doctor, "who has been in Fairyland."

"Nonsense!" I said, and stared back at the shop. It was the usual village shop, post-office, telegraph wire on its brow, zinc pans and brushes outside, boots, shirtings, and potted meats in the window. "Tell me about it," I said, after a pause.

"_I_ don't know," said the Doctor. "He's an ordinary sort of lout-- Skelmersdale is his name. But everybody about here believes it like Bible truth."

I reverted presently to the topic.

"I know nothing about it," said the Doctor, "and I don't WANT to know. I attended him for a broken finger--Married and Single cricket match--and that's when I struck the nonsense. That's all. But it shows you the sort of stuff I have to deal with, anyhow, eh? Nice to get modern sanitary ideas into a people like this!"

"Very," I said in a mildly sympathetic tone, and he went on to tell me about that business of the Bonham drain. Things of that kind, I observe, are apt to weigh on the minds of Medical Officers of Health. I was as sympathetic as I knew how, and when he called the Bonham people "asses," I said they were "thundering asses," but even that did not allay him.

Afterwards, later in the summer, an urgent desire to seclude myself, while finishing my chapter on Spiritual Pathology--it was really, I believe, stiffer to write than it is to read--took me to Bignor. I lodged at a farmhouse, and presently found myself outside that little general shop again, in search of tobacco. "Skelmersdale," said I to myself at the sight of it, and went in.

I was served by a short, but shapely, young man, with a fair downy complexion, good, small teeth, blue eyes, and a languid manner. I scrutinised him curiously. Except for a touch of melancholy in his expression, he was nothing out of the common. He was in the shirt-sleeves and tucked-up apron of his trade, and a pencil was thrust behind his inoffensive ear. Athwart his black waistcoat was a gold chain, from which dangled a bent guinea.

"Nothing more to-day, sir?" he inquired. He leant forward over my bill as he spoke.

"Are you Mr. Skelmersdale?" said I.

"I am, sir," he said, without looking up.

"Is it true that you have been in Fairyland?"

He looked up at me for a moment with wrinkled brows, with an aggrieved, exasperated face. "O SHUT it!" he said, and, after a moment of hostility, eye to eye, he went on adding up my bill. "Four, six and a half," he said, after a pause. "Thank you, Sir."

So, unpropitiously, my acquaintance with Mr. Skelmersdale began.

Well, I got from that to confidence--through a series of toilsome efforts. I picked him up again in the Village Room, where of a night I went to play billiards after my supper, and mitigate the extreme seclusion from my kind that was so helpful to work during the day. I contrived to play with him and afterwards to talk with him. I found the one subject to avoid was Fairyland. On everything else he was open and amiable in a commonplace sort of way, but on that he had been worried--it was a manifest taboo. Only once in the room did I hear the slightest allusion to his experience in his presence, and that was by a cross-grained farm hand who was losing to him.

Skelmersdale had run a break into double figures, which, by the Bignor standards, was uncommonly good play. "Steady on!" said his adversary. "None of your fairy flukes!"

Skelmersdale stared at him for a moment, cue in hand, then flung it down and walked out of the room.

"Why can't you leave 'im alone?" said a respectable elder who had been enjoying the game, and in the general murmur of disapproval the grin of satisfied wit faded from the ploughboy's face.

I scented my opportunity. "What's this joke," said I, "about Fairyland?"

"Tain't no joke about Fairyland, not to young Skelmersdale," said the respectable elder, drinking. A little man with rosy cheeks was more communicative. "They DO say, sir," he said, "that they took him into Aldington Knoll an' kep' him there a matter of three weeks."

And with that the gathering was well under weigh. Once one sheep had started, others were ready enough to follow, and in a little time I had at least the exterior aspect of the Skelmersdale affair. Formerly, before he came to Bignor, he had been in that very similar little shop at Aldington Corner, and there whatever it was did happen had taken place. The story was clear that he had stayed out late one night on the Knoll and vanished for three weeks from the sight of men, and had returned with "his cuffs as clean as when he started," and his pockets full of dust and ashes. He returned in a state of moody wretchedness that only slowly passed away, and for many days he would give no account of where it was he had been. The girl he was engaged to at Clapton Hill tried to get it out of him, and threw him over partly because he refused, and partly because, as she said, he fairly gave her the "ump." And then when, some time after, he let out to some one carelessly that he had been in Fairyland and wanted to go back, and when the thing spread and the simple badinage of the countryside came into play, he threw up his situation abruptly, and

came to Bignor to get out of the fuss. But as to what had happened in Fairyland none of these people knew. There the gathering in the Village Room went to pieces like a pack at fault. One said this, and another said that.

Their air in dealing with this marvel was ostensibly critical and sceptical, but I could see a considerable amount of belief showing through their guarded qualifications. I took a line of intelligent interest, tinged with a reasonable doubt of the whole story.

"If Fairyland's inside Aldington Knoll," I said, "why don't you dig it out?"

"That's what I says," said the young ploughboy.

"There's a-many have tried to dig on Aldington Knoll," said the respectable elder, solemnly, "one time and another. But there's none as goes about to-day to tell what they got by digging."

The unanimity of vague belief that surrounded me was rather impressive; I felt there must surely be SOMETHING at the root of so much conviction, and the already pretty keen curiosity I felt about the real facts of the case was distinctly whetted. If these real facts were to be got from any one, they were to be got from Skelmersdale himself; and I set myself, therefore, still more assiduously to efface the first bad impression I had made and win his confidence to the pitch of voluntary speech. In that endeavour I had a social advantage. Being a person of affability and no apparent employment, and wearing tweeds and knickerbockers, I was naturally classed as an artist in Bignor, and in the remarkable code of social precedence prevalent in Bignor an artist ranks considerably higher than a grocer's assistant. Skelmersdale, like too many of his class, is something of a snob; he had told me to "shut it," only under sudden, excessive provocation, and with, I am certain, a subsequent repentance; he was, I knew,

quite glad to be seen walking about the village with me. In due course, he accepted the proposal of a pipe and whisky in my rooms readily enough, and there, scenting by some happy instinct that there was trouble of the heart in this, and knowing that confidences beget confidences, I plied him with much of interest and suggestion from my real and fictitious past. And it was after the third whisky of the third visit of that sort, if I remember rightly, that a propos of some artless expansion of a little affair that had touched and left me in my teens, that he did at last, of his own free will and motion, break the ice. "It was like that with me," he said, "over there at Aldington. It's just that that's so rum. First I didn't care a bit and it was all her, and afterwards, when it was too late, it was, in a manner of speaking, all me."

I forbore to jump upon this allusion, and so he presently threw out another, and in a little while he was making it as plain as daylight that the one thing he wanted to talk about now was this Fairyland adventure he had sat tight upon for so long. You see, I'd done the trick with him, and from being just another half-incredulous, would-be facetious stranger, I had, by all my wealth of shameless self-exposure, become the possible confidant. He had been bitten by the desire to show that he, too, had lived and felt many things, and the fever was upon him.

He was certainly confoundedly allusive at first, and my eagerness to clear him up with a few precise questions was only equalled and controlled by my anxiety not to get to this sort of thing too soon. But in another meeting or so the basis of confidence was complete; and from first to last I think I got most of the items and aspects--indeed, I got quite a number of times over almost everything that Mr. Skelmersdale, with his very limited powers of narration, will ever be able to tell. And so I come to the story of his adventure, and I piece it all together again. Whether it really happened, whether he imagined it or dreamt it, or fell upon it in some strange hallucinatory trance, I do not profess to say. But that he invented

it I will not for one moment entertain. The man simply and honestly believes the thing happened as he says it happened; he is transparently incapable of any lie so elaborate and sustained, and in the belief of the simple, yet often keenly penetrating, rustic minds about him I find a very strong confirmation of his sincerity. He believes-- and nobody can produce any positive fact to falsify his belief. As for me, with this much of endorsement, I transmit his story-- I am a little old now to justify or explain.

He says he went to sleep on Aldington Knoll about ten o'clock one night--it was quite possibly Midsummer night, though he has never thought of the date, and he cannot be sure within a week or so-- and it was a fine night and windless, with a rising moon. I have been at the pains to visit this Knoll thrice since his story grew up under my persuasions, and once I went there in the twilight summer moonrise on what was, perhaps, a similar night to that of his adventure. Jupiter was great and splendid above the moon, and in the north and northwest the sky was green and vividly bright over the sunken sun. The Knoll stands out bare and bleak under the sky, but surrounded at a little distance by dark thickets, and as I went up towards it there was a mighty starting and scampering of ghostly or quite invisible rabbits. Just over the crown of the Knoll, but nowhere else, was a multitudinous thin trumpeting of midges. The Knoll is, I believe, an artificial mound, the tumulus of some great prehistoric chieftain, and surely no man ever chose a more spacious prospect for a sepulchre. Eastward one sees along the hills to Hythe, and thence across the Channel to where, thirty miles and more perhaps, away, the great white lights by Gris Nez and Boulogne wink and pass and shine. Westward lies the whole tumbled valley of the Weald, visible as far as Hindhead and Leith Hill, and the valley of the Stour opens the Downs in the north to interminable hills beyond Wye. All Romney Marsh lies southward at one's feet, Dymchurch and Romney and Lydd, Hastings and its hill are in the middle distance, and the hills multiply vaguely far beyond where Eastbourne rolls up to Beachy Head.

And out upon all this it was that Skelmersdale wandered, being troubled in his earlier love affair, and as he says, "not caring WHERE he went." And there he sat down to think it over, and so, sulking and grieving, was overtaken by sleep. And so he fell into the fairies' power.

The quarrel that had upset him was some trivial matter enough between himself and the girl at Clapton Hill to whom he was engaged. She was a farmer's daughter, said Skelmersdale, and "very respectable," and no doubt an excellent match for him; but both girl and lover were very young and with just that mutual jealousy, that intolerantly keen edge of criticism, that irrational hunger for a beautiful perfection, that life and wisdom do presently and most mercifully dull. What the precise matter of quarrel was I have no idea. She may have said she liked men in gaiters when he hadn't any gaiters on, or he may have said he liked her better in a different sort of hat, but however it began, it got by a series of clumsy stages to bitterness and tears. She no doubt got tearful and smeary, and he grew dusty and drooping, and she parted with invidious comparisons, grave doubts whether she ever had REALLY cared for him, and a clear certainty she would never care again. And with this sort of thing upon his mind he came out upon Aldington Knoll grieving, and presently, after a long interval, perhaps, quite inexplicably, fell asleep.

He woke to find himself on a softer turf than ever he had slept on before, and under the shade of very dark trees that completely hid the sky. Always, indeed, in Fairyland the sky is hidden, it seems. Except for one night when the fairies were dancing, Mr. Skelmersdale, during all his time with them, never saw a star. And of that night I am in doubt whether he was in Fairyland proper or out where the rings and rushes are, in those low meadows near the railway line at Smeeth.

But it was light under these trees for all that, and on the leaves and amidst the turf shone a multitude of glow-worms, very bright and fine. Mr. Skelmersdale's first impression was that he was SMALL,

and the next that quite a number of people still smaller were standing all about him. For some reason, he says, he was neither surprised nor frightened, but sat up quite deliberately and rubbed the sleep out of his eyes. And there all about him stood the smiling elves who had caught him sleeping under their privileges and had brought him into Fairyland.

What these elves were like I have failed to gather, so vague and imperfect is his vocabulary, and so unobservant of all minor detail does he seem to have been. They were clothed in something very light and beautiful, that was neither wool, nor silk, nor leaves, nor the petals of flowers. They stood all about him as he sat and waked, and down the glade towards him, down a glow-worm avenue and fronted by a star, came at once that Fairy Lady who is the chief personage of his memory and tale. Of her I gathered more. She was clothed in filmy green, and about her little waist was a broad silver girdle. Her hair waved back from her forehead on either side; there were curls not too wayward and yet astray, and on her brow was a little tiara, set with a single star. Her sleeves were some sort of open sleeves that gave little glimpses of her arms; her throat, I think, was a little displayed, because he speaks of the beauty of her neck and chin. There was a necklace of coral about her white throat, and in her breast a coral-coloured flower. She had the soft lines of a little child in her chin and cheeks and throat. And her eyes, I gather, were of a kindled brown, very soft and straight and sweet under her level brows. You see by these particulars how greatly this lady must have loomed in Mr. Skelmersdale's picture. Certain things he tried to express and could not express; "the way she moved," he said several times; and I fancy a sort of demure joyousness radiated from this Lady.

And it was in the company of this delightful person, as the guest and chosen companion of this delightful person, that Mr. Skelmersdale set out to be taken into the intimacies of Fairyland. She welcomed him gladly and a little warmly--I suspect a pressure of his hand

in both of hers and a lit face to his. After all, ten years ago young Skelmersdale may have been a very comely youth. And once she took his arm, and once, I think, she led him by the hand adown the glade that the glow-worms lit.

Just how things chanced and happened there is no telling from Mr. Skelmersdale's disarticulated skeleton of description. He gives little unsatisfactory glimpses of strange corners and doings, of places where there were many fairies together, of "toadstool things that shone pink," of fairy food, of which he could only say "you should have tasted it!" and of fairy music, "like a little musical box," that came out of nodding flowers. There was a great open place where fairies rode and raced on "things," but what Mr. Skelmersdale meant by "these here things they rode," there is no telling. Larvae, perhaps, or crickets, or the little beetles that elude us so abundantly. There was a place where water splashed and gigantic king-cups grew, and there in the hotter times the fairies bathed together. There were games being played and dancing and much elvish love-making, too, I think, among the moss-branch thickets. There can be no doubt that the Fairy Lady made love to Mr. Skelmersdale, and no doubt either that this young man set himself to resist her. A time came, indeed, when she sat on a bank beside him, in a quiet, secluded place "all smelling of vi'lets," and talked to him of love.

"When her voice went low and she whispered," said Mr. Skelmersdale, "and laid 'er 'and on my 'and, you know, and came close with a soft, warm friendly way she 'ad, it was as much as I could do to keep my 'ead."

It seems he kept his head to a certain limited unfortunate extent. He saw "'ow the wind was blowing," he says, and so, sitting there in a place all smelling of violets, with the touch of this lovely Fairy Lady about him, Mr. Skelmersdale broke it to her gently-- that he was engaged!

She had told him she loved him dearly, that he was a sweet human lad for her, and whatever he would ask of her he should have--even his heart's desire.

And Mr. Skelmersdale, who, I fancy, tried hard to avoid looking at her little lips as they just dropped apart and came together, led up to the more intimate question by saying he would like enough capital to start a little shop. He'd just like to feel, he said, he had money enough to do that. I imagine a little surprise in those brown eyes he talked about, but she seemed sympathetic for all that, and she asked him many questions about the little shop, "laughing like" all the time. So he got to the complete statement of his affianced position, and told her all about Millie.

"All?" said I.

"Everything," said Mr. Skelmersdale, "just who she was, and where she lived, and everything about her. I sort of felt I 'ad to all the time, I did."

"'Whatever you want you shall have,' said the Fairy Lady. 'That's as good as done. You **SHALL** feel you have the money just as you wish. And now, you know--**YOU MUST KISS ME.**'"

And Mr. Skelmersdale pretended not to hear the latter part of her remark, and said she was very kind. That he really didn't deserve she should be so kind. And--

The Fairy Lady suddenly came quite close to him and whispered, "Kiss me!"

"And," said Mr. Skelmersdale, "like a fool, I did."

There are kisses and kisses, I am told, and this must have been quite the other sort from Millie's resonant signals of regard. There was

something magic in that kiss; assuredly it marked a turning point. At any rate, this is one of the passages that he thought sufficiently important to describe most at length. I have tried to get it right, I have tried to disentangle it from the hints and gestures through which it came to me, but I have no doubt that it was all different from my telling and far finer and sweeter, in the soft filtered light and the subtly stirring silences of the fairy glades. The Fairy Lady asked him more about Millie, and was she very lovely, and so on-- a great many times. As to Millie's loveliness, I conceive him answering that she was "all right." And then, or on some such occasion, the Fairy Lady told him she had fallen in love with him as he slept in the moonlight, and so he had been brought into Fairyland, and she had thought, not knowing of Millie, that perhaps he might chance to love her. "But now you know you can't," she said, "so you must stop with me just a little while, and then you must go back to Millie." She told him that, and you know Skelmersdale was already in love with her, but the pure inertia of his mind kept him in the way he was going. I imagine him sitting in a sort of stupefaction amidst all these glowing beautiful things, answering about his Millie and the little shop he projected and the need of a horse and cart. . . . And that absurd state of affairs must have gone on for days and days. I see this little lady, hovering about him and trying to amuse him, too dainty to understand his complexity and too tender to let him go. And he, you know, hypnotised as it were by his earthly position, went his way with her hither and thither, blind to everything in Fairyland but this wonderful intimacy that had come to him. It is hard, it is impossible, to give in print the effect of her radiant sweetness shining through the jungle of poor Skelmersdale's rough and broken sentences. To me, at least, she shone clear amidst the muddle of his story like a glow-worm in a tangle of weeds.

There must have been many days of things while all this was happening-- and once, I say, they danced under the moonlight in the fairy rings that stud the meadows near Smeeth--but at last it all came to an end.

She led him into a great cavernous place, lit by a red nightlight sort of thing, where there were coffers piled on coffers, and cups and golden boxes, and a great heap of what certainly seemed to all Mr. Skelmersdale's senses--coined gold. There were little gnomes amidst this wealth, who saluted her at her coming, and stood aside. And suddenly she turned on him there with brightly shining eyes.

"And now," she said, "you have been kind to stay with me so long, and it is time I let you go. You must go back to your Millie. You must go back to your Millie, and here--just as I promised you--they will give you gold."

"She choked like," said Mr. Skelmersdale. "At that, I had a sort of feeling--" (he touched his breastbone) "as though I was fainting here. I felt pale, you know, and shivering, and even then--I 'adn't a thing to say."

He paused. "Yes," I said.

The scene was beyond his describing. But I know that she kissed him good-bye.

"And you said nothing?"

"Nothing," he said. "I stood like a stuffed calf. She just looked back once, you know, and stood smiling like and crying--I could see the shine of her eyes--and then she was gone, and there was all these little fellows bustling about me, stuffing my 'ands and my pockets and the back of my collar and everywhere with gold."

And then it was, when the Fairy Lady had vanished, that Mr. Skelmersdale really understood and knew. He suddenly began plucking out the gold they were thrusting upon him, and shouting out at them to prevent their giving him more. "I don't WANT yer gold,' I said. 'I 'aven't done yet. I'm not going. I want to speak to that Fairy Lady again.'

I started off to go after her and they held me back. Yes, stuck their little 'ands against my middle and shoved me back. They kept giving me more and more gold until it was running all down my trouser legs and dropping out of my 'ands. 'I don't WANT yer gold,' I says to them, 'I want just to speak to the Fairy Lady again.'"

"And did you?"

"It came to a tussle."

"Before you saw her?"

"I didn't see her. When I got out from them she wasn't anywhere to be seen."

So he ran in search of her out of this red-lit cave, down a long grotto, seeking her, and thence he came out in a great and desolate place athwart which a swarm of will-o'-the-wisps were flying to and fro. And about him elves were dancing in derision, and the little gnomes came out of the cave after him, carrying gold in handfuls and casting it after him, shouting, "Fairy love and fairy gold! Fairy love and fairy gold!"

And when he heard these words, came a great fear that it was all over, and he lifted up his voice and called to her by her name, and suddenly set himself to run down the slope from the mouth of the cavern, through a place of thorns and briers, calling after her very loudly and often. The elves danced about him unheeded, pinching him and pricking him, and the will-o'-the-wisps circled round him and dashed into his face, and the gnomes pursued him shouting and pelting him with fairy gold. As he ran with all this strange rout about him and distracting him, suddenly he was knee-deep in a swamp, and suddenly he was amidst thick twisted roots, and he caught his foot in one and stumbled and fell. . . .

He fell and he rolled over, and in that instant he found himself sprawling upon Aldington Knoll, all lonely under the stars.

He sat up sharply at once, he says, and found he was very stiff and cold, and his clothes were damp with dew. The first pallor of dawn and a chilly wind were coming up together. He could have believed the whole thing a strangely vivid dream until he thrust his hand into his side pocket and found it stuffed with ashes. Then he knew for certain it was fairy gold they had given him. He could feel all their pinches and pricks still, though there was never a bruise upon him. And in that manner, and so suddenly, Mr. Skelmersdale came out of Fairyland back into this world of men. Even then he fancied the thing was but the matter of a night until he returned to the shop at Aldington Corner and discovered amidst their astonishment that he had been away three weeks.

"Lor'! the trouble I 'ad!" said Mr. Skelmersdale.

"How?"

"Explaining. I suppose you've never had anything like that to explain."

"Never," I said, and he expatiated for a time on the behaviour of this person and that. One name he avoided for a space.

"And Millie?" said I at last.

"I didn't seem to care a bit for seeing Millie," he said.

"I expect she seemed changed?"

"Every one was changed. Changed for good. Every one seemed big, you know, and coarse. And their voices seemed loud. Why, the sun, when it rose in the morning, fair hit me in the eye!"

"And Millie?"

"I didn't want to see Millie."

"And when you did?"

"I came up against her Sunday, coming out of church. 'Where you been?' she said, and I saw there was a row. I didn't care if there was. I seemed to forget about her even while she was there a-talking to me. She was just nothing. I couldn't make out whatever I 'ad seen in 'er ever, or what there could 'ave been. Sometimes when she wasn't about, I did get back a little, but never when she was there. Then it was always the other came up and blotted her out. . . . Anyow, it didn't break her heart."

"Married?" I asked.

"Married 'er cousin," said Mr. Skelmersdale, and reflected on the pattern of the tablecloth for a space.

When he spoke again it was clear that his former sweetheart had clean vanished from his mind, and that the talk had brought back the Fairy Lady triumphant in his heart. He talked of her--soon he was letting out the oddest things, queer love secrets it would be treachery to repeat. I think, indeed, that was the queerest thing in the whole affair, to hear that neat little grocer man after his story was done, with a glass of whisky beside him and a cigar between his fingers, witnessing, with sorrow still, though now, indeed, with a time-blunted anguish, of the inappeasable hunger of the heart that presently came upon him. "I couldn't eat," he said, "I couldn't sleep. I made mistakes in orders and got mixed with change. There she was day and night, drawing me and drawing me. Oh, I wanted her. Lord! how I wanted her! I was up there, most evenings I was up there on the Knoll, often even when it rained. I used to walk over the Knoll and round it and round it, calling for them to let me in. Shouting. Near blubbering

I was at times. Daft I was and miserable. I kept on saying it was all a mistake. And every Sunday afternoon I went up there, wet and fine, though I knew as well as you do it wasn't no good by day. And I've tried to go to sleep there."

He stopped sharply and decided to drink some whisky.

"I've tried to go to sleep there," he said, and I could swear his lips trembled. "I've tried to go to sleep there, often and often. And, you know, I couldn't, sir--never. I've thought if I could go to sleep there, there might be something. But I've sat up there and laid up there, and I couldn't--not for thinking and longing. It's the longing. . . . I've tried--"

He blew, drank up the rest of his whisky spasmodically, stood up suddenly and buttoned his jacket, staring closely and critically at the cheap oleographs beside the mantel meanwhile. The little black notebook in which he recorded the orders of his daily round projected stiffly from his breast pocket. When all the buttons were quite done, he patted his chest and turned on me suddenly. "Well," he said, "I must be going."

There was something in his eyes and manner that was too difficult for him to express in words. "One gets talking," he said at last at the door, and smiled wanly, and so vanished from my eyes. And that is the tale of Mr. Skelmersdale in Fairyland just as he told it to me.

6. THE STORY OF THE INEXPERIENCED GHOST

The scene amidst which Clayton told his last story comes back very vividly to my mind. There he sat, for the greater part of the time, in the corner of the authentic settle by the spacious open fire, and Sanderson sat beside him smoking the Broseley clay that bore his name. There was Evans, and that marvel among actors, Wish, who is also a modest man. We had all come down to the Mermaid Club that Saturday morning, except Clayton, who had slept there overnight--which indeed gave him the opening of his story. We had golfed until golfing was invisible; we had dined, and we were in that mood of tranquil kindness when men will suffer a story. When Clayton began to tell one, we naturally supposed he was lying. It may be that indeed he was lying--of that the reader will speedily be able to judge as well as I. He began, it is true, with an air of matter-of-fact anecdote, but that we thought was only the incurable artifice of the man.

"I say!" he remarked, after a long consideration of the upward rain of sparks from the log that Sanderson had thumped, "you know I was alone here last night?"

"Except for the domestics," said Wish.

"Who sleep in the other wing," said Clayton. "Yes. Well--" He pulled at his cigar for some little time as though he still hesitated about his confidence. Then he said, quite quietly, "I caught a ghost!"

"Caught a ghost, did you?" said Sanderson. "Where is it?"

And Evans, who admires Clayton immensely and has been four weeks in America, shouted, "CAUGHT a ghost, did you, Clayton? I'm glad of it! Tell us all about it right now."

Clayton said he would in a minute, and asked him to shut the door.

He looked apologetically at me. "There's no eavesdropping of course, but we don't want to upset our very excellent service with any rumours of ghosts in the place. There's too much shadow and oak panelling to trifle with that. And this, you know, wasn't a regular ghost. I don't think it will come again--ever."

"You mean to say you didn't keep it?" said Sanderson.

"I hadn't the heart to," said Clayton.

And Sanderson said he was surprised.

We laughed, and Clayton looked aggrieved. "I know," he said, with the flicker of a smile, "but the fact is it really WAS a ghost, and I'm as sure of it as I am that I am talking to you now. I'm not joking. I mean what I say."

Sanderson drew deeply at his pipe, with one reddish eye on Clayton, and then emitted a thin jet of smoke more eloquent than many words.

Clayton ignored the comment. "It is the strangest thing that has ever happened in my life. You know, I never believed in ghosts or anything of the sort, before, ever; and then, you know, I bag one in a corner; and the whole business is in my hands."

He meditated still more profoundly, and produced and began to pierce a second cigar with a curious little stabber he affected.

"You talked to it?" asked Wish.

"For the space, probably, of an hour."

"Chatty?" I said, joining the party of the sceptics.

"The poor devil was in trouble," said Clayton, bowed over his cigar-end

and with the very faintest note of reproof.

"Sobbing?" some one asked.

Clayton heaved a realistic sigh at the memory. "Good Lord!" he said; "yes." And then, "Poor fellow! yes."

"Where did you strike it?" asked Evans, in his best American accent.

"I never realised," said Clayton, ignoring him, "the poor sort of thing a ghost might be," and he hung us up again for a time, while he sought for matches in his pocket and lit and warmed to his cigar.

"I took an advantage," he reflected at last.

We were none of us in a hurry. "A character," he said, "remains just the same character for all that it's been disembodied. That's a thing we too often forget. People with a certain strength or fixity of purpose may have ghosts of a certain strength and fixity of purpose--most haunting ghosts, you know, must be as one-idea'd as monomaniacs and as obstinate as mules to come back again and again. This poor creature wasn't." He suddenly looked up rather queerly, and his eye went round the room. "I say it," he said, "in all kindness, but that is the plain truth of the case. Even at the first glance he struck me as weak."

He punctuated with the help of his cigar.

"I came upon him, you know, in the long passage. His back was towards me and I saw him first. Right off I knew him for a ghost. He was transparent and whitish; clean through his chest I could see the glimmer of the little window at the end. And not only his physique but his attitude struck me as being weak. He looked, you know, as though he didn't know in the slightest whatever he meant to do. One hand was on the panelling and the other fluttered to his mouth. Like--SO!"

"What sort of physique?" said Sanderson.

"Lean. You know that sort of young man's neck that has two great flutings down the back, here and here--so! And a little, meanish head with scrubby hair--And rather bad ears. Shoulders bad, narrower than the hips; turn-down collar, ready-made short jacket, trousers baggy and a little frayed at the heels. That's how he took me.

I came very quietly up the staircase. I did not carry a light, you know--the candles are on the landing table and there is that lamp--and I was in my list slippers, and I saw him as I came up. I stopped dead at that--taking him in. I wasn't a bit afraid. I think that in most of these affairs one is never nearly so afraid or excited as one imagines one would be. I was surprised and interested. I thought, 'Good Lord! Here's a ghost at last! And I haven't believed for a moment in ghosts during the last five-and-twenty years.'"

"Um," said Wish.

"I suppose I wasn't on the landing a moment before he found out I was there. He turned on me sharply, and I saw the face of an immature young man, a weak nose, a scrubby little moustache, a feeble chin. So for an instant we stood--he looking over his shoulder at me and regarded one another. Then he seemed to remember his high calling. He turned round, drew himself up, projected his face, raised his arms, spread his hands in approved ghost fashion--came towards me. As he did so his little jaw dropped, and he emitted a faint, drawn-out 'Boo.' No, it wasn't--not a bit dreadful. I'd dined. I'd had a bottle of champagne, and being all alone, perhaps two or three--perhaps even four or five--whiskies, so I was as solid as rocks and no more frightened than if I'd been assailed by a frog. 'Boo!' I said. 'Nonsense. You don't belong to THIS place. What are you doing here?'

"I could see him wince. 'Boo-oo,' he said.

"'Boo--be hanged! Are you a member?' I said; and just to show I didn't care a pin for him I stepped through a corner of him and made to light my candle. 'Are you a member?' I repeated, looking at him sideways.

"He moved a little so as to stand clear of me, and his bearing became crestfallen. 'No,' he said, in answer to the persistent interrogation of my eye; 'I'm not a member--I'm a ghost.'

"'Well, that doesn't give you the run of the Mermaid Club. Is there any one you want to see, or anything of that sort?' and doing it as steadily as possible for fear that he should mistake the carelessness of whisky for the distraction of fear, I got my candle alight. I turned on him, holding it. 'What are you doing here?' I said.

"He had dropped his hands and stopped his booing, and there he stood, abashed and awkward, the ghost of a weak, silly, aimless young man. 'I'm haunting,' he said.

"'You haven't any business to,' I said in a quiet voice.

"'I'm a ghost,' he said, as if in defence.

"'That may be, but you haven't any business to haunt here. This is a respectable private club; people often stop here with nursemaids and children, and, going about in the careless way you do, some poor little mite could easily come upon you and be scared out of her wits. I suppose you didn't think of that?'

"'No, sir,' he said, 'I didn't.'

"'You should have done. You haven't any claim on the place, have you? Weren't murdered here, or anything of that sort?'

"'None, sir; but I thought as it was old and oak-panelled--'

"That's NO excuse.' I regarded him firmly. 'Your coming here is a mistake,' I said, in a tone of friendly superiority. I feigned to see if I had my matches, and then looked up at him frankly. 'If I were you I wouldn't wait for cock-crow--I'd vanish right away.'

"He looked embarrassed. 'The fact IS, sir--' he began.

"I'd vanish,' I said, driving it home.

"The fact is, sir, that--somehow--I can't.'

"You CAN'T?'

"No, sir. There's something I've forgotten. I've been hanging about here since midnight last night, hiding in the cupboards of the empty bedrooms and things like that. I'm flurried. I've never come haunting before, and it seems to put me out.'

"Put you out?'

"Yes, sir. I've tried to do it several times, and it doesn't come off. There's some little thing has slipped me, and I can't get back.'

"That, you know, rather bowled me over. He looked at me in such an abject way that for the life of me I couldn't keep up quite the high, hectoring vein I had adopted. 'That's queer,' I said, and as I spoke I fancied I heard some one moving about down below. 'Come into my room and tell me more about it,' I said. 'I didn't, of course, understand this,' and I tried to take him by the arm. But, of course, you might as well have tried to take hold of a puff of smoke! I had forgotten my number, I think; anyhow, I remember going into several bedrooms--it was lucky I was the only soul in that wing--until I saw my traps. 'Here we are,' I said, and sat down in the arm-chair; 'sit down and tell me all about it. It seems

to me you have got yourself into a jolly awkward position, old chap.'

"Well, he said he wouldn't sit down! he'd prefer to flit up and down the room if it was all the same to me. And so he did, and in a little while we were deep in a long and serious talk. And presently, you know, something of those whiskies and sodas evaporated out of me, and I began to realise just a little what a thundering rum and weird business it was that I was in. There he was, semi-transparent--the proper conventional phantom, and noiseless except for his ghost of a voice--flitting to and fro in that nice, clean, chintz-hung old bedroom. You could see the gleam of the copper candlesticks through him, and the lights on the brass fender, and the corners of the framed engravings on the wall,--and there he was telling me all about this wretched little life of his that had recently ended on earth. He hadn't a particularly honest face, you know, but being transparent, of course, he couldn't avoid telling the truth."

"Eh?" said Wish, suddenly sitting up in his chair.

"What?" said Clayton.

"Being transparent--couldn't avoid telling the truth--I don't see it," said Wish.

"_I_ don't see it," said Clayton, with inimitable assurance. "But it IS so, I can assure you nevertheless. I don't believe he got once a nail's breadth off the Bible truth. He told me how he had been killed--he went down into a London basement with a candle to look for a leakage of gas--and described himself as a senior English master in a London private school when that release occurred."

"Poor wretch!" said I.

"That's what I thought, and the more he talked the more I thought it. There he was, purposeless in life and purposeless out of it. He talked

of his father and mother and his schoolmaster, and all who had ever been anything to him in the world, meanly. He had been too sensitive, too nervous; none of them had ever valued him properly or understood him, he said. He had never had a real friend in the world, I think; he had never had a success. He had shirked games and failed examinations. 'It's like that with some people,' he said; 'whenever I got into the examination-room or anywhere everything seemed to go.' Engaged to be married of course--to another over-sensitive person, I suppose--when the indiscretion with the gas escape ended his affairs. 'And where are you now?' I asked. 'Not in--?'

"He wasn't clear on that point at all. The impression he gave me was of a sort of vague, intermediate state, a special reserve for souls too non-existent for anything so positive as either sin or virtue. I don't know. He was much too egotistical and unobservant to give me any clear idea of the kind of place, kind of country, there is on the Other Side of Things. Wherever he was, he seems to have fallen in with a set of kindred spirits: ghosts of weak Cockney young men, who were on a footing of Christian names, and among these there was certainly a lot of talk about 'going haunting' and things like that. Yes--going haunting! They seemed to think 'haunting' a tremendous adventure, and most of them funked it all the time. And so primed, you know, he had come."

"But really!" said Wish to the fire.

"These are the impressions he gave me, anyhow," said Clayton, modestly. "I may, of course, have been in a rather uncritical state, but that was the sort of background he gave to himself. He kept flitting up and down, with his thin voice going talking, talking about his wretched self, and never a word of clear, firm statement from first to last. He was thinner and sillier and more pointless than if he had been real and alive. Only then, you know, he would not have been in my bedroom here--if he HAD been alive. I should have kicked him out."

"Of course," said Evans, "there ARE poor mortals like that."

"And there's just as much chance of their having ghosts as the rest of us," I admitted.

"What gave a sort of point to him, you know, was the fact that he did seem within limits to have found himself out. The mess he had made of haunting had depressed him terribly. He had been told it would be a 'lark'; he had come expecting it to be a 'lark,' and here it was, nothing but another failure added to his record! He proclaimed himself an utter out-and-out failure. He said, and I can quite believe it, that he had never tried to do anything all his life that he hadn't made a perfect mess of--and through all the wastes of eternity he never would. If he had had sympathy, perhaps--. He paused at that, and stood regarding me. He remarked that, strange as it might seem to me, nobody, not any one, ever, had given him the amount of sympathy I was doing now. I could see what he wanted straight away, and I determined to head him off at once. I may be a brute, you know, but being the Only Real Friend, the recipient of the confidences of one of these egotistical weaklings, ghost or body, is beyond my physical endurance. I got up briskly. 'Don't you brood on these things too much,' I said. 'The thing you've got to do is to get out of this get out of this--sharp. You pull yourself together and TRY.' 'I can't,' he said. 'You try,' I said, and try he did."

"Try!" said Sanderson. "HOW?"

"Passes," said Clayton.

"Passes?"

"Complicated series of gestures and passes with the hands. That's how he had come in and that's how he had to get out again. Lord! what a business I had!"

"But how could ANY series of passes--?" I began.

"My dear man," said Clayton, turning on me and putting a great emphasis on certain words, "you want EVERYTHING clear. I don't know HOW. All I know is that you DO--that HE did, anyhow, at least. After a fearful time, you know, he got his passes right and suddenly disappeared."

"Did you," said Sanderson, slowly, "observe the passes?"

"Yes," said Clayton, and seemed to think. "It was tremendously queer," he said. "There we were, I and this thin vague ghost, in that silent room, in this silent, empty inn, in this silent little Friday-night town. Not a sound except our voices and a faint panting he made when he swung. There was the bedroom candle, and one candle on the dressing-table alight, that was all--sometimes one or other would flare up into a tall, lean, astonished flame for a space. And queer things happened. 'I can't,' he said; 'I shall never--!' And suddenly he sat down on a little chair at the foot of the bed and began to sob and sob. Lord! what a harrowing, whimpering thing he seemed!

"'You pull yourself together,' I said, and tried to pat him on the back, and . . . my confounded hand went through him! By that time, you know, I wasn't nearly so--massive as I had been on the landing. I got the queerness of it full. I remember snatching back my hand out of him, as it were, with a little thrill, and walking over to the dressing-table. 'You pull yourself together,' I said to him, 'and try.' And in order to encourage and help him I began to try as well."

"What!" said Sanderson, "the passes?"

"Yes, the passes."

"But--" I said, moved by an idea that eluded me for a space.

"This is interesting," said Sanderson, with his finger in his pipe-bowl. "You mean to say this ghost of yours gave away--"

"Did his level best to give away the whole confounded barrier? YES."

"He didn't," said Wish; "he couldn't. Or you'd have gone there too."

"That's precisely it," I said, finding my elusive idea put into words for me.

"That IS precisely it," said Clayton, with thoughtful eyes upon the fire.

For just a little while there was silence.

"And at last he did it?" said Sanderson.

"At last he did it. I had to keep him up to it hard, but he did it at last--rather suddenly. He despaired, we had a scene, and then he got up abruptly and asked me to go through the whole performance, slowly, so that he might see. 'I believe,' he said, 'if I could SEE I should spot what was wrong at once.' And he did. 'I know,' he said. 'What do you know?' said I. 'I know,' he repeated. Then he said, peevishly, 'I CAN'T do it if you look at me--I really CAN'T; it's been that, partly, all along. I'm such a nervous fellow that you put me out.' Well, we had a bit of an argument. Naturally I wanted to see; but he was as obstinate as a mule, and suddenly I had come over as tired as a dog--he tired me out. 'All right,' I said, 'I won't look at you,' and turned towards the mirror, on the wardrobe, by the bed.

He started off very fast. I tried to follow him by looking in the looking-glass, to see just what it was had hung. Round went his arms and his hands, so, and so, and so, and then with a rush came to the last gesture of all--you stand erect and open out your

arms--and so, don't you know, he stood. And then he didn't! He didn't! He wasn't! I wheeled round from the looking-glass to him. There was nothing! I was alone, with the flaring candles and a staggering mind. What had happened? Had anything happened? Had I been dreaming? . . . And then, with an absurd note of finality about it, the clock upon the landing discovered the moment was ripe for striking ONE. So!--Ping! And I was as grave and sober as a judge, with all my champagne and whisky gone into the vast serene. Feeling queer, you know--confoundedly QUEER! Queer! Good Lord!"

He regarded his cigar-ash for a moment. "That's all that happened," he said.

"And then you went to bed?" asked Evans.

"What else was there to do?"

I looked Wish in the eye. We wanted to scoff, and there was something, something perhaps in Clayton's voice and manner, that hampered our desire.

"And about these passes?" said Sanderson.

"I believe I could do them now."

"Oh!" said Sanderson, and produced a penknife and set himself to grub the dottel out of the bowl of his clay.

"Why don't you do them now?" said Sanderson, shutting his pen-knife with a click.

"That's what I'm going to do," said Clayton.

"They won't work," said Evans.

"If they do--" I suggested.

"You know, I'd rather you didn't," said Wish, stretching out his legs.

"Why?" asked Evans.

"I'd rather he didn't," said Wish.

"But he hasn't got 'em right," said Sanderson, plugging too much tobacco in his pipe.

"All the same, I'd rather he didn't," said Wish.

We argued with Wish. He said that for Clayton to go through those gestures was like mocking a serious matter. "But you don't believe--?" I said. Wish glanced at Clayton, who was staring into the fire, weighing something in his mind. "I do--more than half, anyhow, I do," said Wish.

"Clayton," said I, "you're too good a liar for us. Most of it was all right. But that disappearance . . . happened to be convincing. Tell us, it's a tale of cock and bull."

He stood up without heeding me, took the middle of the hearthrug, and faced me. For a moment he regarded his feet thoughtfully, and then for all the rest of the time his eyes were on the opposite wall, with an intent expression. He raised his two hands slowly to the level of his eyes and so began. . . .

Now, Sanderson is a Freemason, a member of the lodge of the Four Kings, which devotes itself so ably to the study and elucidation of all the mysteries of Masonry past and present, and among the students of this lodge Sanderson is by no means the least. He followed Clayton's motions with a singular interest in his reddish eye. "That's not bad," he said, when it was done. "You really do, you know, put things together, Clayton, in a most amazing fashion. But there's one little detail out."

"I know," said Clayton. "I believe I could tell you which."

"Well?"

"This," said Clayton, and did a queer little twist and writhing and thrust of the hands.

"Yes."

"That, you know, was what HE couldn't get right," said Clayton. "But how do YOU--?"

"Most of this business, and particularly how you invented it, I don't understand at all," said Sanderson, "but just that phase--I do." He reflected. "These happen to be a series of gestures--connected with a certain branch of esoteric Masonry. Probably you know. Or else--HOW?" He reflected still further. "I do not see I can do any harm in telling you just the proper twist. After all, if you know, you know; if you don't, you don't."

"I know nothing," said Clayton, "except what the poor devil let out last night."

"Well, anyhow," said Sanderson, and placed his churchwarden very carefully upon the shelf over the fireplace. Then very rapidly he gesticulated with his hands.

"So?" said Clayton, repeating.

"So," said Sanderson, and took his pipe in hand again.

"Ah, NOW," said Clayton, "I can do the whole thing--right."

He stood up before the waning fire and smiled at us all. But I think

there was just a little hesitation in his smile. "If I begin--"
he said.

"I wouldn't begin," said Wish.

"It's all right!" said Evans. "Matter is indestructible. You don't think any jiggery-pokery of this sort is going to snatch Clayton into the world of shades. Not it! You may try, Clayton, so far as I'm concerned, until your arms drop off at the wrists."

"I don't believe that," said Wish, and stood up and put his arm on Clayton's shoulder. "You've made me half believe in that story somehow, and I don't want to see the thing done!"

"Goodness!" said I, "here's Wish frightened!"

"I am," said Wish, with real or admirably feigned intensity. "I believe that if he goes through these motions right he'll GO."

"He'll not do anything of the sort," I cried. "There's only one way out of this world for men, and Clayton is thirty years from that. Besides . . . And such a ghost! Do you think--?"

Wish interrupted me by moving. He walked out from among our chairs and stopped beside the tole and stood there. "Clayton," he said, "you're a fool."

Clayton, with a humorous light in his eyes, smiled back at him. "Wish," he said, "is right and all you others are wrong. I shall go. I shall get to the end of these passes, and as the last swish whistles through the air, Presto!--this hearthrug will be vacant, the room will be blank amazement, and a respectably dressed gentleman of fifteen stone will plump into the world of shades. I'm certain. So will you be. I decline to argue further. Let the thing be tried."

"NO," said Wish, and made a step and ceased, and Clayton raised his hands once more to repeat the spirit's passing.

By that time, you know, we were all in a state of tension--largely because of the behaviour of Wish. We sat all of us with our eyes on Clayton--I, at least, with a sort of tight, stiff feeling about me as though from the back of my skull to the middle of my thighs my body had been changed to steel. And there, with a gravity that was imperturbably serene, Clayton bowed and swayed and waved his hands and arms before us. As he drew towards the end one piled up, one tingled in one's teeth. The last gesture, I have said, was to swing the arms out wide open, with the face held up. And when at last he swung out to this closing gesture I ceased even to breathe. It was ridiculous, of course, but you know that ghost-story feeling. It was after dinner, in a queer, old shadowy house. Would he, after all--?

There he stood for one stupendous moment, with his arms open and his upturned face, assured and bright, in the glare of the hanging lamp. We hung through that moment as if it were an age, and then came from all of us something that was half a sigh of infinite relief and half a reassuring "NO!" For visibly--he wasn't going. It was all nonsense. He had told an idle story, and carried it almost to conviction, that was all! . . . And then in that moment the face of Clayton, changed.

It changed. It changed as a lit house changes when its lights are suddenly extinguished. His eyes were suddenly eyes that were fixed, his smile was frozen on his lips, and he stood there still. He stood there, very gently swaying.

That moment, too, was an age. And then, you know, chairs were scraping, things were falling, and we were all moving. His knees seemed to give, and he fell forward, and Evans rose and caught him in his arms. . . .

It stunned us all. For a minute I suppose no one said a coherent thing. We believed it, yet could not believe it. . . . I came out

of a muddled stupefaction to find myself kneeling beside him, and his vest and shirt were torn open, and Sanderson's hand lay on his heart. . . .

Well--the simple fact before us could very well wait our convenience; there was no hurry for us to comprehend. It lay there for an hour; it lies athwart my memory, black and amazing still, to this day. Clayton had, indeed, passed into the world that lies so near to and so far from our own, and he had gone thither by the only road that mortal man may take. But whether he did indeed pass there by that poor ghost's incantation, or whether he was stricken suddenly by apoplexy in the midst of an idle tale--as the coroner's jury would have us believe--is no matter for my judging; it is just one of those inexplicable riddles that must remain unsolved until the final solution of all things shall come. All I certainly know is that, in the very moment, in the very instant, of concluding those passes, he changed, and staggered, and fell down before us--dead!

7. JIMMY GOGGLES THE GOD

"It isn't every one who's been a god," said the sunburnt man. "But it's happened to me. Among other things."

I intimated my sense of his condescension.

"It don't leave much for ambition, does it?" said the sunburnt man.

"I was one of those men who were saved from the Ocean Pioneer. Gummy! how time flies! It's twenty years ago. I doubt if you'll remember anything of the Ocean Pioneer?"

The name was familiar, and I tried to recall when and where I had read it. The Ocean Pioneer? "Something about gold dust," I said vaguely, "but the precise--"

"That's it," he said. "In a beastly little channel she hadn't no business in--dodging pirates. It was before they'd put the kybosh on that business. And there'd been volcanoes or something and all the rocks was wrong. There's places about by Soona where you fair have to follow the rocks about to see where they're going next. Down she went in twenty fathoms before you could have dealt for whist, with fifty thousand pounds worth of gold aboard, it was said, in one form or another."

"Survivors?"

"Three."

"I remember the case now," I said. "There was something about salvage--"

But at the word salvage the sunburnt man exploded into language so extraordinarily horrible that I stopped aghast. He came down to more ordinary swearing, and pulled himself up abruptly. "Excuse me,"

he said, "but--salvage!"

He leant over towards me. "I was in that job," he said. "Tried to make myself a rich man, and got made a god instead. I've got my feelings--

"It ain't all jam being a god," said the sunburnt man, and for some time conversed by means of such pithy but unprogressive axioms. At last he took up his tale again.

"There was me," said the sunburnt man, "and a seaman named Jacobs, and Always, the mate of the Ocean Pioneer. And him it was that set the whole thing going. I remember him now, when we was in the jolly-boat, suggesting it all to our minds just by one sentence. He was a wonderful hand at suggesting things. 'There was forty thousand pounds,' he said, 'on that ship, and it's for me to say just where she went down.' It didn't need much brains to tumble to that. And he was the leader from the first to the last. He got hold of the Sanderses and their brig; they were brothers, and the brig was the Pride of Banya, and he it was bought the diving-dress-- a second-hand one with a compressed air apparatus instead of pumping. He'd have done the diving too, if it hadn't made him sick going down. And the salvage people were mucking about with a chart he'd cooked up, as solemn as could be, at Starr Race, a hundred and twenty miles away.

"I can tell you we was a happy lot aboard that brig, jokes and drink and bright hopes all the time. It all seemed so neat and clean and straightforward, and what rough chaps call a 'cert.' And we used to speculate how the other blessed lot, the proper salvagers, who'd started two days before us, were getting on, until our sides fairly ached. We all messed together in the Sanderses' cabin--it was a curious crew, all officers and no men--and there stood the diving-dress waiting its turn. Young Sanders was a humorous sort of chap, and there certainly was something funny in the confounded thing's great fat head and its stare, and he made us see it too. 'Jimmie Goggles,' he used to call it, and talk to it like a Christian.

Asked if he was married, and how Mrs. Goggles was, and all the little Goggleses. Fit to make you split. And every blessed day all of us used to drink the health of Jimmy Goggles in rum, and unscrew his eye and pour a glass of rum in him, until, instead of that nasty mackintoshiness, he smelt as nice in his inside as a cask of rum. It was jolly times we had in those days, I can tell you--little suspecting, poor chaps! what was a-coming.

"We weren't going to throw away our chances by any blessed hurry, you know, and we spent a whole day sounding our way towards where the Ocean Pioneer had gone down, right between two chunks of ropy grey rock--lava rocks that rose nearly out of the water. We had to lay off about half a mile to get a safe anchorage, and there was a thundering row who should stop on board. And there she lay just as she had gone down, so that you could see the top of the masts that was still standing perfectly distinctly. The row ending in all coming in the boat. I went down in the diving-dress on Friday morning directly it was light.

"What a surprise it was! I can see it all now quite distinctly. It was a queer-looking place, and the light was just coming. People over here think every blessed place in the tropics is a flat shore and palm trees and surf, bless 'em! This place, for instance, wasn't a bit that way. Not common rocks they were, undermined by waves; but great curved banks like ironwork cinder heaps, with green slime below, and thorny shrubs and things just waving upon them here and there, and the water glassy calm and clear, and showing you a kind of dirty grey-black shine, with huge flaring red-brown weeds spreading motionless, and crawling and darting things going through it. And far away beyond the ditches and pools and the heaps was a forest on the mountain flank, growing again after the fires and cinder showers of the last eruption. And the other way forest, too, and a kind of broken--what is it?--ambytheatre of black and rusty cinders rising out of it all, and the sea in a kind of bay in the middle.

"The dawn, I say, was just coming, and there wasn't much colour about things, and not a human being but ourselves anywhere in sight up or down the channel. Except the Pride of Banya, lying out beyond a lump of rocks towards the line of the sea.

"Not a human being in sight," he repeated, and paused.

"I don't know where they came from, not a bit. And we were feeling so safe that we were all alone that poor young Sanders was a-singing. I was in Jimmy Goggles, all except the helmet. 'Easy,' says Always, 'there's her mast.' And after I'd had just one squint over the gunwale, I caught up the bogey and almost tipped out as old Sanders brought the boat round. When the windows were screwed and everything was all right, I shut the valve from the air belt in order to help my sinking, and jumped overboard, feet foremost--for we hadn't a ladder. I left the boat pitching, and all of them staring down into the water after me, as my head sank down into the weeds and blackness that lay about the mast. I suppose nobody, not the most cautious chap in the world, would have bothered about a lookout at such a desolate place. It stunk of solitude.

"Of course you must understand that I was a greenhorn at diving. None of us were divers. We'd had to muck about with the thing to get the way of it, and this was the first time I'd been deep. It feels damnable. Your ears hurt beastly. I don't know if you've ever hurt yourself yawning or sneezing, but it takes you like that, only ten times worse. And a pain over the eyebrows here--splitting--and a feeling like influenza in the head. And it isn't all heaven in your lungs and things. And going down feels like the beginning of a lift, only it keeps on. And you can't turn your head to see what's above you, and you can't get a fair squint at what's happening to your feet without bending down something painful. And being deep it was dark, let alone the blackness of the ashes and mud that formed the bottom. It was like going down out of the dawn back into the night, so to speak.

"The mast came up like a ghost out of the black, and then a lot of fishes, and then a lot of flapping red seaweed, and then whack I came with a kind of dull bang on the deck of the Ocean Pioneer, and the fishes that had been feeding on the dead rose about me like a swarm of flies from road stuff in summer time. I turned on the compressed air again--for the suit was a bit thick and mackintoshery after all, in spite of the rum--and stood recovering myself. It struck coolish down there, and that helped take off the stuffiness a bit.

"When I began to feel easier, I started looking about me. It was an extraordinary sight. Even the light was extraordinary, a kind of reddy-coloured twilight, on account of the streamers of seaweed that floated up on either side of the ship. And far overhead just a moony, deep green-blue. The deck of the ship, except for a slight list to starboard, was level, and lay all dark and long between the weeds, clear except where the masts had snapped when she rolled, and vanishing into black night towards the forecastle. There wasn't any dead on the decks, most were in the weeds alongside, I suppose; but afterwards I found two skeletons lying in the passengers' cabins, where death had come to them. It was curious to stand on that deck and recognise it all, bit by bit; a place against the rail where I'd been fond of smoking by starlight, and the corner where an old chap from Sydney used to flirt with a widow we had aboard. A comfortable couple they'd been, only a month ago, and now you couldn't have got a meal for a baby crab off either of them.

"I've always had a bit of a philosophical turn, and I dare say I spent the best part of five minutes in such thoughts before I went below to find where the blessed dust was stored. It was slow work hunting, feeling it was for the most part, pitchy dark, with confusing blue gleams down the companion. And there were things moving about, a dab at my glass once, and once a pinch at my leg. Crabs, I expect. I kicked a lot of loose stuff that puzzled me, and stooped and picked up something all knobs and spikes. What do you think?

Backbone! But I never had any particular feeling for bones. We had talked the affair over pretty thoroughly, and Always knew just where the stuff was stowed. I found it that trip. I lifted a box one end an inch or more."

He broke off in his story. "I've lifted it," he said, "as near as that! Forty thousand pounds worth of pure gold! Gold! I shouted inside my helmet as a kind of cheer and hurt my ears. I was getting confounded stuffy and tired by this time--I must have been down twenty-five minutes or more--and I thought this was good enough. I went up the companion again, and as my eyes came up flush with the deck, a thundering great crab gave a kind of hysterical jump and went scuttling off sideways. Quite a start it gave me. I stood up clear on deck and shut the valve behind the helmet to let the air accumulate to carry me up again--I noticed a kind of whacking from above, as though they were hitting the water with an oar, but I didn't look up. I fancied they were signalling me to come up.

"And then something shot down by me--something heavy, and stood a-quiver in the planks. I looked, and there was a long knife I'd seen young Sanders handling. Thinks I, he's dropped it, and I was still calling him this kind of fool and that--for it might have hurt me serious--when I began to lift and drive up towards the daylight. Just about the level of the top spars of the Ocean Pioneer, whack! I came against something sinking down, and a boot knocked in front of my helmet. Then something else, struggling frightful. It was a big weight atop of me, whatever it was, and moving and twisting about. I'd have thought it a big octopus, or some such thing, if it hadn't been for the boot. But octopuses don't wear boots. It was all in a moment, of course. I felt myself sinking down again, and I threw my arms about to keep steady, and the whole lot rolled free of me and shot down as I went up--"

He paused.

"I saw young Sanders's face, over a naked black shoulder, and a spear driven clean through his neck, and out of his mouth and neck what looked like spirts of pink smoke in the water. And down they went clutching one another, and turning over, and both too far gone to leave go. And in another second my helmet came a whack, fit to split, against the niggers' canoe. It was niggers! Two canoes full.

"It was lively times, I tell you! Overboard came Always with three spears in him. There was the legs of three or four black chaps kicking about me in the water. I couldn't see much, but I saw the game was up at a glance, gave my valve a tremendous twist, and went bubbling down again after poor Always, in as awful a state of scare and astonishment as you can well imagine. I passed young Sanders and the nigger going up again and struggling still a bit, and in another moment I was standing in the dim again on the deck of the Ocean Pioneer.

"'Gummy,' thinks I, 'here's a fix!' Niggers? At first I couldn't see anything for it but Stifle below or Stabs above. I didn't properly understand how much air there was to last me, but I didn't feel like standing very much more of it down below. I was hot and frightfully heady--quite apart from the blue funk I was in. We'd never repined with these beastly natives, filthy Papuan beasts. It wasn't any good, coming up where I was, but I had to do something. On the spur of the moment, I clambered over the side of the brig and landed among the weeds, and set off through the darkness as fast as I could. I just stopped once and knelt, and twisted back my head in the helmet and had a look up. It was a most extraordinary bright green-blue above, and the two canoes and the boat floating there very small and distant like a kind of twisted H. And it made me feel sick to squint up at it, and think what the pitching and swaying of the three meant.

"It was just about the most horrible ten minutes I ever had, blundering about in that darkness, pressure something awful, like being buried in sand, pain across the chest, sick with funk, and breathing nothing

as it seemed but the smell of rum and mackintosh. Gummy! After a bit, I found myself going up a steepish sort of slope. I had another squint to see if anything was visible of the canoes and boats, and then kept on. I stopped with my head a foot from the surface, and tried to see where I was going, but, of course, nothing was to be seen but the reflection of the bottom. Then out I dashed like knocking my head through a mirror. Directly I got my eyes out of the water, I saw I'd come up a kind of beach near the forest. I had a look round, but the natives and the brig were both hidden by a big, hummucky heap of twisted lava, the born fool in me suggested a run for the woods. I didn't take the helmet off, but eased open one of the windows, and, after a bit of a pant, went on out of the water. You'd hardly imagine how clean and light the air tasted.

"Of course, with four inches of lead in your boot soles, and your head in a copper knob the size of a football, and been thirty-five minutes under water, you don't break any records running. I ran like a ploughboy going to work. And half way to the trees I saw a dozen niggers or more, coming out in a gaping, astonished sort of way to meet me.

"I just stopped dead, and cursed myself for all the fools out of London. I had about as much chance of cutting back to the water as a turned turtle. I just screwed up my window again to leave my hands free, and waited for them. There wasn't anything else for me to do.

"But they didn't come on very much. I began to suspect why. 'Jimmy Goggles,' I says, 'it's your beauty does it.' I was inclined to be a little light-headed, I think, with all these dangers about and the change in the pressure of the blessed air. 'Who're ye staring at?' I said, as if the savages could hear me. 'What d'ye take me for? I'm hanged if I don't give you something to stare at,' I said, and with that I screwed up the escape valve and turned on the compressed air from the belt, until I was swelled out like a blown frog. Regular imposing it must have been. I'm blessed if they'd come on a step;

and presently one and then another went down on their hands and knees. They didn't know what to make of me, and they was doing the extra polite, which was very wise and reasonable of them. I had half a mind to edge back seaward and cut and run, but it seemed too hopeless. A step back and they'd have been after me. And out of sheer desperation I began to march towards them up the beach, with slow, heavy steps, and waving my blown-out arms about, in a dignified manner. And inside of me I was singing as small as a tomtit.

"But there's nothing like a striking appearance to help a man over a difficulty,--I've found that before and since. People like ourselves, who're up to diving-dresses by the time we're seven, can scarcely imagine the effect of one on a simple-minded savage. One or two of these niggers cut and run, the others started in a great hurry trying to knock their brains out on the ground. And on I went as slow and solemn and silly-looking and artful as a jobbing plumber. It was evident they took me for something immense.

"Then up jumped one and began pointing, making extraordinary gestures to me as he did so, and all the others began sharing their attention between me and something out at sea. 'What's the matter now?' I said. I turned slowly on account of my dignity, and there I saw, coming round a point, the poor old *Pride of Banya* towed by a couple of canoes. The sight fairly made me sick. But they evidently expected some recognition, so I waved my arms in a striking sort of non-committal manner. And then I turned and stalked on towards the trees again. At that time I was praying like mad, I remember, over and over again: 'Lord help me through with it! Lord help me through with it!' It's only fools who know nothing of dangers can afford to laugh at praying.

"But these niggers weren't going to let me walk through and away like that. They started a kind of bowing dance about me, and sort of pressed me to take a pathway that lay through the trees. It was clear to me they didn't take me for a British citizen, whatever else they thought of me, and for my own part I was never less anxious

to own up to the old country.

"You'd hardly believe it, perhaps, unless you're familiar with savages, but these poor misguided, ignorant creatures took me straight to their kind of joss place to present me to the blessed old black stone there. By this time I was beginning to sort of realise the depth of their ignorance, and directly I set eyes on this deity I took my cue. I started a baritone howl, 'wow-wow,' very long on one note, and began waving my arms about a lot, and then very slowly and ceremoniously turned their image over on its side and sat down on it. I wanted to sit down badly, for diving-dresses ain't much wear in the tropics. Or, to put it different like, they're a sight too much. It took away their breath, I could see, my sitting on their joss, but in less time than a minute they made up their minds and were hard at work worshipping me. And I can tell you I felt a bit relieved to see things turning out so well, in spite of the weight on my shoulders and feet.

"But what made me anxious was what the chaps in the canoes might think when they came back. If they'd seen me in the boat before I went down, and without the helmet on--for they might have been spying and hiding since over night--they would very likely take a different view from the others. I was in a deuce of a stew about that for hours, as it seemed, until the shindy of the arrival began.

"But they took it down--the whole blessed village took it down. At the cost of sitting up stiff and stern, as much like those sitting Egyptian images one sees as I could manage, for pretty nearly twelve hours, I should guess at least, on end, I got over it. You'd hardly think what it meant in that heat and stink. I don't think any of them dreamt of the man inside. I was just a wonderful leathery great joss that had come up with luck out of the water. But the fatigue! the heat! the beastly closeness! the mackintoshiness and the rum! and the fuss! They lit a stinking fire on a kind of lava slab there was before me, and brought in a lot of gory muck--the worst parts

of what they were feasting on outside, the Beasts--and burnt it all in my honour. I was getting a bit hungry, but I understand now how gods manage to do without eating, what with the smell of burnt offerings about them. And they brought in a lot of the stuff they'd got off the brig and, among other stuff, what I was a bit relieved to see, the kind of pneumatic pump that was used for the compressed air affair, and then a lot of chaps and girls came in and danced about me something disgraceful. It's extraordinary the different ways different people have of showing respect. If I'd had a hatchet handy I'd have gone for the lot of them--they made me feel that wild. All this time I sat as stiff as company, not knowing anything better to do. And at last, when nightfall came, and the wattle joss-house place got a bit too shadowy for their taste--all these here savages are afraid of the dark, you know--and I started a sort of 'Moo' noise, they built big bonfires outside and left me alone in peace in the darkness of my hut, free to unscrew my windows a bit and think things over, and feel just as bad as I liked. And, Lord! I was sick.

"I was weak and hungry, and my mind kept on behaving like a beetle on a pin, tremendous activity and nothing done at the end of it. Come round just where it was before. There was sorrowing for the other chaps, beastly drunkards certainly, but not deserving such a fate, and young Sanders with the spear through his neck wouldn't go out of my mind. There was the treasure down there in the Ocean Pioneer, and how one might get it and hide it somewhere safer, and get away and come back for it. And there was the puzzle where to get anything to eat. I tell you I was fair rambling. I was afraid to ask by signs for food, for fear of behaving too human, and so there I sat and hungered until very near the dawn. Then the village got a bit quiet, and I couldn't stand it any longer, and I went out and got some stuff like artichokes in a bowl and some sour milk. What was left of these I put away among the other offerings, just to give them a hint of my tastes. And in the morning they came to worship, and found me sitting up stiff and respectable on their previous god, just as they'd left me overnight. I'd got my back against the central pillar

of the hut, and, practically, I was asleep. And that's how I became a god among the heathen--a false god no doubt, and blasphemous, but one can't always pick and choose.

"Now, I don't want to crack myself up as a god beyond my merits, but I must confess that while I was god to these people they was extraordinary successful. I don't say there's anything in it, mind you. They won a battle with another tribe--I got a lot of offerings I didn't want through it--they had wonderful fishing, and their crop of pourra was exceptional fine. And they counted the capture of the brig among the benefits I brought 'em. I must say I don't think that was a poor record for a perfectly new hand. And, though perhaps you'd scarcely credit it, I was the tribal god of those beastly savages for pretty nearly four months. . . .

"What else could I do, man? But I didn't wear that diving-dress all the time. I made 'em rig me up a sort of holy of holies, and a deuce of a time I had too, making them understand what it was I wanted them to do. That indeed was the great difficulty--making them understand my wishes. I couldn't let myself down by talking their lingo badly--even if I'd been able to speak at all--and I couldn't go flapping a lot of gestures at them. So I drew pictures in sand and sat down beside them and hooted like one o'clock. Sometimes they did the things I wanted all right, and sometimes they did them all wrong. They was always very willing, certainly. All the while I was puzzling how I was to get the confounded business settled. Every night before the dawn I used to march out in full rig and go off to a place where I could see the channel in which the Ocean Pioneer lay sunk, and once even, one moonlight night, I tried to walk out to her, but the weeds and rocks and dark clean beat me. I didn't get back till full day, and then I found all those silly niggers out on the beach praying their sea-god to return to them. I was that vexed and tired, messing and tumbling about, and coming up and going down again, I could have punched their silly heads all round when they started rejoicing. I'm hanged if I like so much ceremony.

"And then came the missionary. That missionary! It was in the afternoon, and I was sitting in state in my outer temple place, sitting on that old black stone of theirs when he came. I heard a row outside and jabbering, and then his voice speaking to an interpreter.

'They worship stocks and stones,' he said, and I knew what was up, in a flash. I had one of my windows out for comfort, and I sang out straight away on the spur of the moment. 'Stocks and stones!' I says.

'You come inside,' I says, 'and I'll punch your blooming head.'

There was a kind of silence and more jabbering, and in he came, Bible in hand, after the manner of them--a little sandy chap in specks and a pith helmet. I flatter myself that me sitting there in the shadows, with my copper head and my big goggles, struck him a bit of a heap at first. 'Well,' I says, 'how's the trade in calico?' for I don't hold with missionaries.

"I had a lark with that missionary. He was a raw hand, and quite outclassed with a man like me. He gasped out who was I, and I told him to read the inscription at my feet if he wanted to know. Down he goes to read, and his interpreter, being of course as superstitious as any of them, took it as an act of worship and plumped down like a shot. All my people gave a howl of triumph, and there wasn't any more business to be done in my village after that journey, not by the likes of him.

"But, of course, I was a fool to choke him off like that. If I'd had any sense I should have told him straight away of the treasure and taken him into Co. I've no doubt he'd have come into Co. A child, with a few hours to think it over, could have seen the connection between my diving-dress and the loss of the Ocean Pioneer. A week after he left I went out one morning and saw the Motherhood, the salver's ship from Starr Race, towing up the channel and sounding. The whole blessed game was up, and all my trouble thrown away.

Gummy!

How wild I felt! And guying it in that stinking silly dress! Four

months!"

The sunburnt man's story degenerated again. "Think of it," he said, when he emerged to linguistic purity once more. "Forty thousand pounds worth of gold."

"Did the little missionary come back?" I asked.

"Oh, yes! Bless him! And he pledged his reputation there was a man inside the god, and started out to see as much with tremendous ceremony. But there wasn't--he got sold again. I always did hate scenes and explanations, and long before he came I was out of it all--going home to Banya along the coast, hiding in bushes by day, and thieving food from the villages by night. Only weapon, a spear. No clothes, no money. Nothing. My face was my fortune, as the saying is. And just a squeak of eight thousand pounds of gold--fifth share. But the natives cut up rusty, thank goodness, because they thought it was him had driven their luck away."

8. THE NEW ACCELERATOR

Certainly, if ever a man found a guinea when he was looking for a pin it is my good friend Professor Gibberne. I have heard before of investigators overshooting the mark, but never quite to the extent that he has done. He has really, this time at any rate, without any touch of exaggeration in the phrase, found something to revolutionise human life. And that when he was simply seeking an all-round nervous stimulant to bring languid people up to the stresses of these pushful days. I have tasted the stuff now several times, and I cannot do better than describe the effect the thing had on me. That there are astonishing experiences in store for all in search of new sensations will become apparent enough.

Professor Gibberne, as many people know, is my neighbour in Folkestone. Unless my memory plays me a trick, his portrait at various ages has already appeared in *The Strand Magazine*--I think late in 1899; but I am unable to look it up because I have lent that volume to some one who has never sent it back. The reader may, perhaps, recall the high forehead and the singularly long black eyebrows that give such a Mephistophelian touch to his face. He occupies one of those pleasant little detached houses in the mixed style that make the western end of the Upper Sandgate Road so interesting. His is the one with the Flemish gables and the Moorish portico, and it is in the little room with the mullioned bay window that he works when he is down here, and in which of an evening we have so often smoked and talked together. He is a mighty jester, but, besides, he likes to talk to me about his work; he is one of those men who find a help and stimulus in talking, and so I have been able to follow the conception of the New Accelerator right up from a very early stage. Of course, the greater portion of his experimental work is not done in Folkestone, but in Gower Street, in the fine new laboratory next to the hospital that he has been the first to use.

As every one knows, or at least as all intelligent people know,

the special department in which Gibberne has gained so great and deserved a reputation among physiologists is the action of drugs upon the nervous system. Upon soporifics, sedatives, and anaesthetics he is, I am told, unequalled. He is also a chemist of considerable eminence, and I suppose in the subtle and complex jungle of riddles that centres about the ganglion cell and the axis fibre there are little cleared places of his making, little glades of illumination, that, until he sees fit to publish his results, are still inaccessible to every other living man. And in the last few years he has been particularly assiduous upon this question of nervous stimulants, and already, before the discovery of the New Accelerator, very successful with them. Medical science has to thank him for at least three distinct and absolutely safe invigorators of unrivalled value to practising men. In cases of exhaustion the preparation known as Gibberne's B Syrup has, I suppose, saved more lives already than any lifeboat round the coast.

"But none of these little things begin to satisfy me yet," he told me nearly a year ago. "Either they increase the central energy without affecting the nerves or they simply increase the available energy by lowering the nervous conductivity; and all of them are unequal and local in their operation. One wakes up the heart and viscera and leaves the brain stupefied, one gets at the brain champagne fashion and does nothing good for the solar plexus, and what I want--and what, if it's an earthly possibility, I mean to have--is a stimulant that stimulates all round, that wakes you up for a time from the crown of your head to the tip of your great toe, and makes you go two--or even three--to everybody else's one. Eh? That's the thing I'm after."

"It would tire a man," I said.

"Not a doubt of it. And you'd eat double or treble--and all that. But just think what the thing would mean. Imagine yourself with a little phial like this"--he held up a little bottle of green glass

and marked his points with it--"and in this precious phial is the power to think twice as fast, move twice as quickly, do twice as much work in a given time as you could otherwise do."

"But is such a thing possible?"

"I believe so. If it isn't, I've wasted my time for a year. These various preparations of the hypophosphites, for example, seem to show that something of the sort . . . Even if it was only one and a half times as fast it would do."

"It WOULD do," I said.

"If you were a statesman in a corner, for example, time rushing up against you, something urgent to be done, eh?"

"He could dose his private secretary," I said.

"And gain--double time. And think if YOU, for example, wanted to finish a book."

"Usually," I said, "I wish I'd never begun 'em."

"Or a doctor, driven to death, wants to sit down and think out a case. Or a barrister--or a man cramming for an examination."

"Worth a guinea a drop," said I, "and more to men like that."

"And in a duel, again," said Gibberne, "where it all depends on your quickness in pulling the trigger."

"Or in fencing," I echoed.

"You see," said Gibberne, "if I get it as an all-round thing it will really do you no harm at all--except perhaps to an infinitesimal

degree it brings you nearer old age. You will just have lived twice to other people's once--"

"I suppose," I meditated, "in a duel--it would be fair?"

"That's a question for the seconds," said Gibberne.

I harked back further. "And you really think such a thing IS possible?" I said.

"As possible," said Gibberne, and glanced at something that went throbbing by the window, "as a motor-bus. As a matter of fact--"

He paused and smiled at me deeply, and tapped slowly on the edge of his desk with the green phial. "I think I know the stuff. . . .

Already I've got something coming." The nervous smile upon his face betrayed the gravity of his revelation. He rarely talked of his actual experimental work unless things were very near the end. "And it may be, it may be--I shouldn't be surprised--it may even do the thing at a greater rate than twice."

"It will be rather a big thing," I hazarded.

"It will be, I think, rather a big thing."

But I don't think he quite knew what a big thing it was to be, for all that.

I remember we had several talks about the stuff after that. "The New Accelerator" he called it, and his tone about it grew more confident on each occasion. Sometimes he talked nervously of unexpected physiological results its use might have, and then he would get a little unhappy; at others he was frankly mercenary, and we debated long and anxiously how the preparation might be turned to commercial account. "It's a good thing," said Gibberne, "a tremendous thing.

I know I'm giving the world something, and I think it only reasonable we should expect the world to pay. The dignity of science is all very well, but I think somehow I must have the monopoly of the stuff for, say, ten years. I don't see why ALL the fun in life should go to the dealers in ham."

My own interest in the coming drug certainly did not wane in the time. I have always had a queer little twist towards metaphysics in my mind. I have always been given to paradoxes about space and time, and it seemed to me that Gibberne was really preparing no less than the absolute acceleration of life. Suppose a man repeatedly dosed with such a preparation: he would live an active and record life indeed, but he would be an adult at eleven, middle-aged at twenty-five, and by thirty well on the road to senile decay. It seemed to me that so far Gibberne was only going to do for any one who took his drug exactly what Nature has done for the Jews and Orientals, who are men in their teens and aged by fifty, and quicker in thought and act than we are all the time. The marvel of drugs has always been great to my mind; you can madden a man, calm a man, make him incredibly strong and alert or a helpless log, quicken this passion and allay that, all by means of drugs, and here was a new miracle to be added to this strange armoury of phials the doctors use! But Gibberne was far too eager upon his technical points to enter very keenly into my aspect of the question.

It was the 7th or 8th of August when he told me the distillation that would decide his failure or success for a time was going forward as we talked, and it was on the 10th that he told me the thing was done and the New Accelerator a tangible reality in the world. I met him as I was going up the Sandgate Hill towards Folkestone--I think I was going to get my hair cut, and he came hurrying down to meet me--I suppose he was coming to my house to tell me at once of his success. I remember that his eyes were unusually bright and his face flushed, and I noted even then the swift alacrity of his step.

"It's done," he cried, and gripped my hand, speaking very fast; "it's more than done. Come up to my house and see."

"Really?"

"Really!" he shouted. "Incredibly! Come up and see."

"And it does--twice?"

"It does more, much more. It scares me. Come up and see the stuff. Taste it! Try it! It's the most amazing stuff on earth." He gripped my arm and, walking at such a pace that he forced me into a trot, went shouting with me up the hill. A whole char-a-banc-ful of people turned and stared at us in unison after the manner of people in chars-a-banc. It was one of those hot, clear days that Folkestone sees so much of, every colour incredibly bright and every outline hard. There was a breeze, of course, but not so much breeze as sufficed under these conditions to keep me cool and dry. I panted for mercy.

"I'm not walking fast, am I?" cried Gibberne, and slackened his pace to a quick march.

"You've been taking some of this stuff," I puffed.

"No," he said. "At the utmost a drop of water that stood in a beaker from which I had washed out the last traces of the stuff. I took some last night, you know. But that is ancient history, now."

"And it goes twice?" I said, nearing his doorway in a grateful perspiration.

"It goes a thousand times, many thousand times!" cried Gibberne, with a dramatic gesture, flinging open his Early English carved oak gate.

"Phew!" said I, and followed him to the door.

"I don't know how many times it goes," he said, with his latch-key in his hand.

"And you--"

"It throws all sorts of light on nervous physiology, it kicks the theory of vision into a perfectly new shape! . . . Heaven knows how many thousand times. We'll try all that after--The thing is to try the stuff now."

"Try the stuff?" I said, as we went along the passage.

"Rather," said Gibberne, turning on me in his study. "There it is in that little green phial there! Unless you happen to be afraid?"

I am a careful man by nature, and only theoretically adventurous. I WAS afraid. But on the other hand there is pride.

"Well," I haggled. "You say you've tried it?"

"I've tried it," he said, "and I don't look hurt by it, do I? I don't even look livery and I FEEL--"

I sat down. "Give me the potion," I said. "If the worst comes to the worst it will save having my hair cut, and that I think is one of the most hateful duties of a civilised man. How do you take the mixture?"

"With water," said Gibberne, whacking down a carafe.

He stood up in front of his desk and regarded me in his easy chair; his manner was suddenly affected by a touch of the Harley Street specialist. "It's rum stuff, you know," he said.

I made a gesture with my hand.

"I must warn you in the first place as soon as you've got it down to shut your eyes, and open them very cautiously in a minute or so's time. One still sees. The sense of vision is a question of length of vibration, and not of multitude of impacts; but there's a kind of shock to the retina, a nasty giddy confusion just at the time, if the eyes are open. Keep 'em shut."

"Shut," I said. "Good!"

"And the next thing is, keep still. Don't begin to whack about. You may fetch something a nasty rap if you do. Remember you will be going several thousand times faster than you ever did before, heart, lungs, muscles, brain--everything--and you will hit hard without knowing it. You won't know it, you know. You'll feel just as you do now. Only everything in the world will seem to be going ever so many thousand times slower than it ever went before. That's what makes it so deuced queer."

"Lor'," I said. "And you mean--"

"You'll see," said he, and took up a little measure. He glanced at the material on his desk. "Glasses," he said, "water. All here. Mustn't take too much for the first attempt."

The little phial glucked out its precious contents.

"Don't forget what I told you," he said, turning the contents of the measure into a glass in the manner of an Italian waiter measuring whisky. "Sit with the eyes tightly shut and in absolute stillness for two minutes," he said. "Then you will hear me speak."

He added an inch or so of water to the little dose in each glass.

"By-the-by," he said, "don't put your glass down. Keep it in your hand and rest your hand on your knee. Yes--so. And now--"

He raised his glass.

"The New Accelerator," I said.

"The New Accelerator," he answered, and we touched glasses and drank, and instantly I closed my eyes.

You know that blank non-existence into which one drops when one has taken "gas." For an indefinite interval it was like that. Then I heard Gibberne telling me to wake up, and I stirred and opened my eyes. There he stood as he had been standing, glass still in hand. It was empty, that was all the difference.

"Well?" said I.

"Nothing out of the way?"

"Nothing. A slight feeling of exhilaration, perhaps. Nothing more."

"Sounds?"

"Things are still," I said. "By Jove! yes! They ARE still. Except the sort of faint pat, patter, like rain falling on different things. What is it?"

"Analysed sounds," I think he said, but I am not sure. He glanced at the window. "Have you ever seen a curtain before a window fixed in that way before?"

I followed his eyes, and there was the end of the curtain, frozen, as it were, corner high, in the act of flapping briskly in the breeze.

"No," said I; "that's odd."

"And here," he said, and opened the hand that held the glass. Naturally I winced, expecting the glass to smash. But so far from smashing it did not even seem to stir; it hung in mid-air--motionless.

"Roughly speaking," said Gibberne, "an object in these latitudes falls 16 feet in the first second. This glass is falling 16 feet in a second now. Only, you see, it hasn't been falling yet for the hundredth part of a second. That gives you some idea of the pace of my Accelerator." And he waved his hand round and round, over and under the slowly sinking glass. Finally, he took it by the bottom, pulled it down, and placed it very carefully on the table. "Eh?" he said to me, and laughed.

"That seems all right," I said, and began very gingerly to raise myself from my chair. I felt perfectly well, very light and comfortable, and quite confident in my mind. I was going fast all over. My heart, for example, was beating a thousand times a second, but that caused me no discomfort at all. I looked out of the window. An immovable cyclist, head down and with a frozen puff of dust behind his driving-wheel, scorched to overtake a galloping char-a-banc that did not stir. I gaped in amazement at this incredible spectacle. "Gibberne," I cried, "how long will this confounded stuff last?"

"Heaven knows!" he answered. "Last time I took it I went to bed and slept it off. I tell you, I was frightened. It must have lasted some minutes, I think--it seemed like hours. But after a bit it slows down rather suddenly, I believe."

I was proud to observe that I did not feel frightened--I suppose because there were two of us. "Why shouldn't we go out?" I asked.

"Why not?"

"They'll see us."

"Not they. Goodness, no! Why, we shall be going a thousand times faster than the quickest conjuring trick that was ever done. Come along! Which way shall we go? Window, or door?"

And out by the window we went.

Assuredly of all the strange experiences that I have ever had, or imagined, or read of other people having or imagining, that little raid I made with Gibberne on the Folkestone Leas, under the influence of the New Accelerator, was the strangest and maddest of all. We went out by his gate into the road, and there we made a minute examination of the statuesque passing traffic. The tops of the wheels and some of the legs of the horses of this char-a-banc, the end of the whip-lash and the lower jaw of the conductor--who was just beginning to yawn--were perceptibly in motion, but all the rest of the lumbering conveyance seemed still. And quite noiseless except for a faint rattling that came from one man's throat! And as parts of this frozen edifice there were a driver, you know, and a conductor, and eleven people! The effect as we walked about the thing began by being madly queer, and ended by being disagreeable. There they were, people like ourselves and yet not like ourselves, frozen in careless attitudes, caught in mid-gesture. A girl and a man smiled at one another, a leering smile that threatened to last for evermore; a woman in a floppy capel Tw rested her arm on the rail and stared at Gibberne's house with the unwinking stare of eternity; a man stroked his moustache like a figure of wax, and another stretched a tiresome stiff hand with extended fingers towards his loosened hat. We stared at them, we laughed at them, we made faces at them, and then a sort of disgust of them came upon us, and we turned away and walked round in front of the cyclist towards the Leas.

"Goodness!" cried Gibberne, suddenly; "look there!"

He pointed, and there at the tip of his finger and sliding down the air with wings flapping slowly and at the speed of an exceptionally languid snail--was a bee.

And so we came out upon the Leas. There the thing seemed madder than ever. The band was playing in the upper stand, though all the sound it made for us was a low-pitched, wheezy rattle, a sort of prolonged last sigh that passed at times into a sound like the slow, muffled ticking of some monstrous clock. Frozen people stood erect, strange, silent, self-conscious-looking dummies hung unstably in mid-stride, promenading upon the grass. I passed close to a little poodle dog suspended in the act of leaping, and watched the slow movement of his legs as he sank to earth. "Lord, look here!" cried Gibberne, and we halted for a moment before a magnificent person in white faint-striped flannels, white shoes, and a Panama hat, who turned back to wink at two gaily dressed ladies he had passed. A wink, studied with such leisurely deliberation as we could afford, is an unattractive thing. It loses any quality of alert gaiety, and one remarks that the winking eye does not completely close, that under its drooping lid appears the lower edge of an eyeball and a little line of white. "Heaven give me memory," said I, "and I will never wink again."

"Or smile," said Gibberne, with his eye on the lady's answering teeth.

"It's infernally hot, somehow," said I. "Let's go slower."

"Oh, come along!" said Gibberne.

We picked our way among the bath-chairs in the path. Many of the people sitting in the chairs seemed almost natural in their passive poses, but the contorted scarlet of the bandsmen was not a restful thing to see. A purple-faced little gentleman was frozen

in the midst of a violent struggle to refold his newspaper against the wind; there were many evidences that all these people in their sluggish way were exposed to a considerable breeze, a breeze that had no existence so far as our sensations went. We came out and walked a little way from the crowd, and turned and regarded it. To see all that multitude changed, to a picture, smitten rigid, as it were, into the semblance of realistic wax, was impossibly wonderful. It was absurd, of course; but it filled me with an irrational, an exultant sense of superior advantage. Consider the wonder of it! All that I had said, and thought, and done since the stuff had begun to work in my veins had happened, so far as those people, so far as the world in general went, in the twinkling of an eye. "The New Accelerator--" I began, but Gibberne interrupted me.

"There's that infernal old woman!" he said.

"What old woman?"

"Lives next door to me," said Gibberne. "Has a lapdog that yaps. Gods! The temptation is strong!"

There is something very boyish and impulsive about Gibberne at times. Before I could expostulate with him he had dashed forward, snatched the unfortunate animal out of visible existence, and was running violently with it towards the cliff of the Leas. It was most extraordinary. The little brute, you know, didn't bark or wriggle or make the slightest sign of vitality. It kept quite stiffly in an attitude of somnolent repose, and Gibberne held it by the neck. It was like running about with a dog of wood. "Gibberne," I cried, "put it down!" Then I said something else. "If you run like that, Gibberne," I cried, "you'll set your clothes on fire. Your linen trousers are going brown as it is!"

He clapped his hand on his thigh and stood hesitating on the verge. "Gibberne," I cried, coming up, "put it down. This heat is too much!

It's our running so! Two or three miles a second! Friction of the air!"

"What?" he said, glancing at the dog.

"Friction of the air," I shouted. "Friction of the air. Going too fast. Like meteorites and things. Too hot. And, Gibberne! Gibberne! I'm all over pricking and a sort of perspiration. You can see people stirring slightly. I believe the stuff's working off! Put that dog down."

"Eh?" he said.

"It's working off," I repeated. "We're too hot and the stuff's working off! I'm wet through."

He stared at me. Then at the band, the wheezy rattle of whose performance was certainly going faster. Then with a tremendous sweep of the arm he hurled the dog away from him and it went spinning upward, still inanimate, and hung at last over the grouped parasols of a knot of chattering people. Gibberne was gripping my elbow. "By Jove!" he cried. "I believe--it is! A sort of hot pricking and--yes. That man's moving his pocket-handkerchief! Perceptibly. We must get out of this sharp."

But we could not get out of it sharply enough. Luckily, perhaps! For we might have run, and if we had run we should, I believe, have burst into flames. Almost certainly we should have burst into flames! You know we had neither of us thought of that. . . . But before we could even begin to run the action of the drug had ceased. It was the business of a minute fraction of a second. The effect of the New Accelerator passed like the drawing of a curtain, vanished in the movement of a hand. I heard Gibberne's voice in infinite alarm. "Sit down," he said, and flop, down upon the turf at the edge of the Leas I sat--scorching as I sat. There is a patch of burnt grass there still where I sat down. The whole stagnation seemed to wake

up as I did so, the disarticulated vibration of the band rushed together into a blast of music, the promenaders put their feet down and walked their ways, the papers and flags began flapping, smiles passed into words, the winker finished his wink and went on his way complacently, and all the seated people moved and spoke.

The whole world had come alive again, was going as fast as we were, or rather we were going no faster than the rest of the world. It was like slowing down as one comes into a railway station. Everything seemed to spin round for a second or two, I had the most transient feeling of nausea, and that was all. And the little dog which had seemed to hang for a moment when the force of Gibberne's arm was expended fell with a swift acceleration clean through a lady's parasol!

That was the saving of us. Unless it was for one corpulent old gentleman in a bath-chair, who certainly did start at the sight of us and afterwards regarded us at intervals with a darkly suspicious eye, and, finally, I believe, said something to his nurse about us, I doubt if a solitary person remarked our sudden appearance among them. Plop! We must have appeared abruptly. We ceased to smoulder almost at once, though the turf beneath me was uncomfortably hot. The attention of every one--including even the Amusements' Association band, which on this occasion, for the only time in its history, got out of tune--was arrested by the amazing fact, and the still more amazing yapping and uproar caused by the fact that a respectable, over-fed lap-dog sleeping quietly to the east of the bandstand should suddenly fall through the parasol of a lady on the west--in a slightly singed condition due to the extreme velocity of its movements through the air. In these absurd days, too, when we are all trying to be as psychic, and silly, and superstitious as possible! People got up and trod on other people, chairs were overturned, the Leas policeman ran. How the matter settled itself I do not know--we were much too anxious to disentangle ourselves from the affair and get out of range of the eye of the old gentleman in the bath-chair to make minute inquiries. As soon as we were

sufficiently cool and sufficiently recovered from our giddiness and nausea and confusion of mind to do so we stood up and, skirting the crowd, directed our steps back along the road below the Metropole towards Gibberne's house. But amidst the din I heard very distinctly the gentleman who had been sitting beside the lady of the ruptured sunshade using quite unjustifiable threats and language to one of those chair-attendants who have "Inspector" written on their caps. "If you didn't throw the dog," he said, "who DID?"

The sudden return of movement and familiar noises, and our natural anxiety about ourselves (our clothes were still dreadfully hot, and the fronts of the thighs of Gibberne's white trousers were scorched a drabish brown), prevented the minute observations I should have liked to make on all these things. Indeed, I really made no observations of any scientific value on that return. The bee, of course, had gone. I looked for that cyclist, but he was already out of sight as we came into the Upper Sandgate Road or hidden from us by traffic; the char-a-banc, however, with its people now all alive and stirring, was clattering along at a spanking pace almost abreast of the nearer church.

We noted, however, that the window-sill on which we had stepped in getting out of the house was slightly singed, and that the impressions of our feet on the gravel of the path were unusually deep.

So it was I had my first experience of the New Accelerator. Practically we had been running about and saying and doing all sorts of things in the space of a second or so of time. We had lived half an hour while the band had played, perhaps, two bars. But the effect it had upon us was that the whole world had stopped for our convenient inspection. Considering all things, and particularly considering our rashness in venturing out of the house, the experience might certainly have been much more disagreeable than it was. It showed, no doubt, that Gibberne has still much to learn before his preparation is a manageable convenience, but its practicability it certainly

demonstrated beyond all cavil.

Since that adventure he has been steadily bringing its use under control, and I have several times, and without the slightest bad result, taken measured doses under his direction; though I must confess I have not yet ventured abroad again while under its influence. I may mention, for example, that this story has been written at one sitting and without interruption, except for the nibbling of some chocolate, by its means. I began at 6.25, and my watch is now very nearly at the minute past the half-hour. The convenience of securing a long, uninterrupted spell of work in the midst of a day full of engagements cannot be exaggerated. Gibberne is now working at the quantitative handling of his preparation, with especial reference to its distinctive effects upon different types of constitution. He then hopes to find a Retarder with which to dilute its present rather excessive potency. The Retarder will, of course, have the reverse effect to the Accelerator; used alone it should enable the patient to spread a few seconds over many hours of ordinary time,--and so to maintain an apathetic inaction, a glacier-like absence of alacrity, amidst the most animated or irritating surroundings. The two things together must necessarily work an entire revolution in civilised existence. It is the beginning of our escape from that Time Garment of which Carlyle speaks. While this Accelerator will enable us to concentrate ourselves with tremendous impact upon any moment or occasion that demands our utmost sense and vigour, the Retarder will enable us to pass in passive tranquillity through infinite hardship and tedium. Perhaps I am a little optimistic about the Retarder, which has indeed still to be discovered, but about the Accelerator there is no possible sort of doubt whatever. Its appearance upon the market in a convenient, controllable, and assimilable form is a matter of the next few months. It will be obtainable of all chemists and druggists, in small green bottles, at a high but, considering its extraordinary qualities, by no means excessive price. Gibberne's Nervous Accelerator it will be called, and he hopes to be able to supply it in three strengths: one in 200,

one in 900, and one in 2000, distinguished by yellow, pink, and white labels respectively.

No doubt its use renders a great number of very extraordinary things possible; for, of course, the most remarkable and, possibly, even criminal proceedings may be effected with impunity by thus dodging, as it were, into the interstices of time. Like all potent preparations it will be liable to abuse. We have, however, discussed this aspect of the question very thoroughly, and we have decided that this is purely a matter of medical jurisprudence and altogether outside our province. We shall manufacture and sell the Accelerator, and, as for the consequences--we shall see.

9. MR. LEDBETTER'S VACATION

My friend, Mr. Ledbetter, is a round-faced little man, whose natural mildness of eye is gigantically exaggerated when you catch the beam through his glasses, and whose deep, deliberate voice irritates irritable people. A certain elaborate clearness of enunciation has come with him to his present vicarage from his scholastic days, an elaborate clearness of enunciation and a certain nervous determination to be firm and correct upon all issues, important and unimportant alike. He is a sacerdotalist and a chess player, and suspected by many of the secret practice of the higher mathematics--credible rather than interesting things. His conversation is copious and given much to needless detail. By many, indeed, his intercourse is condemned, to put it plainly, as "boring," and such have even done me the compliment to wonder why I countenance him. But, on the other hand, there is a large faction who marvel at his countenancing such a dishevelled, discreditable acquaintance as myself. Few appear to regard our friendship with equanimity. But that is because they do not know of the link that binds us, of my amiable connection via Jamaica with Mr. Ledbetter's past.

About that past he displays an anxious modesty. "I do not KNOW what I should do if it became known," he says; and repeats, impressively, "I do not know WHAT I should do." As a matter of fact, I doubt if he would do anything except get very red about the ears. But that will appear later; nor will I tell here of our first encounter, since, as a general rule--though I am prone to break it--the end of a story should come after, rather than before, the beginning. And the beginning of the story goes a long way back; indeed, it is now nearly twenty years since Fate, by a series of complicated and startling manoeuvres, brought Mr. Ledbetter, so to speak, into my hands.

In those days I was living in Jamaica, and Mr. Ledbetter was a schoolmaster in England. He was in orders, and already recognisably

the same man that he is to-day: the same rotundity of visage, the same or similar glasses, and the same faint shadow of surprise in his resting expression. He was, of course, dishevelled when I saw him, and his collar less of a collar than a wet bandage, and that may have helped to bridge the natural gulf between us--but of that, as I say, later.

The business began at Hithergate-on-Sea, and simultaneously with Mr. Ledbetter's summer vacation. Thither he came for a greatly needed rest, with a bright brown portmanteau marked "F. W. L.", a new white-and-black straw hat, and two pairs of white flannel trousers. He was naturally exhilarated at his release from school--for he was not very fond of the boys he taught. After dinner he fell into a discussion with a talkative person established in the boarding-house to which, acting on the advice of his aunt, he had resorted. This talkative person was the only other man in the house. Their discussion concerned the melancholy disappearance of wonder and adventure in these latter days, the prevalence of globe-trotting, the abolition of distance by steam and electricity, the vulgarity of advertisement, the degradation of men by civilisation, and many such things. Particularly was the talkative person eloquent on the decay of human courage through security, a security Mr. Ledbetter rather thoughtlessly joined him in deploring. Mr. Ledbetter, in the first delight of emancipation from "duty," and being anxious, perhaps, to establish a reputation for manly conviviality, partook, rather more freely than was advisable, of the excellent whisky the talkative person produced. But he did not become intoxicated, he insists.

He was simply eloquent beyond his sober wont, and with the finer edge gone from his judgment. And after that long talk of the brave old days that were past forever, he went out into moonlit Hithergate--alone and up the cliff road where the villas cluster together.

He had bewailed, and now as he walked up the silent road he still bewailed, the fate that had called him to such an uneventful life

as a pedagogue's. What a prosaic existence he led, so stagnant, so colourless! Secure, methodical, year in year out, what call was there for bravery? He thought enviously of those roving, mediaeval days, so near and so remote, of quests and spies and condottieri and many a risky blade-drawing business. And suddenly came a doubt, a strange doubt, springing out of some chance thought of tortures, and destructive altogether of the position he had assumed that evening.

Was he--Mr. Ledbetter--really, after all, so brave as he assumed? Would he really be so pleased to have railways, policemen, and security vanish suddenly from the earth?

The talkative man had spoken enviously of crime. "The burglar," he said, "is the only true adventurer left on earth. Think of his single-handed fight against the whole civilised world!" And Mr. Ledbetter had echoed his envy. "They DO have some fun out of life," Mr. Ledbetter had said. "And about the only people who do. Just think how it must feel to wire a lawn!" And he had laughed wickedly. Now, in this franker intimacy of self-communion he found himself instituting a comparison between his own brand of courage and that of the habitual criminal. He tried to meet these insidious questionings with blank assertion. "I could do all that," said Mr. Ledbetter. "I long to do all that. Only I do not give way to my criminal impulses. My moral courage restrains me." But he doubted even while he told himself these things.

"Mr. Ledbetter passed a large villa standing by itself. Conveniently situated above a quiet, practicable balcony was a window, gaping black, wide open. At the time he scarcely marked it, but the picture of it came with him, wove into his thoughts. He figured himself climbing up that balcony, crouching--plunging into that dark, mysterious interior. "Bah! You would not dare," said the Spirit of Doubt. "My duty to my fellow-men forbids," said Mr. Ledbetter's self-respect.

It was nearly eleven, and the little seaside town was already very still. The whole world slumbered under the moonlight. Only one warm oblong of window-blind far down the road spoke of waking life. He turned and came back slowly towards the villa of the open window. He stood for a time outside the gate, a battlefield of motives.

"Let us put things to the test," said Doubt. "For the satisfaction of these intolerable doubts, show that you dare go into that house. Commit a burglary in blank. That, at any rate, is no crime." Very softly he opened and shut the gate and slipped into the shadow of the shrubbery. "This is foolish," said Mr. Ledbetter's caution. "I expected that," said Doubt. His heart was beating fast, but he was certainly not afraid. He was NOT afraid. He remained in that shadow for some considerable time.

The ascent of the balcony, it was evident, would have to be done in a rush, for it was all in clear moonlight, and visible from the gate into the avenue. A trellis thinly set with young, ambitious climbing roses made the ascent ridiculously easy. There, in that black shadow by the stone vase of flowers, one might crouch and take a closer view of this gaping breach in the domestic defences, the open window. For a while Mr. Ledbetter was as still as the night, and then that insidious whisky tipped the balance. He dashed forward. He went up the trellis with quick, convulsive movements, swung his legs over the parapet of the balcony, and dropped panting in the shadow even as he had designed. He was trembling violently, short of breath, and his heart pumped noisily, but his mood was exultation. He could have shouted to find he was so little afraid.

A happy line that he had learnt from Wills's "Mephistopheles" came into his mind as he crouched there. "I feel like a cat on the tiles," he whispered to himself. It was far better than he had expected-- this adventurous exhilaration. He was sorry for all poor men to whom burglary was unknown. Nothing happened. He was quite safe. And he was acting in the bravest manner!

And now for the window, to make the burglary complete! Must he dare do that? Its position above the front door defined it as a landing or passage, and there were no looking-glasses or any bedroom signs about it, or any other window on the first floor, to suggest the possibility of a sleeper within. For a time he listened under the ledge, then raised his eyes above the sill and peered in. Close at hand, on a pedestal, and a little startling at first, was a nearly life-size gesticulating bronze. He ducked, and after some time he peered again. Beyond was a broad landing, faintly gleaming; a flimsy fabric of bead curtain, very black and sharp, against a further window; a broad staircase, plunging into a gulf of darkness below; and another ascending to the second floor. He glanced behind him, but the stillness of the night was unbroken. "Crime," he whispered, "crime," and scrambled softly and swiftly over the sill into the house. His feet fell noiselessly on a mat of skin. He was a burglar indeed!

He crouched for a time, all ears and peering eyes. Outside was a scampering and rustling, and for a moment he repented of his enterprise. A short "miaow," a spitting, and a rush into silence, spoke reassuringly of cats. His courage grew. He stood up. Every one was abed, it seemed. So easy is it to commit a burglary, if one is so minded. He was glad he had put it to the test. He determined to take some petty trophy, just to prove his freedom from any abject fear of the law, and depart the way he had come.

He peered about him, and suddenly the critical spirit arose again. Burglars did far more than such mere elementary entrance as this: they went into rooms, they forced safes. Well--he was not afraid. He could not force safes, because that would be a stupid want of consideration for his hosts. But he would go into rooms--he would go upstairs. More: he told himself that he was perfectly secure; an empty house could not be more reassuringly still. He had to clench his hands, nevertheless, and summon all his resolution before he began very softly to ascend the dim staircase, pausing for several seconds between each step. Above was a square landing with one

open and several closed doors; and all the house was still. For a moment he stood wondering what would happen if some sleeper woke suddenly and emerged. The open door showed a moonlit bedroom, the coverlet white and undisturbed. Into this room he crept in three interminable minutes and took a piece of soap for his plunder--his trophy. He turned to descend even more softly than he had ascended. It was as easy as--

Hist! . . .

Footsteps! On the gravel outside the house--and then the noise of a latchkey, the yawn and bang of a door, and the spitting of a match in the hall below. Mr. Ledbetter stood petrified by the sudden discovery of the folly upon which he had come. "How on earth am I to get out of this?" said Mr. Ledbetter.

The hall grew bright with a candle flame, some heavy object bumped against the umbrella-stand, and feet were ascending the staircase. In a flash Mr. Ledbetter realised that his retreat was closed. He stood for a moment, a pitiful figure of penitent confusion. "My goodness! What a FOOL I have been!" he whispered, and then darted swiftly across the shadowy landing into the empty bedroom from which he had just come. He stood listening--quivering. The footsteps reached the first-floor landing.

Horrible thought! This was possibly the latecomer's room! Not a moment was to be lost! Mr. Ledbetter stooped beside the bed, thanked Heaven for a valance, and crawled within its protection not ten seconds too soon. He became motionless on hands and knees. The advancing candle-light appeared through the thinner stitches of the fabric, the shadows ran wildly about, and became rigid as the candle was put down.

"Lord, what a day!" said the newcomer, blowing noisily, and it seemed he deposited some heavy burthen on what Mr. Ledbetter, judging by the feet, decided to be a writing-table. The unseen then went

to the door and locked it, examined the fastenings of the windows carefully and pulled down the blinds, and returning sat down upon the bed with startling ponderosity.

"WHAT a day!" he said. "Good Lord!" and blew again, and Mr. Ledbetter inclined to believe that the person was mopping his face. His boots were good stout boots; the shadows of his legs upon the valance suggested a formidable stoutness of aspect. After a time he removed some upper garments--a coat and waistcoat, Mr. Ledbetter inferred--and casting them over the rail of the bed remained breathing less noisily, and as it seemed cooling from a considerable temperature. At intervals he muttered to himself, and once he laughed softly. And Mr. Ledbetter muttered to himself, but he did not laugh. "Of all the foolish things," said Mr. Ledbetter. "What on earth am I to do now?"

His outlook was necessarily limited. The minute apertures between the stitches of the fabric of the valance admitted a certain amount of light, but permitted no peeping. The shadows upon this curtain, save for those sharply defined legs, were enigmatical, and intermingled confusingly with the florid patterning of the chintz. Beneath the edge of the valance a strip of carpet was visible, and, by cautiously depressing his eye, Mr. Ledbetter found that this strip broadened until the whole area of the floor came into view. The carpet was a luxurious one, the room spacious, and, to judge by the castors and so forth of the furniture, well equipped.

What he should do he found it difficult to imagine. To wait until this person had gone to bed, and then, when he seemed to be sleeping, to creep to the door, unlock it, and bolt headlong for that balcony seemed the only possible thing to do. Would it be possible to jump from the balcony? The danger of it! When he thought of the chances against him, Mr. Ledbetter despaired. He was within an ace of thrusting forth his head beside the gentleman's legs, coughing if necessary to attract his attention, and then, smiling, apologising and explaining his unfortunate intrusion by a few well-chosen sentences. But he

found these sentences hard to choose. "No doubt, sir, my appearance is peculiar," or, "I trust, sir, you will pardon my somewhat ambiguous appearance from beneath you," was about as much as he could get.

Grave possibilities forced themselves on his attention. Suppose they did not believe him, what would they do to him? Would his unblemished high character count for nothing? Technically he was a burglar, beyond dispute. Following out this train of thought, he was composing a lucid apology for "this technical crime I have committed," to be delivered before sentence in the dock, when the stout gentleman got up and began walking about the room. He locked and unlocked drawers, and Mr. Ledbetter had a transient hope that he might be undressing. But, no! He seated himself at the writing-table, and began to write and then tear up documents. Presently the smell of burning cream-laid paper mingled with the odour of cigars in Mr. Ledbetter's nostrils.

"The position I had assumed," said Mr. Ledbetter when he told me of these things, "was in many respects an ill-advised one. A transverse bar beneath the bed depressed my head unduly, and threw a disproportionate share of my weight upon my hands. After a time, I experienced what is called, I believe, a crick in the neck. The pressure of my hands on the coarsely-stitched carpet speedily became painful. My knees, too, were painful, my trousers being drawn tightly over them. At that time I wore rather higher collars than I do now--two and a half inches, in fact--and I discovered what I had not remarked before, that the edge of the one I wore was frayed slightly under the chin. But much worse than these things was an itching of my face, which I could only relieve by violent grimacing--I tried to raise my hand, but the rustle of the sleeve alarmed me. After a time I had to desist from this relief also, because--happily in time--I discovered that my facial contortions were shifting my glasses down my nose. Their fall would, of course, have exposed me, and as it was they came to rest in an oblique position of by no means stable equilibrium. In addition I had a slight cold, and an intermittent

desire to sneeze or sniff caused me inconvenience. In fact, quite apart from the extreme anxiety of my position, my physical discomfort became in a short time very considerable indeed. But I had to stay there motionless, nevertheless."

After an interminable time, there began a chinking sound. This deepened into a rhythm: chink, chink, chink--twenty-five chinks--a rap on the writing-table, and a grunt from the owner of the stout legs. It dawned upon Mr. Ledbetter that this chinking was the chinking of gold. He became incredulously curious as it went on. His curiosity grew. Already, if that was the case, this extraordinary man must have counted some hundreds of pounds. At last Mr. Ledbetter could resist it no longer, and he began very cautiously to fold his arms and lower his head to the level of the floor, in the hope of peeping under the valance. He moved his feet, and one made a slight scraping on the floor. Suddenly the chinking ceased. Mr. Ledbetter became rigid. After a while the chinking was resumed. Then it ceased again, and everything was still, except Mr. Ledbetter's heart--that organ seemed to him to be beating like a drum.

The stillness continued. Mr. Ledbetter's head was now on the floor, and he could see the stout legs as far as the shins. They were quite still. The feet were resting on the toes and drawn back, as it seemed, under the chair of the owner. Everything was quite still, everything continued still. A wild hope came to Mr. Ledbetter that the unknown was in a fit or suddenly dead, with his head upon the writing-table. . . .

The stillness continued. What had happened? The desire to peep became irresistible. Very cautiously Mr. Ledbetter shifted his hand forward, projected a pioneer finger, and began to lift the valance immediately next his eye. Nothing broke the stillness. He saw now the stranger's knees, saw the back of the writing-table, and then--he was staring at the barrel of a heavy revolver pointed over the writing-table at his head.

"Come out of that, you scoundrel!" said the voice of the stout gentleman in a tone of quiet concentration. "Come out. This side, and now. None of your hanky-panky--come right out, now."

Mr. Ledbetter came right out, a little reluctantly perhaps, but without any hanky-panky, and at once, even as he was told.

"Kneel," said the stout gentleman. "and hold up your hands."

The valance dropped again behind Mr. Ledbetter, and he rose from all-fours and held up his hands. "Dressed like a parson," said the stout gentleman. "I'm blest if he isn't! A little chap, too! You SCOUNDREL! What the deuce possessed you to come here to-night? What the deuce possessed you to get under my bed?"

He did not appear to require an answer, but proceeded at once to several very objectionable remarks upon Mr. Ledbetter's personal appearance. He was not a very big man, but he looked strong to Mr. Ledbetter: he was as stout as his legs had promised, he had rather delicately-chiselled small features distributed over a considerable area of whitish face, and quite a number of chins. And the note of his voice had a sort of whispering undertone.

"What the deuce, I say, possessed you to get under my bed?"

Mr. Ledbetter, by an effort, smiled a wan propitiatory smile. He coughed. "I can quite understand--" he said.

"Why! What on earth? It's SOAP! No!--you scoundrel. Don't you move that hand."

"It's soap," said Mr. Ledbetter. "From your washstand. No doubt it--"

"Don't talk," said the stout man. "I see it's soap. Of all incredible

things."

"If I might explain--"

"Don't explain. It's sure to be a lie, and there's no time for explanations. What was I going to ask you? Ah! Have you any mates?"

"In a few minutes, if you--"

"Have you any mates? Curse you. If you start any soapy palaver I'll shoot. Have you any mates?"

"No," said Mr. Ledbetter.

"I suppose it's a lie," said the stout man. "But you'll pay for it if it is. Why the deuce didn't you floor me when I came upstairs? You won't get a chance to now, anyhow. Fancy getting under the bed! I reckon it's a fair cop, anyhow, so far as you are concerned."

"I don't see how I could prove an alibi," remarked Mr. Ledbetter, trying to show by his conversation that he was an educated man. There was a pause. Mr. Ledbetter perceived that on a chair beside his captor was a large black bag on a heap of crumpled papers, and that there were torn and burnt papers on the table. And in front of these, and arranged methodically along the edge were rows and rows of little yellow rouleaux--a hundred times more gold than Mr. Ledbetter had seen in all his life before. The light of two candles, in silver candlesticks, fell upon these. The pause continued. "It is rather fatiguing holding up my hands like this," said Mr. Ledbetter, with a deprecatory smile.

"That's all right," said the fat man. "But what to do with you I don't exactly know."

"I know my position is ambiguous."

"Lord!" said the fat man, "ambiguous! And goes about with his own soap, and wears a thundering great clerical collar. You ARE a blooming burglar, you are--if ever there was one!"

"To be strictly accurate," said Mr. Ledbetter, and suddenly his glasses slipped off and clattered against his vest buttons.

The fat man changed countenance, a flash of savage resolution crossed his face, and something in the revolver clicked. He put his other hand to the weapon. And then he looked at Mr. Ledbetter, and his eye went down to the dropped pince-nez.

"Full-cock now, anyhow," said the fat man, after a pause, and his breath seemed to catch. "But I'll tell you, you've never been so near death before. Lord! I'M almost glad. If it hadn't been that the revolver wasn't cocked you'd be lying dead there now."

Mr. Ledbetter said nothing, but he felt that the room was swaying.

"A miss is as good as a mile. It's lucky for both of us it wasn't. Lord!" He blew noisily. "There's no need for you to go pale-green for a little thing like that."

"If I can assure you, sir--" said Mr. Ledbetter, with an effort.

"There's only one thing to do. If I call in the police, I'm bust-- a little game I've got on is bust. That won't do. If I tie you up and leave you again, the thing may be out to-morrow. Tomorrow's Sunday, and Monday's Bank Holiday--I've counted on three clear days. Shooting you's murder--and hanging; and besides, it will bust the whole blooming kernooze. I'm hanged if I can think what to do-- I'm hanged if I can."

"Will you permit me--"

"You gas as much as if you were a real parson, I'm blessed if you don't. Of all the burglars you are the--Well! No!--I WON'T permit you. There isn't time. If you start off jawing again, I'll shoot right in your stomach. See? But I know now-I know now! What we're going to do first, my man, is an examination for concealed arms--an examination for concealed arms. And look here! When I tell you to do a thing, don't start off at a gabble--do it brisk."

And with many elaborate precautions, and always pointing the pistol at Mr. Ledbetter's head, the stout man stood him up and searched him for weapons. "Why, you ARE a burglar!" he said "You're a perfect amateur. You haven't even a pistol-pocket in the back of your breeches. No, you don't! Shut up, now."

So soon as the issue was decided, the stout man made Mr. Ledbetter take off his coat and roll up his shirt-sleeves, and, with the revolver at one ear, proceed with the packing his appearance had interrupted. From the stout man's point of view that was evidently the only possible arrangement, for if he had packed, he would have had to put down the revolver. So that even the gold on the table was handled by Mr. Ledbetter. This nocturnal packing was peculiar. The stout man's idea was evidently to distribute the weight of the gold as unostentatiously as possible through his luggage. It was by no means an inconsiderable weight. There was, Mr. Ledbetter says, altogether nearly L18,000 in gold in the black bag and on the table. There were also many little rolls of L5 bank-notes. Each rouleau of L25 was wrapped by Mr. Ledbetter in paper. These rouleaux were then put neatly in cigar boxes and distributed between a travelling trunk, a Gladstone bag, and a hatbox. About L600 went in a tobacco tin in a dressing-bag. L10 in gold and a number of L5 notes the stout man pocketed. Occasionally he objurgated Mr. Ledbetter's clumsiness, and urged him to hurry, and several times he appealed to Mr. Ledbetter's watch for information.

Mr. Ledbetter strapped the trunk and bag, and returned the stout man the keys. It was then ten minutes to twelve, and until the stroke of midnight the stout man made him sit on the Gladstone bag, while he sat at a reasonably safe distance on the trunk and held the revolver handy and waited. He appeared to be now in a less aggressive mood, and having watched Mr. Ledbetter for some time, he offered a few remarks.

"From your accent I judge you are a man of some education," he said, lighting a cigar. "No--DON'T begin that explanation of yours. I know it will be long-winded from your face, and I am much too old a liar to be interested in other men's lying. You are, I say, a person of education. You do well to dress as a curate. Even among educated people you might pass as a curate."

"I AM a curate," said Mr. Ledbetter, "or, at least--"

"You are trying to be. I know. But you didn't ought to burgle. You are not the man to burgle. You are, if I may say it--the thing will have been pointed out to you before--a coward."

"Do you know," said Mr. Ledbetter, trying to get a final opening, "it was that very question--"

The stout man waved him into silence.

"You waste your education in burglary. You should do one of two things. Either you should forge or you should embezzle. For my own part, I embezzle. Yes; I embezzle. What do you think a man could be doing with all this gold but that? Ah! Listen! Midnight! . . . Ten. Eleven. Twelve. There is something very impressive to me in that slow beating of the hours. Time--space; what mysteries they are! What mysteries. . . . It's time for us to be moving. Stand up!"

And then kindly, but firmly, he induced Mr. Ledbetter to sling the dressing bag over his back by a string across his chest, to shoulder the trunk, and, overruling a gasping protest, to take the Gladstone bag in his disengaged hand. So encumbered, Mr. Ledbetter struggled perilously downstairs. The stout gentleman followed with an overcoat, the hatbox, and the revolver, making derogatory remarks about Mr. Ledbetter's strength, and assisting him at the turnings of the stairs.

"The back door," he directed, and Mr. Ledbetter staggered through a conservatory, leaving a wake of smashed flower-pots behind him. "Never mind the crockery," said the stout man; "it's good for trade. We wait here until a quarter past. You can put those things down. You have!"

Mr. Ledbetter collapsed panting on the trunk. "Last night," he gasped, "I was asleep in my little room, and I no more dreamt--"

"There's no need for you to incriminate yourself," said the stout gentleman, looking at the lock of the revolver. He began to hum. Mr. Ledbetter made to speak, and thought better of it.

There presently came the sound of a bell, and Mr. Ledbetter was taken to the back door and instructed to open it. A fair-haired man in yachting costume entered. At the sight of Mr. Ledbetter he started violently and clapped his hand behind him. Then he saw the stout man. "Bingham!" he cried, "who's this?"

"Only a little philanthropic do of mine--burglar I'm trying to reform. Caught him under my bed just now. He's all right. He's a frightful ass. He'll be useful to carry some of our things."

The newcomer seemed inclined to resent Mr. Ledbetter's presence at first, but the stout man reassured him.

"He's quite alone. There's not a gang in the world would own him.

No!--don't start talking, for goodness' sake."

They went out into the darkness of the garden with the trunk still bowing Mr. Ledbetter's shoulders. The man in the yachting costume walked in front with the Gladstone bag and a pistol; then came Mr. Ledbetter like Atlas; Mr. Bingham followed with the hat-box, coat, and revolver as before. The house was one of those that have their gardens right up to the cliff. At the cliff was a steep wooden stairway, descending to a bathing tent dimly visible on the beach. Below was a boat pulled up, and a silent little man with a black face stood beside it. "A few moments' explanation," said Mr. Ledbetter; "I can assure you--" Somebody kicked him, and he said no more.

They made him wade to the boat, carrying the trunk, they pulled him aboard by the shoulders and hair, they called him no better name than "scoundrel" and "burglar" all that night. But they spoke in undertones so that the general public was happily unaware of his ignominy. They hauled him aboard a yacht manned by strange, unsympathetic Orientals, and partly they thrust him and partly he fell down a gangway into a noisome, dark place, where he was to remain many days--how many he does not know, because he lost count among other things when he was seasick. They fed him on biscuits and incomprehensible words; they gave him water to drink mixed with unwished-for rum. And there were cockroaches where they put him, night and day there were cockroaches, and in the night-time there were rats. The Orientals emptied his pockets and took his watch--but Mr. Bingham, being appealed to, took that himself. And five or six times the five Lascars--if they were Lascars--and the Chinaman and the negro who constituted the crew, fished him out and took him aft to Bingham and his friend to play cribbage and euchre and three-anded whist, and to listen to their stories and boastings in an interested manner.

Then these principals would talk to him as men talk to those who have lived a life of crime. Explanations they would never permit,

though they made it abundantly clear to him that he was the rummiest burglar they had ever set eyes on. They said as much again and again. The fair man was of a taciturn disposition and irascible at play; but Mr. Bingham, now that the evident anxiety of his departure from England was assuaged, displayed a vein of genial philosophy. He enlarged upon the mystery of space and time, and quoted Kant and Hegel--or, at least, he said he did. Several times Mr. Ledbetter got as far as: "My position under your bed, you know--," but then he always had to cut, or pass the whisky, or do some such intervening thing. After his third failure, the fair man got quite to look for this opening, and whenever Mr. Ledbetter began after that, he would roar with laughter and hit him violently on the back. "Same old start, same old story; good old burglar!" the fair-haired man would say.

So Mr. Ledbetter suffered for many days, twenty perhaps; and one evening he was taken, together with some tinned provisions, over the side and put ashore on a rocky little island with a spring. Mr. Bingham came in the boat with him, giving him good advice all the way, and waving his last attempts at an explanation aside.

"I am really NOT a burglar," said Mr. Ledbetter.

"You never will be," said Mr. Bingham. "You'll never make a burglar. I'm glad you are beginning to see it. In choosing a profession a man must study his temperament. If you don't, sooner or later you will fail. Compare myself, for example. All my life I have been in banks--I have got on in banks. I have even been a bank manager. But was I happy? No. Why wasn't I happy? Because it did not suit my temperament. I am too adventurous--too versatile. Practically I have thrown it over. I do not suppose I shall ever manage a bank again. They would be glad to get me, no doubt; but I have learnt the lesson of my temperament--at last. . . . No! I shall never manage a bank again.

"Now, your temperament unfits you for crime--just as mine unfits

me for respectability. I know you better than I did, and now I do not even recommend forgery. Go back to respectable courses, my man. YOUR lay is the philanthropic lay--that is your lay. With that voice--the Association for the Promotion of Snivelling among the Young--something in that line. You think it over.

"The island we are approaching has no name apparently--at least, there is none on the chart. You might think out a name for it while you are there--while you are thinking about all these things. It has quite drinkable water, I understand. It is one of the Grenadines--one of the Windward Islands. Yonder, dim and blue, are others of the Grenadines. There are quantities of Grenadines, but the majority are out of sight. I have often wondered what these islands are for--now, you see, I am wiser. This one at least is for you. Sooner or later some simple native will come along and take you off. Say what you like about us then--abuse us, if you like--we shan't care a solitary Grenadine! And here--here is half a sovereign's worth of silver. Do not waste that in foolish dissipation when you return to civilisation. Properly used, it may give you a fresh start in life. And do not--Don't beach her, you beggars, he can wade!--Do not waste the precious solitude before you in foolish thoughts. Properly used, it may be a turning-point in your career. Waste neither money nor time. You will die rich. I'm sorry, but I must ask you to carry your tucker to land in your arms. No; it's not deep. Curse that explanation of yours! There's not time. No, no, no! I won't listen. Overboard you go!"

And the falling night found Mr. Ledbetter--the Mr. Ledbetter who had complained that adventure was dead--sitting beside his cans of food, his chin resting upon his drawn-up knees, staring through his glasses in dismal mildness over the shining, vacant sea.

He was picked up in the course of three days by a negro fisherman and taken to St. Vincent's, and from St. Vincent's he got, by the expenditure of his last coins, to Kingston, in Jamaica. And there

he might have foundered. Even nowadays he is not a man of affairs, and then he was a singularly helpless person. He had not the remotest idea what he ought to do. The only thing he seems to have done was to visit all the ministers of religion he could find in the place to borrow a passage home. But he was much too dirty and incoherent--and his story far too incredible for them. I met him quite by chance. It was close upon sunset, and I was walking out after my siesta on the road to Dunn's Battery, when I met him--I was rather bored, and with a whole evening on my hands--luckily for him. He was trudging dismally towards the town. His woebegone face and the quasi-clerical cut of his dust-stained, filthy costume caught my humour. Our eyes met. He hesitated. "Sir," he said, with a catching of the breath, "could you spare a few minutes for what I fear will seem an incredible story?"

"Incredible!" I said.

"Quite," he answered eagerly. "No one will believe it, alter it though I may. Yet I can assure you, sir--"

He stopped hopelessly. The man's tone tickled me. He seemed an odd character. "I am," he said, "one of the most unfortunate beings alive."

"Among other things, you haven't dined?" I said, struck with an idea.

"I have not," he said solemnly, "for many days."

"You'll tell it better after that," I said; and without more ado led the way to a low place I knew, where such a costume as his was unlikely to give offence. And there--with certain omissions which he subsequently supplied--I got his story. At first I was incredulous, but as the wine warmed him, and the faint suggestion of cringing which his misfortunes had added to his manner disappeared, I began to believe. At last, I was so far convinced of his sincerity that I got him a bed for the night, and next day verified the banker's reference he gave me through my Jamaica banker. And that done, I took

him shopping for underwear and such like equipments of a gentleman at large. Presently came the verified reference. His astonishing story was true. I will not amplify our subsequent proceedings. He started for England in three days' time.

"I do not know how I can possibly thank you enough," began the letter he wrote me from England, "for all your kindness to a total stranger," and proceeded for some time in a similar strain. "Had it not been for your generous assistance, I could certainly never have returned in time for the resumption of my scholastic duties, and my few minutes of reckless folly would, perhaps, have proved my ruin. As it is, I am entangled in a tissue of lies and evasions, of the most complicated sort, to account for my sunburnt appearance and my whereabouts. I have rather carelessly told two or three different stories, not realising the trouble this would mean for me in the end. The truth I dare not tell. I have consulted a number of law-books in the British Museum, and there is not the slightest doubt that I have connived at and abetted and aided a felony. That scoundrel Bingham was the Hithergate bank manager, I find, and guilty of the most flagrant embezzlement. Please, please burn this letter when read--I trust you implicitly. The worst of it is, neither my aunt nor her friend who kept the boarding-house at which I was staying seem altogether to believe a guarded statement I have made them practically of what actually happened. They suspect me of some discreditable adventure, but what sort of discreditable adventure they suspect me of, I do not know. My aunt says she would forgive me if I told her everything. I have--I have told her MORE than everything, and still she is not satisfied. It would never do to let them know the truth of the case, of course, and so I represent myself as having been waylaid and gagged upon the beach. My aunt wants to know WHY they waylaid and gagged me, why they took me away in their yacht. I do not know. Can you suggest any reason? I can think of nothing. If, when you wrote, you could write on TWO sheets so that I could show her one, and on that one if you could show clearly that I really WAS in Jamaica this summer, and had come there by being removed

from a ship, it would be of great service to me. It would certainly add to the load of my obligation to you--a load that I fear I can never fully repay. Although if gratitude . . ." And so forth. At the end he repeated his request for me to burn the letter.

So the remarkable story of Mr. Ledbetter's Vacation ends. That breach with his aunt was not of long duration. The old lady had forgiven him before she died.

10. THE STOLEN BODY

Mr. Bessel was the senior partner in the firm of Bessel, Hart, and Brown, of St. Paul's Churchyard, and for many years he was well known among those interested in psychical research as a liberal-minded and conscientious investigator. He was an unmarried man, and instead of living in the suburbs, after the fashion of his class, he occupied rooms in the Albany, near Piccadilly. He was particularly interested in the questions of thought transference and of apparitions of the living, and in November, 1896, he commenced a series of experiments in conjunction with Mr. Vincey, of Staple Inn, in order to test the alleged possibility of projecting an apparition of one's self by force of will through space.

Their experiments were conducted in the following manner: At a pre-arranged hour Mr. Bessel shut himself in one of his rooms in the Albany and Mr. Vincey in his sitting-room in Staple Inn, and each then fixed his mind as resolutely as possible on the other. Mr. Bessel had acquired the art of self-hypnotism, and, so far as he could, he attempted first to hypnotise himself and then to project himself as a "phantom of the living" across the intervening space of nearly two miles into Mr. Vincey's apartment. On several evenings this was tried without any satisfactory result, but on the fifth or sixth occasion Mr. Vincey did actually see or imagine he saw an apparition of Mr. Bessel standing in his room. He states that the appearance, although brief, was very vivid and real. He noticed that Mr. Bessel's face was white and his expression anxious, and, moreover, that his hair was disordered. For a moment Mr. Vincey, in spite of his state of expectation, was too surprised to speak or move, and in that moment it seemed to him as though the figure glanced over its shoulder and incontinently vanished.

It had been arranged that an attempt should be made to photograph any phantasm seen, but Mr. Vincey had not the instant presence of mind to snap the camera that lay ready on the table beside him,

and when he did so he was too late. Greatly elated, however, even by this partial success, he made a note of the exact time, and at once took a cab to the Albany to inform Mr. Bessel of this result.

He was surprised to find Mr. Bessel's outer door standing open to the night, and the inner apartments lit and in an extraordinary disorder. An empty champagne magnum lay smashed upon the floor; its neck had been broken off against the inkpot on the bureau and lay beside it. An octagonal occasional table, which carried a bronze statuette and a number of choice books, had been rudely overturned, and down the primrose paper of the wall inky fingers had been drawn, as it seemed for the mere pleasure of defilement. One of the delicate chintz curtains had been violently torn from its rings and thrust upon the fire, so that the smell of its smouldering filled the room. Indeed the whole place was disarranged in the strangest fashion. For a few minutes Mr. Vincey, who had entered sure of finding Mr. Bessel in his easy chair awaiting him, could scarcely believe his eyes, and stood staring helplessly at these unanticipated things.

Then, full of a vague sense of calamity, he sought the porter at the entrance lodge. "Where is Mr. Bessel?" he asked. "Do you know that all the furniture is broken in Mr. Bessel's room?" The porter said nothing, but, obeying his gestures, came at once to Mr. Bessel's apartment to see the state of affairs. "This settles it," he said, surveying the lunatic confusion. "I didn't know of this. Mr. Bessel's gone off. He's mad!"

He then proceeded to tell Mr. Vincey that about half an hour previously, that is to say, at about the time of Mr. Bessel's apparition in Mr. Vincey's rooms, the missing gentleman had rushed out of the gates of the Albany into Vigo Street, hatless and with disordered hair, and had vanished into the direction of Bond Street. "And as he went past me," said the porter, "he laughed--a sort of gasping laugh, with his mouth open and his eyes glaring--I tell you,

sir, he fair scared me!--like this."

According to his imitation it was anything but a pleasant laugh. "He waved his hand, with all his fingers crooked and clawing--like that. And he said, in a sort of fierce whisper, 'LIFE!' Just that one word, 'LIFE!'"

"Dear me," said Mr. Vincey. "Tut, tut," and "Dear me!" He could think of nothing else to say. He was naturally very much surprised. He turned from the room to the porter and from the porter to the room in the gravest perplexity. Beyond his suggestion that probably Mr. Bessel would come back presently and explain what had happened, their conversation was unable to proceed. "It might be a sudden toothache," said the porter, "a very sudden and violent toothache, jumping on him suddenly-like and driving him wild. I've broken things myself before now in such a case . . ." He thought. "If it was, why should he say 'LIFE' to me as he went past?"

Mr. Vincey did not know. Mr. Bessel did not return, and at last Mr. Vincey, having done some more helpless staring, and having addressed a note of brief inquiry and left it in a conspicuous position on the bureau, returned in a very perplexed frame of mind to his own premises in Staple Inn. This affair had given him a shock. He was at a loss to account for Mr. Bessel's conduct on any sane hypothesis. He tried to read, but he could not do so; he went for a short walk, and was so preoccupied that he narrowly escaped a cab at the top of Chancery Lane; and at last--a full hour before his usual time--he went to bed. For a considerable time he could not sleep because of his memory of the silent confusion of Mr. Bessel's apartment, and when at length he did attain an uneasy slumber it was at once disturbed by a very vivid and distressing dream of Mr. Bessel.

He saw Mr. Bessel gesticulating wildly, and with his face white and contorted. And, inexplicably mingled with his appearance, suggested perhaps by his gestures, was an intense fear, an urgency

to act. He even believes that he heard the voice of his fellow experimenter calling distressfully to him, though at the time he considered this to be an illusion. The vivid impression remained though Mr. Vincey awoke. For a space he lay awake and trembling in the darkness, possessed with that vague, unaccountable terror of unknown possibilities that comes out of dreams upon even the bravest men. But at last he roused himself, and turned over and went to sleep again, only for the dream to return with enhanced vividness.

He awoke with such a strong conviction that Mr. Bessel was in overwhelming distress and need of help that sleep was no longer possible. He was persuaded that his friend had rushed out to some dire calamity. For a time he lay reasoning vainly against this belief, but at last he gave way to it. He arose, against all reason, lit his gas, and dressed, and set out through the deserted streets--deserted, save for a noiseless policeman or so and the early news carts--towards Vigo Street to inquire if Mr. Bessel had returned.

But he never got there. As he was going down Long Acre some unaccountable impulse turned him aside out of that street towards Covent Garden, which was just waking to its nocturnal activities. He saw the market in front of him--a queer effect of glowing yellow lights and busy black figures. He became aware of a shouting, and perceived a figure turn the corner by the hotel and run swiftly towards him. He knew at once that it was Mr. Bessel. But it was Mr. Bessel transfigured. He was hatless and dishevelled, his collar was torn open, he grasped a bone-handled walking-cane near the ferrule end, and his mouth was pulled awry. And he ran, with agile strides, very rapidly. Their encounter was the affair of an instant. "Bessel!" cried Vincey.

The running man gave no sign of recognition either of Mr. Vincey or of his own name. Instead, he cut at his friend savagely with the stick, hitting him in the face within an inch of the eye. Mr. Vincey, stunned and astonished, staggered back, lost his footing, and fell heavily on the pavement. It seemed to him that Mr. Bessel

leapt over him as he fell. When he looked again Mr. Bessel had vanished, and a policeman and a number of garden porters and salesmen were rushing past towards Long Acre in hot pursuit.

With the assistance of several passers-by--for the whole street was speedily alive with running people--Mr. Vincey struggled to his feet. He at once became the centre of a crowd greedy to see his injury. A multitude of voices competed to reassure him of his safety, and then to tell him of the behaviour of the madman, as they regarded Mr. Bessel. He had suddenly appeared in the middle of the market screaming "LIFE! LIFE!" striking left and right with a blood-stained walking-stick, and dancing and shouting with laughter at each successful blow. A lad and two women had broken heads, and he had smashed a man's wrist; a little child had been knocked insensible, and for a time he had driven every one before him, so furious and resolute had his behaviour been. Then he made a raid upon a coffee stall, hurled its paraffin flare through the window of the post office, and fled laughing, after stunning the foremost of the two policemen who had the pluck to charge him.

Mr. Vincey's first impulse was naturally to join in the pursuit of his friend, in order if possible to save him from the violence of the indignant people. But his action was slow, the blow had half stunned him, and while this was still no more than a resolution came the news, shouted through the crowd, that Mr. Bessel had eluded his pursuers. At first Mr. Vincey could scarcely credit this, but the universality of the report, and presently the dignified return of two futile policemen, convinced him. After some aimless inquiries he returned towards Staple Inn, padding a handkerchief to a now very painful nose.

He was angry and astonished and perplexed. It appeared to him indisputable that Mr. Bessel must have gone violently mad in the midst of his experiment in thought transference, but why that should make him appear with a sad white face in Mr. Vincey's dreams seemed

a problem beyond solution. He racked his brains in vain to explain this. It seemed to him at last that not simply Mr. Bessel, but the order of things must be insane. But he could think of nothing to do. He shut himself carefully into his room, lit his fire--it was a gas fire with asbestos bricks--and, fearing fresh dreams if he went to bed, remained bathing his injured face, or holding up books in a vain attempt to read, until dawn. Throughout that vigil he had a curious persuasion that Mr. Bessel was endeavouring to speak to him, but he would not let himself attend to any such belief.

About dawn, his physical fatigue asserted itself, and he went to bed and slept at last in spite of dreaming. He rose late, unrested and anxious, and in considerable facial pain. The morning papers had no news of Mr. Bessel's aberration--it had come too late for them. Mr. Vincey's perplexities, to which the fever of his bruise added fresh irritation, became at last intolerable, and, after a fruitless visit to the Albany, he went down to St. Paul's Churchyard to Mr. Hart, Mr. Bessel's partner, and, so far as Mr. Vincey knew, his nearest friend.

He was surprised to learn that Mr. Hart, although he knew nothing of the outbreak, had also been disturbed by a vision, the very vision that Mr. Vincey had seen--Mr. Bessel, white and dishevelled, pleading earnestly by his gestures for help. That was his impression of the import of his signs. "I was just going to look him up in the Albany when you arrived," said Mr. Hart. "I was so sure of something being wrong with him."

As the outcome of their consultation the two gentlemen decided to inquire at Scotland Yard for news of their missing friend. "He is bound to be laid by the heels," said Mr. Hart. "He can't go on at that pace for long." But the police authorities had not laid Mr. Bessel by the heels. They confirmed Mr. Vincey's overnight experiences and added fresh circumstances, some of an even graver character than those he knew--a list of smashed glass along the upper

half of Tottenham Court Road, an attack upon a policeman in Hampstead Road, and an atrocious assault upon a woman. All these outrages were committed between half-past twelve and a quarter to two in the morning, and between those hours--and, indeed, from the very moment of Mr. Bessel's first rush from his rooms at half-past nine in the evening--they could trace the deepening violence of his fantastic career. For the last hour, at least from before one, that is, until a quarter to two, he had run amuck through London, eluding with amazing agility every effort to stop or capture him.

But after a quarter to two he had vanished. Up to that hour witnesses were multitudinous. Dozens of people had seen him, fled from him or pursued him, and then things suddenly came to an end. At a quarter to two he had been seen running down the Euston Road towards Baker Street,

flourishing a can of burning colza oil and jerking splashes of flame therefrom at the windows of the houses he passed. But none of the policemen on Euston Road beyond the Waxwork Exhibition, nor any of those in the side streets down which he must have passed had he left the Euston Road, had seen anything of him. Abruptly he disappeared. Nothing of his subsequent doings came to light in spite of the keenest inquiry.

Here was a fresh astonishment for Mr. Vincey. He had found considerable comfort in Mr. Hart's conviction: "He is bound to be laid by the heels before long," and in that assurance he had been able to suspend his mental perplexities. But any fresh development seemed destined to add new impossibilities to a pile already heaped beyond the powers of his acceptance. He found himself doubting whether his memory might not have played him some grotesque trick, debating whether any of these things could possibly have happened; and in the afternoon he hunted up Mr. Hart again to share the intolerable weight on his mind. He found Mr. Hart engaged with a well-known private detective, but as that gentleman accomplished nothing in this case, we need not enlarge upon his proceedings.

All that day Mr. Bessel's whereabouts eluded an unceasingly active inquiry, and all that night. And all that day there was a persuasion in the back of Vincey's mind that Mr. Bessel sought his attention, and all through the night Mr. Bessel with a tear-stained face of anguish pursued him through his dreams. And whenever he saw Mr. Bessel in his dreams he also saw a number of other faces, vague but malignant, that seemed to be pursuing Mr. Bessel.

It was on the following day, Sunday, that Mr. Vincey recalled certain remarkable stories of Mrs. Bullock, the medium, who was then attracting attention for the first time in London. He determined to consult her. She was staying at the house of that well-known inquirer, Dr. Wilson Paget, and Mr. Vincey, although he had never met that gentleman before, repaired to him forthwith with the intention of invoking her help. But scarcely had he mentioned the name of Bessel when Doctor Paget interrupted him. "Last night--just at the end," he said, "we had a communication."

He left the room, and returned with a slate on which were certain words written in a handwriting, shaky indeed, but indisputably the handwriting of Mr. Bessel!

"How did you get this?" said Mr. Vincey. "Do you mean--?"

"We got it last night," said Doctor Paget. With numerous interruptions from Mr. Vincey, he proceeded to explain how the writing had been obtained. It appears that in her seances, Mrs. Bullock passes into a condition of trance, her eyes rolling up in a strange way under her eyelids, and her body becoming rigid. She then begins to talk very rapidly, usually in voices other than her own. At the same time one or both of her hands may become active, and if slates and pencils are provided they will then write messages simultaneously with and quite independently of the flow of words from her mouth. By many she is considered an even more remarkable medium than the celebrated

Mrs. Piper. It was one of these messages, the one written by her left hand, that Mr. Vincey now had before him. It consisted of eight words written disconnectedly: "George Bessel . . . trial excavn. . . . Baker Street . . . help . . . starvation." Curiously enough, neither Doctor Paget nor the two other inquirers who were present had heard of the disappearance of Mr. Bessel--the news of it appeared only in the evening papers of Saturday--and they had put the message aside with many others of a vague and enigmatical sort that Mrs. Bullock has from time to time delivered.

When Doctor Paget heard Mr. Vincey's story, he gave himself at once with great energy to the pursuit of this clue to the discovery of Mr. Bessel. It would serve no useful purpose here to describe the inquiries of Mr. Vincey and himself; suffice it that the clue was a genuine one, and that Mr. Bessel was actually discovered by its aid.

He was found at the bottom of a detached shaft which had been sunk and abandoned at the commencement of the work for the new electric railway near Baker Street Station. His arm and leg and two ribs were broken. The shaft is protected by a hoarding nearly 20 feet high, and over this, incredible as it seems, Mr. Bessel, a stout, middle-aged gentleman, must have scrambled in order to fall down the shaft. He was saturated in colza oil, and the smashed tin lay beside him, but luckily the flame had been extinguished by his fall. And his madness had passed from him altogether. But he was, of course, terribly enfeebled, and at the sight of his rescuers he gave way to hysterical weeping.

In view of the deplorable state of his flat, he was taken to the house of Dr. Hatton in Upper Baker Street. Here he was subjected to a sedative treatment, and anything that might recall the violent crisis through which he had passed was carefully avoided. But on the second day he volunteered a statement.

Since that occasion Mr. Bessel has several times repeated this

statement--to myself among other people--varying the details as the narrator of real experiences always does, but never by any chance contradicting himself in any particular. And the statement he makes is in substance as follows.

In order to understand it clearly it is necessary to go back to his experiments with Mr. Vincey before his remarkable attack. Mr. Bessel's first attempts at self-projection, in his experiments with Mr. Vincey, were, as the reader will remember, unsuccessful. But through all of them he was concentrating all his power and will upon getting out of the body--"willing it with all my might," he says. At last, almost against expectation, came success. And Mr. Bessel asserts that he, being alive, did actually, by an effort of will, leave his body and pass into some place or state outside this world.

The release was, he asserts, instantaneous. "At one moment I was seated in my chair, with my eyes tightly shut, my hands gripping the arms of the chair, doing all I could to concentrate my mind on Vincey, and then I perceived myself outside my body--saw my body near me, but certainly not containing me, with the hands relaxing and the head drooping forward on the breast."

Nothing shakes him in his assurance of that release. He describes in a quiet, matter-of-fact way the new sensation he experienced. He felt he had become impalpable--so much he had expected, but he had not expected to find himself enormously large. So, however, it would seem he became. "I was a great cloud--if I may express it that way--anchored to my body. It appeared to me, at first, as if I had discovered a greater self of which the conscious being in my brain was only a little part. I saw the Albany and Piccadilly and Regent Street and all the rooms and places in the houses, very minute and very bright and distinct, spread out below me like a little city seen from a balloon. Every now and then vague shapes like drifting wreaths of smoke made the vision a little indistinct, but at first I paid little heed to them. The thing that astonished me

most, and which astonishes me still, is that I saw quite distinctly the insides of the houses as well as the streets, saw little people dining and talking in the private houses, men and women dining, playing billiards, and drinking in restaurants and hotels, and several places of entertainment crammed with people. It was like watching the affairs of a glass hive."

Such were Mr. Bessel's exact words as I took them down when he told me the story. Quite forgetful of Mr. Vincey, he remained for a space observing these things. Impelled by curiosity, he says, he stooped down, and, with the shadowy arm he found himself possessed of, attempted to touch a man walking along Vigo Street. But he could not do so, though his finger seemed to pass through the man. Something prevented his doing this, but what it was he finds it hard to describe. He compares the obstacle to a sheet of glass.

"I felt as a kitten may feel," he said, "when it goes for the first time to pat its reflection in a mirror." Again and again, on the occasion when I heard him tell this story, Mr. Bessel returned to that comparison of the sheet of glass. Yet it was not altogether a precise comparison, because, as the reader will speedily see, there were interruptions of this generally impermeable resistance, means of getting through the barrier to the material world again. But, naturally, there is a very great difficulty in expressing these unprecedented impressions in the language of everyday experience.

A thing that impressed him instantly, and which weighed upon him throughout all this experience, was the stillness of this place--he was in a world without sound.

At first Mr. Bessel's mental state was an unemotional wonder. His thought chiefly concerned itself with where he might be. He was out of the body--out of his material body, at any rate--but that was not all. He believes, and I for one believe also, that he was somewhere out of space, as we understand it, altogether. By a strenuous

effort of will he had passed out of his body into a world beyond this world, a world undreamt of, yet lying so close to it and so strangely situated with regard to it that all things on this earth are clearly visible both from without and from within in this other world about us. For a long time, as it seemed to him, this realisation occupied his mind to the exclusion of all other matters, and then he recalled the engagement with Mr. Vincey, to which this astonishing experience was, after all, but a prelude.

He turned his mind to locomotion in this new body in which he found himself. For a time he was unable to shift himself from his attachment to his earthly carcass. For a time this new strange cloud body of his simply swayed, contracted, expanded, coiled, and writhed with his efforts to free himself, and then quite suddenly the link that bound him snapped. For a moment everything was hidden by what appeared to be whirling spheres of dark vapour, and then through a momentary gap he saw his drooping body collapse limply, saw his lifeless head drop sideways, and found he was driving along like a huge cloud in a strange place of shadowy clouds that had the luminous intricacy of London spread like a model below.

But now he was aware that the fluctuating vapour about him was something more than vapour, and the temerarious excitement of his first essay was shot with fear. For he perceived, at first indistinctly, and then suddenly very clearly, that he was surrounded by **FACES!** that each roll and coil of the seeming cloud-stuff was a face. And such faces! Faces of thin shadow, faces of gaseous tenuity. Faces like those faces that glare with intolerable strangeness upon the sleeper in the evil hours of his dreams. Evil, greedy eyes that were full of a covetous curiosity, faces with knit brows and snarling, smiling lips; their vague hands clutched at Mr. Bessel as he passed, and the rest of their bodies was but an elusive streak of trailing darkness. Never a word they said, never a sound from the mouths that seemed to gibber. All about him they pressed in that dreamy silence, passing freely through the dim mistiness that was

his body, gathering ever more numerous about him. And the shadowy Mr. Bessel, now suddenly fear-stricken, drove through the silent, active multitude of eyes and clutching hands.

So inhuman were these faces, so malignant their staring eyes, and shadowy, clawing gestures, that it did not occur to Mr. Bessel to attempt intercourse with these drifting creatures. Idiot phantoms, they seemed, children of vain desire, beings unborn and forbidden the boon of being, whose only expressions and gestures told of the envy and craving for life that was their one link with existence.

It says much for his resolution that, amidst the swarming cloud of these noiseless spirits of evil, he could still think of Mr. Vincey. He made a violent effort of will and found himself, he knew not how, stooping towards Staple Inn, saw Vincey sitting attentive and alert in his arm-chair by the fire.

And clustering also about him, as they clustered ever about all that lives and breathes, was another multitude of these vain voiceless shadows, longing, desiring, seeking some loophole into life.

For a space Mr. Bessel sought ineffectually to attract his friend's attention. He tried to get in front of his eyes, to move the objects in his room, to touch him. But Mr. Vincey remained unaffected, ignorant of the being that was so close to his own. The strange something that Mr. Bessel has compared to a sheet of glass separated them impermeably.

And at last Mr. Bessel did a desperate thing. I have told how that in some strange way he could see not only the outside of a man as we see him, but within. He extended his shadowy hand and thrust his vague black fingers, as it seemed, through the heedless brain.

Then, suddenly, Mr. Vincey started like a man who recalls his attention from wandering thoughts, and it seemed to Mr. Bessel that a little

dark-red body situated in the middle of Mr. Vincey's brain swelled and glowed as he did so. Since that experience he has been shown anatomical figures of the brain, and he knows now that this is that useless structure, as doctors call it, the pineal eye. For, strange as it will seem to many, we have, deep in our brains--where it cannot possibly see any earthly light--an eye! At the time this, with the rest of the internal anatomy of the brain, was quite new to him. At the sight of its changed appearance, however, he thrust forth his finger, and, rather fearful still of the consequences, touched this little spot. And instantly Mr. Vincey started, and Mr. Bessel knew that he was seen.

And at that instant it came to Mr. Bessel that evil had happened to his body, and behold! a great wind blew through all that world of shadows and tore him away. So strong was this persuasion that he thought no more of Mr. Vincey, but turned about forthwith, and all the countless faces drove back with him like leaves before a gale. But he returned too late. In an instant he saw the body that he had left inert and collapsed--lying, indeed, like the body of a man just dead--had arisen, had arisen by virtue of some strength and will beyond his own. It stood with staring eyes, stretching its limbs in dubious fashion.

For a moment he watched it in wild dismay, and then he stooped towards it. But the pane of glass had closed against him again, and he was foiled. He beat himself passionately against this, and all about him the spirits of evil grinned and pointed and mocked. He gave way to furious anger. He compares himself to a bird that has fluttered heedlessly into a room and is beating at the window-pane that holds it back from freedom.

And behold! the little body that had once been his was now dancing with delight. He saw it shouting, though he could not hear its shouts; he saw the violence of its movements grow. He watched it fling his cherished furniture about in the mad delight of existence,

rend his books apart, smash bottles, drink heedlessly from the jagged fragments, leap and smite in a passionate acceptance of living. He watched these actions in paralysed astonishment. Then once more he hurled himself against the impassable barrier, and then with all that crew of mocking ghosts about him, hurried back in dire confusion to Vincey to tell him of the outrage that had come upon him.

But the brain of Vincey was now closed against apparitions, and the disembodied Mr. Bessel pursued him in vain as he hurried out into Holborn to call a cab. Foiled and terror-stricken, Mr. Bessel swept back again, to find his desecrated body whooping in a glorious frenzy down the Burlington Arcade. . . .

And now the attentive reader begins to understand Mr. Bessel's interpretation of the first part of this strange story. The being whose frantic rush through London had inflicted so much injury and disaster had indeed Mr. Bessel's body, but it was not Mr. Bessel. It was an evil spirit out of that strange world beyond existence, into which Mr. Bessel had so rashly ventured. For twenty hours it held possession of him, and for all those twenty hours the dispossessed spirit-body of Mr. Bessel was going to and fro in that unheard-of middle world of shadows seeking help in vain. He spent many hours beating at the minds of Mr. Vincey and of his friend Mr. Hart. Each, as we know, he roused by his efforts. But the language that might convey his situation to these helpers across the gulf he did not know; his feeble fingers groped vainly and powerlessly in their brains. Once, indeed, as we have already told, he was able to turn Mr. Vincey aside from his path so that he encountered the stolen body in its career, but he could not make him understand the thing that had happened: he was unable to draw any help from that encounter. . . .

All through those hours the persuasion was overwhelming in Mr. Bessel's mind that presently his body would be killed by its furious tenant, and he would have to remain in this shadow-land for evermore.

So that those long hours were a growing agony of fear. And ever as he hurried to and fro in his ineffectual excitement, innumerable spirits of that world about him mobbed him and confused his mind. And ever an envious applauding multitude poured after their successful fellow as he went upon his glorious career.

For that, it would seem, must be the life of these bodiless things of this world that is the shadow of our world. Ever they watch, coveting a way into a mortal body, in order that they may descend, as furies and frenzies, as violent lusts and mad, strange impulses, rejoicing in the body they have won. For Mr. Bessel was not the only human soul in that place. Witness the fact that he met first one, and afterwards several shadows of men, men like himself, it seemed, who had lost their bodies even it may be as he had lost his, and wandered, despairingly, in that lost world that is neither life nor death. They could not speak because that world is silent, yet he knew them for men because of their dim human bodies, and because of the sadness of their faces.

But how they had come into that world he could not tell, nor where the bodies they had lost might be, whether they still raved about the earth, or whether they were closed forever in death against return. That they were the spirits of the dead neither he nor I believe. But Doctor Wilson Paget thinks they are the rational souls of men who are lost in madness on the earth.

At last Mr. Bessel chanced upon a place where a little crowd of such disembodied silent creatures was gathered, and thrusting through them he saw below a brightly-lit room, and four or five quiet gentlemen and a woman, a stoutish woman dressed in black bombazine and sitting awkwardly in a chair with her head thrown back. He knew her from her portraits to be Mrs. Bullock, the medium. And he perceived that tracts and structures in her brain glowed and stirred as he had seen the pineal eye in the brain of Mr. Vincey glow. The light was very fitful; sometimes it was a broad illumination, and sometimes

merely a faint twilight spot, and it shifted slowly about her brain. She kept on talking and writing with one hand. And Mr. Bessel saw that the crowding shadows of men about him, and a great multitude of the shadow spirits of that shadowland, were all striving and thrusting to touch the lighted regions of her brain. As one gained her brain or another was thrust away, her voice and the writing of her hand changed. So that what she said was disorderly and confused for the most part; now a fragment of one soul's message, and now a fragment of another's, and now she babbled the insane fancies of the spirits of vain desire. Then Mr. Bessel understood that she spoke for the spirit that had touch of her, and he began to struggle very furiously towards her. But he was on the outside of the crowd and at that time he could not reach her, and at last, growing anxious, he went away to find what had happened meanwhile to his body. For a long time he went to and fro seeking it in vain and fearing that it must have been killed, and then he found it at the bottom of the shaft in Baker Street, writhing furiously and cursing with pain. Its leg and an arm and two ribs had been broken by its fall. Moreover, the evil spirit was angry because his time had been so short and because of the painmaking violent movements and casting his body about.

And at that Mr. Bessel returned with redoubled earnestness to the room where the seance was going on, and so soon as he had thrust himself within sight of the place he saw one of the men who stood about the medium looking at his watch as if he meant that the seance should presently end. At that a great number of the shadows who had been striving turned away with gestures of despair. But the thought that the seance was almost over only made Mr. Bessel the more earnest, and he struggled so stoutly with his will against the others that presently he gained the woman's brain. It chanced that just at that moment it glowed very brightly, and in that instant she wrote the message that Doctor Wilson Paget preserved. And then the other shadows and the cloud of evil spirits about him had thrust Mr. Bessel away from her, and for all the rest of the seance he could regain her no more.

So he went back and watched through the long hours at the bottom of the shaft where the evil spirit lay in the stolen body it had maimed, writhing and cursing, and weeping and groaning, and learning the lesson of pain. And towards dawn the thing he had waited for happened, the brain glowed brightly and the evil spirit came out, and Mr. Bessel entered the body he had feared he should never enter again. As he did so, the silence--the brooding silence--ended; he heard the tumult of traffic and the voices of people overhead, and that strange world that is the shadow of our world--the dark and silent shadows of ineffectual desire and the shadows of lost men--vanished clean away.

He lay there for the space of about three hours before he was found. And in spite of the pain and suffering of his wounds, and of the dim damp place in which he lay; in spite of the tears--wring from him by his physical distress--his heart was full of gladness to know that he was nevertheless back once more in the kindly world of men.

11. MR. BRISHER'S TREASURE

"You can't be TOO careful WHO you marry," said Mr. Brisher, and pulled thoughtfully with a fat-wristed hand at the lank moustache that hides his want of chin.

"That's why--" I ventured.

"Yes," said Mr. Brisher, with a solemn light in his bleary, blue-grey eyes, moving his head expressively and breathing alcohol INTIMATELY at me. "There's lots as 'ave 'ad a try at me--many as I could name in this town--but none 'ave done it--none."

I surveyed the flushed countenance, the equatorial expansion, the masterly carelessness of his attire, and heaved a sigh to think that by reason of the unworthiness of women he must needs be the last of his race.

"I was a smart young chap when I was younger," said Mr. Brisher. "I 'ad my work cut out. But I was very careful--very. And I got through . . ."

He leant over the taproom table and thought visibly on the subject of my trustworthiness. I was relieved at last by his confidence.

"I was engaged once," he said at last, with a reminiscent eye on the shuv-a'penny board.

"So near as that?"

He looked at me. "So near as that. Fact is--" He looked about him, brought his face close to mine, lowered his voice, and fenced off an unsympathetic world with a grimy hand. "If she ain't dead or married to some one else or anything--I'm engaged still. Now." He confirmed this statement with nods and facial contortions. "STILL," he said,

ending the pantomime, and broke into a reckless smile at my surprise.
"ME!"

"Run away," he explained further, with coruscating eyebrows.
"Come 'ome.

"That ain't all.

"You'd 'ardly believe it," he said, "but I found a treasure. Found a regular treasure."

I fancied this was irony, and did not, perhaps, greet it with proper surprise. "Yes," he said, "I found a treasure. And come 'ome. I tell you I could surprise you with things that has happened to me." And for some time he was content to repeat that he had found a treasure--and left it.

I made no vulgar clamour for a story, but I became attentive to Mr. Brisher's bodily needs, and presently I led him back to the deserted lady.

"She was a nice girl," he said--a little sadly, I thought. "AND respectable."

He raised his eyebrows and tightened his mouth to express extreme respectability--beyond the likes of us elderly men.

"It was a long way from 'ere. Essex, in fact. Near Colchester. It was when I was up in London--in the buildin' trade. I was a smart young chap then, I can tell you. Slim. 'Ad best clo'es 's good as anybody. 'At--SILK 'at, mind you." Mr. Brisher's hand shot above his head towards the infinite to indicate it silk hat of the highest. "Umbrella--nice umbrella with a 'orn 'andle. Savin's. Very careful I was. . . ."

He was pensive for a little while, thinking, as we must all come to think sooner or later, of the vanished brightness of youth. But he refrained, as one may do in taprooms, from the obvious moral.

"I got to know 'er through a chap what was engaged to 'er sister. She was stopping in London for a bit with an aunt that 'ad a 'am an' beef shop. This aunt was very particular--they was all very particular people, all 'er people was--and wouldn't let 'er sister go out with this feller except 'er other sister, MY girl that is, went with them. So 'e brought me into it, sort of to ease the crowding. We used to go walks in Battersea Park of a Sunday afternoon. Me in my topper, and 'im in 'is; and the girl's--well--stylish. There wasn't many in Battersea Park 'ad the larf of us. She wasn't what you'd call pretty, but a nicer girl I never met. I liked 'er from the start, and, well--though I say it who shouldn't--she liked me. You know 'ow it is, I dessay?"

I pretended I did.

"And when this chap married 'er sister--'im and me was great friends--what must 'e do but arst me down to Colchester, close by where She lived. Naturally I was introjuced to 'er people, and well, very soon, her and me was engaged."

He repeated "engaged."

"She lived at 'ome with 'er father and mother, quite the lady, in a very nice little 'ouse with a garden--and remarkable respectable people they was. Rich you might call 'em a'most. They owned their own 'ouse--got it out of the Building Society, and cheap because the chap who had it before was a burglar and in prison--and they 'ad a bit of free'old land, and some cottages and money 'nvested--all nice and tight: they was what you'd call snug and warm. I tell you, I was On. Furniture too. Why! They 'ad a pianner. Jane--'er name was Jane--used to play it Sundays, and very nice she played too.

There wasn't 'ardly a 'im toon in the book she COULDN'T play . . .

"Many's the evenin' we've met and sung 'ims there, me and 'er and the family.

"'Er father was quite a leadin' man in chapel. You should ha' seen him Sundays, interruptin' the minister and givin' out 'ims. He had gold spectacles, I remember, and used to look over 'em at you while he sang hearty--he was always great on singing 'earty to the Lord--and when HE got out o' toon 'arf the people went after 'im--always. 'E was that sort of man. And to walk be'ind 'im in 'is nice black clo'es--'is 'at was a brimmer--made one regular proud to be engaged to such a father-in-law. And when the summer came I went down there and stopped a fortnight.

"Now, you know there was a sort of Itch," said Mr. Brisher. "We wanted to marry, me and Jane did, and get things settled. But 'E said I 'ad to get a proper position first. Consequently there was a Itch. Consequently, when I went down there, I was anxious to show that I was a good useful sort of chap like. Show I could do pretty nearly everything like. See?"

I made a sympathetic noise.

"And down at the bottom of their garden was a bit of wild part like. So I says to 'im, 'Why don't you 'ave a rockery 'ere?' I says. 'It 'ud look nice.'

"'Too much expense,' he says.

"'Not a penny,' says I. 'I'm a dab at rockeries. Lemme make you one.' You see, I'd 'elped my brother make a rockery in the beer garden be'ind 'is tap, so I knew 'ow to do it to rights. 'Lemme make you one,' I says. 'It's 'olidays, but I'm that sort of chap, I 'ate doing nothing,' I says. 'I'll make you one to rights.' And the long and

the short of it was, he said I might.

"And that's 'ow I come on the treasure."

"What treasure?" I asked.

"Why!" said Mr. Brisher, "the treasure I'm telling you about, what's the reason why I never married."

"What!--a treasure--dug up?"

"Yes--buried wealth--treasure trove. Come out of the ground. What I kept on saying--regular treasure. . . ." He looked at me with unusual disrespect.

"It wasn't more than a foot deep, not the top of it," he said.
"I'd 'ardly got thirsty like, before I come on the corner."

"Go on," I said. "I didn't understand."

"Why! Directly I 'it the box I knew it was treasure. A sort of instinct told me. Something seemed to shout inside of me--'Now's your chance--lie low.' It's lucky I knew the laws of treasure trove or I'd 'ave been shoutin' there and then. I daresay you know--"

"Crown bags it," I said, "all but one per cent. Go on. It's a shame. What did you do?"

"Uncovered the top of the box. There wasn't anybody in the garden or about like. Jane was 'elping 'er mother do the 'ouse. I WAS excited--I tell you. I tried the lock and then gave a whack at the hinges. Open it came. Silver coins--full! Shining. It made me tremble to see 'em. And jest then--I'm blessed if the dustman didn't come round the back of the 'ouse. It pretty nearly gave me 'eart disease to think what a fool I was to 'ave that money showing. And

directly after I 'eard the chap next door--'e was 'olidaying, too--
I 'eard him watering 'is beans. If only 'e'd looked over the fence!"

"What did you do?"

"Kicked the lid on again and covered it up like a shot, and went on digging about a yard away from it--like mad. And my face, so to speak, was laughing on its own account till I had it hid. I tell you I was regular scared like at my luck. I jest thought that it 'ad to be kep' close and that was all. 'Treasure,' I kep' whisperin' to myself, 'Treasure' and 'undreds of pounds, 'undreds, 'undreds of pounds.' Whispering to myself like, and digging like blazes. It seemed to me the box was regular sticking out and showing, like your legs do under the sheets in bed, and I went and put all the earth I'd got out of my 'ole for the rockery slap on top of it. I WAS in a sweat. And in the midst of it all out toddles 'er father. He didn't say anything to me, jest stood behind me and stared, but Jane tole me afterwards when he went indoors, 'e says, 'That there jackanapes of yours, Jane'--he always called me a jackanapes some'ow--'knows 'ow to put 'is back into it after all.' Seemed quite impressed by it, 'e did."

"How long was the box?" I asked, suddenly.

"'Ow long?" said Mr. Brisher.

"Yes--in length?"

"Oh! 'bout so-by-so." Mr. Brisher indicated a moderate-sized trunk.

"FULL?" said I.

"Full up of silver coins--'arf-crowns, I believe."

"Why!" I cried, "that would mean--hundreds of pounds."

"Thousands," said Mr. Brisher, in a sort of sad calm. "I calc'lated it out."

"But how did they get there?"

"All I know is what I found. What I thought at the time was this. The chap who'd owned the 'ouse before 'er father 'd been a regular slap-up burglar. What you'd call a 'igh-class criminal. Used to drive 'is trap--like Peace did." Mr. Brisher meditated on the difficulties of narration and embarked on a complicated parenthesis. "I don't know if I told you it'd been a burglar's 'ouse before it was my girl's father's, and I knew 'e'd robbed a mail train once, I did know that. It seemed to me--"

"That's very likely," I said. "But what did you do?"

"Sweated," said Mr. Brisher. "Regular run orf me. All that morning," said Mr. Brisher, "I was at it, pretending to make that rockery and wondering what I should do. I'd 'ave told 'er father p'r'aps, only I was doubtful of 'is honesty--I was afraid he might rob me of it like, and give it up to the authorities--and besides, considering I was marrying into the family, I thought it would be nicer like if it came through me. Put me on a better footing, so to speak. Well, I 'ad three days before me left of my 'olidays, so there wasn't no hurry, so I covered it up and went on digging, and tried to puzzle out 'ow I was to make sure of it. Only I couldn't.

"I thought," said Mr. Brisher, "AND I thought. Once I got regular doubtful whether I'd seen it or not, and went down to it and 'ad it uncovered again, just as her ma came out to 'ang up a bit of washin' she'd done. Jumps again! Afterwards I was just thinking I'd 'ave another go at it, when Jane comes to tell me dinner was ready. 'You'll want it,' she said, 'seeing all the 'ole you've dug.'

"I was in a regular daze all dinner, wondering whether that chap next door wasn't over the fence and filling 'is pockets. But in the afternoon I got easier in my mind--it seemed to me it must 'ave been there so long it was pretty sure to stop a bit longer--and I tried to get up a bit of a discussion to dror out the old man and see what 'E thought of treasure trove."

Mr. Brisher paused, and affected amusement at the memory.

"The old man was a scorcher," he said; "a regular scorcher."

"What!" said I; "did he--?"

"It was like this," explained Mr. Brisher, laying a friendly hand on my arm and breathing into my face to calm me. "Just to dror 'im out, I told a story of a chap I said I knew--pretendin', you know--who'd found a sovring in a novercoat 'e'd borrowed. I said 'e stuck to it, but I said I wasn't sure whether that was right or not. And then the old man began. Lor'! 'e DID let me 'ave it!" Mr. Brisher affected an insincere amusement. "'E was, well--what you might call a rare 'and at Snacks. Said that was the sort of friend 'e'd naturally expect me to 'ave. Said 'e'd naturally expect that from the friend of a out-of-work loafer who took up with daughters who didn't belong to 'im. There! I couldn't tell you 'ARF 'e said. 'E went on most outrageous. I stood up to 'im about it, just to dror 'im out. 'Wouldn't you stick to a 'arf-sov', not if you found it in the street?' I says. 'Certainly not,' 'e says; 'certainly I wouldn't.' 'What! not if you found it as a sort of treasure?' 'Young man,' 'e says, 'there's 'i'er 'thority than mine--Render unto Caesar'--what is it? Yes. Well, he fetched up that. A rare 'and at 'itting you over the 'ed with the Bible, was the old man. And so he went on. 'E got to such Snacks about me at last I couldn't stand it. I'd promised Jane not to answer 'im back, but it got a bit TOO thick. I--I give it 'im . . ."

Mr. Brisher, by means of enigmatical facework, tried to make me think he had had the best of that argument, but I knew better.

"I went out in a 'uff at last. But not before I was pretty sure I 'ad to lift that treasure by myself. The only thing that kep' me up was thinking 'ow I'd take it out of 'im when I 'ad the cash."

There was a lengthy pause.

"Now, you'd 'ardly believe it, but all them three days I never 'ad a chance at the blessed treasure, never got out not even a 'arf-crown. There was always a Somethink--always.

"'Stonishing thing it isn't thought of more," said Mr. Brisher. "Finding treasure's no great shakes. It's gettin' it. I don't suppose I slep' a wink any of those nights, thinking where I was to take it, what I was to do with it, 'ow I was to explain it. It made me regular ill. And days I was that dull, it made Jane regular 'uffy. 'You ain't the same chap you was in London,' she says, several times. I tried to lay it on 'er father and 'is Snacks, but bless you, she knew better. What must she 'ave but that I'd got another girl on my mind! Said I wasn't True. Well, we had a bit of a row. But I was that set on the Treasure, I didn't seem to mind a bit Anything she said.

"Well, at last I got a sort of plan. I was always a bit good at planning, though carrying out isn't so much in my line. I thought it all out and settled on a plan. First, I was going to take all my pockets full of these 'ere 'arf-crowns--see?--and afterwards as I shall tell.

"Well, I got to that state I couldn't think of getting at the Treasure again in the daytime, so I waited until the night before I had to go, and then, when everything was still, up I gets and slips down to the back door, meaning to get my pockets full. What must I do

in the scullery but fall over a pail! Up gets 'er father with a gun--'e was a light sleeper was 'er father, and very suspicious and there was me: 'ad to explain I'd come down to the pump for a drink because my water-bottle was bad. 'E didn't let me off a Snack or two over that bit, you lay a bob."

"And you mean to say--" I began.

"Wait a bit," said Mr. Brisher. "I say, I'd made my plan. That put the kybosh on one bit, but it didn't 'urt the general scheme not a bit. I went and I finished that rockery next day, as though there wasn't a Snack in the world; cemented over the stones, I did, dabbed it green and everythink. I put a dab of green just to show where the box was. They all came and looked at it, and sai 'ow nice it was--even 'e was a bit softer like to see it, and all he said was, "It's a pity you can't always work like that, then you might get something definite to do," he says.

"'Yes,' I says--I couldn't 'elp it--'I put a lot in that rockery,' I says, like that. See? 'I put a lot in that rockery'--meaning--"

"I see," said I--for Mr. Brisher is apt to overelaborate his jokes.

"_E_ didn't," said Mr. Brisher. "Not then, anyhow.

"Ar'ever--after all that was over, off I set for London. . . .
Orf I set for London."

Pause.

"On'y I wasn't going to no London," said Mr. Brisher, with sudden animation, and thrusting his face into mine. "No fear! What do YOU think?"

"I didn't go no further than Colchester--not a yard.

"I'd left the spade just where I could find it. I'd got everything planned and right. I 'ired a little trap in Colchester, and pretended I wanted to go to Ipswich and stop the night, and come back next day, and the chap I 'ired it from made me leave two sovrings on it right away, and off I set.

"I didn't go to no Ipswich neither.

"Midnight the 'orse and trap was 'itched by the little road that ran by the cottage where 'e lived--not sixty yards off, it wasn't--and I was at it like a good 'un. It was jest the night for such games--overcast--but a trifle too 'ot, and all round the sky there was summer lightning and presently a thunderstorm. Down it came. First big drops in a sort of fizzle, then 'ail. I kep'on. I whacked at it--I didn't dream the old man would 'ear. I didn't even trouble to go quiet with the spade, and the thunder and lightning and 'ail seemed to excite me like. I shouldn't wonder if I was singing. I got so 'ard at it I clean forgot the thunder and the 'orse and trap. I precious soon got the box showing, and started to lift it"

"Heavy?" I said.

"I couldn't no more lift it than fly. I WAS sick. I'd never thought of that I got regular wild--I tell you, I cursed. I got sort of outrageous. I didn't think of dividing it like for the minute, and even then I couldn't 'ave took money about loose in a trap. I hoisted one end sort of wild like, and over the whole show went with a tremenjous noise. Perfek smash of silver. And then right on the heels of that, Flash! Lightning like the day! and there was the back door open and the old man coming down the garden with 'is blooming old gun. He wasn't not a 'undred yards away!

"I tell you I was that upset--I didn't think what I was doing. I never stopped--not even to fill my pockets. I went over the fence

like a shot, and ran like one o'clock for the trap, cussing and swearing as I went. I WAS in a state. . . .

"And will you believe me, when I got to the place where I'd left the 'orse and trap, they'd gone. Orf! When I saw that I 'adn't a cuss left for it. I jest danced on the grass, and when I'd danced enough I started off to London. . . . I was done."

Mr. Brisher was pensive for an interval. "I was done," he repeated, very bitterly.

"Well?" I said.

"That's all," said Mr. Brisher.

"You didn't go back?"

"No fear. I'd 'ad enough of THAT blooming treasure, any'ow for a bit. Besides, I didn't know what was done to chaps who tried to collar a treasure trove. I started off for London there and then. . . ."

"And you never went back?"

"Never."

"But about Jane? Did you write?"

"Three times, fishing like. And no answer. We'd parted in a bit of a 'uff on account of 'er being jealous. So that I couldn't make out for certain what it meant.

"I didn't know what to do. I didn't even know whether the old man knew it was me. I sort of kep' an eye open on papers to see when he'd give up that treasure to the Crown, as I hadn't a doubt 'e would, considering 'ow respectable he'd always been."

"And did he?"

Mr. Brisher pursed his mouth and moved his head slowly from side to side. "Not 'IM," he said.

"Jane was a nice girl," he said, "a thorough nice girl mind you, if jealous, and there's no knowing I mightn't 'ave gone back to 'er after a bit. I thought if he didn't give up the treasure I might 'ave a sort of 'old on 'im. . . . Well, one day I looks as usual under Colchester--and there I saw 'is name. What for, d'yer think?"

I could not guess.

Mr. Brisher's voice sank to a whisper, and once more he spoke behind his hand. His manner was suddenly suffused with a positive joy. "Issuing counterfeit coins," he said. "Counterfeit coins!"

"You don't mean to say--?"

"Yes-It. Bad. Quite a long case they made of it. But they got 'im, though he dodged tremenjous. Traced 'is 'aving passed, oh!--nearly a dozen bad 'arf-crowns."

"And you didn't--?"

"No fear. And it didn't do 'IM much good to say it was treasure trove."

12. MISS WINCHELSEA'S HEART

Miss Winchelsea was going to Rome. The matter had filled her mind for a month or more, and had overflowed so abundantly into her conversation that quite a number of people who were not going to Rome, and who were not likely to go to Rome, had made it a personal grievance against her. Some indeed had attempted quite unavailingly to convince her that Rome was not nearly such a desirable place as it was reported to be, and others had gone so far as to suggest behind her back that she was dreadfully "stuck up" about "that Rome of hers." And little Lily Hardhurst had told her friend Mr. Binns that so far as she was concerned Miss Winchelsea might "go to her old Rome and stop there; SHE (Miss Lily Hardhurst) wouldn't grieve." And the way in which Miss Winchelsea put herself upon terms of personal tenderness with Horace and Benvenuto Cellini and Raphael and Shelley and Keats--if she had been Shelley's widow she could not have professed a keener interest in his grave--was a matter of universal astonishment. Her dress was a triumph of tactful discretion, sensible, but not too "touristy"--Miss Winchelsea, had a great dread of being "touristy"--and her Baedeker was carried in a cover of grey to hide its glaring red. She made a prim and pleasant little figure on the Charing Cross platform, in spite of her swelling pride, when at last the great day dawned, and she could start for Rome. The day was bright, the Channel passage would be pleasant, and all the omens promised well. There was the gayest sense of adventure in this unprecedented departure.

She was going with two friends who had been fellow-students with her at the training college, nice honest girls both, though not so good at history and literature as Miss Winchelsea. They both looked up to her immensely, though physically they had to look down, and she anticipated some pleasant times to be spent in "stirring them up" to her own pitch of aesthetic and historical enthusiasm. They had secured seats already, and welcomed her effusively at the carriage door. In the instant criticism of the encounter she noted that Fanny

had a slightly "touristy" leather strap, and that Helen had succumbed to a serge jacket with side pockets, into which her hands were thrust. But they were much too happy with themselves and the expedition for their friend to attempt any hint at the moment about these things. As soon as the first ecstasies were over--Fanny's enthusiasm was a little noisy and crude, and consisted mainly in emphatic repetitions of "Just FANCY! we're going to Rome, my dear!--Rome!"--they gave their attention to their fellow-travellers. Helen was anxious to secure a compartment to themselves, and, in order to discourage intruders, got out and planted herself firmly on the step. Miss Winchelsea peeped out over her shoulder, and made sly little remarks about the accumulating people on the platform, at which Fanny laughed gleefully.

They were travelling with one of Mr. Thomas Gunn's parties--fourteen days in Rome for fourteen pounds. They did not belong to the personally conducted party of course--Miss Winchelsea had seen to that--but they travelled with it because of the convenience of that arrangement. The people were the oddest mixture, and wonderfully amusing. There was a vociferous red-faced polyglot personal conductor in a pepper-and-salt suit, very long in the arms and legs and very active. He shouted proclamations. When he wanted to speak to people he stretched out an arm and held them until his purpose was accomplished. One hand was full of papers, tickets, counterfoils of tourists. The people of the personally conducted party were, it seemed, of two sorts; people the conductor wanted and could not find, and people he did not want and who followed him in a steadily growing tail up and down the platform. These people seemed, indeed, to think that their one chance of reaching Rome lay in keeping close to him. Three little old ladies were particularly energetic in his pursuit, and at last maddened him to the pitch of clapping them into a carriage and daring them to emerge again. For the rest of the time, one, two, or three of their heads protruded from the window wailing enquiries about "a little wickerwork box" whenever he drew near. There was a very stout man with a very stout

wife in shiny black; there was a little old man like an aged hostler.

"What CAN such people want in Rome?" asked Miss Winchelsea. "What can it mean to them?" There was a very tall curate in a very small straw hat, and a very short curate encumbered by a long camera stand. The contrast amused Fanny very much. Once they heard some one calling for "Snooks." "I always thought that name was invented by novelists," said Miss Winchelsea. "Fancy! Snooks. I wonder which IS Mr. Snooks." Finally they picked out a very stout and resolute little man in a large check suit. "If he isn't Snooks, he ought to be," said Miss Winchelsea.

Presently the conductor discovered Helen's attempt at a corner in carriages. "Room for five," he bawled with a parallel translation on his fingers. A party of four together--mother, father, and two daughters--blundered in, all greatly excited. "It's all right, Ma, you let me," said one of the daughters, hitting her mother's bonnet with a handbag she struggled to put in the rack. Miss Winchelsea detested people who banged about and called their mother "Ma." A young man travelling alone followed. He was not at all "touristy" in his costume, Miss Winchelsea observed; his Gladstone bag was of good pleasant leather with labels reminiscent of Luxembourg and Ostend, and his boots, though brown, were not vulgar. He carried an overcoat on his arm. Before these people had properly settled in their places, came an inspection of tickets and a slamming of doors, and behold! they were gliding out of Charing Cross station on their way to Rome.

"Fancy!" cried Fanny, "we are going to Rome, my dear! Rome! I don't seem to believe it, even now."

Miss Winchelsea suppressed Fanny's emotions with a little smile, and the lady who was called "Ma" explained to people in general why they had "cut it so close" at the station. The two daughters called her "Ma" several times, toned her down in a tactless effective

way, and drove her at last to the muttered inventory of a basket of travelling requisites. Presently she looked up. "Lor'!" she said, "I didn't bring THEM!" Both the daughters said "Oh, Ma!" but what "them" was did not appear. Presently Fanny produced Hare's Walks in Rome, a sort of mitigated guide-book very popular among Roman visitors; and the father of the two daughters began to examine his books of tickets minutely, apparently in a search after English words. When he had looked at the tickets for a long time right way up, he turned them upside down. Then he produced a fountain pen and dated them with considerable care. The young man, having completed an unostentatious survey of his fellow travellers, produced a book and fell to reading. When Helen and Fanny were looking out of the window at Chiselhurst--the place interested Fanny because the poor dear Empress of the French used to live there--Miss Winchelsea took the opportunity to observe the book the young man held. It was not a guide-book, but a little thin volume of poetry--BOUND. She glanced at his face--it seemed a refined pleasant face to her hasty glance. He wore a little gilt pince-nez. "Do you think she lives there now?" said Fanny, and Miss Winchelsea's inspection came to an end.

For the rest of the journey Miss Winchelsea talked little, and what she said was as pleasant and as stamped with refinement as she could make it. Her voice was always low and clear and pleasant, and she took care that on this occasion it was particularly low and clear and pleasant. As they came under the white cliffs the young man put his book of poetry away, and when at last the train stopped beside the boat, he displayed a graceful alacrity with the impedimenta of Miss Winchelsea and her friends. Miss Winchelsea hated nonsense, but she was pleased to see the young man perceived at once that they were ladies, and helped them without any violent geniality; and how nicely he showed that his civilities were to be no excuse for further intrusions. None of her little party had been out of England before, and they were all excited and a little nervous at the Channel passage. They stood in a little group in a good place near the middle of the boat--the young man had taken Miss Winchelsea's

carry-all there and had told her it was a good place--and they watched the white shores of Albion recede and quoted Shakespeare and made quiet fun of their fellow travellers in the English way.

They were particularly amused at the precautions the bigger-sized people had taken against the little waves--cut lemons and flasks prevailed, one lady lay full-length in a deck chair with a handkerchief over her face, and a very broad resolute man in a bright brown "touristy" suit walked all the way from England to France along the deck, with his legs as widely apart as Providence permitted. These were all excellent precautions, and, nobody was ill. The personally conducted party pursued the conductor about the deck with enquiries in a manner that suggested to Helen's mind the rather vulgar image of hens with a piece of bacon peel, until at last he went into hiding below. And the young man with the thin volume of poetry stood at the stern watching England receding, looking rather lonely and sad to Miss Winchelsea's eye.

And then came Calais and tumultuous novelties, and the young man had not forgotten Miss Winchelsea's hold-all and the other little things. All three girls, though they had passed government examinations in French to any extent, were stricken with a dumb shame of their accents, and the young man was very useful. And he did not intrude. He put them in a comfortable carriage and raised his hat and went away. Miss Winchelsea thanked him in her best manner--a pleasing, cultivated manner--and Fanny said he was "nice" almost before he was out of earshot. "I wonder what he can be," said Helen. "He's going to Italy, because I noticed green tickets in his book."

Miss Winchelsea almost told them of the poetry, and decided not to do so. And presently the carriage windows seized hold upon them and the young man was forgotten. It made them feel that they were doing an educated sort of thing to travel through a country whose commonest advertisements were in idiomatic French, and Miss Winchelsea

made unpatriotic comparisons because there were weedy little sign-board

advertisements by the rail side instead of the broad hoardings that deface the landscape in our land. But the north of France is really uninteresting country, and after a time Fanny reverted to Hare's Walks and Helen initiated lunch. Miss Winchelsea awoke out of a happy reverie; she had been trying to realise, she said, that she was actually going to Rome, but she perceived at Helen's suggestion that she was hungry, and they lunched out of their baskets very cheerfully. In the afternoon they were tired and silent until Helen made tea. Miss Winchelsea might have dozed, only she knew Fanny slept with her mouth open; and as their fellow passengers were two rather nice critical-looking ladies of uncertain age--who knew French well enough to talk it--she employed herself in keeping Fanny awake. The rhythm of the train became insistent, and the streaming landscape outside became at last quite painful to the eye. They were already dreadfully tired of travelling before their night's stoppage came.

The stoppage for the night was brightened by the appearance of the young man, and his manners were all that could be desired and his French quite serviceable. His coupons availed for the same hotel as theirs, and by chance as it seemed he sat next Miss Winchelsea at the table d'hote. In spite of her enthusiasm for Rome, she had thought out some such possibility very thoroughly, and when he ventured to make a remark upon the tediousness of travelling--he let the soup and fish go by before he did this--she did not simply assent to his proposition, but responded with another. They were soon comparing their journeys, and Helen and Fanny were cruelly overlooked in the conversation. It was to be the same journey, they found; one day for the galleries at Florence--"from what I hear," said the young man, "it is barely enough,"--and the rest at Rome. He talked of Rome very pleasantly; he was evidently quite well read, and he quoted Horace about Soracte. Miss Winchelsea had "done" that book of Horace for her matriculation, and was delighted to cap his quotation. It gave a sort of tone to things, this incident--a touch of refinement to mere chatting. Fanny expressed

a few emotions, and Helen interpolated a few sensible remarks, but the bulk of the talk on the girls' side naturally fell to Miss Winchelsea.

Before they reached Rome this young man was tacitly of their party. They did not know his name nor what he was, but it seemed he taught, and Miss Winchelsea had a shrewd idea he was an extension lecturer. At any rate he was something of that sort, something gentlemanly and refined without being opulent and impossible. She tried once or twice to ascertain whether he came from Oxford or Cambridge, but he missed her timid importunities. She tried to get him to make remarks about those places to see if he would say "come up" to them instead of "go down"--she knew that was how you told a 'Varsity man. He used the word "'Varsity"--not university--in quite the proper way.

They saw as much of Mr. Ruskin's Florence as the brief time permitted; he met them in the Pitti Gallery and went round with them, chatting brightly, and evidently very grateful for their recognition. He knew a great deal about art, and all four enjoyed the morning immensely. It was fine to go round recognising old favourites and finding new beauties, especially while so many people fumbled helplessly with Baedeker. Nor was he a bit of a prig, Miss Winchelsea said, and indeed she detested prigs. He had a distinct undertone of humour, and was funny, for example, without being vulgar, at the expense of the quaint work of Beato Angelico. He had a grave seriousness beneath it all, and was quick to seize the moral lessons of the pictures. Fanny went softly among these masterpieces; she admitted "she knew so little about them," and she confessed that to her they were "all beautiful." Fanny's "beautiful" inclined to be a little monotonous, Miss Winchelsea thought. She had been quite glad when the last sunny Alp had vanished, because of the staccato of Fanny's admiration. Helen said little, but Miss Winchelsea had found her a little wanting on the aesthetic side in the old days and was not surprised; sometimes she laughed at the young man's hesitating delicate little jests and sometimes she didn't, and sometimes she seemed quite lost to the art

about them in the contemplation of the dresses of the other visitors.

At Rome the young man was with them intermittently. A rather "touristy" friend of his took him away at times. He complained comically to Miss Winchelsea. "I have only two short weeks in Rome," he said, "and my friend Leonard wants to spend a whole day at Tivoli, looking at a waterfall."

"What is your friend Leonard?" asked Miss Winchelsea abruptly.

"He's the most enthusiastic pedestrian I ever met," the young man replied, amusingly, but a little unsatisfactorily, Miss Winchelsea thought. They had some glorious times, and Fanny could not think what they would have done without him. Miss Winchelsea's interest and Fanny's enormous capacity for admiration were insatiable. They never flagged--through pictures and sculpture galleries, immense crowded churches, ruins and museums, Judas trees and prickly pears, wine carts and palaces, they admired their way unflinchingly. They never saw a stone pine or a eucalyptus but they named and admired it; they never glimpsed Soracte but they exclaimed. Their common ways were made wonderful by imaginative play. "Here Caesar may have walked," they would say. "Raphael may have seen Soracte from this very point." They happened on the tomb of Bibulus. "Old Bibulus," said the young man. "The oldest monument of Republican Rome!" said Miss Winchelsea.

"I'm dreadfully stupid," said Fanny, "but who WAS Bibulus?"

There was a curious little pause.

"Wasn't he the person who built the wall?" said Helen.

The young man glanced quickly at her and laughed. "That was Balbus," he said. Helen reddened, but neither he nor Miss Winchelsea threw any light upon Fanny's ignorance about Bibulus.

Helen was more taciturn than the other three, but then she was always taciturn, and usually she took care of the tram tickets and things like that, or kept her eye on them if the young man took them, and told him where they were when he wanted them. Glorious times they had, these young people, in that pale brown cleanly city of memories that was once the world. Their only sorrow was the shortness of the time. They said indeed that the electric trams and the '70 buildings, and that criminal advertisement that glares upon the Forum, outraged their aesthetic feelings unspeakably; but that was only part of the fun. And indeed Rome is such a wonderful place that it made Miss Winchelsea forget some of her most carefully prepared enthusiasms at times, and Helen, taken unawares, would suddenly admit the beauty of unexpected things. Yet Fanny and Helen would have liked a shop window or so in the English quarter if Miss Winchelsea's uncompromising hostility to all other English visitors had not rendered that district impossible.

The intellectual and aesthetic fellowship of Miss Winchelsea and the scholarly young man passed insensibly towards a deeper feeling. The exuberant Fanny did her best to keep pace with their recondite admiration by playing her "beautiful," with vigour, and saying "Oh! LET'S go," with enormous appetite whenever a new place of interest was mentioned. But Helen developed a certain want of sympathy towards the end, that disappointed Miss Winchelsea a little. She refused to "see anything" in the face of Beatrice Cenci--Shelley's Beatrice Cenci!--in the Barberini gallery; and one day, when they were deploring the electric trams, she said rather snappishly that "people must get about somehow, and it's better than torturing horses up these horrid little hills." She spoke of the Seven Hills of Rome as "horrid little hills!"

And the day they went on the Palatine--though Miss Winchelsea did not know of this--she remarked suddenly to Fanny, "Don't hurry like that, my dear; THEY don't want us to overtake them. And we

don't say the right things for them when we DO get near."

"I wasn't trying to overtake them," said Fanny, slackening her excessive pace; "I wasn't indeed." And for a minute she was short of breath.

But Miss Winchelsea had come upon happiness. It was only when she came to look back across an intervening tragedy that she quite realised how happy she had been, pacing among the cypress-shadowed ruins, and exchanging the very highest class of information the human mind can possess, the most refined impressions it is possible to convey. Insensibly emotion crept into their intercourse, sunning itself openly and pleasantly at last when Helen's modernity was not too near. Insensibly their interest drifted from the wonderful associations about them to their more intimate and personal feelings. In a tentative way information was supplied; she spoke allusively of her school, of her examination successes, of her gladness that the days of "Cram" were over. He made it quite clear that he also was a teacher. They spoke of the greatness of their calling, of the necessity of sympathy to face its irksome details, of a certain loneliness they sometimes felt.

That was in the Colosseum, and it was as far as they got that day, because Helen returned with Fanny--she had taken her into the upper galleries. Yet the private dreams of Miss Winchelsea, already vivid and concrete enough, became now realistic in the highest degree. She figured that pleasant young man, lecturing in the most edifying way to his students, herself modestly prominent as his intellectual mate and helper; she figured a refined little home, with two bureaus, with white shelves of high-class books, and autotypes of the pictures of Rossetti and Burne-Jones, with Morris's wall papers and flowers in pots of beaten copper. Indeed she figured many things. On the Pincio the two had a few precious moments together, while Helen marched Fanny off to see the muro Torto, and he spoke at once plainly. He said he hoped their friendship was only beginning, that he already

found her company very precious to him, that indeed it was more than that.

He became nervous, thrusting at his glasses with trembling fingers as though he fancied his emotions made them unstable. "I should of course," he said, "tell you things about myself. I know it is rather unusual my speaking to you like this. Only our meeting has been so accidental--or providential--and I am snatching at things. I came to Rome expecting a lonely tour . . . and I have been so very happy, so very happy. Quite recently I found myself in a position-- I have dared to think--. And--"

He glanced over his shoulder and stopped. He said "Damn!" quite distinctly--and she did not condemn him for that manly lapse into profanity. She looked and saw his friend Leonard advancing. He drew nearer; he raised his hat to Miss Winchelsea, and his smile was almost a grin. "I've been looking for you everywhere, Snooks," he said. "You promised to be on the Piazza steps half an hour ago."

Snooks! The name struck Miss Winchelsea like a blow in the face. She did not hear his reply. She thought afterwards that Leonard must have considered her the vaguest-minded person. To this day she is not sure whether she was introduced to Leonard or not, nor what she said to him. A sort of mental paralysis was upon her. Of all offensive surnames--Snooks!

Helen and Fanny were returning, there were civilities, and the young men were receding. By a great effort she controlled herself to face the enquiring eyes of her friends. All that afternoon she lived the life of a heroine under the indescribable outrage of that name, chatting, observing, with "Snooks" gnawing at her heart. From the moment that it first rang upon her ears, the dream of her happiness was prostrate in the dust. All the refinement she had figured was ruined and defaced by that cognomen's unavoidable vulgarity.

What was that refined little home to her now, spite of autotypes, Morris papers, and bureaus? Athwart it in letters of fire ran an incredible inscription: "Mrs. Snooks." That may seem a little thing to the reader, but consider the delicate refinement of Miss Winchelsea's mind. Be as refined as you can and then think of writing yourself down:--"Snooks." She conceived herself being addressed as Mrs. Snooks by all the people she liked least, conceived the patronymic touched with a vague quality of insult. She figured a card of grey and silver bearing "Winchelsea," triumphantly effaced by an arrow, Cupid's arrow, in favour of "Snooks." Degrading confession of feminine weakness! She imagined the terrible rejoicings of certain girl friends, of certain grocer cousins from whom her growing refinement had long since estranged her. How they would make it sprawl across the envelope that would bring their sarcastic congratulations. Would even his pleasant company compensate her for that? "It is impossible," she muttered; "impossible! SNOOKS!"

She was sorry for him, but not so sorry as she was for herself. For him she had a touch of indignation. To be so nice, so refined, while all the time he was "Snooks," to hide under a pretentious gentility of demeanour the badge sinister of his surname seemed a sort of treachery. To put it in the language of sentimental science she felt he had "led her on."

There were of course moments of terrible vacillation, a period even when something almost like passion bid her throw refinement to the winds. And there was something in her, an unexpurgated vestige of vulgarity, that made a strenuous attempt at proving that Snooks was not so very bad a name after all. Any hovering hesitation flew before Fanny's manner, when Fanny came with an air of catastrophe to tell that she also knew the horror. Fanny's voice fell to a whisper when she said SNOOKS. Miss Winchelsea would not give him any answer

when at last, in the Borghese, she could have a minute with him; but she promised him a note.

She handed him that note in the little book of poetry he had lent her, the little book that had first drawn them together. Her refusal was ambiguous, allusive. She could no more tell him why she rejected him than she could have told a cripple of his hump. He too must feel something of the unspeakable quality of his name. Indeed he had avoided a dozen chances of telling it, she now perceived. So she spoke of "obstacles she could not reveal"--"reasons why the thing he spoke of was impossible." She addressed the note with a shiver, "E. K. Snooks."

Things were worse than she had dreaded; he asked her to explain. How COULD she explain? Those last two days in Rome were dreadful. She was haunted by his air of astonished perplexity. She knew she had given him intimate hopes, she had not the courage to examine her mind thoroughly for the extent of her encouragement. She knew he must think her the most changeable of beings. Now that she was in full retreat, she would not even perceive his hints of a possible correspondence. But in that matter he did a thing that seemed to her at once delicate and romantic. He made a go-between of Fanny. Fanny could not keep the secret, and came and told her that night under a transparent pretext of needed advice. "Mr. Snooks," said Fanny, "wants to write to me. Fancy! I had no idea. But should I let him?" They talked it over long and earnestly, and Miss Winchelsea was careful to keep the veil over her heart. She was already repenting his disregarded hints. Why should she not hear of him sometimes--painful though his name must be to her? Miss Winchelsea decided it might be permitted, and Fanny kissed her good-night with unusual emotion. After she had gone Miss Winchelsea sat for a long time at the window of her little room. It was moonlight, and down the street a man sang "Santa Lucia" with almost heart-dissolving tenderness. . . . She sat very still.

She breathed a word very softly to herself. The word was "SNOOKS." Then she got up with a profound sigh, and went to bed. The next morning

he said to her meaningly, "I shall hear of you through your friend."

Mr. Snooks saw them off from Rome with that pathetic interrogative perplexity still on his face, and if it had not been for Helen he would have retained Miss Winchelsea's hold-all in his hand as a sort of encyclopaedic keepsake. On their way back to England Miss Winchelsea on six separate occasions made Fanny promise to write to her the longest of long letters. Fanny, it seemed, would be quite near Mr. Snooks. Her new school--she was always going to new schools--would be only five miles from Steely Bank, and it was in the Steely Bank Polytechnic, and one or two first-class schools, that Mr. Snooks did his teaching. He might even see her at times. They could not talk much of him--she and Fanny always spoke of "him," never of Mr. Snooks,--because Helen was apt to say unsympathetic things about him. Her nature had coarsened very much, Miss Winchelsea perceived, since the old Training College days; she had become hard and cynical. She thought he had a weak face, mistaking refinement for weakness as people of her stamp are apt to do, and when she heard his name was Snooks, she said she had expected something of the sort. Miss Winchelsea was careful to spare her own feelings after that, but Fanny was less circumspect.

The girls parted in London, and Miss Winchelsea returned, with a new interest in life, to the Girls' High School in which she had been an increasingly valuable assistant for the last three years. Her new interest in life was Fanny as a correspondent, and to give her a lead she wrote her a lengthy descriptive letter within a fortnight of her return. Fanny answered, very disappointingly. Fanny indeed had no literary gift, but it was new to Miss Winchelsea to find herself deploring the want of gifts in a friend. That letter was even criticised aloud in the safe solitude of Miss Winchelsea's study, and her criticism, spoken with great bitterness, was "Twaddle!" It was full of just the things Miss Winchelsea's letter had been full of, particulars of the school. And of Mr. Snooks, only this much: "I have had a letter from Mr. Snooks, and he has been over

to see me on two Saturday afternoons running. He talked about Rome and you; we both talked about you. Your ears must have burnt, my dear. . . ."

Miss Winchelsea repressed a desire to demand more explicit information, and wrote the sweetest long letter again. "Tell me all about yourself, dear. That journey has quite refreshed our ancient friendship, and I do so want to keep in touch with you." About Mr. Snooks she simply wrote on the fifth page that she was glad Fanny had seen him, and that if he SHOULD ask after her, she was to be remembered to him VERY KINDLY (underlined). And Fanny replied most obtusely in the key of that "ancient friendship," reminding Miss Winchelsea of a dozen foolish things of those old schoolgirl days at the training college, and saying not a word about Mr. Snooks!

For nearly a week Miss Winchelsea was so angry at the failure of Fanny as a go-between that she could not write to her. And then she wrote less effusively, and in her letter she asked point-blank, "Have you seen Mr. Snooks?" Fanny's letter was unexpectedly satisfactory. "I HAVE seen Mr. Snooks," she wrote, and having once named him she kept on about him; it was all Snooks--Snooks this and Snooks that. He was to give a public lecture, said Fanny, among other things. Yet Miss Winchelsea, after the first glow of gratification, still found this letter a little unsatisfactory. Fanny did not report Mr. Snooks as saying anything about Miss Winchelsea, nor as looking a little white and worn, as he ought to have been doing. And behold! before she had replied, came a second letter from Fanny on the same theme, quite a gushing letter, and covering six sheets with her loose feminine hand.

And about this second letter was a rather odd little thing that Miss Winchelsea only noticed as she re-read it the third time. Fanny's natural femininity had prevailed even against the round and clear traditions of the training college; she was one of those she-creatures born to make all her m's and n's and u's and r's and e's

alike, and to leave her o's and a's open and her i's undotted. So that it was only after an elaborate comparison of word with word that Miss Winchelsea felt assured Mr. Snooks was not really "Mr. Snooks" at all! In Fanny's first letter of gush he was Mr. "Snooks," in her second the spelling was changed to Mr. "Senoks." Miss Winchelsea's hand positively trembled as she turned the sheet over--it meant so much to her. For it had already begun to seem to her that even the name of Mrs. Snooks might be avoided at too great a price, and suddenly--this possibility! She turned over the six sheets, all dappled with that critical name, and everywhere the first letter had the form of an E! For a time she walked the room with a hand pressed upon her heart.

She spent a whole day pondering this change, weighing a letter of inquiry that should be at once discreet and effectual, weighing too what action she should take after the answer came. She was resolved that if this altered spelling was anything more than a quaint fancy of Fanny's, she would write forthwith to Mr. Snooks. She had now reached a stage when the minor refinements of behaviour disappear. Her excuse remained uninvented, but she had the subject of her letter clear in her mind, even to the hint that "circumstances in my life have changed very greatly since we talked together." But she never gave that hint. There came a third letter from that fitful correspondent Fanny. The first line proclaimed her "the happiest girl alive."

Miss Winchelsea crushed the letter in her hand--the rest unread--and sat with her face suddenly very still. She had received it just before morning school, and had opened it when the junior mathematicians were well under way. Presently she resumed reading with an appearance of great calm. But after the first sheet she went on reading the third without discovering the error:--"told him frankly I did not like his name," the third sheet began. "He told me he did not like it himself --you know that sort of sudden frank way he has"--Miss Winchelsea did know. "So I said 'Couldn't you change it?' He didn't see it

at first. Well, you know, dear, he had told me what it really meant; it means Sevenoaks, only it has got down to Snooks--both Snooks and Noaks, dreadfully vulgar surnames though they be, are really worn forms of Sevenoaks. So I said--even I have my bright ideas at times--'if it got down from Sevenoaks to Snooks, why not get it back from Snooks to Sevenoaks?' And the long and the short of it is, dear, he couldn't refuse me, and he changed his spelling there and then to Senoks for the bills of the new lecture. And afterwards, when we are married, we shall put in the apostrophe and make it Se'noks. Wasn't it kind of him to mind that fancy of mine, when many men would have taken offence? But it is just like him all over; he is as kind as he is clever. Because he knew as well as I did that I would have had him in spite of it, had he been ten times Snooks. But he did it all the same."

The class was startled by the sound of paper being viciously torn, and looked up to see Miss Winchelsea white in the face, and with some very small pieces of paper clenched in one hand. For a few seconds they stared at her stare, and then her expression changed back to a more familiar one. "Has any one finished number three?" she asked in an even tone. She remained calm after that. But impositions ruled high that day. And she spent two laborious evenings writing letters of various sorts to Fanny, before she found a decent congratulatory vein. Her reason struggled hopelessly against the persuasion that Fanny had behaved in an exceedingly treacherous manner.

One may be extremely refined and still capable of a very sore heart. Certainly Miss Winchelsea's heart was very sore. She had moods of sexual hostility, in which she generalised uncharitably about mankind. "He forgot himself with me," she said. "But Fanny is pink and pretty and soft and a fool--a very excellent match for a Man." And by way of a wedding present she sent Fanny a gracefully bound volume of poetry by George Meredith, and Fanny wrote back a grossly happy letter to say that it was "ALL beautiful." Miss Winchelsea hoped that some day Mr. Senoks might take up that slim book and

think for a moment of the donor. Fanny wrote several times before and about her marriage, pursuing that fond legend of their "ancient friendship," and giving her happiness in the fullest detail. And Miss Winchelsea wrote to Helen for the first time after the Roman journey, saying nothing about the marriage, but expressing very cordial feelings.

They had been in Rome at Easter, and Fanny was married in the August vacation. She wrote a garrulous letter to Miss Winchelsea, describing her home-coming, and the astonishing arrangements of their "teeny weeny" little house. Mr. Sen'oks was now beginning to assume a refinement in Miss Winchelsea's memory out of all proportion to the facts of the case, and she tried in vain to imagine his cultured greatness in a "teeny weeny" little house. "Am busy enamelling a cosey corner," said Fanny, sprawling to the end of her third sheet, "so excuse more." Miss Winchelsea answered in her best style, gently poking fun at Fanny's arrangements and hoping intensely that Mr. Sen'oks might see the letter. Only this hope enabled her to write at all, answering not only that letter but one in November and one at Christmas.

The two latter communications contained urgent invitations for her to come to Steely Bank on a Visit during the Christmas holidays. She tried to think that HE had told her to ask that, but it was too much like Fanny's opulent good-nature. She could not but believe that he must be sick of his blunder by this time; and she had more than a hope that he would presently write her a letter beginning "Dear Friend." Something subtly tragic in the separation was a great support to her, a sad misunderstanding. To have been jilted would have been intolerable. But he never wrote that letter beginning "Dear Friend."

For two years Miss Winchelsea could not go to see her friends, in spite of the reiterated invitations of Mrs. Sevenoaks--it became full Sevenoaks in the second year. Then one day near the Easter

rest she felt lonely and without a soul to understand her in the world, and her mind ran once more on what is called Platonic friendship. Fanny was clearly happy and busy in her new sphere of domesticity, but no doubt HE had his lonely hours. Did he ever think of those days in Rome--gone now beyond recalling? No one had understood her as he had done; no one in all the world. It would be a sort of melancholy pleasure to talk to him again, and what harm could it do? Why should she deny herself? That night she wrote a sonnet, all but the last two lines of the octave--which would not come, and the next day she composed a graceful little note to tell Fanny she was coming down.

And so she saw him again.

Even at the first encounter it was evident he had changed; he seemed stouter and less nervous, and it speedily appeared that his conversation had already lost much of its old delicacy. There even seemed a justification for Helen's description of weakness in his face--in certain lights it WAS weak. He seemed busy and preoccupied about his affairs, and almost under the impression that Miss Winchelsea had come for the sake of Fanny. He discussed his dinner with Fanny in an intelligent way. They only had one good long talk together, and that came to nothing. He did not refer to Rome, and spent some time abusing a man who had stolen an idea he had had for a text-book. It did not seem a very wonderful idea to Miss Winchelsea. She discovered he had forgotten the names of more than half the painters whose work they had rejoiced over in Florence.

It was a sadly disappointing week, and Miss Winchelsea was glad when it came to an end. Under various excuses she avoided visiting them again. After a time the visitor's room was occupied by their two little boys, and Fanny's invitations ceased. The intimacy of her letters had long since faded away.

13. A DREAM OF ARMAGEDDON

The man with the white face entered the carriage at Rugby. He moved slowly in spite of the urgency of his porter, and even while he was still on the platform I noted how ill he seemed. He dropped into the corner over against me with a sigh, made an incomplete attempt to arrange his travelling shawl, and became motionless, with his eyes staring vacantly. Presently he was moved by a sense of my observation, looked up at me, and put out a spiritless hand for his newspaper. Then he glanced again in my direction.

I feigned to read. I feared I had unwittingly embarrassed him, and in a moment I was surprised to find him speaking.

"I beg your pardon?" said I.

"That book," he repeated, pointing a lean finger, "is about dreams."

"Obviously," I answered, for it was Fortnum-Roscoe's *Dream States*, and the title was on the cover. He hung silent for a space as if he sought words. "Yes," he said at last, "but they tell you nothing." I did not catch his meaning for a second.

"They don't know," he added.

I looked a little more attentively at his face.

"There are dreams," he said, "and dreams."

That sort of proposition I never dispute.

"I suppose--" he hesitated. "Do you ever dream? I mean vividly."

"I dream very little," I answered. "I doubt if I have three vivid dreams in a year."

"Ah!" he said, and seemed for a moment to collect his thoughts.

"Your dreams don't mix with your memories?" he asked abruptly.

"You don't find yourself in doubt; did this happen or did it not?"

"Hardly ever. Except just for a momentary hesitation now and then. I suppose few people do."

"Does HE say--" he indicated the book.

"Says it happens at times and gives the usual explanation about intensity of impression and the like to account for its not happening as a rule. I suppose you know something of these theories--"

"Very little--except that they are wrong."

His emaciated hand played with the strap of the window for a time. I prepared to resume reading, and that seemed to precipitate his next remark. He leant forward almost as though he would touch me.

"Isn't there something called consecutive dreaming--that goes on night after night?"

"I believe there is. There are cases given in most books on mental trouble."

"Mental trouble! Yes. I dare say there are. It's the right place for them. But what I mean--" He looked at his bony knuckles.

"Is that sort of thing always dreaming? IS it dreaming? Or is it something else? Mightn't it be something else?"

I should have snubbed his persistent conversation but for the drawn anxiety of his face. I remember now the look of his faded eyes and the lids red-stained--perhaps you know that look.

"I'm not just arguing about a matter of opinion," he said. "The thing's killing me."

"Dreams?"

"If you call them dreams. Night after night. Vivid!--so vivid . . . this--" (he indicated the landscape that went streaming by the window) "seems unreal in comparison! I can scarcely remember who I am, what business I am on. . . ."

He paused. "Even now--"

"The dream is always the same--do you mean?" I asked.

"It's over."

"You mean?"

"I died."

"Died?"

"Smashed and killed, and now, so much of me as that dream was, is dead. Dead for ever. I dreamt I was another man, you know, living in a different part of the world and in a different time. I dreamt that night after night. Night after night I woke into that other life. Fresh scenes and fresh happenings--until I came upon the last--"

"When you died?"

"When I died."

"And since then--"

"No," he said. "Thank God! That was the end of the dream. . . ."

It was clear I was in for this dream. And after all, I had an hour before me, the light was fading fast, and Fortnum-Roscoe has a dreary way with him. "Living in a different time," I said: "do you mean in some different age?"

"Yes."

"Past?"

"No, to come--to come."

"The year three thousand, for example?"

"I don't know what year it was. I did when I was asleep, when I was dreaming, that is, but not now--not now that I am awake. There's a lot of things I have forgotten since I woke out of these dreams, though I knew them at the time when I was--I suppose it was dreaming. They called the year differently from our way of calling the year. . . . What DID they call it?" He put his hand to his forehead. "No," said he, "I forget."

He sat smiling weakly. For a moment I feared he did not mean to tell me his dream. As a rule I hate people who tell their dreams, but this struck me differently. I proffered assistance even. "It began--" I suggested.

"It was vivid from the first. I seemed to wake up in it suddenly. And it's curious that in these dreams I am speaking of I never remembered this life I am living now. It seemed as if the dream life was enough while it lasted. Perhaps--But I will tell you how I find myself when I do my best to recall it all. I don't remember anything dearly until I found myself sitting in a sort of loggia

looking out over the sea. I had been dozing, and suddenly I woke up--fresh and vivid--not a bit dream-like--because the girl had stopped fanning me."

"The girl?"

"Yes, the girl. You must not interrupt or you will put me out."

He stopped abruptly. "You won't think I'm mad?" he said.

"No," I answered; "you've been dreaming. Tell me your dream."

"I woke up, I say, because the girl had stopped fanning me. I was not surprised to find myself there or anything of that sort, you understand. I did not feel I had fallen into it suddenly. I simply took it up at that point. Whatever memory I had of THIS life, this nineteenth-century life, faded as I woke, vanished like a dream. I knew all about myself, knew that my name was no longer Cooper but Hedon, and all about my position in the world. I've forgotten a lot since I woke--there's a want of connection--but it was all quite clear and matter of fact then."

He hesitated again, gripping the window strap, putting his face forward and looking up at me appealingly.

"This seems bosh to you?"

"No, no!" I cried. "Go on. Tell me what this loggia was like."

"It was not really a loggia--I don't know what to call it. It faced south. It was small. It was all in shadow except the semicircle above the balcony that showed the sky and sea and the corner where the girl stood. I was on a couch--it was a metal couch with light striped cushions--and the girl was leaning over the balcony with her back to me. The light of the sunrise fell on her ear and cheek.

Her pretty white neck and the little curls that nestled there, and her white shoulder were in the sun, and all the grace of her body was in the cool blue shadow. She was dressed--how can I describe it? It was easy and flowing. And altogether there she stood, so that it came to me how beautiful and desirable she was, as though I had never seen her before. And when at last I sighed and raised myself upon my arm she turned her face to me--"

He stopped.

"I have lived three-and-fifty years in this world. I have had mother, sisters, friends, wife, and daughters--all their faces, the play of their faces, I know. But the face of this girl--it is much more real to me. I can bring it back into memory so that I see it again--I could draw it or paint it. And after all--"

He stopped--but I said nothing.

"The face of a dream--the face of a dream. She was beautiful. Not that beauty which is terrible, cold, and worshipful, like the beauty of a saint; nor that beauty that stirs fierce passions; but a sort of radiation, sweet lips that softened into smiles, and grave grey eyes. And she moved gracefully, she seemed to have part with all pleasant and gracious things--"

He stopped, and his face was downcast and hidden. Then he looked up at me and went on, making no further attempt to disguise his absolute belief in the reality of his story.

"You see, I had thrown up my plans and ambitions, thrown up all I had ever worked for or desired for her sake. I had been a master man away there in the north, with influence and property and a great reputation, but none of it had seemed worth having beside her. I had come to the place, this city of sunny pleasures, with her, and left all those things to wreck and ruin just to save a remnant

at least of my life. While I had been in love with her before I knew that she had any care for me, before I had imagined that she would dare--that we should dare, all my life had seemed vain and hollow, dust and ashes. It WAS dust and ashes. Night after night and through the long days I had longed and desired--my soul had beaten against the thing forbidden!

"But it is impossible for one man to tell another just these things. It's emotion, it's a tint, a light that comes and goes. Only while it's there, everything changes, everything. The thing is I came away and left them in their Crisis to do what they could."

"Left whom?" I asked, puzzled.

"The people up in the north there. You see--in this dream, anyhow-- I had been a big man, the sort of man men come to trust in, to group themselves about. Millions of men who had never seen me were ready to do things and risk things because of their confidence in me. I had been playing that game for years, that big laborious game, that vague, monstrous political game amidst intrigues and betrayals, speech and agitation. It was a vast weltering world, and at last I had a sort of leadership against the Gang--you know it was called the Gang--a sort of compromise of scoundrelly projects and base ambitions and vast public emotional stupidities and catchwords--the Gang that kept the world noisy and blind year by year, and all the while that it was drifting, drifting towards infinite disaster. But I can't expect you to understand the shades and complications of the year--the year something or other ahead. I had it all down to the smallest details--in my dream. I suppose I had been dreaming of it before I awoke, and the fading outline of some queer new development I had imagined still hung about me as I rubbed my eyes. It was some grubby affair that made me thank God for the sunlight. I sat up on the couch and remained looking at the woman and rejoicing--rejoicing that I had come away out of all that tumult and folly and violence before it was too late. After all, I thought, this

is life--love and beauty, desire and delight, are they not worth all those dismal struggles for vague, gigantic ends? And I blamed myself for having ever sought to be a leader when I might have given my days to love. But then, thought I, if I had not spent my early days sternly and austere, I might have wasted myself upon vain and worthless women, and at the thought all my being went out in love and tenderness to my dear mistress, my dear lady, who had come at last and compelled me--compelled me by her invincible charm for me--to lay that life aside.

"You are worth it,' I said, speaking without intending her to hear; 'you are worth it, my dearest one; worth pride and praise and all things. Love! to have YOU is worth them all together.' And at the murmur of my voice she turned about.

"Come and see,' she cried--I can hear her now--'come and see the sunrise upon Monte Solaro.'

"I remember how I sprang to my feet and joined her at the balcony. She put a white hand upon my shoulder and pointed towards great masses of limestone, flushing, as it were, into life. I looked. But first I noted the sunlight on her face caressing the lines of her cheeks and neck. How can I describe to you the scene we had before us? We were at Capri--"

"I have been there," I said. "I have clambered up Monte Solaro and drunk vero Capri--muddy stuff like cider--at the summit."

"Ah!" said the man with the white face; "then perhaps you can tell me--you will know if this was indeed Capri. For in this life I have never been there. Let me describe it. We were in a little room, one of a vast multitude of little rooms, very cool and sunny, hollowed out of the limestone of a sort of cape, very high above the sea. The whole island, you know, was one enormous hotel, complex beyond explaining, and on the other side there were miles of floating hotels,

and huge floating stages to which the flying machines came. They called it a pleasure city. Of course, there was none of that in your time rather, I should say, IS none of that NOW. Of course. Now!--yes.

"Well, this room of ours was at the extremity of the cape, so that one could see east and west. Eastward was a great cliff--a thousand feet high perhaps--coldly grey except for one bright edge of gold, and beyond it the Isle of the Sirens, and a falling coast that faded and passed into the hot sunrise. And when one turned to the west, distinct and near was a little bay, a little beach still in shadow. And out of that shadow rose Solaro straight and tall, flushed and golden crested, like a beauty throned, and the white moon was floating behind her in the sky. And before us from east to west stretched the many-tinted sea all dotted with little sailing boats.

"To the eastward, of course, these little boats were grey and very minute and clear, but to the westward they were little boats of gold--shining gold--almost like little flames. And just below us was a rock with an arch worn through it. The blue sea-water broke to green and foam all round the rock, and a galley came gliding out of the arch."

"I know that rock," I said. "I was nearly drowned there. It is called the Faraglioni."

"I Faraglioni? Yes, she called it that," answered the man with the white face. "There was some story--but that--"

He put his hand to his forehead again. "No," he said, "I forget that story."

"Well, that is the first thing I remember, the first dream I had, that little shaded room and the beautiful air and sky and that dear lady of mine, with her shining arms and her graceful robe,

and how we sat and talked in half whispers to one another. We talked in whispers not because there was any one to hear, but because there was still such a freshness of mind between us that our thoughts were a little frightened, I think, to find themselves at last in words. And so they went softly.

"Presently we were hungry and we went from our apartment, going by a strange passage with a moving floor, until we came to the great breakfast room--there was a fountain and music. A pleasant and joyful place it was, with its sunlight and splashing, and the murmur of plucked strings. And we sat and ate and smiled at one another, and I would not heed a man who was watching me from a table near by.

"And afterwards we went on to the dancing-hall. But I cannot describe that hall. The place was enormous--larger than any building you have ever seen--and in one place there was the old gate of Capri, caught into the wall of a gallery high overhead. Light girders, stems and threads of gold, burst from the pillars like fountains, streamed like an Aurora across the roof and interlaced, like--like conjuring tricks. All about the great circle for the dancers there were beautiful figures, strange dragons, and intricate and wonderful grotesques bearing lights. The place was inundated with artificial light that shamed the newborn day. And as we went through the throng the people turned about and looked at us, for all through the world my name and face were known, and how I had suddenly thrown up pride and struggle to come to this place. And they looked also at the lady beside me, though half the story of how at last she had come to me was unknown or mistold. And few of the men who were there, I know, but judged me a happy man, in spite of all the shame and dishonour that had come upon my name.

"The air was full of music, full of harmonious scents, full of the rhythm of beautiful motions. Thousands of beautiful people swarmed about the hall, crowded the galleries, sat in a myriad recesses; they were dressed in splendid colours and crowned

with flowers; thousands danced about the great circle beneath the white images of the ancient gods, and glorious processions of youths and maidens came and went. We two danced, not the dreary monotonies of your days--of this time, I mean--but dances that were beautiful, intoxicating. And even now I can see my lady dancing--dancing joyously. She danced, you know, with a serious face; she danced with a serious dignity, and yet she was smiling at me and caressing me--smiling and caressing with her eyes.

"The music was different," he murmured. "It went--I cannot describe it; but it was infinitely richer and more varied than any music that has ever come to me awake.

"And then--it was when we had done dancing--a man came to speak to me. He was a lean, resolute man, very soberly clad for that place, and already I had marked his face watching me in the breakfasting hall, and afterwards as we went along the passage I had avoided his eye. But now, as we sat in a little alcove, smiling at the pleasure of all the people who went to and fro across the shining floor, he came and touched me, and spoke to me so that I was forced to listen. And he asked that he might speak to me for a little time apart.

"'No,' I said. 'I have no secrets from this lady. What do you want to tell me?'

"He said it was a trivial matter, or at least a dry matter, for a lady to hear.

"'Perhaps for me to hear,' said I.

"He glanced at her, as though almost he would appeal to her. Then he asked me suddenly if I had heard of a great and avenging declaration that Evesham had made. Now, Evesham had always before been the man next to myself in the leadership of that great party in the north. He was a forcible, hard and tactless man, and only I had been able

to control and soften him. It was on his account even more than my own, I think, that the others had been so dismayed at my retreat. So this question about what he had done reawakened my old interest in the life I had put aside just for a moment.

"I have taken no heed of any news for many days,' I said. 'What has Evesham been saying?'

"And with that the man began, nothing loath, and I must confess even I was struck by Evesham's reckless folly in the wild and threatening words he had used. And this messenger they had sent to me not only told me of Evesham's speech, but went on to ask counsel and to point out what need they had of me. While he talked, my lady sat a little forward and watched his face and mine.

"My old habits of scheming and organising reasserted themselves. I could even see myself suddenly returning to the north, and all the dramatic effect of it. All that this man said witnessed to the disorder of the party indeed, but not to its damage. I should go back stronger than I had come. And then I thought of my lady. You see--how can I tell you? There were certain peculiarities of our relationship--as things are I need not tell you about that--which would render her presence with me impossible. I should have had to leave her; indeed, I should have had to renounce her clearly and openly, if I was to do all that I could do in the north. And the man knew THAT, even as he talked to her and me, knew it as well as she did, that my steps to duty were--first, separation, then abandonment. At the touch of that thought my dream of a return was shattered. I turned on the man suddenly, as he was imagining his eloquence was gaining ground with me.

"What have I to do with these things now?' I said. 'I have done with them. Do you think I am coquetting with your people in coming here?'

"No,' he said; 'but--'

"Why cannot you leave me alone? I have done with these things. I have ceased to be anything but a private man.'

"Yes,' he answered. 'But have you thought?--this talk of war, these reckless challenges, these wild aggressions--'

"I stood up.

"No,' I cried. 'I won't hear you. I took count of all those things, I weighed them--and I have come away.'

"He seemed to consider the possibility of persistence. He looked from me to where the lady sat regarding us.

"War,' he said, as if he were speaking to himself, and then turned slowly from me and walked away. I stood, caught in the whirl of thoughts his appeal had set going.

"I heard my lady's voice.

"Dear,' she said; 'but if they have need of you--'

"She did not finish her sentence, she let it rest there. I turned to her sweet face, and the balance of my mood swayed and reeled.

"They want me only to do the thing they dare not do themselves,' I said. 'If they distrust Evesham they must settle with him themselves.'

"She looked at me doubtfully.

"But war--' she said.

"I saw a doubt on her face that I had seen before, a doubt of herself

and me, the first shadow of the discovery that, seen strongly and completely, must drive us apart for ever.

"Now, I was an older mind than hers, and I could sway her to this belief or that.

"My dear one,' I said, 'you must not trouble over these things. There will be no war. Certainly there will be no war. The age of wars is past. Trust me to know the justice of this case. They have no right upon me, dearest, and no one has a right upon me. I have been free to choose my life, and I have chosen this.'

"But WAR--' she said.

"I sat down beside her. I put an arm behind her and took her hand in mine. I set myself to drive that doubt away--I set myself to fill her mind with pleasant things again. I lied to her, and in lying to her I lied also to myself. And she was only too ready to believe me, only too ready to forget.

"Very soon the shadow had gone again, and we were hastening to our bathing-place in the Grotta del Bovo Marino, where it was our custom to bathe every day. We swam and splashed one another, and in that buoyant water I seemed to become something lighter and stronger than a man. And at last we came out dripping and rejoicing and raced among the rocks. And then I put on a dry bathing-dress, and we sat to bask in the sun, and presently I nodded, resting my head against her knee, and she put her hand upon my hair and stroked it softly and I dozed. And behold! as it were with the snapping of the string of a violin, I was awakening, and I was in my own bed in Liverpool, in the life of to-day.

"Only for a time I could not believe that all these vivid moments had been no more than the substance of a dream.

"In truth, I could not believe it a dream for all the sobering reality of things about me. I bathed and dressed as it were by habit, and as I shaved I argued why I of all men should leave the woman I loved to go back to fantastic politics in the hard and strenuous north. Even if Evesham did force the world back to war, what was that to me? I was a man, with the heart of a man, and why should I feel the responsibility of a deity for the way the world might go?"

"You know that is not quite the way I think about affairs, about my real affairs. I am a solicitor, you know, with a point of view."

"The vision was so real, you must understand, so utterly unlike a dream that I kept perpetually recalling little irrelevant details; even the ornament of a book-cover that lay on my wife's sewing-machine in the breakfast-room recalled with the utmost vividness the gilt line that ran about the seat in the alcove where I had talked with the messenger from my deserted party. Have you ever heard of a dream that had a quality like that?"

"Like--?"

"So that afterwards you remembered little details you had forgotten."

I thought. I had never noticed the point before, but he was right.

"Never," I said. "That is what you never seem to do with dreams."

"No," he answered. "But that is just what I did. I am a solicitor, you must understand, in Liverpool, and I could not help wondering what the clients and business people I found myself talking to in my office would think if I told them suddenly I was in love with a girl who would be born a couple of hundred years or so hence, and worried about the politics of my great-great-great-grandchildren. I was chiefly busy that day negotiating a ninety-nine-year building lease. It was a private builder in a hurry, and we wanted to tie him

in every possible way. I had an interview with him, and he showed a certain want of temper that sent me to bed still irritated. That night I had no dream. Nor did I dream the next night, at least, to remember.

"Something of that intense reality of conviction vanished. I began to feel sure it WAS a dream. And then it came again.

"When the dream came again, nearly four days later, it was very different. I think it certain that four days had also elapsed in the dream. Many things had happened in the north, and the shadow of them was back again between us, and this time it was not so easily dispelled. I began, I know, with moody musings. Why, in spite of all, should I go back, go back for all the rest of my days to toil and stress, insults and perpetual dissatisfaction, simply to save hundreds of millions of common people, whom I did not love, whom too often I could do no other than despise, from the stress and anguish of war and infinite misrule? And after all I might fail. THEY all sought their own narrow ends, and why should not I--why should not I also live as a man? And out of such thoughts her voice summoned me, and I lifted my eyes.

"I found myself awake and walking. We had come out above the Pleasure City, we were near the summit of Monte Solaro and looking towards the bay. It was the late afternoon and very clear. Far away to the left Ischia hung in a golden haze between sea and sky, and Naples was coldly white against the hills, and before us was Vesuvius with a tall and slender streamer feathering at last towards the south, and the ruins of Torre dell' Annunziata and Castellamare glittering and near."

I interrupted suddenly: "You have been to Capri, of course?"

"Only in this dream," he said, "only in this dream. All across the bay beyond Sorrento were the floating palaces of the Pleasure City moored and chained. And northward were the broad floating stages

that received the aeroplanes. Aeroplanes fell out of the sky every afternoon, each bringing its thousands of pleasure-seekers from the uttermost parts of the earth to Capri and its delights. All these things, I say, stretched below.

"But we noticed them only incidentally because of an unusual sight that evening had to show. Five war aeroplanes that had long slumbered useless in the distant arsenals of the Rhinemouth were manoeuvring now in the eastward sky. Evesham had astonished the world by producing them and others, and sending them to circle here and there. It was the threat material in the great game of bluff he was playing, and it had taken even me by surprise. He was one of those incredibly stupid energetic people who seem sent by Heaven to create disasters. His energy to the first glance seemed so wonderfully like capacity! But he had no imagination, no invention, only a stupid, vast, driving force of will, and a mad faith in his stupid idiot 'luck' to pull him through. I remember how we stood out upon the headland watching the squadron circling far away, and how I weighed the full meaning of the sight, seeing clearly the way things must go. And then even it was not too late. I might have gone back, I think, and saved the world. The people of the north would follow me, I knew, granted only that in one thing I respected their moral standards. The east and south would trust me as they would trust no other northern man. And I knew I had only to put it to her and she would have let me go. . . . Not because she did not love me!

"Only I did not want to go; my will was all the other way about. I had so newly thrown off the incubus of responsibility: I was still so fresh a renegade from duty that the daylight clearness of what I OUGHT to do had no power at all to touch my will. My will was to live, to gather pleasures and make my dear lady happy. But though this sense of vast neglected duties had no power to draw me, it could make me silent and preoccupied, it robbed the days I had spent of half their brightness and roused me into dark meditations in the silence of the night. And as I stood and watched Evesham's

aeroplanes sweep to and fro--those birds of infinite ill omen--she stood beside me watching me, perceiving the trouble indeed, but not perceiving it clearly her eyes questioning my face, her expression shaded with perplexity. Her face was grey because the sunset was fading out of the sky. It was no fault of hers that she held me. She had asked me to go from her, and again in the night time and with tears she had asked me to go.

"At last it was the sense of her that roused me from my mood. I turned upon her suddenly and challenged her to race down the mountain slopes. 'No,' she said, as if I jarred with her gravity, but I was resolved to end that gravity, and made her run--no one can be very grey and sad who is out of breath--and when she stumbled I ran with my hand beneath her arm. We ran down past a couple of men, who turned back staring in astonishment at my behaviour--they must have recognised my face. And halfway down the slope came a tumult in the air, clang-clank, clang-clank, and we stopped, and presently over the hill-crest those war things came flying one behind the other."

The man seemed hesitating on the verge of a description.

"What were they like?" I asked.

"They had never fought," he said. "They were just like our ironclads are nowadays; they had never fought. No one knew what they might do, with excited men inside them; few even cared to speculate. They were great driving things shaped like spearheads without a shaft, with a propeller in the place of the shaft."

"Steel?"

"Not steel."

"Aluminium?"

"No, no, nothing of that sort. An alloy that was very common--as common as brass, for example. It was called--let me see--." He squeezed his forehead with the fingers of one hand. "I am forgetting everything," he said.

"And they carried guns?"

"Little guns, firing high explosive shells. They fired the guns backwards, out of the base of the leaf, so to speak, and rammed with the beak. That was the theory, you know, but they had never been fought. No one could tell exactly what was going to happen. And meanwhile I suppose it was very fine to go whirling through the air like a flight of young swallows, swift and easy. I guess the captains tried not to think too clearly what the real thing would be like. And these flying war machines, you know, were only one sort of the endless war contrivances that had been invented and had fallen into abeyance during the long peace. There were all sorts of these things that people were routing out and furbishing up; infernal things, silly things; things that had never been tried; big engines, terrible explosives, great guns. You know the silly way of these ingenious sort of men who make these things; they turn 'em out as beavers build dams, and with no more sense of the rivers they're going to divert and the lands they're going to flood!

"As we went down the winding stepway to our hotel again, in the twilight, I foresaw it all: I saw how clearly and inevitably things were driving for war in Evesham's silly, violent hands, and I had some inkling of what war was bound to be under these new conditions. And even then, though I knew it was drawing near the limit of my opportunity, I could find no will to go back."

He sighed.

"That was my last chance.

"We didn't go into the city until the sky was full of stars, so we walked out upon the high terrace, to and fro, and--she counselled me to go back.

"My dearest,' she said, and her sweet face looked up to me, 'this is Death. This life you lead is Death. Go back to them, go back to your duty--.'

"She began to weep, saying, between her sobs, and clinging to my arm as she said it, 'Go back--Go back.'

"Then suddenly she fell mute, and, glancing down at her face, I read in an instant the thing she had thought to do. It was one of those moments when one SEES.

"No!' I said.

"No?' she asked, in surprise, and I think a little fearful at the answer to her thought.

"Nothing,' I said, 'shall send me back. Nothing! I have chosen. Love, I have chosen, and the world must go. Whatever happens I will live this life--I will live for YOU! It--nothing shall turn me aside; nothing, my dear one. Even if you died--even if you died--'

"Yes,' she murmured, softly.

"Then--I also would die.'

"And before she could speak again I began to talk, talking eloquently--as I COULD do in that life--talking to exalt love, to make the life we were living seem heroic and glorious; and the thing I was deserting something hard and enormously ignoble that it was a fine thing to set aside. I bent all my mind to throw that glamour upon it, seeking not only to convert her but myself to that. We talked, and

she clung to me, torn too between all that she deemed noble and all that she knew was sweet. And at last I did make it heroic, made all the thickening disaster of the world only a sort of glorious setting to our unparalleled love, and we two poor foolish souls strutted there at last, clad in that splendid delusion, drunken rather with that glorious delusion, under the still stars.

"And so my moment passed.

"It was my last chance. Even as we went to and fro there, the leaders of the south and east were gathering their resolve, and the hot answer that shattered Evesham's bluffing for ever, took shape and waited. And all over Asia, and the ocean, and the south, the air and the wires were throbbing with their warnings to prepare--prepare.

"No one living, you know, knew what war was; no one could imagine, with all these new inventions, what horror war might bring. I believe most people still believed it would be a matter of bright uniforms and shouting charges and triumphs and flags and bands--in a time when half the world drew its food supply from regions ten thousand miles away--."

The man with the white face paused. I glanced at him, and his face was intent on the floor of the carriage. A little railway station, a string of loaded trucks, a signal-box, and the back of a cottage, shot by the carriage window, and a bridge passed with a clap of noise, echoing the tumult of the train.

"After that," he said, "I dreamt often. For three weeks of nights that dream was my life. And the worst of it was there were nights when I could not dream, when I lay tossing on a bed in THIS accursed life; and THERE--somewhere lost to me--things were happening--momentous, terrible things. . . . I lived at nights--my days, my waking days, this life I am living now, became a faded, far-away dream, a drab setting, the cover of the book."

He thought.

"I could tell you all, tell you every little thing in the dream, but as to what I did in the daytime--no. I could not tell--I do not remember. My memory--my memory has gone. The business of life slips from me--"

He leant forward, and pressed his hands upon his eyes. For a long time he said nothing.

"And then?" said I.

"The war burst like a hurricane."

He stared before him at unspeakable things.

"And then?" I urged again.

"One touch of unreality," he said, in the low tone of a man who speaks to himself, "and they would have been nightmares. But they were not nightmares--they were not nightmares. NO!"

He was silent for so long that it dawned upon me that there was a danger of losing the rest of the story. But he went on talking again in the same tone of questioning self-communion.

"What was there to do but flight? I had not thought the war would touch Capri--I had seemed to see Capri as being out of it all, as the contrast to it all; but two nights after the whole place was shouting and bawling, every woman almost and every other man wore a badge--Evesham's badge--and there was no music but a jangling war-song over and over again, and everywhere men enlisting, and in the dancing halls they were drilling. The whole island was awl with rumours; it was said, again and again, that fighting had begun.

I had not expected this. I had seen so little of the life of pleasure that I had failed to reckon with this violence of the amateurs. And as for me, I was out of it. I was like a man who might have prevented the firing of a magazine. The time had gone. I was no one; the vainest stripling with a badge counted for more than I. The crowd jostled us and bawled in our ears; that accursed song deafened us; a woman shrieked at my lady because no badge was on her, and we two went back to our own place again, ruffled and insulted--my lady white and silent, and I aquiver with rage. So furious was I, I could have quarrelled with her if I could have found one shade of accusation in her eyes.

"All my magnificence had gone from me. I walked up and down our rock cell, and outside was the darkling sea and a light to the southward that flared and passed and came again.

"'We must get out of this place,' I said over and over. 'I have made my choice, and I will have no hand in these troubles. I will have nothing of this war. We have taken our lives out of all these things. This is no refuge for us. Let us go.'

"And the next day we were already in flight from the war that covered the world.

"And all the rest was Flight--all the rest was Flight."

He mused darkly.

"How much was there of it?"

He made no answer.

"How many days?"

His face was white and drawn and his hands were clenched. He took

no heed of my curiosity.

I tried to draw him back to his story with questions.

"Where did you go?" I said.

"When?"

"When you left Capri."

"Southwest," he said, and glanced at me for a second. "We went in a boat."

"But I should have thought an aeroplane?"

"They had been seized."

I questioned him no more. Presently I thought he was beginning again. He broke out in an argumentative monotone:

"But why should it be? If, indeed, this battle, this slaughter and stress IS life, why have we this craving for pleasure and beauty? If there IS no refuge, if there is no place of peace, and if all our dreams of quiet places are a folly and a snare, why have we such dreams? Surely it was no ignoble cravings, no base intentions, had brought us to this; it was Love had isolated us. Love had come to me with her eyes and robed in her beauty, more glorious than all else in life, in the very shape and colour of life, and summoned me away. I had silenced all the voices, I had answered all the questions-- I had come to her. And suddenly there was nothing but War and Death!"

I had an inspiration. "After all," I said, "it could have been only a dream."

"A dream!" he cried, flaming upon me, "a dream--when even now--"

For the first time he became animated. A faint flush crept into his cheek. He raised his open hand and clenched it, and dropped it to his knee. He spoke, looking away from me, and for all the rest of the time he looked away. "We are but phantoms," he said, "and the phantoms of phantoms, desires like cloud shadows and wills of straw that eddy in the wind; the days pass, use and wont carry us through as a train carries the shadow of its lights, so be it! But one thing is real and certain, one thing is no dreamstuff, but eternal and enduring. It is the centre of my life, and all other things about it are subordinate or altogether vain. I loved her, that woman of a dream. And she and I are dead together!

"A dream! How can it be a dream, when it drenched a living life with unappeasable sorrow, when it makes all that I have lived for and cared for, worthless and unmeaning?

"Until that very moment when she was killed I believed we had still a chance of getting away," he said. "All through the night and morning that we sailed across the sea from Capri to Salerno, we talked of escape. We were full of hope, and it clung about us to the end, hope for the life together we should lead, out of it all, out of the battle and struggle, the wild and empty passions, the empty arbitrary 'thou shalt' and 'thou shalt not' of the world. We were uplifted, as though our quest was a holy thing, as though love for one another was a mission. . . .

"Even when from our boat we saw the fair face of that great rock Capri--already scarred and gashed by the gun emplacements and hiding-places that were to make it a fastness--we reckoned nothing of the imminent slaughter, though the fury of preparation hung about in puffs and clouds of dust at a hundred points amidst the grey; but, indeed, I made a text of that and talked. There, you know, was the rock, still beautiful, for all its scars, with its countless windows and arches and ways, tier upon tier, for a thousand feet,

a vast carving of grey, broken by vine-clad terraces, and lemon and orange groves, and masses of agave and prickly pear, and puffs of almond blossom. And out under the archway that is built over the Piccola Marina other boats were coming; and as we came round the cape and within sight of the mainland, another little string of boats came into view, driving before the wind towards the southwest. In a little while a multitude had come out, the remoter just little specks of ultramarine in the shadow of the eastward cliff.

"It is love and reason,' I said, 'fleeing from all this madness, of war.'

"And though we presently saw a squadron of aeroplanes flying across the southern sky we did not heed it. There it was--a line of little dots in the sky--and then more, dotting the southeastern horizon, and then still more, until all that quarter of the sky was stippled with blue specks. Now they were all thin little strokes of blue, and now one and now a multitude would heel and catch the sun and become short flashes of light. They came rising and falling and growing larger, like some huge flight of gulls or rooks, or such-like birds moving with a marvellous uniformity, and ever as they drew nearer they spread over a greater width of sky. The southward wing flung itself in an arrow-headed cloud athwart the sun. And then suddenly they swept round to the eastward and streamed eastward, growing smaller and smaller and clearer and clearer again until they vanished from the sky. And after that we noted to the northward and very high Evesham's fighting machines hanging high over Naples like an evening swarm of gnats.

"It seemed to have no more to do with us than a flight of birds.

"Even the mutter of guns far away in the southeast seemed to us to signify nothing. . . .

"Each day, each dream after that, we were still exalted, still

seeking that refuge where we might live and love. Fatigue had come upon us, pain and many distresses. For though we were dusty and stained by our toilsome tramping, and half starved and with the horror of the dead men we had seen and the flight of the peasants--for very soon a gust of fighting swept up the peninsula--with these things haunting our minds it still resulted only in a deepening resolution to escape. O, but she was brave and patient! She who had never faced hardship and exposure had courage for herself--and me. We went to and fro seeking an outlet, over a country all commandeered and ransacked by the gathering hosts of war. Always we went on foot. At first there were other fugitives, but we did not mingle with them. Some escaped northward, some were caught in the torrent of peasantry that swept along the main roads; many gave themselves into the hands of the soldiery and were sent northward. Many of the men were impressed. But we kept away from these things; we had brought no money to bribe a passage north, and I feared for my lady at the hands of these conscript crowds. We had landed at Salerno, and we had been turned back from Cava, and we had tried to cross towards Taranto by a pass over Mount Alburno, but we had been driven back for want of food, and so we had come down among the marshes by Paestum, where those great temples stand alone. I had some vague idea that by Paestum it might be possible to find a boat or something, and take once more to sea. And there it was the battle overtook us.

"A sort of soul-blindness had me. Plainly I could see that we were being hemmed in; that the great net of that giant Warfare had us in its toils. Many times we had seen the levies that had come down from the north going to and fro, and had come upon them in the distance amidst the mountains making ways for the ammunition and preparing the mounting of the guns. Once we fancied they had fired at us, taking us for spies--at any rate a shot had gone shuddering over us. Several times we had hidden in woods from hovering aeroplanes.

"But all these things do not matter now, these nights of flight

and pain. . . . We were in an open place near those great temples at Paestum, at last, on a blank stony place dotted with spiky bushes, empty and desolate and so flat that a grove of eucalyptus far away showed to the feet of its stems. How I can see it! My lady was sitting down under a bush, resting a little, for she was very weak and weary, and I was standing up watching to see if I could tell the distance of the firing that came and went. They were still, you know, fighting far from each other, with those terrible new weapons that had never before been used: guns that would carry beyond sight, and aeroplanes that would do--What THEY would do no man could foretell.

"I knew that we were between the two armies, and that they drew together. I knew we were in danger, and that we could not stop there and rest!

"Though all these things were in my mind, they were in the background. They seemed to be affairs beyond our concern. Chiefly, I was thinking of my lady. An aching distress filled me. For the first time she had owned herself beaten and had fallen a-weeping. Behind me I could hear her sobbing, but I would not turn round to her because I knew she had need of weeping, and had held herself so far and so long for me. It was well, I thought, that she would weep and rest and then we would toil on again, for I had no inkling of the thing that hung so near. Even now I can see her as she sat there, her lovely hair upon her shoulder, can mark again the deepening hollow of her cheek.

"'If we had parted,' she said, 'if I had let you go.'

"'No,' said I. 'Even now, I do not repent. I will not repent; I made my choice, and I will hold on to the end.'"

"And then--

"Overhead in the sky something flashed and burst, and all about us I heard the bullets making a noise like a handful of peas suddenly thrown. They chipped the stones about us, and whirled fragments from the bricks and passed. . . ."

He put his hand to his mouth, and then moistened his lips.

"At the flash I had turned about. . . ."

"You know--she stood up--"

"She stood up; you know, and moved a step towards me--"

"As though she wanted to reach me--"

"And she had been shot through the heart."

He stopped and stared at me. I felt all that foolish incapacity an Englishman feels on such occasions. I met his eyes for a moment, and then stared out of the window. For a long space we kept silence. When at last I looked at him he was sitting back in his corner, his arms folded, and his teeth gnawing at his knuckles.

He bit his nail suddenly, and stared at it.

"I carried her," he said, "towards the temples, in my arms--as though it mattered. I don't know why. They seemed a sort of sanctuary, you know, they had lasted so long, I suppose."

"She must have died almost instantly. Only--I talked to her--all the way."

Silence again.

"I have seen those temples," I said abruptly, and indeed he had brought

those still, sunlit arcades of worn sandstone very vividly before me.

"It was the brown one, the big brown one. I sat down on a fallen pillar and held her in my arms. . . . Silent after the first babble was over. And after a little while the lizards came out and ran about again, as though nothing unusual was going on, as though nothing had changed. . . . It was tremendously still there, the sun high, and the shadows still; even the shadows of the weeds upon the entablature were still--in spite of the thudding and banging that went all about the sky.

"I seem to remember that the aeroplanes came up out of the south, and that the battle went away to the west. One aeroplane was struck, and upset and fell. I remember that--though it didn't interest me in the least. It didn't seem to signify. It was like a wounded gull, you know--flapping for a time in the water. I could see it down the aisle of the temple--a black thing in the bright blue water.

"Three or four times shells burst about the beach, and then that ceased. Each time that happened all the lizards scuttled in and hid for a space. That was all the mischief done, except that once a stray bullet gashed the stone hard by--made just a fresh bright surface.

"As the shadows grew longer, the stillness seemed greater.

"The curious thing," he remarked, with the manner of a man who makes a trivial conversation, "is that I didn't THINK--I didn't think at all. I sat with her in my arms amidst the stones--in a sort of lethargy--stagnant.

"And I don't remember waking up. I don't remember dressing that day. I know I found myself in my office, with my letters all slit open in front of me, and how I was struck by the absurdity of being there, seeing that in reality I was sitting, stunned, in that Paestum temple with a dead woman in my arms. I read my letters like a machine. I have forgotten what they were about."

He stopped, and there was a long silence.

Suddenly I perceived that we were running down the incline from Chalk Farm to Euston. I started at this passing of time. I turned on him with a brutal question, with the tone of Now or never.

"And did you dream again?"

"Yes."

He seemed to force himself to finish. His voice was very low.

"Once more, and as it were only for a few instants. I seemed to have suddenly awakened out of a great apathy, to have risen into a sitting position, and the body lay there on the stones beside me. A gaunt body. Not her, you know. So soon--it was not her. . . .

"I may have heard voices. I do not know. Only I knew clearly that men were coming into the solitude and that that was a last outrage.

"I stood up and walked through the temple, and then there came into sight--first one man with a yellow face, dressed in a uniform of dirty white, trimmed with blue, and then several, climbing to the crest of the old wall of the vanished city, and crouching there. They were little bright figures in the sunlight, and there they hung, weapon in hand, peering cautiously before them.

"And further away I saw others and then more at another point in the wall. It was a long lax line of men in open order.

"Presently the man I had first seen stood up and shouted a command, and his men came tumbling down the wall and into the high weeds towards the temple. He scrambled down with them and led them. He came facing towards me, and when he saw me he stopped.

"At first I had watched these men with a mere curiosity, but when I had seen they meant to come to the temple I was moved to forbid them. I shouted to the officer.

"'You must not come here,' I cried, '_I_ am here. I am here with my dead.'

"He stared, and then shouted a question back to me in some unknown tongue.

"I repeated what I had said.

"He shouted again, and I folded my arms and stood still. Presently he spoke to his men and came forward. He carried a drawn sword.

"I signed to him to keep away, but he continued to advance. I told him again very patiently and clearly: 'You must not come here. These are old temples and I am here with my dead.'

"Presently he was so close I could see his face clearly. It was a narrow face, with dull grey eyes, and a black moustache. He had a scar on his upper lip, and he was dirty and unshaven. He kept shouting unintelligible things, questions perhaps, at me.

"I know now that he was afraid of me, but at the time that did not occur to me. As I tried to explain to him he interrupted me in imperious tones, bidding me, I suppose, stand aside.

"He made to go past me, And I caught hold of him.

"I saw his face change at my grip.

"'You fool,' I cried. 'Don't you know? She is dead!'

"He started back. He looked at me with cruel eyes. I saw a sort of exultant resolve leap into them--delight. Then, suddenly, with a scowl, he swept his sword back--SO--and thrust."

He stopped abruptly. I became aware of a change in the rhythm of the train. The brakes lifted their voices and the carriage jarred and jerked. This present world insisted upon itself, became clamorous. I saw through the steamy window huge electric lights glaring down from tall masts upon a fog, saw rows of stationary empty carriages passing by, and then a signal-box, hoisting its constellation of green and red into the murky London twilight marched after them. I looked again at his drawn features.

"He ran me through the heart. It was with a sort of astonishment--no fear, no pain--but just amazement, that I felt it pierce me, felt the sword drive home into my body. It didn't hurt, you know. It didn't hurt at all."

The yellow platform lights came into the field of view, passing first rapidly, then slowly, and at last stopping with a jerk. Dim shapes of men passed to and fro without.

"Euston!" cried a voice.

"Do you mean--?"

"There was no pain, no sting or smart. Amazement and then darkness sweeping over everything. The hot, brutal face before me, the face of the man who had killed me, seemed to recede. It swept out of existence--"

"Euston!" clamoured the voices outside; "Euston!"

The carriage door opened, admitting a flood of sound, and a porter stood regarding us. The sounds of doors slamming, and the hoof-clatter

of cab-horses, and behind these things the featureless remote roar of the London cobble-stones, came to my ears. A truckload of lighted lamps blazed along the platform.

"A darkness, a flood of darkness that opened and spread and blotted out all things."

"Any luggage, sir?" said the porter.

"And that was the end?" I asked.

He seemed to hesitate. Then, almost inaudibly, he answered, "No."

"You mean?"

"I couldn't get to her. She was there on the other side of the Temple--
And then--"

"Yes," I insisted. "Yes?"

"Nightmares," he cried; "nightmares indeed! My God! Great birds that fought and tore."

TONO-BUNGAY

by
H.G Wells
1908

BOOK THE FIRST

THE DAYS BEFORE TONO-BUNGAY WAS INVENTED

CHAPTER THE FIRST

OF BLADESOVER HOUSE, AND MY MOTHER; AND THE CONSTITUTION OF SOCIETY

I

Most people in this world seem to live "in character"; they have a beginning, a middle and an end, and the three are congruous one with another and true to the rules of their type. You can speak of them as being of this sort of people or that. They are, as theatrical people say, no more (and no less) than "character actors." They have a class, they have a place, they know what is becoming in them and what is due to them, and their proper size of tombstone tells at last how properly they have played the part. But there is also another kind of life that is not so much living as a miscellaneous tasting of life. One gets hit by some unusual transverse force, one is jerked out of one's stratum and lives crosswise for the rest of the time, and, as it were, in a succession of samples. That has been my lot, and that is what has set me at last writing something in the nature of a novel. I have got an unusual series of impressions that I want very urgently to tell. I have seen life at very different levels, and at all these levels I have seen it with a sort of intimacy and in good faith. I have been a native in many social countries. I

have been the unwelcome guest of a working baker, my cousin, who has since died in the Chatham infirmary; I have eaten illegal snacks--the unjustifiable gifts of footmen--in pantries, and been despised for my want of style (and subsequently married and divorced) by the daughter of a gasworks clerk; and--to go to my other extreme--I was once--oh, glittering days!--an item in the house-party of a countess. She was, I admit, a countess with a financial aspect, but still, you know, a countess. I've seen these people at various angles. At the dinner-table I've met not simply the titled but the great. On one occasion--it is my brightest memory--I upset my champagne over the trousers of the greatest statesman in the empire--Heaven forbid I should be so invidious as to name him!--in the warmth of our mutual admiration.

And once (though it is the most incidental thing in my life) I murdered a man....

Yes, I've seen a curious variety of people and ways of living altogether. Odd people they all are great and small, very much alike at bottom and curiously different on their surfaces. I wish I had ranged just a little further both up and down, seeing I have ranged so far. Royalty must be worth knowing and very great fun. But my contacts with princes have been limited to quite public occasions, nor at the other end of the scale have I had what I should call an inside acquaintance with that dusty but attractive class of people who go about on the high-roads drunk but enfamille (so redeeming the minor lapse), in the summertime, with a perambulator, lavender to sell, sun-brown children, a smell, and ambiguous bundles that fire the imagination. Navvies, farm-labourers, sailormen and stokers, all such as sit in 1834 beer-houses, are beyond me also, and I suppose must remain so now for ever. My intercourse with the ducal rank too has been negligible; I once went shooting with a duke, and in an outburst of what was no doubt snobbishness, did my best to get him in the

legs. But that failed.

I'm sorry I haven't done the whole lot though....

You will ask by what merit I achieved this remarkable social range, this extensive cross-section of the British social organism. It was the Accident of Birth. It always is in England.

Indeed, if I may make the remark so cosmic, everything is. But that is by the way. I was my uncle's nephew, and my uncle was no less a person than Edward Ponderevo, whose comet-like transit of the financial heavens happened--it is now ten years ago! Do you remember the days of Ponderevo, the great days, I mean, of Ponderevo? Perhaps you had a trifle in some world-shaking enterprise! Then you know him only too well. Astraddle on Tono-Bungay, he flashed athwart the empty heavens--like a comet--rather, like a stupendous rocket!--and overawed investors spoke of his star. At his zenith he burst into a cloud of the most magnificent promotions. What a time that was! The Napoleon of domestic conveniences!

I was his nephew, his peculiar and intimate nephew. I was hanging on to his coat-tails all the way through. I made pills with him in the chemist's shop at Wimblesbury before he began. I was, you might say, the stick of his rocket; and after our tremendous soar, after he had played with millions, a golden rain in the sky, after my bird's-eye view of the modern world, I fell again, a little scarred and blistered perhaps, two and twenty years older, with my youth gone, my manhood eaten in upon, but greatly edified, into this Thames-side yard, into these white heats and hammerings, amidst the fine realities of steel--to think it all over in my leisure and jot down the notes and inconsecutive observations that make this book. It was more, you know, than a figurative soar. The zenith of that career was surely our flight

across the channel in the Lord Roberts B....

I warn you this book is going to be something of an agglomeration. I want to trace my social trajectory (and my uncle's) as the main line of my story, but as this is my first novel and almost certainly my last, I want to get in, too, all sorts of things that struck me, things that amused me and impressions I got--even although they don't minister directly to my narrative at all. I want to set out my own queer love experiences too, such as they are, for they troubled and distressed and swayed me hugely, and they still seem to me to contain all sorts of irrational and debatable elements that I shall be the clearer-headed for getting on paper. And possibly I may even flow into descriptions of people who are really no more than people seen in transit, just because it amuses me to recall what they said and did to us, and more particularly how they behaved in the brief but splendid glare of Tono-Bungay and its still more glaring offspring. It lit some of them up, I can assure you! Indeed, I want to get in all sorts of things. My ideas of a novel all through are comprehensive rather than austere....

Tono-Bungay still figures on the hoardings, it stands in rows in every chemist's storeroom, it still assuages the coughs of age and brightens the elderly eye and loosens the elderly tongue; but its social glory, its financial illumination, have faded from the world for ever. And I, sole scorched survivor from the blaze, sit writing of it here in an air that is never still for the clang and thunder of machines, on a table littered with working drawings, and amid fragments of models and notes about velocities and air and water pressures and trajectories--of an altogether different sort from that of Tono-Bungay.

II

I write that much and look at it, and wonder whether, after all, this is any fair statement of what I am attempting in this book. I've given, I see, an impression that I want to make simply a hotch-potch of anecdotes and experiences with my uncle swimming in the middle as the largest lump of victual. I'll own that here, with the pen already started, I realise what a fermenting mass of things learnt and emotions experienced and theories formed I've got to deal with, and how, in a sense, hopeless my book must be from the very outset. I suppose what I'm really trying to render is nothing more nor less than Life--as one man has found it. I want to tell--MYSELF, and my impressions of the thing as a whole, to say things I have come to feel intensely of the laws, traditions, usages, and ideas we call society, and how we poor individuals get driven and lured and stranded among these windy, perplexing shoals and channels. I've got, I suppose, to a time of life when things begin to take on shapes that have an air of reality, and become no longer material for dreaming, but interesting in themselves. I've reached the criticising, novel-writing age, and here I am writing mine--my one novel--without having any of the discipline to refrain and omit that I suppose the regular novel-writer acquires.

I've read an average share of novels and made some starts before this beginning, and I've found the restraints and rules of the art (as I made them out) impossible for me. I like to write, I am keenly interested in writing, but it is not my technique. I'm an engineer with a patent or two and a set of ideas; most of whatever artist there is in me has been given to turbine machines and boat building and the problem of flying, and do what I will I fail to see how I can be other than a lax, undisciplined story-teller. I must sprawl and flounder, comment and theorise, if I am to get the thing out I have in mind. And it isn't a constructed tale I have to tell, but unmanageable realities. My love-story--and if only I can keep up the spirit of truth-telling all through as strongly as I have now, you shall have it

all--falls into no sort of neat scheme of telling. It involves three separate feminine persons. It's all mixed up with the other things....

But I've said enough, I hope, to excuse myself for the method or want of method in what follows, and I think I had better tell without further delay of my boyhood and my early impressions in the shadow of Bladesover House.

III

There came a time when I realised that Bladesover House was not all it seemed, but when I was a little boy I took the place with the entirest faith as a complete authentic microcosm. I believed that the Bladesover system was a little working-model--and not so very little either--of the whole world.

Let me try and give you the effect of it.

Bladesover lies up on the Kentish Downs, eight miles perhaps from Ashborough; and its old pavilion, a little wooden parody of the temple of Vesta at Tibur, upon the hill crest behind the house, commands in theory at least a view of either sea, of the Channel southward and the Thames to the northeast. The park is the second largest in Kent, finely wooded with well-placed beeches, many elms and some sweet chestnuts, abounding in little valleys and hollows of bracken, with springs and a stream and three fine ponds and multitudes of fallow deer. The house was built in the eighteenth century, it is of pale red brick in the style of a French chateau, and save for one pass among the crests which opens to blue distances, to minute, remote, oast-set farm-houses and copses and wheat fields and the occasional gleam of water, its hundred and seventeen windows look on nothing but its own wide and handsome territories. A semi-circular screen of great beeches masks the church and village, which cluster picturesquely

about the high road along the skirts of the great park.

Northward, at the remotest corner of that enclosure, is a second dependent village, Ropedean, less fortunate in its greater distance and also on account of a rector. This divine was indeed rich, but he was vindictively economical because of some shrinkage of his tithes; and by reason of his use of the word Eucharist for the Lord's Supper he had become altogether estranged from the great ladies of Bladesover. So that Ropedean was in the shadows through all that youthful time.

Now the unavoidable suggestion of that wide park and that fair large house, dominating church, village and the country side, was that they represented the thing that mattered supremely in the world, and that all other things had significance only in relation to them. They represented the Gentry, the Quality, by and through and for whom the rest of the world, the farming folk and the labouring folk, the trades-people of Ashborough, and the upper servants and the lower servants and the servants of the estate, breathed and lived and were permitted. And the Quality did it so quietly and thoroughly, the great house mingled so solidly and effectually earth and sky, the contrast of its spacious hall and saloon and galleries, its airy housekeeper's room and warren of offices with the meagre dignities of the vicar, and the pinched and stuffy rooms of even the post-office people and the grocer, so enforced these suggestions, that it was only when I was a boy of thirteen or fourteen and some queer inherited strain of scepticism had set me doubting whether Mr. Bartlett, the vicar, did really know with certainty all about God, that as a further and deeper step in doubting I began to question the final rightness of the gentlefolks, their primary necessity in the scheme of things. But once that scepticism had awakened it took me fast and far. By fourteen I had achieved terrible blasphemies and sacrilege; I had resolved to marry a viscount's daughter, and I had blacked the left eye--I think it was the left--of her half-brother, in open and declared

rebellion.

But of that in its place.

The great house, the church, the village, and the labourers and the servants in their stations and degrees, seemed to me, I say, to be a closed and complete social system. About us were other villages and great estates, and from house to house, interlacing, correlated, the Gentry, the fine Olympians, came and went. The country towns seemed mere collections of shops, marketing places for the tenantry, centres for such education as they needed, as entirely dependent on the gentry as the village and scarcely less directly so. I thought this was the order of the whole world. I thought London was only a greater country town where the gentle-folk kept town-houses and did their greater shopping under the magnificent shadow of the greatest of all fine gentlewomen, the Queen. It seemed to be in the divine order. That all this fine appearance was already sapped, that there were forces at work that might presently carry all this elaborate social system in which my mother instructed me so carefully that I might understand my "place," to Limbo, had scarcely dawned upon me even by the time that Tono-Bungay was fairly launched upon the world.

There are many people in England to-day upon whom it has not yet dawned. There are times when I doubt whether any but a very inconsiderable minority of English people realise how extensively this ostensible order has even now passed away. The great houses stand in the parks still, the cottages cluster respectfully on their borders, touching their eaves with their creepers, the English countryside--you can range through Kent from Bladeston northward and see persists obstinately in looking what it was. It is like an early day in a fine October. The hand of change rests on it all, unfelt, unseen; resting for awhile, as it were half reluctantly, before it grips and ends the thing for ever. One frost and the whole face of things will be bare, links snap,

patience end, our fine foliage of pretences lie glowing in the mire.

For that we have still to wait a little while. The new order may have gone far towards shaping itself, but just as in that sort of lantern show that used to be known in the village as the "Dissolving Views," the scene that is going remains upon the mind, traceable and evident, and the newer picture is yet enigmatical long after the lines that are to replace those former ones have grown bright and strong, so that the new England of our children's children is still a riddle to me. The ideas of democracy, of equality, and above all of promiscuous fraternity have certainly never really entered into the English mind. But what IS coming into it? All this book, I hope, will bear a little on that. Our people never formulates; it keeps words for jests and ironies. In the meanwhile the old shapes, the old attitudes remain, subtly changed and changing still, sheltering strange tenants. Bladesover House is now let furnished to Sir Reuben Lichtenstein, and has been since old Lady Drew died; it was my odd experience to visit there, in the house of which my mother had been housekeeper, when my uncle was at the climax of Tono-Bungay. It was curious to notice then the little differences that had come to things with this substitution. To borrow an image from my mineralogical days, these Jews were not so much a new British gentry as "pseudomorphous" after the gentry. They are a very clever people, the Jews, but not clever enough to suppress their cleverness. I wished I could have gone downstairs to savour the tone of the pantry. It would have been very different I know. Hawksnest, over beyond, I noted, had its pseudomorph too; a newspaper proprietor of the type that hustles along with stolen ideas from one loud sink-or-swim enterprise to another, had bought the place outright; Redgrave was in the hands of brewers.

But the people in the villages, so far as I could detect, saw no

difference in their world. Two little girls bobbed and an old labourer touched his hat convulsively as I walked through the village. He still thought he knew his place--and mine. I did not know him, but I would have liked dearly to have asked him if he remembered my mother, if either my uncle or old Lichtenstein had been man enough to stand being given away like that.

In that English countryside of my boyhood every human being had a "place." It belonged to you from your birth like the colour of your eyes, it was inextricably your destiny. Above you were your betters, below you were your inferiors, and there were even an unstable questionable few, cases so disputable that you might for the rough purposes of every day at least, regard them as your equals. Head and centre of our system was Lady Drew, her "leddyship," shrivelled, garrulous, with a wonderful memory for genealogies and very, very old, and beside her and nearly as old, Miss Somerville, her cousin and companion. These two old souls lived like dried-up kernels in the great shell of Bladesover House, the shell that had once been gaily full of fops, of fine ladies in powder and patches and courtly gentlemen with swords; and when there was no company they spent whole days in the corner parlour just over the housekeeper's room, between reading and slumber and caressing their two pet dogs. When I was a boy I used always to think of these two poor old creatures as superior beings living, like God, somewhere through the ceiling. Occasionally they bumped about a bit and one even heard them overhead, which gave them a greater effect of reality without mitigating their vertical predominance. Sometimes too I saw them. Of course if I came upon them in the park or in the shrubbery (where I was a trespasser) I hid or fled in pious horror, but I was upon due occasion taken into the Presence by request. I remember her "leddyship" then as a thing of black silks and a golden chain, a quavering injunction to me to be a good boy, a very shrunken loose-skinned face and neck, and a rosy hand that trembled a halfcrown into mine. Miss Somerville

hovered behind, a paler thing of broken lavender and white and black, with screwed up, sandy-lashed eyes. Her hair was yellow and her colour bright, and when we sat in the housekeeper's room of a winter's night warming our toes and sipping elder wine, her maid would tell us the simple secrets of that belated flush.... After my fight with young Garvell I was of course banished, and I never saw those poor old painted goddesses again.

Then there came and went on these floors over our respectful heads, the Company; people I rarely saw, but whose tricks and manners were imitated and discussed by their maids and valets in the housekeeper's room and the steward's room--so that I had them through a medium at second hand. I gathered that none of the company were really Lady Drew's equals, they were greater and lesser after the manner of all things in our world. Once I remember there was a Prince, with a real live gentleman in attendance, and that was a little above our customary levels and excited us all, and perhaps raised our expectations unduly. Afterwards, Rabbits, the butler, came into my mother's room downstairs, red with indignation and with tears in his eyes. "Look at that!" gasped Rabbits. My mother was speechless with horror. That was a sovereign, a mere sovereign, such as you might get from any commoner!

After Company, I remember, came anxious days, for the poor old women upstairs were left tired and cross and vindictive, and in a state of physical and emotional indigestion after their social efforts....

On the lowest fringe of these real Olympians hung the vicarage people, and next to them came those ambiguous beings who are neither quality nor subjects. The vicarage people certainly hold a place by themselves in the typical English scheme; nothing is more remarkable than the progress the Church has made--socially--in the last two hundred years. In the early

eighteenth century the vicar was rather under than over the house-steward, and was deemed a fitting match for the housekeeper or any not too morally discredited discard. The eighteenth century literature is full of his complaints that he might not remain at table to share the pie. He rose above these indignities because of the abundance of younger sons. When I meet the large assumptions of the contemporary cleric, I am apt to think of these things. It is curious to note that to-day that down-trodden, organ-playing creature, the Church of England village Schoolmaster, holds much the same position as the seventeenth century parson. The doctor in Bladesover ranked below the vicar but above the "vet," artists and summer visitors squeezed in above or below this point according to their appearance and expenditure, and then in a carefully arranged scale came the tenantry, the butler and housekeeper, the village shopkeeper, the head keeper, the cook, the publican, the second keeper, the blacksmith (whose status was complicated by his daughter keeping the post-office--and a fine hash she used to make of telegrams too!) the village shopkeeper's eldest son, the first footman, younger sons of the village shopkeeper, his first assistant, and so forth.

All these conceptions and applications of a universal precedence and much else I drank in at Bladesover, as I listened to the talk of valets, ladies'-maids, Rabbits the butler and my mother in the much-cupboarded, white-painted, chintz-brightened housekeeper's room where the upper servants assembled, or of footmen and Rabbits and estate men of all sorts among the green baize and Windsor chairs of the pantry--where Rabbits, being above the law, sold beer without a license or any compunction--or of housemaids and still-room maids in the bleak, matting-carpeted still-room or of the cook and her kitchen maids and casual friends among the bright copper and hot glow of the kitchens.

Of course their own ranks and places came by implication to

these people, and it was with the ranks and places of the Olympians that the talk mainly concerned itself. There was an old peerage and a Crockford together with the books of recipes, the Whitaker's Almanack, the Old Moore's Almanack, and the eighteenth century dictionary, on the little dresser that broke the cupboards on one side of my mother's room; there was another peerage, with the covers off, in the pantry; there was a new peerage in the billiard-room, and I seem to remember another in the anomalous apartment that held the upper servants' bagatelle board and in which, after the Hall dinner, they partook of the luxury of sweets. And if you had asked any of those upper servants how such and such a Prince of Battenberg was related to, let us say, Mr. Cunninghame Graham or the Duke of Argyle, you would have been told upon the nail. As a boy, I heard a great deal of that sort of thing, and if to this day I am still a little vague about courtesy titles and the exact application of honorifics, it is, I can assure you, because I hardened my heart, and not from any lack of adequate opportunity of mastering these succulent particulars.

Dominating all these memories is the figure of my mother--my mother who did not love me because I grew liker my father every day--and who knew with inflexible decision her place and the place of every one in the world--except the place that concealed my father--and in some details mine. Subtle points were put to her. I can see and hear her saying now, "No, Miss Fison, peers of England go in before peers of the United Kingdom, and he is merely a peer of the United Kingdom." She had much exercise in placing people's servants about her tea-table, where the etiquette was very strict. I wonder sometimes if the etiquette of housekeepers' rooms is as strict to-day, and what my mother would have made of a chauffeur....

On the whole I am glad that I saw so much as I did of Bladesover--if for no other reason than because seeing it when I

did, quite naively, believing in it thoroughly, and then coming to analyse it, has enabled me to understand much that would be absolutely incomprehensible in the structure of English society. Bladesover is, I am convinced, the clue to almost all that is distinctively British and perplexing to the foreign inquirer in England and the English-speaking peoples. Grasp firmly that England was all Bladesover two hundred years ago; that it has had Reform Acts indeed, and such--like changes of formula, but no essential revolution since then; that all that is modern and different has come in as a thing intruded or as a gloss upon this predominant formula, either impertinently or apologetically; and you will perceive at once the reasonableness, the necessity, of that snobbishness which is the distinctive quality of English thought. Everybody who is not actually in the shadow of a Bladesover is as it were perpetually seeking after lost orientations. We have never broken with our tradition, never even symbolically hewed it to pieces, as the French did in quivering fact in the Terror. But all the organizing ideas have slackened, the old habitual bonds have relaxed or altogether come undone. And America too, is, as it were, a detached, outlying part of that estate which has expanded in queer ways. George Washington, Esquire, was of the gentlefolk, and he came near being a King. It was Plutarch, you know, and nothing intrinsically American that prevented George Washington being a King....

IV

I hated teatime in the housekeeper's room more than anything else at Bladesover. And more particularly I hated it when Mrs. Mackridge and Mrs. Booch and Mrs. Latude-Fernay were staying in the house. They were, all three of them, pensioned-off servants.

Old friends of Lady Drew's had rewarded them posthumously for a prolonged devotion to their minor comforts, and Mrs. Booch was

also trustee for a favourite Skye terrier. Every year Lady Drew gave them an invitation--a reward and encouragement of virtue with especial reference to my mother and Miss Fison, the maid. They sat about in black and shiny and flouncey clothing adorned with gimp and beads, eating great quantities of cake, drinking much tea in a stately manner and reverberating remarks.

I remember these women as immense. No doubt they were of negotiable size, but I was only a very little chap and they have assumed nightmare proportions in my mind. They loomed, they bulged, they impended. Mrs. Mackridge was large and dark; there was a marvel about her head, inasmuch as she was bald. She wore a dignified cap, and in front of that upon her brow, hair was PAINTED. I have never seen the like since. She had been maid to the widow of Sir Roderick Blenderhasset Impey, some sort of governor or such-like portent in the East Indies, and from her remains--in Mrs. Mackridge--I judge Lady Impey was a very stupendous and crushing creature indeed. Lady Impey had been of the Juno type, haughty, unapproachable, given to irony and a caustic wit. Mrs. Mackridge had no wit, but she had acquired the caustic voice and gestures along with the old satins and trimmings of the great lady. When she told you it was a fine morning, she seemed also to be telling you you were a fool and a low fool to boot; when she was spoken to, she had a way of acknowledging your poor tinkle of utterance with a voluminous, scornful "Haw!" that made you want to burn her alive. She also had a way of saying "Indade!" with a droop of the eyelids.

Mrs. Booch was a smaller woman, brown haired, with queer little curls on either side of her face, large blue eyes and a small set of stereotyped remarks that constituted her entire mental range. Mrs. Latude-Fernay has left, oddly enough, no memory at all except her name and the effect of a green-grey silk dress, all set with gold and blue buttons. I fancy she was a large blonde. Then there was Miss Fison, the maid who served both Lady Drew and

Miss Somerville, and at the end of the table opposite my mother, sat Rabbits the butler. Rabbits, for a butler, was an unassuming man, and at tea he was not as you know butlers, but in a morning coat and a black tie with blue spots. Still, he was large, with side whiskers, even if his clean-shaven mouth was weak and little. I sat among these people on a high, hard, early Gregorian chair, trying to exist, like a feeble seedling amidst great rocks, and my mother sat with an eye upon me, resolute to suppress the slightest manifestation of vitality. It was hard on me, but perhaps it was also hard upon these rather over-fed, ageing, pretending people, that my youthful restlessness and rebellious unbelieving eyes should be thrust in among their dignities.

Tea lasted for nearly three-quarters of an hour, and I sat it out perforce; and day after day the talk was exactly the same.

"Sugar, Mrs. Mackridge?" my mother used to ask.

"Sugar, Mrs. Latude-Fernay?"

The word sugar would stir the mind of Mrs. Mackridge. "They say," she would begin, issuing her proclamation--at least half her sentences began "they say"--"sugar is fatt-an-ing, nowadays. Many of the best people do not take it at all."

"Not with their tea, ma'am," said Rabbits intelligently.

"Not with anything," said Mrs. Mackridge, with an air of crushing repartee, and drank.

"What won't they say next?" said Miss Fison.

"They do say such things!" said Mrs. Booch.

"They say," said Mrs. Mackridge, inflexibly, "the doctors are not recomm-an-ding it now."

My Mother: "No, ma'am?"

Mrs. Mackridge: "No, ma'am."

Then, to the table at large: "Poor Sir Roderick, before he died, consumed great quan-ta-ties of sugar. I have sometimes fancied it may have hastened his end."

This ended the first skirmish. A certain gloom of manner and a pause was considered due to the sacred memory of Sir Roderick.

"George," said my mother, "don't kick the chair!"

Then, perhaps, Mrs. Booch would produce a favourite piece from her repertoire. "The evenings are drawing out nicely," she would say, or if the season was decadent, "How the evenings draw in!" It was an invaluable remark to her; I do not know how she would have got along without it.

My mother, who sat with her back to the window, would always consider it due to Mrs. Booch to turn about and regard the evening in the act of elongation or contraction, whichever phase it might be.

A brisk discussion of how long we were to the longest or shortest day would ensue, and die away at last exhausted.

Mrs. Mackridge, perhaps, would reopen. She had many intelligent habits; among others she read the paper--The Morning Post. The other ladies would at times tackle that sheet, but only to read the births, marriages, and deaths on the front page. It was, of course, the old Morning Post that cost threepence, not the brisk

coruscating young thing of to-day. "They say," she would open, "that Lord Tweedums is to go to Canada."

"Ah!" said Mr. Rabbits; "dew they?"

"Isn't he," said my mother, "the Earl of Slumgold's cousin?" She knew he was; it was an entirely irrelevant and unnecessary remark, but still, something to say.

"The same, ma'am," said Mrs. Mackridge. "They say he was extremelay popular in New South Wales. They looked up to him greatlay. I knew him, ma'am, as a young man. A very nice pleasant young fella."

Interlude of respect.

"'Is predecessor," said Rabbits, who had acquired from some clerical model a precise emphatic articulation without acquiring at the same time the aspirates that would have graced it, "got into trouble at Sydney."

"Haw!" said Mrs. Mackridge, scornfully, "so am tawled."

"'E came to Templemorton after 'e came back, and I remember them talking 'im over after 'e'd gone again."

"Haw?" said Mrs. Mackridge, interrogatively.

"'Is fuss was quotin' poetry, ma'am. 'E said--what was it 'e said--'They lef' their country for their country's good,'--which in some way was took to remind them of their being originally convic's, though now reformed. Every one I 'eard speak, agreed it was takless of 'im."

"Sir Roderick used to say," said Mrs. Mackridge, "that the First

Thing,"--here Mrs. Mackridge paused and looked dreadfully at me--"and the Second Thing"--here she fixed me again--"and the Third Thing"--now I was released--"needed in a colonial governor is Tact." She became aware of my doubts again, and added predominantly, "It has always struck me that that was a Singularly True Remark."

I resolved that if ever I found this polypus of Tact growing up in my soul, I would tear it out by the roots, throw it forth and stamp on it.

"They're queer people--colonials," said Rabbits, "very queer. When I was at Templemorton I see something of 'em. Queer fellows, some of 'em. Very respectful of course, free with their money in a spasammy sort of way, but-- Some of 'em, I must confess, make me nervous. They have an eye on you. They watch you--as you wait. They let themselves appear to be lookin' at you..."

My mother said nothing in that discussion. The word colonies always upset her. She was afraid, I think, that if she turned her mind in that direction my errant father might suddenly and shockingly be discovered, no doubt conspicuously bigamic and altogether offensive and revolutionary. She did not want to rediscover my father at all.

It is curious that when I was a little listening boy I had such an idea of our colonies that I jeered in my heart at Mrs. Mackridge's colonial ascendancy. These brave emancipated sunburnt English of the open, I thought, suffer these aristocratic invaders as a quaint anachronism, but as for being gratified--!

I don't jeer now. I'm not so sure.

V

It is a little difficult to explain why I did not come to do what was the natural thing for any one in my circumstances to do, and take my world for granted. A certain innate scepticism, I think, explains it and a certain inaptitude for sympathetic assimilation. My father, I believe, was a sceptic; my mother was certainly a hard woman.

I was an only child, and to this day I do not know whether my father is living or dead. He fled my mother's virtues before my distincter memories began. He left no traces in his flight, and she, in her indignation, destroyed every vestige that she could of him. Never a photograph nor a scrap of his handwriting have I seen; and it was, I know, only the accepted code of virtue and discretion that prevented her destroying her marriage certificate and me, and so making a clean sweep of her matrimonial humiliation. I suppose I must inherit something of the moral stupidity that would enable her to make a holocaust of every little personal thing she had of him. There must have been presents made by him as a lover, for example--books with kindly inscriptions, letters perhaps, a flattened flower, a ring, or such-like gage. She kept her wedding-ring, of course, but all the others she destroyed. She never told me his christian name or indeed spoke a word to me of him; though at times I came near daring to ask her: add what I have of him--it isn't much--I got from his brother, my hero, my uncle Ponderevo. She wore her ring; her marriage certificate she kept in a sealed envelope in the very bottom of her largest trunk, and me she sustained at a private school among the Kentish hills. You must not think I was always at Bladesover--even in my holidays. If at the time these came round, Lady Drew was vexed by recent Company, or for any other reason wished to take it out of my mother, then she used to ignore the customary reminder my mother gave her, and I "stayed on" at the school.

But such occasions were rare, and I suppose that between ten and fourteen I averaged fifty days a year at Bladesover.

Don't imagine I deny that was a fine thing for me. Bladesover, in absorbing the whole countryside, had not altogether missed greatness. The Bladesover system has at least done one good thing for England, it has abolished the peasant habit of mind. If many of us still live and breathe pantry and housekeeper's room, we are quit of the dream of living by economising parasitically on hens and pigs.... About that park there were some elements of a liberal education; there was a great space of greensward not given over to manure and food grubbing; there was mystery, there was matter for the imagination. It was still a park of deer. I saw something of the life of these dappled creatures, heard the belling of stags, came upon young fawns among the bracken, found bones, skulls, and antlers in lonely places. There were corners that gave a gleam of meaning to the word forest, glimpses of unstudied natural splendour. There was a slope of bluebells in the broken sunlight under the newly green beeches in the west wood that is now precious sapphire in my memory; it was the first time that I knowingly met Beauty.

And in the house there were books. The rubbish old Lady Drew read I never saw; stuff of the Maria Monk type, I have since gathered, had a fascination for her; but back in the past there had been a Drew of intellectual enterprise, Sir Cuthbert, the son of Sir Matthew who built the house; and thrust away, neglected and despised, in an old room upstairs, were books and treasures of his that my mother let me rout among during a spell of wintry wet. Sitting under a dormer window on a shelf above great stores of tea and spices, I became familiar with much of Hogarth in a big portfolio, with Raphael, there was a great book of engravings from the stanzas of Raphael in the Vatican--and with most of the capitals of Europe as they had looked about 1780, by

means of several pig iron-moulded books of views. There was also a broad eighteenth century atlas with huge wandering maps that instructed me mightily. It had splendid adornments about each map title; Holland showed a fisherman and his boat; Russia a Cossack; Japan, remarkable people attired in pagodas--I say it deliberately, "pagodas." There were Terrae Incognitae in every continent then, Poland, Sarmatia, lands since lost; and many a voyage I made with a blunted pin about that large, incorrect and dignified world. The books in that little old closet had been banished, I suppose, from the saloon during the Victorian revival of good taste and emasculated orthodoxy, but my mother had no suspicion of their character. So I read and understood the good sound rhetoric of Tom Paine's "Rights of Man," and his "Common Sense," excellent books, once praised by bishops and since sedulously lied about. Gulliver was there unexpurgated, strong meat for a boy perhaps but not too strong I hold--I have never regretted that I escaped niceness in these affairs. The satire of Traldragdubh made my blood boil as it was meant to do, but I hated Swift for the Houyhnhnms and never quite liked a horse afterwards. Then I remember also a translation of Voltaire's "Candide," and "Rasselas;" and, vast book though it was, I really believe I read, in a muzzy sort of way of course, from end to end, and even with some reference now and then to the Atlas, Gibbon--in twelve volumes.

These readings whetted my taste for more, and surreptitiously I raided the bookcases in the big saloon. I got through quite a number of books before my sacrilegious temerity was discovered by Ann, the old head-housemaid. I remember that among others I tried a translation of Plato's "Republic" then, and found extraordinarily little interest in it; I was much too young for that; but "Vathek"--"Vathek" was glorious stuff. That kicking affair! When everybody HAD to kick!

The thought of "Vathek" always brings back with it my boyish

memory of the big saloon at Bladesover.

It was a huge long room with many windows opening upon the park, and each window--there were a dozen or more reaching from the floor up--had its elaborate silk or satin curtains, heavily fringed, a canopy (is it?) above, its completely white shutters folding into the deep thickness of the wall. At either end of that great still place was an immense marble chimney-piece; the end by the bookcase showed the wolf and Romulus and Remus, with Homer and Virgil for supporters; the design of the other end I have forgotten. Frederick, Prince of Wales, swaggered flatly over the one, twice life-size, but mellowed by the surface gleam of oil; and over the other was an equally colossal group of departed Dews as sylvan deities, scantily clad, against a storm-rent sky. Down the centre of the elaborate ceiling were three chandeliers, each bearing some hundreds of dangling glass lustres, and over the interminable carpet--it impressed me as about as big as Sarmatia in the store-room Atlas--were islands and archipelagoes of chintz-covered chairs and couches, tables, great Sevres vases on pedestals, a bronze man and horse. Somewhere in this wilderness one came, I remember, upon--a big harp beside a lyre-shaped music stand, and a grand piano....

The book-borrowing raid was one of extraordinary dash and danger.

One came down the main service stairs--that was legal, and illegality began in a little landing when, very cautiously, one went through a red baize door. A little passage led to the hall, and here one reconnoitered for Ann, the old head-housemaid--the younger housemaids were friendly and did not count. Ann located, came a dash across the open space at the foot of that great staircase that has never been properly descended since powder went out of fashion, and so to the saloon door. A beast of an oscillating Chinaman in china, as large as life, grimaced and quivered to one's lightest steps. That door was the perilous

place; it was double with the thickness of the wall between, so that one could not listen beforehand for the whisk of the feather-brush on the other side. Oddly rat-like, is it not, this darting into enormous places in pursuit of the abandoned crumbs of thought?

And I found Langhorne's "Plutarch" too, I remember, on those shelves. It seems queer to me now to think that I acquired pride and self-respect, the idea of a state and the germ of public spirit, in such a furtive fashion; queer, too, that it should rest with an old Greek, dead these eighteen hundred years to teach that.

VI

The school I went to was the sort of school the Bladesover system permitted. The public schools that add comic into existence in the brief glow of the Renaissance had been taken possession of by the ruling class; the lower classes were not supposed to stand in need of schools, and our middle stratum got the schools it deserved, private schools, schools any unqualified pretender was free to establish. Mine was kept by a man who had had the energy to get himself a College of Preceptors diploma, and considering how cheap his charges were, I will readily admit the place might have been worse. The building was a dingy yellow-brick residence outside the village, with the schoolroom as an outbuilding of lath and plaster.

I do not remember that my school-days were unhappy--indeed I recall a good lot of fine mixed fun in them--but I cannot without grave risk of misinterpretation declare that we were at all nice and refined. We fought much, not sound formal fighting, but "scrapping" of a sincere and murderous kind, into which one might bring one's boots--it made us tough at any rate--and several of us were the sons of London publicans, who distinguished "scraps"

where one meant to hurt from ordered pugilism, practising both arts, and having, moreover, precocious linguistic gifts. Our cricket-field was bald about the wickets, and we played without style and disputed with the umpire; and the teaching was chiefly in the hands of a lout of nineteen, who wore ready-made clothes and taught despicably. The head-master and proprietor taught us arithmetic, algebra, and Euclid, and to the older boys even trigonometry, himself; he had a strong mathematical bias, and I think now that by the standard of a British public school he did rather well by us.

We had one inestimable privilege at that school, and that was spiritual neglect. We dealt with one another with the forcible simplicity of natural boys, we "cheeked," and "punched" and "clouted"; we thought ourselves Red Indians and cowboys and such-like honourable things, and not young English gentlemen; we never felt the strain of "Onward Christian soldiers," nor were swayed by any premature piety in the cold oak pew of our Sunday devotions. All that was good. We spent our rare pennies in the uncensored reading matter of the village dame's shop, on the Boys of England, and honest penny dreadfuls--ripping stuff, stuff that anticipated Haggard and Stevenson, badly printed and queerly illustrated, and very very good for us. On our half-holidays we were allowed the unusual freedom of rambling in twos and threes wide and far about the land, talking experimentally, dreaming wildly. There was much in those walks! To this day the landscape of the Kentish world, with its low broad distances, its hop gardens and golden stretches of wheat, its oasts and square church towers, its background of downland and hangers, has for me a faint sense of adventure added to the pleasure of its beauty. We smoked on occasion, but nobody put us up to the proper "boyish" things to do; we never "robbed an orchard" for example, though there were orchards all about us, we thought stealing was sinful, we stole incidental apples and turnips and strawberries from the fields indeed, but in a criminal inglorious fashion, and

afterwards we were ashamed. We had our days of adventure, but they were natural accidents, our own adventures. There was one hot day when several of us, walking out towards Maidstone, were incited by the devil to despise ginger beer, and we fuddled ourselves dreadfully with ale; and a time when our young minds were infected to the pitch of buying pistols, by the legend of the Wild West. Young Roots from Highbury came back with a revolver and cartridges, and we went off six strong to live a free wild life one holiday afternoon. We fired our first shot deep in the old flint mine at Chiselstead, and nearly burst our ear drums; then we fired in a primrose studded wood by Pickthorn Green, and I gave a false alarm of "keeper," and we fled in disorder for a mile. After which Roots suddenly shot at a pheasant in the high road by Chiselstead, and then young Barker told lies about the severity of the game laws and made Roots sore afraid, and we hid the pistol in a dry ditch outside the school field. A day or so after we got in again, and ignoring a certain fouling and rusting of the barrel, tried for a rabbit at three hundred yards. Young Roots blew a molehill at twenty paces into a dust cloud, burnt his fingers, and scorched his face; and the weapon having once displayed this strange disposition to flame back upon the shooter, was not subsequently fired.

One main source of excitement for us was "cheeking" people in vans and carts upon the Goudhurst road; and getting myself into a monstrous white mess in the chalk pits beyond the village, and catching yellow jaundice as a sequel to bathing stark naked with three other Adamites, old Ewart leading that function, in the rivulet across Hickson's meadows, are among my memorabilia. Those free imaginative afternoons! how much they were for us! how much they did for us! All streams came from the then undiscovered "sources of the Nile" in those days, all thickets were Indian jungles, and our best game, I say it with pride, I invented. I got it out of the Bladesover saloon. We found a wood where "Trespassing" was forbidden, and did the "Retreat of

the Ten Thousand" through it from end to end, cutting our way bravely through a host of nettle beds that barred our path, and not forgetting to weep and kneel when at last we emerged within sight of the High Road Sea. So we have burst at times, weeping and rejoicing, upon startled wayfarers. Usually I took the part of that distinguished general Xenophen--and please note the quantity of the o. I have all my classical names like that,--Socrates rhymes with Bates for me, and except when the bleak eye of some scholar warns me of his standards of judgment, I use those dear old mispronunciations still. The little splash into Latin made during my days as a chemist washed off nothing of the habit. Well,--if I met those great gentlemen of the past with their accents carelessly adjusted I did at least meet them alive, as an equal, and in a living tongue. Altogether my school might easily have been worse for me, and among other good things it gave me a friend who has lasted my life out.

This was Ewart, who is now a monumental artist at Woking, after many vicissitudes. Dear chap, how he did stick out of his clothes to be sure! He was a longlimbed lout, ridiculously tall beside my more youth full compactness, and, except that there was no black moustache under his nose blob, he had the same round knobby face as he has to-day, the same bright and active hazel brown eyes, the stare, the meditative moment, the insinuating reply. Surely no boy ever played the fool as Bob Ewart used to play it, no boy had a readier knack of mantling the world with wonder. Commonness vanished before Ewart, at his expository touch all things became memorable and rare. From him I first heard tell of love, but only after its barbs were already sticking in my heart. He was, I know now the bastard of that great improvident artist, Rickmann Ewart; he brought the light of a lax world that at least had not turned its back upon beauty, into the growing fermentation of my mind.

I won his heart by a version of Vathek, and after that we were

inseparable yarning friends. We merged our intellectual stock so completely that I wonder sometimes how much I did not become Ewart, how much Ewart is not vicariously and derivatively me.

VII

And then when I had newly passed my fourteenth birthday, came my tragic disgrace.

It was in my midsummer holidays that the thing happened, and it was through the Honourable Beatrice Normandy. She had "come into my life," as they say, before I was twelve.

She descended unexpectedly into a peaceful interlude that followed the annual going of those Three Great Women. She came into the old nursery upstairs, and every day she had tea with us in the housekeeper's room. She was eight, and she came with a nurse called Nannie; and to begin with, I did not like her at all.

Nobody liked this irruption into the downstairs rooms; the two "gave trouble,"--a dire offence; Nannie's sense of duty to her charge led to requests and demands that took my mother's breath away. Eggs at unusual times, the reboiling of milk, the rejection of an excellent milk pudding--not negotiated respectfully but dictated as of right. Nannie was a dark, longfeatured, taciturn woman in a grey dress; she had a furtive inflexibility of manner that finally dismayed and crushed and overcame. She conveyed she was "under orders"--like a Greek tragedy. She was that strange product of the old time, a devoted, trusted servant; she had, as it were, banked all her pride and will with the greater, more powerful people who employed her, in return for a life-long security of servitude--the bargain was nonetheless binding for being implicit. Finally they were to pension her, and she would die

the hated treasure of a boarding-house. She had built up in herself an enormous habit of reference to these upstairs people, she had curbed down all discordant murmurings of her soul, her very instincts were perverted or surrendered. She was sexless, her personal pride was all transferred, she mothered another woman's child with a hard, joyless devotion that was at least entirely compatible with a stoical separation. She treated us all as things that counted for nothing save to fetch and carry for her charge. But the Honourable Beatrice could condescend.

The queer chances of later years come between me and a distinctly separated memory of that childish face. When I think of Beatrice, I think of her as I came to know her at a later time, when at last I came to know her so well that indeed now I could draw her, and show a hundred little delicate things you would miss in looking at her. But even then I remember how I noted the infinite delicacy of her childish skin and the fine eyebrow, finer than the finest feather that ever one felt on the breast of a bird. She was one of those elfin, rather precocious little girls, quick coloured, with dark hair, naturally curling dusky hair that was sometimes astray over her eyes, and eyes that were sometimes impishly dark, and sometimes a clear brown yellow. And from the very outset, after a most cursory attention to Rabbits, she decided that the only really interesting thing at the tea-table was myself.

The elders talked in their formal dull way--telling Nannie the trite old things about the park and the village that they told every one, and Beatrice watched me across the table with a pitiless little curiosity that made me uncomfortable.

"Nannie," she said, pointing, and Nannie left a question of my mother's disregarded to attend to her; "is he a servant boy? "

"S-s-sh," said Nannie. "He's Master Ponderevo."

"Is he a servant boy?" repeated Beatrice.

"He's a schoolboy," said my mother.

"Then may I talk to him, Nannie?"

Nannie surveyed me with brutal inhumanity. "You mustn't talk too much," she said to her charge, and cut cake into fingers for her.

"No," she added decisively, as Beatrice made to speak.

Beatrice became malignant. Her eyes explored me with unjustifiable hostility. "He's got dirty hands," she said, stabbing at the forbidden fruit. "And there's a fray to his collar."

Then she gave herself up to cake with an appearance of entire forgetfulness of me that filled me with hate and a passionate desire to compel her to admire me.... And the next day before tea, I did for the first time in my life, freely, without command or any compulsion, wash my hands.

So our acquaintance began, and presently was deepened by a whim of hers. She had a cold and was kept indoors, and confronted Nannie suddenly with the alternative of being hopelessly naughty, which in her case involved a generous amount of screaming unsuitable for the ears of an elderly, shaky, rich aunt, or having me up to the nursery to play with her all the afternoon. Nannie came downstairs and borrowed me in a careworn manner; and I was handed over to the little creature as if I was some large variety of kitten. I had never had anything to do with a little girl before, I thought she was more beautiful and wonderful and bright than anything else could possibly be in life, and she found me the gentlest of slaves--though at the same time, as I

made evident, fairly strong. And Nannie was amazed to find the afternoon slip cheerfully and rapidly away. She praised my manners to Lady Drew and to my mother, who said she was glad to hear well of me, and after that I played with Beatrice several times. The toys she had remain in my memory still as great splendid things, gigantic to all my previous experience of toys, and we even went to the great doll's house on the nursery landing to play discreetly with that, the great doll's house that the Prince Regent had given Sir Harry Drew's first-born (who died at five, that was a not ineffectual model of Bladesover itself, and contained eighty-five dolls and had cost hundreds of pounds. I played under imperious direction with that toy of glory.

I went back to school when that holiday was over, dreaming of beautiful things, and got Ewart to talk to me of love; and I made a great story out of the doll's house, a story that, taken over into Ewart's hands, speedily grew to an island doll's city all our own.

One of the dolls, I privately decided, was like Beatrice.

One other holiday there was when I saw something of her--oddly enough my memory of that second holiday in which she played a part is vague--and then came a gap of a year, and then my disgrace.

VIII

Now I sit down to write my story and tell over again things in their order, I find for the first time how inconsecutive and irrational a thing the memory can be. One recalls acts and cannot recall motives; one recalls quite vividly moments that stand out inexplicably-- things adrift, joining on to nothing, leading nowhere. I think I must have seen Beatrice and her half-brother quite a number of times in my last holiday at Bladesover, but I

really cannot recall more than a little of the quality of the circumstances. That great crisis of my boyhood stands out very vividly as an effect, as a sort of cardinal thing for me, but when I look for details, particularly details that led up to the crisis--I cannot find them in any developing order at all. This halfbrother, Archie Garvell, was a new factor in the affair. I remember him clearly as a fair-haired, supercilious looking, weedily-lank boy, much taller than I, but I should imagine very little heavier, and that we hated each other by a sort of instinct from the beginning; and yet I cannot remember my first meeting with him at all.

Looking back into these past things--it is like rummaging in a neglected attic that has experienced the attentions of some whimsical robber--I cannot even account for the presence of these children at Bladesover. They were, I know, among the innumerable cousins of Lady Drew, and according to the theories of downstairs candidates for the ultimate possession of Bladesover. If they were, their candidature was unsuccessful. But that great place, with all its faded splendour, its fine furniture, its large traditions, was entirely at the old lady's disposition; and I am inclined to think it is true that she used this fact to torment and dominate a number of eligible people. Lord Osprey was among the number of these, and she showed these hospitalities to his motherless child and step-child, partly, no doubt, because he was poor, but quite as much, I nowadays imagine, in the dim hope of finding some affectionate or imaginative outcome of contact with them. Nannie had dropped out of the world this second time, and Beatrice was in the charge of an extremely amiable and ineffectual poor army-class young woman whose name I never knew. They were, I think, two remarkably illmanaged and enterprising children. I seem to remember too, that it was understood that I was not a fit companion for them, and that our meetings had to be as unostentatious as possible. It was Beatrice who insisted upon our meeting.

I am certain I knew quite a lot about love at fourteen and that I was quite as much in love with Beatrice then as any impassioned adult could be, and that Beatrice was, in her way, in love with me. It is part of the decent and useful pretences of our world that children of the age at which we were, think nothing, feel nothing, know nothing of love. It is wonderful what people the English are for keeping up pretences. But indeed I cannot avoid telling that Beatrice and I talked of love and kissed and embraced one another.

I recall something of one talk under the overhanging bushes of the shrubbery--I on the park side of the stone wall, and the lady of my worship a little inelegantly astride thereon. Inelegantly do I say? you should have seen the sweet imp as I remember her. Just her poise on the wall comes suddenly clear before me, and behind her the light various branches of the bushes of the shrubbery that my feet might not profane, and far away and high behind her, dim and stately, the cornice of the great facade of Bladesover rose against the dappled sky. Our talk must have been serious and business-like, for we were discussing my social position.

"I don't love Archie," she had said, apropos of nothing; and then in a whisper, leaning forward with the hair about her face, "I love YOU!"

But she had been a little pressing to have it clear that I was not and could not be a servant.

"You'll never be a servant--ever!"

I swore that very readily, and it is a vow I have kept by nature.

"What will you be?" said she.

I ran my mind hastily over the professions.

"Will you be a soldier?" she asked.

"And be bawled at by duffers? No fear!" said I. "Leave that to the plough-boys."

"But an officer? "

"I don't know," I said, evading a shameful difficulty.

"I'd rather go into the navy."

"Wouldn't you like to fight?"

"I'd like to fight," I said. "But a common soldier it's no honour to have to be told to fight and to be looked down upon while you do it, and how could I be an officer?"

"Couldn't you be?" she said, and looked at me doubtfully; and the spaces of the social system opened between us.

Then, as became a male of spirit, I took upon myself to brag and lie my way through this trouble. I said I was a poor man, and poor men went into the navy; that I "knew" mathematics, which no army officer did; and I claimed Nelson for an exemplar, and spoke very highly of my outlook upon blue water. "He loved Lady Hamilton," I said, "although she was a lady--and I will love you."

We were somewhere near that when the egregious governess became audible, calling "Beeee-atrice! Beeee-e-atrice!"

"Snifty beast!" said my lady, and tried to get on with the

conversation; but that governess made things impossible.

"Come here!" said my lady suddenly, holding out a grubby hand; and I went very close to her, and she put her little head down upon the wall until her black fog of hair tickled my cheek.

"You are my humble, faithful lover," she demanded in a whisper, her warm flushed face near touching mine, and her eyes very dark and lustrous.

"I am your humble, faithful lover," I whispered back.

And she put her arm about my head and put out her lips and we kissed, and boy though I was, I was all atremble. So we two kissed for the first time.

"Beeee-e-e-a-trice!" fearfully close.

My lady had vanished, with one wild kick of her black-stocking leg. A moment after, I heard her sustaining the reproaches of her governess, and explaining her failure to answer with an admirable lucidity and disingenuousness.

I felt it was unnecessary for me to be seen just then, and I vanished guiltily round the corner into the West Wood, and so to love-dreams and single-handed play, wandering along one of those meandering bracken valleys that varied Bladesover park. And that day and for many days that kiss upon my lips was a seal, and by night the seed of dreams.

Then I remember an expedition we made--she, I, and her half-brother--into those West Woods--they two were supposed to be playing in the shrubbery--and how we were Indians there, and made a wigwam out of a pile of beech logs, and how we stalked deer, crept near and watched rabbits feeding in a glade, and almost got

a squirrel. It was play seasoned with plentiful disputing between me and young Garvell, for each firmly insisted upon the leading roles, and only my wider reading--I had read ten stories to his one--gave me the ascendancy over him. Also I scored over him by knowing how to find the eagle in a bracken stem. And somehow--I don't remember what led to it at all--I and Beatrice, two hot and ruffled creatures, crept in among the tall bracken and hid from him. The great fronds rose above us, five feet or more, and as I had learnt how to wriggle through that undergrowth with the minimum of betrayal by tossing greenery above, I led the way. The ground under bracken is beautifully clear and faintly scented in warm weather; the stems come up black and then green; if you crawl flat, it is a tropical forest in miniature. I led the way and Beatrice crawled behind, and then as the green of the further glade opened before us, stopped. She crawled up to me, her hot little face came close to mine; once more she looked and breathed close to me, and suddenly she flung her arm about my neck and dragged me to earth beside her, and kissed me and kissed me again. We kissed, we embraced and kissed again, all without a word; we desisted, we stared and hesitated--then in a suddenly damped mood and a little perplexed at ourselves, crawled out, to be presently run down and caught in the tamest way by Archie.

That comes back very clearly to me, and other vague memories--I know old Hall and his gun, out shooting at jackdaws, came into our common experiences, but I don't remember how; and then at last, abruptly, our fight in the Warren stands out. The Warren, like most places in England that have that name, was not particularly a warren, it was a long slope of thorns and beeches through which a path ran, and made an alternative route to the downhill carriage road between Bladesover and Ropedean. I don't know how we three got there, but I have an uncertain fancy it was connected with a visit paid by the governess to the Ropedean vicarage people. But suddenly Archie and I, in discussing a game, fell into a dispute for Beatrice. I had made him the

fairest offer: I was to be a Spanish nobleman, she was to be my wife, and he was to be a tribe of Indians trying to carry her off. It seems to me a fairly attractive offer to a boy to be a whole tribe of Indians with a chance of such a booty. But Archie suddenly took offence.

"No," he said; "we can't have that!"

"Can't have what?"

"You can't be a gentleman, because you aren't. And you can't play Beatrice is your wife. It's--it's impertinent."

"But" I said, and looked at her.

Some earlier grudge in the day's affairs must have been in Archie's mind. "We let you play with us," said Archie; "but we can't have things like that."

"What rot!" said Beatrice. "He can if he likes."

But he carried his point. I let him carry it, and only began to grow angry three or four minutes later. Then we were still discussing play and disputing about another game. Nothing seemed right for all of us.

"We don't want you to play with us at all," said Archie.

"Yes, we do," said Beatrice.

"He drops his aitches like anything."

"No, 'e doesn't," said I, in the heat of the moment.

"There you go!" he cried. "E, he says. E! E! E!"

He pointed a finger at me. He had struck to the heart of my shame. I made the only possible reply by a rush at him. "Hello!" he cried, at my blackavised attack. He dropped back into an attitude that had some style in it, parried my blow, got back at my cheek, and laughed with surprise and relief at his own success. Whereupon I became a thing of murderous rage. He could box as well or better than I--he had yet to realise I knew anything of that at all--but I had fought once or twice to a finish with bare fists. I was used to inflicting and enduring savage hurting, and I doubt if he had ever fought. I hadn't fought ten seconds before I felt this softness in him, realised all that quality of modern upper-class England that never goes to the quick, that hedges about rules and those petty points of honour that are the ultimate comminution of honour, that claims credit for things demonstrably half done. He seemed to think that first hit of his and one or two others were going to matter, that I ought to give in when presently my lip bled and dripped blood upon my clothes. So before we had been at it a minute he had ceased to be aggressive except in momentary spurts, and I was knocking him about almost as I wanted to do; and demanding breathlessly and fiercely, after our school manner, whether he had had enough, not knowing that by his high code and his soft training it was equally impossible for him to either buck-up and beat me, or give in.

I have a very distinct impression of Beatrice dancing about us during the affair in a state of unladylike appreciation, but I was too preoccupied to hear much of what she was saying. But she certainly backed us both, and I am inclined to think now--it may be the disillusionment of my ripened years--whichever she thought was winning.

Then young Garvell, giving way before my slogging, stumbled and fell over a big flint, and I, still following the tradition of my

class and school, promptly flung myself on him to finish him. We were busy with each other on the ground when we became aware of a dreadful interruption.

"Shut up, you FOOL!" said Archie.

"Oh, Lady Drew!" I heard Beatrice cry. "They're fighting! They're fighting something awful!"

I looked over my shoulder. Archie's wish to get up became irresistible, and my resolve to go on with him vanished altogether.

I became aware of the two old ladies, presences of black and purple silk and fur and shining dark things; they had walked up through the Warren, while the horses took the hill easily, and so had come upon us. Beatrice had gone to them at once with an air of taking refuge, and stood beside and a little behind them. We both rose dejectedly. The two old ladies were evidently quite dreadfully shocked, and peering at us with their poor old eyes; and never had I seen such a tremblement in Lady Drew's lorgnettes.

"You've never been fighting?" said Lady Drew.

"You have been fighting."

"It wasn't proper fighting," snapped Archie, with accusing eyes on me.

"It's Mrs. Ponderevo's George!" said Miss Somerville, so adding a conviction for ingratitude to my evident sacrilege.

"How could he DARE?" cried Lady Drew, becoming very awful.

"He broke the rules" said Archie, sobbing for breath. "I slipped, and--he hit me while I was down. He knelt on me."

"How could you DARE?" said Lady Drew.

I produced an experienced handkerchief rolled up into a tight ball, and wiped the blood from my chin, but I offered no explanation of my daring. Among other things that prevented that, I was too short of breath.

"He didn't fight fair," sobbed Archie.

Beatrice, from behind the old ladies, regarded me intently and without hostility. I am inclined to think the modification of my face through the damage to my lip interested her. It became dimly apparent to my confused intelligence that I must not say these two had been playing with me. That would not be after the rules of their game. I resolved in this difficult situation upon a sulky silence, and to take whatever consequences might follow.

IX

The powers of justice in Bladesover made an extraordinary mess of my case.

I have regretfully to admit that the Honourable Beatrice Normandy did, at the age of ten, betray me, abandon me, and lie most abominably about me. She was, as a matter of fact, panic-stricken about me, conscience stricken too; she bolted from the very thought of my being her affianced lover and so forth, from the faintest memory of kissing; she was indeed altogether disgraceful and human in her betrayal. She and her half-brother lied in perfect concord, and I was presented as a wanton assailant of my social betters. They were waiting about in the Warren, when I came up and spoke to them, etc.

On the whole, I now perceive Lady Drew's decisions were, in the light of the evidence, reasonable and merciful.

They were conveyed to me by my mother, who was, I really believe, even more shocked by the grossness of my social insubordination than Lady Drew. She dilated on her ladyship's kindnesses to me, on the effrontery and wickedness of my procedure, and so came at last to the terms of my penance. "You must go up to young Mr. Garvell, and beg his pardon."

"I won't beg his pardon," I said, speaking for the first time.

My mother paused, incredulous.

I folded my arms on her table-cloth, and delivered my wicked little ultimatum. "I won't beg his pardon nohow," I said. "See?"

"Then you will have to go off to your uncle Frapp at Chatham."

"I don't care where I have to go or what I have to do, I won't beg his pardon," I said.

And I didn't.

After that I was one against the world. Perhaps in my mother's heart there lurked some pity for me, but she did not show it. She took the side of the young gentleman; she tried hard, she tried very hard, to make me say I was sorry I had struck him. Sorry!

I couldn't explain.

So I went into exile in the dog-cart to Redwood station, with

Jukes the coachman, coldly silent, driving me, and all my personal belongings in a small American cloth portmanteau behind.

I felt I had much to embitter me; the game had and the beginnings of fairness by any standards I knew.... But the thing that embittered me most was that the Honourable Beatrice Normandy should have repudiated and fled from me as though I was some sort of leper, and not even have taken a chance or so, to give me a good-bye. She might have done that anyhow! Supposing I had told on her! But the son of a servant counts as a servant. She had forgotten and now remembered.

I solaced myself with some extraordinary dream of coming back to Bladesover, stern, powerful, after the fashion of Coriolanus. I do not recall the details, but I have no doubt I displayed great magnanimity...

Well, anyhow I never said I was sorry for pounding young Garvell, and I am not sorry to this day.

CHAPTER THE SECOND

OF MY LAUNCH INTO THE WORLD AND THE LAST I SAW OF BLADESOVER

I

When I was thus banished from Bladesover House, as it was then thought for good and all, I was sent by my mother in a vindictive spirit, first to her cousin Nicodemus Frapp, and then, as a fully indentured apprentice, to my uncle Ponderevo.

I ran away from the care of my cousin Nicodemus back to Bladesover House.

My cousin Nicodemus Frapp was a baker in a back street--a slum rather--just off that miserable narrow mean high road that threads those exquisite beads, Rochester and Chatham. He was, I must admit, a shock to me, much dominated by a young, plump, prolific, malingering wife; a bent, slow-moving, unwilling dark man with flour in his hair and eyelashes, in the lines of his face and the seams of his coat. I've never had a chance to correct my early impression of him, and he still remains an almost dreadful memory, a sort of caricature of incompetent simplicity. As I remember him, indeed, he presented the servile tradition perfected. He had no pride in his person; fine clothes and dressing up wasn't "for the likes of" him, so that he got his wife, who was no artist at it, to cut his black hair at irregular intervals, and let his nails become disagreeable to the fastidious eye; he had no pride in his business nor any initiative; his only virtues were not doing certain things and hard work. "Your uncle," said my mother--all grown-up cousins were uncles by courtesy among the Victorian middle-class-- "isn't much to look at or talk to, but he's a Good Hard-Working Man." There was a sort of base honourableness about toil, however needless, in that system of inversion. Another point of honour was to rise at or before dawn, and then laboriously muddle about.

It was very distinctly impressed on my mind that the Good Hard-Working Man would have thought it "fal-lalish" to own a pocket handkerchief. Poor old Frapp--dirty and crushed by, product of, Bladesover's magnificence! He made no fight against the world at all, he was floundering in small debts that were not so small but that finally they overwhelmed him, whenever there was occasion for any exertion his wife fell back upon pains and her "condition," and God sent them many children, most of whom died, and so, by their coming and going, gave a double exercise in the virtues of submission.

Resignation to God's will was the common device of these people in the face of every duty and every emergency. There were no books in the house; I doubt if either of them had retained the capacity for reading consecutively for more than a minute or so, and it was with amazement that day after day, over and above stale bread, one beheld food and again more food amidst the litter that held permanent session on the living-room table.

One might have doubted if either of them felt discomfort in this dusty darkness of existence, if it was not that they did visibly seek consolation. They sought this and found it of a Sunday, not in strong drink and raving, but in imaginary draughts of blood. They met with twenty or thirty other darkened and unclean people, all dressed in dingy colours that would not show the dirt, in a little brick-built chapel equipped with a spavined roarer of a harmonium, and there solaced their minds on the thought that all that was fair and free in life, all that struggled, all that planned and made, all pride and beauty and honour, all fine and enjoyable things, were irrevocably damned to everlasting torments. They were the self-appointed confidants of God's mockery of his own creation. So at any rate they stick in my mind. Vaguer, and yet hardly less agreeable than this cosmic jest, this coming "Yah, clever!" and general serving out and "showing up" of the lucky, the bold, and the cheerful, was their own predestination to Glory.

"There is a Fountain, filled with Blood
Drawn from Emmanuel's Veins,"

so they sang. I hear the drone and wheeze of that hymn now. I hated them with the bitter uncharitable condemnation of boyhood, and a twinge of that hate comes back to me. As I write the words, the sounds and then the scene return, these obscure, undignified people, a fat woman with asthma, an old Welsh milk-seller with a tumour on his bald head, who was the

intellectual leader of the sect, a huge-voiced haberdasher with a big black beard, a white-faced, extraordinarily pregnant woman, his wife, a spectacled rate collector with a bent back.... I hear the talk about souls, the strange battered old phrases that were coined ages ago in the seaports of the sun-dry Levant, of balm of Gilead and manna in the desert, of gourds that give shade and water in a thirsty land; I recall again the way in which at the conclusion of the service the talk remained pious in form but became medical in substance, and how the women got together for obstetric whisperings. I, as a boy, did not matter, and might overhear.

If Bladesover is my key for the explanation of England, I think my invincible persuasion that I understand Russia was engendered by the circle of Uncle Frapp.

I slept in a dingy sheeted bed with the two elder survivors of Frapp fecundity, and spent my week days in helping in the laborious disorder of the shop and bakehouse, in incidental deliveries of bread and so forth, and in parrying the probings of my uncle into my relations with the Blood, and his confidential explanations that ten shillings a week--which was what my mother paid him--was not enough to cover my accommodation. He was very anxious to keep that, but also he wanted more. There were neither books nor any seat nor corner in that house where reading was possible, no newspaper ever brought the clash of worldly things into its heavenward seclusion; horror of it all grew in me daily, and whenever I could I escaped into the streets and tramped about Chatham. The news shops appealed to me particularly. One saw there smudgy illustrated sheets, the Police News in particular, in which vilely drawn pictures brought home to the dullest intelligence an interminable succession of squalid crimes, women murdered and put into boxes, buried under floors, old men bludgeoned at midnight by robbers, people thrust suddenly out of trains, happy lovers shot, vitrioled and so forth

by rivals. I got my first glimpse of the life of pleasure in foully drawn pictures of "police raids" on this and that. Interspersed with these sheets were others in which Sloper, the urban John Bull, had his fling with gin bottle and obese umbrella, or the kindly empty faces of the Royal Family appeared and reappeared, visiting this, opening that, getting married, getting offspring, lying in state, doing everything but anything, a wonderful, good-meaning, impenetrable race apart.

I have never revisited Chatham; the impression it has left on my mind is one of squalid compression, unlit by any gleam of a maturer charity. All its effects arranged themselves as antithetical to the Bladesover effects. They confirmed and intensified all that Bladesover suggested. Bladesover declared itself to be the land, to be essentially England; I have already told how its airy spaciousness, its wide dignity, seemed to thrust village, church, and vicarage into corners, into a secondary and conditional significance. Here one gathered the corollary of that. Since the whole wide country of Kent was made up of contiguous Bladesovers and for the gentlefolk, the surplus of population, all who were not good tenants nor good labourers, Church of England, submissive and respectful, were necessarily thrust together, jostled out of sight, to fester as they might in this place that had the colours and even the smells of a well-packed dustbin. They should be grateful even for that; that, one felt, was the theory of it all.

And I loafed about this wilderness of crowded dinginess, with young, receptive, wide-open eyes, and through the blessing (or curse) of some fairy godmother of mine, asking and asking again: "But after all, WHY--"

I wandered up through Rochester once, and had a glimpse of the Stour valley above the town, all horrible with cement works and foully smoking chimneys and rows of workmen's cottages, minute,

ugly, uncomfortable, and grimy. So I had my first intimation of how industrialism must live in a landlord's land. I spent some hours, too, in the streets that give upon the river, drawn by the spell of the sea. But I saw barges and ships stripped of magic and mostly devoted to cement, ice, timber, and coal. The sailors looked to me gross and slovenly men, and the shipping struck me as clumsy, ugly, old, and dirty. I discovered that most sails don't fit the ships that hoist them, and that there may be as pitiful and squalid a display of poverty with a vessel as with a man. When I saw colliers unloading, watched the workers in the hold filling up silly little sacks and the succession of blackened, half-naked men that ran to and fro with these along a plank over a thirty-foot drop into filth and mud, I was first seized with admiration of their courage and toughness and then, "But after all, WHY--?" and the stupid ugliness of all this waste of muscle and endurance came home to me. Among other things it obviously wasted and deteriorated the coal.... And I had imagined great things of the sea!

Well, anyhow, for a time that vocation was stilled.

But such impressions came into my leisure, and of that I had no excess. Most of my time was spent doing things for Uncle Frapp, and my evenings and nights perforce in the company of the two eldest of my cousins. He was errand boy at an oil shop and fervently pious, and of him I saw nothing until the evening except at meals; the other was enjoying the midsummer holidays without any great elation; a singularly thin and abject, stunted creature he was, whose chief liveliness was to pretend to be a monkey, and who I am now convinced had some secret disease that drained his vitality away. If I met him now I should think him a pitiful little creature and be extremely sorry for him. Then I felt only a wondering aversion. He sniffed horribly, he was tired out by a couple of miles of loafing, he never started any conversation, and he seemed to prefer his own company to mine.

His mother, poor woman, said he was the "thoughtful one."

Serious trouble came suddenly out of a conversation we held in bed one night. Some particularly pious phrase of my elder cousin's irritated me extremely, and I avowed outright my entire disbelief in the whole scheme of revealed religion. I had never said a word about my doubts to any one before, except to Ewart who had first evolved them. I had never settled my doubts until at this moment when I spoke. But it came to me then that the whole scheme of salvation of the Frappes was not simply doubtful, but impossible. I fired this discovery out into the darkness with the greatest promptitude.

My abrupt denials certainly scared my cousin amazingly.

At first they could not understand what I was saying, and when they did I fully believe they expected an instant answer in thunderbolts and flames. They gave me more room in the bed forthwith, and then the elder sat up and expressed his sense of my awfulness. I was already a little frightened at my temerity, but when he asked me categorically to unsay what I had said, what could I do but confirm my repudiation?

"There's no hell," I said, "and no eternal punishment. No God would be such a fool as that."

My elder cousin cried aloud in horror, and the younger lay scared, but listening. "Then you mean," said my elder cousin, when at last he could bring himself to argue, "you might do just as you liked?"

"If you were cad enough," said I.

Our little voices went on interminably, and at one stage my cousin got out of bed and made his brother do likewise, and knelt

in the night dimness and prayed at me. That I found trying, but I held out valiantly. "Forgive him," said my cousin, "he knows not what he sayeth."

"You can pray if you like," I said, "but if you're going to cheek me in your prayers I draw the line."

The last I remember of that great discussion was my cousin deploring the fact that he "should ever sleep in the same bed with an Infidel!"

The next day he astonished me by telling the whole business to his father. This was quite outside all my codes. Uncle Nicodemus sprang it upon me at the midday meal.

"You been sayin' queer things, George," he said abruptly. "You better mind what you're saying."

"What did he say, father?" said Mrs. Frapp.

"Things I couldn't repeat," said he.

"What things?" I asked hotly.

"Ask 'IM," said my uncle, pointing with his knife to his informant, and making me realise the nature of my offence. My aunt looked at the witness. "Not--?" she framed a question.

"Wuss," said my uncle. "Blarsphemy."

My aunt couldn't touch another mouthful. I was already a little troubled in my conscience by my daring, and now I began to feel the black enormity of the course upon which I had embarked.

"I was only talking sense," I said.

I had a still more dreadful moment when presently I met my cousin in the brick alley behind the yard, that led back to his grocer's shop.

"You sneak!" I said, and smacked his face hard forthwith. "Now then," said I.

He started back, astonished and alarmed. His eyes met mine, and I saw a sudden gleam of resolution. He turned his other cheek to me.

"It 'it," he said. "It 'it. I'LL forgive you."

I felt I had never encountered a more detestable way of evading a licking. I shoved him against the wall and left him there, forgiving me, and went back into the house.

"You better not speak to your cousins, George," said my aunt, "till you're in a better state of mind."

I became an outcast forthwith. At supper that night a gloomy silence was broken by my cousin saying

"E 'it me for telling you, and I turned the other cheek, muvver."

"E's got the evil one be'ind 'im now, a ridin' on 'is back," said my aunt, to the grave discomfort of the eldest girl, who sat beside me.

After supper my uncle, in a few ill-chosen words, prayed me to repent before I slept.

"Suppose you was took in your sleep, George," he said; "where'd

you be then? You jest think of that me boy." By this time I was thoroughly miserable and frightened, and this suggestion unnerved me dreadfully but I kept up an impenitent front. "To wake in 'ell," said Uncle Nicodemus, in gentle tones. "You don't want to wake in 'ell, George, burnin' and screamin' for ever, do you? You wouldn't like that?"

He tried very hard to get me to "jest 'ave a look at the bake'ouse fire" before I retired. "It might move you," he said.

I was awake longest that night. My cousins slept, the sleep of faith on either side of me. I decided I would whisper my prayers, and stopped midway because I was ashamed, and perhaps also because I had an idea one didn't square God like that.

"No," I said, with a sudden confidence, "damn me if you're coward enough.... But you're not. No! You couldn't be!"

I woke my cousins up with emphatic digs, and told them as much, triumphantly, and went very peacefully to sleep with my act of faith accomplished.

I slept not only through that night, but for all my nights since then. So far as any fear of Divine injustice goes, I sleep soundly, and shall, I know, to the end of things. That declaration was an epoch in my spiritual life.

II

But I didn't expect to have the whole meeting on Sunday turned on to me.

It was. It all comes back to me, that convergence of attention, even the faint leathery smell of its atmosphere returns, and the coarse feel of my aunt's black dress beside me in contact with my

hand. I see again the old Welsh milkman "wrestling" with me, they all wrestled with me, by prayer or exhortation. And I was holding out stoutly, though convinced now by the contagion of their universal conviction that by doing so I was certainly and hopelessly damned. I felt that they were right, that God was probably like them, and that on the whole it didn't matter. And to simplify the business thoroughly I had declared I didn't believe anything at all. They confuted me by texts from Scripture which I now perceive was an illegitimate method of reply. When I got home, still impenitent and eternally lost and secretly very lonely and miserable and alarmed, Uncle Nicodemus docked my Sunday pudding.

One person only spoke to me like a human being on that day of wrath, and that was the younger Frapp. He came up to me in the afternoon while I was confined upstairs with a Bible and my own thoughts.

"Ello," he said, and fretted about.

"D'you mean to say there isn't--no one," he said, funkng the word.

"No one?"

"No one watching yer--always."

"Why should there be?" I asked.

"You can't 'elp thoughts," said my cousin, "anyhow. You mean--" He stopped hovering. "I s'pose I oughtn't to be talking to you."

He hesitated and flitted away with a guilty back glance over his shoulder....

The following week made life quite intolerable for me; these people forced me at last into an Atheism that terrified me. When I learnt that next Sunday the wrestling was to be resumed, my courage failed me altogether.

I happened upon a map of Kent in a stationer's window on Saturday, and that set me thinking of one form of release. I studied it intently for half an hour perhaps, on Saturday night, got a route list of villages well fixed in my memory, and got up and started for Bladesover about five on Sunday morning while my two bed mates were still fast asleep.

III

I remember something, but not so much of it as I should like to recall, of my long tramp to Bladesover House. The distance from Chatham is almost exactly seventeen miles, and it took me until nearly one. It was very interesting and I do not think I was very fatigued, though I got rather pinched by one boot.

The morning must have been very clear, because I remember that near Itchinstow Hall I looked back and saw the estuary of the Thames, that river that has since played so large a part in my life. But at the time I did not know it was the Thames, I thought this great expanse of mud flats and water was the sea, which I had never yet seen nearly. And out upon it stood ships, sailing ships and a steamer or so, going up to London or down out into the great seas of the world. I stood for a long time watching these and thinking whether after all I should not have done better to have run away to sea.

The nearer I drew to Bladesover, the more doubtful I grew of the duality of my reception, and the more I regretted that alternative. I suppose it was the dirty clumsiness of the shipping I had seen nearly, that put me out of mind of that. I

took a short cut through the Warren across the corner of the main park to intercept the people from the church. I wanted to avoid meeting any one before I met my mother, and so I went to a place where the path passed between banks, and without exactly hiding, stood up among the bushes. This place among other advantages eliminated any chance of seeing Lady Drew, who would drive round by the carriage road.

Standing up to waylay in this fashion I had a queer feeling of brigandage, as though I was some intrusive sort of bandit among these orderly things. It is the first time I remember having that outlaw feeling distinctly, a feeling that has played a large part in my subsequent life. I felt there existed no place for me that I had to drive myself in.

Presently, down the hill, the servants appeared, straggling by twos and threes, first some of the garden people and the butler's wife with them, then the two laundry maids, odd inseparable old creatures, then the first footman talking to the butler's little girl, and at last, walking grave and breathless beside old Ann and Miss Fison, the black figure of my mother.

My boyish mind suggested the adoption of a playful form of appearance. "Coo-ee, mother" said I, coming out against the sky, "Coo-ee!"

My mother looked up, went very white, and put her hand to her bosom.

I suppose there was a fearful fuss about me. And of course I was quite unable to explain my reappearance. But I held out stoutly, "I won't go back to Chatham; I'll drown myself first." The next day my mother carried me off to Wimblehurst, took me fiercely and aggressively to an uncle I had never heard of before, near though the place was to us. She gave me no word

as to what was to happen, and I was too subdued by her manifest wrath and humiliation at my last misdemeanour to demand information. I don't for one moment think Lady Drew was "nice" about me. The finality of my banishment was endorsed and underlined and stamped home. I wished very much now that I had run away to sea, in spite of the coal dust and squalour Rochester had revealed to me. Perhaps over seas one came to different lands.

IV

I do not remember much of my journey to Wimblesbury with my mother except the image of her as sitting bolt upright, as rather disdainful of the third-class carriage in which we traveled, and how she looked away from me out of the window when she spoke of my uncle. "I have not seen your uncle," she said, "since he was a boy...." She added grudgingly, "Then he was supposed to be clever."

She took little interest in such qualities as cleverness.

"He married about three years ago, and set up for himself in Wimblesbury.... So I suppose she had some money."

She mused on scenes she had long dismissed from her mind. "Teddy," she said at last in the tone of one who has been feeling in the dark and finds. "He was called Teddy... about your age.... Now he must be twenty-six or seven."

I thought of my uncle as Teddy directly I saw him; there was something in his personal appearance that in the light of that memory phrased itself at once as Teddiness--a certain Teddidity. To describe it in and other terms is more difficult. It is nimbleness without grace, and alertness without intelligence. He

whisked out of his shop upon the pavement, a short figure in grey and wearing grey carpet slippers; one had a sense of a young fattish face behind gilt glasses, wiry hair that stuck up and forward over the forehead, an irregular nose that had its aquiline moments, and that the body betrayed an equatorial laxity, an incipient "bow window" as the image goes. He jerked out of the shop, came to a stand on the pavement outside, regarded something in the window with infinite appreciation, stroked his chin, and, as abruptly, shot sideways into the door again, charging through it as it were behind an extended hand.

"That must be him," said my mother, catching at her breath.

We came past the window whose contents I was presently to know by heart, a very ordinary chemist's window except that there was a frictional electrical machine, an air pump and two or three tripods and retorts replacing the customary blue, yellow, and red bottles above. There was a plaster of Paris horse to indicate veterinary medicines among these breakables, and below were scent packets and diffusers and sponges and soda-water syphons and such-like things. Only in the middle there was a rubricated card, very neatly painted by hand, with these words--

Buy Ponderevo's Cough Linctus NOW.

NOW!

WHY?

Twopence Cheaper than in Winter.

You Store apples! why not the Medicine

You are Bound to Need?

in which appeal I was to recognise presently my uncle's distinctive note.

My uncle's face appeared above a card of infant's comforters in the glass pane of the door. I perceived his eyes were brown, and

that his glasses creased his nose. It was manifest he did not know us from Adam. A stare of scrutiny allowed an expression of commercial deference to appear in front of it, and my uncle flung open the door.

"You don't know me?" panted my mother.

My uncle would not own he did not, but his curiosity was manifest. My mother sat down on one of the little chairs before the soap and patent medicine-piled counter, and her lips opened and closed.

"A glass of water, madam," said my uncle, waved his hand in a sort of curve and shot away.

My mother drank the water and spoke. "That boy," she said, "takes after his father. He grows more like him every day.... And so I have brought him to you."

"His father, madam?"

"George."

For a moment the chemist was still at a loss. He stood behind the counter with the glass my mother had returned to him in his hand. Then comprehension grew.

"By Gosh!" he said. "Lord!" he cried. His glasses fell off. He disappeared replacing them, behind a pile of boxed-up bottles of blood mixture. "Eleven thousand virgins!" I heard him cry. The glass was banged down. "O-ri-ental Gums!"

He shot away out of the shop through some masked door. One heard his voice. "Susan! Susan!"

Then he reappeared with an extended hand. "Well, how are you?" he said. "I was never so surprised in my life. Fancy!... You!"

He shook my mother's impassive hand and then mine very warmly holding his glasses on with his left forefinger.

"Come right in!" he cried--"come right in! Better late than never!" and led the way into the parlour behind the shop.

After Bladesover that apartment struck me as stuffy and petty, but it was very comfortable in comparison with the Frapp living-room. It had a faint, disintegrating smell of meals about it, and my most immediate impression was of the remarkable fact that something was hung about or wrapped round or draped over everything. There was bright-patterned muslin round the gas-bracket in the middle of the room, round the mirror over the mantel, stuff with ball-fringe along the mantel and casing in the fireplace,--I first saw ball-fringe here--and even the lamp on the little bureau wore a shade like a large muslin hat. The table-cloth had ball-fringe and so had the window curtains, and the carpet was a bed of roses. There were little cupboards on either side of the fireplace, and in the recesses, ill-made shelves packed with books, and enriched with pinked American cloth. There was a dictionary lying face downward on the table, and the open bureau was littered with foolscap paper and the evidences of recently abandoned toil. My eye caught "The Ponderevo Patent Flat, a Machine you can Live in," written in large firm letters. My uncle opened a little door like a cupboard door in the corner of this room, and revealed the narrowest twist of staircase I had ever set eyes upon. "Susan!" he bawled again. "Wantje. Some one to see you. Surprisin'."

There came an inaudible reply, and a sudden loud bump over our heads as of some article of domestic utility pettishly flung aside, then the cautious steps of someone descending the twist,

and then my aunt appeared in the doorway with her hand upon the jamb.

"It's Aunt Ponderevo," cried my uncle. "George's wife--and she's brought over her son!" His eye roamed about the room. He darted to the bureau with a sudden impulse, and turned the sheet about the patent flat face down. Then he waved his glasses at us, "You know, Susan, my elder brother George. I told you about 'im lots of times."

He fretted across to the hearthrug and took up a position there, replaced his glasses and coughed.

My aunt Susan seemed to be taking it in. She was then rather a pretty slender woman of twenty-three or four, I suppose, and I remember being struck by the blueness of her eyes and the clear freshness of her complexion. She had little features, a button nose, a pretty chin and a long graceful neck that stuck out of her pale blue cotton morning dress. There was a look of half-assumed perplexity on her face, a little quizzical wrinkle of the brow that suggested a faintly amused attempt to follow my uncle's mental operations, a vain attempt and a certain hopelessness that had in succession become habitual. She seemed to be saying, "Oh Lord! What's he giving me THIS time?" And as came to know her better I detected, as a complication of her effort of apprehension, a subsidiary riddle to "What's he giving me?" and that was--to borrow a phrase from my schoolboy language "Is it keeps?" She looked at my mother and me, and back to her husband again.

"You know," he said. "George."

"Well," she said to my mother, descending the last three steps of the staircase and holding out her hand! "you're welcome. Though it's a surprise.... I can't ask you to HAVE anything, I'm

afraid, for there isn't anything in the house." She smiled, and looked at her husband banteringly. "Unless he makes up something with his old chemicals, which he's quite equal to doing."

My mother shook hands stiffly, and told me to kiss my aunt....

"Well, let's all sit down," said my uncle, suddenly whistling through his clenched teeth, and briskly rubbing his hands together. He put up a chair for my mother, raised the blind of the little window, lowered it again, and returned to his hearthrug. "I'm sure," he said, as one who decides, "I'm very glad to see you."

V

As they talked I gave my attention pretty exclusively to my uncle.

I noted him in great detail. I remember now his partially unbuttoned waistcoat, as though something had occurred to distract him as he did it up, and a little cut upon his chin. I liked a certain humour in his eyes. I watched, too, with the fascination that things have for an observant boy, the play of his lips--they were a little oblique, and there was something "slipshod," if one may strain a word so far, about his mouth, so that he lisped and sibilated ever and again and the coming and going of a curious expression, triumphant in quality it was, upon his face as he talked. He fingered his glasses, which did not seem to fit his nose, fretted with things in his waistcoat pockets or put his hands behind him, looked over our heads, and ever and again rose to his toes and dropped back on his heels. He had a way of drawing air in at times through his teeth that gave a whispering zest to his speech. It's a sound I can only represent as a soft *Zzzz*.

He did most of the talking. My mother repeated what she had already said in the shop, "I have brought George over to you," and then desisted for a time from the real business in hand. "You find this a comfortable house?" she asked; and this being affirmed: "It looks--very convenient.... Not too big to be a trouble--no. You like Wimblehurst, I suppose?"

My uncle retorted with some inquiries about the great people of Bladesover, and my mother answered in the character of a personal friend of Lady Drew's. The talk hung for a time, and then my uncle embarked upon a dissertation upon Wimblehurst.

"This place," he began, "isn't of course quite the place I ought to be in."

My mother nodded as though she had expected that.

"It gives me no Scope," he went on. "It's dead-and-alive. Nothing happens."

"He's always wanting something to happen," said my aunt Susan. "Some day he'll get a shower of things and they'll be too much for him."

"Not they," said my uncle, buoyantly.

"Do you find business--slack?" asked my mother.

"Oh! one rubs along. But there's no Development--no growth. They just come along here and buy pills when they want 'em--and a horseball or such. They've got to be ill before there's a prescription. That sort they are. You can't get 'em to launch out, you can't get 'em to take up anything new. For instance, I've been trying lately--induce them to buy their medicines in advance, and in larger quantities. But they won't look for it!

Then I tried to float a little notion of mine, sort of an insurance scheme for colds; you pay so much a week, and when you've got a cold you get a bottle of Cough Linctus so long as you can produce a substantial sniff. See? But Lord! they've no capacity for ideas, they don't catch on; no Jump about the place, no Life. Live!--they trickle, and what one has to do here is to trickle too-- Zzzz."

"Ah!" said my mother.

"It doesn't suit me," said my uncle. "I'm the cascading sort."

"George was that," said my mother after a pondering moment.

My aunt Susan took up the parable with an affectionate glance at her husband.

"He's always trying to make his old business jump," she said.

"Always putting fresh cards in the window, or getting up to something. You'd hardly believe. It makes ME jump sometimes."

"But it does no good," said my uncle.

"It does no good," said his wife. "It's not his miloo..."

Presently they came upon a wide pause.

From the beginning of their conversation there had been the promise of this pause, and I pricked my ears. I knew perfectly what was bound to come; they were going to talk of my father. I was enormously strengthened in my persuasion when I found my mother's eyes resting thoughtfully upon me in the silence, and then my uncle looked at me and then my aunt. I struggled unavailingly to produce an expression of meek stupidity.

"I think," said my uncle, "that George will find it more amusing to have a turn in the market-place than to sit here talking with us. There's a pair of stocks there, George--very interesting. Old-fashioned stocks."

"I don't mind sitting here," I said.

My uncle rose and in the most friendly way led me through the shop. He stood on his doorstep and jerked amiable directions to me.

"Ain't it sleepy, George, eh? There's the butcher's dog over there, asleep in the road-half an hour from midday! If the last Trump sounded I don't believe it would wake. Nobody would wake! The chaps up there in the churchyard--they'd just turn over and say: 'Naar--you don't catch us, you don't! See?'.... Well, you'll find the stocks just round that corner."

He watched me out of sight.

So I never heard what they said about my father after all.

VI

When I returned, my uncle had in some remarkable way become larger and central. "Tha'chu, George?" he cried, when the shop-door bell sounded. "Come right through"; and I found him, as it were, in the chairman's place before the draped grate.

The three of them regarded me.

"We have been talking of making you a chemist, George," said my uncle.

My mother looked at me. "I had hoped," she said, "that Lady Drew

would have done something for him--" She stopped.

"In what way?" said my uncle.

"She might have spoken to some one, got him into something perhaps...." She had the servant's invincible persuasion that all good things are done by patronage.

"He is not the sort of boy for whom things are done," she added, dismissing these dreams. "He doesn't accommodate himself. When he thinks Lady Drew wishes a thing, he seems not to wish it. Towards Mr. Redgrave, too, he has been--disrespectful--he is like his father."

"Who's Mr. Redgrave?"

"The Vicar."

"A bit independent?" said my uncle, briskly.

"Disobedient," said my mother. "He has no idea of his place. He seems to think he can get on by slighting people and flouting them. He'll learn perhaps before it is too late."

My uncle stroked his cut chin and me. "Have you learnt any Latin?" he asked abruptly.

I said I had not.

"He'll have to learn a little Latin," he explained to my mother, "to qualify. H'm. He could go down to the chap at the grammar school here--it's just been routed into existence again by the Charity Commissioners and have lessons."

"What, me learn Latin!" I cried, with emotion.

"A little," he said.

"I've always wanted" I said and; "LATIN!"

I had long been obsessed by the idea that having no Latin was a disadvantage in the world, and Archie Garvell had driven the point of this pretty earnestly home. The literature I had read at Bladesover had all tended that way. Latin had had a quality of emancipation for me that I find it difficult to convey. And suddenly, when I had supposed all learning was at an end for me, I heard this!

"It's no good to you, of course," said my uncle, "except to pass exams with, but there you are!"

"You'll have to learn Latin because you have to learn Latin," said my mother, "not because you want to. And afterwards you will have to learn all sorts of other things...."

The idea that I was to go on learning, that to read and master the contents of books was still to be justifiable as a duty, overwhelmed all other facts. I had had it rather clear in my mind for some weeks that all that kind of opportunity might close to me for ever. I began to take a lively interest in this new project.

"Then shall I live here?" I asked, "with you, and study... as well as work in the shop?"

"That's the way of it," said my uncle.

I parted from my mother that day in a dream, so sudden and important was this new aspect of things to me. I was to learn Latin! Now that the humiliation of my failure at Bladesover was

past for her, now that she had a little got over her first intense repugnance at this resort to my uncle and contrived something that seemed like a possible provision for my future, the tenderness natural to a parting far more significant than any of our previous partings crept into her manner.

She sat in the train to return, I remember, and I stood at the open door of her compartment, and neither of us knew how soon we should cease for ever to be a trouble to one another.

"You must be a good boy, George," she said. "You must learn.... And you mustn't set yourself up against those who are above you and better than you.... Or envy them."

"No, mother," I said.

I promised carelessly. Her eyes were fixed upon me. I was wondering whether I could by any means begin Latin that night.

Something touched her heart then, some thought, some memory; perhaps some premonition.... The solitary porter began slamming carriage doors.

"George" she said hastily, almost shamefully, "kiss me!"

I stepped up into her compartment as she bent downward.

She caught me in her arms quite eagerly, she pressed me to her--a strange thing for her to do. I perceived her eyes were extraordinarily bright, and then this brightness burst along the lower lids and rolled down her cheeks.

For the first and last time in my life I saw my mother's tears. Then she had gone, leaving me discomfited and perplexed, forgetting for a time even that I was to learn Latin, thinking of

my mother as of something new and strange.

The thing recurred though I sought to dismiss it, it stuck itself into my memory against the day of fuller understanding. Poor, proud, habitual, sternly narrow soul! poor difficult and misunderstanding son! it was the first time that ever it dawned upon me that my mother also might perhaps feel.

VII

My mother died suddenly and, it was thought by Lady Drew, inconsiderately, the following spring. Her ladyship instantly fled to Folkestone with Miss Somerville and Fison, until the funeral should be over and my mother's successor installed.

My uncle took me over to the funeral. I remember there was a sort of prolonged crisis in the days preceding this because, directly he heard of my loss, he had sent a pair of check trousers to the Judkins people in London to be dyed black, and they did not come back in time. He became very excited on the third day, and sent a number of increasingly fiery telegrams without any result whatever, and succumbed next morning with a very ill grace to my aunt Susan's insistence upon the resources of his dress-suit. In my memory those black legs of his, in a particularly thin and shiny black cloth--for evidently his dress-suit dated from adolescent and slenderer days--straddle like the Colossus of Rhodes over my approach to my mother's funeral. Moreover, I was inconvenienced and distracted by a silk hat he had bought me, my first silk hat, much ennobled, as his was also, by a deep mourning band.

I remember, but rather indistinctly, my mother's white paneled housekeeper's room and the touch of oddness about it that she was not there, and the various familiar faces made strange by black, and I seem to recall the exaggerated self-consciousness that

arose out of their focussed attention. No doubt the sense of the new silk hat came and went and came again in my emotional chaos. Then something comes out clear and sorrowful, rises out clear and sheer from among all these rather base and inconsequent things, and once again I walk before all the other mourners close behind her coffin as it is carried along the churchyard path to her grave, with the old vicar's slow voice saying regretfully and unconvincingly above me, triumphant solemn things.

"I am the resurrection and the life, saith the Lord; he that believeth in me, though he were dead, yet shall he live: and whosoever liveth and believeth in me shall never die."

Never die! The day was a high and glorious morning in spring, and all the trees were budding and bursting into green. Everywhere there were blossoms and flowers; the pear trees and cherry trees in the sexton's garden were sunlit snow, there were nodding daffodils and early tulips in the graveyard beds, great multitudes of daisies, and everywhere the birds seemed singing. And in the middle was the brown coffin end, tilting on men's shoulders and half occluded by the vicar's Oxford hood.

And so we came to my mother's waiting grave.

For a time I was very observant, watching the coffin lowered, hearing the words of the ritual. It seemed a very curious business altogether.

Suddenly as the service drew to its end, I felt something had still to be said which had not been said, realised that she had withdrawn in silence, neither forgiving me nor hearing from me--those now lost assurances. Suddenly I knew I had not understood. Suddenly I saw her tenderly; remembered not so much tender or kindly things of her as her crossed wishes and the ways in which I had thwarted her. Surprisingly I realised that

behind all her hardness and severity she had loved me, that I was the only thing she had ever loved and that until this moment I had never loved her. And now she was there and deaf and blind to me, pitifully defeated in her designs for me, covered from me so that she could not know....

I dug my nails into the palms of my hands, I set my teeth, but tears blinded me, sobs would have choked me had speech been required of me. The old vicar read on, there came a mumbled response--and so on to the end. I wept as it were internally, and only when we had come out of the churchyard could I think and speak calmly again.

Stamped across this memory are the little black figures of my uncle and Rabbits, telling Avebury, the sexton and undertaker, that "it had all passed off very well--very well indeed."

VIII

That is the last I shall tell of Bladesover. The dropscene falls on that, and it comes no more as an actual presence into this novel. I did indeed go back there once again, but under circumstances quite immaterial to my story. But in a sense Bladesover has never left me; it is, as I said at the outset, one of those dominant explanatory impressions that make the framework of my mind. Bladesover illuminates England; it has become all that is spacious, dignified pretentious, and truly conservative in English life. It is my social datum. That is why I have drawn it here on so large a scale.

When I came back at last to the real Bladesover on an inconsequent visit, everything was far smaller than I could have supposed possible. It was as though everything had shivered and shrivelled a little at the Lichtenstein touch. The harp was still in the saloon, but there was a different grand piano with a

painted lid and a metrostyle pianola, and an extraordinary quantity of artistic litter and bric-a-brac scattered about. There was the trail of the Bond Street showroom over it all. The furniture was still under chintz, but it wasn't the same sort of chintz although it pretended to be, and the lustre-dangling chandeliers had passed away. Lady Lichtenstein's books replaced the brown volumes I had browsed among--they were mostly presentation copies of contemporary novels and the National Review and the Empire Review, and the Nineteenth Century and after jostled current books on the tables--English new books in gaudy catchpenny "artistic" covers, French and Italian novels in yellow, German art handbooks of almost incredible ugliness. There were abundant evidences that her ladyship was playing with the Keltic renaissance, and a great number of ugly cats made of china--she "collected" china and stoneware cats--stood about everywhere--in all colours, in all kinds of deliberately comic, highly glazed distortion.

It is nonsense to pretend that finance makes any better aristocrats than rent. Nothing can make an aristocrat but pride, knowledge, training, and the sword. These people were no improvement on the Drews, none whatever. There was no effect of a beneficial replacement of passive unintelligent people by active intelligent ones. One felt that a smaller but more enterprising and intensely undignified variety of stupidity had replaced the large dullness of the old gentry, and that was all. Bladesover, I thought, had undergone just the same change between the seventies and the new century that had overtaken the dear old Times, and heaven knows how much more of the decorous British fabric. These Lichtensteins and their like seem to have no promise in them at all of any fresh vitality for the kingdom. I do not believe in their intelligence or their power--they have nothing new about them at all, nothing creative nor rejuvenescent, no more than a disorderly instinct of acquisition; and the prevalence of them and their kind is but a phase in the

broad slow decay of the great social organism of England. They could not have made Bladesover they cannot replace it; they just happen to break out over it--saprophytically.

Well--that was my last impression of Bladesover.

CHAPTER THE THIRD

THE WIMBLEHURST APPRENTICESHIP

I

So far as I can remember now, except for that one emotional phase by the graveside, I passed through all these experiences rather callously. I had already, with the facility of youth, changed my world, ceased to think at all of the old school routine and put Bladesover aside for digestion at a latter stage. I took up my new world in Wimblehurst with the chemist's shop as its hub, set to work at Latin and materia medica, and concentrated upon the present with all my heart. Wimblehurst is an exceptionally quiet and grey Sussex town rare among south of England towns in being largely built of stone. I found something very agreeable and picturesque in its clean cobbled streets, its odd turnings and abrupt corners; and in the pleasant park that crowds up one side of the town. The whole place is under the Eastry dominion and it was the Eastry influence and dignity that kept its railway station a mile and three-quarters away. Eastry House is so close that it dominates the whole; one goes across the marketplace (with its old lock-up and stocks), past the great pre-reformation church, a fine grey shell, like some empty skull from which the life has fled, and there at once are the huge wrought-iron gates, and one peeps through them to see the facade of this place, very white and large and fine, down a long avenue of yews. Eastry was far greater than Bladesover and an

altogether completer example of the eighteenth century system. It ruled not two villages, but a borough, that had sent its sons and cousins to parliament almost as a matter of right so long as its franchise endured. Every one was in the system, every one--except my uncle. He stood out and complained.

My uncle was the first real breach I found in the great front of Bladesover the world had presented me, for Chatham was not so much a breach as a confirmation. But my uncle had no respect for Bladesover and Eastry--none whatever. He did not believe in them. He was blind even to what they were. He propounded strange phrases about them, he exfoliated and wagged about novel and incredible ideas.

"This place," said my uncle, surveying it from his open doorway in the dignified stillness of a summer afternoon, "wants Waking Up!"

I was sorting up patent medicines in the corner.

"I'd like to let a dozen young Americans loose into it," said my uncle. "Then we'd see."

I made a tick against Mother Shipton's Sleeping Syrup. We had cleared our forward stock.

"Things must be happening SOMEWHERE, George," he broke out in a querulously rising note as he came back into the little shop. He fiddled with the piled dummy boxes of fancy soap and scent and so forth that adorned the end of the counter, then turned about petulantly, stuck his hands deeply into his pockets and withdrew one to scratch his head. "I must do SOMETHING," he said. "I can't stand it.

"I must invent something. And shove it.... I could.

"Or a play. There's a deal of money in a play, George. What would you think of me writing a play eh?... There's all sorts of things to be done.

"Or the stog-igschange."

He fell into that meditative whistling of his.

"Sac-ramental wine!" he swore, "this isn't the world--it's Cold Mutton Fat! That's what Wimblerhurst is! Cold Mutton Fat!--dead and stiff! And I'm buried in it up to the arm pits. Nothing ever happens, nobody wants things to happen 'scept me! Up in London, George, things happen. America! I wish to Heaven, George, I'd been born American--where things hum.

"What can one do here? How can one grow? While we're sleepin' here with our Capital oozing away into Lord Eastry's pockets for rent-men are up there...." He indicated London as remotely over the top of the dispensing counter, and then as a scene of great activity by a whirl of the hand and a wink and a meaning smile at me.

"What sort of things do they do?" I asked.

"Rush about," he said. "Do things! Somethin' glorious. There's cover gambling. Ever heard of that, George?" He drew the air in through his teeth. "You put down a hundred say, and buy ten thousand pounds worth. See? That's a cover of one per cent. Things go up one, you sell, realise cent per cent; down, whiff, it's gone! Try again! Cent per cent, George, every day. Men are made or done for in an hour. And the shoutin'! Zzzz.... Well, that's one way, George. Then another way--there's Corners!"

"They're rather big things, aren't they?" I ventured.

"Oh, if you go in for wheat or steel--yes. But suppose you tackled a little thing, George. Just some little thing that only needed a few thousands. Drugs for example. Shoved all you had into it--staked your liver on it, so to speak. Take a drug--take ipecac, for example. Take a lot of ipecac. Take all there is! See? There you are! There aren't unlimited supplies of ipecacuanha--can't be!--and it's a thing people must have. Then quinine again! You watch your chance, wait for a tropical war breaking out, let's say, and collar all the quinine. Where ARE they? Must have quinine, you know. Eh? Zzzz.

"Lord! there's no end of things--no end of little things. Dill-water--all the suffering babes yowling for it. Eucalyptus again--cascara--witch hazel--menthol--all the toothache things. Then there's antiseptics, and curare, cocaine...."

"Rather a nuisance to the doctors," I reflected.

"They got to look out for themselves. By Jove, yes. They'll do you if they can, and you do them. Like brigands. That makes it romantic. That's the Romance of Commerce, George. You're in the mountains there! Think of having all the quinine in the world, and some millionaire's pampered wife gone ill with malaria, eh? That's a squeeze, George, eh? Eh? Millionaire on his motor car outside, offering you any price you liked. That 'ud wake up Wimblehurst.... Lord! You haven't an Idea down here. Not an idea. Zzzz."

He passed into a rapt dream, from which escaped such fragments as: "Fifty per cent. advance sir; security--to-morrow. Zzzz."

The idea of cornering a drug struck upon my mind then as a sort of irresponsible monkey trick that no one would ever be permitted to do in reality. It was the sort of nonsense one

would talk to make Ewart laugh and set him going on to still odder possibilities. I thought it was part of my uncle's way of talking. But I've learnt differently since. The whole trend of modern money-making is to foresee something that will presently be needed and put it out of reach, and then to haggle yourself wealthy. You buy up land upon which people will presently want to build houses, you secure rights that will bar vitally important developments, and so on, and so on. Of course the naive intelligence of a boy does not grasp the subtler developments of human inadequacy. He begins life with a disposition to believe in the wisdom of grown-up people, he does not realise how casual and disingenuous has been the development of law and custom, and he thinks that somewhere in the state there is a power as irresistible as a head master's to check mischievous and foolish enterprises of every sort. I will confess that when my uncle talked of cornering quinine, I had a clear impression that any one who contrived to do that would pretty certainly go to jail. Now I know that any one who could really bring it off would be much more likely to go to the House of Lords!

My uncle ranged over the gilt labels of his bottles and drawers for a while, dreaming of corners in this and that. But at last he reverted to Wimblehurst again.

"You got to be in London when these things are in hand. Down here--!"

"Jee-rusalem!" he cried. "Why did I plant myself here? Everything's done. The game's over. Here's Lord Eastry, and he's got everything, except what his lawyers get, and before you get any more change this way you'll have to dynamite him--and them. HE doesn't want anything more to happen. Why should he? Any chance 'ud be a loss to him. He wants everything to burble along and burble along and go on as it's going for the next ten

thousand years, Eastry after Eastry, one parson down another come, one grocer dead, get another! Any one with any ideas better go away. They HAVE gone away! Look at all these blessed people in this place! Look at 'em! All fast asleep, doing their business out of habit--in a sort of dream, Stuffed men would do just as well--just. They've all shook down into their places. THEY don't want anything to happen either. They're all broken in. There you are! Only what are they all alive for?...

"Why can't they get a clockwork chemist?"

He concluded as he often concluded these talks. "I must invent something,--that's about what I must do. Zzzz. Some convenience.

Something people want.... Strike out.... You can't think, George, of anything everybody wants and hasn't got? I mean something you could turn out retail under a shilling, say? Well, YOU think, whenever you haven't got anything better to do. See?"

II

So I remember my uncle in that first phase, young, but already a little fat, restless, fretful, garrulous, putting in my fermenting head all sorts of discrepant ideas. Certainly he was educational....

For me the years at Wimblehurst were years of pretty active growth. Most of my leisure and much of my time in the shop I spent in study. I speedily mastered the modicum of Latin necessary for my qualifying examinations, and--a little assisted by the Government Science and Art Department classes that were held in the Grammar School--went on with my mathematics. There were classes in physics, in chemistry, in mathematics and machine drawing, and I took up these subjects with considerable avidity. Exercise I got chiefly in the form of walks. There was

some cricket in the summer and football in the winter sustained by young men's clubs that levied a parasitic blackmail of the big people and the sitting member, but I was never very keen at these games. I didn't find any very close companions among the youths of Wimbleshurst. They struck me, after my cockney schoolmates, as loutish and slow, servile and furtive, spiteful and mean. WE used to swagger, but these countrymen dragged their feet and hated an equal who didn't; we talked loud, but you only got the real thoughts of Wimbleshurst in a knowing undertone behind its hand. And even then they weren't much in the way of thoughts.

No, I didn't like those young countrymen, and I'm no believer in the English countryside under the Bladesover system as a breeding ground for honourable men. One hears a frightful lot of nonsense about the Rural Exodus and the degeneration wrought by town life upon our population. To my mind, the English townsman, even in the slums, is infinitely better spiritually, more courageous, more imaginative and cleaner, than his agricultural cousin. I've seen them both when they didn't think they were being observed, and I know. There was something about my Wimbleshurst companions that disgusted me. It's hard to define. Heaven knows that at that cockney boarding-school at Goudhurst we were coarse enough; the Wimbleshurst youngsters had neither words nor courage for the sort of thing we used to do--for our bad language, for example; but, on the other hand, they displayed a sort of sluggish, real lewdness, lewdness is the word--a baseness of attitude. Whatever we exiled urbans did at Goudhurst was touched with something, however coarse, of romantic imagination. We had read the Boys of England, and told each other stories. In the English countryside there are no books at all, no songs, no drama, no valiant sin even; all these things have never come or they were taken away and hidden generations ago, and the imagination aborts and bestialises. That, I think, is where the real difference against the English rural man lies. It is because I know this that I do not share in the common repinings

because our countryside is being depopulated, because our population is passing through the furnace of the towns. They starve, they suffer, no doubt, but they come out of it hardened, they come out of it with souls.

Of an evening the Wimblehurst blade, shiny-faced from a wash and with some loud finery, a coloured waistcoat or a vivid tie, would betake himself to the Eastry Arms billiard-room, or to the bar parlour of some minor pub where nap could be played. One soon sickened of his slow knowingness, the cunning observation of his deadened eyes, his idea of a "good story," always, always told in undertones, poor dirty worm! his shrewd, elaborate maneuvers for some petty advantage, a drink to the good or such-like deal. There rises before my eyes as I write, young Hopley Dodd, the son of the Wimblehurst auctioneer, the pride of Wimblehurst, its finest flower, with his fur waistcoat and his bulldog pipe, his riding breeches--he had no horse--and his gaiters, as he used to sit, leaning forward and watching the billiard-table from under the brim of his artfully tilted hat. A half-dozen phrases constituted his conversation: "hard lines!" he used to say, and "Good baazness," in a bass bleat. Moreover, he had a long slow whistle that was esteemed the very cream of humorous comment. Night after night he was there.

Also you knew he would not understand that I could play billiards, and regarded every stroke I made as a fluke. For a beginner I didn't play so badly, I thought. I'm not so sure now; that was my opinion at the time. But young Dodd's scepticism and the "good baazness" finally cured me of my disposition to frequent the Eastry Arms, and so these noises had their value in my world.

I made no friends among the young men of the place at all, and though I was entering upon adolescence I have no love-affair to tell of here. Not that I was not waking up to that aspect of

life in my middle teens I did, indeed, in various slightly informal ways scrape acquaintance with casual Wimblehurst girls; with a little dressmaker's apprentice I got upon shyly speaking terms, and a pupil teacher in the National School went further and was "talked about" in connection with me but I was not by any means touched by any reality of passion for either of these young people; love--love as yet came to me only in my dreams. I only kissed these girls once or twice. They rather disconcerted than developed those dreams. They were so clearly not "it." I shall have much to say of love in this story, but I may break it to the reader now that it is my role to be a rather ineffectual lover. Desire I knew well enough--indeed, too well; but love I have been shy of. In all my early enterprises in the war of the sexes, I was torn between the urgency of the body and a habit of romantic fantasy that wanted every phase of the adventure to be generous and beautiful. And I had a curiously haunting memory of Beatrice, of her kisses in the bracken and her kiss upon the wall, that somehow pitched the standard too high for Wimblehurst's opportunities. I will not deny I did in a boyish way attempt a shy, rude adventure or so in love-making at Wimblehurst; but through these various influences, I didn't bring things off to any extent at all. I left behind me no devastating memories, no splendid reputation. I came away at last, still inexperienced and a little thwarted, with only a natural growth of interest and desire in sexual things.

If I fell in love with any one in Wimblehurst it was with my aunt. She treated me with a kindliness that was only half maternal--she petted my books, she knew about my certificates, she made fun of me in a way that stirred my heart to her. Quite unconsciously I grew fond of her....

My adolescent years at Wimblehurst were on the whole laborious, uneventful years that began in short jackets and left me in many ways nearly a man, years so uneventful that the Calculus of

Variations is associated with one winter, and an examination in Physics for Science and Art department Honours marks an epoch. Many divergent impulses stirred within me, but the master impulse was a grave young disposition to work and learn and thereby in some not very clearly defined way get out of the Wimblehurst world into which I had fallen. I wrote with some frequency to Ewart, self-conscious, but, as I remember them, not intelligent letters, dated in Latin and with lapses into Latin quotation that roused Ewart to parody. There was something about me in those days more than a little priggish. But it was, to do myself justice, something more than the petty pride of learning. I had a very grave sense of discipline and preparation that I am not ashamed at all to remember. I was serious. More serious than I am at the present time. More serious, indeed, than any adult seems to be. I was capable then of efforts--of nobilities.... They are beyond me now. I don't see why, at forty, I shouldn't confess I respect my own youth. I had dropped being a boy quite abruptly. I thought I was presently to go out into a larger and quite important world and do significant things there. I thought I was destined to do something definite to a world that had a definite purpose. I did not understand then, as I do now, that life was to consist largely in the world's doing things to me. Young people never do seem to understand that aspect of things. And, as I say, among my educational influences my uncle, all unsuspected, played a leading part, and perhaps among other things gave my discontent with Wimblehurst, my desire to get away from that clean and picturesque emptiness, a form and expression that helped to emphasise it. In a way that definition made me patient. "Presently I shall get to London," I said, echoing him.

I remember him now as talking, always talking, in those days. He talked to me of theology, he talked of politics, of the wonders of science and the marvels of art, of the passions and the affections, of the immortality of the soul and the peculiar actions of drugs; but predominantly and constantly he talked of

getting on, of enterprises, of inventions and great fortunes, of Rothschilds, silver kings, Vanderbilts, Goulds, flotations, realisations and the marvelous ways of Chance with men--in all localities, that is to say, that are not absolutely sunken to the level of Cold Mutton Fat.

When I think of those early talks, I figure him always in one of three positions. Either we were in the dispensing lair behind a high barrier, he pounding up things in a mortar perhaps, and I rolling pill-stuff into long rolls and cutting it up with a sort of broad, fluted knife, or he stood looking out of the shop door against the case of sponges and spray-diffusers, while I surveyed him from behind the counter, or he leant against the little drawers behind the counter, and I hovered dusting in front. The thought of those early days brings back to my nostrils the faint smell of scent that was always in the air, marbled now with streaks of this drug and now of that, and to my eyes the rows of jejune glass bottles with gold labels, mirror-reflected, that stood behind him. My aunt, I remember, used sometimes to come into the shop in a state of aggressive sprightliness, a sort of connubial ragging expedition, and get much fun over the abbreviated Latinity of those gilt inscriptions. "Ol Amjig, George," she would read derisively, "and he pretends it's almond oil! Snap!--and that's mustard. Did you ever, George?"

"Look at him, George, looking dignified. I'd like to put an old label on to him round the middle like his bottles are, with Ol Pondo on it. That's Latin for Impostor, George MUST be. He'd look lovely with a stopper."

"YOU want a stopper," said my uncle, projecting his face....

My aunt, dear soul, was in those days quite thin and slender, with a delicate rosebud completion and a disposition to connubial badinage, to a sort of gentle skylarking. There was a silvery

ghost of lisping in her speech. She was a great humourist, and as the constraint of my presence at meals wore off, I became more and more aware of a filmy but extensive net of nonsense she had woven about her domestic relations until it had become the reality of her life. She affected a derisive attitude to the world at large and applied the epithet "old" to more things than I have ever heard linked to it before or since. "Here's the old news-paper," she used to say--to my uncle. "Now don't go and get it in the butter, you silly old Sardine!"

"What's the day of the week, Susan?" my uncle would ask.

"Old Monday, Sossidge," she would say, and add, "I got all my Old Washing to do. Don't I KNOW it!"...

She had evidently been the wit and joy of a large circle of schoolfellows, and this style had become a second nature with her. It made her very delightful to me in that quiet place. Her customary walk even had a sort of hello! in it. Her chief preoccupation in life was, I believe, to make my uncle laugh, and when by some new nickname, some new quaintness or absurdity, she achieved that end, she was, behind a mask of sober amazement, the happiest woman on earth. My uncle's laugh when it did come, I must admit was, as Baedeker says, "rewarding." It began with gusty blowings and snortings, and opened into a clear "Ha ha!" but in fullest development it included, in those youthful days, falling about anyhow and doubling up tightly, and whackings of the stomach, and tears and cries of anguish. I never in my life heard my uncle laugh to his maximum except at her; he was commonly too much in earnest for that, and he didn't laugh much at all, to my knowledge, after those early years. Also she threw things at him to an enormous extent in her resolve to keep things lively in spite of Wimbleshurst; sponges out of stock she threw, cushions, balls of paper, clean washing, bread; and once up the yard when they thought that I and the errand boy and the

diminutive maid of all work were safely out of the way, she smashed a boxful of eight-ounce bottles I had left to drain, assaulting my uncle with a new soft broom. Sometimes she would shy things at me--but not often. There seemed always laughter round and about her--all three of us would share hysterics at times--and on one occasion the two of them came home from church shockingly ashamed of themselves, because of a storm of mirth during the sermon. The vicar, it seems, had tried to blow his nose with a black glove as well as the customary pocket-handkerchief. And afterwards she had picked up her own glove by the finger, and looking innocently but intently sideways, had suddenly by this simple expedient exploded my uncle altogether. We had it all over again at dinner.

"But it shows you," cried my uncle, suddenly becoming grave, "what Wimblehurst is, to have us all laughing at a little thing like that! We weren't the only ones that giggled. Not by any means! And, Lord! it was funny!"

Socially, my uncle and aunt were almost completely isolated. In places like Wimblehurst the tradesmen's lives always are isolated socially, all of them, unless they have a sister or a bosom friend among the other wives, but the husbands met in various bar-parlours or in the billiard-room of the Eastry Arms. But my uncle, for the most part, spent his evenings at home. When first he arrived in Wimblehurst I think he had spread his effect of abounding ideas and enterprise rather too aggressively; and Wimblehurst, after a temporary subjugation, had rebelled and done its best to make a butt of him. His appearance in a public-house led to a pause in any conversation that was going on.

"Come to tell us about everything, Mr. Pond'revo?" some one would say politely.

"You wait," my uncle used to answer, disconcerted, and sulk for the rest of his visit.

Or some one with an immense air of innocence would remark to the world generally, "They're talkin' of rebuildin' Wemblehurst all over again, I'm told. Anybody heard anything of it? Going to make it a reg'lar smartgoin', enterprisin' place--kind of Crystal Pallas."

"Earthquake and a pestilence before you get that," my uncle would mutter, to the infinite delight of every one, and add something inaudible about "Cold Mutton Fat."...

III

We were torn apart by a financial accident to my uncle of which I did not at first grasp the full bearings. He had developed what I regarded as an innocent intellectual recreation which he called stock-market meteorology. I think he got the idea from one use of curves in the graphic presentation of associated variations that he saw me plotting. He secured some of my squared paper and, having cast about for a time, decided to trace the rise and fall of certain lines and railways. "There's something in this, George," he said, and I little dreamt that among other things that were in it, was the whole of his spare money and most of what my mother had left to him in trust for me.

"It's as plain as can be," he said. "See, here's one system of waves and here's another! These are prices for Union Pacifics--extending over a month. Now next week, mark my words, they'll be down one whole point. We're getting near the steep part of the curve again. See? It's absolutely scientific. It's verifiable. Well, and apply it! You buy in the hollow and sell on the crest, and there you are!"

I was so convinced of the triviality of this amusement that to find at last that he had taken it in the most disastrous earnest overwhelmed me.

He took me for a long walk to break it to me, over the hills towards Yare and across the great gorse commons by Hazelbrow.

"There are ups and downs in life, George," he said--halfway across that great open space, and paused against the sky.... "I left out one factor in the Union Pacific analysis."

"DID you?" I said, struck by the sudden chance in his voice. "But you don't mean?"

I stopped and turned on him in the narrow sandy rut of pathway and he stopped likewise.

"I do, George. I DO mean. It's bust me! I'm a bankrupt here and now."

"Then--?"

"The shop's bust too. I shall have to get out of that."

"And me?"

"Oh, you!--YOU'RE all right. You can transfer your apprenticeship, and--er--well, I'm not the sort of man to be careless with trust funds, you can be sure. I kept that aspect in mind. There's some of it left George--trust me!--quite a decent little sum."

"But you and aunt?"

"It isn't QUITE the way we meant to leave Wimblehurst, George;

but we shall have to go. Sale; all the things shoved about and ticketed--lot a hundred and one. Ugh!... It's been a larky little house in some ways. The first we had. Furnishing--a spree in its way.... Very happy..." His face winced at some memory. "Let's go on, George," he said shortly, near choking, I could see.

I turned my back on him, and did not look round again for a little while.

"That's how it is, you see, George." I heard him after a time.

When we were back in the high road again he came alongside, and for a time we walked in silence.

"Don't say anything home yet," he said presently. "Fortunes of War. I got to pick the proper time with Susan--else she'll get depressed. Not that she isn't a first-rate brick whatever comes along."

"All right," I said, "I'll be careful"; and it seemed to me for the time altogether too selfish to bother him with any further inquiries about his responsibility as my trustee. He gave a little sigh of relief at my note of assent, and was presently talking quite cheerfully of his plans.... But he had, I remember, one lapse into moodiness that came and went suddenly. "Those others!" he said, as though the thought had stung him for the first time.

"What others?" I asked.

"Damn them!" said he.

"But what others?"

"All those damned stick-in-the-mud-and-die-slowly tradespeople: Ruck, the butcher, Marbel, the grocer. Snape! Gord! George, HOW they'll grin!"

I thought him over in the next few weeks, and I remember now in great detail the last talk we had together before he handed over the shop and me to his successor. For he had the good luck to sell his business, "lock, stock, and barrel"--in which expression I found myself and my indentures included. The horrors of a sale by auction of the furniture even were avoided.

I remember that either coming or going on that occasion, Ruck, the butcher, stood in his doorway and regarded us with a grin that showed his long teeth.

"You half-witted hog!" said my uncle. "You grinning hyaena"; and then, "Pleasant day, Mr. Ruck."

"Goin' to make your fortun' in London, then?" said Mr. Ruck, with slow enjoyment.

That last excursion took us along the causeway to Beeching, and so up the downs and round almost as far as Steadhurst, home. My moods, as we went, made a mingled web. By this time I had really grasped the fact that my uncle had, in plain English, robbed me; the little accumulations of my mother, six hundred pounds and more, that would have educated me and started me in business, had been eaten into and was mostly gone into the unexpected hollow that ought to have been a crest of the Union Pacific curve, and of the remainder he still gave no account. I was too young and inexperienced to insist on this or know how to get it, but the thought of it all made streaks of decidedly black anger in that scheme of interwoven feelings. And you know, I was also acutely sorry for him--almost as sorry as I was for my aunt Susan. Even then I had quite found him out. I knew him to be weaker than

myself; his incurable, irresponsible childishness was as clear to me then as it was on his deathbed, his redeeming and excusing imaginative silliness. Through some odd mental twist perhaps I was disposed to exonerate him even at the cost of blaming my poor old mother who had left things in his untrustworthy hands.

I should have forgiven him altogether, I believe, if he had been in any manner apologetic to me; but he wasn't that. He kept reassuring me in a way I found irritating. Mostly, however, his solicitude was for Aunt Susan and himself.

"It's these Crises, George," he said, "try Character. Your aunt's come out well, my boy."

He made meditative noises for a space.

"Had her cry of course,"--the thing had been only too painfully evident to me in her eyes and swollen face--"who wouldn't? But now--buoyant again!... She's a Corker.

"We'll be sorry to leave the little house of course. It's a bit like Adam and Eve, you know. Lord! what a chap old Milton was!

"The world was all before them, where to choose
Their place of rest, and Providence their guide.'

It sounds, George.... Providence their guide!... Well--thank goodness there's no imedgit prospect of either Cain or Abel!

"After all, it won't be so bad up there. Not the scenery, perhaps, or the air we get here, but--LIFE! We've got very comfortable little rooms, very comfortable considering, and I shall rise. We're not done yet, we're not beaten; don't think that, George. I shall pay twenty shillings in the pound before I've done--you mark my words, George,--twenty--five to you.... I

got this situation within twenty-four hours--others offered. It's an important firm--one of the best in London. I looked to that. I might have got four or five shillings a week more--elsewhere. Quarters I could name. But I said to them plainly, wages to go on with, but opportunity's my game--development. We understood each other."

He threw out his chest, and the little round eyes behind his glasses rested valiantly on imaginary employers.

We would go on in silence for a space while he revised and restated that encounter. Then he would break out abruptly with some banal phrase.

"The Battle of Life, George, my boy," he would cry, or "Ups and Downs!"

He ignored or waived the poor little attempts I made to ascertain my own position. "That's all right," he would say; or, "Leave all that to me. I'LL look after them." And he would drift away towards the philosophy and moral of the situation. What was I to do?

"Never put all your resources into one chance, George; that's the lesson I draw from this. Have forces in reserve. It was a hundred to one, George, that I was right--a hundred to one. I worked it out afterwards. And here we are spiked on the off-chance. If I'd have only kept back a little, I'd have had it on U.P. next day, like a shot, and come out on the rise. There you are!"

His thoughts took a graver turn.

"It's where you'll bump up against Chance like this, George, that you feel the need of religion. Your hard-and-fast scientific

men--your Spencers and Huxleys--they don't understand that. I do. I've thought of it a lot lately--in bed and about. I was thinking of it this morning while I shaved. It's not irreverent for me to say it, I hope--but God comes in on the off-chance, George. See? Don't you be too cocksure of anything, good or bad. That's what I make out of it. I could have sworn. Well, do you think I--particular as I am--would have touched those Union Pacifics with trust money at all, if I hadn't thought it a thoroughly good thing--good without spot or blemish?... And it was bad!

"It's a lesson to me. You start in to get a hundred percent. and you come out with that. It means, in a way, a reproof for Pride. I've thought of that, George--in the Night Watches. I was thinking this morning when I was shaving, that that's where the good of it all comes in. At the bottom I'm a mystic in these affairs. You calculate you're going to do this or that, but at bottom who knows at all WHAT he's doing? When you most think you're doing things, they're being done right over your head. YOU'RE being done--in a sense. Take a hundred-to one chance, or one to a hundred--what does it matter? You're being Led."

It's odd that I heard this at the time with unutterable contempt, and now that I recall it--well, I ask myself, what have I got better?

"I wish," said I, becoming for a moment outrageous, "YOU were being Led to give me some account of my money, uncle."

"Not without a bit of paper to figure on, George, I can't. But you trust me about that never fear. You trust me."

And in the end I had to.

I think the bankruptcy hit my aunt pretty hard. There was, so

far as I can remember now, a complete cessation of all those cheerful outbreaks of elasticity, no more skylarking in the shop nor scampering about the house. But there was no fuss that I saw, and only little signs in her complexion of the fits of weeping that must have taken her. She didn't cry at the end, though to me her face with its strain of self-possession was more pathetic than any weeping. "Well" she said to me as she came through the shop to the cab, "Here's old orf, George! Orf to Mome number two! Good-bye!" And she took me in her arms and kissed me and pressed me to her. Then she dived straight for the cab before I could answer her.

My uncle followed, and he seemed to me a trifle too valiant and confident in his bearing for reality. He was unusually white in the face. He spoke to his successor at the counter. "Here we go!" he said. "One down, the other up. You'll find it a quiet little business so long as you run it on quiet lines--a nice quiet little business. There's nothing more? No? Well, if you want to know anything write to me. I'll always explain fully. Anything--business, place or people. You'll find Pil Antibil. a little overstocked by-the-by, I found it soothed my mind the day before yesterday making 'em, and I made 'em all day. Thousands! And where's George? Ah! there you are! I'll write to you, George, FULLY, about all that affair. Fully!"

It became clear to me as if for the first time, that I was really parting from my aunt Susan. I went out on to the pavement and saw her head craned forward, her wide-open blue eyes and her little face intent on the shop that had combined for her all the charms of a big doll's house and a little home of her very own. "Good-bye!" she said to it and to me. Our eyes met for a moment--perplexed. My uncle bustled out and gave a few totally unnecessary directions to the cabman and got in beside her. "All right?" asked the driver. "Right," said I; and he woke up the horse with a flick of his whip. My aunt's eyes surveyed me

again. "Stick to your old science and things, George, and write and tell me when they make you a Professor," she said cheerfully.

She stared at me for a second longer with eyes growing wider and brighter and a smile that had become fixed, glanced again at the bright little shop still saying "Ponderevo" with all the emphasis of its fascia, and then flopped back hastily out of sight of me into the recesses of the cab. Then it had gone from before me and I beheld Mr. Snape, the hairdresser, inside his store regarding its departure with a quiet satisfaction and exchanging smiles and significant headshakes with Mr. Marbel.

IV

I was left, I say, as part of the lock, stock, and barrel, at Wimbleshurst with my new master, a Mr. Mantell; who plays no part in the progress of this story except in so far as he effaced my uncle's traces. So soon as the freshness of this new personality faded, I began to find Wimbleshurst not only a dull but a lonely place, and to miss my aunt Susan immensely. The advertisements of the summer terms for Cough Linctus were removed; the bottles of coloured water--red, green, and yellow--restored to their places; the horse announcing veterinary medicine, which my uncle, sizzling all the while, had coloured in careful portraiture of a Goodwood favourite, rewhitened; and I turned myself even more resolutely than before to Latin (until the passing of my preliminary examination enabled me to drop that), and then to mathematics and science.

There were classes in Electricity and Magnetism at the Grammar School. I took a little "elementary" prize in that in my first year and a medal in my third; and in Chemistry and Human Physiology and Sound, Light and Heat, I did well. There was also a lighter, more discursive subject called Physiography, in which one ranged among the sciences and encountered Geology as a

process of evolution from Eozoon to Eastry House, and Astronomy as a record of celestial movements of the most austere and invariable integrity. I learnt out of badly-written, condensed little text-books, and with the minimum of experiment, but still I learnt. Only thirty years ago it was, and I remember I learnt of the electric light as an expensive, impracticable toy, the telephone as a curiosity, electric traction as a practical absurdity. There was no argon, no radium, no phagocytes--at least to my knowledge, and aluminium was a dear, infrequent metal. The fastest ships in the world went then at nineteen knots, and no one but a lunatic here and there ever thought it possible that men might fly.

Many things have happened since then, but the last glance I had of Wimblesbury two years ago remarked no change whatever in its pleasant tranquillity. They had not even built any fresh houses--at least not actually in the town, though about the station there had been some building. But it was a good place to do work in, for all its quiescence. I was soon beyond the small requirements of the Pharmaceutical Society's examination, and as they do not permit candidates to sit for that until one and twenty, I was presently filling up my time and preventing my studies becoming too desultory by making an attack upon the London University degree of Bachelor of Science, which impressed me then as a very splendid but almost impossible achievement. The degree in mathematics and chemistry appealed to me as particularly congenial--albeit giddily inaccessible. I set to work. I had presently to arrange a holiday and go to London to matriculate, and so it was I came upon my aunt and uncle again. In many ways that visit marked an epoch. It was my first impression of London at all. I was then nineteen, and by a conspiracy of chances my nearest approach to that human wilderness had been my brief visit to Chatham. Chatham too had been my largest town. So that I got London at last with an exceptional freshness of effect, as the sudden revelation of a

whole unsuspected other side to life.

I came to it on a dull and smoky day by the South Eastern Railway, and our train was half an hour late, stopping and going on and stopping again. I marked beyond Chiselhurst the growing multitude of villas, and so came stage by stage through multiplying houses and diminishing interspaces of market garden and dingy grass to regions of interlacing railway lines, big factories, gasometers and wide reeking swamps of dingy little homes, more of them and more and more. The number of these and their dinginess and poverty increased, and here rose a great public house and here a Board School and there a gaunt factory; and away to the east there loomed for a time a queer, incongruous forest of masts and spars. The congestion of houses intensified and piled up presently into tenements; I marveled more and more at this boundless world of dingy people; whiffs of industrial smell, of leather, of brewing, drifted into the carriage; the sky darkened, I rumbled thunderously over bridges, van-crowded streets, peered down on and crossed the Thames with an abrupt eclat of sound. I got an effect of tall warehouses, of grey water, barge crowded, of broad banks of indescribable mud, and then I was in Cannon Street Station--a monstrous dirty cavern with trains packed across its vast floor and more porters standing along the platform than I had ever been in my life before. I alighted with my portmanteau and struggled along, realising for the first time just how small and weak I could still upon occasion feel. In this world, I felt, an Honours medal in Electricity and magnetism counted for nothing at all.

Afterwards I drove in a cab down a canon of rushing street between high warehouses, and peeped up astonished at the blackened greys of Saint Paul's. The traffic of Cheapside--it was mostly in horse omnibuses in those days--seemed stupendous, its roar was stupendous; I wondered where the money came from to employ so many cabs, what industry could support the endless

jostling stream of silk-hatted, frock-coated, hurrying men. Down a turning I found the Temperance Hotel Mr. Mantell had recommended to me. The porter in a green uniform who took over my portmanteau, seemed, I thought, to despise me a good deal.

V

Matriculation kept me for four full days and then came an afternoon to spare, and I sought out Tottenham Court Road through a perplexing network of various and crowded streets. But this London was vast! it was endless! it seemed the whole world had changed into packed frontages and hoardings and street spaces. I got there at last and made inquiries, and I found my uncle behind the counter of the pharmacy he managed, an establishment that did not impress me as doing a particularly high-class trade. "Lord!" he said at the sight of me, "I was wanting something to happen!"

He greeted me warmly. I had grown taller, and he, I thought, had grown shorter and smaller and rounder but otherwise he was unchanged. He struck me as being rather shabby, and the silk hat he produced and put on, when, after mysterious negotiations in the back premises he achieved his freedom to accompany me, was past its first youth; but he was as buoyant and confident as ever.

"Come to ask me about all THAT," he cried. "I've never written yet."

"Oh, among other things," said I, with a sudden regrettable politeness, and waived the topic of his trusteeship to ask after my aunt Susan.

"We'll have her out of it," he said suddenly; "we'll go somewhere. We don't get you in London every day."

"It's my first visit," I said, "I've never seen London before"; and that made him ask me what I thought of it, and the rest of the talk was London, London, to the exclusion of all smaller topics. He took me up the Hampstead Road almost to the Cobden statue, plunged into some back streets to the left, and came at last to a blistered front door that responded to his latch-key, one of a long series of blistered front doors with fanlights and apartment cards above. We found ourselves in a drab-coloured passage that was not only narrow and dirty but desolatingly empty, and then he opened a door and revealed my aunt sitting at the window with a little sewing-machine on a bamboo occasional table before her, and "work"--a plum-coloured walking dress I judged at its most analytical stage--scattered over the rest of the apartment.

At the first glance I judged my aunt was plumper than she had been, but her complexion was just as fresh and her China blue eye as bright as in the old days.

"London," she said, didn't "get blacks" on her.

She still "cheeked" my uncle, I was pleased to find. "What are you old Poking in for at THIS time--Gubbitt?," she said when he appeared, and she still looked with a practised eye for the facetious side of things. When she saw me behind him, she gave a little cry and stood up radiant. Then she became grave.

I was surprised at my own emotion in seeing her. She held me at arm's length for a moment, a hand on each shoulder, and looked at me with a sort of glad scrutiny. She seemed to hesitate, and then pecked little kiss off my cheek.

"You're a man, George," she said, as she released me, and continued to look at me for a while.

Their menage was one of a very common type in London. They occupied what is called the dining-room floor of a small house, and they had the use of a little inconvenient kitchen in the basement that had once been scullery. The two rooms, bedroom behind and living room in front, were separated by folding-doors that were never now thrown back, and indeed, in the presence of a visitor, not used at all. There was of course no bathroom or anything of that sort available, and there was no water supply except to the kitchen below. My aunt did all the domestic work, though she could have afforded to pay for help if the build of the place had not rendered that inconvenient to the pitch of impossibility. There was no sort of help available except that of indoor servants, for whom she had no accommodation. The furniture was their own; it was partly secondhand, but on the whole it seemed cheerful to my eye, and my aunt's bias for cheap, gay-figured muslin had found ample score. In many ways I should think it must have been an extremely inconvenient and cramped sort of home, but at the time I took it, as I was taking everything, as being there and in the nature of things. I did not see the oddness of solvent decent people living in a habitation so clearly neither designed nor adapted for their needs, so wasteful of labour and so devoid of beauty as this was, and it is only now as I describe this that I find myself thinking of the essential absurdity of an intelligent community living in such makeshift homes. It strikes me now as the next thing to wearing second-hand clothes.

You see it was a natural growth, part of that system to which Bladesover, I hold, is the key. There are wide regions of London, miles of streets of houses, that appear to have been originally designed for prosperous-middle-class homes of the early Victorian type. There must have been a perfect fury of such building in the thirties, forties, and fifties. Street after street must have been rushed into being, Campden Town way,

Pentonville way, Brompton way, West Kensington way in the Victoria region and all over the minor suburbs of the south side.

I am doubtful if many of these houses had any long use as the residences of single families if from the very first almost their tenants did not makeshift and take lodgers and sublet. They were built with basements, in which their servants worked and lived--servants of a more submissive and troglodytic generation who did not mind stairs. The dining-room (with folding doors) was a little above the ground level, and in that the wholesome boiled and roast with damp boiled potatoes and then pie to follow, was consumed and the numerous family read and worked in the evening, and above was the drawing-room (also with folding doors), where the infrequent callers were received. That was the vision at which those industrious builders aimed. Even while these houses were being run up, the threads upon the loom of fate were shaping to abolish altogether the type of household that would have fitted them. Means of transit were developing to carry the moderately prosperous middle-class families out of London, education and factory employment were whittling away at the supply of rough, hardworking, obedient girls who would stand the subterranean drudgery of these places, new classes of hard-up middle-class people such as my uncle, employees of various types, were coming into existence, for whom no homes were provided. None of these classes have ideas of what they ought to be, or fit in any legitimate way into the Bladesover theory that dominates our minds. It was nobody's concern to see them housed under civilised conditions, and the beautiful laws of supply and demand had free play. They had to squeeze in. The landlords came out financially intact from their blundering enterprise. More and more these houses fell into the hands of married artisans, or struggling widows or old servants with savings, who became responsible for the quarterly rent and tried to sweat a living by sub-letting furnished or unfurnished apartments.

I remember now that a poor grey-haired old woman who had an air of having been roused from a nap in the dust bin, came out into the area and looked up at us as we three went out from the front door to "see London" under my uncle's direction. She was the sub-letting occupier; she squeezed out a precarious living by taking the house whole and sub-letting it in detail and she made her food and got the shelter of an attic above and a basement below by the transaction. And if she didn't chance to "let" steadily, out she went to pauperdom and some other poor, sordid old adventurer tried in her place....

It is a foolish community that can house whole classes, useful and helpful, honest and loyal classes, in such squalidly unsuitable dwellings. It is by no means the social economy it seems, to use up old women, savings and inexperience in order to meet the landlord's demands. But any one who doubts this thing is going on right up to to-day need only spend an afternoon in hunting for lodgings in any of the regions of London I have named.

But where has my story got to? My uncle, I say, decided I must be shown London, and out we three went as soon as my aunt had got her hat on, to catch all that was left of the day.

VI

It pleased my uncle extremely to find I had never seen London before. He took possession of the metropolis forthwith. "London, George," he said, "takes a lot of understanding. It's a great place. Immense. The richest town in the world, the biggest port, the greatest manufacturing town, the Imperial city--the centre of civilisation, the heart of the world! See those sandwich men down there! That third one's hat! Fair treat! You don't see poverty like that in Wimblehurst George! And many of them high Oxford honour men too. Brought down by drink! It's a

wonderful place, George--a whirlpool, a maelstrom! whirls you up and whirls you down."

I have a very confused memory of that afternoon's inspection of London. My uncle took us to and fro showing us over his London, talking erratically, following a route of his own. Sometimes we were walking, sometimes we were on the tops of great staggering horse omnibuses in a heaving jumble of traffic, and at one point we had tea in an Aerated Bread Shop. But I remember very distinctly how we passed down Park Lane under an overcast sky, and how my uncle pointed out the house of this child of good fortune and that with succulent appreciation.

I remember, too, that as he talked I would find my aunt watching my face as if to check the soundness of his talk by my expression.

"Been in love yet, George?" she asked suddenly, over a bun in the tea-shop.

"Too busy, aunt," I told her.

She bit her bun extensively, and gesticulated with the remnant to indicate that she had more to say.

"How are YOU going to make your fortune?" she said so soon as she could speak again. "You haven't told us that."

"Lectricity," said my uncle, taking breath after a deep draught of tea.

"If I make it at all," I said. "For my part I think shall be satisfied with something less than a fortune."

"We're going to make ours--suddenly," she said.

"So HE old says." She jerked her head at my uncle.

"He won't tell me when--so I can't get anything ready. But it's coming. Going to ride in our carriage and have a garden. Garden--like a bishop's."

She finished her bun and twiddled crumbs from her fingers. "I shall be glad of the garden," she said. "It's going to be a real big one with rosaries and things. Fountains in it. Pampas grass. Hothouses."

"You'll get it all right," said my uncle, who had reddened a little.

"Grey horses in the carriage, George," she said. "It's nice to think about when one's dull. And dinners in restaurants often and often. And theatres--in the stalls. And money and money and money."

"You may joke," said my uncle, and hummed for a moment.

"Just as though an old Porpoise like him would ever make money," she said, turning her eyes upon his profile with a sudden lapse to affection. "He'll just porpoise about."

"I'll do something," said my uncle, "you bet! Zzzz!" and rapped with a shilling on the marble table.

"When you do you'll have to buy me a new pair of gloves," she said, "anyhow. That finger's past mending. Look! you Cabbage--you." And she held the split under his nose, and pulled a face of comical fierceness.

My uncle smiled at these sallies at the time, but afterwards,

when I went back with him to the Pharmacy--the low-class business grew brisker in the evening and they kept open late--he reverted to it in a low expository tone. "Your aunt's a bit impatient, George. She gets at me. It's only natural.... A woman doesn't understand how long it takes to build up a position. No.... In certain directions now--I am--quietly--building up a position. Now here.... I get this room. I have my three assistants. Zzzz. It's a position that, judged by the criterion of imedjit income, isn't perhaps so good as I deserve, but strategically--yes. It's what I want. I make my plans. I rally my attack."

"What plans," I said, "are you making?"

"Well, George, there's one thing you can rely upon, I'm doing nothing in a hurry. I turn over this one and that, and I don't talk--indiscreetly. There's-- No! I don't think I can tell you that. And yet, why NOT?"

He got up and closed the door into the shop. "I've told no one," he remarked, as he sat down again. "I owe you something."

His face flushed slightly, he leant forward over the little table towards me.

"Listen!" he said.

I listened.

"Tono-Bungay," said my uncle very slowly and distinctly.

I thought he was asking me to hear some remote, strange noise. "I don't hear anything," I said reluctantly to his expectant face. He smiled undefeated. "Try again," he said, and repeated, "Tono-Bungay."

"Oh, THAT!" I said.

"Eh?" said he.

"But what is it?"

"Ah!" said my uncle, rejoicing and expanding. "What IS it? That's what you got to ask? What won't it be?" He dug me violently in what he supposed to be my ribs. "George," he cried--"George, watch this place! There's more to follow."

And that was all I could get from him.

That, I believe, was the very first time that the words Tono-Bungay ever heard on earth--unless my uncle indulged in monologues in his chamber--a highly probable thing. Its utterance certainly did not seem to me at the time to mark any sort of epoch, and had I been told this word was the Open Sesame to whatever pride and pleasure the grimy front of London hid from us that evening, I should have laughed aloud.

"Coming now to business," I said after a pause, and with a chill sense of effort; and I opened the question of his trust.

My uncle sighed, and leant back in his chair. "I wish I could make all this business as clear to you as it is to me," he said. "However--Go on! Say what you have to say."

VII

After I left my uncle that evening I gave way to a feeling of profound depression. My uncle and aunt seemed to me to be leading--I have already used the word too often, but I must use it again--DINGY lives. They seemed to be adrift in a limitless

crowd of dingy people, wearing shabby clothes, living uncomfortably in shabby second-hand houses, going to and fro on pavements that had always a thin veneer of greasy, slippery mud, under grey skies that showed no gleam of hope of anything for them but dinginess until they died. It seemed absolutely clear to me that my mother's little savings had been swallowed up and that my own prospect was all too certainly to drop into and be swallowed up myself sooner or later by this dingy London ocean. The London that was to be an adventurous escape from the slumber of Wimblehurst, had vanished from my dreams. I saw my uncle pointing to the houses in Park Lane and showing a frayed shirt-cuff as he did so. I heard my aunt: "I'm to ride in my carriage then. So he old says."

My feelings towards my uncle were extraordinarily mixed. I was intensely sorry not only for my aunt Susan but for him--for it seemed indisputable that as they were living then so they must go on--and at the same time I was angry with the garrulous vanity and illness that had elipped all my chance of independent study, and imprisoned her in those grey apartments. When I got back to Wimblehurst I allowed myself to write him a boyishly sarcastic and sincerely bitter letter. He never replied. Then, believing it to be the only way of escape for me, I set myself far more grimly and resolutely to my studies than I had ever done before. After a time I wrote to him in more moderate terms, and he answered me evasively. And then I tried to dismiss him from my mind and went on working.

Yes, that first raid upon London under the moist and chilly depression of January had an immense effect upon me. It was for me an epoch-making disappointment. I had thought of London as a large, free, welcoming, adventurous place, and I saw it slovenly and harsh and irresponsible.

I did not realise at all what human things might be found behind

those grey frontages, what weakness that whole forbidding facade might presently confess. It is the constant error of youth to over-estimate the Will in things. I did not see that the dirt, the discouragement, the discomfort of London could be due simply to the fact that London was a witless old giantess of a town, too slack and stupid to keep herself clean and maintain a brave face to the word. No! I suffered from the sort of illusion that burnt witches in the seventeenth century. I endued her grubby disorder with a sinister and magnificent quality of intention.

And my uncle's gestures and promises filled me with doubt and a sort of fear for him. He seemed to me a lost little creature, too silly to be silent, in a vast implacable condemnation. I was full of pity and a sort of tenderness for my aunt Susan, who was doomed to follow his erratic fortunes mocked by his grandiloquent promises.

I was to learn better. But I worked with the terror of the grim underside of London in my soul during all my last year at Wemblehurst.

BOOK THE SECOND

THE RISE OF TONO-BUNGAY

CHAPTER THE FIRST

HOW I BECAME A LONDON STUDENT AND WENT ASTRAY

I came to live in London, as I shall tell you, when I was nearly twenty-two. Wemblehurst dwindles in perspective, is now in this book a little place far off, Bladesover no more than a small pinkish speck of frontage among the distant Kentish hills; the

scene broadens out, becomes multitudinous and limitless, full of the sense of vast irrelevant movement. I do not remember my second coming to London as I do my first, for my early impressions, save that an October memory of softened amber sunshine stands out, amber sunshine falling on grey house fronts I know not where. That, and a sense of a large tranquillity.

I could fill a book, I think, with a more or less imaginary account of how I came to apprehend London, how first in one aspect and then in another it grew in my mind. Each day my accumulating impressions were added to and qualified and brought into relationship with new ones; they fused inseparably with others that were purely personal and accidental. I find myself with a certain comprehensive perception of London, complete indeed, incurably indistinct in places and yet in some way a whole that began with my first visit and is still being mellowed and enriched.

London!

At first, no doubt, it was a chaos of streets and people and buildings and reasonless going to and fro. I do not remember that I ever struggled very steadily to understand it, or explored it with any but a personal and adventurous intention. Yet in time there has grown up in me a kind of theory of London; I do think I see lines of an ordered structure out of which it has grown, detected a process that is something more than a confusion of casual accidents though indeed it may be no more than a process of disease.

I said at the outset of my first book that I find in Bladesover the clue to all England. Well, I certainly imagine it is the clue to the structure of London. There have been no revolutions no deliberate restatements or abandonments of opinion in England since the days of the fine gentry, since 1688 or thereabouts, the

days when Bladesover was built; there have been changes, dissolving forest replacing forest, if you will; but then it was that the broad lines of the English system set firmly. And as I have gone to and fro in London in certain regions constantly the thought has recurred this is Bladesover House, this answers to Bladesover House. The fine gentry may have gone; they have indeed largely gone, I think; rich merchants may have replaced them, financial adventurers or what not. That does not matter; the shape is still Bladesover.

I am most reminded of Bladesover and Eastry by all those regions round about the West End parks; for example, estate parks, each more or less in relation to a palace or group of great houses. The roads and back ways of Mayfair and all about St. James's again, albeit perhaps of a later growth in point of time, were of the very spirit and architectural texture of the Bladesover passages and yards; they had the same smells, the space, the large cleanest and always going to and fro where one met unmistakable Olympians and even more unmistakable valets, butlers, footmen in mufti. There were moments when I seemed to glimpse down areas the white panelling, the very chintz of my mother's room again.

I could trace out now on a map what I would call the Great-House region; passing south-westward into Belgravia, becoming diffused and sporadic westward, finding its last systematic outbreak round and about Regent's Park. The Duke of Devonshire's place in Piccadilly, in all its insolent ugliness, pleases me particularly; it is the quintessence of the thing; Apsley House is all in the manner of my theory, Park Lane has its quite typical mansions, and they run along the border of the Green Park and St. James's. And I struck out a truth one day in Cromwell Road quite suddenly, as I looked over the Natural History Museum "By Jove," said I "but this is the little assemblage of cases of stuffed birds and animals upon the Bladesover staircase grown

enormous, and yonder as the corresponding thing to the Bladesover curios and porcelain is the Art Museum and there in the little observatories in Exhibition Road is old Sir Cuthbert's Gregorian telescope that I hunted out in the storeroom and put together." And diving into the Art Museum under this inspiration, I came to a little reading-room and found as I had inferred, old brown books!

It was really a good piece of social comparative anatomy I did that day; all these museums and libraries that are dotted over London between Piccadilly and West Kensington, and indeed the museum and library movement throughout the world, sprang from the elegant leisure of the gentlemen of taste. Theirs were the first libraries, the first houses of culture; by my rat-like raids into the Bladesover saloon I became, as it were, the last dwindled representative of such a man of letters as Swift. But now these things have escaped out of the Great House altogether, and taken on a strange independent life of their own.

It is this idea of escaping parts from the seventeenth century system of Bladesover, of proliferating and overgrowing elements from the Estates, that to this day seems to me the best explanation, not simply of London, but of all England. England is a country of great Renaissance landed gentlefolk who have been unconsciously outgrown and overgrown. The proper shops for Bladesover custom were still to be found in Regent Street and Bond Street in my early London days in those days they had been but lightly touched by the American's profaning hand--and in Piccadilly. I found the doctor's house of the country village or country town up and down Harley Street, multiplied but not otherwise different, and the family solicitor (by the hundred) further eastward in the abandoned houses of a previous generation of gentlepeople, and down in Westminster, behind Palladian fronts, the public offices sheltered in large Bladesoverish rooms and looked out on St. James's Park. The Parliament Houses of

lords and gentlemen, the parliament house that was horrified when merchants and brewers came thrusting into it a hundred years ago, stood out upon its terrace gathering the whole system together into a head.

And the more I have paralleled these things with my Bladesover-Eastry model, the more evident it has become to me that the balance is not the same, and the more evident is the presence of great new forces, blind forces of invasion, of growth. The railway termini on the north side of London have been kept as remote as Eastry had kept the railway-station from Wimblesbury, they stop on the very outskirts of the estates, but from the south, the South Eastern railway had butted its great stupid rusty iron head of Charing Cross station, that great head that came smashing down in 1905--clean across the river, between Somerset House and Whitehall. The south side had no protecting estate. Factory chimneys smoke right over against Westminster with an air of carelessly not having permission, and the whole effect of industrial London and of all London east of Temple Bar and of the huge dingy immensity of London port is to me of something disproportionately large, something morbidly expanded, without plan or intention, dark and sinister toward the clean clear social assurance of the West End. And south of this central London, south-east, south-west, far west, north-west, all round the northern hills, are similar disproportionate growths, endless streets of undistinguished houses, undistinguished industries, shabby families, second-rate shops, inexplicable people who in a once fashionable phrase do not "exist." All these aspects have suggested to my mind at times, do suggest to this day, the unorganised, abundant substance of some tumorous growth-process, a process which indeed bursts all the outlines of the affected carcass and protrudes such masses as ignoble comfortable Croydon, as tragic impoverished West Ham. To this day I ask myself will those masses ever become structural, will they indeed shape into anything new whatever, or is that

cancerous image their true and ultimate diagnosis?...

Moreover, together with this hypertrophy there is an immigration of elements that have never understood and never will understand the great tradition, wedges of foreign settlement embedded in the heart of this yeasty English expansion. One day I remember wandering eastward out of pure curiosity--it must have been in my early student days--and discovering a shabbily bright foreign quarter, shops displaying Hebrew placards and weird, unfamiliar commodities and a concourse of bright-eyed, eagle-nosed people talking some incomprehensible gibberish between the shops and the barrows. And soon I became quite familiar with the devious, vicious, dirtily-pleasant eroticism of Soho. I found those crowded streets a vast relief from the dull grey exterior of Brompton where I lodged and lived my daily life. In Soho, indeed, I got my first inkling of the factor of replacement that is so important in both the English and the American process.

Even in the West End, in Mayfair and the square, about Pall Mall, Ewart was presently to remind me the face of the old aristocratic dignity was fairer than its substance; here were actors and actresses, here money lenders and Jews, here bold financial adventurers, and I thought of my uncle's frayed cuff as he pointed out this house in Park Lane and that. That was so and so's who made a corner in borax, and that palace belonged to that hero among modern adventurers, Barmetrude, who used to be an I.D.B.,--an illicit diamond buyer that is to say. A city of Bladesovers, the capital of a kingdom of Bladesovers, all much shaken and many altogether in decay, parasitically occupied, insidiously replaced by alien, unsympathetic and irresponsible elements; and with a ruling an adventitious and miscellaneous empire of a quarter of this daedal earth complex laws, intricate social necessities, disturbing insatiable suggestions, followed from this. Such was the world into which I had come, into which I had in some way to thrust myself and fit my problem,

my temptations, my efforts, my patriotic instinct, all my moral instincts, my physical appetites, my dreams and my sanity.

London! I came up to it, young and without advisers, rather priggish, rather dangerously open-minded and very open-eyed, and with something--it is, I think, the common gift of imaginative youth, and I claim it unblushingly--fine in me, finer than the world and seeking fine responses. I did not want simply to live or simply to live happily or well; I wanted to serve and do and make--with some nobility. It was in me. It is in half the youth of the world.

II

I had come to London as a scholar. I had taken the Vincent Bradley scholarship of the Pharmaceutical Society, but I threw this up when I found that my work of the Science and Art Department in mathematics, physics and chemistry had given me one of the minor Technical Board Scholarships at the Consolidated Technical Schools at South Kensington. This latter was in mechanics and metallurgy; and I hesitated between the two. The Vincent Bradley gave me L70 a year and quite the best start-off a pharmaceutical chemist could have; the South Kensington thing was worth about twenty-two shillings a week, and the prospects it opened were vague. But it meant far more scientific work than the former, and I was still under the impulse of that great intellectual appetite that is part of the adolescence of men of my type. Moreover it seemed to lead towards engineering, in which I imagined--I imagine to this day--my particular use is to be found. I took its greater uncertainty as a fair risk. I came up very keen, not doubting that the really hard and steady industry that had carried me through Wemblehurst would go on still in the new surroundings.

Only from the very first it didn't....

When I look back now at my Wimblehurst days, I still find myself surprised at the amount of steady grinding study, of strenuous self-discipline that I maintained throughout my apprenticeship. In many ways I think that time was the most honourable period in my life. I wish I could say with a certain mind that my motives in working so well were large and honourable too. To a certain extent they were so; there was a fine sincere curiosity, a desire for the strength and power of scientific knowledge and a passion for intellectual exercise; but I do not think those forces alone would have kept me at it so grimly and closely if Wimblehurst had not been so dull, so limited and so observant. Directly I came into the London atmosphere, tasting freedom, tasting irresponsibility and the pull of new forces altogether, my discipline fell from me like a garment. Wimblehurst to a youngster in my position offered no temptations worth counting, no interests to conflict with study, no vices--such vices as it offered were coarsely stripped of any imaginative glamourfull drunkenness, clumsy leering shameful lust, no social intercourse even to waste one's time, and on the other hand it would minister greatly to the self-esteem of a conspicuously industrious student. One was marked as "clever," one played up to the part, and one's little accomplishment stood out finely in one's private reckoning against the sunlit small ignorance of that agreeable place. One went with an intent rush across the market square, one took one's exercise with as dramatic a sense of an ordered day as an Oxford don, one burnt the midnight oil quite consciously at the rare respectful, benighted passer-by. And one stood out finely in the local paper with one's unapproachable yearly harvest of certificates. Thus I was not only a genuinely keen student, but also a little of a prig and poseur in those days--and the latter kept the former at it, as London made clear.

Moreover Wimblehurst had given me no outlet in any other direction.

But I did not realise all this when I came to London, did not perceive how the change of atmosphere began at once to warp and distribute my energies. In the first place I became invisible. If I idled for a day, no one except my fellow-students (who evidently had no awe for me) remarked it. No one saw my midnight taper; no one pointed me out as I crossed the street as an astonishing intellectual phenomenon. In the next place I became inconsiderable. In Wimblesbury I felt I stood for Science; nobody there seemed to have so much as I and to have it so fully and completely. In London I walked ignorant in an immensity, and it was clear that among my fellow-students from the midlands and the north I was ill-equipped and under-trained. With the utmost exertion I should only take a secondary position among them. And finally, in the third place, I was distracted by voluminous new interests; London took hold of me, and Science, which had been the universe, shrank back to the dimensions of tiresome little formulae compacted in a book. I came to London in late September, and it was a very different London from that great greyly-overcast, smoke-stained house-wilderness of my first impressions. I reached it by Victoria and not by Cannon Street, and its centre was now in Exhibition Road. It shone, pale amber, blue-grey and tenderly spacious and fine under clear autumnal skies. a London of hugely handsome buildings and vistas and distances, a London of gardens and labyrinthine tall museums, of old trees and remote palaces and artificial waters. I lodged near by in West Brompton at a house in a little square.

So London faced me the second time, making me forget altogether for a while the grey, drizzling city visage that had first looked upon me. I settled down and went to and fro to my lectures and laboratory; in the beginning I worked hard, and only slowly did the curiosity that presently possessed me to know more of this huge urban province arise, the desire to find something beyond mechanism that I could serve, some use other than learning. With

this was a growing sense of loneliness, a desire for adventure and intercourse. I found myself in the evenings poring over a map of London I had bought, instead of copying out lecture notes--and on Sundays I made explorations, taking omnibus rides east and west and north and south, and to enlarging and broadening the sense of great swarming hinterlands of humanity with whom I had no dealings, of whom I knew nothing....

The whole illimitable place teemed with suggestions of indefinite and sometimes outrageous possibility, of hidden but magnificent meanings.

It wasn't simply that I received a vast impression of space and multitude and opportunity; intimate things also were suddenly dragged from neglected, veiled and darkened corners into an acute vividness of perception. Close at hand in the big art museum I came for the first time upon the beauty of nudity, which I had hitherto held to be a shameful secret, flaunted and gloried in; I was made aware of beauty as not only permissible, but desirable and frequent and of a thousand hitherto unsuspected rich aspects of life. One night in a real rapture, I walked round the upper gallery of the Albert Hall and listened for the first time to great music; I believe now that it was a rendering of Beethoven's Ninth Symphony....

My apprehension of spaces and places was reinforced by a quickened apprehension of persons. A constant stream of people passed by me, eyes met and challenged mine and passed--more and more I wanted then to stay--if I went eastward towards Piccadilly, women who seemed then to my boyish inexperience softly splendid and alluring, murmured to me as they passed. Extraordinarily life unveiled. The very hoardings clamoured strangely at one's senses and curiosities. One bought pamphlets and papers full of strange and daring ideas transcending one's boldest; in the parks one heard men discussing the very existence

of God, denying the rights of property, debating a hundred things that one dared not think about in Wimblehurst. And after the ordinary overcast day, after dull mornings, came twilight, and London lit up and became a thing of white and yellow and red jewels of light and wonderful floods of golden illumination and stupendous and unfathomable shadows--and there were no longer any mean or shabby people--but a great mysterious movement of unaccountable beings....

Always I was coming on the queerest new aspects. Late one Saturday night I found myself one of a great slow-moving crowd between the blazing shops and the flaring barrows in the Harrow Road; I got into conversation with two bold-eyed girls, bought them boxes of chocolate, made the acquaintance of father and mother and various younger brothers and sisters, sat in a public-house hilariously with them all, standing and being stood drinks, and left them in the small hours at the door of "home," never to see them again. And once I was accosted on the outskirts of a Salvation Army meeting in one of the parks by a silk-hatted young man of eager and serious discourse, who argued against scepticism with me, invited me home to tea into a clean and cheerful family of brothers and sisters and friends, and there I spent the evening singing hymns to the harmonium (which reminded me of half-forgotten Chatham), and wishing all the sisters were not so obviously engaged....

Then on the remote hill of this boundless city-world I found Ewart.

III

How well I remember the first morning, a bright Sunday morning in early October, when I raided in upon Ewart! I found my old schoolfellow in bed in a room over an oil-shop in a back street at the foot of Highgate Hill. His landlady, a pleasant, dirty

young woman with soft-brown eyes, brought down his message for me to come up; and up I went. The room presented itself as ample and interesting in detail and shabby with a quite commendable shabbiness. I had an impression of brown walls--they were papered with brown paper-- of a long shelf along one side of the room, with dusty plaster casts and a small cheap lay figure of a horse, of a table and something of grey wax partially covered with a cloth, and of scattered drawings. There was a gas stove in one corner, and some enameled ware that had been used for overnight cooking. The oilcloth on the floor was streaked with a peculiar white dust. Ewart himself was not in the first instance visible, but only a fourfold canvas screen at the end of the room from which shouts proceeded of "Come on!" then his wiry black hair, very much ruffled, and a staring red-brown eye and his stump of a nose came round the edge of this at a height of about three feet from the ground "It's old Ponderevo!" he said, "the Early bird! And he's caught the worm! By Jove, but it's cold this morning! Come round here and sit on the bed!"

I walked round, wrung his hand, and we surveyed one another.

He was lying on a small wooden fold-up bed, the scanty covering of which was supplemented by an overcoat and an elderly but still cheerful pair of check trousers, and he was wearing pajamas of a virulent pink and green. His neck seemed longer and more stringy than it had been even in our schooldays, and his upper lip had a wiry black moustache. The rest of his ruddy, knobby countenance, his erratic hair and his general hairy leanness had not even--to my perceptions grown.

"By Jove!" he said, "you've got quite decent-looking, Ponderevo! What do you think of me?"

"You're all right. What are you doing here?"

"Art, my son--sculpture! And incidentally--" He hesitated. "I ply a trade. Will you hand me that pipe and those smoking things? So! You can't make coffee, eh? Well, try your hand. Cast down this screen--no--fold it up and so we'll go into the other room. I'll keep in bed all the same. The fire's a gas stove. Yes. Don't make it bang too loud as you light it--I can't stand it this morning. You won't smoke ?... Well, it does me good to see you again, Ponderevo. Tell me what you're doing, and how you're getting on."

He directed me in the service of his simple hospitality, and presently I came back to his bed and sat down and smiled at him there, smoking comfortably, with his hands under his head, surveying me.

"How's Life's Morning, Ponderevo? By Jove, it must be nearly six years since we met! They've got moustaches. We've fleshed ourselves a bit, eh? And you?"

I felt a pipe was becoming after all, and that lit, I gave him a favourable sketch of my career.

"Science! And you've worked like that! While I've been potting round doing odd jobs for stone-masons and people, and trying to get to sculpture. I've a sort of feeling that the chisel--I began with painting, Ponderevo, and found I was colour-blind, colour-blind enough to stop it. I've drawn about and thought about--thought more particularly. I give myself three days a week as an art student, and the rest of the time I've a sort of trade that keeps me. And we're still in the beginning of things, young men starting. Do you remember the old times at Goudhurst, our doll's-house island, the Retreat of the Ten Thousand Young Holmes and the rabbits, eh? It's surprising, if you think of it, to find we are still young. And we used to talk of what we would be, and we used to talk of love! I suppose you know all about

that now, Ponderevo?"

I finished and hesitated on some vague foolish lie, "No," I said, a little ashamed of the truth. "Do you? I've been too busy."

"I'm just beginning--just as we were then. Things happen."

He sucked at his pipe for a space and stared at the plaster cast of a flayed hand that hung on the wall.

"The fact is, Ponderevo, I'm beginning to find life a most extraordinary queer set-out; the things that pull one, the things that don't. The wants--This business of sex. It's a net. No end to it, no way out of it, no sense in it. There are times when women take possession of me, when my mind is like a painted ceiling at Hampton Court with the pride of the flesh sprawling all over it. WHY?... And then again sometimes when I have to encounter a woman, I am overwhelmed by a terror of tantalising boredom--I fly, I hide, I do anything. You've got your scientific explanations perhaps; what's Nature and the universe up to in that matter?"

"It's her way, I gather, of securing the continuity of the species."

"But it doesn't," said Ewart. "That's just it! No. I have succumbed to--dissipation--down the hill there. Euston Road way.

And it was damned ugly and mean, and I hate having done it. And the continuity of the species--Lord!... And why does Nature make a man so infernally ready for drinks? There's no sense in that anyhow." He sat up in bed, to put this question with the greater earnestness. "And why has she given me a most violent desire towards sculpture and an equally violent desire to leave off work directly I begin it, eh?... Let's have some more coffee. I put

it to you, these things puzzle me, Ponderevo. They dishearten me. They keep me in bed."

He had an air of having saved up these difficulties for me for some time. He sat with his chin almost touching his knees, sucking at his pipe.

"That's what I mean," he went on, "when I say life is getting on to me as extraordinarily queer, I don't see my game, nor why I was invited. And I don't make anything of the world outside either. What do you make of it?"

"London," I began. "It's--so enormous!"

"Isn't it! And it's all up to nothing. You find chaps keeping grocers' shops--why the DEVIL, Ponderevo, do they keep grocers' shops? They all do it very carefully, very steadily, very meanly. You find people running about and doing the most remarkable things being policemen, for example, and burglars. They go about these businesses quite gravely and earnestly. I somehow--can't go about mine. Is there any sense in it at all--anywhere?"

"There must be sense in it," I said. "We're young."

"We're young--yes. But one must inquire. The grocer's a grocer because, I suppose, he sees he comes in there. Feels that on the whole it amounts to a call.... But the bother is I don't see where I come in at all. Do you?"

"Where you come in?"

"No, where you come in."

"Not exactly, yet," I said. "I want to do some good in the

world--something--something effectual, before I die. I have a sort of idea my scientific work-- I don't know."

"Yes," he mused." And I've got a sort of idea my sculpture,--but now it is to come in and WHY,--I've no idea at all." He hugged his knees for a space. "That's what puzzles me, Ponderevo, no end."

He became animated. "If you will look in that cupboard," he said, "you will find an old respectable looking roll on a plate and a knife somewhere and a gallipot containing butter. You give them me and I'll make my breakfast, and then if you don't mind watching me paddle about at my simple toilet I'll get up. Then we'll go for a walk and talk about this affair of life further. And about Art and Literature and anything else that crops up on the way.... Yes, that's the gallipot. Cockroach got in it? Chuck him out--damned interloper...."

So in the first five minutes of our talk, as I seem to remember it now, old Ewart struck the note that ran through all that morning's intercourse....

To me it was a most memorable talk because it opened out quite new horizons of thought. I'd been working rather close and out of touch with Ewart's free gesticulating way. He was pessimistic that day and sceptical to the very root of things. He made me feel clearly, what I had not felt at all before, the general adventurousness of life, particularly of life at the stage we had reached, and also the absence of definite objects, of any concerted purpose in the lives that were going on all round us. He made me feel, too, how ready I was to take up commonplace assumptions. Just as I had always imagined that somewhere in social arrangements there was certainly a Head-Master who would intervene if one went too far, so I had always had a sort of implicit belief that in our England there

were somewhere people who understood what we were all, as a nation, about. That crumpled into his pit of doubt and vanished.

He brought out, sharply cut and certain, the immense effect of purposelessness in London that I was already indistinctly feeling. We found ourselves at last returning through Highgate Cemetery and Waterlow Park--and Ewart was talking.

"Look at it there," he said, stopping and pointing to the great vale of London spreading wide and far. "It's like a sea--and we swim in it. And at last down we go, and then up we come--washed up here." He swung his arms to the long slopes about us, tombs and headstones in long perspectives, in limitless rows.

"We're young, Ponderevo, but sooner or later our whitened memories will wash up on one of these beaches, on some such beach as this. George Ponderevo, F.R.S., Sidney Ewart, R.I.P. Look at the rows of 'em!"

He paused. "Do you see that hand? The hand, I mean, pointing upward, on the top of a blunted obelisk. Yes. Well, that's what I do for a living--when I'm not thinking, or drinking, or prowling, or making love, or pretending I'm trying to be a sculptor without either the money or the morals for a model. See? And I do those hearts afire and those pensive angel guardians with the palm of peace. Damned well I do 'em and damned cheap! I'm a sweated victim, Ponderevo..."

That was the way of it, anyhow. I drank deep of talk that day; we went into theology, into philosophy; I had my first glimpse of socialism. I felt as though I had been silent in a silence since I and he had parted. At the thought of socialism Ewart's moods changed for a time to a sort of energy. "After all, all this confounded vagueness might be altered. If you could get men to work together..."

It was a good talk that rambled through all the universe. I thought I was giving my mind refreshment, but indeed it was dissipation. All sorts of ideas, even now, carry me back as it were to a fountain-head, to Waterlow Park and my resuscitated Ewart. There stretches away south of us long garden slopes and white gravestones and the wide expanse of London, and somewhere in the picture is a red old wall, sun-warmed, and a great blaze of Michaelmas daisies set off with late golden sunflowers and a drift of mottled, blood-red, fallen leaves. It was with me that day as though I had lifted my head suddenly out of dull and immediate things and looked at life altogether.... But it played the very devil with the copying up of my arrears of notes to which I had vowed the latter half of that day.

After that reunion Ewart and I met much and talked much, and in our subsequent encounters his monologue was interrupted and I took my share. He had exercised me so greatly that I lay awake at nights thinking him over, and discoursed and answered him in my head as I went in the morning to the College. I am by nature a doer and only by the way a critic; his philosophical assertion of the incalculable vagueness of life which fitted his natural indolence roused my more irritable and energetic nature to active protests. "It's all so pointless," I said, "because people are slack and because it's in the ebb of an age. But you're a socialist. Well, let's bring that about! And there's a purpose. There you are!"

Ewart gave me all my first conceptions of socialism; in a little while I was an enthusiastic socialist and he was a passive resister to the practical exposition of the theories he had taught me. "We must join some organisation," I said. "We ought to do things.... We ought to go and speak at street corners. People don't know."

You must figure me a rather ill-dressed young man in a state of great earnestness, standing up in that shabby studio of his and saying these things, perhaps with some gesticulations, and Ewart with a clay-smudged face, dressed perhaps in a flannel shirt and trousers, with a pipe in his mouth, squatting philosophically at a table, working at some chunk of clay that never got beyond suggestion.

"I wonder why one doesn't want to," he said.

It was only very slowly I came to gauge Ewart's real position in the scheme of things, to understand how deliberate and complete was this detachment of his from the moral condemnation and responsibilities that played so fine a part in his talk. His was essentially the nature of an artistic appreciator; he could find interest and beauty in endless aspects of things that I marked as evil, or at least as not negotiable; and the impulse I had towards self-deception, to sustained and consistent self-devotion, disturbed and detached and pointless as it was at that time, he had indeed a sort of admiration for but no sympathy. Like many fantastic and ample talkers he was at bottom secretive, and he gave me a series of little shocks of discovery throughout our intercourse.

The first of these came in the realisation that he quite seriously meant to do nothing in the world at all towards reforming the evils he laid bare in so easy and dexterous a manner. The next came in the sudden appearance of a person called "Milly"--I've forgotten her surname--whom I found in his room one evening, simply attired in a blue wrap--the rest of her costume behind the screen--smoking cigarettes and sharing a flagon of an amazingly cheap and self-assertive grocer's wine Ewart affected, called "Canary Sack." "Hullo!" said Ewart, as I came in. "This is Milly, you know. She's been being a model--she IS a model really.... (keep calm, Ponderevo!) Have

some sack?"

Milly was a woman of thirty, perhaps, with a broad, rather pretty face, a placid disposition, a bad accent and delightful blond hair that waved off her head with an irrepressible variety of charm; and whenever Ewart spoke she beamed at him. Ewart was always sketching this hair of hers and embarking upon clay statuettes of her that were never finished. She was, I know now, a woman of the streets, whom Ewart had picked up in the most casual manner, and who had fallen in love with him, but my inexperience in those days was too great for me to place her then, and Ewart offered no elucidations. She came to him, he went to her, they took holidays together in the country when certainly she sustained her fair share of their expenditure. I suspect him now even of taking money from her. Odd old Ewart! It was a relationship so alien to my orderly conceptions of honour, to what I could imagine any friend of mine doing, that I really hardly saw it with it there under my nose. But I see it and I think I understand it now....

Before I fully grasped the discursive manner in which Ewart was committed to his particular way in life, I did, I say, as the broad constructive ideas of socialism took hold of me, try to get him to work with me in some definite fashion as a socialist.

"We ought to join on to other socialists," I said.

"They've got something."

"Let's go and look at some first."

After some pains we discovered the office of the Fabian Society, lurking in a cellar in Clement's Inn; and we went and interviewed a rather discouraging secretary who stood astraddle in front of a fire and questioned us severely and seemed to doubt the integrity

of our intentions profoundly. He advised us to attend the next open meeting in Clifford's Inn and gave us the necessary data. We both contrived to get to the affair, and heard a discursive gritty paper on Trusts and one of the most inconclusive discussions you can imagine. Three-quarters of the speakers seemed under some jocular obsession which took the form of pretending to be conceited. It was a sort of family joke, and as strangers to the family we did not like it.... As we came out through the narrow passage from Clifford's Inn to the Strand, Ewart suddenly pitched upon a wizened, spectacled little man in a vast felt hat and a large orange tie.

"How many members are there in this Fabian Society of yours?" he asked.

The little man became at once defensive in his manner.

"About seven hundred," he said; "perhaps eight."

"Like--like the ones here?"

The little man gave a nervous self-satisfied laugh. "I suppose they're up to sample," he said.

The little man dropped out of existence and we emerged upon the Strand. Ewart twisted his arm into a queerly eloquent gesture that gathered up all the tall facades of the banks, the business places, the projecting clock and towers of the Law Courts, the advertisements, the luminous signs, into one social immensity, into a capitalistic system gigantic and invincible.

"These socialists have no sense of proportion," he said. "What can you expect of them?"

Ewart, as the embodiment of talk, was certainly a leading factor in my conspicuous failure to go on studying. Social theory in its first crude form of Democratic Socialism gripped my intelligence more and more powerfully. I argued in the laboratory with the man who shared my bench until we quarreled and did not speak and also I fell in love.

The ferment of sex had been creeping into my being like a slowly advancing tide through all my Wimblehurst days, the stimulus of London was like the rising of a wind out of the sea that brings the waves in fast and high. Ewart had his share in that. More and more acutely and unmistakably did my perception of beauty, form and sound, my desire for adventure, my desire for intercourse, converge on this central and commanding business of the individual life. I had to get me a mate.

I began to fall in love faintly with girls I passed in the street, with women who sat before me in trains, with girl fellow-students, with ladies in passing carriages, with loiterers at the corners, with neat-handed waitresses in shops and tea-rooms, with pictures even of girls and women. On my rare visits to the theatre I always became exalted, and found the actresses and even the spectators about me mysterious, attractive, creatures of deep interest and desire. I had a stronger and stronger sense that among these glancing, passing multitudes there was somewhere one who was for me. And in spite of every antagonistic force in the world, there was something in my very marrow that insisted: "Stop! Look at this one! Think of her! Won't she do? This signifies--this before all things signifies! Stop! Why are you hurrying by? This may be the predestined person--before all others."

It is odd that I can't remember when first I saw Marion, who became my wife--whom I was to make wretched, who was to make me

wretched, who was to pluck that fine generalised possibility of love out of my early manhood and make it a personal conflict. I became aware of her as one of a number of interesting attractive figures that moved about in my world, that glanced back at my eyes, that flitted by with a kind of averted watchfulness. I would meet her coming through the Art Museum, which was my short cut to the Brompton Road, or see her sitting, reading as I thought, in one of the bays of the Education Library. But really, as I found out afterwards, she never read. She used to come there to eat a bun in quiet. She was a very gracefully-moving figure of a girl then, very plainly dressed, with dark brown hair I remember, in a knot low on her neck behind that confessed the pretty roundness of her head and harmonised with the admirable lines of ears and cheek, the grave serenity of mouth and brow.

She stood out among the other girls very distinctly because they dressed more than she did, struck emphatic notes of colour, startled one by novelties in hats and bows and things. I've always hated the rustle, the disconcerting colour boundaries, the smart unnatural angles of women's clothes. Her plain black dress gave her a starkness....

I do remember, though, how one afternoon I discovered the peculiar appeal of her form for me. I had been restless with my work and had finally slipped out of the Laboratory and come over to the Art Museum to lounge among the pictures. I came upon her in an odd corner of the Sheepshanks gallery, intently copying something from a picture that hung high. I had just been in the gallery of casts from the antique, my mind was all alive with my newly awakened sense of line, and there she stood with face upturned, her body drooping forward from the hips just a little--memorably graceful--feminine.

After that I know I sought to see her, felt a distinctive

emotion at her presence, began to imagine things about her. I no longer thought of generalised womanhood or of this casual person or that. I thought of her.

An accident brought us together. I found myself one Monday morning in an omnibus staggering westward from Victoria--I was returning from a Sunday I'd spent at Wimblehurst in response to a unique freak of hospitality on the part of Mr. Mantell. She was the sole other inside passenger. And when the time came to pay her fare, she became an extremely scared, disconcerted and fumbling young woman; she had left her purse at home.

Luckily I had some money.

She looked at me with startled, troubled brown eyes; she permitted my proffered payment to the conductor with a certain ungraciousness that seemed a part of her shyness, and then as she rose to go, she thanked me with an obvious affectation of ease.

"Thank you so much," she said in a pleasant soft voice; and then less gracefully, "Awfully kind of you, you know."

I fancy I made polite noises. But just then I wasn't disposed to be critical. I was full of the sense of her presence; her arm was stretched out over me as she moved past me, the gracious slenderness of her body was near me. The words we used didn't seem very greatly to matter. I had vague ideas of getting out with her--and I didn't.

That encounter, I have no doubt, exercised me enormously. I lay awake at night rehearsing it, and wondering about the next phase of our relationship. That took the form of the return of my twopence. I was in the Science Library, digging something out of the Encyclopedia Britannica, when she appeared beside me and placed on the open page an evidently premeditated thin envelope,

bulgingly confessing the coins within.

"It was so very kind of you," she said, "the other day. I don't know what I should have done, Mr.--"

I supplied my name. "I knew," I said, "you were a student here."

"Not exactly a student. I--"

"Well, anyhow, I knew you were here frequently. And I'm a student myself at the Consolidated Technical Schools."

I plunged into autobiography and questionings, and so entangled her in a conversation that got a quality of intimacy through the fact that, out of deference to our fellow-readers, we were obliged to speak in undertones. And I have no doubt that in substance it was singularly banal. Indeed I have an impression that all our early conversations were incredibly banal. We met several times in a manner half-accidental, half furtive and wholly awkward. Mentally I didn't take hold of her. I never did take hold of her mentally. Her talk, I now know all too clearly, was shallow, pretentious, evasive. Only--even to this day--I don't remember it as in any way vulgar. She was, I could see quite clearly, anxious to overstate or conceal her real social status, a little desirous to be taken for a student in the art school and a little ashamed that she wasn't. She came to the museum to "copy things," and this, I gathered, had something to do with some way of partially earning her living that I wasn't to inquire into. I told her things about myself, vain things that I felt might appeal to her, but that I learnt long afterwards made her think me "conceited." We talked of books, but there she was very much on her guard and secretive, and rather more freely of pictures. She "liked" pictures. I think from the outset I appreciated and did not for a moment resent that hers was a commonplace mind, that she was the unconscious custodian of

something that had gripped my most intimate instinct, that she embodied the hope of a possibility, was the careless proprietor of a physical quality that had turned my head like strong wine. I felt I had to stick to our acquaintance, flat as it was. Presently we should get through these irrelevant exterior things, and come to the reality of love beneath.

I saw her in dreams released, as it were, from herself, beautiful, worshipful, glowing. And sometimes when we were together, we would come on silences through sheer lack of matter, and then my eyes would feast on her, and the silence seemed like the drawing back of a curtain--her superficial self. Odd, I confess. Odd, particularly, the enormous hold of certain things about her upon me, a certain slight rounded duskiness of skin, a certain perfection of modelling in her lips, her brow, a certain fine flow about the shoulders. She wasn't indeed beautiful to many people--these things are beyond explaining. She had manifest defects of form and feature, and they didn't matter at all. Her complexion was bad, but I don't think it would have mattered if it had been positively unwholesome. I had extraordinarily limited, extraordinarily painful, desires. I longed intolerably to kiss her lips.

V

The affair was immensely serious and commanding to me. I don't remember that in these earlier phases I had any thought of turning back at all. It was clear to me that she regarded me with an eye entirely more critical than I had for her, that she didn't like my scholarly untidiness, my want of even the most commonplace style. "Why do you wear collars like that?" she said, and sent me in pursuit of gentlemanly neckwear. I remember when she invited me a little abruptly one day to come to tea at her home on the following Sunday and meet her father and mother and aunt, that I immediately doubted whether my hitherto

unsuspected best clothes would create the impression she desired me to make on her belongings. I put off the encounter until the Sunday after, to get myself in order. I had a morning coat made and I bought a silk hat, and had my reward in the first glance of admiration she ever gave me. I wonder how many of my sex are as preposterous. I was, you see, abandoning all my beliefs, my conventions unasked. I was forgetting myself immensely. And there was a conscious shame in it all. Never a word--did I breathe to Ewart--to any living soul of what was going on.

Her father and mother and aunt struck me as the dismalest of people, and her home in Walham Green was chiefly notable for its black and amber tapestry carpets and curtains and table-cloths, and the age and irrelevance of its books, mostly books with faded gilt on the covers. The windows were fortified against the intrusive eye by cheap lace curtains and an "art pot" upon an unstable octagonal table. Several framed Art School drawings of Marion's, bearing official South Kensington marks of approval, adorned the room, and there was a black and gilt piano with a hymn-book on the top of it. There were draped mirrors over all the mantels, and above the sideboard in the dining-room in which we sat at tea was a portrait of her father, villainously truthful after the manner of such works. I couldn't see a trace of the beauty I found in her in either parent, yet she somehow contrived to be like them both.

These people pretended in a way that reminded me of the Three Great Women in my mother's room, but they had not nearly so much social knowledge and did not do it nearly so well. Also, I remarked, they did it with an eye on Marion. They had wanted to thank me, they said, for the kindness to their daughter in the matter of the 'bus fare, and so accounted for anything unusual in their invitation. They posed as simple gentlefolk, a little hostile to the rush and gadding-about of London, preferring a secluded and unpretentious quiet.

When Marion got out the white table-cloth from the sideboard-drawer for tea, a card bearing the word "APARTMENTS" fell to the floor. I picked it up and gave it to her before I realised from her quickened colour that I should not have seen it; that probably had been removed from the window in honour of my coming.

Her father spoke once in a large remote way of his claims of business engagements, and it was only long afterwards I realised that he was a supernumerary clerk in the Walham Green Gas Works and otherwise a useful man at home. He was a large, loose, fattish man with unintelligent brown eyes magnified by spectacles; he wore an ill-fitting frock-coat and a paper collar, and he showed me, as his great treasure and interest, a large Bible which he had grangerised with photographs of pictures. Also he cultivated the little garden-yard behind the house, and he had a small greenhouse with tomatoes. "I wish I 'ad 'eat," he said. "One can do such a lot with 'eat. But I suppose you can't 'ave everything you want in this world."

Both he and Marion's mother treated her with a deference that struck me as the most natural thing in the world. Her own manner changed, became more authoritative and watchful, her shyness disappeared. She had taken a line of her own I gathered, draped the mirror, got the second-hand piano, and broken her parents in.

Her mother must once have been a pretty woman; she had regular features and Marion's hair without its lustre, but she was thin and careworn. The aunt, Miss Ramboat, was a large, abnormally shy person very like her brother, and I don't recall anything she said on this occasion.

To begin with there was a good deal of tension, Marion was frightfully nervous and every one was under the necessity of

behaving in a mysteriously unreal fashion until I plunged, became talkative and made a certain ease and interest. I told them of the schools, of my lodgings, of Wimblehurst and my apprenticeship days. "There's a lot of this Science about nowadays," Mr. Ramboat reflected; "but I sometimes wonder a bit what good it is?"

I was young enough to be led into what he called "a bit of a discussion," which Marion truncated before our voices became unduly raised. "I dare say," she said, "there's much to be said on both sides."

I remember Marion's mother asked me what church I attended, and that I replied evasively. After tea there was music and we sang hymns. I doubted if I had a voice when this was proposed, but that was held to be a trivial objection, and I found sitting close beside the sweep of hair from Marion's brow had many compensations. I discovered her mother sitting in the horsehair armchair and regarding us sentimentally. I went for a walk with Marion towards Putney Bridge, and then there was more singing and a supper of cold bacon and pie, after which Mr. Ramboat and I smoked. During that walk, I remember, she told me the import of her sketchings and copyings in the museum. A cousin of a friend of hers whom she spoke of as Smithie, had developed an original business in a sort of tea-gown garment which she called a Persian Robe, a plain sort of wrap with a gaily embroidered yoke, and Marion went there and worked in the busy times. In the times that weren't busy she designed novelties in yokes by an assiduous use of eyes and note-book in the museum, and went home and traced out the captured forms on the foundation material. "I don't get much," said Marion, "but it's interesting, and in the busy times we work all day. Of course the workgirls are dreadfully common, but we don't say much to them. And Smithie talks enough for ten."

I quite understood the workgirls were dreadfully common.

I don't remember that the Walham Green menage and the quality of these people, nor the light they threw on Marion, detracted in the slightest degree at that time from the intent resolve that held me to make her mine. I didn't like them. But I took them as part of the affair. Indeed, on the whole, I think they threw her up by an effect of contrast; she was so obviously controlling them, so consciously superior to them.

More and more of my time did I give to this passion that possessed me. I began to think chiefly of ways of pleasing Marion, of acts of devotion, of treats, of sumptuous presents for her, of appeals she would understand. If at times she was manifestly unintelligent, in her ignorance became indisputable, I told myself her simple instincts were worth all the education and intelligence in the world. And to this day I think I wasn't really wrong about her. There was something extraordinarily fine about her, something simple and high, that flickered in and out of her ignorance and commonness and limitations like the tongue from the mouth of a snake....

One night I was privileged to meet her and bring her home from an entertainment at the Birkbeck Institute. We came back on the underground railway and we travelled first-class--that being the highest class available. We were alone in the carriage, and for the first time I ventured to put my arm about her.

"You mustn't," she said feebly.

"I love you," I whispered suddenly with my heart beating wildly, drew her to me, drew all her beauty to me and kissed her cool and unresisting lips.

"Love me?" she said, struggling away from me, "Don't!" and then,

as the train ran into a station, "You must tell no one.... I don't know.... You shouldn't have done that...."

Then two other people got in with us and terminated my wooing for a time.

When we found ourselves alone together, walking towards Battersea, she had decided to be offended. I parted from her unforgiven and terribly distressed.

When we met again, she told me I must never say "that" again.

I had dreamt that to kiss her lips was ultimate satisfaction. But it was indeed only the beginning of desires. I told her my one ambition was to marry her.

"But," she said, "you're not in a position-- What's the good of talking like that?"

I stared at her. "I mean to," I said.

"You can't," she answered. "It will be years"

"But I love you," I insisted.

I stood not a yard from the sweet lips I had kissed; I stood within arm's length of the inanimate beauty I desired to quicken, and I saw opening between us a gulf of years, toil, waiting, disappointments and an immense uncertainty.

"I love you," I said. "Don't you love me?"

She looked me in the face with grave irresponsible eyes.

"I don't know," she said. "I LIKE you, of course.... One has to

be sensibl..."

I can remember now my sense of frustration by her unresilient reply. I should have perceived then that for her my ardour had no quickening fire. But how was I to know? I had let myself come to want her, my imagination endowed her with infinite possibilities. I wanted her and wanted her, stupidly and instinctively....

"But," I said "Love--!"

"One has to be sensible," she replied. "I like going about with you. Can't we keep as we are?"

VI

Well, you begin to understand my breakdown now, I have been copious enough with these apologia. My work got more and more spiritless, my behaviour degenerated, my punctuality declined; I was more and more outclassed in the steady grind by my fellow-students. Such supplies of moral energy as I still had at command shaped now in the direction of serving Marion rather than science.

I fell away dreadfully, more and more I shirked and skulked; the humped men from the north, the pale men with thin, clenched minds, the intent, hard-breathing students I found against me, fell at last from keen rivalry to moral contempt. Even a girl got above me upon one of the lists. Then indeed I made it a point of honour to show by my public disregard of every rule that I really did not even pretend to try.

So one day I found myself sitting in a mood of considerable astonishment in Kensington Gardens, reacting on a recent heated interview with the school Registrar in which I had displayed more

spirit than sense. I was astonished chiefly at my stupendous falling away from all the militant ideals of unflinching study I had brought up from Wimblehurst. I had displayed myself, as the Registrar put it, "an unmitigated rotter." My failure to get marks in the written examination had only been equalled by the insufficiency of my practical work.

"I ask you," the Registrar had said, "what will become of you when your scholarship runs out?"

It certainly was an interesting question. What was going to become of me?

It was clear there would be nothing for me in the schools as I had once dared to hope; there seemed, indeed, scarcely anything in the world except an illpaid assistantship in some provincial organized Science School or grammar school. I knew that for that sort of work, without a degree or any qualification, one earned hardly a bare living and had little leisure to struggle up to anything better. If only I had even as little as fifty pounds I might hold out in London and take my B.Sc. degree, and quadruple my chances! My bitterness against my uncle returned at the thought. After all, he had some of my money still, or ought to have. Why shouldn't I act within my rights, threaten to 'take proceedings'? I meditated for a space on the idea, and then returned to the Science Library and wrote him a very considerable and occasionally pungent letter.

That letter to my uncle was the nadir of my failure. Its remarkable consequences, which ended my student days altogether, I will tell in the next chapter.

I say "my failure." Yet there are times when I can even doubt whether that period was a failure at all, when I become defensively critical of those exacting courses I did not follow,

the encyclopaedic process of scientific exhaustion from which I was distracted. My mind was not inactive, even if it fed on forbidden food. I did not learn what my professors and demonstrators had resolved I should learn, but I learnt many things. My mind learnt to swing wide and to swing by itself.

After all, those other fellows who took high places in the College examinations and were the professor's model boys haven't done so amazingly. Some are professors themselves, some technical experts; not one can show things done such as I, following my own interest, have achieved. For I have built boats that smack across the water like whiplashes; no one ever dreamt of such boats until I built them; and I have surprised three secrets that are more than technical discoveries, in the unexpected hiding-places of Nature. I have come nearer flying than any man has done. Could I have done as much if I had had a turn for obeying those rather mediocre professors at the college who proposed to train my mind? If I had been trained in research--that ridiculous contradiction in terms--should I have done more than produce additions to the existing store of little papers with blunted conclusions, of which there are already too many? I see no sense in mock modesty upon this matter. Even by the standards of worldly success I am, by the side of my fellow-students, no failure. I had my F.R.S. by the time I was thirty-seven, and if I am not very wealthy poverty is as far from me as the Spanish Inquisition. Suppose I had stamped down on the head of my wandering curiosity, locked my imagination in a box just when it wanted to grow out to things, worked by so-and-so's excellent method and so-and-so's indications, where should I be now?

I may be all wrong in this. It may be I should be a far more efficient man than I am if I had cut off all those divergent expenditures of energy, plugged up my curiosity about society with more currently acceptable rubbish or other, abandoned

Ewart, evaded Marion instead of pursuing her, concentrated. But I don't believe it!

However, I certainly believed it completely and was filled with remorse on that afternoon when I sat dejectedly in Kensington Gardens and reviewed, in the light of the Registrar's pertinent questions my first two years in London.

CHAPTER THE SECOND

THE DAWN COMES, AND MY UNCLE APPEARS IN A NEW SILK HAT

I

Throughout my student days I had not seen my uncle. I refrained from going to him in spite of an occasional regret that in this way I estranged myself from my aunt Susan, and I maintained a sulky attitude of mind towards him. And I don't think that once in all that time I gave a thought to that mystic word of his that was to alter all the world for us. Yet I had not altogether forgotten it. It was with a touch of memory, dim transient perplexity if no more--why did this thing seem in some way personal?--that I read a new inscription upon the hoardings:

THE SECRET OF VIGOUR, TONO-BUNGAY.

That was all. It was simple and yet in some way arresting. I found myself repeating the word after I had passed; it roused one's attention like the sound of distant guns. "Tono"--what's that? and deep, rich, unhurrying;--"BUN--gay!"

Then came my uncle's amazing telegram, his answer to my hostile

note: "Come to me at once you are wanted three hundred a year certain tono-bungay."

"By Jove!" I cried, "of course!"

"It's something--. A patent-medicine! I wonder what he wants with me."

In his Napoleonic way my uncle had omitted to give an address. His telegram had been handed in at Farringdon Road, and after complex meditations I replied to Ponderevo, Farringdon Road, trusting to the rarity of our surname to reach him.

"Where are you?" I asked.

His reply came promptly:

"192A, Raggett Street, E.C."

The next day I took an unsanctioned holiday after the morning's lecture. I discovered my uncle in a wonderfully new silk hat--oh, a splendid hat! with a rolling brim that went beyond the common fashion. It was decidedly too big for him--that was its only fault. It was stuck on the back of his head, and he was in a white waistcoat and shirt sleeves. He welcomed me with a forgetfulness of my bitter satire and my hostile abstinence that was almost divine. His glasses fell off at the sight of me. His round inexpressive eyes shone brightly. He held out his plump short hand.

"Here we are, George! What did I tell you? Needn't whisper it now, my boy. Shout it--LOUD! spread it about! Tell every one! Tono--TONO--, TONO-BUNGAY!"

Raggett Street, you must understand, was a thoroughfare over

which some one had distributed large quantities of cabbage stumps and leaves. It opened out of the upper end of Farringdon Street, and 192A was a shop with the plate-glass front coloured chocolate, on which several of the same bills I had read upon the hoardings had been stuck. The floor was covered by street mud that had been brought in on dirty boots, and three energetic young men of the hooligan type, in neck-wraps and caps, were packing wooden cases with papered-up bottles, amidst much straw and confusion. The counter was littered with these same swathed bottles, of a pattern then novel but now amazingly familiar in the world, the blue paper with the coruscating figure of a genially nude giant, and the printed directions of how under practically all circumstances to take Tono-Bungay. Beyond the counter on one side opened a staircase down which I seem to remember a girl descending with a further consignment of bottles, and the rest of the background was a high partition, also chocolate, with "Temporary Laboratory" inscribed upon it in white letters, and over a door that pierced it, "Office." Here I rapped, inaudible amid much hammering, and then entered unanswered to find my uncle, dressed as I have described, one hand gripping a sheath of letters, and the other scratching his head as he dictated to one of three toiling typewriter girls. Behind him was a further partition and a door inscribed "ABSOLUTELY PRIVATE--NO ADMISSION," thereon. This partition was of wood painted the universal chocolate, up to about eight feet from the ground, and then of glass. Through the glass I saw dimly a crowded suggestion of crucibles and glass retorts, and--by Jove!--yes!--the dear old Wimblehurst air-pump still! It gave me quite a little thrill--that air-pump! And beside it was the electrical machine--but something--some serious trouble--had happened to that. All these were evidently placed on a shelf just at the level to show.

"Come right into the sanctum," said my uncle, after he had

finished something about "esteemed consideration," and whisked me through the door into a room that quite amazingly failed to verify the promise of that apparatus. It was papered with dingy wall-paper that had peeled in places; it contained a fireplace, an easy-chair with a cushion, a table on which stood two or three big bottles, a number of cigar-boxes on the mantel, whisky Tantalus and a row of soda syphons. He shut the door after me carefully.

"Well, here we are!" he said. "Going strong! Have a whisky, George? No!--Wise man! Neither will I! You see me at it! At it--hard!"

"Hard at what?"

"Read it," and he thrust into my hand a label--that label that has now become one of the most familiar objects of the chemist's shop, the greenish-blue rather old-fashioned bordering, the legend, the name in good black type, very clear, and the strong man all set about with lightning flashes above the double column of skilful lies in red--the label of Tono-Bungay. "It's afloat," he said, as I stood puzzling at this. "It's afloat. I'm afloat!" And suddenly he burst out singing in that throaty tenor of his--

"I'm afloat, I'm afloat on the fierce flowing tide,
The ocean's my home and my bark is my bride!

"Ripping song that is, George. Not so much a bark as a solution, but still--it does! Here we are at it! By-the-by! Half a mo'! I've thought of a thing." He whisked out, leaving me to examine this nuclear spot at leisure while his voice became dictatorial without. The den struck me as in its large grey dirty way quite unprecedented and extraordinary. The bottles were all labelled simply A, B, C, and so forth, and that dear old apparatus above,

seen from this side, was even more patiently "on the shelf" than when it had been used to impress Wimblehurst. I saw nothing for it but to sit down in the chair and await my uncle's explanations. I remarked a frock-coat with satin lapels behind the door; there was a dignified umbrella in the corner and a clothes-brush and a hat-brush stood on a side-table. My uncle returned in five minutes looking at his watch--a gold watch-- "Gettin' lunch-time, George," he said. "You'd better come and have lunch with me!"

"How's Aunt Susan?" I asked.

"Exuberant. Never saw her so larky. This has bucked her up something wonderful--all this."

"All what?"

"Tono-Bungay."

"What is Tono-Bungay?" I asked.

My uncle hesitated. "Tell you after lunch, George," he said. "Come along!" and having locked up the sanctum after himself, led the way along a narrow dirty pavement, lined with barrows and swept at times by avalanche-like porters bearing burthens to vans, to Farringdon Street. He hailed a passing cab superbly, and the cabman was infinitely respectful. "Schafer's," he said, and off we went side by side--and with me more and more amazed at all these things--to Schafer's Hotel, the second of the two big places with huge lace curtain-covered windows, near the corner of Blackfriars Bridge.

I will confess I felt a magic charm in our relative proportions as the two colossal, pale-blue-and-red liveried porters of Schafers' held open the inner doors for us with a respectful

salutation that in some manner they seemed to confine wholly to my uncle. Instead of being about four inches taller, I felt at least the same size as he, and very much slenderer. Still more respectful--waiters relieved him of the new hat and the dignified umbrella, and took his orders for our lunch. He gave them with a fine assurance.

He nodded to several of the waiters.

"They know me, George, already," he said. "Point me out. Live place! Eye for coming men!"

The detailed business of the lunch engaged our attention for a while, and then I leant across my plate. "And NOW?" said I.

"It's the secret of vigour. Didn't you read that label?"

"Yes, but--"

"It's selling like hot cakes."

"And what is it?" I pressed.

"Well," said my uncle, and then leant forward and spoke softly under cover of his hand, "It's nothing more or less than..."

(But here an unfortunate scruple intervenes. After all, Tono-Bungay is still a marketable commodity and in the hands of purchasers, who bought it from--among other vendors--me. No! I am afraid I cannot give it away--)

"You see," said my uncle in a slow confidential whisper, with eyes very wide and a creased forehead, "it's nice because of the" (here he mentioned a flavouring matter and an aromatic spirit), "it's stimulating because of" (here he mentioned two very vivid

tonics, one with a marked action on the kidney.) "And the" (here he mentioned two other ingredients) "makes it pretty intoxicating. Cocks their tails. Then there's" (but I touch on the essential secret.) "And there you are. I got it out of an old book of recipes--all except the" (here he mentioned the more virulent substance, the one that assails the kidneys), "which is my idea! Modern touch! There you are!"

He reverted to the direction of our lunch.

Presently he was leading the way to the lounge--sumptuous piece in red morocco and yellow glazed crockery, with incredible vistas of settees and sofas and things, and there I found myself grouped with him in two excessively upholstered chairs with an earthenware Moorish table between us bearing coffee and Benedictine, and I was tasting the delights of a tenpenny cigar. My uncle smoked a similar cigar in an habituated manner, and he looked energetic and knowing and luxurious and most unexpectedly a little boulder, round the end of it. It was just a trivial flaw upon our swagger, perhaps that we both were clear our cigars had to be "mild." He got obliquely across the spaces of his great armchair so as to incline confidentially to my ear, he curled up his little legs, and I, in my longer way, adopted a corresponding receptive obliquity. I felt that we should strike an unbiased observer as a couple of very deep and wily and developing and repulsive persons.

"I want to let you into this"--puff--"George," said my uncle round the end of his cigar. "For many reasons."

His voice grew lower and more cunning. He made explanations that to my inexperience did not completely explain. I retain an impression of a long credit and a share with a firm of wholesale chemists, of a credit and a prospective share with some pirate printers, of a third share for a leading magazine and newspaper

proprietor.

"I played 'em off one against the other," said my uncle. I took his point in an instant. He had gone to each of them in turn and said the others had come in.

"I put up four hundred pounds," said my uncle, "myself and my all. And you know--"

He assumed a brisk confidence. "I hadn't five hundred pence. At least--"

For a moment he really was just a little embarrassed. "I DID" he said, "produce capital. You see, there was that trust affair of yours--I ought, I suppose--in strict legality--to have put that straight first. Zzzz....

"It was a bold thing to do," said my uncle, shifting the venue from the region of honour to the region of courage. And then with a characteristic outburst of piety, "Thank God it's all come right!

"And now, I suppose, you ask where do YOU come in? Well, fact is I've always believed in you, George. You've got--it's a sort of dismal grit. Bark your shins, rouse you, and you'll go! You'd rush any position you had a mind to rush. I know a bit about character, George--trust me. You've got--" He clenched his hands and thrust them out suddenly, and at the same time said, with explosive violence, "Wooosh! Yes. You have! The way you put away that Latin at Wimblerhurst; I've never forgotten it.

Wo-oo-oo-osh! Your science and all that! Wo-oo-oo-osh! I know my limitations. There's things I can do, and" (he spoke in a whisper, as though this was the first hint of his life's secret) "there's things I can't. Well, I can create this business, but I

can't make it go. I'm too voluminous--I'm a boiler-over, not a simmering stick-at-it. You keep on HOTTING UP AND HOTTING UP. Papin's digester. That's you, steady and long and piling up,--then, wo-oo-oo-oo-osh. Come in and stiffen these niggers. Teach them that wo-oo-oo-oo-osh. There you are! That's what I'm after. You! Nobody else believes you're more than a boy. Come right in with me and be a man. Eh, George? Think of the fun of it--a thing on the go--a Real Live Thing! Wooshing it up! Making it buzz and spin! Whoo-oo-oo." --He made alluring expanding circles in the air with his hand. "Eh?"

His proposal, sinking to confidential undertones again, took more definite shape. I was to give all my time and energy to developing and organising. "You shan't write a single advertisement, or give a single assurance" he declared. "I can do all that." And the telegram was no flourish; I was to have three hundred a year. Three hundred a year. ("That's nothing," said my uncle, "the thing to freeze on to, when the time comes, is your tenth of the vendor's share.")

Three hundred a year certain, anyhow! It was an enormous income to me. For a moment I was altogether staggered. Could there be that much money in the whole concern? I looked about me at the sumptuous furniture of Schafer's Hotel. No doubt there were many such incomes.

My head was spinning with unwonted Benedictine and Burgundy.

"Let me go back and look at the game again," I said. "Let me see upstairs and round about."

I did.

"What do you think of it all?" my uncle asked at last.

"Well, for one thing," I said, "why don't you have those girls working in a decently ventilated room? Apart from any other consideration, they'd work twice as briskly. And they ought to cover the corks before labelling round the bottle"

"Why?" said my uncle.

"Because--they sometimes make a mucker of the cork job, and then the label's wasted."

"Come and change it, George," said my uncle, with sudden fervour "Come here and make a machine of it. You can. Make it all slick, and then make it woosh. I know you can. Oh! I know you can."

II

I seem to remember very quick changes of mind after that lunch. The muzzy exaltation of the unaccustomed stimulants gave way very rapidly to a model of pellucid and impartial clairvoyance which is one of my habitual mental states. It is intermittent; it leaves me for weeks together, I know, but back it comes at last like justice on circuit, and calls up all my impression, all my illusions, all my willful and passionate proceedings. We came downstairs again into that inner room which pretended to be a scientific laboratory through its high glass lights, and indeed was a lurking place. My uncle pressed a cigarette on me, and I took it and stood before the empty fireplace while he propped his umbrella in the corner, deposited the new silk hat that was a little too big for him on the table, blew copiously and produced a second cigar.

It came into my head that he had shrunken very much in size since the Wimblehurst days, that the cannon ball he had swallowed was rather more evident and shameless than it had been, his skin less

fresh and the nose between his glasses, which still didn't quite fit, much redder. And just then he seemed much laxer in his muscles and not quite as alertly quick in his movements. But he evidently wasn't aware of the degenerative nature of his changes as he sat there, looking suddenly quite little under my eyes.

"Well, George!" he said, quite happily unconscious of my silent criticism, "what do you think of it all?"

"Well," I said, "in the first place--it's a damned swindle!"

"Tut! tut!" said my uncle. "It's as straight as-- It's fair trading!"

"So much the worse for trading," I said.

"It's the sort of thing everybody does. After all, there's no harm in the stuff--and it may do good. It might do a lot of good--giving people confidence, for instance, against an epidemic.

See? Why not? don't see where your swindle comes in."

"H'm," I said. "It's a thing you either see or don't see."

"I'd like to know what sort of trading isn't a swindle in its way. Everybody who does a large advertised trade is selling something common on the strength of saying it's uncommon. Look at Chickson--they made him a baronet. Look at Lord Radmore, who did it on lying about the alkali in soap! Rippin' ads those were of his too!"

"You don't mean to say you think doing this stuff up in bottles and swearing it's the quintessence of strength and making poor devils buy it at that, is straight?"

"Why not, George? How do we know it mayn't be the quintessence to them so far as they're concerned?"

"Oh!" I said, and shrugged my shoulders.

"There's Faith. You put Faith in 'em.... I grant our labels are a bit emphatic. Christian Science, really. No good setting people against the medicine. Tell me a solitary trade nowadays that hasn't to be--emphatic. It's the modern way! Everybody understands it--everybody allows for it."

"But the world would be no worse and rather better, if all this stuff of yours was run down a conduit into the Thames."

"Don't see that, George, at all. 'Mong other things, all our people would be out of work. Unemployed! I grant you Tono-Bungay MAY be--not QUITE so good a find for the world as Peruvian bark, but the point is, George--it MAKES TRADE! And the world lives on trade. Commerce! A romantic exchange of commodities and property. Romance. 'Magination. See? You must look at these things in a broad light. Look at the wood--and forget the trees! And hang it, George! we got to do these things! There's no way unless you do. What do YOU mean to do--anyhow?"

"There's ways of living," I said, "Without either fraud or lying."

"You're a bit stiff, George. There's no fraud in this affair, I'll bet my hat. But what do you propose to do? Go as chemist to some one who IS running a business, and draw a salary without a share like I offer you. Much sense in that! It comes out of the swindle as you call it--just the same."

"Some businesses are straight and quiet, anyhow; supply a sound

article that is really needed, don't shout advertisements."

"No, George. There you're behind the times. The last of that sort was sold up 'bout five years ago."

"Well, there's scientific research."

"And who pays for that? Who put up that big City and Guilds place at South Kensington? Enterprising business men! They fancy they'll have a bit of science going on, they want a handy Expert ever and again, and there you are! And what do you get for research when you've done it? Just a bare living and no outlook. They just keep you to make discoveries, and if they fancy they'll use 'em they do."

"One can teach."

"How much a year, George? How much a year? I suppose you must respect Carlyle! Well, you take Carlyle's test--solvency. (Lord! what a book that French Revolution of his is!) See what the world pays teachers and discoverers and what it pays business men! That shows the ones it really wants. There's a justice in these big things, George, over and above the apparent injustice. I tell you it wants trade. It's Trade that makes the world go round! Argosies! Venice! Empire!"

My uncle suddenly rose to his feet.

"You think it over, George. You think it over! And come up on Sunday to the new place--we got rooms in Gower Street now--and see your aunt. She's often asked for you, George often and often, and thrown it up at me about that bit of property--though I've always said and always will, that twenty-five shillings in the pound is what I'll pay you and interest up to the nail. And think it over. It isn't me I ask you to help. It's yourself.

It's your aunt Susan. It's the whole concern. It's the commerce of your country. And we want you badly. I tell you straight, I know my limitations. You could take this place, you could make it go! I can see you at it--looking rather sour. Woosh is the word, George."

And he smiled endearingly.

"I got to dictate a letter," he said, ending the smile, and vanished into the outer room.

III

I didn't succumb without a struggle to my uncle's allurements. Indeed, I held out for a week while I contemplated life and my prospects. It was a crowded and muddled contemplation. It invaded even my sleep.

My interview with the Registrar, my talk with my uncle, my abrupt discovery of the hopeless futility of my passion for Marion, had combined to bring me to sense of crisis. What was I going to do with life?

I remember certain phases of my indecisions very well.

I remember going home from our talk. I went down Farringdon Street to the Embankment because I thought to go home by Holborn and Oxford Street would be too crowded for thinking.... That piece of Embankment from Blackfriars to Westminster still reminds me of that momentous hesitation.

You know, from first to last, I saw the business with my eyes open, I saw its ethical and moral values quite clearly. Never for a moment do I remember myself faltering from my persuasion that the sale of Tono-Bungay was a thoroughly dishonest

proceeding. The stuff was, I perceived, a mischievous trash, slightly stimulating, aromatic and attractive, likely to become a bad habit and train people in the habitual use of stronger tonics and insidiously dangerous to people with defective kidneys. It would cost about sevenpence the large bottle to make, including bottling, and we were to sell it at half a crown plus the cost of the patent medicine stamp. A thing that I will confess deterred me from the outset far more than the sense of dishonesty in this affair, was the supreme silliness of the whole concern. I still clung to the idea that the world of men was or should be a sane and just organisation, and the idea that I should set myself gravely, just at the fine springtime of my life, to developing a monstrous bottling and packing warehouse, bottling rubbish for the consumption of foolish, credulous and depressed people, had in it a touch of insanity. My early beliefs still clung to me. I felt assured that somewhere there must be a hitch in the fine prospect of ease and wealth under such conditions; that somewhere, a little overgrown, perhaps, but still traceable, lay a neglected, wasted path of use and honour for me.

My inclination to refuse the whole thing increased rather than diminished at first as I went along the Embankment. In my uncle's presence there had been a sort of glamour that had prevented an outright refusal. It was a revival of affection for him I felt in his presence, I think, in part, and in part an instinctive feeling that I must consider him as my host. But much more was it a curious persuasion he had the knack of inspiring--a persuasion not so much of his integrity and capacity as of the reciprocal and yielding foolishness of the world. One felt that he was silly and wild, but in some way silly and wild after the fashion of the universe. After all, one must live somehow. I astonished him and myself by temporising.

"No," said I, "I'll think it over!"

And as I went along the embankment the first effect was all against my uncle. He shrank--for a little while he continued to shrink--in perspective until he was only a very small shabby little man in a dirty back street, sending off a few hundred bottles of rubbish to foolish buyers. The great buildings on the right of us, the Inns and the School Board place--as it was then--Somerset House, the big hotels, the great bridges, Westminster's outlines ahead, had an effect of grey largeness that reduced him to the proportions of a busy black beetle in a crack in the floor.

And then my eye caught the advertisements on the south side of "Sorber's Food," of "Cracknell's Ferric Wine," very bright and prosperous signs, illuminated at night, and I realised how astonishingly they looked at home there, how evidently part they were in the whole thing.

I saw a man come charging out of Palace Yard--the policeman touched his helmet to him--with a hat and a bearing astonishingly like my uncle's. After all,--didn't Cracknell himself sit in the House?

Tono-Bungay shouted at me from a hoarding near Adelphi Terrace; I saw it afar off near Carfax Street; it cried out again upon me in Kensington High Street, and burst into a perfect clamour; six or seven times I saw it as I drew near my diggings. It certainly had an air of being something more than a dream.

Yes, I thought it over--thoroughly enough.... Trade rules the world. Wealth rather than trade! The thing was true, and true too was my uncle's proposition that the quickest way to get wealth is to sell the cheapest thing possible in the dearest bottle. He was frightfully right after all. Pecunia non olet,--a Roman emperor said that. Perhaps my great heroes in Plutarch were no more than such men, fine now only because they

are distant; perhaps after all this Socialism to which I had been drawn was only a foolish dream, only the more foolish because all its promises were conditionally true. Morris and these others played with it wittingly; it gave a zest, a touch of substance, to their aesthetic pleasures. Never would there be good faith enough to bring such things about. They knew it; every one, except a few young fools, knew it. As I crossed the corner of St. James's Park wrapped in thought, I dodged back just in time to escape a prancing pair of greys. A stout, common-looking woman, very magnificently dressed, regarded me from the carriage with a scornful eye. "No doubt," thought I, "a pill-vendor's wife...."

Running through all my thoughts, surging out like a refrain, was my uncle's master-stroke, his admirable touch of praise: "Make it all slick--and then make it go Woosh. I know you can! Oh! I KNOW you can!"

IV

Ewart as a moral influence was unsatisfactory. I had made up my mind to put the whole thing before him, partly to see how he took it, and partly to hear how it sounded when it was said. I asked him to come and eat with me in an Italian place near Panton Street where one could get a curious, interesting, glutting sort of dinner for eighteen-pence. He came with a disconcerting black-eye that he wouldn't explain. "Not so much a black-eye," he said, "as the aftermath of a purple patch.... What's your difficulty?"

"I'll tell you with the salad," I said.

But as a matter of fact I didn't tell him. I threw out that I was doubtful whether I ought to go into trade, or stick to teaching in view of my deepening socialist proclivities; and he,

warming with the unaccustomed generosity of a sixteen-penny Chianti, ran on from that without any further inquiry as to my trouble.

His utterances roved wide and loose.

"The reality of life, my dear Ponderevo," I remember him saying very impressively and punctuating with the nut-crackers as he spoke, "is Chromatic Conflict ... and Form. Get hold of that and let all these other questions go. The Socialist will tell you one sort of colour and shape is right, the Individualist another. What does it all amount to? What DOES it all amount to? NOTHING! I have no advice to give anyone,--except to avoid regrets. Be yourself, seek after such beautiful things as your own sense determines to be beautiful. And don't mind the headache in the morning.... For what, after all, is a morning, Ponderevo? It isn't like the upper part of a day!"

He paused impressively.

"What Rot!" I cried, after a confused attempt to apprehend him.

"Isn't it! And it's my bedrock wisdom in the matter! Take it or leave it, my dear George; take it or leave it."... He put down the nut-crackers out of my reach and lugged a greasy-looking note-book from his pocket. "I'm going to steal this mustard pot," he said.

I made noises of remonstrance.

"Only as a matter of design. I've got to do an old beast's tomb.

Wholesale grocer. I'll put it on his corners,--four mustard pots. I dare say he'd be glad of a mustard plaster now to cool him, poor devil, where he is. But anyhow,--here goes!"

V

It came to me in the small hours that the real moral touchstone for this great doubting of mind was Marion. I lay composing statements of my problem and imagined myself delivering them to her--and she, goddess-like and beautiful; giving her fine, simply-worded judgment.

"You see, it's just to give one's self over to the Capitalistic System," I imagined myself saying in good Socialist jargon; "it's surrendering all one's beliefs. We MAY succeed, we MAY grow rich, but where would the satisfaction be?"

Then she would say, "No! That wouldn't be right."

"But the alternative is to wait!"

Then suddenly she would become a goddess. She would turn upon me frankly and nobly, with shining eyes, with arms held out. "No," she would say, "we love one another. Nothing ignoble shall ever touch us. We love one another. Why wait to tell each other that, dear? What does it matter that we are poor and may keep poor?"

But indeed the conversation didn't go at all in that direction. At the sight of her my nocturnal eloquence became preposterous and all the moral values altered altogether. I had waited for her outside the door of the Parsian-robe establishment in Kensington High Street and walked home with her thence. I remember how she emerged into the warm evening light and that she wore a brown straw hat that made her, for once not only beautiful but pretty.

"I like that hat," I said by way of opening; and she smiled her

rare delightful smile at me.

"I love you," I said in an undertone, as we jostled closer on the pavement.

She shook her head forbiddingly, but she still smiled. Then--
"Be sensible!"

The High Street pavement is too narrow and crowded for conversation and we were some way westward before we spoke again.

"Look here," I said; "I want you, Marion. Don't you understand? I want you."

"Now!" she cried warningly.

I do not know if the reader will understand how a passionate lover, an immense admiration and desire, can be shot with a gleam of positive hatred. Such a gleam there was in me at the serene self-complacency of that "NOW!" It vanished almost before I felt it. I found no warning in it of the antagonisms latent between us.

"Marion," I said, "this isn't a trifling matter to me. I love you; I would die to get you.... Don't you care?"

"But what is the good?"

"You don't care," I cried. "You don't care a rap!"

"You know I care," she answered. "If I didn't-- If I didn't like you very much, should I let you come and meet me-- go about with you?"

"Well then," I said, "promise to marry me!"

"If I do, what difference will it make?"

We were separated by two men carrying a ladder who drove between us unawares.

"Marion," I asked when we got together again, "I tell you I want you to marry me."

"We can't."

"Why not?"

"We can't marry--in the street."

"We could take our chance!"

"I wish you wouldn't go on talking like this. What is the good?"

She suddenly gave way to gloom. "It's no good marrying" she said. "One's only miserable. I've seen other girls. When one's alone one has a little pocket-money anyhow, one can go about a little. But think of being married and no money, and perhaps children--you can't be sure...."

She poured out this concentrated philosophy of her class and type in jerky uncompleted sentences, with knitted brows, with discontented eyes towards the westward glow--forgetful, it seemed, for a moment even of me.

"Look here, Marion," I said abruptly, "what would you marry on?"

"What IS the good?" she began.

"Would you marry on three hundred a year?"

She looked at me for a moment. "That's six pounds a week," she said. "One could manage on that, easily. Smithie's brother--No, he only gets two hundred and fifty. He married a typewriting girl."

"Will you marry me if I get three hundred a year?"

She looked at me again, with a curious gleam of hope.

"IF!" she said.

I held out my hand and looked her in the eyes. "It's a bargain," I said.

She hesitated and touched my hand for an instant. "It's silly," she remarked as she did so. "It means really we're--" She paused.

"Yes?" said I.

"Engaged. You'll have to wait years. What good can it do you?"

"Not so many years." I answered.

For a moment she brooded.

Then she glanced at me with a smile, half-sweet, half-wistful, that has stuck in my memory for ever.

"I like you!" she said. "I shall like to be engaged to you."

And, faint on the threshold of hearing, I caught her ventured "dear!" It's odd that in writing this down my memory passed over

all that intervened and I feel it all again, and once again I'm Marion's boyish lover taking great joy in such rare and little things.

VI

At last I went to the address my uncle had given me in Gower Street, and found my aunt Susan waiting tea for him.

Directly I came into the room I appreciated the change in outlook that the achievement of Tono-Bungay had made almost as vividly as when I saw my uncle's new hat. The furniture of the room struck upon my eye as almost stately. The chairs and sofa were covered with chintz which gave it a dim, remote flavour of Bladesover; the mantel, the cornice, the gas pendant were larger and finer than the sort of thing I had grown accustomed to in London. And I was shown in by a real housemaid with real tails to her cap, and great quantities of reddish hair. There was my aunt too looking bright and pretty, in a blue-patterned tea-wrap with bows that seemed to me the quintessence of fashion. She was sitting in a chair by the open window with quite a pile of yellow-labelled books on the occasional table beside her. Before the large, paper-decorated fireplace stood a three-tiered cake-stand displaying assorted cakes, and a tray with all the tea equipage except the teapot, was on the large centre-table. The carpet was thick, and a spice of adventure was given it by a number of dyed sheep-skin mats.

"Hello!" said my aunt as I appeared. "It's George!"

"Shall I serve the tea now, Mem?" said the real housemaid, surveying our greeting coldly.

"Not till Mr. Ponderevo comes, Meggie," said my aunt, and grimaced with extraordinary swiftness and virulence as the

housemaid turned her back.

"Meggie she calls herself," said my aunt as the door closed, and left me to infer a certain want of sympathy.

"You're looking very jolly, aunt," said I.

"What do you think of all this old Business he's got?" asked my aunt.

"Seems a promising thing," I said.

"I suppose there is a business somewhere?"

"Haven't you seen it ?"

"Fraid I'd say something AT it George, if I did. So he won't let me. It came on quite suddenly. Brooding he was and writing letters and sizzling something awful--like a chestnut going to pop. Then he came home one day saying Tono-Bungay till I thought he was clean off his onion, and singing--what was it?"

"I'm afloat, I'm afloat," I guessed.

"The very thing. You've heard him. And saying our fortunes were made. Took me out to the Ho'burn Restaurant, George,--dinner, and we had champagne, stuff that blows up the back of your nose and makes you go SO, and he said at last he'd got things worthy of me--and we moved here next day. It's a swell house, George. Three pounds a week for the rooms. And he says the Business'll stand it."

She looked at me doubtfully.

"Either do that or smash," I said profoundly.

We discussed the question for a moment mutely with our eyes. My aunt slapped the pile of books from Mudie's.

"I've been having such a Go of reading, George. You never did!"

"What do you think of the business?" I asked.

"Well, they've let him have money," she said, and thought and raised her eyebrows.

"It's been a time," she went on. "The flapping about! Me sitting doing nothing and him on the go like a rocket. He's done wonders. But he wants you, George--he wants you. Sometimes he's full of hope--talks of when we're going to have a carriage and be in society--makes it seem so natural and topsy-turvy, I hardly know whether my old heels aren't up here listening to him, and my old head on the floor.... Then he gets depressed. Says he wants restraint. Says he can make a splash but can't keep on. Says if you don't come in everything will smash--But you are coming in?"

She paused and looked at me.

"Well--"

"You don't say you won't come in!"

"But look here, aunt," I said, "do you understand quite?... It's a quack medicine. It's trash."

"There's no law against selling quack medicine that I know of," said my aunt. She thought for a minute and became unusually grave. "It's our only chance, George," she said. "If it doesn't go..."

There came the slamming of a door, and a loud bellowing from the next apartment through the folding doors. "Here-er Shee Rulk lies Poo Tom Bo--oling."

"Silly old Concertina! Hark at him, George!" She raised her voice. "Don't sing that, you old Walrus, you! Sing 'I'm afloat!'"

One leaf of the folding doors opened and my uncle appeared.

"Hullo, George! Come along at last? Gossome tea-cake, Susan?"

"Thought it over George?" he said abruptly.

"Yes," said I.

"Coming in?"

I paused for a last moment and nodded yes.

"Ah!" he cried. "Why couldn't you say that a week ago?"

"I've had false ideas about the world," I said. "Oh! they don't matter now! Yes, I'll come, I'll take my chance with you, I won't hesitate again."

And I didn't. I stuck to that resolution for seven long years.

CHAPTER THE THIRD

HOW WE MADE TONO-BUNGAY HUM

I

So I made my peace with my uncle, and we set out upon this bright enterprise of selling slightly injurious rubbish at one-and-three-halfpence and two-and-nine a bottle, including the Government stamp. We made Tono-Bungay hum! It brought us wealth, influence, respect, the confidence of endless people. All that my uncle promised me proved truth and understatement; Tono-Bungay carried me to freedoms and powers that no life of scientific research, no passionate service of humanity could ever have given me....

It was my uncle's genius that did it. No doubt he needed me,--I was, I will admit, his indispensable right hand; but his was the brain to conceive. He wrote every advertisement; some of them even he sketched. You must remember that his were the days before the Time took to enterprise and the vociferous hawking of that antiquated Encyclopedia. That alluring, button-holing, let-me-just-tell-you-quite-soberly-something-you-ought-to-know style of newspaper advertisement, with every now and then a convulsive jump of some attractive phrase into capitals, was then almost a novelty. "Many people who are MODERATELY well think they are QUITE well," was one of his early efforts. The jerks in capitals were, "DO NOT NEED DRUGS OR MEDICINE," and "SIMPLY A PROPER REGIMEN TO GET YOU IN TONE." One was warned against the chemist or druggist who pushed "much-advertised nostrums" on one's attention. That trash did more harm than good. The thing needed was regimen--and Tono-Bungay!

Very early, too, was that bright little quarter column, at least it was usually a quarter column in the evening papers: "HILARITY--Tono-Bungay. Like Mountain Air in the Veins." The penetrating trio of questions: "Are you bored with your Business? Are you bored with your Dinner. Are you bored with your Wife?"

--that, too, was in our Gower Street days. Both these we had in our first campaign when we worked London south central, and west; and then, too, we had our first poster--the HEALTH, BEAUTY, AND STRENGTH one. That was his design; I happen still to have got by me the first sketch he made for it. I have reproduced it here with one or two others to enable the reader to understand the mental quality that initiated these familiar ornaments of London.

(The second one is about eighteen months later, the germ of the well-known "Fog" poster; the third was designed for an influenza epidemic, but never issued.)

These things were only incidental in my department.

I had to polish them up for the artist and arrange the business of printing and distribution, and after my uncle had had a violent and needless quarrel with the advertising manager of the Daily Regulator about the amount of display given to one of his happy thoughts, I also took up the negotiations of advertisements for the press.

We discussed and worked out distribution together first in the drawing-room floor in Gower Street with my aunt sometimes helping very shrewdly, and then, with a steadily improving type of cigar and older and older whisky, in his smuggery at their first house, the one in Beckenham. Often we worked far into the night sometimes until dawn.

We really worked infernally hard, and, I recall, we worked with a very decided enthusiasm, not simply on my uncle's part but mine, It was a game, an absurd but absurdly interesting game, and the points were scored in cases of bottles. People think a happy notion is enough to make a man rich, that fortunes can be made without toil. It's a dream, as every millionaire (except one or two lucky gamblers) can testify; I doubt if J.D. Rockefeller in

the early days of Standard Oil, worked harder than we did. We worked far into the night--and we also worked all day. We made a rule to be always dropping in at the factory unannounced to keep things right--for at first we could afford no properly responsible underlings--and we traveled London, pretending to be our own representatives and making all sorts of special arrangements.

But none of this was my special work, and as soon as we could get other men in, I dropped the traveling, though my uncle found it particularly interesting and kept it up for years. "Does me good, George, to see the chaps behind their counters like I was once," he explained. My special and distinctive duty was to give Tono-Bungay substance and an outward and visible bottle, to translate my uncle's great imaginings into the creation of case after case of labelled bottles of nonsense, and the punctual discharge of them by railway, road and steamer towards their ultimate goal in the Great Stomach of the People. By all modern standards the business was, as my uncle would say, "absolutely bona fide." We sold our stuff and got the money, and spent the money honestly in lies and clamour to sell more stuff. Section by section we spread it over the whole of the British Isles; first working the middle-class London suburbs, then the outer suburbs, then the home counties, then going (with new bills and a more pious style of "ad") into Wales, a great field always for a new patent-medicine, and then into Lancashire.

My uncle had in his inner office a big map of England, and as we took up fresh sections of the local press and our consignments invaded new areas, flags for advertisements and pink underlines for orders showed our progress.

"The romance of modern commerce, George!" my uncle would say, rubbing his hands together and drawing in air through his teeth. "The romance of modern commerce, eh? Conquest. Province

by province. Like sogers."

We subjugated England and Wales; we rolled over the Cheviots with a special adaptation containing eleven per cent. of absolute alcohol; "Tono-Bungay: Thistle Brand." We also had the Fog poster adapted to a kilted Briton in a misty Highland scene.

Under the shadow of our great leading line we were presently taking subsidiary specialties into action; "Tono-Bungay Hair Stimulant" was our first supplement. Then came "Concentrated Tono-Bungay" for the eyes. That didn't go, but we had a considerable success with the Hair Stimulant. We broached the subject, I remember, in a little catechism beginning: "Why does the hair fall out? Because the follicles are fagged. What are the follicles?..." So it went on to the climax that the Hair Stimulant contained all "The essential principles of that most reviving tonic, Tono-Bungay, together with an emollient and nutritious oil derived from crude Neat's Foot Oil by a process of refinement, separation and deodorization.... It will be manifest to any one of scientific attainments that in Neat's Foot Oil derived from the hoofs and horns of beasts, we must necessarily have a natural skin and hair lubricant."

And we also did admirable things with our next subsidiaries, "Tono-Bungay Lozenges," and "Tono-Bungay Chocolate." These we urged upon the public for their extraordinary nutritive and recuperative value in cases of fatigue and strain. We gave them posters and illustrated advertisements showing climbers hanging from marvelously vertical cliffs, cyclist champions upon the track, mounted messengers engaged in Aix-to-Ghent rides, soldiers lying out in action under a hot sun. "You can GO for twenty-four hours," we declared, "on Tono-Bungay Chocolate." We didn't say whether you could return on the same commodity. We also showed a dreadfully barristerish barrister, wig, side-whiskers, teeth, a horribly life-like portrait of all existing barristers, talking

at a table, and beneath, this legend: "A Four Hours' Speech on Tono-Bungay Lozenges, and as fresh as when he began." Then brought in regiments of school-teachers, revivalist ministers, politicians and the like. I really do believe there was an element of "kick" in the strychnine in these lozenges, especially in those made according to our earlier formula. For we altered all our formulae--invariably weakening them enormously as sales got ahead.

In a little while--so it seems to me now--we were employing travelers and opening up Great Britain at the rate of a hundred square miles a day. All the organisation throughout was sketched in a crude, entangled, half-inspired fashion by my uncle, and all of it had to be worked out into a practicable scheme of quantities and expenditure by me. We had a lot of trouble finding our travelers; in the end at least half of them were Irish-Americans, a wonderful breed for selling medicine. We had still more trouble over our factory manager, because of the secrets of the inner room, and in the end we got a very capable woman, Mrs. Hampton Diggs, who had formerly managed a large millinery workroom, whom we could trust to keep everything in good working order without finding out anything that wasn't put exactly under her loyal and energetic nose. She conceived a high opinion of Tono-Bungay and took it in all forms and large quantities so long as I knew her. It didn't seem to do her any harm. And she kept the girls going quite wonderfully.

My uncle's last addition to the Tono-Bungay group was the Tono-Bungay Mouthwash. The reader has probably read a hundred times that inspiring inquiry of his, "You are Young Yet, but are you Sure Nothing has Aged your Gums?"

And after that we took over the agency for three or four good American lines that worked in with our own, and could be handled with it; Texan Embrocation, and "23--to clear the system" were

the chief....

I set down these bare facts. To me they are all linked with the figure of my uncle. In some of the old seventeenth and early eighteenth century prayerbooks at Bladesover there used to be illustrations with long scrolls coming out of the mouths of the wood-cut figures. I wish I could write all this last chapter on a scroll coming out of the head of my uncle, show it all the time as unfolding and pouring out from a short, fattening, small-legged man with stiff cropped hair, disobedient glasses on a perky little nose, and a round stare behind them. I wish I could show you him breathing hard and a little through his nose as his pen scrabbled out some absurd inspiration for a poster or a picture page, and make you hear his voice, charged with solemn import like the voice of a squeaky prophet, saying, "George! list'n! I got an ideer. I got a notion! George!"

I should put myself into the same picture. Best setting for us, I think, would be the Beckenham snugery, because there we worked hardest. It would be the lamplit room of the early nineties, and the clock upon the mantel would indicate midnight or later. We would be sitting on either side of the fire, I with a pipe, my uncle with a cigar or cigarette. There would be glasses standing inside the brass fender. Our expressions would be very grave. My uncle used to sit right back in his armchair; his toes always turned in when he was sitting down and his legs had a way of looking curved, as though they hadn't bones or joints but were stuffed with sawdust.

"George, whad'yer think of T.B. for sea-sickness?" he would say.

"No good that I can imagine."

"Oom! No harm TRYING, George. We can but try."

I would suck my pipe. "Hard to get at. Unless we sold our stuff specially at the docks. Might do a special at Cook's office, or in the Continental Bradshaw."

"It 'ud give 'em confidence, George."

He would Zzzz, with his glasses reflecting the red of the glowing coals.

"No good hiding our light under a Bushel," he would remark.

I never really determined whether my uncle regarded Tono-Bungay as a fraud, or whether he didn't come to believe in it in a kind of way by the mere reiteration of his own assertions. I think that his average attitude was one of kindly, almost parental, toleration. I remember saying on one occasion, "But you don't suppose this stuff ever did a human being the slightest good all?" and how his face assumed a look of protest, as of one reproving harshness and dogmatism.

"You've a hard nature, George," he said. "You're too ready to run things down. How can one TELL? How can one venture to TELL!..."

I suppose any creative and developing game would have interested me in those years. At any rate, I know I put as much zeal into this Tono-Bungay as any young lieutenant could have done who suddenly found himself in command of a ship. It was extraordinarily interesting to me to figure out the advantage accruing from this shortening of the process or that, and to weigh it against the capital cost of the alteration. I made a sort of machine for sticking on the labels, that I patented; to this day there is a little trickle of royalties to me from that. I also contrived to have our mixture made concentrated, got the

bottles, which all came sliding down a guarded slant-way, nearly filled with distilled water at one tap, and dripped our magic ingredients in at the next. This was an immense economy of space for the inner sanctum. For the bottling we needed special taps, and these, too, I invented and patented.

We had a sort of endless band of bottles sliding along an inclined glass trough made slippery with running water. At one end a girl held them up to the light, put aside any that were imperfect and placed the others in the trough; the filling was automatic; at the other end a girl slipped in the cork and drove it home with a little mallet. Each tank, the little one for the vivifying ingredients and the big one for distilled water, had a level indicator, and inside I had a float arrangement that stopped the slide whenever either had sunk too low. Another girl stood ready with my machine to label the corked bottles and hand them to the three packers, who slipped them into their outer papers and put them, with a pad of corrugated paper between each pair, into a little groove from which they could be made to slide neatly into position in our standard packing-case. It sounds wild, I know, but I believe I was the first man in the city of London to pack patent medicines through the side of the packing-case, to discover there was a better way in than by the lid. Our cases packed themselves, practically; had only to be put into position on a little wheeled tray and when full pulled to the lift that dropped them to the men downstairs, who padded up the free space and nailed on top and side. Our girls, moreover, packed with corrugated paper and matchbook-wood box partitions when everybody else was using expensive young men to pack through the top of the box with straw, many breakages and much waste and confusion.

II

As I look back at them now, those energetic years seem all

compacted to a year or so; from the days of our first hazardous beginning in Farringdon Street with barely a thousand pounds' worth of stuff or credit all told--and that got by something perilously like snatching--to the days when my uncle went to the public on behalf of himself and me (one-tenth share) and our silent partners, the drug wholesalers and the printing people and the owner of that group of magazines and newspapers, to ask with honest confidence for L150,000. Those silent partners were remarkably sorry, I know, that they had not taken larger shares and given us longer credit when the subscriptions came pouring in. My uncle had a clear half to play with (including the one-tenth understood to be mine).

L150,000--think of it!--for the goodwill in a string of lies and a trade in bottles of mitigated water! Do you realise the madness of the world that sanctions such a thing? Perhaps you don't. At times use and wont certainly blinded me. If it had not been for Ewart, I don't think I should have had an inkling of the wonderfulness of this development of my fortunes; I should have grown accustomed to it, fallen in with all its delusions as completely as my uncle presently did. He was immensely proud of the flotation. "They've never been given such value," he said, "for a dozen years." But Ewart, with his gesticulating hairy hands and bony wrists, his single-handed chorus to all this as it played itself over again in my memory, and he kept my fundamental absurdity illuminated for me during all this astonishing time.

"It's just on all fours with the rest of things," he remarked; "only more so. You needn't think you're anything out of the way."

I remember one disquisition very distinctly. It was just after Ewart had been to Paris on a mysterious expedition to "rough in" some work for a rising American sculptor. This young man had a commission for an allegorical figure of Truth (draped, of

course) for his State Capitol, and he needed help. Ewart had returned with his hair cut en brosse and with his costume completely translated into French. He wore, I remember, a bicycling suit of purplish-brown, baggy beyond ageing--the only creditable thing about it was that it had evidently not been made for him--a voluminous black tie, a decadent soft felt hat and several French expletives of a sinister description. "Silly clothes, aren't they?" he said at the sight of my startled eye. "I don't know why I got'm. They seemed all right over there."

He had come down to our Raggett Street place to discuss a benevolent project of mine for a poster by him, and he scattered remarkable discourse over the heads (I hope it was over the heads) of our bottlers.

"What I like about it all, Ponderevo, is its poetry.... That's where we get the pull of the animals. No animal would ever run a factory like this. Think!... One remembers the Beaver, of course. He might very possibly bottle things, but would he stick a label round 'em and sell 'em? The Beaver is a dreamy fool, I'll admit, him and his dams, but after all there's a sort of protection about 'em, a kind of muddy practicality! They prevent things getting at him. And it's not your poetry only. It's the poetry of the customer too. Poet answering to poet--soul to soul. Health, Strength and Beauty--in a bottle--the magic philtre! Like a fairy tale....

"Think of the people to whom your bottles of footle go! (I'm calling it footle, Ponderevo, out of praise," he said in parenthesis.)

"Think of the little clerks and jaded women and overworked people. People overstrained with wanting to do, people overstrained with wanting to be.... People, in fact, overstrained.... The real trouble of life, Ponderevo, isn't that

we exist--that's a vulgar error; the real trouble is that we DON'T really exist and we want to. That's what this--in the highest sense--just stands for! The hunger to be--for once--really alive--to the finger tips!...

"Nobody wants to do and be the things people are--nobody. YOU don't want to preside over this--this bottling; I don't want to wear these beastly clothes and be led about by you; nobody wants to keep on sticking labels on silly bottles at so many farthings a gross. That isn't existing! That's--sus--substratum. None of us want to be what we are, or to do what we do. Except as a sort of basis. What do we want? You know. I know. Nobody confesses. What we all want to be is something perpetually young and beautiful--young Joves--young Joves, Ponderevo" --his voice became loud, harsh and declamatory--"pursuing coy half-willing nymphs through everlasting forests."...

There was a just-perceptible listening hang in the work about us.

"Come downstairs," I interrupted, "we can talk better there."

"I can talk better here," he answered.

He was just going on, but fortunately the implacable face of Mrs. Hampton Diggs appeared down the aisle of bottling machines.

"All right," he said, "I'll come."

In the little sanctum below, my uncle was taking a digestive pause after his lunch and by no means alert. His presence sent Ewart back to the theme of modern commerce, over the excellent cigar my uncle gave him. He behaved with the elaborate deference due to a business magnate from an unknown man.

"What I was pointing out to your nephew, sir," said Ewart,

putting both elbows on the table, "was the poetry of commerce. He doesn't, you know, seem to see it at all."

My uncle nodded brightly. "Whad I tell 'im," he said round his cigar.

"We are artists. You and I, sir, can talk, if you will permit me, as one artist to another. It's advertisement has--done it. Advertisement has revolutionised trade and industry; it is going to revolutionise the world. The old merchant used to tote about commodities; the new one creates values. Doesn't need to tote. He takes something that isn't worth anything--or something that isn't particularly worth anything--and he makes it worth something. He takes mustard that is just like anybody else's mustard, and he goes about saying, shouting, singing, chalking on walls, writing inside people's books, putting it everywhere, 'Smith's Mustard is the Best.' And behold it is the best!"

"True," said my uncle, chubbily and with a dreamy sense of mysticism; "true!"

"It's just like an artist; he takes a lump of white marble on the verge of a lime-kiln, he chips it about, he makes--he makes a monument to himself--and others--a monument the world will not willingly let die. Talking of mustard, sir, I was at Clapham Junction the other day, and all the banks are overgrown with horse radish that's got loose from a garden somewhere. You know what horseradish is--grows like wildfire--spreads --spreads. I stood at the end of the platform looking at the stuff and thinking about it. 'Like fame,' I thought, 'rank and wild where it isn't wanted. Why don't the really good things in life grow like horseradish?' I thought. My mind went off in a peculiar way it does from that to the idea that mustard costs a penny a tin--I bought some the other day for a ham I had. It came into my head that it would be ripping good business to use horseradish to

adulterate mustard. I had a sort of idea that I could plunge into business on that, get rich and come back to my own proper monumental art again. And then I said, 'But why adulterate? I don't like the idea of adulteration.'

"Shabby," said my uncle, nodding his head. "Bound to get found out!"

"And totally unnecessary, too! Why not do up a mixture--three-quarters pounded horseradish and a quarter mustard--give it a fancy name--and sell it at twice the mustard price. See? I very nearly started the business straight away, only something happened. My train came along."

"Jolly good ideer," said my uncle. He looked at me. "That really is an ideer, George," he said.

"Take shavin's, again! You know that poem of Longfellow's, sir, that sounds exactly like the first declension. What is it?--'Marr's a maker, men say!'"

My uncle nodded and gurgled some quotation that died away.

'Jolly good poem, George," he said in an aside to me.

"Well, it's about a carpenter and a poetic Victorian child, you know, and some shavin's. The child made no end out of the shavin's. So might you. Powder 'em. They might be anything. Soak 'em in jipper,--Xylo-tobacco! Powder'em and get a little tar and turpentinous smell in,--wood-packing for hot baths--a Certain Cure for the scourge of Influenza! There's all these patent grain foods,--what Americans call cereals. I believe I'm right, sir, in saying they're sawdust."

"No!" said my uncle, removing his cigar; "as far as I can find

out it's really grain,--spoilt grain.... I've been going into that."

"Well, there you are!" said Ewart. "Say it's spoilt grain. It carried out my case just as well. Your modern commerce is no more buying and selling than sculpture. It's mercy--it's salvation. It's rescue work! It takes all sorts of fallen commodities by the hand and raises them. Cana isn't in it. You turn water--into Tono-Bungay."

"Tono-Bungay's all right," said my uncle, suddenly grave. "We aren't talking of Tono-Bungay."

"Your nephew, sir, is hard; he wants everything to go to a sort of predestinated end; he's a Calvinist of Commerce. Offer him a dustbin full of stuff; he calls it refuse--passes by on the other side. Now YOU, sir you'd make cinders respect themselves."

My uncle regarded him dubiously for a moment. But there was a touch of appreciation in his eye.

"Might make 'em into a sort of sanitary brick," he reflected over his cigar end.

"Or a friable biscuit. Why NOT? You might advertise: 'Why are Birds so Bright? Because they digest their food perfectly! Why do they digest their food so perfectly? Because they have a gizzard! Why hasn't man a gizzard? Because he can buy Ponderevo's Asphalt Triturating, Friable Biscuit--Which is Better.'"

He delivered the last words in a shout, with his hairy hand flourished in the air....

"Damn clever fellow," said my uncle, after he had one. "I know a

man when I see one. He'd do. But drunk, I should say. But that only makes some chap brighter . If he WANTS to do that poster, he can. Zzzz. That ideer of his about the horseradish. There's something in that, George. I'm going to think over that...."

I may say at once that my poster project came to nothing in the end, though Ewart devoted an interesting week to the matter. He let his unfortunate disposition to irony run away with him. He produced a picture of two beavers with a subtle likeness, he said, to myself and my uncle--the likeness to my uncle certainly wasn't half bad--and they were bottling rows and rows of Tono-Bungay, with the legend "Modern commerce." It certainly wouldn't have sold a case, though he urged it on me one cheerful evening on the ground that it would "arouse curiosity." In addition he produced a quite shocking study of my uncle, excessively and needlessly nude, but, so far as I was able to judge, an admirable likeness, engaged in feats of strength of a Gargantuan type before an audience of deboshed and shattered ladies. The legend, "Health, Beauty, Strength," below, gave a needed point to his parody. This he hung up in the studio over the oil shop, with a flap of brown paper; by way of a curtain over it to accentuate its libellous offence.

CHAPTER THE FOURTH

MARION I

As I look back on those days in which we built up the great Tono-Bungay property out of human hope and credit for bottles and rent and printing, I see my life as it were arranged in two parallel columns of unequal width, a wider, more diffused, eventful and various one which continually broadens out, the business side of my life, and a narrow, darker and darkling one shot ever and again with a gleam of happiness, my home-life with

Marion. For, of course, I married Marion.

I didn't, as a matter of fact, marry her until a year after Tono-Bungay was thoroughly afloat, and then only after conflicts and discussions of a quite strenuous sort. By that time I was twenty-four. It seems the next thing to childhood now. We were both in certain directions unusually ignorant and simple; we were temperamentally antagonistic, and we hadn't--I don't think we were capable of--an idea in common. She was young and extraordinarily conventional--she seemed never to have an idea of her own but always the idea of her class--and I was young and sceptical, enterprising and passionate; the two links that held us together were the intense appeal her physical beauty had for me, and her appreciation of her importance in my thoughts. There can be no doubt of my passion for her. In her I had discovered woman desired. The nights I have lain awake on account of her, writhing, biting my wrists in a fever of longing!

...

I have told how I got myself a silk hat and black coat to please her on Sunday--to the derision of some of my fellow-students who charged to meet me, and how we became engaged. But that was only the beginning of our difference. To her that meant the beginning of a not unpleasant little secrecy, an occasional use of verbal endearments, perhaps even kisses. It was something to go on indefinitely, interfering in no way with her gossiping spells of work at Smithie's. To me it was a pledge to come together into the utmost intimacy of soul and body so soon as we could contrive it....

I don't know if it will strike the reader that I am setting out to discuss the queer, unwise love relationship and my bungle of a marriage with excessive solemnity. But to me it seems to reach out to vastly wider issues than our little personal affair. I've thought over my life. In these last few years I've tried to get

at least a little wisdom out of it. And in particular I've thought over this part of my life. I'm enormously impressed by the ignorant, unguided way in which we two entangled ourselves with each other. It seems to me the queerest thing in all this network of misunderstandings and misstatements and faulty and ramshackle conventions which makes up our social order as the individual meets it, that we should have come together so accidentally and so blindly. Because we were no more than samples of the common fate. Love is not only the cardinal fact in the individual life, but the most important concern of the community; after all, the way in which the young people of this generation pair off determines the fate of the nation; all the other affairs of the State are subsidiary to that. And we leave it to flushed and blundering youth to stumble on its own significance, with nothing to guide in but shocked looks and sentimental twaddle and base whisperings and cant-smearred examples.

I have tried to indicate something of my own sexual development in the preceding chapter. Nobody was ever frank and decent with me in this relation; nobody, no book, ever came and said to me thus and thus is the world made, and so and so is necessary. Everything came obscurely, indefinitely, perplexingly; and all I knew of law or convention in the matter had the form of threatenings and prohibitions. Except through the furtive, shameful talk of my coevals at Goudhurst and Wimblehurst, I was not even warned against quite horrible dangers. My ideas were made partly of instinct, partly of a romantic imagination, partly woven out of a medley of scraps of suggestion that came to me haphazard. I had read widely and confusedly "Vathek," Shelley, Tom Paine, Plutarch, Carlyle, Haeckel, William Morris, the Bible, the Freethinker, the Clarion, "The Woman Who Did,"--I mention the ingredients that come first to mind. All sorts of ideas were jumbled up in me and never a lucid explanation. But it was evident to me that the world regarded Shelley, for

example, as a very heroic as well as beautiful person; and that to defy convention and succumb magnificently to passion was the proper thing to do to gain the respect and affection of all decent people.

And the make-up of Marion's mind in the matter was an equally irrational affair. Her training had been one, not simply of silences, but suppressions. An enormous force of suggestion had so shaped her that the intense natural fastidiousness of girlhood had developed into an absolute perversion of instinct. For all that is cardinal in this essential business of life she had one inseparable epithet--"horrid." Without any such training she would have been a shy lover, but now she was an impossible one. For the rest she had derived, I suppose, partly from the sort of fiction she got from the Public Library, and partly from the workroom talk at Smithie's. So far as the former origin went, she had an idea of love as a state of worship and service on the part of the man and of condescension on the part of the woman. There was nothing "horrid" about it in any fiction she had read. The man gave presents, did services, sought to be in every way delightful. The woman "went out" with him, smiled at him, was kissed by him in decorous secrecy, and if he chanced to offend, denied her countenance and presence. Usually she did something "for his good" to him, made him go to church, made him give up smoking or gambling, smartened him up. Quite at the end of the story came a marriage, and after that the interest ceased.

That was the tenor of Marion's fiction; but I think the work-table conversation at Smithie's did something to modify that. At Smithie's it was recognised, I think, that a "fellow" was a possession to be desired; that it was better to be engaged to a fellow than not; that fellows had to be kept--they might be mislaid, they might even be stolen. There was a case of stealing at Smithie's, and many tears.

Smithie I met before we were married, and afterwards she became a frequent visitor to our house at Ealing. She was a thin, bright-eyed, hawk-nosed girl of thirtyodd, with prominent teeth, a high-pitched, eager voice and a disposition to be urgently smart in her dress. Her hats were startling and various, but invariably disconcerting, and she talked in a rapid, nervous flow that was hilarious rather than witty, and broken by little screams of "Oh, my dear!" and "you never did!" She was the first woman I ever met who used scent. Poor old Smithie! What a harmless, kindly soul she really was, and how heartily I detested her! Out of the profits on the Persian robes she supported a sister's family of three children, she "helped" a worthless brother, and overflowed in help even to her workgirls, but that didn't weigh with me in those youthfully-narrow times. It was one of the intense minor irritations of my married life that Smithie's whirlwind chatter seemed to me to have far more influence with Marion than anything I had to say. Before all things I coveted her grip upon Marion's inaccessible mind.

In the workroom at Smithie's, I gathered, they always spoke of me demurely as "A Certain Person." I was rumoured to be dreadfully "clever," and there were doubts--not altogether without justification--of the sweetness of my temper.

II

Well, these general explanations will enable the reader to understand the distressful times we two had together when presently I began to feel on a footing with Marion and to fumble conversationally for the mind and the wonderful passion I felt, obstinately and stupidity, must be in her. I think she thought me the maddest of sane men; "clever," in fact, which at Smithie's was, I suppose, the next thing to insanity, a word intimating incomprehensible and incalculable motives.... She could be shocked at anything, she misunderstood everything, and her weapon

was a sulky silence that knitted her brows, spoilt her mouth and robbed her face of beauty. "Well, if we can't agree, I don't see why you should go on talking," she used to say. That would always enrage me beyond measure. Or, "I'm afraid I'm not clever enough to understand that."

Silly little people! I see it all now, but then I was no older than she and I couldn't see anything but that Marion, for some inexplicable reason, wouldn't come alive.

We would contrive semi-surreptitious walks on Sunday, and part speechless with the anger of indefinable offences. Poor Marion! The things I tried to put before her, my fermenting ideas about theology, about Socialism, about aesthetics--the very words appalled her, gave her the faint chill of approaching impropriety, the terror of a very present intellectual impossibility. Then by an enormous effort I would suppress myself for a time and continue a talk that made her happy, about Smithie's brother, about the new girl who had come to the workroom, about the house we would presently live in. But there we differed a little. I wanted to be accessible to St. Paul's or Cannon Street Station, and she had set her mind quite resolutely upon Eating.... It wasn't by any means quarreling all the time, you understand. She liked me to play the lover "nicely"; she liked the effect of going about--we had lunches, we went to Earl's Court, to Kew, to theatres and concerts, but not often to concerts, because, though Marion "liked" music, she didn't like "too much of it," to picture shows--and there was a nonsensical sort of babytalk I picked up--I forget where now--that became a mighty peacemaker.

Her worst offence for me was an occasional excursion into the Smithie style of dressing, debased West Kensington. For she had no sense at all of her own beauty. She had no comprehension whatever of beauty of the body, and she could slash her beautiful

lines to rags with hat-brims and trimmings. Thank Heaven! a natural refinement, a natural timidity, and her extremely slender purse kept her from the real Smithie efflorescence! Poor, simple, beautiful, kindly limited Marion! Now that I am forty-five, I can look back at her with all my old admiration and none of my old bitterness with a new affection and not a scrap of passion, and take her part against the equally stupid, drivingly-energetic, sensuous, intellectual sprawl I used to be. I was a young beast for her to have married--a hound beast. With her it was my business to understand and control--and I exacted fellowship, passion....

We became engaged, as I have told; we broke it off and joined again. We went through a succession of such phases. We had no sort of idea what was wrong with us. Presently we were formally engaged. I had a wonderful interview with her father, in which he was stupendously grave and H--less, wanted to know about my origins and was tolerant (exasperatingly tolerant) because my mother was a servant, and afterwards her mother took to kissing me, and I bought a ring. But the speechless aunt, I gathered, didn't approve--having doubts of my religiosity. Whenever we were estranged we could keep apart for days; and to begin with, every such separation was a relief. And then I would want her; a restless longing would come upon me. I would think of the flow of her arms, of the soft, gracious bend of her body. I would lie awake or dream of a transfigured Marion of light and fire. It was indeed Dame Nature driving me on to womankind in her stupid, inexorable way; but I thought it was the need of Marion that troubled me. So I always went back to Marion at last and made it up and more or less conceded or ignored whatever thing had parted us, and more and more I urged her to marry me....

In the long run that became a fixed idea. It entangled my will and my pride; I told myself I was not going to be beaten. I hardened to the business. I think, as a matter of fact, my real

passion for Marion had waned enormously long before we were married, that she had lived it down by sheer irresponsiveness. When I felt sure of my three hundred a year she stipulated for delay, twelve months' delay, "to see how things would turn out." There were times when she seemed simply an antagonist holding out irritatingly against something I had to settle. Moreover, I began to be greatly distracted by the interest and excitement of Tono-Bungay's success, by the change and movement in things, the going to and fro. I would forget her for days together, and then desire her with an irritating intensity at last, one Saturday afternoon, after a brooding morning, I determined almost savagely that these delays must end.

I went off to the little home at Walham Green, and made Marion come with me to Putney Common. Marion wasn't at home when I got there and I had to fret for a time and talk to her father, who was just back from his office, he explained, and enjoying himself in his own way in the greenhouse.

"I'm going to ask your daughter to marry me!" I said. "I think we've been waiting long enough."

"I don't approve of long engagements either," said her father. "But Marion will have her own way about it, anyhow. Seen this new powdered fertiliser?"

I went in to talk to Mrs. Ramboat. "She'll want time to get her things," said Mrs. Ramboat....

I and Marion sat down together on a little seat under some trees at the top of Putney Hill, and I came to my point abruptly.

"Look here, Marion," I said, "are you going to marry me or are you not?"

She smiled at me. "Well," she said, "we're engaged--aren't we?"

"That can't go on for ever. Will you marry me next week?"

She looked me in the face. "We can't," she said.

"You promised to marry me when I had three hundred a year."

She was silent for a space. "Can't we go on for a time as we are? We COULD marry on three hundred a year. But it means a very little house. There's Smithie's brother. They manage on two hundred and fifty, but that's very little. She says they have a semi-detached house almost on the road, and hardly a bit of garden. And the wall to next-door is so thin they hear everything. When her baby cries--they rap. And people stand against the railings and talk.... Can't we wait? You're doing so well."

An extraordinary bitterness possessed me at this invasion of the stupendous beautiful business of love by sordid necessity. I answered her with immense restraint.

"If," I said, "we could have a double-fronted, detached house--at Ealing, say--with a square patch of lawn in front and a garden behind--and--and a tiled bathroom"

"That would be sixty pounds a year at least."

"Which means five hundred a year.... Yes, well, you see, I told my uncle I wanted that, and I've got it."

"Got what?"

"Five hundred pounds a year."

"Five hundred pounds!"

I burst into laughter that had more than a taste of bitterness.

"Yes," I said, "really! and NOW what do you think?"

"Yes," she said, a little flushed; "but be sensible! Do you really mean you've got a Rise, all at once, of two hundred a year?"

"To marry on--yes."

She scrutinised me a moment. "You've done this as a surprise!" she said, and laughed at my laughter. She had become radiant, and that made me radiant, too.

"Yes," I said, "yes," and laughed no longer bitterly.

She clasped her hands and looked me in the eyes.

She was so pleased that I forgot absolutely my disgust of a moment before. I forgot that she had raised her price two hundred pounds a year and that I had bought her at that.

"Come!" I said, standing up; "let's go towards the sunset, dear, and talk about it all. Do you know--this is a most beautiful world, an amazingly beautiful world, and when the sunset falls upon you it makes you into shining gold. No, not gold--into golden glass.... Into something better than either glass or gold."...

And for all that evening I wooed her and kept her glad. She made me repeat my assurances over again and still doubted a little.

We furnished that double-fronted house from attic--it ran to an

attic--to cellar, and created a garden.

"Do you know Pampas Grass?" said Marion. "I love Pampas Grass... if there is room."

"You shall have Pampas Grass," I declared. And there were moments as we went in imagination about that house together, when my whole being cried out to take her in my arms--now. But I refrained. On that aspect of life I touched very lightly in that talk, very lightly because I had had my lessons. She promised to marry me within two months' time. Shyly, reluctantly, she named a day, and next afternoon, in heat and wrath, we "broke it off" again for the last time. We split upon procedure. I refused flatly to have a normal wedding with wedding cake, in white favours, carriages and the rest of it. It dawned upon me suddenly in conversation with her and her mother, that this was implied. I blurted out my objection forthwith, and this time it wasn't any ordinary difference of opinion; it was a "row." I don't remember a quarter of the things we flung out in that dispute. I remember her mother reiterating in tones of gentle remonstrance: "But, George dear, you must have a cake--to send home." I think we all reiterated things. I seem to remember a refrain of my own: "A marriage is too sacred a thing, too private a thing, for this display. Her father came in and stood behind me against the wall, and her aunt appeared beside the sideboard and stood with arms, looking from speaker to speaker, a sternly gratified prophetess. It didn't occur to me then! How painful it was to Marion for these people to witness my rebellion.

"But, George," said her father, "what sort of marriage do you want? You don't want to go to one of those there registry offices?"

"That's exactly what I'd like to do. Marriage is too private a thing--"

"I shouldn't feel married," said Mrs. Ramboat.

"Look here, Marion," I said; "we are going to be married at a registry office. I don't believe in all these fripperies and superstitions, and I won't submit to them. I've agreed to all sorts of things to please you."

"What's he agreed to?" said her father--unheeded.

"I can't marry at a registry office," said Marion, sallow-white.

"Very well," I said. "I'll marry nowhere else."

"I can't marry at a registry office."

"Very well," I said, standing up, white and tense and it amazed me, but I was also exultant; "then we won't marry at all."

She leant forward over the table, staring blankly. But presently her half-averted face began to haunt me as she had sat at the table, and her arm and the long droop of her shoulder.

III

The next day I did an unexampled thing. I sent a telegram to my uncle, "Bad temper not coming to business," and set off for Highgate and Ewart. He was actually at work--on a bust of Millie, and seemed very glad for any interruption.

"Ewart, you old Fool," I said, "knock off and come for a day's gossip. I'm rotten. There's a sympathetic sort of lunacy about you. Let's go to Staines and paddle up to Windsor."

"Girl?" said Ewart, putting down a chisel.

"Yes."

That was all I told him of my affair.

"I've got no money," he remarked, to clear up ambiguity in my invitation.

We got a jar of shandy-gaff, some food, and, on Ewart's suggestion, two Japanese sunshades in Staines; we demanded extra cushions at the boathouse and we spent an enormously soothing day in discourse and meditation, our boat moored in a shady place this side of Windsor. I seem to remember Ewart with a cushion forward, only his heels and sunshade and some black ends of hair showing, a voice and no more, against the shining, smoothly-streaming mirror of the trees and bushes.

"It's not worth it," was the burthen of the voice. "You'd better get yourself a Millie, Ponderevo, and then you wouldn't feel so upset."

"No," I said decidedly, "that's not my way."

A thread of smoke ascended from Ewart for a while, like smoke from an altar.

"Everything's a muddle, and you think it isn't. Nobody knows where we are--because, as a matter of fact we aren't anywhere. Are women property--or are they fellow-creatures? Or a sort of proprietary goddesses? They're so obviously fellow-creatures. You believe in the goddess?"

"No," I said, "that's not my idea."

"What is your idea?"

"Well"

"H'm," said Ewart, in my pause.

"My idea," I said, "is to meet one person who will belong to me--to whom I shall belong--body and soul. No half-gods! Wait till she comes. If she comes at all.... We must come to each other young and pure."

"There's no such thing as a pure person or an impure person.... Mixed to begin with."

This was so manifestly true that it silenced me altogether.

"And if you belong to her and she to you, Ponderevo--which end's the head?"

I made no answer except an impatient "oh!"

For a time we smoked in silence....

"Did I tell you, Ponderevo, of a wonderful discovery I've made?" Ewart began presently.

"No," I said, "what is it?"

"There's no Mrs. Grundy."

"No?"

"No! Practically not. I've just thought all that business out. She's merely an instrument, Ponderevo. She's borne the blame. Grundy's a man. Grundy unmasked. Rather lean and out of sorts. Early middle age. With bunchy black whiskers and a worried eye.

Been good so far, and it's fretting him! Moods! There's Grundy in a state of sexual panic, for example,--'For God's sake cover it up! They get together--they get together! It's too exciting! The most dreadful things are happening!' Rushing about--long arms going like a windmill. 'They must be kept apart!' Starts out for an absolute obliteration of everything absolute separations. One side of the road for men, and the other for women, and a hoarding--without posters between them. Every boy and girl to be sewed up in a sack and sealed, just the head and hands and feet out until twenty-one. Music abolished, calico garments for the lower animals! Sparrows to be suppressed--ab-so-lutely."

I laughed abruptly.

"Well, that's Mr. Grundy in one mood--and it puts Mrs. Grundy--She's a much-maligned person, Ponderevo--a rake at heart--and it puts her in a most painful state of fluster--most painful! She's an amenable creature. When Grundy tells her things are shocking, she's shocked--pink and breathless. She goes about trying to conceal her profound sense of guilt behind a haughty expression....

"Grundy, meanwhile, is in a state of complete whirlabout. Long lean knuckly hands pointing and gesticulating! 'They're still thinking of things--thinking of things! It's dreadful. They get it out of books. I can't imagine where they get it! I must watch! There're people over there whispering! Nobody ought to whisper!--There's something suggestive in the mere act! Then, pictures! In the museum--things too dreadful for words. Why can't we have pure art--with the anatomy all wrong and pure and nice--and pure fiction pure poetry, instead of all this stuff with allusions--allusions?... Excuse me! There's something up behind that locked door! The keyhole! In the interests of public morality--yes, Sir, as a pure good man--I insist--I'LL

look--it won't hurt me--I insist on looking my duty--M'm'm--the keyhole!"

He kicked his legs about extravagantly, and I laughed again.

"That's Grundy in one mood, Ponderevo. It isn't Mrs. Grundy. That's one of the lies we tell about women. They're too simple. Simple! Woman ARE simple! They take on just what men tell 'em."

Ewart meditated for a space. "Just exactly as it's put to them," he said, and resumed the moods of Mr. Grundy.

"Then you get old Grundy in another mood. Ever caught him nosing, Ponderevo? Mad with the idea of mysterious, unknown, wicked, delicious things. Things that aren't respectable. Wow! Things he mustn't do!... Any one who knows about these things, knows there's just as much mystery and deliciousness about Grundy's forbidden things as there is about eating ham. Jolly nice if it's a bright morning and you're well and hungry and having breakfast in the open air. Jolly unattractive if you're off colour. But Grundy's covered it all up and hidden it and put mucky shades and covers over it until he's forgotten it. Begins to fester round it in his mind. Has dreadful struggles--with himself about impure thoughts.... Then you set Grundy with hot ears,--curious in undertones. Grundy on the loose, Grundy in a hoarse whisper and with furtive eyes and convulsive movements--making things indecent. Evolving--in dense vapours--indecenty!

"Grundy sins. Oh, yes, he's a hypocrite. Sneaks round a corner and sins ugly. It's Grundy and his dark corners that make vice, vice! We artists--we have no vices.

"And then he's frantic with repentance. And wants to be cruel to fallen women and decent harmless sculptors of the simple

nude--like me--and so back to his panic again."

"Mrs. Grundy, I suppose, doesn't know he sins," I remarked.

"No? I'm not so sure.... But, bless her heart she's a woman.... She's a woman. Then again you get Grundy with a large greasy smile--like an accident to a butter tub--all over his face, being Liberal Minded--Grundy in his Anti-Puritan moments, 'trying not to see Harm in it'--Grundy the friend of innocent pleasure. He makes you sick with the Harm he's trying not to see in it...

"And that's why everything's wrong, Ponderevo. Grundy, damn him! stands in the light, and we young people can't see. His moods affect us. We catch his gusts of panic, his disease of nosing, his greasiness. We don't know what we may think, what we may say, he does his silly utmost to prevent our reading and seeing the one thing, the one sort of discussion we find--quite naturally and properly--supremely interesting. So we don't adolescence; we blunder up to sex. Dare--dare to look--and he may dirt you for ever! The girls are terror-stricken to silence by his significant whiskers, by the bleary something in his eyes."

Suddenly Ewart, with an almost Jack-in-the-box effect, sat up.

"He's about us everywhere, Ponderevo," he said, very solemnly. "Sometimes--sometimes I think he is--in our blood. In MINE."

He regarded me for my opinion very earnestly, with his pipe in the corner of his mouth.

"You're the remotest cousin he ever had," I said.

I reflected. "Look here, Ewart," I asked, "how would you have things different?"

He wrinkled up his queer face, regarded the wait and made his pipe gurgle for a space, thinking deeply.

"There are complications, I admit. We've grown up under the terror of Grundy and that innocent but docile and--yes--formidable lady, his wife. I don't know how far the complications aren't a disease, a sort of bleaching under the Grundy shadow.... It is possible there are things I have still to learn about women.... Man has eaten of the Tree of Knowledge. His innocence is gone. You can't have your cake and eat it. We're in for knowledge; let's have it plain and straight. I should begin, I think, by abolishing the ideas of decency and indecency...."

"Grundy would have fits!" I injected.

"Grundy, Ponderevo, would have cold douches--publicly--if the sight was not too painful--three times a day.... But I don't think, mind you, that I should let the sexes run about together. No. The fact behind the sexes--is sex. It's no good humbugging. It trails about--even in the best mixed company. Tugs at your ankle. The men get showing off and quarrelling--and the women. Or they're bored. I suppose the ancestral males have competed for the ancestral females ever since they were both some sort of grubby little reptile. You aren't going to alter that in a thousand years or so.... Never should you have a mixed company, never--except with only one man or only one woman. How would that be?...

"Or duets only?..."

"How to manage it? Some rule of etiquette, perhaps." ... He became portentously grave.

Then his long hand went out in weird gestures.

"I seem to see--I seem to see--a sort of City of Women, Ponderevo. Yes.... A walled enclosure--good stone-mason's work--a city wall, high as the walls of Rome, going about a garden. Dozens of square miles of garden--trees--fountains--arbours--lakes. Lawns on which the women play, avenues in which they gossip, boats.... Women like that sort of thing. Any woman who's been to a good eventful girls' school lives on the memory of it for the rest of her life. It's one of the pathetic things about women--the superiority of school and college--to anything they get afterwards. And this city-garden of women will have beautiful places for music, places for beautiful dresses, places for beautiful work. Everything a woman can want. Nurseries. Kindergartens. Schools. And no man--except to do rough work, perhaps--ever comes in. The men live in a world where they can hunt and engineer, invent and mine and manufacture, sail ships, drink deep and practice the arts, and fight--"

"Yes," I said, "but--"

He stilled me with a gesture.

"I'm coming to that. The homes of the women, Ponderevo, will be set in the wall of their city; each woman will have her own particular house and home, furnished after her own heart in her own manner--with a little balcony on the outside wall. Built into the wall--and a little balcony. And there she will go and look out, when the mood takes her, and all round the city there will be a broad road and seats and great shady trees. And men will stroll up and down there when they feel the need of feminine company; when, for instance, they want to talk about their souls or their characters or any of the things that only women will stand.... The women will lean over and look at the men and smile and talk to them as they fancy. And each woman will have this;

she will have a little silken ladder she can let down if she chooses--if she "wants to talk closer..."

"The men would still be competing."

"There perhaps--yes. But they'd have to abide by the women's decisions."

I raised one or two difficulties, and for a while we played with this idea.

"Ewart," I said, "this is like Doll's Island.

"Suppose," I reflected, "an unsuccessful man laid siege to a balcony and wouldn't let his rival come near it?"

"Move him on," said Ewart, "by a special regulation. As one does organ-grinders. No difficulty about that. And you could forbid it--make it against the etiquette. No life is decent without etiquette.... And people obey etiquette sooner than laws..."

"H'm," I said, and was struck by an idea that is remote in the world of a young man. "How about children?" I asked; "in the City? Girls are all very well. But boys, for example--grow up."

"Ah!" said Ewart. "Yes. I forgot. They mustn't grow up inside.... They'd turn out the boys when they were seven. The father must come with a little pony and a little gun and manly wear, and take the boy away. Then one could come afterwards to one's mother's balcony.... It must be fine to have a mother. The father and the son..."

"This is all very pretty in its way," I said at last, "but it's a dream. Let's come back to reality. What I want to know is, what are you going to do in Brompton, let us say, or Walham Green

NOW?"

"Oh! damn it!" he remarked, "Walham Green! What a chap you are, Ponderevo!" and he made an abrupt end to his discourse. He wouldn't even reply to my tentatives for a time.

"While I was talking just now," he remarked presently,

"I had a quite different idea."

"What?"

"For a masterpiece. A series. Like the busts of the Caesars. Only not heads, you know. We don't see the people who do things to us nowadays..."

"How will you do it, then?"

"Hands--a series of hands! The hands of the Twentieth Century. I'll do it. Some day some one will discover it--go there--see what I have done, and what is meant by it."

"See it where?"

"On the tombs. Why not? The Unknown Master of the Highgate Slope! All the little, soft feminine hands, the nervous ugly males, the hands of the flops, and the hands of the snatchers! And Grundy's loose, lean, knuckly affair--Grundy the terror!--the little wrinkles and the thumb! Only it ought to hold all the others together--in a slightly disturbing squeeze....Like Rodin's great Hand--you know the thing!"

IV

I forget how many days intervened between that last breaking off

of our engagement and Marion's surrender. But I recall now the sharpness of my emotion, the concentrated spirit of tears and laughter in my throat as I read the words of her unexpected letter--"I have thought over everything, and I was selfish...." I rushed off to Walham Green that evening to give back all she had given me, to beat her altogether at giving. She was extraordinarily gentle and generous that time, I remember, and when at last I left her, she kissed me very sweetly.

So we were married.

We were married with all the customary incongruity. I gave--perhaps after a while not altogether ungrudgingly--and what I gave, Marion took, with a manifest satisfaction. After all, I was being sensible. So that we had three livery carriages to the church (one of the pairs of horses matched) and coachmen--with improvised flavour and very shabby silk hats--bearing white favours on their whips, and my uncle intervened with splendour and insisted upon having a wedding breakfast sent in from a caterer's in Hammersmith. The table had a great display of chrysanthemums, and there was orange blossom in the significant place and a wonderful cake. We also circulated upwards of a score of wedges of that accompanied by silver-printed cards in which Marion's name of Ramboat was stricken out by an arrow in favour of Ponderevo. We had a little rally of Marion's relations, and several friends and friends' friends from Smithie's appeared in the church and drifted vestry-ward. I produced my aunt and uncle a select group of two. The effect in that shabby little house was one of exhilarating congestion. The side-board, in which lived the table-cloth and the "Apartments" card, was used for a display of the presents, eked out by the unused balance of the silver-printed cards.

Marion wore the white raiment of a bride, white silk and satin,

that did not suit her, that made her seem large and strange to me; she obtruded bows and unfamiliar contours. She went through all this strange ritual of an English wedding with a sacramental gravity that I was altogether too young and egotistical to comprehend. It was all extraordinarily central and important to her; it was no more than an offensive, complicated, and disconcerting intrusion of a world I was already beginning to criticise very bitterly, to me. What was all this fuss for? The mere indecent advertisement that I had been passionately in love with Marion! I think, however, that Marion was only very remotely aware of my smouldering exasperation at having in the end behaved "nicely." I had played--up to the extent of dressing my part; I had an admirably cut frock--coat, a new silk hat, trousers as light as I could endure them--lighter, in fact--a white waistcoat, night tie, light gloves. Marion, seeing me despondent had the unusual enterprise to whisper to me that I looked lovely; I knew too well I didn't look myself. I looked like a special coloured supplement to Men's Wear, or The Tailor and Cutter, Full Dress For Ceremonial Occasions. I had even the disconcerting sensations of an unfamiliar collar. I felt lost--in a strange body, and when I glanced down myself for reassurance, the straight white abdomen, the alien legs confirmed that impression.

My uncle was my best man, and looked like a banker--a little banker--in flower. He wore a white rose in his buttonhole. He wasn't, I think, particularly talkative. At least I recall very little from him.

"George" he said once or twice, "this is a great occasion for you--a very great occasion." He spoke a little doubtfully.

You see I had told him nothing about Marion until about a week before the wedding; both he and my aunt had been taken altogether by surprise. They couldn't, as people say, "make it out." My

aunt was intensely interested, much more than my uncle; it was then, I think, for the first time that I really saw that she cared for me. She got me alone, I remember, after I had made my announcement. "Now, George," she said, "tell me everything about her. Why didn't you tell--ME at least--before?"

I was surprised to find how difficult it was to tell her about Marion. I perplexed her.

"Then is she beautiful?" she asked at last.

"I don't know what you'll think of her," I parried. "I think--"

"Yes?"

"I think she might be the most beautiful person in the world."

"And isn't she? To you?"

"Of course," I said, nodding my head. "Yes. She IS..."

And while I don't remember anything my uncle said or did at the wedding, I do remember very distinctly certain little things, scrutiny, solicitude, a curious rare flash of intimacy in my aunt's eyes. It dawned on me that I wasn't hiding anything from her at all. She was dressed very smartly, wearing a big-plumed hat that made her neck seem longer and slenderer than ever, and when she walked up the aisle with that rolling stride of hers and her eye all on Marion, perplexed into self-forgetfulness, it wasn't somehow funny. She was, I do believe, giving my marriage more thought than I had done, she was concerned beyond measure at my black rage and Marion's blindness, she was looking with eyes that knew what loving is--for love.

In the vestry she turned away as we signed, and I verily believe

she was crying, though to this day I can't say why she should have cried, and she was near crying too when she squeezed my hand at parting--and she never said a word or looked at me, but just squeezed my hand....

If I had not been so grim in spirit, I think I should have found much of my wedding amusing. I remember a lot of ridiculous detail that still declines to be funny in my memory. The officiating clergyman had a cold, and turned his "n's" to "d's," and he made the most mechanical compliment conceivable about the bride's age when the register was signed. Every bride he had ever married had had it, one knew. And two middle-aged spinsters, cousins of Marion's and dressmakers at Barking, stand out. They wore marvellously bright and gay blouses and dim old skirts, and had an immense respect for Mr. Ramboat. They threw rice; they brought a whole bag with them and gave handfuls away to unknown little boys at the church door and so created a Lilliputian riot; and one had meant to throw a slipper. It was a very warm old silk slipper, I know, because she dropped it out of a pocket in the aisle--there was a sort of jumble in the aisle--and I picked it up for her. I don't think she actually threw it, for as we drove away from the church I saw her in a dreadful, and, it seemed to me, hopeless, struggle with her pocket; and afterwards my eye caught the missile of good fortune lying, it or its fellow, most obviously mislaid, behind the umbrella-stand in the hall....

The whole business was much more absurd, more incoherent, more human than I had anticipated, but I was far too young and serious to let the latter quality atone for its shortcomings. I am so remote from this phase of my youth that I can look back at it all as dispassionately as one looks at a picture--at some wonderful, perfect sort of picture that is inexhaustible; but at the time these things filled me with unspeakable resentment. Now I go round it all, look into its details, generalise about its

aspects. I'm interested, for example, to square it with my Bladesover theory of the British social scheme. Under stress of tradition we were all of us trying in the fermenting chaos of London to carry out the marriage ceremonies of a Bladesover tenant or one of the chubby middling sort of people in some dependent country town. There a marriage is a public function with a public significance. There the church is to a large extent the gathering-place of the community, and your going to be married a thing of importance to every one you pass on the road. It is a change of status that quite legitimately interests the whole neighbourhood. But in London there are no neighbours, nobody knows, nobody cares. An absolute stranger in an office took my notice, and our banns were proclaimed to ears that had never previously heard our names. The clergyman, even, who married us had never seen us before, and didn't in any degree intimate that he wanted to see us again.

Neighbours in London! The Ramboats did not know the names of the people on either side of them. As I waited for Marion before we started off upon our honeymoon flight, Mr. Ramboat, I remember, came and stood beside me and stared out of the window.

"There was a funeral over there yesterday," he said, by way of making conversation, and moved his head at the house opposite. "Quite a smart affair it was with a glass 'earse...."

And our little procession of three carriages with white-favour-adorned horses and drivers, went through all the huge, noisy, indifferent traffic like a lost china image in the coal-chute of an ironclad. Nobody made way for us, nobody cared for us; the driver of an omnibus jeered; for a long time we crawled behind an unamiable dust-cart. The irrelevant clatter and tumult gave a queer flavour of indecency to this public coming together of lovers. We seemed to have obtruded ourselves

shamelessly. The crowd that gathered outside the church would have gathered in the same spirit and with greater alacrity for a street accident....

At Charing Cross--we were going to Hastings--the experienced eye of the guard detected the significance of our unusual costume and he secured us a compartment.

"Well," said I, as the train moved out of the station, "That's all over!" And I turned to Marion--a little unfamiliar still, in her unfamiliar clothes--and smiled.

She regarded me gravely, timidly.

"You're not cross?" she asked.

"Cross! Why?"

"At having it all proper."

"My dear Marion!" said I, and by way of answer took and kissed her white-gloved, leather-scented hand....

I don't remember much else about the journey, an hour or so it was of undistinguished time--for we were both confused and a little fatigued and Marion had a slight headache and did not want caresses. I fell into a reverie about my aunt, and realised as if it were a new discovery, that I cared for her very greatly. I was acutely sorry I had not told her earlier of my marriage.

But you will not want to hear the history of my honeymoon. I have told all that was needed to serve my present purpose. Thus and thus it was the Will in things had its way with me. Driven by forces I did not understand, diverted altogether from the science, the curiosities and work to which I had once given

myself, I fought my way through a tangle of traditions, customs, obstacles and absurdities, enraged myself, limited myself, gave myself to occupations I saw with the clearest vision were dishonourable and vain, and at last achieved the end of purblind Nature, the relentless immediacy of her desire, and held, far short of happiness, Marion weeping and reluctant in my arms.

V

Who can tell the story of the slow estrangement of two married people, the weakening of first this bond and then that of that complex contact? Least of all can one of the two participants. Even now, with an interval of fifteen years to clear it up for me, I still find a mass of impressions of Marion as confused, as discordant, as unsystematic and self-contradictory as life. I think of this thing and love her, of that and hate her--of a hundred aspects in which I can now see her with an unimpassioned sympathy. As I sit here trying to render some vision of this infinitely confused process, I recall moments of hard and fierce estrangement, moments of clouded intimacy, the passage of transition all forgotten. We talked a little language together whence were "friends," and I was "Mutney" and she was "Ming," and we kept up such an outward show that till the very end Smithie thought our household the most amiable in the world.

I cannot tell to the full how Marion thwarted me and failed in that life of intimate emotions which is the kernel of love. That life of intimate emotions is made up of little things. A beautiful face differs from an ugly one by a difference of surfaces and proportions that are sometimes almost infinitesimally small. I find myself setting down little things and little things; none of them do more than demonstrate those essential temperamental discords I have already sought to make clear. Some readers will understand--to others I shall seem no more than an unfeeling brute who couldn't make allowances....

It's easy to make allowances now; but to be young and ardent and to make allowances, to see one's married life open before one, the life that seemed in its dawn a glory, a garden of roses, a place of deep sweet mysteries and heart throbs and wonderful silences, and to see it a vista of tolerations and baby-talk; a compromise, the least effectual thing in all one's life.

Every love romance I read seemed to mock our dull intercourse, every poem, every beautiful picture reflected upon the uneventful succession of grey hours we had together. I think our real difference was one of aesthetic sensibility.

I do still recall as the worst and most disastrous aspect of all that time, her absolute disregard of her own beauty. It's the pettiest thing to record, I know, but she could wear curl-papers in my presence. It was her idea, too, to "wear out" her old clothes and her failures at home when "no one was likely to see her"--"no one" being myself. She allowed me to accumulate a store of ungracious and slovenly memories....

All our conceptions of life differed. I remember how we differed about furniture. We spent three or four days in Tottenham Court Road, and she chose the things she fancied with an inexorable resolution,--sweeping aside my suggestions with--"Oh, YOU want such queer things." She pursued some limited, clearly seen and experienced ideal--that excluded all other possibilities. Over every mantel was a mirror that was draped, our sideboard was wonderfully good and splendid with beveled glass, we had lamps on long metal stalks and cozy corners and plants in grog-tubs. Smithie approved it all. There wasn't a place where one could sit and read in the whole house. My books went upon shelves in the dining-room recess. And we had a piano though Marion's playing was at an elementary level.

You know, it was the cruelest luck for Marion that I, with my

restlessness, my scepticism, my constantly developing ideas, had insisted on marriage with her. She had no faculty of growth or change; she had taken her mould, she had set in the limited ideas of her peculiar class. She preserved her conception of what was right in drawing-room chairs and in marriage ceremonial and in every relation of life with a simple and luminous honesty and conviction, with an immense unimaginative inflexibility--as a tailor-bird builds its nest or a beaver makes its dam.

Let me hasten over this history of disappointments and separation. I might tell of waxings and waning of love between us, but the whole was waning. Sometimes she would do things for me, make me a tie or a pair of slippers, and fill me with none the less gratitude because the things were absurd. She ran our home and our one servant with a hard, bright efficiency. She was inordinately proud of house and garden. Always, by her lights, she did her duty by me.

Presently the rapid development of Tono-Bungay began to take me into the provinces, and I would be away sometimes for a week together. This she did not like; it left her "dull," she said, but after a time she began to go to Smithie's again and to develop an independence of me. At Smithie's she was now a woman with a position; she had money to spend. She would take Smithie to theatres and out to lunch and talk interminably of the business, and Smithie became a sort of permanent weekender with us. Also Marion got a spaniel and began to dabble with the minor arts, with poker-work and a Kodak and hyacinths in glasses. She called once on a neighbour. Her parents left Walham Green--her father severed his connection with the gas-works--and came to live in a small house I took for them near us, and they were much with us.

Odd the littleness of the things that exasperate when the fountains of life are embittered! My father-in-law was

perpetually catching me in moody moments and urging me to take to gardening. He irritated me beyond measure.

"You think too much," he would say. "If you was to let in a bit with a spade, you might soon 'ave that garden of yours a Vision of Flowers. That's better than thinking, George."

Or in a torrent of exasperation, "I CARN'T think, George, why you don't get a bit of glass 'ere. This sunny corner you c'd do wonders with a bit of glass."

And in the summer time he never came in without performing a sort of conjuring trick in the hall, and taking cucumbers and tomatoes from unexpected points of his person. "All out o' MY little bit," he'd say in exemplary tones. He left a trail of vegetable produce in the most unusual places, on mantel boards, sideboards, the tops of pictures. Heavens! how the sudden unexpected tomato could annoy me!...

It did much to widen our estrangement that Marion and my aunt failed to make friends, became, by a sort of instinct, antagonistic.

My aunt, to begin with, called rather frequently, for she was really anxious to know Marion. At first she would arrive like a whirlwind and pervade the house with an atmosphere of hello! She dressed already with that cheerfully extravagant abandon that signalled her accession to fortune, and dressed her best for these visits.

She wanted to play the mother to me, I fancy, to tell Marion occult secrets about the way I wore out my boots and how I never could think to put on thicker things in cold weather. But Marion received her with that defensive suspiciousness of the shy person, thinking only of the possible criticism of herself; and

my aunt, perceiving this, became nervous and slangy...

"She says such queer things," said Marion once, discussing her.
"But I suppose it's witty."

"Yes," I said; "it IS witty."

"If I said things like she does--"

The queer things my aunt said were nothing to the queer things she didn't say. I remember her in our drawing-room one day, and how she cocked her eye--it's the only expression--at the India-rubber plant in a Douulton-ware pot which Marion had placed on the corner of the piano.

She was on the very verge of speech. Then suddenly she caught my expression, and shrank up like a cat that has been discovered looking at the milk.

Then a wicked impulse took her.

"Didn't say an old word, George," she insisted, looking me full in the eye.

I smiled. "You're a dear," I said, "not to," as Marion came lowering into the room to welcome her. But I felt extraordinarily like a traitor--to the India-rubber plant, I suppose--for all that nothing had been said...

"Your aunt makes Game of people," was Marion's verdict, and, open-mindedly: "I suppose it's all right... for her."

Several times we went to the house in Beckenham for lunch, and once or twice to dinner. My aunt did her peculiar best to be friends, but Marion was implacable. She was also, I know,

intensely uncomfortable, and she adopted as her social method, an exhausting silence, replying compactly and without giving openings to anything that was said to her.

The gaps between my aunt's visits grew wider and wider.

My married existence became at last like a narrow deep groove in the broad expanse of interests in which I was living. I went about the world; I met a great number of varied personalities; I read endless books in trains as I went to and fro. I developed social relationships at my uncle's house that Marion did not share. The seeds of new ideas poured in upon me and grew in me. Those early and middle years of one's third decade are, I suppose, for a man the years of greatest mental growth. They are restless years and full of vague enterprise.

Each time I returned to Ealing, life there seemed more alien, narrow, and unattractive--and Marion less beautiful and more limited and difficult--until at last she was robbed of every particle of her magic. She gave me always a cooler welcome, I think, until she seemed entirely apathetic. I never asked myself then what heartaches she might hide or what her discontents might be.

I would come home hoping nothing, expecting nothing.

This was my fated life, and I had chosen it. I became more sensitive to the defects I had once disregarded altogether; I began to associate her sallow complexion with her temperamental insufficiency, and the heavier lines of her mouth and nostril with her moods of discontent. We drifted apart; wider and wider the gap opened. I tired of baby-talk and stereotyped little fondlings; I tired of the latest intelligence from those wonderful workrooms, and showed it all too plainly; we hardly spoke when we were alone together. The mere unreciprocated

physical residue of my passion remained--an exasperation between us.

No children came to save us. Marion had acquired at Smithie's a disgust and dread of maternity. All that was the fruition and quintessence of the "horrid" elements in life, a disgusting thing, a last indignity that overtook unwary women. I doubt indeed a little if children would have saved us; we should have differed so fatally about their upbringing.

Altogether, I remember my life with Marion as a long distress, now hard, now tender. It was in those days that I first became critical of my life and burdened with a sense of error and maladjustment. I would lie awake in the night, asking myself the purpose of things, reviewing my unsatisfying, ungainly home-life, my days spent in rascal enterprise and rubbish-selling, contrasting all I was being and doing with my adolescent ambitions, my Wimblehurst dreams. My circumstances had an air of finality, and I asked myself in vain why I had forced myself into them.

VI

The end of our intolerable situation came suddenly and unexpectedly, but in a way that I suppose was almost inevitable.

My alienated affections wandered, and I was unfaithful to Marion.

I won't pretend to extenuate the quality of my conduct. I was a young and fairly vigorous male; all my appetite for love had been roused and whetted and none of it had been satisfied by my love affair and my marriage. I had pursued an elusive gleam of beauty to the disregard of all else, and it had failed me. It had faded when I had hoped it would grow brighter. I despaired of life and was embittered. And things happened as I am telling. I don't

draw any moral at all in the matter, and as for social remedies, I leave them to the social reformer. I've got to a time of life when the only theories that interest me are generalisations about realities.

To go to our inner office in Raggett Street I had to walk through a room in which the typists worked. They were the correspondence typists; our books and invoicing had long since overflowed into the premises we had had the luck to secure on either side of us. I was, I must confess, always in a faintly cloudily-emotional way aware of that collection of for the most part round-shouldered femininity, but presently one of the girls detached herself from the others and got a real hold upon my attention. I appreciated her at first as a straight little back, a neater back than any of the others; as a softly rounded neck with a smiling necklace of sham pearls; as chestnut hair very neatly done--and as a side-long glance; presently as a quickly turned face that looked for me.

My eye would seek her as I went through on business things--I dictated some letters to her and so discovered she had pretty, soft-looking hands with pink nails. Once or twice, meeting casually, we looked one another for the flash of a second in the eyes.

That was all. But it was enough in the mysterious free-masonry of sex to say essential things. We had a secret between us.

One day I came into Raggett Street at lunch time and she was alone, sitting at her desk. She glanced up as I entered, and then became very still, with a downcast face and her hands clenched on the table. I walked right by her to the door of the inner office, stopped, came back and stood over her.

We neither of us spoke for quite a perceptible time. I was

trembling violently.

"Is that one of the new typewriters?" I asked at last for the sake of speaking.

She looked up at me without a word, with her face flushed and her eyes alight, and I bent down and kissed her lips. She leant back to put an arm about me, drew my face to her and kissed me again and again. I lifted her and held her in my arms. She gave a little smothered cry to feel herself so held.

Never before had I known the quality of passionate kisses.

Somebody became audible in the shop outside.

We started back from one another with flushed faces and bright and burning eyes.

"We can't talk here," I whispered with a confident intimacy.
"Where do you go at five?"

"Along the Embankment to Charing Cross," she answered as intimately. "None of the others go that way..."

"About half-past five?"

"Yes, half-past five..."

The door from the shop opened, and she sat down very quickly.

"I'm glad," I said in a commonplace voice, "that these new typewriters are all right."

I went into the inner office and routed out the paysheet in order to find her name--Effie Rink. And did no work at all that

afternoon. I fretted about that dingy little den like a beast in a cage.

When presently I went out, Effie was working with an extraordinary appearance of calm--and there was no look for me at all....

We met and had our talk that evening, a talk in whispers when there was none to overhear; we came to an understanding. It was strangely unlike any dream of romance I had ever entertained.

VII

I came back after a week's absence to my home again--a changed man. I had lived out my first rush of passion for Effie, had come to a contemplation of my position. I had gauged Effie's place in the scheme of things, and parted from her for a time. She was back in her place at Raggett Street after a temporary indisposition. I did not feel in any way penitent or ashamed, I know, as I opened the little cast-iron gate that kept Marion's front grader and Pampas Grass from the wandering dog. Indeed, if anything, I felt as if I had vindicated some right that had been in question. I came back to Marion with no sense of wrong-doing at all with, indeed, a new friendliness towards her. I don't know how it may be proper to feel on such occasions; that is how I felt.

I followed her in our drawing-room, standing beside the tall lamp-stand that half filled the bay as though she had just turned from watching for me at the window. There was something in her pale face that arrested me. She looked as if she had not been sleeping. She did not come forward to greet me.

"You've come home," she said.

"As I wrote to you."

She stood very still, a dusky figure against the bright window.

"Where have you been?" she asked.

"East Coast," I said easily.

She paused for a moment. "I KNOW," she said.

I stared at her. It was the most amazing moment in any life....

"By Jove!" I said at last, "I believe you do!"

"And then you come home to me!"

I walked to the hearthrug and stood quite still there regarding this new situation.

"I didn't dream," she began. "How could you do such a thing?"

It seemed a long interval before either of us spoke another word.

"Who knows about it?" I asked at last.

"Smithie's brother. They were at Cromer."

"Confound Cromer! Yes!"

"How could you bring yourself"

I felt a spasm of petulant annoyance at this unexpected catastrophe.

"I should like to wring Smithie's brother's neck," I said....

Marion spoke in dry, broken fragments of sentences. "You... I'd always thought that anyhow you couldn't deceive me... I suppose all men are horrid--about this."

"It doesn't strike me as horrid. It seems to me the most necessary consequence--and natural thing in the world."

I became aware of some one moving about in the passage, and went and shut the door of the room, then I walked back to the hearthrug and turned.

"It's rough on you," I said. "But I didn't mean you to know. You've never cared for me. I've had the devil of a time. Why should you mind?"

She sat down in a draped armchair. "I HAVE cared for you," she said.

I shrugged my shoulders.

"I suppose," she said, "SHE cares for you?"

I had no answer.

"Where is she now?"

"Oh! does it matter to you?... Look here, Marion! This--this I didn't anticipate. I didn't mean this thing to smash down on you like this. But, you know, something had to happen. I'm sorry--sorry to the bottom of my heart that things have come to this between us. But indeed, I'm taken by surprise. I don't know where I am--I don't know how we got here. Things took me by surprise. I found myself alone with her one day. I kissed her. I went on. It seemed stupid to go back. And besides--why should

I have gone back? Why should I? From first to last, I've hardly thought of it as touching you.... Damn!"

She scrutinised my face, and pulled at the ball-fringe of the little table beside her.

"To think of it," she said. "I don't believe I can ever touch you again."

We kept a long silence. I was only beginning to realise in the most superficial way the immense catastrophe that had happened between us. Enormous issues had rushed upon us. I felt unprepared and altogether inadequate. I was unreasonably angry. There came a rush of stupid expressions to my mind that my rising sense of the supreme importance of the moment saved me from saying. The gap of silence widened until it threatened to become the vast memorable margin of some one among a thousand trivial possibilities of speech that would vex our relations for ever.

Our little general servant tapped at the door--Marion always liked the servant to tap--and appeared.

"Tea, M'm," she said--and vanished, leaving the door open.

"I will go upstairs," said I, and stopped. "I will go upstairs" I repeated, "and put my bag in the spare room."

We remained motionless and silent for a few seconds.

"Mother is having tea with us to-day," Marion remarked at last, and dropped the worried end of ball-fringe and stood up slowly....

And so, with this immense discussion of our changed relations hanging over us, we presently had tea with the unsuspecting Mrs.

Ramboats and the spaniel. Mrs. Ramboat was too well trained in her position to remark upon our somber preoccupation. She kept a thin trickle of talk going, and told us, I remember, that Mr. Ramboat was "troubled" about his cannas.

"They don't come up and they won't come up. He's been round and had an explanation with the man who sold him the bulbs--and he's very heated and upset."

The spaniel was a great bore, begging and doing small tricks first at one and then at the other of us. Neither of us used his name. You see we had called him Miggles, and made a sort of trio in the baby-talk of Mutney and Miggles and Ming.

VIII

Then presently we resumed our monstrous, momentous dialogue. I can't now make out how long that dialogue went on. It spread itself, I know, in heavy fragments over either three days or four. I remember myself grouped with Marion, talking sitting on our bed in her room, talking standing in our dining-room, saving this thing or that. Twice we went for long walks. And we had a long evening alone together, with jaded nerves and hearts that fluctuated between a hard and dreary recognition of facts and, on my part at least, a strange unwonted tenderness; because in some extraordinary way this crisis had destroyed our mutual apathy and made us feel one another again.

It was a dialogue that had discrepant parts that fell into lumps of talk that failed to join on to their predecessors, that began again at a different level, higher or lower, that assumed new aspects in the intervals and assimilated new considerations. We discussed the fact that we two were no longer lovers; never before had we faced that. It seems a strange thing to write, but

as I look back, I see clearly that those several days were the time when Marion and I were closest together, looked for the first and last time faithfully and steadfastly into each other's soul. For those days only, there were no pretences, I made no concessions to her nor she to me; we concealed nothing, exaggerated nothing. We had done with pretending. We had it out plainly and soberly with each other. Mood followed mood and got its stark expression.

Of course there was quarreling between us, bitter quarreling, and we said things to one another--long pent-up things that bruised and crushed and cut. But over it all in my memory now is an effect of deliberate confrontation, and the figure of Marion stands up, pale, melancholy, tear-stained, injured, implacable and dignified.

"You love her?" she asked once, and jerked that doubt into my mind.

I struggled with tangled ideas and emotions. "I don't know what love is. It's all sorts of things--it's made of a dozen strands twisted in a thousand ways."

"But you want her? You want her now--when you think of her?"

"Yes," I reflected. "I want her--right enough."

"And me? Where do I come in?"

"I suppose you come in here."

"Well, but what are you going to do?"

"Do!" I said with the exasperation of the situation growing upon me. "What do you want me to do?"

As I look back upon all that time--across a gulf of fifteen active years--I find I see it with an understanding judgment. I see it as if it were the business of some one else--indeed of two other people--intimately known yet judged without passion. I see now that this shock, this sudden immense disillusionment, did in real fact bring out a mind and soul in Marion; that for the first time she emerged from habits, timidities, imitations, phrases and a certain narrow will-impulse, and became a personality.

Her ruling motive at first was, I think, an indignant and outraged pride. This situation must end. She asked me categorically to give up Effie, and I, full of fresh and glowing memories, absolutely refused.

"It's too late, Marion," I said. "It can't be done like that."

"Then we can't very well go on living together," she said. "Can we?"

"Very well," I deliberated "if you must have it so."

"Well, can we?"

"Can you stay in this house? I mean--if I go away?"

"I don't know.... I don't think I could."

"Then--what do you want?"

Slowly we worked our way from point to point, until at last the word "divorce" was before us.

"If we can't live together we ought to be free," said Marion.

"I don't know anything of divorce," I said--"if you mean that. I don't know how it is done. I shall have to ask somebody--or look it up.... Perhaps, after all, it is the thing to do. We may as well face it."

We began to talk ourselves into a realisation of what our divergent futures might be. I came back on the evening of that day with my questions answered by a solicitor.

"We can't as a matter of fact," I said, "get divorced as things are. Apparently, so far as the law goes you've got to stand this sort of thing. It's silly but that is the law. However, it's easy to arrange a divorce. In addition to adultery there must be desertion or cruelty. To establish cruelty I should have to strike you, or something of that sort, before witnesses. That's impossible--but it's simple to desert you legally. I have to go away from you; that's all. I can go on sending you money--and you bring a suit, what is it?--for Restitution of Conjugal Rights. The Court orders me to return. I disobey. Then you can go on to divorce me. You get a Decree Nisi, and once more the Court tries to make me come back. If we don't make it up within six months and if you don't behave scandalously the Decree is made absolute. That's the end of the fuss. That's how one gets unmarried. It's easier, you see, to marry than unmarry."

"And then--how do I live? What becomes of me?"

"You'll have an income. They call it alimony. From a third to a half of my present income--more if you like--I don't mind--three hundred a year, say. You've got your old people to keep and you'll need all that."

"And then--then you'll be free?"

"Both of us."

"And all this life you've hated"

I looked up at her wrung and bitter face. "I haven't hated it," I lied, my voice near breaking with the pain of it all. "Have you?"

IX

The perplexing thing about life is the irresolvable complexity of reality, of things and relations alike. Nothing is simple. Every wrong done has a certain justice in it, and every good deed has dregs of evil. As for us, young still, and still without self-knowledge, resounded a hundred discordant notes in the harsh angle of that shock. We were furiously angry with each other, tender with each other, callously selfish, generously self-sacrificing.

I remember Marion saying innumerable detached things that didn't hang together one with another, that contradicted one another, that were, nevertheless, all in their places profoundly true and sincere. I see them now as so many vain experiments in her effort to apprehend the crumpled confusions of our complex moral landslide. Some I found irritating beyond measure. I answered her--sometimes quite abominably.

"Of course," she would say again and again, "my life has been a failure."

"I've besieged you for three years," I would retort "asking it not to be. You've done as you pleased. If I've turned away at last--"

Or again she would revive all the stresses before our marriage.

"How you must hate me! I made you wait. Well now--I suppose you have your revenge."

"REVENGE!" I echoed.

Then she would try over the aspects of our new separated lives.

"I ought to earn my own living," she would insist.

"I want to be quite independent. I've always hated London. Perhaps I shall try a poultry farm and bees. You won't mind at first my being a burden. Afterwards--"

"We've settled all that," I said.

"I suppose you will hate me anyhow..."

There were times when she seemed to regard our separation with absolute complacency, when she would plan all sorts of freedoms and characteristic interests.

"I shall go out a lot with Smithie," she said.

And once she said an ugly thing that I did indeed hate her for. that I cannot even now quite forgive her.

"Your aunt will rejoice at all this. She never cared for me..."

Into my memory of these pains and stresses comes the figure of Smithie, full-charged with emotion, so breathless in the presence of the horrid villain of the piece that she could make no articulate sounds. She had long tearful confidences with Marion, I know, sympathetic close clingings. There were moments when only absolute speechlessness prevented her giving me a stupendous "talking-to"--I could see it in her eye. The wrong

things she would have said! And I recall, too, Mrs. Ramboat's slow awakening to something in, the air, the growing expression of solicitude in her eye, only her well-trained fear of Marion keeping her from speech.

And at last through all this welter, like a thing fated and altogether beyond our control, parting came to Marion and me.

I hardened my heart, or I could not have gone. For at the last it came to Marion that she was parting from me for ever. That overbore all other things, had turned our last hour to anguish. She forgot for a time the prospect of moving into a new house, she forgot the outrage on her proprietorship and pride. For the first time in her life she really showed strong emotions in regard to me, for the first time, perhaps, they really came to her. She began to weep slow, reluctant tears. I came into her room, and found her asprawl on the bed, weeping.

"I didn't know," she cried. "Oh! I didn't understand!"

"I've been a fool. All my life is a wreck!

"I shall be alone!...MUTNEY! Mutney, don't leave me! Oh! Mutney! I didn't understand."

I had to harden my heart indeed, for it seemed to me at moments in those last hours together that at last, too late, the longed-for thing had happened and Marion had come alive. A new-born hunger for me lit her eyes.

"Don't leave me!" she said, "don't leave me!" She clung to me; she kissed me with tear-salt lips.

I was promised now and pledged, and I hardened my heart against this impossible dawn. Yet it seems to me that there were moments

when it needed but a cry, but one word to have united us again for all our lives. Could we have united again? Would that passage have enlightened us for ever or should we have fallen back in a week or so into the old estrangement, the old temperamental opposition?

Of that there is now no telling. Our own resolve carried us on our predestined way. We behaved more and more like separating lovers, parting inexorably, but all the preparations we had set going worked on like a machine, and we made no attempt to stop them. My trunks and boxes went to the station. I packed my bag with Marion standing before me. We were like children who had hurt each other horribly in sheer stupidity, who didn't know now how to remedy it. We belonged to each other immensely--immensely. The cab came to the little iron gate.

"Good-bye!" I said.

"Good-bye."

For a moment we held one another in each other's arms and kissed--incredibly without malice. We heard our little servant in the passage going to open the door. For the last time we pressed ourselves to one another. We were not lovers nor enemies, but two human souls in a frank community of pain. I tore myself from her.

"Go away," I said to the servant, seeing that Marion had followed me down.

I felt her standing behind me as I spoke to the cab man.

I got into the cab, resolutely not looking back, and then as it started jumped up, craned out and looked at the door.

It was wide open, but she had disappeared....

I wonder--I suppose she ran upstairs.

X

So I parted from Marion at an extremity of perturbation and regret, and went, as I had promised and arranged, to Effie, who was waiting for me in apartments near Orpington. I remember her upon the station platform, a bright, flitting figure looking along the train for me, and our walk over the fields in the twilight. I had expected an immense sense of relief where at last the stresses of separation were over, but now I found I was beyond measure wretched and perplexed, full of the profoundest persuasion of irreparable error. The dusk and somber Marion were so alike, her sorrow seemed to be all about me. I had to hold myself to my own plans, to remember that I must keep faith with Effie, with Effie who had made no terms, exacted no guarantees, but flung herself into my hands.

We went across the evening fields in silence, towards a sky of deepening gold and purple, and Effie was close beside me always, very close, glancing up ever and again at my face.

Certainly she knew I grieved for Marion, that ours was now no joyful reunion. But she showed no resentment and no jealousy. Extraordinarily, she did not compete against Marion. Never once in all our time together did she say an adverse word of Marion....

She set herself presently to dispel the shadow that brooded over me with the same instinctive skill that some women will show with the trouble of a child. She made herself my glad and pretty slave and handmaid; she forced me at last to rejoice in her. Yet at the back of it all Marion remained, stupid and tearful and

infinitely distressful, so that I was almost intolerably unhappy for her--for her and the dead body of my married love.

It is all, as I tell it now, unaccountable to me. I go back into these remote parts, these rarely visited uplands and lonely tares of memory, and it seems to me still a strange country. I had thought I might be going to some sensuous paradise with Effie, but desire which fills the universe before its satisfaction, vanishes utterly like the going of daylight--with achievement. All the facts and forms of life remain darkling and cold. It was an upland of melancholy questionings, a region from which I saw all the world at new angles and in new aspects; I had outflanked passion and romance.

I had come into a condition of vast perplexities. For the first time in my life, at least so it seems to me now in this retrospect, I looked at my existence as a whole.

Since this was nothing, what was I doing? What was I for?

I was going to and fro about Tono-Bungay--the business I had taken up to secure Marion and which held me now in spite of our intimate separation--and snatching odd week-ends and nights for Orpington, and all the while I struggled with these obstinate interrogations. I used to fall into musing in the trains, I became even a little inaccurate and forgetful about business things. I have the clearest memory of myself sitting thoughtful in the evening sunlight on a grassy hillside that looked toward Seven Oaks and commanded a wide sweep of country, and that I was thinking out my destiny. I could almost write my thought down now, I believe, as they came to me that afternoon. Effie, restless little cockney that she was, rustled and struggled in a hedgerow below, gathering flowers, discovering flowers she had never seen before. I had. I remember, a letter from Marion in my pocket. I had even made some tentatives for return, for a

reconciliation; Heaven knows now how I had put it! but her cold, ill-written letter repelled me. I perceived I could never face that old inconclusive dullness of life again, that stagnant disappointment. That, anyhow, wasn't possible. But what was possible? I could see no way of honour or fine living before me at all.

"What am I to do with life?" that was the question that besieged me.

I wondered if all the world was even as I, urged to this by one motive and to that by another, creatures of chance and impulse and unmeaning traditions. Had I indeed to abide by what I had said and done and chosen? Was there nothing for me in honour but to provide for Effie, go back penitent to Marion and keep to my trade in rubbish--or find some fresh one--and so work out the residue of my days? I didn't accept that for a moment. But what else was I to do? I wondered if my case was the case of many men, whether in former ages, too, men had been so guideless, so uncharted, so haphazard in their journey into life. In the Middle Ages, in the old Catholic days, one went to a priest, and he said with all the finality of natural law, this you are and this you must do. I wondered whether even in the Middle Ages I should have accepted that ruling without question.

I remember too very distinctly how Effie came and sat beside me on a little box: that was before the casement window of our room.

"Gloomkins," said she.

I smiled and remained head on hand, looking out of the window forgetful of her.

"Did you love your wife so well?" she whispered softly.

"Oh!" I cried, recalled again; "I don't know. I don't understand these things. Life is a thing that hurts, my dear! It hurts without logic or reason. I've blundered! I didn't understand. Anyhow--there is no need to go hurting you, is there?"

And I turned about and drew her to me, and kissed her ear....

Yes, I had a very bad time--I still recall. I suffered, I suppose, from a sort of ennui of the imagination. I found myself without an object to hold my will together. I sought. I read restlessly and discursively. I tried Ewart and got no help from him. As I regard it all now in this retrospect, it seems to me as if in those days of disgust and abandoned aims I discovered myself for the first time. Before that I had seen only the world and things in it, had sought them self-forgetful of all but my impulse. Now I found myself GROUPED with a system of appetites and satisfactions, with much work to do--and no desire, it seemed, left in me.

There were moments when I thought of suicide. At times my life appeared before me in bleak, relentless light, a series of ignorances, crude blunderings, degradation and cruelty. I had what the old theologians call a "conviction of sin." I sought salvation--not perhaps in the formula a Methodist preacher would recognise but salvation nevertheless.

Men find their salvation nowadays in many ways. Names and forms don't, I think, matter very much; the real need is something that we can hold and that holds one. I have known a man find that determining factor in a dry-plate factory, and another in writing a history of the Manor. So long as it holds one, it does not matter. Many men and women nowadays take up some concrete aspect of Socialism or social reform. But Socialism for me has always been a little bit too human, too set about with personalities and foolishness. It isn't my line. I don't like

things so human. I don't think I'm blind to the fun, the surprises, the jolly little coarsenesses and insufficiency of life, to the "humour of it," as people say, and to adventure, but that isn't the root of the matter with me. There's no humour in my blood. I'm in earnest in warp and woof. I stumble and flounder, but I know that over all these merry immediate things, there are other things that are great and serene, very high, beautiful things--the reality. I haven't got it, but it's there nevertheless. I'm a spiritual guttersnipe in love with unimaginable goddesses. I've never seen the goddesses nor ever shall--but it takes all the fun out of the mud--and at times I fear it takes all the kindness, too.

But I'm talking of things I can't expect the reader to understand, because I don't half understand them myself. There is something links things for me, a sunset or so, a mood or so, the high air, something there was in Marion's form and colour, something I find and lose in Mantegna's pictures, something in the lines of these boats I make. (You should see X2, my last and best!)

I can't explain myself, I perceive. Perhaps it all comes to this, that I am a hard and morally limited cad with a mind beyond my merits. Naturally I resist that as a complete solution. Anyhow, I had a sense of inexorable need, of distress and insufficiency that was unendurable, and for a time this aeronautical engineering allayed it....

In the end of this particular crisis of which I tell so badly, I idealised Science. I decided that in power and knowledge lay the salvation of my life, the secret that would fill my need; that to these things I would give myself.

I emerged at last like a man who has been diving in darkness, clutching at a new resolve for which he had groped desperately

and long.

I came into the inner office suddenly one day--it must have been just before the time of Marion's suit for restitution--and sat down before my uncle.

"Look here," I said, "I'm sick of this."

"Hullo!" he answered, and put some papers aside.

"What's up, George?"

"Things are wrong."

"As how?"

"My life," I said, "it's a mess, an infinite mess."

"She's been a stupid girl, George," he said; "I partly understand. But you're quit of her now, practically, and there's just as good fish in the sea--"

"Oh! it's not that!" I cried. "That's only the part that shows. I'm sick--I'm sick of all this damned rascality."

"Eh? Eh?" said my uncle. "WHAT--rascality?"

"Oh, YOU know. I want some STUFF, man. I want something to hold on to. I shall go amok if I don't get it. I'm a different sort of beast from you. You float in all this bunkum. I feel like a man floundering in a universe of soapsuds, up and downs, east and west. I can't stand it. I must get my foot on something solid or--I don't know what."

I laughed at the consternation in his face.

"I mean it," I said. "I've been thinking it over. I've made up my mind. It's no good arguing. I shall go in for work--real work. No! this isn't work; it's only laborious cheating. But I've got an idea! It's an old idea--I thought of years ago, but it came back to me. Look here! Why should I fence about with you? I believe the time has come for flying to be possible. Real flying!"

"Flying!"

I stuck to that, and it helped me through the worst time in my life. My uncle, after some half-hearted resistance and a talk with my aunt, behaved like the father of a spoilt son. He fixed up an arrangement that gave me capital to play with, released me from too constant a solicitude for the newer business developments--this was in what I may call the later Moggs period of our enterprises--and I went to work at once with grim intensity.

But I will tell of my soaring and flying machines in the proper place. I've been leaving the story of my uncle altogether too long. I wanted merely to tell how it was I took to this work. I took to these experiments after I had sought something that Marion in some indefinable way had seemed to promise. I toiled and forgot myself for a time, and did many things. Science too has been something of an irresponsive mistress since, though I've served her better than I served Marion. But at the time Science, with her order, her inhuman distance, yet steely certainties, saved me from despair.

Well, I have still to fly; but incidentally I have invented the lightest engines in the world.

I am trying to tell of all the things that happened to me. It's

hard enough simply to get it put down in the remotest degree right. But this is a novel, not a treatise. Don't imagine that I am coming presently to any sort of solution of my difficulties. Here among my drawings and hammerings NOW, I still question unanswering problems. All my life has been at bottom, SEEKING, disbelieving always, dissatisfied always with the thing seen and the thing believed, seeking something in toil, in force, in danger, something whose name and nature I do not clearly understand, something beautiful, worshipful, enduring, mine profoundly and fundamentally, and the utter redemption of myself; I don't know--all I can tell is that it is something I have ever failed to find.

XI

But before I finish this chapter and book altogether and go on with the great adventure of my uncle's career. I may perhaps tell what else remains to tell of Marion and Effie, and then for a time set my private life behind me.

For a time Marion and I corresponded with some regularity, writing friendly but rather uninforming letters about small business things. The clumsy process of divorce completed itself.

She left the house at Ealing and went into the country with her aunt and parents, taking a small farm near Lewes in Sussex. She put up glass, she put in heat for her father, happy man! and spoke of figs and peaches. The thing seemed to promise well throughout a spring and summer, but the Sussex winter after London was too much for the Ramboats. They got very muddy and dull; Mr. Ramboat killed a cow by improper feeding, and that disheartened them all. A twelvemonth saw the enterprise in difficulties. I had to help her out of this, and then they returned to London and she went into partnership with Smithie at Streatham, and ran a business that was intimated on the firm's

stationery as "Robes." The parents and aunt were stowed away in a cottage somewhere. After that the letters became infrequent. But in one I remember a postscript that had a little stab of our old intimacy: "Poor old Miggles is dead."

Nearly eight years slipped by. I grew up. I grew in experience, in capacity, until I was fully a man, but with many new interests, living on a larger scale in a wider world than I could have dreamt of in my Marion days. Her letters become rare and insignificant. At last came a gap of silence that made me curious. For eighteen months or more I had nothing from Marion save her quarterly receipts through the bank. Then I damned at Smithie, and wrote a card to Marion.

"Dear Marion," I said, "how goes it?"

She astonished me tremendously by telling me she had married again--"a Mr. Wachorn, a leading agent in the paper-pattern trade." But she still wrote on the Ponderevo and Smith (Robes) notepaper, from the Ponderevo and Smith address.

And that, except for a little difference of opinion about the continuance of alimony which gave me some passages of anger, and the use of my name by the firm, which also annoyed me, is the end of Marion's history for me, and she vanishes out of this story. I do not know where she is or what she is doing. I do not know whether she is alive or dead. It seems to me utterly grotesque that two people who have stood so close to one another as she and I should be so separated, but so it is between us.

Effie, too, I have parted from, though I still see her at times. Between us there was never any intention of marriage nor intimacy of soul. She had a sudden, fierce, hot-blooded passion for me and I for her, but I was not her first lover nor her last. She was in another world from Marion. She had a queer, delightful

nature; I've no memory of ever seeing her sullen or malicious. She was--indeed she was magnificently--eupeptic. That, I think, was the central secret of her agreeableness, and, moreover, that she was infinitely kind-hearted. I helped her at last into an opening she coveted, and she amazed me by a sudden display of business capacity. She has now a typewriting bureau in Riffle's Inn, and she runs it with a brisk vigour and considerable success, albeit a certain plumpness has overtaken her. And she still loves her kind. She married a year or so ago a boy half her age--a wretch of a poet, a wretched poet, and given to drugs, a thing with lank fair hair always getting into his blue eyes, and limp legs. She did it, she said, because he needed nursing....

But enough of this disaster of my marriage and of my early love affairs; I have told all that is needed for my picture to explain how I came to take up aeroplane experiments and engineering science; let me get back to my essential story, to Tono-Bungay and my uncle's promotions and to the vision of the world these things have given me.

BOOK THE THIRD

THE GREAT DAYS OF TONO-BUNGAY

CHAPTER THE FIRST

THE HARDINGHAM HOTEL, AND HOW WE BECAME BIG PEOPLE

I

But now that I resume the main line of my story it may be well to describe the personal appearance of my uncle as I remember him

during those magnificent years that followed his passage from trade to finance. The little man plumped up very considerably during the creation of the Tono-Bungay property, but with the increasing excitements that followed that first flotation came dyspepsia and a certain flabbiness and falling away. His abdomen--if the reader will pardon my taking his features in the order of their value--had at first a nice full roundness, but afterwards it lost tone without, however, losing size. He always went as though he was proud of it and would make as much of it as possible. To the last his movements remained quick and sudden, his short firm legs, as he walked, seemed to twinkle rather than display the scissors-stride of common humanity, and he never seemed to have knees, but instead, a dispersed flexibility of limb.

There was, I seem to remember, a secular intensification of his features; his nose developed character, became aggressive, stuck out at the world more and more; the obliquity of his mouth, I think, increased. From the face that returns to my memory projects a long cigar that is sometimes cocked jauntily up from the higher corner, that sometimes droops from the lower;--it was as eloquent as a dog's tail, and he removed it only for the more emphatic modes of speech. He assumed a broad black ribbon for his glasses, and wore them more and more askew as time went on. His hair seemed to stiffen with success, but towards the climax it thinned greatly over the crown, and he brushed it hard back over his ears where, however, it stuck out fiercely. It always stuck out fiercely over his forehead, up and forward.

He adopted an urban style of dressing with the onset of Tono-Bungay and rarely abandoned it. He preferred silk hats with ample rich brims, often a trifle large for him by modern ideas, and he wore them at various angles to his axis; his taste in trouserings was towards fairly emphatic stripes and his trouser cut was neat; he liked his frock-coat long and full, although

that seemed to shorten him. He displayed a number of valuable rings, and I remember one upon his left little finger with a large red stone bearing Gnostic symbols. "Clever chaps, those Gnostics, George," he told me. "Means a lot. Lucky!" He never had any but a black mohair watch-chain. In the country he affected grey and a large grey cloth top-hat, except when motoring; then he would have a brown deer-stalker cap and a fur suit of esquimaux cut with a sort of boot-end to the trousers. Of an evening he would wear white waistcoats and plain gold studs. He hated diamonds. "Flashy," he said they were. "Might as well wear--an income tax-receipt. All very well for Park Lane. Unsold stock. Not my style. Sober financier, George."

So much for his visible presence. For a time it was very familiar to the world, for at the crest of the boom he allowed quite a number of photographs and at least one pencil sketch to be published in the sixpenny papers.

His voice declined during those years from his early tenor to a flat rich quality of sound that my knowledge of music is inadequate to describe. His Zzz-ing inrush of air became less frequent as he ripened, but returned in moments of excitement. Throughout his career, in spite of his increasing and at last astounding opulence, his more intimate habits remained as simple as they had been at Wimblesbury. He would never avail himself of the services of a valet; at the very climax of his greatness his trousers were folded by a housemaid and his shoulders brushed as he left his house or hotel. He became wary about breakfast as life advanced, and at one time talked much of Dr. Haig and uric acid. But for other meals he remained reasonably omnivorous. He was something of a gastronome, and would eat anything he particularly liked in an audible manner, and perspire upon his forehead. He was a studiously moderate drinker--except when the spirit of some public banquet or some great occasion caught him and bore him beyond his wariness--there he would, as it were,

drink inadvertently and become flushed and talkative--about everything but his business projects.

To make the portrait complete one wants to convey an effect of sudden, quick bursts of movement like the jumps of a Chinese-cracker to indicate that his pose whatever it is, has been preceded and will be followed by a rush. If I were painting him, I should certainly give him for a background that distressed, uneasy sky that was popular in the eighteenth century, and at a convenient distance a throbbing motor-car, very big and contemporary, a secretary hurrying with papers, and an alert chauffeur.

Such was the figure that created and directed the great property of Tono-Bungay, and from the successful reconstruction of that company passed on to a slow crescendo of magnificent creations and promotions until the whole world of investors marveled. I have already I think, mentioned how, long before we offered Tono Bungay to the public, we took over the English agency of certain American specialties. To this was presently added our exploitation of Moggs' Domestic Soap, and so he took up the Domestic Convenience Campaign that, coupled with his equatorial rotundity and a certain resolute convexity in his bearings won my uncle his Napoleonic title.

II

It illustrates the romantic element in modern commerce that my uncle met young Moggs at a city dinner--I think it was the Bottle-makers' Company--when both were some way advanced beyond the initial sobriety of the occasion. This was the grandson of the original Moggs, and a very typical instance of an educated, cultivated, degenerate plutocrat. His people had taken him about in his youth as the Ruskins took their John and fostered a passion for history in him, and the actual management of the

Moggs' industry had devolved upon a cousin and a junior partner.

Mr. Moggs, being of a studious and refined disposition, had just decided--after a careful search for a congenial subject in which he would not be constantly reminded of soap--to devote himself to the History of the Thebaid, when this cousin died suddenly and precipitated responsibilities upon him. In the frankness of conviviality, Moggs bewailed the uncongenial task thus thrust into his hands, and my uncle offered to lighten his burden by a partnership then and there. They even got to terms--extremely muzzy terms, but terms nevertheless.

Each gentleman wrote the name and address of the other on his cuff, and they separated in a mood of brotherly carelessness, and next morning neither seems to have thought to rescue his shirt from the wash until it was too late. My uncle made a painful struggle--it was one of my business mornings--to recall name and particulars.

"He was an aquarium-faced, long, blond sort of chap, George, with glasses and a genteel accent," he said.

I was puzzled. "Aquarium-faced?"

"You know how they look at you. His stuff was soap, I'm pretty nearly certain. And he had a name--And the thing was the straightest Bit-of-All-right you ever. I was clear enough to spot that..."

We went out at last with knitted brows, and wandered up into Finsbury seeking a good, well-stocked looking grocer. We called first on a chemist for a pick-me-up for my uncle, and then we found the shop we needed.

"I want," said my uncle, "half a pound of every sort of soap you

got. Yes, I want to take them now. Wait a moment, George....
Now what sort of soap d'you call THAT?"

At the third repetition of that question the young man said,
"Moggs' Domestic."

"Right," said my uncle. "You needn't guess again. Come along, George, let's go to a telephone and get on to Moggs. Oh--the order? Certainly. I confirm it. Send it all--send it all to the Bishop of London; he'll have some good use for it--(First-rate man, George, he is--charities and all that)--and put it down to me, here's a card--Ponderevo--Tono-Bungay."

Then we went on to Moggs and found him in a camel-hair dressing-jacket in a luxurious bed, drinking China tea, and got the shape of everything but the figures fixed by lunch time.

Young Moggs enlarged my mind considerably; he was a sort of thing I hadn't met before; he seemed quite clean and well-informed and he assured me to never read newspapers nor used soap in any form at all, "Delicate skin," he said.

"No objection to our advertising you wide and free?" said my uncle.

"I draw the line at railway stations," said Moggs, "south-coast cliffs, theatre programmes, books by me and poetry generally--scenery--oh!--and the Mercure de France."

"We'll get along," said my uncle.

"So long as you don't annoy me," said Moggs, lighting a cigarette, "you can make me as rich as you like."

We certainly made him no poorer. His was the first firm that was

advertised by a circumstantial history; we even got to illustrated magazine articles telling of the quaint past of Moggs. We concocted Moggsiana. Trusting to our partner's preoccupation with the uncommercial aspects of life, we gave graceful history--of Moggs the First, Moggs the Second, Moggs the Third, and Moggs the Fourth. You must, unless you are very young, remember some of them and our admirable block of a Georgian shop window. My uncle brought early nineteenth-century memoirs, soaked himself in the style, and devised stories about old Moggs the First and the Duke of Wellington, George the Third and the soap dealer ("almost certainly old Moggs"). Very soon we had added to the original Moggs' Primrose several varieties of scented and superfatted, a "special nurseries used in the household of the Duke of Kent and for the old Queen in Infancy," a plate powder, "the Paragon," and a knife powder. We roped in a good little second-rate black-lead firm, and carried their origins back into the mists of antiquity. It was my uncle's own unaided idea that we should associate that commodity with the Black Prince. He became industriously curious about the past of black-lead. I remember his button-holing the president of the Pepys Society.

"I say, is there any black-lead in Pepys? You know --black-lead--for grates! OR DOES HE PASS IT OVER AS A MATTER OF COURSE?"

He became in those days the terror of eminent historians. "Don't want your drum and trumpet history--no fear," he used to say. "Don't want to know who was who's mistress, and why so-and-so devastated such a province; that's bound to be all lies and upsy-down anyhow. Not my affair. Nobody's affair now. Chaps who did it didn't clearly know.... What I want to know is, in the Middle Ages, did they do anything for Housemaid's Knee? What did they put in their hot baths after jousting, and was the Black Prince--you know the Black Prince--was he enameled or

painted, or what? I think myself, black-leaded--very likely--like pipe-clay--but DID they use blacking so early?"

So it came about that in designing and writing those Moggs' Soap Advertisements, that wrought a revolution in that department of literature, my uncle was brought to realise not only the lost history, but also the enormous field for invention and enterprise that lurked among the little articles, the dustpans and mincers, the mousetraps and carpet-sweepers that fringe the shops of the oilman and domestic ironmonger. He was recalled to one of the dreams of his youth, to his conception of the Ponderevo Patent Flat that had been in his mind so early as the days before I went to serve him at Wimblehurst. "The Home, George," he said, "wants straightening up. Silly muddle! Things that get in the way. Got to organise it."

For a time he displayed something like the zeal of a genuine social reformer in relation to these matters.

"We've got to bring the Home Up to Date? That's my idee, George. We got to make a civilised domestic machine out of these relics of barbarism. I'm going to hunt up inventors, make a corner in d'mestic ideas. Everything. Balls of string that won't dissolve into a tangle, and gum that won't dry into horn. See? Then after conveniences--beauty. Beauty, George! All these few things ought to be made fit to look at; it's your aunt's idea, that. Beautiful jam-pots! Get one of those new art chaps to design all the things they make ugly now. Patent carpet-sweepers by these greenwood chaps, housemaid's boxes it'll be a pleasure to fall over--rich coloured house-flannels. Zzzz. Pails, f'rinstance. Hang 'em up on the walls like warming-pans. All the polishes and things in such tins--you'll want to cuddle 'em, George! See the notion? 'Sted of all the silly ugly things we got." ...

We had some magnificent visions; they so affected me that when I passed ironmongers and oil-shops they seemed to me as full of promise as trees in late winter, flushed with the effort to burst into leaf and flower.... And really we did do much towards that very brightness these shops display. They were dingy things in the eighties compared to what our efforts have made them now, grey quiet displays.

Well, I don't intend to write down here the tortuous financial history of Moggs' Limited, which was our first development of Moggs and Sons; nor will I tell very much of how from that we spread ourselves with a larger and larger conception throughout the chandlery and minor ironmongery, how we became agents for this little commodity, partners in that, got a tentacle round the neck of a specialised manufacturer or so, secured a pull upon this or that supply of raw material, and so prepared the way for our second flotation, Domestic Utilities; "Do it," they reordered it in the city. And then came the reconstruction of Tono-Bungay, and then "Household services" and the Boom!

That sort of development is not to be told in detail in a novel. I have, indeed, told much of it elsewhere. It is to be found set out at length, painfully at length, in my uncle's examination and mine in the bankruptcy proceedings, and in my own various statements after his death. Some people know everything in that story, some know it all too well, most do not want the details. It is the story of a man of imagination among figures, and unless you are prepared to collate columns of pounds, shillings and pence, compare dates and check additions, you will find it very unmeaning and perplexing. And after all, you wouldn't find the early figures so much wrong as STRAINED. In the matter of Moggs and Do Ut, as in the first Tono-Bungay promotion and in its reconstruction, we left the court by city standards without a stain on our characters. The great amalgamation of Household Services was my uncle's first really big-scale enterprise and

his first display of bolder methods: for this we bought back Do Ut, Moggs (going strong with a seven per cent. dividend) and acquired Skinnerton's polishes, the Riffleshaw properties and the Runcorn's mincer and coffee-mill business. To that Amalgamation I was really not a party; I left it to my uncle because I was then beginning to get keen upon the soaring experiments I had taken on from the results then to hand of Lilienthal, Pilcher and the Wright brothers. I was developing a glider into a flyer. I meant to apply power to this glider as soon as I could work out one or two residual problems affecting the longitudinal stability. I knew that I had a sufficiently light motor in my own modification of Bridger's light turbine, but I knew too that until I had cured my aeroplane of a tendency demanding constant alertness from me, a tendency to jerk up its nose at unexpected moments and slide back upon me, the application of an engine would be little short of suicide.

But that I will tell about later. The point I was coming to was that I did not realise until after the crash how recklessly my uncle had kept his promise of paying a dividend of over eight per cent. on the ordinary shares of that hugely over-capitalised enterprise, Household Services.

I drifted out of business affairs into my research much more than either I or my uncle had contemplated. Finance was much less to my taste than the organisation of the Tono-Bungay factory. In the new field of enterprise there was a great deal of bluffing and gambling, of taking chances and concealing material facts--and these are hateful things to the scientific type of mind. It wasn't fear I felt so much as an uneasy inaccuracy. I didn't realise dangers, I simply disliked the sloppy, relaxing quality of this new sort of work. I was at last constantly making excuses not to come up to him in London. The latter part of his business career recedes therefore beyond the circle of any particular life. I lived more or less with him; I talked, I

advised, I helped him at times to fight his Sunday crowd at Crest Hill, but I did not follow nor guide him. From the Do Ut time onward he rushed up the financial world like a bubble in water and left me like some busy water-thing down below in the deeps.

Anyhow, he was an immense success. The public was, I think, particularly attracted by the homely familiarity of his field of work--you never lost sight of your investment they felt, with the name on the house-flannel and shaving-strop--and its allegiance was secured by the Egyptian solidity of his apparent results. Tono-Bungay, after its reconstruction, paid thirteen, Moggs seven, Domestic Utilities had been a safe-looking nine; here was Household Services with eight; on such a showing he had merely to buy and sell Roeburn's Antiseptic fluid, Razor soaks and Bath crystals in three weeks to clear twenty thousand pounds.

I do think that as a matter of fact Roeburn's was good value at the price at which he gave it to the public, at least until it was strained by ill-conserved advertisement. It was a period of expansion and confidence; much money was seeking investment and "Industrials" were the fashion. Prices were rising all round. There remained little more for my uncle to do therefore, in his climb to the high unstable crest of Financial Greatness but, as he said, to "grasp the cosmic oyster, George, while it gaped," which, being translated, meant for him to buy respectable businesses confidently and courageously at the vendor's estimate, add thirty or forty thousand to the price and sell them again. His sole difficulty indeed was the tactful management of the load of shares that each of these transactions left upon his hands. But I thought so little of these later things that I never fully appreciated the peculiar inconveniences of that until it was too late to help him.

When I think of my uncle near the days of his Great Boom and in connection with the actualities of his enterprises, I think of him as I used to see him in the suite of rooms he occupied in the Hardingham Hotel, seated at a great old oak writing-table, smoking, drinking, and incoherently busy; that was his typical financial aspect--our evenings, our mornings, our holidays, our motor-car expeditions, Lady Grove and Crest Hill belong to an altogether different set of memories.

These rooms in the Hardingham were a string of apartments along one handsome thick-carpeted corridor. All the doors upon the corridor were locked except the first; and my uncle's bedroom, breakfast-room and private sanctum were the least accessible and served by an entrance from the adjacent passage, which he also used at times as a means of escape from importunate callers. The most eternal room was a general waiting-room and very business-like in quality; it had one or two uneasy sofas, a number of chairs, a green baize table, and a collection of the very best Moggs and Tone posters: and the plush carpets normal to the Hardingham had been replaced by a grey-green cork linoleum; Here I would always find a remarkable miscellany of people presided over by a peculiarly faithful and ferocious looking commissioner, Ropper, who guarded the door that led a step nearer my uncle. Usually there would be a parson or so, and one or two widows; hairy, eyeglassy, middle-aged gentlemen, some of them looking singularly like Edward Ponderevos who hadn't come off, a variety of young and youngish men more or less attractively dressed, some with papers protruding from their pockets, others with their papers decently concealed. And wonderful, incidental, frowsy people.

All these persons maintained a practically hopeless siege--sometimes for weeks together; they had better have stayed at home. Next came a room full of people who had some sort of appointment, and here one would find smart-looking people,

brilliantly dressed, nervous women hiding behind magazines, nonconformist divines, clergy in gaiters, real business men, these latter for the most part gentlemen in admirable morning dress who stood up and scrutinised my uncle's taste in water colours manfully and sometimes by the hour together. Young men again were here of various social origins, young Americans, treasonable clerks from other concerns, university young men, keen-looking, most of them, resolute, reserved, but on a sort of hair trigger, ready at any moment to be most voluble, most persuasive.

This room had a window, too, looking out into the hotel courtyard with its fern-set fountains and mosaic pavement, and the young men would stand against this and sometimes even mutter. One day I heard one repeating in all urgent whisper as I passed "But you don't quite see, Mr. Ponderevo, the full advantages, the FULL advantages--" I met his eye and he was embarrassed.

Then came a room with a couple of secretaries--no typewriters, because my uncle hated the clatter--and a casual person or two sitting about, projectors whose projects were being entertained. Here and in a further room nearer the private apartments, my uncle's correspondence underwent an exhaustive process of pruning and digestion before it reached him. Then the two little rooms in which my uncle talked; my magic uncle who had got the investing public--to whom all things were possible. As one came in we would find him squatting with his cigar up and an expression of dubious beatitude upon his face, while some one urged him to grow still richer by this or that.

"That'ju, George?" he used to say. "Come in. Here's a thing. Tell him--Mister--over again. Have a drink, George? No! Wise man! Liss'n."

I was always ready to listen. All sorts of financial marvels

came out of the Hardingham, more particularly during my uncle's last great flurry, but they were nothing to the projects that passed in. It was the little brown and gold room he sat in usually. He had had it redecorated by Bordingly and half a dozen Sussex pictures by Webster hung about it. Latterly he wore a velveteen jacket of a golden-brown colour in this apartment that I think over-emphasised its esthetic intention, and he also added some gross Chinese bronzes.

He was, on the whole, a very happy man throughout all that wildly enterprising time. He made and, as I shall tell in its place, spent great sums of money. He was constantly in violent motion, constantly stimulated mentally and physically and rarely tired. About him was an atmosphere of immense deference much of his waking life was triumphal and all his dreams. I doubt if he had any dissatisfaction with himself at all until the crash bore him down. Things must have gone very rapidly with him.... I think he must have been very happy.

As I sit here writing about all these things, jerking down notes and throwing them aside in my attempt to give some literary form to the tale of our promotions, the marvel of it all comes to me as if it came for the first time the supreme unreason of it. At the climax of his Boom, my uncle at the most sparing estimate must have possessed in substance and credit about two million pounds'-worth of property to set off against his vague colossal liabilities, and from first to last he must have had a controlling influence in the direction of nearly thirty millions.

This irrational muddle of a community in which we live gave him that, paid him at that rate for sitting in a room and scheming and telling it lies. For he created nothing, he invented nothing, he economised nothing. I cannot claim that a single one of the great businesses we organised added any real value to human life at all. Several like Tono-Bungay were unmitigated

frauds by any honest standard, the giving of nothing coated in advertisements for money. And the things the Hardingham gave out, I repeat, were nothing to the things that came in. I think of the long procession of people who sat down before us and propounded this and that. Now it was a device for selling bread under a fancy name and so escaping the laws as to weight--this was afterwards floated as the Decorticated Health-Bread Company and bumped against the law--now it was a new scheme for still more strident advertisement, now it was a story of unsuspected deposits of minerals, now a cheap and nasty substitute for this or that common necessity, now the treachery of a too well-informed employee, anxious to become our partner. It was all put to us tentatively, persuasively. Sometimes one had a large pink blustering person trying to carry us off our feet by his pseudo-boyish frankness, now some dyspeptically yellow whisperer, now some earnest, specially dressed youth with an eye-glass and a buttonhole, now some homely-speaking, shrewd Manchester man or some Scotchman eager to be very clear and full.

Many came in couples or trios, often in tow of an explanatory solicitor. Some were white and earnest, some flustered beyond measure at their opportunity. Some of them begged and prayed to be taken up. My uncle chose what he wanted and left the rest. He became very autocratic to these applicants.

He felt he could make them, and they felt so too. He had but to say "No!" and they faded out of existence.... He had become a sort of vortex to which wealth flowed of its own accord. His possessions increased by heaps; his shares, his leaseholds and mortgages and debentures.

Behind his first-line things he found it necessary at last, and sanctioned by all the precincts, to set up three general trading companies, the London and African Investment Company, the British Traders' Loan Company, and Business Organisations Limited. This

was in the culminating time when I had least to do with affairs. I don't say that with any desire to exculpate myself; I admit I was a director of all three, and I will confess I was willfully incurious in that capacity. Each of these companies ended its financial year solvent by selling great holdings of shares to one or other of its sisters, and paying a dividend out of the proceeds. I sat at the table and agreed. That was our method of equilibrium at the iridescent climax of the bubble.

You perceive now, however, the nature of the services for which this fantastic community have him unmanageable wealth and power and real respect. It was all a monstrous payment for courageous fiction, a gratuity in return for the one reality of human life--illusion. We gave them a feeling of hope and profit; we sent a tidal wave of water and confidence into their stranded affairs. "We mint Faith, George," said my uncle one day. "That's what we do. And by Jove we got to keep minting! We been making human confidence ever since I drove the first cork of Tono-Bungay."

"Coining" would have been a better word than minting! And yet, you know, in a sense he was right. Civilisation is possible only through confidence, so that we can bank our money and go unarmed about the streets. The bank reserve or a policeman keeping order in a jostling multitude of people, are only slightly less impudent bluffs than my uncle's prospectuses. They couldn't for a moment "make good" if the quarter of what they guarantee was demanded of them. The whole of this modern mercantile investing civilisation is indeed such stuff as dreams are made of. A mass of people swelters and toils, great railway systems grow, cities arise to the skies and spread wide and far, mines are opened, factories hum, foundries roar, ships plough the seas, countries are settled; about this busy striving world the rich owners go, controlling all, enjoying all, confident and creating the confidence that draws us all together into a reluctant,

nearly unconscious brotherhood. I wonder and plan my engines. The flags flutter, the crowds cheer, the legislatures meet. Yet it seems to me indeed at times that all this present commercial civilisation is no more than my poor uncle's career writ large, a swelling, thinning bubble of assurances; that its arithmetic is just as unsound, its dividends as ill-advised, its ultimate aim as vague and forgotten; that it all drifts on perhaps to some tremendous parallel to his individual disaster...

Well, so it was we Boomed, and for four years and a half we lived a life of mingled substance and moonshine. Until our particular unsoundness overtook us we went about in the most magnificent of motor-cars upon tangible high roads, made ourselves conspicuous and stately in splendid houses, ate sumptuously and had a perpetual stream of notes and money trickling into our pockets; hundreds of thousands of men and women respected us, saluted us and gave us toil and honour; I asked, and my worksheets rose, my aeroplanes swooped out of nothingness to scare the downland pe-wits; my uncle waved his hand and Lady Grove and all its associations of chivalry and ancient peace were his; waved again, and architects were busy planning the great palace he never finished at Crest Hill and an army of folkmen gathered to do his bidding, blue marble came from Canada, and timber from New Zealand; and beneath it all, you know, there was nothing but fictitious values as evanescent as rainbow gold.

IV

I pass the Hardingham ever and again and glance aside through the great archway at the fountain and the ferns, and think of those receding days when I was so near the centre of our eddy of greed and enterprise. I see again my uncle's face, white and intent, and hear him discourse, hear him make consciously Napoleonic decisions, "grip" his nettles, put his "finger on the spot," "bluff," say "snap." He became particularly addicted to the last

idiom. Towards the end every conceivable act took the form of saying "snap!"

The odd fish that came to us! And among others came Gordon-Nasmyth, that queer blend of romance and illegality who was destined to drag me into the most irrelevant adventure in my life the Mordet Island affair; and leave me, as they say, with blood upon my hands. It is remarkable how little it troubles my conscience and how much it stirs my imagination, that particular memory of the life I took. The story of Mordet Island has been told in a government report and told all wrong; there are still excellent reasons for leaving it wrong in places, but the liveliest appeals of discretion forbid my leaving it out altogether.

I've still the vividest memory of Gordon-Nasmyth's appearance in the inner sanctum, a lank, sunburnt person in tweeds with a yellow-brown hatchet face and one faded blue eye--the other was a closed and sunken lid--and how he told us with a stiff affectation of ease his incredible story of this great heap of quap that lay abandoned or undiscovered on the beach behind Mordet's Island among white dead mangroves and the black ooze of brackish water.

"What's quap?" said my uncle on the fourth repetition of the word.

"They call it quap, or quab, or quabb," said Gordon-Nasmyth; "but our relations weren't friendly enough to get the accent right...."

But there the stuff is for the taking. They don't know about it.

Nobody knows about it. I got down to the damned place in a canoe alone. The boys wouldn't come. I pretended to be botanising."

...

To begin with, Gordon-Nasmyth was inclined to be dramatic.

"Look here," he said when he first came in, shutting the door rather carefully behind him as he spoke, "do you two men--yes or no--want to put up six thousand--for--a clear good chance of fifteen hundred per cent. on your money in a year?"

"We're always getting chances like that," said my uncle, cocking his cigar offensively, wiping his glasses and tilting his chair back. "We stick to a safe twenty."

Gordon-Nasmyth's quick temper showed in a slight stiffening of his attitude.

"Don't you believe him," said I, getting up before he could reply. "You're different, and I know your books. We're very glad you've come to us. Confound it, uncle! It's Gordon-Nasmyth! Sit down. What is it? Minerals?"

"Quap," said Gordon-Nasmyth, fixing his eye on me, "in heaps."

"In heaps," said my uncle softly, with his glasses very oblique.

"You're only fit for the grocery," said Gordon-Nasmyth scornfully, sitting down and helping himself to one of my uncle's cigars. "I'm sorry I came. But, still, now I'm here.... And first as to quap; quap, sir, is the most radio-active stuff in the world. That's quap! It's a festering mass of earths and heavy metals, polonium, radium, ythorium, thorium, carium, and new things, too. There's a stuff called Xk--provisionally. There they are, mucked up together in a sort of rotting sand. What it is, how it got made, I don't know. It's like as if some young creator had been playing about there. There it lies in two heaps, one small, one great, and the world for miles about it is

blasted and scorched and dead. You can have it for the getting. You've got to take it--that's all!"

"That sounds all right," said I. "Have you samples?"

"Well--should I? You can have anything--up to two ounces."

"Where is it?"...

His blue eye smiled at me and scrutinised me. He smoked and was fragmentary for a time, fending off my questions; then his story began to piece itself together. He conjured up a vision of this strange forgotten kink in the world's littoral, of the long meandering channels that spread and divaricate and spend their burden of mud and silt within the thunderbelt of Atlantic surf, of the dense tangled vegetation that creeps into the shimmering water with root and sucker. He gave a sense of heat and a perpetual reek of vegetable decay, and told how at last comes a break among these things, an arena fringed with bone-white dead trees, a sight of the hard-blue sea line beyond the dazzling surf and a wide desolation of dirty shingle and mud, bleached and scarred.... A little way off among charred dead weeds stands the abandoned station,--abandoned because every man who stayed two months at that station stayed to die, eaten up mysteriously like a leper with its dismantled sheds and its decaying pier of wormrotten and oblique piles and planks, still insecurely possible.

And in the midst, two clumsy heaps shaped like the backs of hogs, one small, one great, sticking out under a rib of rock that cuts the space across,--quap!

"There it is," said Gordon-Nasmyth, "worth three pounds an ounce, if it's worth a penny; two great heaps of it, rotten stuff and soft, ready to shovel and wheel, and you may get it by the

ton!"

"How did it get there?"

"God knows! ... There it is--for the taking! In a country where you mustn't trade. In a country where the company waits for good kind men to find it riches and then take 'em away from 'em. There you have it--derelict."

"Can't you do any sort of deal?"

"They're too damned stupid. You've got to go and take it. That's all."

"They might catch you."

"They might, of course. But they're not great at catching."

We went into the particulars of that difficulty. "They wouldn't catch me, because I'd sink first. Give me a yacht," said Gordon-Nasmyth; "that's all I need."

"But if you get caught," said my uncle.

I am inclined to think Gordon-Nasmyth imagined we would give him a cheque for six thousand pounds on the strength of his talk. It was very good talk, but we didn't do that. I stipulated for samples of his stuff for analysis, and he consented--reluctantly.

I think, on the whole, he would rather I didn't examine samples. He made a motion pocketwards, that gave us an invincible persuasion that he had a sample upon him, and that at the last instant he decided not to produce it prematurely.

There was evidently a curious strain of secretiveness in him. He

didn't like to give us samples, and he wouldn't indicate within three hundred miles the position of this Mordet Island of his. He had it clear in his mind that he had a secret of immense value, and he had no idea at all of just how far he ought to go with business people. And so presently, to gain time for these hesitations of his, he began to talk of other things. He talked very well. He talked of the Dutch East Indies and of the Congo, of Portuguese East Africa and Paraguay, of Malays and rich Chinese merchants, Dyaks and negroes and the spread of the Mahometan world in Africa to-day. And all this time he was trying to judge if we were good enough to trust with his adventure. Our cosy inner office became a little place, and all our business cold and lifeless exploits beside his glimpses of strange minglings of men, of slayings unavenged and curious customs, of trade where no writs run, and the dark treacheries of eastern ports and uncharted channels.

We had neither of us gone abroad except for a few vulgar raids on Paris; our world was England, are the places of origin of half the raw material of the goods we sold had seemed to us as remote as fairyland or the forest of Arden. But Gordon-Nasmyth made it so real and intimate for us that afternoon--for me, at any rate--that it seemed like something seen and forgotten and now again remembered.

And in the end he produced his sample, a little lump of muddy clay speckled with brownish grains, in a glass bottle wrapped about with lead and flannel--red flannel it was, I remember--a hue which is, I know, popularly supposed to double all the mystical efficacies of flannel.

"Don't carry it about on you," said Gordon-Nasmyth. "It makes a sore."

I took the stuff to Thorold, and Thorold had the exquisite agony

of discovering two new elements in what was then a confidential analysis. He has christened them and published since, but at the time Gordon-Nasmyth wouldn't hear for a moment of our publication of any facts at all; indeed, he flew into a violent passion and abused me mercilessly even for showing the stuff to Thorold. "I thought you were going to analyse it yourself," he said with the touching persuasion of the layman that a scientific man knows and practises at the sciences.

I made some commercial inquiries, and there seemed even then much truth in Gordon-Nasmyth's estimate of the value of the stuff. It was before the days of Capern's discovery of the value of canadum and his use of it in the Capern filament, but the cerium and thorium alone were worth the money he extracted for the gas-mantles then in vogue. There were, however, doubts. Indeed, there were numerous doubts. What were the limits of the gas-mantle trade? How much thorium, not to speak of cerium, could they take at a maximum. Suppose that quantity was high enough to justify our shipload, came doubts in another quarter. Were the heaps up to sample? Were they as big as he said? Was Gordon-Nasmyth--imaginative? And if these values held, could we after all get the stuff? It wasn't ours. It was on forbidden ground. You see, there were doubts of every grade and class in the way of this adventure.

We went some way, nevertheless, in the discussion of his project, though I think we tried his patience. Then suddenly he vanished from London, and I saw no more of him for a year and a half.

My uncle said that was what he had expected, and when at last Gordon-Nasmyth reappeared and mentioned in an incidental way that he had been to Paraguay on private (and we guessed passionate) affairs, the business of the "quap" expedition had to be begun again at the beginning. My uncle was disposed to be altogether sceptical, but I wasn't so decided. I think I was

drawn by its picturesque aspects. But we neither of us dreamt of touching it seriously until Capern's discovery.

Nasmyth's story had laid hold of my imagination like one small, intense picture of tropical sunshine hung on a wall of grey business affairs. I kept it going during Gordon-Nasmyth's intermittent appearances in England. Every now and then he and I would meet and reinforce its effect. We would lunch in London, or he would come to see my gliders at Crest Hill, and make new projects for getting at those heaps again now with me, now alone.

At times they became a sort of fairy-story with us, an imaginative exercise. And there came Capern's discovery of what he called the ideal filament and with it an altogether less problematical quality about the business side of quap. For the ideal filament needed five per cent. of canadium, and canadium was known to the world only as a newly separated constituent of a variety of the rare mineral rutile. But to Thorold it was better known as an element in a mysterious sample brought to him by me, and to me it was known as one of the elements in quap. I told my uncle, and we jumped on to the process at once. We found that Gordon-Nasmyth, still unaware of the altered value of the stuff, and still thinking of the experimental prices of radium and the rarity value of cerium, had got hold of a cousin named Pollack, made some extraordinary transaction about his life insurance policy, and was buying a brig. We put in, put down three thousand pounds, and forthwith the life insurance transaction and the Pollack side of this finance vanished into thin air, leaving Pollack, I regret to say, in the brig and in the secret--except so far as canadium and the filament went--as residuum. We discussed earnestly whether we should charter a steamer or go on with the brig, but we decided on the brig as a less conspicuous instrument for an enterprise that was after all, to put it plainly, stealing.

But that was one of our last enterprises before our great crisis, and I will tell of it in its place.

So it was quap came into our affairs, came in as a fairy-tale and became real. More and more real it grew until at last it was real, until at last I saw with my eyes the heaps my imagination had seen for so long, and felt between my fingers again that half-gritty, half soft texture of quap, like sanded moist-sugar mixed with clay in which there stirs something--

One must feel it to understand.

V

All sorts of things came to the Hardingham and offered themselves to my uncle. Gordon-Nasmyth stands but only because he played a part at last in the crisis of our fortunes. So much came to us that it seemed to me at times as though the whole world of human affairs was ready to prostitute itself to our real and imaginary millions. As I look back, I am still dazzled and incredulous to think of the quality of our opportunities.

We did the most extraordinary things; things that it seems absurd to me to leave to any casual man of wealth and enterprise who cares to do them. I had some amazing perceptions of just how modern thought and the supply of fact to the general mind may be controlled by money. Among other things that my uncle offered for, he tried very hard to buy the British Medical Journal and the Lancet, and run them on what he called modern lines, and when they resisted him he talked very vigorously for a time of organising a rival enterprise. That was a very magnificent idea indeed in its way; it would have given a tremendous advantage in the handling of innumerable specialties and indeed I scarcely know how far it would not have put the medical profession in our grip. It still amazes me--I shall die amazed--that such a thing

can be possible in the modern state. If my uncle failed to bring the thing off, some one else may succeed. But I doubt, even if he had got both these weeklies, whether his peculiar style would have suited them. The change of purpose would have shown. He would have found it difficult to keep up their dignity.

He certainly did not keep up the dignity of the Sacred Grove, an important critical organ which he acquired one day--by saying "snap"--for eight hundred pounds. He got it "lock, stock and barrel"--under one or other of which three aspects the editor was included. Even at that price it didn't pay. If you are a literary person you will remember the bright new cover he gave that representative organ of British intellectual culture, and how his sound business instincts jarred with the exalted pretensions of a vanishing age. One old wrapper I discovered the other day runs:--

"THE SACRED GROVE."

Weekly Magazine of Art, Philosophy, Science and
Belles Lettres.

HAVE YOU A NASTY TASTE IN YOUR MOUTH?

THE BEST PILL IN THE WORLD FOR AN IRREGULAR LIVER

I suppose it is some lingering traces of the Bladesover tradition to me that makes this combination of letters and pills seem so incongruous, just as I suppose it is a lingering trace of Plutarch and my ineradicable boyish imagination that at bottom our State should be wise, sane and dignified, that makes me think a country which leaves its medical and literary criticism, or indeed any such vitally important criticism, entirely to private enterprise and open to the advances of any purchaser must be in a frankly hopeless condition. These are ideal conceptions of mine.

As a matter of fact, nothing would be more entirely natural and representative of the relations of learning, thought and the economic situation in the world at the present time than this cover of the Sacred Grove--the quiet conservatism of the one element embedded in the aggressive brilliance of the other; the contrasted notes of bold physiological experiment and extreme mental immobility.

There comes back, too, among these Hardingham memories, an impression of a drizzling November day, and how we looked out of the windows upon a procession of the London unemployed.

It was like looking down a well into some momentarily revealed nether world. Some thousands of needy ineffectual men had been raked together to trail their spiritless misery through the West Eire with an appeal that was also in its way a weak and insubstantial threat: "It is Work we need, not Charity."

There they were, half-phantom through the fog, a silent, foot-dragging, interminable, grey procession. They carried wet, dirty banners, they rattled boxes for pence; these men who had not said "snap" in the right place, the men who had "snapped" too eagerly, the men who had never said "snap," the men who had never had a chance of saying "snap." A shambling, shameful stream they made, oozing along the street, the gutter waste of competitive civilisation. And we stood high out of it all, as high as if we looked godlike from another world, standing in a room beautifully lit and furnished, skillfully warmed, filled with costly things.

"There," thought I, "but for the grace of God, go George and Edward Ponderevo."

But my uncle's thoughts ran in a different channel, and he made that vision the test of a spirited but inconclusive harangue upon Tariff Reform.

CHAPTER THE SECOND

OUR PROGRESS FROM CAMDEN TOWN TO CREST HILL

I

So far my history of my aunt and uncle has dealt chiefly with his industrial and financial exploits. But side by side with that history of inflation from the infinitesimal to the immense is another development, the change year by year from the shabby impecuniosity of the Camden Town lodging to the lavish munificence of the Crest Hill marble staircase and my aunt's golden bed, the bed that was facsimiled from Fontainebleau. And the odd thing is that as I come to this nearer part of my story I find it much more difficult to tell than the clear little perspective memories of the earlier days. Impressions crowd upon one another and overlap one another; I was presently to fall in love again, to be seized by a passion to which I still faintly respond, a passion that still clouds my mind. I came and went between Ealing and my aunt and uncle, and presently between Effie and clubland, and then between business and a life of research that became far more continuous, infinitely more consecutive and memorable than any of these other sets of experiences. I didn't witness a regular social progress therefore; my aunt and uncle went up in the world, so far as I was concerned, as if they were displayed by an early cinematograph, with little jumps and flickers.

As I recall this side of our life, the figure of my round-eyes, button-nosed, pink-and-white Aunt Susan tends always to the central position. We drove the car and sustained the car, she sat in it with a magnificent variety of headgear poised upon her delicate neck, and always with that faint ghost of a lisp no misspelling can render--commented on and illuminated the new aspects.

I've already sketched the little home behind the Wimblehurst chemist's shop, the lodging near the Cobden statue, and the apartments in Gower Street. Thence my aunt and uncle went into a flat in Redgauntlet Mansions. There they lived when I married.

It was a compact flat, with very little for a woman to do in it. In those days my aunt, I think, used to find the time heavy upon her hands, and so she took to books and reading, and after a time even to going to lectures in the afternoon. I began to find unexpected books upon her table: sociological books, travels, Shaw's plays. "Hullo!" I said, at the sight of some volume of the latter.

"I'm keeping a mind, George," she explained.

"Eh?"

"Keeping a mind. Dogs I never cared for. It's been a toss-up between setting up a mind and setting up a soul. It's jolly lucky for Him and you it's a mind. I've joined the London Library, and I'm going in for the Royal Institution and every blessed lecture that comes along next winter. You'd better look out." ...

And I remember her coming in late one evening with a note-book in her hand.

"Where ya been, Susan?" said my uncle.

"Birkbeck--Physiology. I'm getting on." She sat down and took off her gloves. "You're just glass to me," she sighed, and then in a note of grave reproach: "You old PACKAGE! I had no idea! The Things you've kept from me!"

Presently they were setting; up the house at Beckenham, and my aunt intermitted her intellectual activities. The house at Beckenham was something of an enterprise for them at that time, a reasonably large place by the standards of the early years of Tono-Bungay. It was a big, rather gaunt villa, with a conservatory and a shrubbery, a tennis-lawn, a quite

considerable vegetable garden, and a small disused coach-house. I had some glimpses of the excitements of its inauguration, but not many because of the estrangement between my aunt and Marion.

My aunt went into that house with considerable zest, and my uncle distinguished himself by the thoroughness with which he did the repainting and replumbing. He had all the drains up and most of the garden with them, and stood administrative on heaps--administrating whisky to the workmen. I found him there one day, most Napoleonic, on a little Elba of dirt, in an atmosphere that defies print. He also, I remember, chose what he considered cheerful contrasts of colours for the painting of the woodwork. This exasperated my aunt extremely--she called him a "Pestilential old Splosher" with an unusual note of earnestness--and he also enraged her into novelties of abuse by giving each bedroom the name of some favourite hero--Cliff, Napoleon, Caesar, and so forth--and having it painted on the door in gilt letters on a black label. "Martin Luther" was kept for me. Only her respect for domestic discipline, she said, prevented her retaliating with "Old Pondo" on the housemaid's cupboard.

Also he went and ordered one of the completest sets of garden requisites I have ever seen--and had them all painted a hard clear blue. My aunt got herself large tins of a kindlier hued enamel and had everything secretly recoated, and this done, she found great joy in the garden and became an ardent rose grower and herbaceous borderer, leaving her Mind, indeed, to damp evenings and the winter months. When I think of her at Beckenham, I always think first of her as dressed in that blue cotton stuff she affected, with her arms in huge gauntleted gardening gloves, a trowel in one hand and a small but no doubt hardy and promising annual, limp and very young-looking and sheepish, in the other.

Beckenham, in the persons of a vicar, a doctor's wife, and a large proud lady called Hogberry, "called" on my uncle and aunt almost at once, so soon in fact as the lawn was down again, and afterwards my aunt made friends with a quiet gentlewoman next door, a propos of an overhanging cherry tree and the need of repairing the party fence. So she resumed her place in society from which she had fallen with the disaster of Wimblehurst. She made a partially facetious study of the etiquette of her position, had cards engraved and retaliated calls. And then she received a card for one of Mrs. Hogberry's At Homes, gave an old garden party herself, participated in a bazaar and sale of work, and was really becoming quite cheerfully entangled in Beckenham society when she was suddenly taken up by the roots again by my uncle and transplanted to Chiselhurst.

"Old Trek, George," she said compactly, "Onward and Up," when I found her superintending the loading of two big furniture vans. "Go up and say good-bye to 'Martin Luther,' and then I'll see what you can do to help me."

II

I look into the jumbled stores of the middle distance of memory, and Beckenham seems to me a quite transitory phase. But really they were there several years; through nearly all my married life, in fact, and far longer than the year and odd months we lived together at Wimblehurst. But the Wimblehurst time with them is fuller in my memory by far than the Beckenham period. There comes back to me with a quite considerable amount of detail the effect of that garden party of my aunt's and of a little social misbehaviour of which I was guilty on that occasion. It's like a scrap from another life. It's all set in what is for me a kind of cutaneous feeling, the feeling of rather ill-cut city clothes, frock coat and grey trousers, and of a high collar and tie worn in sunshine among flowers. I have still

a quite vivid memory of the little trapezoidal lawn, of the gathering, and particularly of the hats and feathers of the gathering, of the parlour-maid and the blue tea-cups, and of the magnificent presence of Mrs. Hogberry and of her clear, resonant voice. It was a voice that would have gone with a garden party on a larger scale; it went into adjacent premises; it included the gardener who was far up the vegetable patch and technically out of play. The only other men were my aunt's doctor, two of the clergy, amiable contrasted men, and Mrs. Hogberry's imperfectly grown-up son, a youth just bursting into collar. The rest were women, except for a young girl or so in a state of speechless good behaviour. Marion also was there.

Marion and I had arrived a little estranged, and I remember her as a silent presence, a shadow across all that sunlit emptiness of intercourse. We had embittered each other with one of those miserable little disputes that seemed so unavoidable between us. She had, with the help of Smithie, dressed rather elaborately for the occasion, and when she saw me prepared to accompany her in, I think it was a grey suit, she protested that silk hat and frock coat were imperative. I was recalcitrant, she quoted an illustrated paper showing a garden party with the King present, and finally I capitulated--but after my evil habit, resentfully.... Eh, dear! those old quarrels, how pitiful they were, how trivial! And how sorrowful they are to recall! I think they grow more sorrowful as I grow older, and all the small passionate reasons for our mutual anger fade and fade out of memory.

The impression that Beckenham company has left on my mind is one of a modest unreality; they were all maintaining a front of unspecified social pretension, and evading the display of the economic facts of the case. Most of the husbands were "in business" off stage, it would have been outrageous to ask what the business was--and the wives were giving their energies to

produce, with the assistance of novels and the illustrated magazines, a moralised version of the afternoon life of the aristocratic class. They hadn't the intellectual or moral enterprise of the upper-class woman, they had no political interests, they had no views about anything, and consequently they were, I remember, extremely difficult to talk to. They all sat about in the summer-house and in garden-chairs, and were very hatty and ruffley and sunshady. Three ladies and the curate played croquet with a general immense gravity, broken by occasional loud cries of feigned distress from the curate. "Oh! Whacking me about again! Augh!"

The dominant social fact that afternoon was Mrs. Hogberry; she took up a certain position commanding the croquet and went on, as my aunt said to me in an incidental aside, "like an old Roundabout." She talked of the way in which Beckenham society was getting mixed, and turned on to a touching letter she had recently received from her former nurse at Little Gossean. Followed a loud account of Little Gossean and how much she and her eight sisters had been looked up to there. "My poor mother was quite a little Queen there," she said. "And such NICE Common people! People say the country labourers are getting disrespectful nowadays. It isn't so--not if they're properly treated. Here of course in Beckenham it's different. I won't call the people we get here a Poor--they're certainly not a proper Poor. They're Masses. I always tell Mr. Bugshoot they're Masses, and ought to be treated as such."...

Dim memories of Mrs. Mackridge floated through my mind as I listened to her....

I was whirled on this roundabout for a bit, and then had the fortune to fall off into a tete-a-tete with a lady whom my aunt introduced as Mrs. Mumble--but then she introduced everybody to me as Mumble that afternoon, either by way of humour or

necessity.

That must have been one of my earliest essays in the art of polite conversation, and I remember that I began by criticising the local railway service, and that at the third sentence or thereabouts Mrs. Mumble said in a distinctly bright and encouraging way that she feared I was a very "frivolous" person.

I wonder now what it was I said that was "frivolous."

I don't know what happened to end that conversation, or if it had an end. I remember talking to one of the clergy for a time rather awkwardly, and being given a sort of topographical history of Beckenham, which he assured me time after time was "Quite an old place. Quite an old place." As though I had treated it as new and he meant to be very patient but very convincing. Then we hung up in a distinct pause, and my aunt rescued me. "George," she said in a confidential undertone, "keep the pot a-boiling." And then audibly, "I say, will you both old trot about with tea a bit?"

"Only too delighted to TROT for you, Mrs. Ponderevo," said the clergyman, becoming fearfully expert and in his elements; "only too delighted."

I found we were near a rustic table, and that the housemaid was behind us in a suitable position to catch us on the rebound with the tea things.

"Trot!" repeated the clergyman to me, much amused; "excellent expression!" And I just saved him from the tray as he turned about.

We handed tea for a while....

"Give 'em cakes," said my aunt, flushed, but well in hand.
"Helps 'em to talk, George. Always talk best after a little
nourishment. Like throwing a bit of turf down an old geyser."

She surveyed the gathering with a predominant blue eye and helped
herself to tea.

"They keep on going stiff," she said in an undertone.... "I've
done my best."

"It's been a huge success," I said encouragingly.

"That boy has had his legs crossed in that position and hasn't
spoken for ten minutes. Stiffer and stiffer. Brittle. He's
beginning a dry cough--always a bad sign, George.... Walk 'em
about, shall I?--rub their noses with snow?"

Happily she didn't. I got myself involved with the gentlewoman
from next door, a pensive, languid-looking little woman with a
low voice, and fell talking; our topic, Cats and Dogs, and which
it was we liked best.

"I always feel," said the pensive little woman, "that there's
something about a dog-- A cat hasn't got it."

"Yes," I found myself admitting with great enthusiasm, "there is
something. And yet again--"

"Oh! I know there's something about a cat, too. But it isn't the
same."

"Not quite the same," I admitted; "but still it's something."

"Ah! But such a different something!"

"More sinuous."

"Much more."

"Ever so much more."

"It makes all the difference, don't you think?"

"Yes," I said, "ALL."

She glanced at me gravely and sighed a long, deeply felt "Yes."
A long pause.

The thing seemed to me to amount to a stale-mate. Fear came into my heart and much perplexity.

"The--er--Roses," I said. I felt like a drowning man. "Those roses--don't you think they are--very beautiful flowers?"

"Aren't they!" she agreed gently. "There seems to be something in roses--something--I don't know how to express it."

"Something," I said helpfully.

"Yes," she said, "something. Isn't there?"

"So few people see it," I said; "more's the pity!"

She sighed and said again very softly, "Yes."...

There was another long pause. I looked at her and she was thinking dreamily. The drowning sensation returned, the fear and enfeeblement. I perceived by a sort of inspiration that her tea-cup was empty.

"Let me take your cup," I said abruptly, and, that secured, made for the table by the summer-house. I had no intention then of deserting my aunt. But close at hand the big French window of the drawing-room yawned inviting and suggestive. I can feel all that temptation now, and particularly the provocation of my collar. In an instant I was lost. I would--Just for a moment!

I dashed in, put down the cup on the keys of the grand piano and fled upstairs, softly, swiftly, three steps at a time, to the sanctuary of my uncle's study, his snugger. I arrived there breathless, convinced there was no return for me. I was very glad and ashamed of myself, and desperate. By means of a penknife I contrived to break open his cabinet of cigars, drew a chair to the window, took off my coat, collar and tie, and remained smoking guiltily and rebelliously, and peeping through the blind at the assembly on the lawn until it was altogether gone....

The clergymen, I thought, were wonderful.

III

A few such pictures of those early days at Beckenham stand out, and then I find myself among the Chiselhurst memories. The Chiselhurst mansion had "grounds" rather than a mere garden, and there was a gardener's cottage and a little lodge at the gate. The ascendant movement was always far more in evidence there than at Beckenham. The velocity was increasing

One night picks itself out as typical, as, in its way, marking an epoch. I was there, I think, about some advertisement stuff, on some sort of business anyhow, and my uncle and aunt had come back in a fly from a dinner at the Runcorns. (Even there he was nibbling at Runcorn with the idea of our great Amalgamation budding in his mind.) I got down there, I suppose, about eleven.

I found the two of them sitting in the study, my aunt on a chair-arm with a whimsical pensiveness on her face, regarding my uncle, and he, much extended and very rotund, in the low arm-chair drawn up to the fender.

"Look here, George," said my uncle, after my first greetings. "I just been saying: We aren't Oh Fay!"

"Eh?"

"Not Oh Fay! Socially!"

"Old FLY, he means, George--French!"

"Oh! Didn't think of French. One never knows where to have him. What's gone wrong to-night?"

"I been thinking. It isn't any particular thing. I ate too much of that fishy stuff at first, like salt frog spawn, and was a bit confused by olives; and--well, I didn't know which wine was which. Had to say THAT each time. It puts your talk all wrong. And she wasn't in evening dress, not like the others. We can't go on in that style, George--not a proper ad."

"I'm not sure you were right," I said, "in having a fly."

"We got to do it all better," said my uncle, "we got to do it in Style. Smart business, smart men. She tries to pass it off as humorous"--my aunt pulled a grimace-- "it isn't humorous! See! We're on the up-grade now, fair and square. We're going to be big. We aren't going to be laughed at as Poovenos, see!"

"Nobody laughed at you," said my aunt. "Old Bladder!"

"Nobody isn't going to laugh at me," said my uncle, glancing at

his contours and suddenly sitting up.

My aunt raised her eyebrows slightly, swung her foot, and said nothing.

"We aren't keeping pace with our own progress, George. We got to. We're bumping against new people, and they set up to be gentlefolks--etiquette dinners and all the rest of it. They give themselves airs and expect us to be fish-out-of-water. We aren't going to be. They think we've no Style. Well, we give them Style for our advertisements, and we're going to give 'em Style all through.... You needn't be born to it to dance well on the wires of the Bond Street tradesmen. See?"

I handed him the cigar-box.

"Runcorn hadn't cigars like these," he said, truncating one lovingly. "We beat him at cigars. We'll beat him all round."

My aunt and I regarded him, full of apprehensions.

"I got ideas," he said darkly to the cigar, deepening our dread.

He pocketed his cigar-cutter and spoke again.

"We got to learn all the rotten little game first. See, F'rinstance, we got to get samples of all the blessed wines there are--and learn 'em up. Stern, Smoor, Burgundy, all of 'em! She took Stern to-night--and when she tasted it first--you pulled a face, Susan, you did. I saw you. It surprised you. You bunched your nose. We got to get used to wine and not do that. We got to get used to wearing evening dress--YOU, Susan, too."

"Always have had a tendency to stick out of my clothes," said my aunt. "However--Who cares?" She shrugged her shoulders.

I had never seen my uncle so immensely serious.

"Got to get the hang of etiquette," he went on to the fire.
"Horses even. Practise everything. Dine every night in evening dress.... Get a brougham or something. Learn up golf and tennis and things. Country gentleman. Oh Fay. It isn't only freedom from Goochery."

"Eh?" I said.

"Oh!--Gawshery, if you like!"

"French, George," said my aunt. "But I'M not ol' Gooch. I made that face for fun."

"It isn't only freedom from Gawshery. We got to have Style. See! Style! Just all right and one better. That's what I call Style. We can do it, and we will."

He mumbled his cigar and smoked for a space, leaning forward and looking into the fire.

"What is it," he asked, "after all? What is it? Tips about eating; tips about drinking. Clothes. How to hold yourself, and not say jes' the few little things they know for certain are wrong--jes' the shibboleth things."

He was silent again, and the cigar crept up from the horizontal towards the zenith as the confidence of his mouth increased.

"Learn the whole bag of tricks in six months." he said, becoming more cheerful. "Ah, Susan? Beat it out! George, you in particular ought to get hold of it. Ought to get into a good club, and all that."

"Always ready to learn!" I said. "Ever since you gave me the chance of Latin. So far we don't seem to have hit upon any Latin-speaking stratum in the population."

"We've come to French," said my aunt, "anyhow."

"It's a very useful language," said my uncle. "Put a point on things. Zzzz. As for accent, no Englishman has an accent. No Englishman pronounces French properly. Don't you tell ME. It's a Bluff.--It's all a Bluff. Life's a Bluff--practically. That's why it's so important, Susan, for us to attend to Style. Le Steel Say Lum. The Style it's the man. Whad you laughing at, Susan? George, you're not smoking. These cigars are good for the mind.... What do YOU think of it all? We got to adapt ourselves. We have--so far.... Not going to be beat by these silly things."

IV

"What do you think of it, George?" he insisted.

What I said I thought of it I don't now recall. Only I have very distinctly the impression of meeting for a moment my aunt's impenetrable eye. And anyhow he started in with his accustomed energy to rape the mysteries of the Costly Life, and become the calmest of its lords. On the whole, I think he did it--thoroughly. I have crowded memories, a little difficult to disentangle, of his experimental stages, his experimental proceedings. It's hard at times to say which memory comes in front of which. I recall him as presenting on the whole a series of small surprises, as being again and again, unexpectedly, a little more self-confident, a little more polished, a little richer and finer, a little more aware of the positions and values of things and men.

There was a time--it must have been very early--when I saw him deeply impressed by the splendours of the dining-room of the National Liberal Club. Heaven knows who our host was or what that particular little "feed" was about now!--all that sticks is the impression of our straggling entry, a string of six or seven guests, and my uncle looking about him at the numerous bright red-shaded tables, at the exotics in great Majolica jars, at the shining ceramic columns and pilasters, at the impressive portraits of Liberal statesmen and heroes, and all that contributes to the ensemble of that palatial spectacle. He was betrayed into a whisper to me, "This is all Right, George!" he said. That artless comment seems almost incredible as I set it down; there came a time so speedily when not even the clubs of New York could have overawed my uncle, and when he could walk through the bowing magnificence of the Royal Grand Hotel to his chosen table in that aggressively exquisite gallery upon the river, with all the easy calm of one of earth's legitimate kings.

The two of them learnt the new game rapidly and well; they experimented abroad, they experimented at home. At Chiselhurst, with the aid of a new, very costly, but highly instructive cook, they tried over everything they heard of that roused their curiosity and had any reputation for difficulty, from asparagus to plover's eggs. They afterwards got a gardener who could wait at table--and he brought the soil home to one. Then there came a butler.

I remember my aunt's first dinner-gown very brightly, and how she stood before the fire in the drawing-room confessing once unsuspected pretty arms with all the courage she possessed, and looking over her shoulder at herself in a mirror.

"A ham," she remarked reflectively, "must feel like this. Just a necklace."...

I attempted, I think, some commonplace compliment.

My uncle appeared at the door in a white waistcoat and with his hands in his trouser pockets; he halted and surveyed her critically.

"Couldn't tell you from a duchess, Susan," he remarked. "I'd like to have you painted, standin' at the fire like that. Sargent! You look--spirited, somehow. Lord!--I wish some of those damned tradesmen at Wimblehurst could see you."...

They did a lot of week-ending at hotels, and sometimes I went down with them. We seemed to fall into a vast drifting crowd of social learners. I don't know whether it is due simply to my changed circumstances, but it seems to me there have been immensely disproportionate developments of the hotel-frequenting and restaurant-using population during the last twenty years. It is not only, I think, that there are crowds of people who, like we were, are in the economically ascendant phase, but whole masses of the prosperous section of the population must be altering its habits, giving up high-tea for dinner and taking to evening dress, using the week-end hotels as a practise-ground for these new social arts. A swift and systematic conversion to gentility has been going on, I am convinced, throughout the whole commercial upper-middle class since I was twenty-one. Curiously mixed was the personal quality of the people one saw in these raids. There were conscientiously refined and low-voiced people reeking with proud bashfulness; there were aggressively smart people using pet diminutives for each other loudly and seeking fresh occasions for brilliant rudeness; there were awkward husbands and wives quarrelling furtively about their manners and ill at ease under the eye of the winter; cheerfully amiable and often discrepant couples with a disposition to inconspicuous corners, and the jolly sort, affecting an unaffected ease; plump

happy ladies who laughed too loud, and gentlemen in evening dress who subsequently "got their pipes." And nobody, you knew, was anybody, however expensively they dressed and whatever rooms they took.

I look back now with a curious remoteness of spirit to those crowded dining-rooms with their dispersed tables and their inevitable red-shaded lights and the unsympathetic, unskillful waiters, and the choice of "Thig or Glear, Sir?" I've not dined in that way, in that sort of place, now for five years--it must be quite five years, so specialised and narrow is my life becoming.

My uncle's earlier motor-car phases work in with these associations, and there stands out a little bright vignette of the hall of the Magnificent, Bexhill-on-Sea, and people dressed for dinner and sitting about amidst the scarlet furniture--satin and white-enameled woodwork until the gong should gather them; and my aunt is there, very marvelously wrapped about in a dust cloak and a cage-like veil, and there are hotel porters and under-porters very alert, and an obsequious manager; and the tall young lady in black from the office is surprised into admiration, and in the middle of the picture is my uncle, making his first appearance in that Esquimaux costume I have already mentioned, a short figure, compactly immense, hugely goggled, wearing a sort of brown rubber proboscis, and surmounted by a table-land of motoring cap.

V

So it was we recognised our new needs as fresh invaders of the upper levels of the social system, and set ourselves quite consciously to the acquisition of Style and Savoir Faire. We became part of what is nowadays quite an important element in the confusion of our world, that multitude of economically ascendant

people who are learning how to spend money. It is made up of financial people, the owners of the businesses that are eating up their competitors, inventors of new sources of wealth, such as ourselves; it includes nearly all America as one sees it on the European stage. It is a various multitude having only this in common: they are all moving, and particularly their womankind are moving, from conditions in which means were insistently finite, things were few, and customs simple, towards a limitless expenditure and the sphere of attraction of Bond Street, Fifth Avenue, and Paris. Their general effect is one of progressive revolution, of limitless rope.

They discover suddenly indulgences their moral code never foresaw and has no provision for, elaborations, ornaments, possessions beyond their wildest dreams. With an immense astonished zest they begin shopping begin a systematic adaptation to a new life crowded and brilliant with things shopped, with jewels, maids, butlers, coachmen, electric broughams, hired town and country houses. They plunge into it as one plunges into a career; as a class, they talk, think, and dream possessions. Their literature, their Press, turns all on that; immense illustrated weeklies of unsurpassed magnificence guide them in domestic architecture, in the art of owning a garden, in the achievement of the sumptuous in motor-cars, in an elaborate sporting equipment, in the purchase and control of their estates, in travel and stupendous hotels. Once they begin to move they go far and fast. Acquisition becomes the substance of their lives. They find a world organised to gratify that passion. In a brief year or so they are connoisseurs. They join in the plunder of the eighteenth century, buy rare old books, fine old pictures, good old furniture. Their first crude conception of dazzling suites of the newly perfect is replaced almost from the outset by a jackdaw dream of accumulating costly discrepant old things.

I seem to remember my uncle taking to shopping quite suddenly.

In the Beckenham days and in the early Chiselhurst days he was chiefly interested in getting money, and except for his onslaught on the Beckenham house, bothered very little about his personal surroundings and possessions. I forget now when the change came and he began to spend. Some accident must have revealed to him this new source of power, or some subtle shifting occurred in the tissues of his brain. He began to spend and "shop." So soon as he began to shop, he began to shop violently. He began buying pictures, and then, oddly enough, old clocks. For the Chiselhurst house he bought nearly a dozen grandfather clocks and three copper warming pans. After that he bought much furniture. Then he plunged into art patronage, and began to commission pictures and to make presents to churches and institutions. His buying increased with a regular acceleration. Its development was a part of the mental changes that came to him in the wild excitements of the last four years of his ascent. Towards the climax he was a furious spender; he shopped with large unexpected purchases, he shopped like a mind seeking expression, he shopped to astonish and dismay; shopped crescendo, shopped fortissimo, con molto espressione until the magnificent smash of Crest Hill eroded his shopping for ever. Always it was he who shopped. My aunt did not shine as a purchaser. It is a curious thing, due to I know not what fine strain in her composition, that my aunt never set any great store upon possessions. She plunged through that crowded bazaar of Vanity Fair during those feverish years, spending no doubt freely and largely, but spending with detachment and a touch of humorous contempt for the things, even the "old" things, that money can buy. It came to me suddenly one afternoon just how detached she was, as I saw her going towards the Hardingham, sitting up, as she always did, rather stiffly in her electric brougham, regarding the glittering world with interested and ironically innocent blue eyes from under the brim of a hat that defied comment. "No one," I thought, "would sit so apart if she hadn't dreams--and what are her dreams?"

I'd never thought.

And I remember, too, an outburst of scornful description after she had lunched with a party of women at the Imperial Cosmic Club. She came round to my rooms on the chance of finding me there, and I gave her tea. She professed herself tired and cross, and flung herself into my chair....

"George," she cried, " the Things women are! Do I stink of money?"

"Lunching?" I asked.

She nodded.

"Plutocratic ladies?"

"Yes."

"Oriental type?"

"Oh! Like a burst hareem!... Bragging of possessions.... They feel you. They feel your clothes, George, to see if they are good!"

I soothed her as well as I could. "They ARE Good aren't they?" I said.

"It's the old pawnshop in their blood," she said, drinking tea; and then in infinite disgust, "They run their hands over your clothes--they paw you."

I had a moment of doubt whether perhaps she had not been discovered in possession of unsuspected forgeries. I don't know. After that my eyes were quickened, and I began to see for

myself women running their hands over other women's furs, scrutinising their lace, even demanding to handle jewelry, appraising, envying, testing. They have a kind of etiquette. The woman who feels says, "What beautiful sables?" "What lovely lace?" The woman felt admits proudly: "It's Real, you know," or disavows pretension modestly and hastily, "It's Rot Good." In each other's houses they peer at the pictures, handle the selvage of hangings, look at the bottoms of china....

I wonder if it IS the old pawnshop in the blood.

I doubt if Lady Drew and the Olympians did that sort of thing, but here I may be only clinging to another of my former illusions about aristocracy and the State. Perhaps always possessions have been Booty, and never anywhere has there been such a thing as house and furnishings native and natural to the women and men who made use of them....

VI

For me, at least, it marked an epoch in my uncle's career when I learnt one day that he had "shopped" Lady Grove. I realised a fresh, wide, unpreluded step. He took me by surprise with the sudden change of scale from such portable possessions as jewels and motor-cars to a stretch of countryside. The transaction was Napoleonic; he was told of the place; he said "snap"; there were no preliminary desirings or searchings. Then he came home and said what he had done. Even my aunt was for a day or so measurably awestricken by this exploit in purchase, and we both went down with him to see the house in a mood near consternation. It struck us then as a very lordly place indeed. I remember the three of us standing on the terrace that looked westward, surveying the sky-reflecting windows of the house, and a feeling of unwarrantable intrusion comes back to me.

Lady Grove, you know, is a very beautiful house indeed, a still and gracious place, whose age-long seclusion was only effectively broken with the toot of the coming of the motor-car. An old Catholic family had died out in it, century by century, and was now altogether dead. Portions of the fabric are thirteenth century, and its last architectural revision was Tudor; within, it is for the most part dark and chilly, save for two or three favoured rooms and its tall-windowed, oak-galleried hall. Its terrace is its noblest feature; a very wide, broad lawn it is, bordered by a low stone battlement, and there is a great cedar in one corner under whose level branches one looks out across the blue distances of the Weald, blue distances that are made extraordinarily Italian in quality by virtue of the dark masses of that single tree. It is a very high terrace; southward one looks down upon the tops of wayfaring trees and spruces, and westward on a steep slope of beechwood, through which the road comes. One turns back to the still old house, and sees a grey and lichenous facade with a very finely arched entrance. It was warmed by the afternoon light and touched with the colour of a few neglected roses and a pyracanthus. It seemed to me that the most modern owner conceivable in this serene fine place was some bearded scholarly man in a black cassock, gentle-voiced and white-handed, or some very soft-robed, grey gentlewoman. And there was my uncle holding his goggles in a sealskin glove, wiping the glass with a pocket-handkerchief, and asking my aunt if Lady Grove wasn't a "Bit of all Right."

My aunt made him no answer.

"The man who built this," I speculated, "wore armour and carried a sword."

"There's some of it inside still," said my uncle.

We went inside. An old woman with very white hair was in charge

of the place and cringed rather obviously to the new master. She evidently found him a very strange and frightful apparition indeed, and was dreadfully afraid of him. But if the surviving present bowed down to us, the past did not. We stood up to the dark, long portraits of the extinguished race--one was a Holbein--and looked them in their sidelong eyes. They looked back at us. We all, I know, felt the enigmatical quality in them. Even my uncle was momentarily embarrassed, I think, by that invincibly self-complacent expression. It was just as though, after all, he had not bought them up and replaced them altogether; as though that, secretly, they knew better and could smile at him.

The spirit of the place was akin to Bladesover, but touched with something older and remoter. That armour that stood about had once served in tilt-yards, if indeed it had not served in battle, and this family had sent its blood and treasure, time after time, upon the most romantic quest in history, to Palestine. Dreams, loyalties, place and honour, how utterly had it all evaporated, leaving, at last, the final expression of its spirit, these quaint painted smiles, these smiles of triumphant completion! It had evaporated, indeed, long before the ultimate Durgan had died, and in his old age he had cumbered the place with Early Victorian cushions and carpets and tapestry table-cloths and invalid appliances of a type even more extinct, it seemed to us, than the crusades.... Yes, it was different from Bladesover.

"Bit stuffy, George," said my uncle. "They hadn't much idea of ventilation when this was built."

One of the panelled rooms was half-filled with presses and a four-poster bed. "Might be the ghost room," said my uncle; but it did not seem to me that so retiring a family as the Durgans, so old and completely exhausted a family as the Durgans, was

likely to haunt anybody. What living thing now had any concern with their honour and judgments and good and evil deeds? Ghosts and witchcraft were a later innovation--that fashion came from Scotland with the Stuarts.

Afterwards, prying for epitaphs, we found a marble crusader with a broken nose, under a battered canopy of fretted stone, outside the restricted limits of the present Duffield church, and half buried in nettles. "Ichabod," said my uncle. "Eh? We shall be like that, Susan, some day.... I'm going to clean him up a bit and put a railing to keep off the children."

"Old saved at the eleventh hour," said my aunt, quoting one of the less successful advertisements of Tono-Bungay.

But I don't think my uncle heard her.

It was by our captured crusader that the vicar found us. He came round the corner at us briskly, a little out of breath. He had an air of having been running after us since the first toot of our horn had warned the village of our presence. He was an Oxford man, clean-shaven, with a cadaverous complexion and a guardedly respectful manner, a cultivated intonation, and a general air of accommodation to the new order of things. These Oxford men are the Greeks of our plutocratic empire. He was a Tory in spirit, and what one may call an adapted Tory by stress of circumstances; that is to say, he was no longer a legitimist; he was prepared for the substitution of new lords for old. We were pill vendors he knew, and no doubt horribly vulgar in soul; but then it might have been some polygamous Indian rajah, a great strain on a good man's tact, or some Jew with an inherited expression of contempt. Anyhow, we were English, and neither Dissenters nor Socialists, and he was cheerfully prepared to do what he could to make gentlemen of both of us. He might have preferred Americans for some reasons; they are not so obviously

taken from one part of the social system and dumped down in another, and they are more teachable; but in this world we cannot always be choosers. So he was very bright and pleasant with us, showed us the church, gossiped informingly about our neighbours on the countryside--Tux, the banker; Lord Boom, the magazine and newspaper proprietor; Lord Carnaby, that great sportsman, and old Lady Osprey. And finally he took us by way of a village lane--three children bobbed convulsively with eyes of terror for my uncle--through a meticulous garden to a big, slovenly Vicarage with faded Victorian furniture and a faded Victorian wife, who gave us tea and introduced us to a confusing family dispersed among a lot of disintegrating basket chairs upon the edge of a well-used tennis lawn.

These people interested me. They were a common type, no doubt, but they were new to me. There were two lank sons who had been playing singles at tennis, red-eared youths growing black moustaches, and dressed in conscientiously untidy tweeds and unbuttoned and ungirt Norfolk jackets. There were a number of ill-nourished-looking daughters, sensible and economical in their costume, the younger still with long, brown-stockinged legs, and the eldest present--there were, we discovered, one or two hidden away--displaying a large gold cross and other aggressive ecclesiastical symbols; there were two or three fox-terriers, a retrieverish mongrel, and an old, bloody-eyed and very evil-smelling St. Bernard. There was a jackdaw. There was, moreover, an ambiguous, silent lady that my aunt subsequently decided must be a very deaf paying guest. Two or three other people had concealed themselves at our coming and left unfinished teas behind them. Rugs and cushions lay among the chairs, and two of the latter were, I noted, covered with Union Jacks.

The vicar introduced us sketchily, and the faded Victorian wife regarded my aunt with a mixture of conventional scorn and abject respect, and talked to her in a languid, persistent voice about

people in the neighbourhood whom my aunt could not possibly know.

My aunt received these personalia cheerfully, with her blue eyes flitting from point to point, and coming back again and again to the pinched faces of the daughters and the cross upon the eldest's breast. Encouraged by my aunt's manner, the vicar's wife grew patronising and kindly, and made it evident that she could do much to bridge the social gulf between ourselves and the people of family about us.

I had just snatches of that conversation. "Mrs. Merridew brought him quite a lot of money. Her father, I believe, had been in the Spanish wine trade--quite a lady though. And after that he fell off his horse and cracked his brain pan and took to fishing and farming. I'm sure you'll like to know them. He's most amusing.... The daughter had a disappointment and went to China as a missionary and got mixed up in a massacre."...

"The most beautiful silks and things she brought back, you'd hardly believe!"

"Yes, they gave them to propitiate her. You see, they didn't understand the difference, and they thought that as they'd been massacring people, THEY'D be massacred. They didn't understand the difference Christianity makes."...

"Seven bishops they've had in the family!"

"Married a Papist and was quite lost to them."...

"He failed some dreadful examination and had to go into the militia."...

"So she bit his leg as hard as ever she could and he let go."...

"Had four of his ribs amputated."...

"Caught meningitis and was carried off in a week."

"Had to have a large piece of silver tube let into his throat, and if he wants to talk he puts his finger on it. It makes him so interesting, I think. You feel he's sincere somehow. A most charming man in every way."

"Preserved them both in spirits very luckily, and there they are in his study, though of course he doesn't show them to everybody."

The silent lady, unperturbed by these apparently exciting topics, scrutinised my aunt's costume with a singular intensity, and was visibly moved when she unbuttoned her dust cloak and flung it wide. Meanwhile we men conversed, one of the more spirited daughters listened brightly, and the youths lay on the grass at our feet. My uncle offered them cigars, but they both declined,--out of bashfulness, it seemed to me, whereas the vicar, I think, accepted out of tact. When we were not looking at them directly, these young men would kick each other furtively.

Under the influence of my uncle's cigar, the vicar's mind had soared beyond the limits of the district. "This Socialism," he said, "seems making great headway."

My uncle shook his head. "We're too individualistic in this country for that sort of nonsense," he said "Everybody's business is nobody's business. That's where they go wrong."

"They have some intelligent people in their ranks, I am told," said the vicar, "writers and so forth. Quite a distinguished playwright, my eldest daughter was telling me--I forget his name."

Milly, dear! Oh! she's not here. Painters, too, they have. This Socialist, it seems to me, is part of the Unrest of the Age.... But, as you say, the spirit of the people is against it. In the country, at any rate. The people down here are too sturdily independent in their small way--and too sensible altogether."...

"It's a great thing for Duffield to have Lady Grove occupied again," he was saying when my wandering attention came back from some attractive casualty in his wife's discourse. "People have always looked up to the house and considering all things, old Mr. Durgan really was extraordinarily good--extraordinarily good. You intend to give us a good deal of your time here, I hope."

"I mean to do my duty by the Parish," said my uncle.

"I'm sincerely glad to hear it--sincerely. We've missed--the house influence. An English village isn't complete--People get out of hand. Life grows dull. The young people drift away to London."

He enjoyed his cigar gingerly for a moment.

"We shall look to you to liven things up," he said, poor man!

My uncle cocked his cigar and removed it from his mouth.

"What you think the place wants?" he asked.

He did not wait for an answer. "I been thinking while you been talking--things one might do. Cricket--a good English game--sports. Build the chaps a pavilion perhaps. Then every village ought to have a miniature rifle range."

"Ye-ees," said the vicar. "Provided, of course, there isn't a constant popping."...

"Manage that all right," said my uncle. "Thing'd be a sort of long shed. Paint it red. British colour. Then there's a Union Jack for the church and the village school. Paint the school red, too, p'raps. Not enough colour about now. Too grey. Then a maypole."

"How far our people would take up that sort of thing--" began the vicar.

"I'm all for getting that good old English spirit back again," said my uncle. "Merrymakings. Lads and lasses dancing on the village green. Harvest home. Fairings. Yule Log--all the rest of it."

"How would old Sally Glue do for a May Queen?" asked one of the sons in the slight pause that followed.

"Or Annie Glassbound?" said the other, with the huge virile guffaw of a young man whose voice has only recently broken.

"Sally Glue is eighty-five," explained the vicar, "and Annie Glassbound is well--a young lady of extremely generous proportions. And not quite right, you know. Not quite right--here." He tapped his brow.

"Generous proportions!" said the eldest son, and the guffaws were renewed.

"You see," said the vicar, "all the brisker girls go into service in or near London. The life of excitement attracts them. And no doubt the higher wages have something to do with it. And the liberty to wear finery. And generally--freedom from restraint.

So that there might be a little difficulty perhaps to find a May Queen here just at present who was really young and er--pretty.... Of course I couldn't think of any of my girls--or anything of that sort."

"We got to attract 'em back," said my uncle. "That's what I feel about it. We got to Buck-Up the country. The English country is a going concern still; just as the Established Church--if you'll excuse me saying it, is a going concern. Just as Oxford is--or Cambridge. Or any of those old, fine old things. Only it wants fresh capital, fresh ideas and fresh methods. Light railways, f'rinstance--scientific use of drainage. Wire fencing machinery--all that."

The vicar's face for one moment betrayed dismay. Perhaps he was thinking of his country walks amidst the hawthorns and honeysuckle.

"There's great things," said my uncle, "to be done on Mod'un lines with Village Jam and Pickles--boiled in the country."

It was the reverberation of this last sentence in my mind, I think, that sharpened my sentimental sympathy as we went through the straggling village street and across the trim green on our way back to London. It seemed that afternoon the most tranquil and idyllic collection of creeper-sheltered homes you can imagine; thatch still lingered on a whitewashed cottage or two, pyracanthus, wall-flowers, and daffodils abounded, and an unsystematic orchard or so was white with blossom above and gay with bulbs below. I noted a row of straw beehives, beehive-shaped, beehives of the type long since condemned as inefficient by all progressive minds, and in the doctor's acre of grass a flock of two whole sheep was grazing,--no doubt he'd taken them on account. Two men and one old woman made gestures of abject vassalage, and my uncle replied with a lordly gesture

of his great motoring glove....

"England's full of Bits like this," said my uncle, leaning over the front seat and looking back with great satisfaction. The black glare of his goggles rested for a time on the receding turrets of Lady Grove just peeping over the trees.

"I shall have a flagstaff, I think," he considered. "Then one could show when one is in residence. The villagers will like to know."...

I reflected. "They will" I said. "They're used to liking to know."...

My aunt had been unusually silent. Suddenly she spoke. "He says Snap," she remarked; "he buys that place. And a nice old job of Housekeeping he gives me! He sails through the village swelling like an old turkey. And who'll have to scoot the butler? Me! Who's got to forget all she ever knew and start again? Me! Who's got to trek from Chiselhurst and be a great lady? Me! ... You old Bother! Just when I was settling down and beginning to feel at home."

My uncle turned his goggles to her. "Ah! THIS time it is home, Susan.... We got there."

VII

It seems to me now but a step from the buying of Lady Grove to the beginning of Crest Hill, from the days when the former was a stupendous achievement to the days when it was too small and dark and inconvenient altogether for a great financier's use. For me that was a period of increasing detachment from our business and the great world of London; I saw it more and more in broken glimpses, and sometimes I was working in my little pavilion above

Lady Grove for a fortnight together; even when I came up it was often solely for a meeting of the aeronautical society or for one of the learned societies or to consult literature or employ searchers or some such special business. For my uncle it was a period of stupendous inflation. Each time I met him I found him more confident, more comprehensive, more consciously a factor in great affairs. Soon he was no longer an associate of merely business men; he was big enough for the attentions of greater powers.

I grew used to discovering some item of personal news about him in my evening paper, or to the sight of a full-page portrait of him in a sixpenny magazine. Usually the news was of some munificent act, some romantic piece of buying or giving or some fresh rumour of reconstruction. He saved, you will remember, the Parbury Reynolds for the country. Or at times, it would be an interview or my uncle's contribution to some symposium on the "Secret of Success," or such-like topic. Or wonderful tales of his power of work, of his wonderful organisation to get things done, of his instant decisions and remarkable power of judging his fellow-men. They repeated his great mot: "Eight hour working day--I want eighty hours!"

He became modestly but resolutely "public." They cartooned him in Vanity Fair. One year my aunt, looking indeed a very gracious, slender lady, faced the portrait of the King in the great room at Burlington House, and the next year saw a medallion of my uncle by Ewart, looking out upon the world, proud and imperial, but on the whole a trifle too prominently convex, from the walls of the New Gallery.

I shared only intermittently in his social experiences. People knew of me, it is true, and many of them sought to make through me a sort of flank attack upon him, and there was a legend, owing, very unreasonably, partly to my growing scientific

reputation and partly to an element of reserve in my manner, that I played a much larger share in planning his operations than was actually the case. This led to one or two very intimate private dinners, to my inclusion in one or two house parties and various odd offers of introductions and services that I didn't for the most part accept. Among other people who sought me in this way was Archie Garvell, now a smart, impecunious soldier of no particular distinction, who would, I think, have been quite prepared to develop any sporting instincts I possessed, and who was beautifully unaware of our former contact. He was always offering me winners; no doubt in a spirit of anticipatory exchange for some really good thing in our more scientific and certain method of getting something for nothing....

In spite of my preoccupation with my experiments, work, I did, I find now that I come to ransack my impressions, see a great deal of the great world during those eventful years; I had a near view of the machinery by which an astounding Empire is run, rubbed shoulders and exchanged experiences with bishops and statesmen, political women and women who were not political, physicians and soldiers, artists and authors, the directors of great journals, philanthropists and all sorts of eminent, significant people. I saw the statesmen without their orders and the bishops with but a little purple silk left over from their canonicals, inhaling, not incense but cigar smoke. I could look at them all the better because, for the most part, they were not looking at me but at my uncle, and calculating consciously or unconsciously how they might use him and assimilate him to their system, the most unpremeditated, subtle, successful and aimless plutocracy that ever encumbered the destinies of mankind. Not one of them, so far as I could see, until disaster overtook him, resented his lies, his almost naked dishonesty of method, the disorderly disturbance of this trade and that, caused by his spasmodic operations. I can see them now about him, see them polite, watchful, various; his stiff compact little figure always a

centre of attention, his wiry hair, his brief nose, his under-lip, electric with self-confidence. Wandering marginally through distinguished gatherings, I would catch the whispers: "That's Mr. Ponderevo!"

"The little man?"

"Yes, the little boulder with the glasses."

"They say he's made--"...

Or I would see him on some parterre of a platform beside my aunt's hurrying hat, amidst titles and costumes, "holding his end up," as he would say, subscribing heavily to obvious charities, even at times making brief convulsive speeches in some good cause before the most exalted audiences. "Mr. Chairman, your Royal Highness, my Lords, Ladies and Gentlemen," he would begin amidst subsiding applause and adjust those obstinate glasses and thrust back the wings of his frock-coat and rest his hands upon his hips and speak his fragment with ever and again an incidental Zzzz. His hands would fret about him as he spoke, fiddle his glasses, feel in his waistcoat pockets; ever and again he would rise slowly to his toes as a sentence unwound jerkily like a clockwork snake, and drop back on his heels at the end. They were the very gestures of our first encounter when he had stood before the empty fireplace in his minute draped parlour and talked of my future to my mother.

In those measurelessly long hot afternoons in the little shop at Wimblehurst he had talked and dreamt of the Romance of Modern Commerce. Here, surely, was his romance come true.

VIII

People say that my uncle lost his head at the crest of his

fortunes, but if one may tell so much truth of a man one has in a manner loved, he never had very much head to lose. He was always imaginative, erratic, inconsistent, recklessly inexact, and his inundation of wealth merely gave him scope for these qualities. It is true, indeed, that towards the climax he became intensely irritable at times and impatient of contradiction, but that, I think, was rather the gnawing uneasiness of sanity than any mental disturbance. But I find it hard either to judge him or convey the full development of him to the reader. I saw too much of him; my memory is choked with disarranged moods and aspects. Now he is distended with megalomania, now he is deflated, now he is quarrelsome, now impenetrably self-satisfied, but always he is sudden, jerky, fragmentary, energetic, and--in some subtle fundamental way that I find difficult to define--absurd.

There stands out--because of the tranquil beauty of its setting perhaps--a talk we had in the veranda of the little pavilion near my worksheds behind Crest Hill in which my aeroplanes and navigable balloons were housed. It was one of many similar conversations, and I do not know why it in particular should survive its fellows. It happens so. He had come up to me after his coffee to consult me about a certain chalice which in a moment of splendour and under the importunity of a countess he had determined to give to a deserving church in the east-end. I, in a moment of even rasher generosity, had suggested Ewart as a possible artist. Ewart had produced at once an admirable sketch for the sacred vessel surrounded by a sort of wreath of Millies with open arms and wings and had drawn fifty pounds on the strength of it. After that came a series of vexatious delays. The chalice became less and less of a commercial man's chalice, acquired more and more the elusive quality of the Holy Grail, and at last even the drawing receded.

My uncle grew restive...."You see, George, they'll begin to want the blasted thing!"

"What blasted thing?"

"That chalice, damn it! They're beginning to ask questions. It isn't Business, George."

"It's art," I protested, "and religion."

"That's all very well. But it's not a good ad for us, George, to make a promise and not deliver the goods.... I'll have to write off your friend Ewart as a bad debt, that's what it comes to, and go to a decent firm."...

We sat outside on deck chairs in the veranda of the pavilion, smoked, drank whisky, and, the chalice disposed of, meditated. His temporary annoyance passed. It was an altogether splendid summer night, following a blazing, indolent day. Full moonlight brought out dimly the lines of the receding hills, one wave beyond another; far beyond were the pin-point lights of Leatherhead, and in the foreground the little stage from which I used to start upon my gliders gleamed like wet steel. The season must have been high June, for down in the woods that hid the lights of the Lady Grove windows, I remember the nightingales thrilled and gurgled....

"We got here, George," said my uncle, ending a long pause. "Didn't I say?"

"Say!--when?" I asked.

"In that hole in the To'nem Court Road, eh? It's been a Straight Square Fight, and here we are!"

I nodded.

"Member me telling you--Tono-Bungay?... Well.... I'd just that afternoon thought of it!"

"I've fancied at times;" I admitted.

"It's a great world, George, nowadays, with a fair chance for every one who lays hold of things. The career ouvert to the Talons--eh? Tono-Bungay. Think of it! It's a great world and a growing world, and I'm glad we're in it--and getting a pull. We're getting big people, George. Things come to us. Eh? This Palestine thing."...

He meditated for a time and Zzzzed softly. Then he became still.

His theme was taken up by a cricket in the grass until he himself was ready to resume it. The cricket too seemed to fancy that in some scheme of its own it had got there. "Chirrrrrrup" it said; "chirrrrrrup."

"Lord, what a place that was at Wemblehurst!" he broke out. "If ever I get a day off we'll motor there, George, and run over that dog that sleeps in the High Street. Always was a dog asleep there--always. Always... I'd like to see the old shop again. I daresay old Ruck still stands between the sheep at his door, grinning with all his teeth, and Marbel, silly beggar! comes out with his white apron on and a pencil stuck behind his ear, trying to look awake... Wonder if they know it's me? I'd like 'em somehow to know it's me."

"They'll have had the International Tea Company and all sorts of people cutting them up," I said. "And that dog's been on the pavement this six years--can't sleep even there, poor dear, because of the motor-horns and its shattered nerves."

"Movin' everywhere," said my uncle. "I expect you're right...."

It's a big time we're in, George. It's a big Progressive On-coming Imperial Time. This Palestine business--the daring of it.... It's, it's a Process, George. And we got our hands on it. Here we sit--with our hands on it, George. Entrusted.

"It seems quiet to--night. But if we could see and hear." He waved his cigar towards Leatherhead and London.

"There they are, millions, George. Jes' think of what they've been up to to-day--those ten millions--each one doing his own particular job. You can't grasp it. It's like old Whitman says--what is it he says? Well, anyway it's like old Whitman. Fine chap, Whitman! Fine old chap! Queer, you can't quote him. ... And these millions aren't anything. There's the millions over seas, hundreds of millions, Chinese, M'rocco, Africa generally, 'Merica.... Well, here we are, with power, with leisure, picked out--because we've been energetic, because we've seized opportunities, because we've made things hum when other people have waited for them to hum. See? Here we are--with our hands on it. Big people. Big growing people. In a sort of way,--Forces."

He paused. "It's wonderful, George," he said.

"Anglo-Saxon energy," I said softly to the night.

"That's it, George--energy. It's put things in our grip--threads, wires, stretching out and out, George, from that little office of ours, out to West Africa, out to Egypt, out to Inja, out east, west, north and south. Running the world practically. Running it faster and faster. Creative. There's that Palestine canal affair. Marvellous idee! Suppose we take that up, suppose we let ourselves in for it, us and the others, and run that water sluice from the Mediterranean into the Dead Sea Valley--think of the difference it will make! All the desert

blooming like a rose, Jericho lost for ever, all the Holy Places under water.... Very likely destroy Christianity."...

He mused for a space. "Cuttin' canals," murmured my uncle. "Making tunnels.... New countries.... New centres.... Zzzz.... Finance.... Not only Palestine.

"I wonder where we shall get before we done, George? We got a lot of big things going. We got the investing public sound and sure. I don't see why in the end we shouldn't be very big. There's difficulties but I'm equal to them. We're still a bit soft in our bones, but they'll harden all right.... I suppose, after all, I'm worth something like a million, George, cleared up and settled. If I got out of things now. It's a great time, George, a wonderful time!"...

I glanced through the twilight at his convexity and I must confess it struck me that on the whole he wasn't particularly good value.

"We got our hands on things, George, us big people. We got to hang together, George run the show. Join up with the old order like that mill-wheel of Kipling's. (Finest thing he ever wrote, George; I jes' been reading it again. Made me buy Lady Grove.) Well, we got to run the country, George. It's ours. Make it a Scientific Organised Business Enterprise. Put idees into it. 'Lectrify it. Run the Press. Run all sorts of developments. All sorts of developments. I been talking to Lord Boom. I been talking to all sorts of people. Great things. Progress. The world on business lines. Only jes' beginning."...

He fell into a deep meditation.

He Zzzzed for a time and ceased.

"YES," he said at last in the tone of a man who has at last emerged with ultimate solutions to the profoundest problems.

"What?" I said after a seemingly pause.

My uncle hung fire for a moment and it seemed to me the fate of nations trembled in the balance. Then he spoke as one who speaks from the very bottom of his heart--and I think it was the very bottom of his heart.

"I'd jes' like to drop into the Eastry Arms, jes' when all those beggars in the parlour are sittin' down to whist, Ruck and Marbel and all, and give 'em ten minutes of my mind, George. Straight from the shoulder. Jes' exactly what I think of them. It's a little thing, but I'd like to do it jes' once before I die."...

He rested on that for some time Zzzz-ing.

Then he broke out at a new place in a tone of detached criticism.

"There's Boom," he reflected.

"It's a wonderful system this old British system, George. It's staid and stable and yet it has a place for new men. We come up and take our places. It's almost expected. We take a hand. That's where our Democracy differs from America. Over there a man succeeds; all he gets is money. Here there's a system open to every one--practically.... Chaps like Boom--come from nowhere."

His voice ceased. I reflected upon the spirit of his words. Suddenly I kicked my feet in the air, rolled on my side and sat up suddenly on my deck chair with my legs down.

"You don't mean it!" I said.

"Mean what, George?"

"Subscription to the party funds. Reciprocal advantage. Have we got to that?"

"Whad you driving at, George?"

"You know. They'd never do it, man!"

"Do what?" he said feebly; and, "Why shouldn't they?"

"They'd not even go to a baronetcy. NO!.... And yet, of course, there's Boom! And Collingshead and Gorver. They've done beer, they've done snippets! After all Tono-Bungay--it's not like a turf commission agent or anything like that!... There have of course been some very gentlemanly commission agents. It isn't like a fool of a scientific man who can't make money!"

My uncle grunted; we'd differed on that issue before.

A malignant humour took possession of me. "What would they call you?" I speculated. "The vicar would like Duffield. Too much like Duffer! Difficult thing, a title." I ran my mind over various possibilities. "Why not take a leaf from a socialist tract I came upon yesterday. Chap says we're all getting delocalised. Beautiful word--delocalised! Why not be the first delocalised peer? That gives you--Tono-Bungay! There is a Bungay, you know. Lord Tono of Bungay--in bottles everywhere. Eh?"

My uncle astonished me by losing his temper.

"Damn it. George, you don't seem to see I'm serious! You're always sneering at Tono-Bungay! As though it was some sort of swindle. It was perfec'ly legitimate trade, perfec'ly

legitimate. Good value and a good article.... When I come up here and tell you plans and exchange ideas--you sneer at me. You do. You don't see--it's a big thing. It's a big thing. You got to get used to new circumstances. You got to face what lies before us. You got to drop that tone."

IX

My uncle was not altogether swallowed up in business and ambition. He kept in touch with modern thought. For example, he was, I know, greatly swayed by what he called "This Overman idee, Nietzsche--all that stuff."

He mingled those comforting suggestions of a potent and exceptional human being emancipated from the pettier limitations of integrity with the Napoleonic legend. It gave his imagination a considerable outlet. That Napoleonic legend! The real mischief of Napoleon's immensely disastrous and accidental career began only when he was dead and the romantic type of mind was free to elaborate his character. I do believe that my uncle would have made a far less egregious smash if there had been no Napoleonic legend to misguide him. He was in many ways better and infinitely kinder than his career. But when in doubt between decent conduct and a base advantage, that cult came in more and more influentially: "think of Napoleon; think what the inflexibly-wilful Napoleon would have done with such scruples as yours;" that was the rule, and the end was invariably a new step in dishonour.

My uncle was in an unsystematic way a collector of Napoleonic relics; the bigger the book about his hero the more readily he bought it; he purchased letters and tinsel and weapons that bore however remotely upon the Man of Destiny, and he even secured in Geneva, though he never brought home, an old coach in which Buonaparte might have ridden; he crowded the quiet walls of Lady

Grove with engravings and figures of him, preferring, my aunt remarked, the more convex portraits with the white vest and those statuettes with the hands behind the back which threw forward the figure. The Durgans watched him through it all, sardonically.

And he would stand after breakfast at times in the light of the window at Lady Grove, a little apart, with two fingers of one hand stuck between his waistcoat-buttons and his chin sunken, thinking,--the most preposterous little fat man in the world. It made my aunt feel, she said, "like an old Field Marshal--knocks me into a cocked hat, George!"

Perhaps this Napoleonic bias made him a little less frequent with his cigars than he would otherwise have been, but of that I cannot be sure, and it certainly caused my aunt a considerable amount of vexation after he had read Napoleon and the Fair Sex, because for a time that roused him to a sense of a side of life he had in his commercial preoccupations very largely forgotten. Suggestion plays so great a part in this field. My uncle took the next opportunity and had an "affair"!

It was not a very impassioned affair, and the exact particulars never of course reached me. It is quite by chance I know anything of it at all. One evening I was surprised to come upon my uncle in a mixture of Bohemia and smart people at an At Home in the flat of Robbert, the R.A. who painted my aunt, and he was standing a little apart in a recess, talking or rather being talked to in undertones by a plump, blond little woman in pale blue, a Helen Scrymgeour who wrote novels and was organising a weekly magazine. I elbowed a large lady who was saying something about them, but I didn't need to hear the thing she said to perceive the relationship of the two. It hit me like a placard on a hoarding. I was amazed the whole gathering did not see it. Perhaps they did. She was wearing a remarkably fine diamond necklace, much too fine for journalism, and regarding him

with that quality of questionable proprietorship, of leashed but straining intimacy, that seems inseparable from this sort of affair. It is so much more palpable than matrimony. If anything was wanted to complete my conviction it was my uncle's eyes when presently he became aware of mine, a certain embarrassment and a certain pride and defiance. And the next day he made an opportunity to praise the lady's intelligence to me concisely, lest I should miss the point of it all.

After that I heard some gossip--from a friend of the lady's. I was much too curious to do anything but listen. I had never in all my life imagined my uncle in an amorous attitude. It would appear that she called him her "God in the Car"--after the hero in a novel of Anthony Hope's. It was essential to the convention of their relations that he should go relentlessly whenever business called, and it was generally arranged that it did call. To him women were an incident, it was understood between them; Ambition was the master-passion. A great world called him and the noble hunger for Power. I have never been able to discover just how honest Mrs. Scrymgeour was in all this, but it is quite possible the immense glamour of his financial largeness prevailed with her and that she did bring a really romantic feeling to their encounters. There must have been some extraordinary moments....

I was a good deal exercised and distressed about my aunt when I realised what was afoot. I thought it would prove a terrible humiliation to her. I suspected her of keeping up a brave front with the loss of my uncle's affections fretting at her heart, but there I simply underestimated her. She didn't hear for some time and when she did hear she was extremely angry and energetic. The sentimental situation didn't trouble her for a moment. She decided that my uncle "wanted smacking." She accentuated herself with an unexpected new hat, went and gave him an inconceivable talking-to at the Hardingham, and then came round to "blow-up"

me for not telling her what was going on before....

I tried to bring her to a proper sense of the accepted values in this affair, but my aunt's originality of outlook was never so invincible. "Men don't tell on one another in affairs of passion," I protested, and such-like worldly excuses.

"Women!" she said in high indignation, "and men! It isn't women and men--it's him and me, George! Why don't you talk sense?"

"Old passion's all very well, George, in its way, and I'm the last person to be jealous. But this is old nonsense.... I'm not going to let him show off what a silly old lobster he is to other women... I'll mark every scrap of his underclothes with red letters, 'Ponderevo-Private'--every scrap.

"Going about making love indeed,--in abdominal belts!--at his time of life!"

I cannot imagine what passed between her and my uncle. But I have no doubt that for once her customary badinage was laid aside. How they talked then I do not know, for I who knew them so well had never heard that much of intimacy between them. At any rate it was a concerned and preoccupied "God in the Car" I had to deal with in the next few days, unusually Zzzz-y and given to slight impatient gestures that had nothing to do with the current conversation. And it was evident that in all directions he was finding things unusually difficult to explain.

All the intimate moments in this affair were hidden from me, but in the end my aunt triumphed. He did not so much throw as jerk over Mrs. Scrymgeour, and she did not so much make a novel of it as upset a huge pailful of attenuated and adulterated female soul upon this occasion. My aunt did not appear in that, even remotely. So that it is doubtful if the lady knew the real

causes of her abandonment. The Napoleonic hero was practically unmarried, and he threw over his lady as Napoleon threw over Josephine for a great alliance.

It was a triumph for my aunt, but it had its price. For some time it was evident things were strained between them. He gave up the lady, but he resented having to do so, deeply. She had meant more to his imagination than one could have supposed. He wouldn't for a long time "come round." He became touchy and impatient and secretive towards my aunt, and she, I noted, after an amazing check or so, stopped that stream of kindly abuse that had flowed for so long and had been so great a refreshment in their lives. They were both the poorer for its cessation, both less happy. She devoted herself more and more to Lady Grove and the humours and complications of its management. The servants took to her--as they say--she god-mothered three Susans during her rule, the coachman's, the gardener's, and the Up Hill gamekeeper's. She got together a library of old household books that were in the vein of the place. She revived the still-room, and became a great artist in jellies and elder and cowslip wine.

X

And while I neglected the development of my uncle's finances--and my own, in my scientific work and my absorbing conflict with the difficulties of flying,--his schemes grew more and more expansive and hazardous, and his spending wilder and laxer. I believe that a haunting sense of the intensifying unsoundness of his position accounts largely for his increasing irritability and his increasing secretiveness with my aunt and myself during these crowning years. He dreaded, I think, having to explain, he feared our jests might pierce unwittingly to the truth. Even in the privacy of his mind he would not face the truth. He was accumulating unrealisable securities in his safes until they hung a potential avalanche over the economic world. But his buying

became a fever, and his restless desire to keep it up with himself that he was making a triumphant progress to limitless wealth gnawed deeper and deeper. A curious feature of this time with him was his buying over and over again of similar things. His ideas seemed to run in series. Within a twelve-month he bought five new motor-cars, each more swift and powerful than its predecessor, and only the repeated prompt resignation of his chief chauffeur at each moment of danger, prevented his driving them himself. He used them more and more. He developed a passion for locomotion for its own sake.

Then he began to chafe at Lady Grove, fretted by a chance jest he had overheard at a dinner. "This house, George," he said. "It's a misfit. There's no elbow-room in it; it's choked with old memories. And I can't stand all these damned Durgans!

"That chap in the corner, George. No! the other corner! The man in a cherry-coloured coat. He watched you! He'd look silly if I stuck a poker through his Gizzard!"

"He'd look," I reflected, "much as he does now. As though he was amused."

He replaced his glasses, which had fallen at his emotion, and glared at his antagonists. "What are they? What are they all, the lot of 'em? Dead as Mutton! They just stuck in the mud. They didn't even rise to the Reformation. The old out-of-date Reformation! Move with the times!--they moved against the times.

Just a Family of Failure,--they never even tried!

"They're jes', George, exactly what I'm not. Exactly. It isn't suitable.... All this living in the Past.

"And I want a bigger place too, George. I want air and sunlight

and room to move about and more service. A house where you can get a Move on things! Zzzz. Why! it's like a discord--it jars--even to have the telephone.... There's nothing, nothing except the terrace, that's worth a Rap. It's all dark and old and dried up and full of old-fashioned things--musty old ideas--fitter for a silver-fish than a modern man.... I don't know how I got here."

He broke out into a new grievance. "That damned vicar," he complained, "thinks I ought to think myself lucky to get this place! Every time I meet him I can see him think it.... One of these days, George I'll show him what a Mod'un house is like!"

And he did.

I remember the day when he declared, as Americans say, for Crest Hill. He had come up to see my new gas plant, for I was then only just beginning to experiment with auxiliary collapsible balloons, and all the time the shine of his glasses was wandering away to the open down beyond. "Let's go back to Lady Grove over the hill," he said. "Something I want to show you. Something fine!"

It was an empty sunlit place that summer evening, sky and earth warm with sundown, and a pe-wit or so just accentuating the pleasant stillness that ends a long clear day. A beautiful peace, it was, to wreck for ever. And there was my uncle, the modern man of power, in his grey top-hat and his grey suit and his black-ribboned glasses, short, thin-legged, large-stomached, pointing and gesticulating, threatening this calm.

He began with a wave of his arm. "That's the place, George," he said. "See?"

"Eh!" I cried--for I had been thinking of remote things.

"I got it."

"Got what?"

"For a house!--a Twentieth Century house! That's the place for it!"

One of his characteristic phrases was begotten in him.

"Four-square to the winds of heaven, George!" he said. "Eh? Four-square to the winds of heaven!"

"You'll get the winds up here," I said.

"A mammoth house it ought to be, George--to suit these hills."

"Quite," I said.

"Great galleries and things--running out there and there--See? I been thinking of it, George! Looking out all this way--across the Weald. With its back to Lady Grove."

"And the morning sun in its eye."

"Like an eagle, George,--like an eagle!"

So he broached to me what speedily became the leading occupation of his culminating years, Crest Hill. But all the world has heard of that extravagant place which grew and changed its plans as it grew, and bubbled like a salted snail, and burgeoned and bulged and evermore grew. I know not what delirium of pinnacles and terraces and arcades and corridors glittered at last upon the uplands of his mind; the place, for all that its expansion was

terminated abruptly by our collapse, is wonderful enough as it stands,--that empty instinctive building of a childless man. His chief architect was a young man named Westminster, whose work he had picked out in the architecture room of the Royal Academy on account of a certain grandiose courage in it, but with him he associated from time to time a number of fellow professionals, stonemasons, sanitary engineers, painters, sculptors, scribes, metal workers, wood carvers, furniture designers, ceramic specialists, landscape gardeners, and the man who designs the arrangement and ventilation of the various new houses in the London Zoological Gardens. In addition he had his own ideas. The thing occupied his mind at all times, but it held it completely from Friday night to Monday morning. He would come down to Lady Grove on Friday night in a crowded motor-car that almost dripped architects. He didn't, however, confine himself to architects; every one was liable to an invitation to week-end and view Crest Hill, and many an eager promoter, unaware of how Napoleonically and completely my uncle had departmentalised his mind, tried to creep up to him by way of tiles and ventilators and new electric fittings. Always on Sunday mornings, unless the weather was vile, he would, so soon as breakfast and his secretaries were disposed of, visit the site with a considerable retinue, and alter and develop plans, making modifications, Zzzz-ing, giving immense new orders verbally--an unsatisfactory way, as Westminster and the contractors ultimately found.

There he stands in my memory, the symbol of this age for me, the man of luck and advertisement, the current master of the world. There he stands upon the great outward sweep of the terrace before the huge main entrance, a little figure, ridiculously disproportionate to that forty-foot arch, with the granite ball behind him--the astronomical ball, brass coopered, that represented the world, with a little adjustable tube of lenses on a gun-metal arm that focussed the sun upon just that point of the earth on which it chanced to be shining vertically. There he

stands, Napoleonicly grouped with his retinue men in tweeds and golfing-suits, a little solicitor, whose name I forget, in grey trousers and a black jacket, and Westminster in Jaeger underclothing, a floriferous tie, and peculiar brown cloth of his own.

The downland breeze flutters my uncle's coat-tails, disarranges his stiff hair, and insists on the evidence of undisciplined appetites in face and form, as he points out this or that feature in the prospect to his attentive collaborator.

Below are hundreds of feet of wheeling-planks, ditches, excavations, heaps of earth, piles of garden stone from the Wealden ridges. On either hand the walls of his irrelevant unmeaning palace rise at one time he had working in that place--disturbing the economic balance of the whole countryside by their presence--upwards of three thousand men....

So he poses for my picture amidst the raw beginnings that were never to be completed. He did the strangest things about that place, things more and more detached from any conception of financial scale, things more and more apart from sober humanity. He seemed to think himself, at last, released from any such limitations. He moved a quite considerable hill, and nearly sixty mature trees were moved with it to open his prospect eastward, moved it about two hundred feet to the south. At another time he caught a suggestion from some city restaurant and made a billiard-room roofed with plate glass beneath the waters of his ornamental lake. He furnished one wing while its roof still awaited completion. He had a swimming bath thirty feet square next to his bedroom upstairs, and to crown it all he commenced a great wall to hold all his dominions together, free from the invasion of common men. It was a ten-foot wall, glass surmounted, and had it been completed as he intended it, it would have had a total length of nearly eleven miles. Some of it

towards the last was so dishonestly built that it collapsed within a year upon its foundations, but some miles of it still stand. I never think of it now but what I think of the hundreds of eager little investors who followed his "star," whose hopes and lives, whose wives' security and children's prospects are all mixed up beyond redemption with that flaking mortar....

It is curious how many of these modern financiers of chance and bluff have ended their careers by building. It was not merely my uncle. Sooner or later they all seem to bring their luck to the test of realisation, try to make their fluid opulence coagulate out as bricks and mortar, bring moonshine into relations with a weekly wages-sheet. Then the whole fabric of confidence and imagination totters--and down they come....

When I think of that despoiled hillside, that colossal litter of bricks and mortar, and crude roads and paths, the scaffolding and sheds, the general quality of unforeseeing outrage upon the peace of nature, I am reminded of a chat I had with the vicar one bleak day after he had witnessed a glide. He talked to me of aeronautics as I stood in jersey and shorts beside my machine, fresh from alighting, and his cadaverous face failed to conceal a peculiar desolation that possessed him.

"Almost you convince me," he said, coming up to me, "against my will.... A marvellous invention! But it will take you a long time, sir, before you can emulate that perfect mechanism--the wing of a bird."

He looked at my sheds.

"You've changed the look of this valley, too," he said.

"Temporary defilements," I remarked, guessing what was in his mind.

"Of course. Things come and go. Things come and go. But--H'm. I've just been up over the hill to look at Mr. Edward Ponderevo's new house. That--that is something more permanent. A magnificent place!--in many ways. Imposing. I've never somehow brought myself to go that way before. Things are greatly advanced.... We find--the great number of strangers introduced into the villages about here by these operations, working-men chiefly, a little embarrassing. It put us out. They bring a new spirit into the place; betting--ideas--all sorts of queer notions. Our publicans like it, of course. And they come and sleep in one's outhouses--and make the place a little unsafe at nights. The other morning I couldn't sleep--a slight dyspepsia--and I looked out of the window. I was amazed to see people going by on bicycles. A silent procession. I counted ninety-seven--in the dawn. All going up to the new road for Crest Hill. Remarkable I thought it. And so I've been up to see what they were doing."

"They would have been more than remarkable thirty years ago," I said.

"Yes, indeed. Things change. We think nothing of it now at all--comparatively. And that big house--"

He raised his eyebrows. "Really stupendous! Stupendous.

"All the hillside--the old turf--cut to ribbons!"

His eye searched my face. "We've grown so accustomed to look up to Lady Grove," he said, and smiled in search of sympathy. "It shifts our centre of gravity."

"Things will readjust themselves," I lied.

He snatched at the phrase. "Of course," he said.

"They'll readjust themselves--settle down again. Must. In the old way. It's bound to come right again--a comforting thought. Yes. After all, Lady Grove itself had to be built once upon a time--was--to begin with--artificial."

His eye returned to my aeroplane. He sought to dismiss his graver preoccupations. "I should think twice," he remarked, "before I trusted myself to that concern.... But I suppose one grows accustomed to the motion."

He bade me good morning and went his way, bowed and thoughtful....

He had kept the truth from his mind a long time, but that morning it had forced its way to him with an aspect that brooked no denial that this time it was not just changes that were coming in his world, but that all his world lay open and defenceless, conquered and surrendered, doomed so far as he could see, root and branch, scale and form alike, to change.

CHAPTER THE THIRD

SOARING

I

For nearly all the time that my uncle was incubating and hatching Crest Hill I was busy in a little transverse valley between that great beginning and Lady Grove with more and more costly and ambitious experiments in aerial navigation. This work was indeed the main substance of my life through all the great time of the Tono-Bungay symphony.

I have told already how I came to devote myself to this system of inquiries, how in a sort of disgust with the common adventure of life I took up the dropped ends of my college studies, taking them up again with a man's resolution instead of a boy's ambition. From the first I did well at this work. It--was, I think, largely a case of special aptitude, of a peculiar irrelevant vein of faculty running through my mind. It is one of those things men seem to have by chance, that has little or nothing to do with their general merit, and which it is ridiculous to be either conceited or modest about. I did get through a very big mass of work in those years, working for a time with a concentrated fierceness that left little of such energy or capacity as I possess unused. I worked out a series of problems connected with the stability of bodies pitching in the air and the internal movements of the wind, and I also revolutionised one leading part at last of the theory of explosive engines. These things are to be found in the *Philosophical Transactions*, the *Mathematical Journal*, and less frequently in one or two other such publications, and they needn't detain us here. Indeed, I doubt if I could write about them here. One acquires a sort of shorthand for one's notes and mind in relation to such special work. I have never taught; nor lectured, that is to say, I have never had to express my thoughts about mechanical things in ordinary everyday language, and I doubt very much if I could do so now without extreme tedium.

My work was, to begin with, very largely theoretical. I was able to attack such early necessities of verification as arose with quite little models, using a turntable to get the motion through the air, and cane, whalebone and silk as building material. But a time came when incalculable factors crept in, factors of human capacity and factors of insufficient experimental knowledge, when one must needs guess and try. Then I had to enlarge the scale of my operations, and soon I had enlarged them very greatly. I set

to work almost concurrently on the balance and stability of gliders and upon the steering of inflated bags, the latter a particularly expensive branch of work. I was no doubt moved by something of the same spirit of lavish expenditure that was running away with my uncle in these developments. Presently my establishment above Lady Grove had grown to a painted wood chalet big enough to accommodate six men, and in which I would sometimes live for three weeks together; to a gasometer, to a motor-house, to three big corrugated-roofed sheds and lock-up houses, to a stage from which to start gliders, to a workshop and so forth. A rough road was made. We brought up gas from Cheaping and electricity from Woking, which place I found also afforded a friendly workshop for larger operations than I could manage. I had the luck also to find a man who seemed my heaven-sent second-in-command--Cothope his name was. He was a self-educated-man; he had formerly been a sapper and he was one of the best and handiest working engineers alive. Without him I do not think I could have achieved half what I have done. At times he has been not so much my assistant as my collaborator, and has followed my fortunes to this day. Other men came and went as I needed them.

I do not know how far it is possible to convey to any one who has not experienced it, the peculiar interest, the peculiar satisfaction that lies in a sustained research when one is not hampered by want of money. It is a different thing from any other sort of human effort. You are free from the exasperating conflict with your fellow-creatures altogether--at least so far as the essential work goes; that for me is its peculiar merit. Scientific truth is the remotest of mistresses; she hides in strange places, she is attained by tortuous and laborious roads, but SHE IS ALWAYS THERE! Win to her and she will not fail you; she is yours and mankind's for ever. She is reality, the one reality I have found in this strange disorder of existence. She will not sulk with you nor misunderstand you nor cheat you of

your reward upon some petty doubt. You cannot change her by advertisement or clamour, nor stifle her in vulgarities. Things grow under your hands when you serve her, things that are permanent as nothing else is permanent in the whole life of man. That, I think, is the peculiar satisfaction of science and its enduring reward....

The taking up of experimental work produced a great change in my personal habits. I have told how already once in my life at Wimblehurst I had a period of discipline and continuous effort, and how, when I came to South Kensington, I became demoralised by the immense effect of London, by its innumerable imperative demands upon my attention and curiosity. And I parted with much of my personal pride when I gave up science for the development of Tono-Bungay. But my poverty kept me abstinent and my youthful romanticism kept me chaste until my married life was well under way. Then in all directions I relaxed. I did a large amount of work, but I never troubled to think whether it was my maximum nor whether the moods and indolences that came to me at times were avoidable things. With the coming of plenty I ate abundantly and foolishly, drank freely and followed my impulses more and more carelessly. I felt no reason why I should do anything else. Never at any point did I use myself to the edge of my capacity. The emotional crisis of my divorce did not produce any immediate change in these matters of personal discipline. I found some difficulty at first in concentrating my mind upon scientific work, it was so much more exacting than business, but I got over that difficulty by smoking. I became an inordinate cigar smoker; it gave me moods of profound depression, but I treated these usually by the homeopathic method,--by lighting another cigar. I didn't realise at all how loose my moral and nervous fibre had become until I reached the practical side of my investigations and was face to face with the necessity of finding out just how it felt to use a glider and just what a man could do with one.

I got into this relaxed habit of living in spite of very real tendencies in my nature towards discipline. I've never been in love with self-indulgence. That philosophy of the loose lip and the lax paunch is one for which I've always had an instinctive distrust. I like bare things, stripped things, plain, austere and continent things, fine lines and cold colours. But in these plethoric times when there is too much coarse stuff for everybody and the struggle for life takes the form of competitive advertisement and the effort to fill your neighbour's eye, when there is no urgent demand either for personal courage, sound nerves or stark beauty, we find ourselves by accident. Always before these times the bulk of the people did not over-eat themselves, because they couldn't, whether they wanted to do so or not, and all but a very few were kept "fit" by unavoidable exercise and personal danger. Now, if only he pitch his standard low enough and keep free from pride, almost any one can achieve a sort of excess. You can go through contemporary life fudging and evading, indulging and slacking, never really hungry nor frightened nor passionately stirred, your highest moment a mere sentimental orgasm, and your first real contact with primary and elemental necessities, the sweat of your death-bed. So I think it was with my uncle; so, very nearly, it was with me.

But the glider brought me up smartly. I had to find out how these things went down the air, and the only way to find out is to go down with one. And for a time I wouldn't face it.

There is something impersonal about a book, I suppose. At any rate I find myself able to write down here just the confession I've never been able to make to any one face to face, the frightful trouble it was to me to bring myself to do what I suppose every other coloured boy in the West Indies could do without turning a hair, and that is to fling myself off for my first soar down the wind. The first trial was bound to be the worst; it was an experiment I made with life, and the chance of

death or injury was, I supposed, about equal to the chance of success. I believed that with a dawn-like lucidity. I had begun with a glider that I imagined was on the lines of the Wright brothers' aeroplane, but I could not be sure. It might turn over. I might upset it. It might burrow its nose at the end and smash itself and me. The conditions of the flight necessitated alert attention; it wasn't a thing to be done by jumping off and shutting one's eyes or getting angry or drunk to do it. One had to use one's weight to balance. And when at last I did it it was horrible--for ten seconds. For ten seconds or so, as I swept down the air flattened on my infernal framework and with the wind in my eyes, the rush of the ground beneath me filled me with sick and helpless terror; I felt as though some violent oscillatory current was throbbing in brain and back bone, and I groaned aloud. I set my teeth and groaned. It was a groan wrung out of me in spite of myself. My sensations of terror swooped to a climax. And then, you know, they ended!

Suddenly my terror was over and done with. I was soaring through the air right way up, steadily, and no mischance had happened. I felt intensely alive and my nerves were strung like a bow. I shifted a limb, swerved and shouted between fear and triumph as I recovered from the swerve and heeled the other way and steadied myself.

I thought I was going to hit a rook that was flying athwart me,--it was queer with what projectile silence that jumped upon me out of nothingness, and I yelled helplessly, "Get out of the way!" The bird doubled itself up like a partly inverted V, flapped, went up to the right abruptly and vanished from my circle of interest. Then I saw the shadow of my aeroplane keeping a fixed distance before me and very steady, and the turf as it seemed streaming out behind it. The turf!--it wasn't after all streaming so impossibly fast.

When I came gliding down to the safe spread of level green I had chosen, I was as cool and ready as a city clerk who drops off an omnibus in motion, and I had learnt much more than soaring. I tilted up her nose at the right moment, levelled again and grounded like a snowflake on a windless day. I lay flat for an instant and then knelt up and got on my feet atremble, but very satisfied with myself. Cothope was running down the hill to me.

...

But from that day I went into training, and I kept myself in training for many months. I had delayed my experiments for very nearly six weeks on various excuses because of my dread of this first flight, because of the slackness of body and spirit that had come to me with the business life. The shame of that cowardice spurred me none the less because it was probably altogether my own secret. I felt that Cothope at any rate might suspect. Well,--he shouldn't suspect again.

It is curious that I remember that shame and self accusation and its consequences far more distinctly than I recall the weeks of vacillation before I soared. For a time I went altogether without alcohol, I stopped smoking altogether and ate very sparingly, and every day I did something that called a little upon my nerves and muscles. I soared as frequently as I could. I substituted a motor-bicycle for the London train and took my chances in the southward traffic, and I even tried what thrills were to be got upon a horse. But they put me on made horses, and I conceived a perhaps unworthy contempt for the certitudes of equestrian exercise in comparison with the adventures of mechanism. Also I walked along the high wall at the back of Lady Grove garden, and at last brought myself to stride the gap where the gate comes. If I didn't altogether get rid of a certain giddy instinct by such exercises, at least I trained my will until it didn't matter. And soon I no longer dreaded flight, but was eager to go higher into the air, and I came to esteem soaring

upon a glider, that even over the deepest dip in the ground had barely forty feet of fall beneath it, a mere mockery of what flight might be. I began to dream of the keener freshness in the air high above the beechwoods, and it was rather to satisfy that desire than as any legitimate development of my proper work that presently I turned a part of my energies and the bulk of my private income to the problem of the navigable balloon.

II

I had gone far beyond that initial stage; I had had two smashes and a broken rib which my aunt nursed with great energy, and was getting some reputation in the aeronautic world when, suddenly, as though she had never really left it, the Honourable Beatrice Normandy, dark-eyed, and with the old disorderly wave of the hair from her brow, came back into my life. She came riding down a grass path in the thickets below Lady Grove, perched up on a huge black horse, and the old Earl of Carnaby and Archie Garvell, her half-brother, were with her. My uncle had been bothering me about the Crest Hill hot-water pipes, and we were returning by a path transverse to theirs and came out upon them suddenly. Old Carnaby was trespassing on our ground, and so he hailed us in a friendly fashion and pulled up to talk to us.

I didn't note Beatrice at all at first. I was interested in Lord Carnaby, that remarkable vestige of his own brilliant youth. I had heard of him, but never seen him. For a man of sixty-five who had sinned all the sins, so they said, and laid waste the most magnificent political debut of any man of his generation, he seemed to me to be looking remarkably fit and fresh. He was a lean little man with grey-blue eyes in his brown face, and his cracked voice was the worst thing in his effect.

"Hope you don't mind us coming this way, Ponderevo," he cried; and my uncle, who was sometimes a little too general and generous

with titles, answered, "Not at all, my lord, not at all! Glad you make use of it!"

"You're building a great place over the hill," said Carnaby.

"Thought I'd make a show for once," said my uncle. "It looks big because it's spread out for the sun."

"Air and sunlight," said the earl. "You can't have too much of them. But before our time they used to build for shelter and water and the high road."

Then I discovered that the silent figure behind the earl was Beatrice.

I'd forgotten her sufficiently to think for a moment that she hadn't changed at all since she had watched me from behind the skirts of Lady Drew. She was looking at me, and her dainty brow under her broad brimmed hat--she was wearing a grey hat and loose unbuttoned coat--was knit with perplexity, trying, I suppose, to remember where she had seen me before. Her shaded eyes met mine with that mute question....

It seemed incredible to me she didn't remember.

"Well," said the earl and touched his horse.

Garvell was patting the neck of his horse, which was inclined to fidget, and disregarding me. He nodded over his shoulder and followed. His movement seemed to release a train of memories in her. She glanced suddenly at him and then back at me with a flash of recognition that warmed instantly to a faint smile. She hesitated as if to speak to me, smiled broadly and understandingly and turned to follow the others. All three broke into a canter and she did not look back. I stood for a second or

so at the crossing of the lanes, watching her recede, and then became aware that my uncle was already some paces off and talking over his shoulder in the belief that I was close behind. I turned about and strode to overtake him. My mind was full of Beatrice and this surprise. I remembered her simply as a Normandy. I'd clean forgotten that Garvell was the son and she the step-daughter of our neighbour, Lady Osprey. Indeed, I'd probably forgotten at that time that we had Lady Osprey as a neighbour. There was no reason at all for remembering it. It was amazing to find her in this Surrey countryside, when I'd never thought of her as living anywhere in the world but at Bladesover Park, near forty miles and twenty years away. She was so alive--so unchanged! The same quick warm blood was in her cheeks. It seemed only yesterday that we had kissed among the bracken stems....

"Eh?" I said.

"I say he's good stuff," said my uncle. "You can say what you like against the aristocracy, George; Lord Carnaby's rattling good stuff. There's a sort of Savoir Faire, something--it's an old-fashioned phrase, George, but a good one there's a Bong-Tong.... It's like the Oxford turf, George, you can't grow it in a year. I wonder how they do it. It's living always on a Scale, George. It's being there from the beginning."...

"She might," I said to myself, "be a picture by Romney come alive!"

"They tell all these stories about him," said my uncle, "but what do they all amount to?"

"Gods!" I said to myself; "but why have I forgotten for so long? Those queer little brows of hers, the touch of mischief in her eyes--the way she breaks into a smile!"

"I don't blame him," said my uncle. "Mostly it's imagination. That and leisure, George. When I was a young man I was kept pretty busy. So were you. Even then--!"

What puzzled me more particularly was the queer trick of my memory that had never recalled anything vital of Beatrice whatever when I met Garvell again that had, indeed, recalled nothing except a boyish antagonism and our fight. Now when my senses were full of her, it seemed incredible that I could ever have forgotten....

III

"Oh, Crikey!" said my aunt, reading a letter behind her coffee-machine. "HERE'S a young woman, George!"

We were breakfasting together in the big window bay at Lady Grove that looks upon the iris beds; my uncle was in London.

I sounded an interrogative note and decapitated an egg.

"Who's Beatrice Normandy?" asked my aunt. "I've not heard of her before."

"She the young woman?"

"Yes. Says she knows you. I'm no hand at old etiquette, George, but her line is a bit unusual. Practically she says she's going to make her mother--"

"Eh? Step-mother, isn't it?"

"You seem to know a lot about her. She says 'mother'--Lady Osprey. They're to call on me, anyhow, next Wednesday week at

four, and there's got to be you for tea."

"Eh?"

"You--for tea.

"H'm. She had rather--force of character. When I knew her before."

I became aware of my aunt's head sticking out obliquely from behind the coffee-machine and regarding me with wide blue curiosity. I met her gaze for a moment, flinched, coloured, and laughed.

"I've known her longer than I've known you," I said, and explained at length.

My aunt kept her eye on me over and round the coffee-machine as I did so. She was greatly interested, and asked several elucidatory questions.

"Why didn't you tell me the day you saw her? You've had her on your mind for a week," she said.

"It IS odd I didn't tell you," I admitted.

"You thought I'd get a Down on her," said my aunt conclusively. "That's what you thought" and opened the rest of her letters.

The two ladies came in a pony-carriage with conspicuous punctuality, and I had the unusual experience of seeing my aunt entertaining callers. We had tea upon the terrace under the cedar, but old Lady Osprey, being an embittered Protestant, had never before seen the inside of the house, and we made a sort of tour of inspection that reminded me of my first visit to the

place. In spite of my preoccupation with Beatrice, I stored a queer little memory of the contrast between the two other women; my aunt, tall, slender and awkward, in a simple blue homekeeping dress, an omnivorous reader and a very authentic wit, and the lady of pedigree, short and plump, dressed with Victorian fussiness, living at the intellectual level of palmistry and genteel fiction, pink in the face and generally flustered by a sense of my aunt's social strangeness and disposed under the circumstances to behave rather like an imitation of the more queenly moments of her own cook. The one seemed made of whalebone, the other of dough. My aunt was nervous, partly through the intrinsic difficulty of handling the lady and partly because of her passionate desire to watch Beatrice and me, and her nervousness took a common form with her, a wider clumsiness of gesture and an exacerbation of her habitual oddity of phrase which did much to deepen the pink perplexity of the lady of title. For instance, I heard my aunt admit that one of the Stuart Durgan ladies did look a bit "balmy on the crumpet"; she described the knights of the age of chivalry as "korvorting about on the off-chance of a dragon"; she explained she was "always old mucking about the garden," and instead of offering me a Garibaldi biscuit, she asked me with that faint lisp of hers, to "have some squashed flies, George." I felt convinced Lady Osprey would describe her as "a most eccentric person" on the very first opportunity;-- "a most eccentric person." One could see her, as people say, "shaping" for that.

Beatrice was dressed very quietly in brown, with a simple but courageous broad-brimmed hat, and an unexpected quality of being grown-up and responsible. She guided her step-mother through the first encounter, scrutinised my aunt, and got us all well in movement through the house, and then she turned her attention to me with a quick and half-confident smile.

"We haven't met," she said, "since--"

"It was in the Warren."

"Of course," she said, "the Warren! I remembered it all except just the name.... I was eight."

Her smiling eyes insisted on my memories being thorough. I looked up and met them squarely, a little at a loss for what I should say.

"I gave you away pretty completely," she said, meditating upon my face. "And afterwards I gave way Archie."

She turned her face away from the others, and her voice fell ever so little.

"They gave him a licking for telling lies!" she said, as though that was a pleasant memory. "And when it was all over I went to our wigwam. You remember the wigwam?"

"Out in the West Wood?"

"Yes--and cried--for all the evil I had done you, I suppose.... I've often thought of it since."...

Lady Osprey stopped for us to overtake her. "My dear!" she said to Beatrice. "Such a beautiful gallery!" Then she stared very hard at me, puzzled in the most naked fashion to understand who I might be.

"People say the oak staircase is rather good," said my aunt, and led the way.

Lady Osprey, with her skirts gathered for the ascent to the gallery and her hand on the newel, turned and addressed a look

full of meaning overflowing indeed with meanings--at her charge. The chief meaning no doubt was caution about myself, but much of it was just meaning at large. I chanced to catch the response in a mirror and detected Beatrice with her nose wrinkled into a swift and entirely diabolical grimace. Lady Osprey became a deeper shade of pink and speechless with indignation--it was evident she disavowed all further responsibility, as she followed my aunt upstairs.

"It's dark, but there's a sort of dignity," said Beatrice very distinctly, regarding the hall with serene tranquillity, and allowing the unwilling feet on the stairs to widen their distance from us. She stood a step up, so that she looked down a little upon me and over me at the old hall.

She turned upon me abruptly when she thought her step-mother was beyond ear-shot.

"But how did you get here?" she asked.

"Here?"

"All this." She indicated space and leisure by a wave of the hand at hall and tall windows and sunlit terrace. "Weren't you the housekeeper's son?"

"I've adventured. My uncle has become--a great financier. He used to be a little chemist about twenty miles from Bladesover. We're promoters now, amalgamators, big people on the new model."

"I understand." She regarded me with interested eyes, visibly thinking me out.

"And you recognised me?" I asked.

"After a second or so. I saw you recognised me. I couldn't place you, but I knew I knew you. Then Archie being there helped me to remember."

"I'm glad to meet again," I ventured. "I'd never forgotten you."

"One doesn't forget those childish things."

We regarded one another for a moment with a curiously easy and confident satisfaction in coming together again. I can't explain our ready zest in one another. The thing was so. We pleased each other, we had no doubt in our minds that we pleased each other. From the first we were at our ease with one another. "So picturesque, so very picturesque," came a voice from above, and then: "Bee-atrice!"

"I've a hundred things I want to know about you," she said with an easy intimacy, as we went up the winding steps....

As the four of us sat at tea together under the cedar on the terrace she asked questions about my aeronautics. My aunt helped with a word or so about my broken ribs. Lady Osprey evidently regarded flying as a most undesirable and improper topic--a blasphemous intrusion upon the angels. "It isn't flying," I explained. "We don't fly yet."

"You never will," she said compactly. "You never will."

"Well," I said, "we do what we can."

The little lady lifted a small gloved hand and indicated a height of about four feet from the ground. "Thus far," she said, "thus far--AND NO FARTHER! No!"

She became emphatically pink. "NO," she said again quite

conclusively, and coughed shortly. "Thank you," she said to her ninth or tenth cake. Beatrice burst into cheerful laughter with her eye on me. I was lying on the turf, and this perhaps caused a slight confusion about the primordial curse in Lady Osprey's mind.

"Upon his belly shall he go," she said with quiet distinctness, "all the days of his life."

After which we talked no more of aeronautics.

Beatrice sat bunched together in a chair and regarded me with exactly the same scrutiny, I thought, the same adventurous aggression, that I had faced long ago at the tea-table in my mother's room. She was amazingly like that little Princess of my Bladesover memories, the wilful misbehaviours of her hair seemed the same--her voice; things one would have expected to be changed altogether. She formed her plans in the same quick way, and acted with the same irresponsible decision.

She stood up abruptly.

"What is there beyond the terrace?" she said, and found me promptly beside her.

I invented a view for her.

At the further corner from the cedar she perched herself up upon the parapet and achieved an air of comfort among the lichenous stones. "Now tell me," she said, "all about yourself. Tell me about yourself; I know such duffers of men! They all do the same things. How did you get--here? All my men WERE here. They couldn't have got here if they hadn't been here always. They wouldn't have thought it right. You've climbed."

"If it's climbing," I said.

She went off at a tangent. "It's--I don't know if you'll understand--interesting to meet you again. I've remembered you. I don't know why, but I have. I've used you as a sort of lay figure--when I've told myself stories. But you've always been rather stiff and difficult in my stories--in ready-made clothes--a Labour Member or a Bradlaugh, or something like that. You're not like that a bit. And yet you ARE!"

She looked at me. "Was it much of a fight? They make out it is.

I don't know why."

"I was shot up here by an accident," I said. "There was no fight at all. Except to keep honest, perhaps and I made no great figure in that. I and my uncle mixed a medicine and it blew us up. No merit in that! But you've been here all the time. Tell me what you have done first."

"One thing we didn't do." She meditated for a moment.

"What?" said I.

"Produce a little half-brother for Bladesover. So it went to the Phillbrick gang. And they let it! And I and my step-mother--we let, too. And live in a little house."

She nodded her head vaguely over her shoulder and turned to me again. "Well, suppose it was an accident. Here you are! Now you're here, what are you going to do? You're young. Is it to be Parliament? heard some men the other day talking about you. Before I knew you were you. They said that was what you ought to do." ...

She put me through my intentions with a close and vital curiosity. It was just as she had tried to imagine me a soldier and place me years ago. She made me feel more planless and incidental than ever. "You want to make a flying-machine," she pursued, "and when you fly? What then? Would it be for fighting?"

I told her something of my experimental work. She had never heard of the soaring aeroplane, and was excited by the thought, and keen to hear about it. She had thought all the work so far had been a mere projecting of impossible machines. For her Pilcher and Lilienthal had died in vain. She did not know such men had lived in the world.

"But that's dangerous!" she said, with a note of discovery.

"Oh!--it's dangerous."

"Bee-atrice!" Lady Osprey called.

Beatrice dropped from the wall to her feet.

"Where do you do this soaring?"

"Beyond the high Barrows. East of Crest Hill and the wood."

"Do you mind people coming to see?"

"Whenever you please. Only let me know"

"I'll take my chance some day. Some day soon." She looked at me thoughtfully, smiled, and our talk was at an end.

IV

All my later work in aeronautics is associated in my memory with the quality of Beatrice, with her incidental presence, with things she said and did and things I thought of that had reference to her.

In the spring of that year I had got to a flying machine that lacked nothing but longitudinal stability. My model flew like a bird for fifty or a hundred yards or so, and then either dived and broke its nose or, what was commoner, reared up, slid back and smashed its propeller. The rhythm of the pitching puzzled me. I felt it must obey some laws not yet quite clearly stated. I became therefore a student of theory and literature for a time; I hit upon the string of considerations that led me to what is called Ponderevo's Principle and my F.R.S., and I worked this out in three long papers. Meanwhile I made a lot of turn-table and glider models and started in upon an idea of combining gas-bags and gliders. Balloon work was new to me. I had made one or two ascents in the balloons of the Aero Club before I started my gasometer and the balloon shed and gave Cothope a couple of months with Sir Peter Rumchase. My uncle found part of the money for these developments; he was growing interested and competitive in this business because of Lord Boom's prize and the amount of reclame involved, and it was at his request that I named my first navigable balloon Lord Roberts Alpha.

Lord Roberts A very nearly terminated all my investigations. My idea both in this and its more successful and famous younger brother, Lord Roberts B, was to utilise the idea of a contractile balloon with a rigid flat base, a balloon shaped rather like an inverted boat that should almost support the apparatus, but not quite. The gas-bag was of the chambered sort used for these long forms, and not with an internal balloonette. The trouble was to make the thing contractile. This I sought to do by fixing a long, fine-meshed silk net over it that was fastened to be rolled up on two longitudinal rods. Practically I contracted my

sausage gas-bag by netting it down. The ends were too complex for me to describe here, but I thought them out elaborately and they were very carefully planned. Lord Roberts A was furnished with a single big screw forward, and there was a rudder aft. The engine was the first one to be, so to speak, right in the plane of the gas-bag. I lay immediately under the balloon on a sort of glider framework, far away from either engine or rudder, controlling them by wire-pulls constructed on the principle of the well-known Bowden brake of the cyclist.

But Lord Roberts A has been pretty exhaustively figured and described in various aeronautical publications. The unforeseen defect was the badness of the work in the silk netting. It tore aft as soon as I began to contract the balloon, and the last two segments immediately bulged through the hole, exactly as an inner tube will bulge through the ruptured outer cover of a pneumatic tire, and then the sharp edge of the torn net cut the oiled-silk of the distended last segment along a weak seam and burst it with a loud report.

Up to that point the whole thing had been going on extremely well. As a navigable balloon and before I contracted it, the Lord Roberts A was an unqualified success. It had run out of the shed admirably at nine or ten miles an hour or more, and although there was a gentle southwester blowing, it had gone up and turned and faced it as well as any craft of the sort I have ever seen.

I lay in my customary glider position, horizontal and face downward, and the invisibility of all the machinery gave an extraordinary effect of independent levitation. Only by looking up, as it were, and turning my head back could I see the flat aeroplane bottom of the balloon and the rapid successive passages, swish, swish, swish of the vans of the propeller. I made a wide circle over Lady Grove and Duffield and out towards Effingham and came back quite successfully to the starting-point.

Down below in the October sunlight were my sheds and the little group that had been summoned to witness the start, their faces craned upward and most of them scrutinising my expression through field-glasses. I could see Carnaby and Beatrice on horseback, and two girls I did not know with them; Cothope and three or four workmen I employed; my aunt and Mrs. Levinstein, who was staying with her, on foot, and Dimmock, the veterinary surgeon, and one or two others. My shadow moved a little to the north of them like the shadow of a fish. At Lady Grove the servants were out on the lawn, and the Duffield school playground swarmed with children too indifferent to aeronautics to cease their playing. But in the Crest Hill direction--the place looked extraordinarily squat and ugly from above--there were knots and strings of staring workmen everywhere--not one of them working, but all agape. (But now I write it, it occurs to me that perhaps it was their dinner hour; it was certainly near twelve.) I hung for a moment or so enjoying the soar, then turned about to face a clear stretch of open down, let the engine out to full speed and set my rollers at work rolling in the net, and so tightening the gas-bags. Instantly the pace quickened with the diminished resistance...

In that moment before the bang I think I must have been really flying. Before the net ripped, just in the instant when my balloon was at its systole, the whole apparatus was, I am convinced, heavier than air. That, however, is a claim that has been disputed, and in any case this sort of priority is a very trivial thing.

Then came a sudden retardation, instantly followed by an inexpressibly disconcerting tilt downward of the machine. That I still recall with horror. I couldn't see what was happening at all and I couldn't imagine. It was a mysterious, inexplicable dive. The thing, it seemed, without rhyme or reason, was kicking

up its heels in the air. The bang followed immediately, and I perceived I was falling rapidly.

I was too much taken by surprise to think of the proper cause of the report. I don't even know what I made of it. I was obsessed, I suppose, by that perpetual dread of the modern aeronaut, a flash between engine and balloon. Yet obviously I wasn't wrapped in flames. I ought to have realised instantly it wasn't that. I did, at any rate, whatever other impressions there were, release the winding of the outer net and let the balloon expand again, and that no doubt did something to break my fall. I don't remember doing that. Indeed, all I do remember is the giddy effect upon the landscape of falling swiftly upon it down a flat spiral, the hurried rush of fields and trees and cottages on my left shoulder and the overhung feeling as if the whole apparatus was pressing down the top of my head. I didn't stop or attempt to stop the screw. That was going on, swish, swish, swish all the time.

Cothope really knows more about the fall than I do. He describes the easterly start, the tilt, and the appearance and bursting of a sort of bladder aft. Then down I swooped, very swiftly, but not nearly so steeply as I imagined I was doing. "Fifteen or twenty degrees," said Cothope, "to be exact." From him it was that I learnt that I let the nets loose again, and so arrested my fall. He thinks I was more in control of myself than I remember.

But I do not see why I should have forgotten so excellent a resolution. His impression is that I was really steering and trying to drop into the Farthing Down beeches. "You hit the trees," he said, "and the whole affair stood on its nose among them, and then very slowly crumpled up. I saw you'd been jerked out, as I thought, and I didn't stay for more. I rushed for my bicycle."

As a matter of fact, it was purely accidental that I came down in the woods. I am reasonably certain that I had no more control then than a thing in a parcel. I remember I felt a sort of wincing, "Now it comes!" as the trees rushed up to me. If I remember that, I should remember steering. Then the propeller smashed, everything stopped with a jerk, and I was falling into a mass of yellowing leaves, and Lord Roberts A, so it seemed to me, was going back into the sky.

I felt twigs and things hit me in the face, but I didn't feel injured at the time; I clutched at things that broke, tumbled through a froth of green and yellow into a shadowy world of great bark-covered arms, and there, snatching wildly, got a grip on a fair round branch, and hung.

I became intensely alert and clear-headed. I held by that branch for a moment and then looked about me, and caught at another, and then found myself holding to a practicable fork. I swung forward to that and got a leg around it below its junction, and so was able presently to clamber down, climbing very coolly and deliberately. I dropped ten feet or so from the lowest branch and fell on my feet. "That's all right," I said, and stared up through the tree to see what I could of the deflated and crumpled remains that had once been Lord Roberts A festooned on the branches it had broken. "Gods!" I said, "what a tumble!"

I wiped something that trickled from my face and was shocked to see my hand covered with blood. I looked at myself and saw what seemed to me an astonishing quantity of blood running down my arm and shoulder. I perceived my mouth was full of blood. It's a queer moment when one realises one is hurt, and perhaps badly hurt, and has still to discover just how far one is hurt. I explored my face carefully and found unfamiliar contours on the left side. The broken end of a branch had driven right through my cheek, damaging my cheek and teeth and gums, and left a

splinter of itself stuck, like an explorer's farthest-point flag, in the upper maxillary. That and a sprained wrist were all my damage. But I bled as though I had been chopped to pieces, and it seemed to me that my face had been driven in. I can't describe just the horrible disgust I felt at that.

"This blood must be stopped, anyhow," I said, thickheadedly.

"I wonder where there's a spider's web"--an odd twist for my mind to take. But it was the only treatment that occurred to me.

I must have conceived some idea of going home unaided, because I was thirty yards from the tree before I dropped.

Then a kind of black disc appeared in the middle of the world and rushed out to the edge of things and blotted them out. I don't remember falling down. I fainted from excitement, disgust at my injury and loss of blood, and lay there until Cothope found me.

He was the first to find me, scorching as he did over the downland turf, and making a wide course to get the Carnaby plantations at their narrowest. Then presently, while he was trying to apply the methodical teachings of the St. John's Ambulance classes to a rather abnormal case, Beatrice came galloping through the trees full-tilt, with Lord Carnaby hard behind her, and she was hatless, muddy from a fall, and white as death. "And cool as a cucumber, too," said Cothope, turning it over in his mind as he told me.

("They never seem quite to have their heads, and never seem quite to lose 'em," said Cothope, generalising about the sex.)

Also he witnessed she acted with remarkable decision. The question was whether I should be taken to the house her step-mother occupied at Bedley Corner, the Carnaby dower house,

or down to Carnaby's place at Easting. Beatrice had no doubt in the matter, for she meant to nurse me. Carnaby didn't seem to want that to happen. "She WOULD have it wasn't half so far," said Cothope. "She faced us out...."

"I hate to be faced out of my opinion, so I've taken a pedometer over it since. It's exactly forty-three yards further.

"Lord Carnaby looked at her pretty straight," said Cothope, finishing the picture; "and then he give in."

V

But my story has made a jump from June to October, and during that time my relations with Beatrice and the countryside that was her setting had developed in many directions. She came and went, moving in an orbit for which I had no data, going to London and Paris, into Wales and Northampton, while her stepmother, on some independent system of her own, also vanished and recurred intermittently. At home they obeyed the rule of an inflexible old maid, Charlotte, and Beatrice exercised all the rights of proprietorship in Carnaby's extensive stables. Her interest in me was from the first undisguised. She found her way to my worksheds and developed rapidly, in spite of the sincere discouragement of Cothope, into a keen amateur of aeronautics. She would come sometimes in the morning, sometimes in the afternoon, sometimes afoot with an Irish terrier, sometimes riding. She would come for three or four days every day, vanish for a fortnight or three weeks, return.

It was not long before I came to look for her. From the first I found her immensely interesting. To me she was a new feminine type altogether--I have made it plain, I think, how limited was my knowledge of women. But she made me not simply interested in her, but in myself. She became for me something that greatly

changes a man's world. How shall I put it? She became an audience. Since I've emerged from the emotional developments of the affair I have thought it out in a hundred aspects, and it does seem to me that this way in which men and women make audiences for one another is a curiously influential force in their lives. For some it seems an audience is a vital necessity, they seek audiences as creatures seek food; others again, my uncle among them, can play to an imaginary audience. I, I think, have lived and can live without one. In my adolescence I was my own audience and my own court of honour. And to have an audience in one's mind is to play a part, to become self-conscious and dramatic. For many years I had been self-forgetful and scientific. I had lived for work and impersonal interests until I found scrutiny, applause and expectation in Beatrice's eyes. Then I began to live for the effect I imagined I made upon her, to make that very soon the principal value in my life. I played to her. I did things for the look of them. I began to dream more and more of beautiful situations and fine poses and groupings with her and for her.

I put these things down because they puzzle me. I think I was in love with Beatrice, as being in love is usually understood; but it was quite a different state altogether from my passionate hunger for Marion, or my keen, sensuous desire for and pleasure in Effie. These were selfish, sincere things, fundamental and instinctive, as sincere as the leap of a tiger. But until matters drew to a crisis with Beatrice, there was an immense imaginative insurgence of a quite different quality. I am setting down here very gravely, and perhaps absurdly, what are no doubt elementary commonplaces for innumerable people. This love that grew up between Beatrice and myself was, I think--I put it quite tentatively and rather curiously--romantic love. That unfortunate and truncated affair of my uncle and the Scrymgeour lady was really of the same stuff, if a little different in quality. I have to admit that. The factor of audience was of

primary importance in either else.

Its effect upon me was to make me in many respects adolescent again. It made me keener upon the point of honour, and anxious and eager to do high and splendid things, and in particular, brave things. So far it ennobled and upheld me. But it did also push me towards vulgar and showy things. At bottom it was disingenuous; it gave my life the quality of stage scenery, with one side to the audience, another side that wasn't meant to show, and an economy of substance. It certainly robbed my work of high patience and quality. I cut down the toil of research in my eagerness and her eagerness for fine flourishes in the air, flights that would tell. I shirked the longer road.

And it robbed me, too, of any fine perception of absurdity.

Yet that was not everything in our relationship. The elemental thing was there also. It came in very suddenly.

It was one day in the summer, though I do not now recall without reference to my experimental memoranda whether it was in July or August. I was working with a new and more bird-like aeroplane with wing curvatures studied from Lilienthal, Pilcher and Phillips, that I thought would give a different rhythm for the pitching oscillations than anything I'd had before. I was soaring my long course from the framework on the old barrow by my sheds down to Tinker's Corner. It is a clear stretch of downland, except for two or three thickets of box and thorn to the right of my course; one transverse trough, in which there is bush and a small rabbit warren, comes in from the east. I had started, and was very intent on the peculiar long swoop with which any new arrangement flew. Then, without any sort of notice, right ahead of me appeared Beatrice, riding towards Tinker's Corner to waylay and talk to me. She looked round over her shoulder, saw me coming, touched her horse to a gallop, and

then the brute bolted right into the path of my machine.

There was a queer moment of doubt whether we shouldn't all smash together. I had to make up my mind very quickly whether I would pitch-up and drop backward at once and take my chance of falling undamaged--a poor chance it would have been--in order to avoid any risk to her, or whether I would lift against the wind and soar right over her. This latter I did. She had already got her horse in hand when I came up to her. Her woman's body lay along his neck, and she glanced up as I, with wings aspread, and every nerve in a state of tension, swept over her.

Then I had landed, and was going back to where her horse stood still and trembling.

We exchanged no greetings. She slid from her saddle into my arms, and for one instant I held her.

"Those great wings," she said, and that was all.

She lay in my arms, and I thought for a moment she had fainted.

"Very near a nasty accident," said Cothope, coming up and regarding our grouping with disfavour. He took her horse by the bridle. "Very dangerous thing coming across us like that."

Beatrice disengaged herself from me, stood for a moment trembling, and then sat down on the turf "I'll just sit down for a moment," she said.

"Oh!" she said.

She covered her face with her hands, while Cothope looked at her with an expression between suspicion and impatience.

For some moments nobody moved. Then Cothope remarked that perhaps he'd better get her water.

As for me, I was filled with a new outrageous idea, begotten I scarcely know how from this incident, with its instant contacts and swift emotions, and that was that I must make love to and possess Beatrice. I see no particular reason why that thought should have come to me in that moment, but it did. I do not believe that before then I had thought of our relations in such terms at all. Suddenly, as I remember it, the factor of passion came. She crouched there, and I stood over her, and neither of us said a word. But it was just as though something had been shouted from the sky.

Cothope had gone twenty paces perhaps when she uncovered her face. "I shan't want any water," she said. "Call him back."

VI

After that the spirit of our relations changed. The old ease had gone. She came to me less frequently, and when she came she would have some one with her, usually old Carnaby, and he would do the bulk of the talking. All through September she was away. When we were alone together there was a curious constraint. We became clouds of inexpressible feeling towards one another; we could think of nothing that was not too momentous for words.

Then came the smash of Lord Roberts A, and I found myself with a bandaged face in a bedroom in the Bedley Corner dower-house with Beatrice presiding over an inefficient nurse, Lady Osprey very pink and shocked in the background, and my aunt jealously intervening.

My injuries were much more showy than serious, and I could have been taken to Lady Grove next day, but Beatrice would not permit

that, and kept me at Bedley Corner three clear days. In the afternoon of the second day she became extremely solicitous for the proper aeration of the nurse, packed her off for an hour in a brisk rain, and sat by me alone.

I asked her to marry me.

All the while I must admit it was not a situation that lent itself to eloquence. I lay on my back and talked through bandages, and with some little difficulty, for my tongue and mouth had swollen. But I was feverish and in pain, and the emotional suspense I had been in so long with regard to her became now an unendurable impatience.

"Comfortable?" she asked.

"Yes."

"Shall I read to you?"

"No. I want to talk."

"You can't. I'd better talk to you."

"No," I said, "I want to talk to you."

She came and stood by my bedside and looked me in the eyes. "I don't--I don't want you to talk to me," she said. "I thought you couldn't talk."

"I get few chances--of you."

"You'd better not talk. Don't talk now. Let me chatter instead.

You ought not to talk."

"It isn't much" I said.

"I'd rather you didn't."

"I'm not going to be disfigured," I said. "Only a scar."

"Oh!" she said, as if she had expected something quite different. "Did you think you'd become a sort of gargoyle?"

"L'Homme qui Rit!--I didn't know. But that's all right. Jolly flowers those are!"

"Michaelmas daisies," she said. "I'm glad you'r not disfigured, and those are perennial sunflowers. Do you know no flowers at all? When I saw you on the ground I certainly thought you were dead. You ought to have been, by all the rules of the game."

She said some other things, but I was thinking of my next move.

"Are we social equals?" I said abruptly.

She stared at me. "Queer question," she said.

"But are we?"

"H'm. Difficult to say. But why do you ask? Is the daughter of a courtesy Baron who died--of general disreputableness, I believe--before his father--? I give it up. Does it matter?"

"No. My mind is confused. I want to know if you will marry me."

She whitened and said nothing. I suddenly felt I must plead with her. "Damn these bandages!" I said, breaking into ineffectual febrile rage.

She roused herself to her duties as nurse. "What are you doing? Why are you trying to sit up? Sit down! Don't touch your bandages. I told you not to talk."

She stood helpless for a moment, then took me firmly by the shoulders and pushed me back upon the pillow. She gripped the wrist of the hand I had raised to my face.

"I told you not to talk," she whispered close to my face. "I asked you not to talk. Why couldn't you do as I asked you?"

"You've been avoiding me for a month," I said.

"I know. You might have known. Put your hand back--down by your side."

I obeyed. She sat on the edge of the bed. A flush had come to her cheeks, and her eyes were very bright. "I asked you," she repeated, "not to talk."

My eyes questioned her mutely.

She put her hand on my chest. Her eyes were tormented.

"How can I answer you now?" she said.

"How can I say anything now?"

"What do you mean?" I asked.

She made no answer.

"Do you mean it must be 'No'?"

She nodded.

"But" I said, and my whole soul was full of accusations.

"I know," she said. "I can't explain. I can't. But it has to be 'No!' It can't be. It's utterly, finally, for ever impossible.... Keep your hands still!"

"But," I said, "when we met again--"

"I can't marry. I can't and won't."

She stood up. "Why did you talk?" she cried, "couldn't you SEE?"

She seemed to have something it was impossible to say.

She came to the table beside my bed and pulled the Michaelmas daisies awry. "Why did you talk like that?" she said in a tone of infinite bitterness. "To begin like that!"

"But what is it?" I said. "Is it some circumstance--my social position?"

"Oh, DAMN your social position!" she cried.

She went and stood at the further window, staring out at the rain. For a long time we were absolutely still. The wind and rain came in little gusts upon the pane. She turned to me abruptly.

"You didn't ask me if I loved you," she said.

"Oh, if it's THAT!" said I.

"It's not that," she said. "But if you want to know--" She

paused.

"I do," she said.

We stared at one another.

"I do--with all my heart, if you want to know."

"Then, why the devil--?" I asked.

She made no answer. She walked across the room to the piano and began to play, rather noisily and rapidly, with odd gusts of emphasis, the shepherd's pipe music from the last act in "Tristan and Isolde." Presently she missed a note, failed again, ran her finger heavily up the scale, struck the piano passionately with her fist, making a feeble jar in the treble, jumped up, and went out of the room....

The nurse found me still wearing my helmet of bandages, partially dressed, and pottering round the room to find the rest of my clothes. I was in a state of exasperated hunger for Beatrice, and I was too inflamed and weakened to conceal the state of my mind. I was feebly angry because of the irritation of dressing, and particularly of the struggle to put on my trousers without being able to see my legs. I was staggering about, and once I had fallen over a chair and I had upset the jar of Michaelmas daisies.

I must have been a detestable spectacle. "I'll go back to bed," said I, "if I may have a word with Miss Beatrice. I've got something to say to her. That's why I'm dressing."

My point was conceded, but there were long delays. Whether the household had my ultimatum or whether she told Beatrice directly I do not know, and what Lady Osprey can have made of it in the

former case I don't imagine.

At last Beatrice came and stood by my bedside. "Well?" she said.

"All I want to say," I said with the querulous note of a misunderstood child, "is that I can't take this as final. I want to see you and talk when I'm better, and write. I can't do anything now. I can't argue."

I was overtaken with self-pity and began to snivel, "I can't rest. You see? I can't do anything."

She sat down beside me again and spoke softly. "I promise I will talk it all over with you again. When you are well. I promise I will meet you somewhere so that we can talk. You can't talk now.

I asked you not to talk now. All you want to know you shall know... Will that do?"

"I'd like to know"

She looked round to see the door was closed, stood up and went to it.

Then she crouched beside me and began whispering very softly and rapidly with her face close to me.

"Dear," she said, "I love you. If it will make you happy to marry me, I will marry you. I was in a mood just now--a stupid, inconsiderate mood. Of course I will marry you. You are my prince, my king. Women are such things of mood--or I would have behaved differently. We say 'No' when we mean 'Yes'--and fly into crises. So now, Yes--yes--yes. I will. I can't even kiss you. Give me your hand to kiss that. Understand, I am yours. Do you understand? I am yours just as if we had been married

fifty years. Your wife--Beatrice. Is that enough? Now--now will you rest?"

"Yes," I said, "but why?"

"There are complications. There are difficulties. When you are better you will be able to--understand them. But now they don't matter. Only you know this must be secret--for a time. Absolutely secret between us. Will you promise that?"

"Yes," I said, "I understand. I wish I could kiss you."

She laid her head down beside mine for a moment and then she kissed my hand.

"I don't care what difficulties there are," I said, and I shut my eyes.

VII

But I was only beginning to gauge the unaccountable elements in Beatrice. For a week after my return to Lady Grove I had no sign of her, and then she called with Lady Osprey and brought a huge bunch of perennial sunflowers and Michaelmas daisies, "just the old flowers there were in your room," said my aunt, with a relentless eye on me. I didn't get any talk alone with Beatrice then, and she took occasion to tell us she was going to London for some indefinite number of weeks. I couldn't even pledge her to write to me, and when she did it was a brief, enigmatical, friendly letter with not a word of the reality between us.

I wrote back a love letter--my first love letter--and she made no reply for eight days. Then came a scrawl: "I can't write letters. Wait till we can talk. Are you better?"

I think the reader would be amused if he could see the papers on my desk as I write all this, the mangled and disfigured pages, the experimental arrangements of notes, the sheets of suggestions balanced in constellations, the blottesque intellectual battlegrounds over which I have been fighting. I find this account of my relations to Beatrice quite the most difficult part of my story to write. I happen to be a very objective-minded person, I forget my moods, and this was so much an affair of moods. And even such moods and emotions as I recall are very difficult to convey. To me it is about as difficult as describing a taste or a scent.

Then the objective story is made up of little things that are difficult to set in a proper order. And love in an hysterical passion, now high, now low, now exalted, and now intensely physical. No one has ever yet dared to tell a love story completely, its alternations, its comings and goings, its debased moments, its hate. The love stories we tell, tell only the net consequence, the ruling effect....

How can I rescue from the past now the mystical quality of Beatrice; my intense longing for her; the overwhelming, irrational, formless desire? How can I explain how intimately that worship mingled with a high, impatient resolve to make her mine, to take her by strength and courage, to do my loving in a violent heroic manner? And then the doubts, the puzzled arrest at the fact of her fluctuations, at her refusal to marry me, at the fact that even when at last she returned to Bedley Corner she seemed to evade me?

That exasperated me and perplexed me beyond measure.

I felt that it was treachery. I thought of every conceivable explanation, and the most exalted and romantic confidence in her did not simply alternate, but mingled with the basest misgivings.

And into the tangle of memories comes the figure of Carnaby, coming out slowly from the background to a position of significance, as an influence, as a predominant strand in the nets that kept us apart, as a rival. What were the forces that pulled her away from me when it was so clearly manifest she loved me? Did she think of marrying him? Had I invaded some long-planned scheme? It was evident he did not like me, that in some way I spoilt the world for him. She returned to Bedley Corner, and for some weeks she was flitting about me, and never once could I have talk with her alone. When she came to my sheds Carnaby was always with her, jealously observant. (Why the devil couldn't she send him about his business?) The days slipped by and my anger gathered.

All this mingles with the making of Lord Roberts B. I had resolved upon that one night as I lay awake at Bedley Corner; I got it planned out before the bandages were off my face. I conceived this second navigable balloon in a grandiose manner. It was to be a second Lord Roberts A, only more so; it was to be three times as big, large enough to carry three men, and it was to be an altogether triumphant vindication of my claims upon the air. The framework was to be hollow like a bird's bones, airtight, and the air pumped in or out, and the weight of fuel I carried changed. I talked much and boasted to Cothope--whom I suspected of scepticisms about this new type--of what it would do, and it progressed--slowly. It progressed slowly because I was restless and uncertain. At times I would go away to London to snatch some chance of seeing Beatrice there, at times nothing but a day of gliding and hard and dangerous exercise would satisfy me. And now in the newspapers, in conversation, in everything about me, arose a new invader of my mental states. Something was happening to the great schemes of my uncle's affairs; people were beginning to doubt, to question. It was the first quiver of his tremendous insecurity, the first wobble of

that gigantic credit top he had kept spinning so long.

There were comings and goings, November and December slipped by. I had two unsatisfactory meetings with Beatrice, meetings that had no privacy--in which we said things of the sort that need atmosphere, baldly and furtively. I wrote to her several times and she wrote back notes that I would sometimes respond to altogether, sometimes condemn as insincere evasions. "You don't understand. I can't just now explain. Be patient with me. Leave things a little while to me." She wrote.

I would talk aloud to these notes and wrangle over them in my workroom--while the plans of Lord Roberts B waited.

"You don't give me a chance!" I would say. "Why don't you let me know the secret? That's what I'm for--to settle difficulties! to tell difficulties to!"

And at last I could hold out no longer against these accumulating pressures.

I took an arrogant, outrageous line that left her no loopholes; I behaved as though we were living in a melodrama.

"You must come and talk to me," I wrote, "or I will come and take you. I want you--and the time runs away."

We met in a ride in the upper plantations. It must have been early in January, for there was snow on the ground and on the branches of the trees. We walked to and fro for an hour or more, and from the first I pitched the key high in romance and made understandings impossible. It was our worst time together. I boasted like an actor, and she, I know not why, was tired and spiritless.

Now I think over that talk in the light of all that has happened since, I can imagine how she came to me full of a human appeal I was too foolish to let her make. I don't know. I confess I have never completely understood Beatrice. I confess I am still perplexed at many things she said and did. That afternoon, anyhow, I was impossible. I posed and scolded. I was--I said it--for "taking the Universe by the throat!"

"If it was only that," she said, but though I heard, I did not heed her.

At last she gave way to me and talked no more. Instead she looked at me--as a thing beyond her controlling, but none the less interesting--much as she had looked at me from behind the skirts of Lady Drew in the Warren when we were children together.

Once even I thought she smiled faintly.

"What are the difficulties" I cried. "there's no difficulty I will not overcome for you! Do your people think I'm no equal for you? Who says it? My dear, tell me to win a title! I'll do it in five years!..."

"Here am I just grown a man at the sight of you. I have wanted something to fight for. Let me fight for you!..."

"I'm rich without intending it. Let me mean it, give me an honourable excuse for it, and I'll put all this rotten old Warren of England at your feet!"

I said such things as that. I write them down here in all their resounding base pride. I said these empty and foolish things, and they are part of me. Why should I still cling to pride and be ashamed? I shouted her down.

I passed from such megalomania to petty accusations.

"You think Carnaby is a better man than I?" I said.

"No!" she cried, stung to speech. "No!"

"You think we're unsubstantial. You've listened to all these rumours Boom has started because we talked of a newspaper of our own. When you are with me you know I'm a man; when you get away from me you think I'm a cheat and a cad.... There's not a word of truth in the things they say about us. I've been slack. I've left things. But we have only to exert ourselves. You do not know how wide and far we have spread our nets. Even now we have a coup--an expedition--in hand. It will put us on a footing."...

Her eyes asked mutely and asked in vain that I would cease to boast of the very qualities she admired in me.

In the night I could not sleep for thinking of that talk and the vulgar things I had said in it. I could not understand the drift my mind had taken. I was acutely disgusted. And my unwonted doubts about myself spread from a merely personal discontent to our financial position. It was all very well to talk as I had done of wealth and power and peerages, but what did I know nowadays of my uncle's position? Suppose in the midst of such boasting and confidence there came some turn I did not suspect, some rottenness he had concealed from me? I resolved I had been playing with aeronautics long enough; that next morning I would go to him and have things clear between us.

I caught an early train and went up to the Hardingham.

I went up to the Hardingham through a dense London fog to see how things really stood. Before I had talked to my uncle for ten minutes I felt like a man who has just awakened in a bleak,

inhospitable room out of a grandiose dream.

CHAPTER THE FOURTH

HOW I STOLE THE HEAPS OF QUAP FROM MORDET ISLAND

I

"We got to make a fight for it," said my uncle. "We got to face the music!"

I remember that even at the sight of him I had a sense of impending calamity. He sat under the electric light with the shadow of his hair making bars down his face. He looked shrunken, and as though his skin had suddenly got loose and yellow. The decorations of the room seemed to have lost freshness, and outside the blinds were up--there was not so much fog as a dun darkness. One saw the dingy outlines of the chimneys opposite quite distinctly, and then a sky of such brown as only London can display.

"I saw a placard," I said: "'More Ponderevity.'"

"That's Boom," he said. "Boom and his damned newspapers. He's trying to fight me down. Ever since I offered to buy the Daily Decorator he's been at me. And he thinks consolidating Do Ut cut down the ads. He wants everything, damn him! He's got no sense of dealing. I'd like to bash his face!"

"Well," I said, "what's to be done?"

"Keep going," said my uncle.

"I'll smash Boom yet," he said, with sudden savagery.

"Nothing else?" I asked.

"We got to keep going. There's a scare on. Did you notice the rooms? Half the people out there this morning are reporters. And if I talk they touch it up!... They didn't used to touch things up! Now they put in character touches--insulting you. Don't know what journalism's coming to. It's all Boom's doing."

He cursed Lord Boom with considerable imaginative vigour.

"Well," said I, "what can he do?"

"Shove us up against time, George; make money tight for us. We been handling a lot of money--and he tightens us up."

"We're sound?"

"Oh, we're sound, George. Trust me for that! But all the same-- There's such a lot of imagination in these things.... We're sound enough. That's not it."

He blew. "Damn Boom!" he said, and his eyes over his glasses met mine defiantly.

"We can't, I suppose, run close hauled for a bitstop expenditure?"

"Where?"

"Well,--Crest Hill"

"What!" he shouted. "Me stop Crest Hill for Boom!" He waved a fist as if to hit his inkpot, and controlled himself with difficulty. He spoke at last in a reasonable voice. "If I did,"

he said, "he'd kick up a fuss. It's no good, even if I wanted to. Everybody's watching the place. If I was to stop building we'd be down in a week."

He had an idea. "I wish I could do something to start a strike or something. No such luck. Treat those workmen a sight too well. No, sink or swim, Crest Hill goes on until we're under water."

I began to ask questions and irritated him instantly.

"Oh, dash these explanations, George!" he cried; "You only make things look rottener than they are. It's your way. It isn't a case of figures. We're all right--there's only one thing we got to do."

"Yes?"

"Show value, George. That's where this quap comes in; that's why I fell in so readily with what you brought to me week before last. Here we are, we got our option on the perfect filament, and all we want's canadium. Nobody knows there's more canadium in the world than will go on the edge of a sixpence except me and you. Nobody has an idee the perfect filament's more than just a bit of theorising. Fifty tons of quap and we'd turn that bit of theorising into something. We'd make the lamp trade sit on its tail and howl. We'd put Ediswan and all of 'em into a parcel withour last year's trousers and a hat, and swap 'em off for a pot ofgeraniums. See? We'd do it through Business Organisations, and there you are! See? Capern's Patent Filament!

The Ideal and the Real! George, we'll do it! We'll bring it off! And then we'll give such a facer to Boom, he'll think for fifty years. He's laying up for our London and African meeting. Let him. He can turn the whole paper on to us. He says the

Business Organisations shares aren't worth fifty-two and we quote 'em at eighty-four. Well, here we are gettin' ready for him--loading our gun."

His pose was triumphant.

"Yes," I said, "that's all right. But I can't help thinking where should we be if we hadn't just by accident got Capern's Perfect Filament. Because, you know it was an accident--my buying up that."

He crumpled up his nose into an expression of impatient distaste at my unreasonableness.

"And after all, the meeting's in June, and you haven't begun to get the quap! After all, we've still got to load our gun."

"They start on Toosday."

"Have they got the brig?"

"They've got a brig."

"Gordon-Nasmyth!" I doubted.

"Safe as a bank," he said. "More I see of that man the more I like him. All I wish is we'd got a steamer instead of a sailing ship"

"And," I went on, "you seem to overlook what used to weigh with us a bit. This canadium side of the business and the Capern chance has rushed you off your legs. After all--it's stealing, and in its way an international outrage. They've got two gunboats on the coast."

I jumped up and went and stared out at the fog.

"And, by Jove, it's about our only chance! I didn't dream."

I turned on him. "I've been up in the air," I said.

"Heaven knows where I haven't been. And here's our only chance--and you give it to that adventurous lunatic to play in his own way--in a brig!"

"Well, you had a voice--"

"I wish I'd been in this before. We ought to have run out a steamer to Lagos or one of those West Coast places and done it from there. Fancy a brig in the channel at this time of year, if it blows southwest!"

"I dessay you'd have shoved it, George. Still you know, George.... I believe in him."

"Yes," I said. "Yes, I believe in him, too. In a way. Still--"

We took up a telegram that was lying on his desk and opened it. His face became a livid yellow. He put the flimsy paper down with a slow, reluctant movement and took off his glasses.

"George," he said, "the luck's against us."

"What?"

He grimaced with his mouth--in the queerest way at the telegram.

"That."

I took it up and read:

"Motor smash compound fracture of the leg gordon nasmyth what price mordet now"

For a moment neither of us spoke.

"That's all right," I said at last.

"Eh?" said my uncle.

"I'M going. I'll get that quap or bust."

II

I had a ridiculous persuasion that I was "saving the situation."

"I'm going," I said quite consciously and dramatically. I saw the whole affair--how shall I put it?--in American colours.

I sat down beside him. "Give me all the data you've got," I said, "and I'll pull this thing off."

"But nobody knows exactly where--"

"Nasmyth does, and he'll tell me."

"He's been very close," said my uncle, and regarded me.

"He'll tell me all right, now he's smashed."

He thought. "I believe he will."

"George," he said, "if you pull this thing off--Once or twice before you've stepped in--with that sort of Woosh of yours--"

He left the sentence unfinished.

"Give me that note-book," I said, "and tell me all you know. Where's the ship? Where's Pollack? And where's that telegram from? If that quap's to be got, I'll get it or bust. If you'll hold on here until I get back with it."...

And so it was I jumped into the wildest adventure of my life.

I requisitioned my uncle's best car forthwith. I went down that night to the place of despatch named on Nasmyth's telegram, Bampton S.O. Oxon, routed him out with a little trouble from that centre, made things right with him and got his explicit directions; and I was inspecting the Maud Mary with young Pollack, his cousin and aide, the following afternoon. She was rather a shock to me and not at all in my style, a beast of a brig inured to the potato trade, and she reeked from end to end with the faint, subtle smell of raw potatoes so that it prevailed even over the temporary smell of new paint. She was a beast of a brig, all hold and dirty framework, and they had ballasted her with old iron and old rails and iron sleepers, and got a miscellaneous lot of spades and iron wheelbarrows against the loading of the quap. I thought her over with Pollack, one of those tall blond young men who smoke pipes and don't help much, and then by myself, and as a result I did my best to sweep Gravesend clean of wheeling planks, and got in as much cord and small rope as I could for lashing. I had an idea we might need to run up a jetty. In addition to much ballast she held, remotely hidden in a sort of inadvertent way a certain number of ambiguous cases which I didn't examine, but which I gathered were a provision against the need of a trade.

The captain was a most extraordinary creature, under the impression we were after copper ore; he was a Roumanian Jew, with twitching, excitable features, who had made his way to a

certificate after some preliminary naval experiences in the Black Sea. The mate was an Essex man of impenetrable reserve. The crew were astoundingly ill-clad and destitute and dirty; most of them youths, unwashed, out of colliers. One, the cook was a mulatto; and one, the best-built fellow of them all, was a Breton. There was some subterfuge about our position on board--I forget the particulars now--I was called the supercargo and Pollack was the steward. This added to the piratical flavour that insufficient funds and Gordon-Nasmyth's original genius had already given the enterprise.

Those two days of bustle at Gravesend, under dingy skies, in narrow, dirty streets, were a new experience for me. It is like nothing else in my life. I realised that I was a modern and a civilised man. I found the food filthy and the coffee horrible; the whole town stank in my nostrils, the landlord of the Good Intent on the quay had a stand-up quarrel with us before I could get even a hot bath, and the bedroom I slept in was infested by a quantity of exotic but voracious flat parasites called locally "bugs," in the walls, in the woodwork, everywhere. I fought them with insect powder, and found them comatose in the morning. I was dipping down into the dingy underworld of the contemporary state, and I liked it no better than I did my first dip into it when I stayed with my Uncle Nicodemus Frapp at the bakery at Chatham--where, by-the-by, we had to deal with cockroaches of a smaller, darker variety, and also with bugs of sorts.

Let me confess that through all this time before we started I was immensely self-conscious, and that Beatrice played the part of audience in my imagination throughout. I was, as I say, "saving the situation," and I was acutely aware of that. The evening before we sailed, instead of revising our medicine-chest as I had intended, I took the car and ran across country to Lady Grove to tell my aunt of the journey I was making, dress, and astonish Lady Osprey by an after dinner call.

The two ladies were at home and alone beside a big fire that seemed wonderfully cheerful after the winter night. I remember the effect of the little parlour in which they sat as very bright and domestic. Lady Osprey, in a costume of mauve and lace, sat on a chintz sofa and played an elaborately spread-out patience by the light of a tall shaded lamp; Beatrice, in a whiteness that showed her throat, smoked a cigarette in an armchair and read with a lamp at her elbow. The room was white-panelled and chintz-curtained. About those two bright centres of light were warm dark shadow, in which a circular mirror shone like a pool of brown water. I carried off my raid by behaving like a slave of etiquette. There were moments when I think I really made Lady Osprey believe that my call was an unavoidable necessity, that it would have been negligent of me not to call just how and when I did. But at the best those were transitory moments.

They received me with disciplined amazement. Lady Osprey was interested in my face and scrutinised the scar. Beatrice stood behind her solicitude. Our eyes met, and in hers I could see startled interrogations.

"I'm going," I said, "to the west coast of Africa."

They asked questions, but it suited my mood to be vague.

"We've interests there. It is urgent I should go. I don't know when I may return."

After that I perceived Beatrice surveyed me steadily.

The conversation was rather difficult. I embarked upon lengthy thanks for their kindness to me after my accident. I tried to understand Lady Osprey's game of patience, but it didn't appear that Lady Osprey was anxious for me to understand her patience.

I came to the verge of taking my leave

"You needn't go yet," said Beatrice, abruptly.

She walked across to the piano, took a pile of music from the cabinet near, surveyed Lady Osprey's back, and with a gesture to me dropped it all deliberately on to the floor.

"Must talk," she said, kneeling close to me as I helped her to pick it up. "Turn my pages. At the piano."

"I can't read music."

"Turn my pages."

Presently we were at the piano, and Beatrice was playing with noisy inaccuracy. She glanced over her shoulder and Lady Osprey had resumed her patience. The old lady was very pink, and appeared to be absorbed in some attempt to cheat herself without our observing it.

"Isn't West Africa a vile climate?" "Are you going to live there?" "Why are you going?"

Beatrice asked these questions in a low voice and gave me no chance to answer. Then taking a rhythm from the music before her, she said--

"At the back of the house is a garden--a door in the wall--on the lane. Understand?"

I turned over the pages without any effect on her playing.

"When?" I asked.

She dealt in chords. "I wish I COULD play this!" she said.
"Midnight."

She gave her attention to the music for a time.

"You may have to wait."

"I'll wait."

She brought her playing to an end by--as school boys say--"stashing it up."

"I can't play to-night," she said, standing up and meeting my eyes. "I wanted to give you a parting voluntary."

"Was that Wagner, Beatrice?" asked Lady Osprey looking up from her cards. "It sounded very confused."

I took my leave. I had a curious twinge of conscience as I parted from Lady Osprey. Either a first intimation of middle-age or my inexperience in romantic affairs was to blame, but I felt a very distinct objection to the prospect of invading this good lady's premises from the garden door. I motored up to the pavilion, found Cothope reading in bed, told him for the first time of West Africa, spent an hour with him in settling all the outstanding details of Lord Roberts B, and left that in his hands to finish against my return. I sent the motor back to Lady Grove, and still wearing my fur coat--for the January night was damp and bitterly cold--walked to Bedley Corner. I found the lane to the back of the Dower House without any difficulty, and was at the door in the wall with ten minutes to spare. I lit a cigar and fell to walking up and down. This queer flavour of intrigue, this nocturnal garden-door business, had taken me by surprise and changed my mental altitudes. I was startled out of my egotistical pose and thinking intently of Beatrice, of that

elfin quality in her that always pleased me, that always took me by surprise, that had made her for example so instantly conceive this meeting.

She came within a minute of midnight; the door opened softly and she appeared, a short, grey figure in a motor-coat of sheepskin, bareheaded to the cold drizzle. She flitted up to me, and her eyes were shadows in her dusky face.

"Why are you going to West Africa?" she asked at once.

"Business crisis. I have to go."

"You're not going--? You're coming back?"

"Three or four months," I said, "at most."

"Then, it's nothing to do with me?"

"Nothing," I said. "Why should it have?"

"Oh, that's all right. One never knows what people think or what people fancy." She took me by the arm, "Let's go for a walk," she said.

I looked about me at darkness and rain.

"That's all right," she laughed. "We can go along the lane and into the Old Woking Road. Do you mind? Of course you don't. My head. It doesn't matter. One never meets anybody."

"How do you know?"

"I've wandered like this before.... Of course. Did you think"--she nodded her head back at her home--"that's all?"

"No, by Jove!" I cried; "it's manifest it isn't."

She took my arm and turned me down the lane. "Night's my time," she said by my side. "There's a touch of the werewolf in my blood. One never knows in these old families.... I've wondered often.... Here we are, anyhow, alone in the world. Just darkness and cold and a sky of clouds and wet. And we--together.

I like the wet on my face and hair, don't you? When do you sail?"

I told her to-morrow.

"Oh, well, there's no to-morrow now. You and I!" She stopped and confronted me.

"You don't say a word except to answer!"

"No," I said.

"Last time you did all the talking."

"Like a fool. Now--"

We looked at each other's two dim faces. "You're glad to be here?"

"I'm glad--I'm beginning to be--it's more than glad."

She put her hands on my shoulders and drew me down to kiss her.

"Ah!" she said, and for a moment or so we just clung to one another.

"That's all," she said, releasing herself. "What bundles of clothes we are to-night. I felt we should kiss some day again. Always. The last time was ages ago."

"Among the fern stalks."

"Among the bracken. You remember. And your lips were cold. Were mine? The same lips--after so long--after so much!... And now let's trudge through this blotted-out world together for a time. Yes, let me take your arm. Just trudge. See? Hold tight to me because I know the way--and don't talk--don't talk. Unless you want to talk.... Let me tell you things! You see, dear, the whole world is blotted out--it's dead and gone, and we're in this place. This dark wild place.... We're dead. Or all the world is dead. No! We're dead. No one can see us. We're shadows. We've got out of our positions, out of our bodies--and together. That's the good thing of it--together. But that's why the world can't see us and why we hardly see the world. Sssh! Is it all right?"

"It's all right," I said.

We stumbled along for a time in a close silence. We passed a dim-lit, rain-veiled window.

"The silly world," she said, "the silly world! It eats and sleeps. If the wet didn't patter so from the trees we'd hear it snoring. It's dreaming such stupid things--stupid judgments. It doesn't know we are passing, we two--free of it--clear of it. You and I!"

We pressed against each other reassuringly.

"I'm glad we're dead," she whispered. "I'm glad we're dead. I was tired of it, dear. I was so tired of it, dear, and so

entangled."

She stopped abruptly.

We splashed through a string of puddles. I began to remember things I had meant to say.

"Look here!" I cried. "I want to help you beyond measure. You are entangled. What is the trouble? I asked you to marry me. You said you would. But there's something."

My thoughts sounded clumsy as I said them.

"Is it something about my position?... Or is it something--perhaps--about some other man?"

There was an immense assenting silence.

"You've puzzled me so. At first--I mean quite early--I thought you meant to make me marry you."

"I did."

"And then?"

"To-night," she said after a long pause, "I can't explain. No! I can't explain. I love you! But--explanations! To-night my dear, here we are in the world alone--and the world doesn't matter. Nothing matters. Here I am in the cold with you and my bed away there deserted. I'd tell you--I will tell you when things enable me to tell you, and soon enough they will. But to-night--I won't--I won't."

She left my side and went in front of me.

She turned upon me. "Look here," she said, "I insist upon your being dead. Do you understand? I'm not joking. To-night you and I are out of life. It's our time together. There may be other times, but this we won't spoil. We're--in Hades if you like. Where there's nothing to hide and nothing to tell. No bodies even. No bothers. We loved each other--down there--and were kept apart, but now it doesn't matter. It's over.... If you won't agree to that--I will go home."

"I wanted," I began.

"I know. Oh! my dear, if you'd only understand I understand. If you'd only not care--and love me to-night."

"I do love you," I said.

"Then LOVE me," she answered, "and leave all the things that bother you. Love me! Here I am!"

"But!--"

"No!" she said.

"Well, have your way."

So she carried her point, and we wandered into the night together and Beatrice talked to me of love....

I'd never heard a woman before in all my life who could talk of love, who could lay bare and develop and touch with imagination all that mass of fine emotion every woman, it may be, hides. She had read of love, she had thought of love, a thousand sweet lyrics had sounded through her brain and left fine fragments in her memory; she poured it out, all of it, shamelessly, skilfully, for me. I cannot give any sense of that talk, I cannot even tell

how much of the delight of it was the magic of her voice, the glow of her near presence. And always we walked swathed warmly through a chilly air, along dim, interminable greasy roads--with never a soul abroad it seemed to us, never a beast in the fields.

"Why do people love each other?" I said.

"Why not?"

"But why do I love you? Why is your voice better than any voice, your face sweeter than any face?"

"And why do I love you?" she asked; "not only what is fine in you, but what isn't? Why do I love your dullness, your arrogance? For I do. To--night I love the very raindrops on the fur of your coat!"...

So we talked; and at last very wet, still glowing but a little tired, we parted at the garden door. We had been wandering for two hours in our strange irrational community of happiness, and all the world about us, and particularly Lady Osprey and her household, had been asleep--and dreaming of anything rather than Beatrice in the night and rain.

She stood in the doorway, a muffled figure with eyes that glowed.

"Come back," she whispered. "I shall wait for you."

She hesitated.

She touched the lapel of my coat. "I love you NOW," she said, and lifted her face to mine.

I held her to me and was atremble from top to toe. "O God!" I cried. "And I must go!"

She slipped from my arms and paused, regarding me. For an instant the world seemed full of fantastic possibilities.

"Yes, GO!" she said, and vanished and slammed the door upon me, leaving me alone like a man new fallen from fairyland in the black darkness of the night.

III

That expedition to Mordet Island stands apart from all the rest of my life, detached, a piece by itself with an atmosphere of its own. It would, I suppose, make a book by itself--it has made a fairly voluminous official report--but so far as this novel of mine goes it is merely an episode, a contributory experience, and I mean to keep it at that.

Vile weather, an impatient fretting against unbearable slowness and delay, sea--sickness, general discomfort and humiliating self--revelation are the master values of these memories.

I was sick all through the journey out. I don't know why. It was the only time I was ever sea-sick, and I have seen some pretty bad weather since I became a boat-builder. But that phantom smell of potatoes was peculiarly vile to me. Coming back on the brig we were all ill, every one of us, so soon as we got to sea, poisoned, I firmly believe, by quap. On the way out most of the others recovered in a few days, but the stuffiness below, the coarse food, the cramped dirty accommodation kept me, if not actually sea-sick, in a state of acute physical wretchedness the whole time. The ship abounded in cockroaches and more intimate vermin. I was cold all the time until after we passed Cape Verde, then I became steamily hot; I had been too preoccupied with Beatrice and my keen desire to get the Maud Mary under way at once, to consider a proper wardrobe for myself, and

in particular I lacked a coat. Heavens! how I lacked that coat! And, moreover, I was cooped up with two of the worst bores in Christendom, Pollack and the captain. Pollack, after conducting his illness in a style better adapted to the capacity of an opera house than a small compartment, suddenly got insupportably well and breezy, and produced a manly pipe in which he smoked a tobacco as blond as himself, and divided his time almost equally between smoking it and trying to clean it. "There's only three things you can clean a pipe with," he used to remark with a twist of paper in hand. "The best's a feather, the second's a straw, and the third's a girl's hairpin. I never see such a ship. You can't find any of 'em. Last time I came this way I did find hairpins anyway, and found 'em on the floor of the captain's cabin. Regular deposit. Eh?... Feelin' better?"

At which I usually swore.

"Oh, you'll be all right soon. Don't mind my puffin' a bit? Eh?"

He never tired of asking me to "have a hand at Nap. Good game. Makes you forget it, and that's half the battle."

He would sit swaying with the rolling of the ship and suck at his pipe of blond tobacco and look with an inexpressibly sage but somnolent blue eye at the captain by the hour together.

"Captain's a Card," he would say over and over again as the outcome of these meditations. "He'd like to know what we're up to. He'd like to know--no end."

That did seem to be the captain's ruling idea. But he also wanted to impress me with the notion that he was a gentleman of good family and to air a number of views adverse to the English, to English literature, to the English constitution, and the like.

He had learnt the sea in the Roumanian navy, and English out of a book; he would still at times pronounce the e's at the end of "there" and "here"; he was a naturalised Englishman, and he drove me into a reluctant and uncongenial patriotism by his everlasting carping at things English. Pollack would set himself to "draw him out." Heaven alone can tell how near I came to murder.

Fifty-three days I had outward, cooped up with these two and a shy and profoundly depressed mate who read the Bible on Sundays and spent the rest of his leisure in lethargy, three and fifty days of life cooped up in a perpetual smell, in a persistent sick hunger that turned from the sight of food, in darkness, cold and wet, in a lightly ballasted ship that rolled and pitched and swayed. And all the time the sands in the hour-glass of my uncle's fortunes were streaming out. Misery! Amidst it all I remember only one thing brightly, one morning of sunshine in the Bay of Biscay and a vision of frothing waves, sapphire green, a bird following our wake and our masts rolling about the sky. Then wind and rain close in on us again.

You must not imagine they were ordinary days, days, I mean, of an average length; they were not so much days as long damp slabs of time that stretched each one to the horizon, and much of that length was night. One paraded the staggering deck in a borrowed sou'-wester hour after hour in the chilly, windy, splashing and spitting darkness, or sat in the cabin, bored and ill, and looked at the faces of those inseparable companions by the help of a lamp that gave smell rather than light. Then one would see going up, up, up, and then sinking down, down, down, Pollack, extinct pipe in mouth, humorously observant, bringing his mind slowly to the seventy-seventh decision that the captain was a Card, while the words flowed from the latter in a nimble incessant good. "Dis England eet is not a country aristocratic, no! Eet is a glorified bourgeoisie! Eet is plutocratic. In England dere is no aristocracy since de Wars of Roses. In the

rest of Europe east of the Latins, yes; in England, no.

"Eet is all middle-class, youra England. Everything you look at, middle-class. Respectable! Everything good--eet is, you say, shocking. Madame Grundy! Eet is all limited and computing and self-seeking. Dat is why your art is so limited, youra fiction, your philosophin, why you are all so inartistic. You want nothing but profit! What will pay! What would you?"...

He had all those violent adjuncts to speech we Western Europeans have abandoned, shruggings of the shoulders, waving of the arms, thrusting out of the face, wonderful grimaces and twiddlings of the hands under your nose until you wanted to hit them away. Day after day it went on, and I had to keep any anger to myself, to reserve myself for the time ahead when it would be necessary to see the quap was got aboard and stowed--knee deep in this man's astonishment. I knew he would make a thousand objections to all we had before us. He talked like a drugged man. It ran glibly over his tongue. And all the time one could see his seamanship fretting him, he was gnawed by responsibility, perpetually uneasy about the ship's position, perpetually imagining dangers. If a sea hit us exceptionally hard he'd be out of the cabin in an instant making an outcry of inquiries, and he was pursued by a dread of the hold, of ballast shifting, of insidious wicked leaks. As we drew near the African coast his fear of rocks and shoals became infectious.

"I do not know dis coast," he used to say. "I cama hera because Gordon-Nasmyth was coming too. Den he does not come!"

"Fortunes of war," I said, and tried to think in vain if any motive but sheer haphazard could have guided Gordon-Nasmyth in the choice of these two men. I think perhaps Gordon-Nasmyth had the artistic temperament and wanted contrasts, and also that the captain helped him to express his own malignant Anti-Britishism.

He was indeed an exceptionally inefficient captain. On the whole I was glad I had come even at the eleventh hour to see to things.

(The captain, by-the-by, did at last, out of sheer nervousness, get aground at the end of Mordet's Island, but we got off in an hour or so with a swell and a little hard work in the boat.)

I suspected the mate of his opinion of the captain long before he expressed it. He was, I say, a taciturn man, but one day speech broke through him. He had been sitting at the table with his arms folded on it, musing drearily, pipe in mouth, and the voice of the captain drifted down from above.

The mate lifted his heavy eyes to me and regarded me for a moment. Then he began to heave with the beginnings of speech. He disembarrassed himself of his pipe. I cowered with expectation. Speech was coming at last. Before he spoke he nodded reassuringly once or twice.

"E--"

He moved his head strangely and mysteriously, but a child might have known he spoke of the captain.

"E's a foreigner."

He regarded me doubtfully for a time, and at last decided for the sake of lucidity to clench the matter.

"That's what E is--a DAGO!"

He nodded like a man who gives a last tap to a nail, and I could see he considered his remark well and truly laid. His face, though still resolute, became as tranquil and uneventful as a

huge hall after a public meeting has dispersed out of it, and finally he closed and locked it with his pipe.

"Roumanian Jew, isn't he?" I said.

He nodded darkly and almost forbiddingly.

More would have been too much. The thing was said. But from that time forth I knew I could depend upon him and that he and I were friends. It happens I never did have to depend upon him, but that does not affect our relationship.

Forward the crew lived lives very much after the fashion of ours, more crowded, more cramped and dirty, wetter, steamier, more verminous. The coarse food they had was still not so coarse but that they did not think they were living "like fighting cocks." So far as I could make out they were all nearly destitute men; hardly any of them had a proper sea outfit, and what small possessions they had were a source of mutual distrust. And as we pitched and floundered southward they gambled and fought, were brutal to one another, argued and wrangled loudly, until we protested at the uproar.

There's no romance about the sea in a small sailing ship as I saw it. The romance is in the mind of the landsman dreamer. These brigs and schooners and brigantines that still stand out from every little port are relics from an age of petty trade, as rotten and obsolescent as a Georgian house that has sunken into a slum. They are indeed just floating fragments of slum, much as icebergs are floating fragments of glacier. The civilised man who has learnt to wash, who has developed a sense of physical honour, of cleanly temperate feeding, of time, can endure them no more. They pass, and the clanking coal-wasting steamers will follow them, giving place to cleaner, finer things....

But so it was I made my voyage to Africa, and came at last into a world of steamy fogs and a hot smell of vegetable decay, and into sound and sight of surf and distant intermittent glimpses of the coast. I lived a strange concentrated life through all that time, such a life as a creature must do that has fallen in a well. All my former ways ceased, all my old vistas became memories.

The situation I was saving was very small and distant now; I felt its urgency no more. Beatrice and Lady Grove, my uncle and the Hardingham, my soaring in the air and my habitual wide vision of swift effectual things, became as remote as if they were in some world I had left for ever....

IV

All these African memories stand by themselves. It was for me an expedition into the realms of undisciplined nature out of the world that is ruled by men, my first bout with that hot side of our mother that gives you the jungle--that cold side that gives you the air-eddy I was beginning to know passing well. They are memories woven upon a fabric of sunshine and heat and a constant warm smell of decay. They end in rain--such rain as I had never seen before, a vehement, a frantic downpouring of water, but our first slow passage through the channels behind Mordet's Island was in incandescent sunshine.

There we go in my memory still, a blistered dirty ship with patched sails and a battered mermaid to present Maud Mary, sounding and taking thought between high ranks of forest whose trees come out knee-deep at last in the water. There we go with a little breeze on our quarter, Mordet Island rounded and the quap, it might be within a day of us.

Here and there strange blossoms woke the dank intensities of

green with a trumpet call of colour. Things crept among the jungle and peeped and dashed back rustling into stillness. Always in the sluggishly drifting, opaque water were eddyings and stirrings; little rushes of bubbles came chuckling up light-heartedly from this or that submerged conflict and tragedy; now and again were crocodiles like a stranded fleet of logs basking in the sun. Still it was by day, a dreary stillness broken only by insect sounds and the creaking and flapping of our progress, by the calling of the soundings and the captain's confused shouts; but in the night as we lay moored to a clump of trees the darkness brought a thousand swampy things to life and out of the forest came screaming and howlings, screaming and yells that made us glad to be afloat. And once we saw between the tree stems long blazing fires. We passed two or three villages landward, and brown-black women and children came and stared at us and gesticulated, and once a man came out in a boat from a creek and hailed us in an unknown tongue; and so at last we came to a great open place, a broad lake rimmed with a desolation of mud and bleached refuse and dead trees, free from crocodiles or water birds or sight or sound of any living thing, and saw far off, even as Nasmyth had described, the ruins of the deserted station, and hard by two little heaps of buff-hued rubbish under a great rib of rock, the quap! The forest receded. The land to the right of us fell away and became barren, and far on across notch in its backbone was surf and the sea.

We took the ship in towards those heaps and the ruined jetty slowly and carefully. The captain came and talked.

"This is eet?" he said.

"Yes," said I.

"Is eet for trade we have come?"

This was ironical.

"No," said I.

"Gordon-Nasmyth would haf told me long ago what it ees for we haf come."

"I'll tell you now," I said. "We are going to lay in as close as we can to those two heaps of stuff--you see them?--under the rock. Then we are going to chuck all our ballast overboard and take those in. Then we're going home."

"May I presume to ask--is eet gold?"

"No," I said incivilly, "it isn't."

"Then what is it?"

"It's stuff--of some commercial value."

"We can't do eet," he said.

"We can," I answered reassuringly.

"We can't," he said as confidently. "I don't mean what you mean.

You know so liddle--But--dis is forbidden country."

I turned on him suddenly angry and met bright excited eyes. For a minute we scrutinised one another. Then I said, "That's our risk. Trade is forbidden. But this isn't trade.... This thing's got to be done."

His eyes glittered and he shook his head....

The brig stood in slowly through the twilight toward this strange scorched and blistered stretch of beach, and the man at the wheel strained his ears to listening the low-voiced angry argument that began between myself and the captain, that was presently joined by Pollack. We moored at last within a hundred yards of our goal, and all through our dinner and far into the night we argued intermittently and fiercely with the captain about our right to load just what we pleased. "I will haf nothing to do with eet," he persisted. "I wash my hands." It seemed that night as though we argued in vain. "If it is not trade," he said, "it is prospecting and mining. That is worse. Any one who knows anything--outside England--knows that is worse."

We argued and I lost my temper and swore at him. Pollack kept cooler and chewed his pipe watchfully with that blue eye of his upon the captain's gestures. Finally I went on deck to cool. The sky was overcast I discovered all the men were in a knot forward, staring at the faint quivering luminosity that had spread over the heaps of quap, a phosphorescence such as one sees at times on rotting wood. And about the beach east and west there were patches and streaks of something like diluted moonshine....

In the small hours I was still awake and turning over scheme after scheme in my mind whereby I might circumvent the captain's opposition. I meant to get that quap aboard if I had to kill some one to do it. Never in my life had I been so thwarted! After this intolerable voyage! There came a rap at my cabin door and then it opened and I made out a bearded face. "Come in," I said, and a black voluble figure I could just see obscurely came in to talk in my private ear and fill my cabin with its whisperings and gestures. It was the captain. He, too, had been awake and thinking things over. He had come to explain--enormously. I lay there hating him and wondering if I and Pollack could lock him in his cabin and run the ship without

him. "I do not want to spoil this expedition," emerged from a cloud of protestations, and then I was able to disentangle "a commission--shush a small commission--for special risks!" "Special risks" became frequent. I let him explain himself out. It appeared he was also demanding an apology for something I had said. No doubt I had insulted him generously. At last came definite offers. I broke my silence and bargained.

"Pollack!" I cried and hammered the partition.

"What's up?" asked Pollack.

I stated the case concisely.

There came a silence.

"He's a Card," said Pollack. "Let's give him his commission. I don't mind."

"Eh?" I cried.

"I said he was a Card, that's all," said Pollack. "I'm coming."

He appeared in my doorway a faint white figure joined our vehement whisperings.

We had to buy the captain off; we had to promise him ten per cent. of our problematical profits. We were to give him ten per cent. on what we sold the cargo for over and above his legitimate pay, and I found in my out-bargained and disordered state small consolation in the thought that I, as the Gordon-Nasmyth expedition, was to sell the stuff to myself as Business Organisations. And he further exasperated me by insisting on having our bargain in writing. "In the form of a letter," he insisted.

"All right," I acquiesced, "in the form of a letter. Here goes! Get a light!"

"And the apology," he said, folding up the letter.

"All right," I said; "Apology."

My hand shook with anger as I wrote, and afterwards I could not sleep for hate of him. At last I got up. I suffered, I found, from an unusual clumsiness. I struck my toe against my cabin door, and cut myself as I shaved. I found myself at last pacing the deck under the dawn in a mood of extreme exasperation. The sun rose abruptly and splashed light blindingly into my eyes and I swore at the sun. I found myself imagining fresh obstacles with the men and talking aloud in anticipatory rehearsal of the consequent row.

The malaria of the quap was already in my blood.

V

Sooner or later the ridiculous embargo that now lies upon all the coast eastward of Mordet Island will be lifted and the reality of the deposits of quap ascertained. I am sure that we were merely taking the outcrop of a stratum of nodulated deposits that dip steeply seaward. Those heaps were merely the crumbled out contents of two irregular cavities in the rock; they are as natural as any talus or heap of that kind, and the mud along the edge of the water for miles is mixed with quap, and is radio-active and lifeless and faintly phosphorescent at night. But the reader will find the full particulars of my impression of all this in the Geological Magazine for October, 1905, and to that I must refer him. There, too, he will find my unconfirmed theories of its nature. If I am right it is something far more

significant from the scientific point of view than those incidental constituents of various rare metals, pitchblende, rutile, and the like, upon which the revolutionary discoveries of the last decade are based. Those are just little molecular centres of disintegration, of that mysterious decay and rotting of those elements, elements once regarded as the most stable things in nature. But there is something--the only word that comes near it is CANCEROUS--and that is not very near, about the whole of quap, something that creeps and lives as a disease lives by destroying; an elemental stirring and disarrangement, incalculably maleficent and strange.

This is no imaginative comparison of mine. To my mind radio-activity is a real disease of matter. Moreover, it is a contagious disease. It spreads. You bring those debased and crumbling atoms near others and those too presently catch the trick of swinging themselves out of coherent existence. It is in matter exactly what the decay of our old culture is in society, a loss of traditions and distinctions and assured reactions. When I think of these inexplicable dissolvent centres that have come into being in our globe--these quap heaps are surely by far the largest that have yet been found in the world; the rest as yet mere specks in grains and crystals--I am haunted by a grotesque fancy of the ultimate eating away and dry-rotting and dispersal of all our world. So that while man still struggles and dreams his very substance will change and crumble from beneath him. I mention this here as a queer persistent fancy. Suppose, indeed, that is to be the end of our planet; no splendid climax and finale, no towering accumulation of achievements, but just--atomic decay! I add that to the ideas of the suffocating comet, the dark body out of space, the burning out of the sun, the distorted orbit, as a new and far more possible end--as Science can see ends--to this strange by-play of matter that we call human life. I do not believe this can be the end; no human soul can believe in such an end and go on

living, but to it science points as a possible thing, science and reason alike. If single human beings--if one single rickety infant--can be born as it were by accident and die futile, why not the whole race? These are questions I have never answered, that now I never attempt to answer, but the thought of quap and its mysteries brings them back to me.

I can witness that the beach and mud for two miles or more either way was a lifeless beach--lifeless as I could have imagined no tropical mud could ever be, and all the dead branches and leaves and rotting dead fish and so forth that drifted ashore became presently shrivelled and white. Sometimes crocodiles would come up out of the water and bask, and now and then water birds would explore the mud and rocky ribs that rose out of it, in a mood of transitory speculation. That was its utmost admiration. And the air felt at once hot and austere, dry and blistering, and altogether different the warm moist embrace that had met us at our first African landfall and to which we had grown accustomed.

I believe that the primary influence of the quap upon us was to increase the conductivity of our nerves, but that is a mere unjustifiable speculation on my part. At any rate it gave a sort of east wind effect to life. We all became irritable, clumsy, languid and disposed to be impatient with our languor. We moored the brig to the rocks with difficulty, and got aground on mud and decided to stick there and tow off when we had done--the bottom was as greasy as butter. Our efforts to fix up planks and sleepers in order to wheel the quap aboard were as ill-conceived as that sort of work can be--and that sort of work can at times be very ill-conceived. The captain had a superstitious fear of his hold: he became wildly gesticulatory and expository and incompetent at the bare thought of it. His shouts still echo in my memory, becoming as each crisis approached less and less like any known tongue.

But I cannot now write the history of those days of blundering and toil: of how Milton, one of the boys, fell from a plank to the beach, thirty feet perhaps, with his barrow and broke his arm and I believe a rib, of how I and Pollack set the limb and nursed him through the fever that followed, of how one man after another succumbed to a feverish malaria, and how I--by virtue of my scientific reputation--was obliged to play the part of doctor and dose them with quinine, and then finding that worse than nothing, with rum and small doses of Easton's Syrup, of which there chanced to be a case of bottles aboard--Heaven and Gordon-Nasmyth know why. For three long days we lay in misery and never shipped a barrow-load. Then, when they resumed, the men's hands broke out into sores. There were no gloves available; and I tried to get them, while they shovelled and wheeled, to cover their hands with stockings or greased rags. They would not do this on account of the heat and discomfort. This attempt of mine did, however, direct their attention to the quap as the source of their illness and precipitated what in the end finished our lading, an informal strike. "We've had enough of this," they said, and they meant it. They came aft to say as much. They cowed the captain.

Through all these days the weather was variously vile, first a furnace heat under a sky of a scowling intensity of blue, then a hot fog that stuck in one's throat like wool and turned the men on the planks into colourless figures of giants, then a wild burst of thunderstorms, mad elemental uproar and rain. Through it all, against illness, heat, confusion of mind, one master impetus prevailed with me, to keep the shipping going, to maintain one motif at least, whatever else arose or ceased, the chuff of the spades, the squeaking and shriek of the barrows, the pluppa, pluppa, pluppa, as the men came trotting along the swinging high planks, and then at last, the dollop, dollop, as the stuff shot into the hold. "Another barrow-load, thank God! Another fifteen hundred, or it may be two thousand pounds, for

the saving of Ponderevo!...!"

I found out many things about myself and humanity in those weeks of effort behind Mordet Island. I understand now the heart of the sweater, of the harsh employer, of the nigger-driver. I had brought these men into a danger they didn't understand, I was fiercely resolved to overcome their opposition and bend and use them for my purpose, and I hated the men. But I hated all humanity during the time that the quap was near me.

And my mind was pervaded, too, by a sense of urgency and by the fear that we should be discovered and our proceedings stopped. I wanted to get out to sea again--to be beating up northward with our plunder. I was afraid our masts showed to seaward and might betray us to some curious passer on the high sea. And one evening near the end I saw a canoe with three natives far off down the lake; I got field-glasses from the captain and scrutinised them, and I could see them staring at us. One man might have been a half-breed and was dressed in white. They watched us for some time very quietly and then paddled off into some channel in the forest shadows.

And for three nights running, so that it took a painful grip upon my inflamed imagination, I dreamt of my uncle's face, only that it was ghastly white like a clown's, and the throat was cut from ear to ear--a long ochreous cut. "Too late," he said; "Too late!..."

VI

A day or so after we had got to work upon the quap I found myself so sleepless and miserable that the ship became unendurable. Just before the rush of sunrise I borrowed Pollack's gun, walked down the planks, clambered over the quap heaps and prowled along the beach. I went perhaps a mile and a half that day and some

distance beyond the ruins of the old station. I became interested in the desolation about me, and found when I returned that I was able to sleep for nearly an hour. It was delightful to have been alone for so long,--no captain, no Pollack, no one. Accordingly I repeated this expedition the next morning and the next until it became a custom with me. There was little for me to do once the digging and wheeling was organised, and so these prowlings of mine grew longer and longer, and presently I began to take food with me.

I pushed these walks far beyond the area desolated by the quap. On the edges of that was first a zone of stunted vegetation, then a sort of swampy jungle that was difficult to penetrate, and then the beginnings of the forest, a scene of huge tree stems and tangled creeper ropes and roots mingled with oozy mud. Here I used to loaf in a state between botanising and reverie--always very anxious to know what was up above in the sunlight--and here it was I murdered a man.

It was the most unmeaning and purposeless murder imaginable. Even as I write down its well-remembered particulars there comes again the sense of its strangeness, its pointlessness, its incompatibility with any of the neat and definite theories people hold about life and the meaning of the world. I did this thing and I want to tell of my doing it, but why I did it and particularly why I should be held responsible for it I cannot explain.

That morning I had come upon a track in the forest, and it had occurred to me as a disagreeable idea that this was a human pathway. I didn't want to come upon any human beings. The less our expedition saw of the African population the better for its prospects. Thus far we had been singularly free from native pestering. So I turned back and was making my way over mud and roots and dead fronds and petals scattered from the green world

above when abruptly I saw my victim.

I became aware of him perhaps forty feet off standing quite still and regarding me.

He wasn't by any means a pretty figure. He was very black and naked except for a dirty loin-cloth, his legs were ill-shaped and his toes spread wide and the upper edge of his cloth and a girdle of string cut his clumsy abdomen into folds. His forehead was low, his nose very flat and his lower lip swollen and purplish-red. His hair was short and fuzzy, and about his neck was a string and a little purse of skin. He carried a musket, and a powder-flask was stuck in his girdle. It was a curious confrontation. There opposed to him stood I, a little soiled, perhaps, but still a rather elaborately civilised human being, born, bred and trained in a vague tradition. In my hand was an unaccustomed gun. And each of us was essentially a teeming, vivid brain, tensely excited by the encounter, quite unaware of the other's mental content or what to do with him.

He stepped back a pace or so, stumbled and turned to run.

"Stop," I cried; "stop, you fool!" and started to run after him, shouting such things in English. But I was no match for him over the roots and mud.

I had a preposterous idea. "He mustn't get away and tell them!"

And with that instantly I brought both feet together, raised my gun, aimed quite coolly, drew the trigger carefully and shot him neatly in the back.

I saw, and saw with a leap of pure exaltation, the smash of my bullet between his shoulder blades. "Got him," said I, dropping my gun and down he flopped and died without a groan. "By Jove!"

I cried with note of surprise, "I've killed him!" I looked about me and then went forward cautiously, in a mood between curiosity and astonishment, to look at this man whose soul I had flung so unceremoniously out of our common world. I went to him, not as one goes to something one has made or done, but as one approaches something found.

He was frightfully smashed out in front; he must have died in the instant. I stooped and raised him by his shoulder and realised that. I dropped him, and stood about and peered about me through the trees. "My word!" I said. He was the second dead human being--apart, I mean, from surgical properties and mummies and common shows of that sort--that I have ever seen. I stood over him wondering, wondering beyond measure.

A practical idea came into that confusion. Had any one heard the gun?

I reloaded.

After a time I felt securer, and gave my mind again to the dead I had killed. What must I do?

It occurred to me that perhaps I ought to bury him. At any rate, I ought to hide him. I reflected coolly, and then put my gun within easy reach and dragged him by the arm towards a place where the mud seemed soft, and thrust him in. His powder-flask slipped from his loin-cloth, and I went back to get it. Then I pressed him down with the butt of my rifle.

Afterwards this all seemed to me most horrible, but at the time it was entirely a matter-of-fact transaction. I looked round for any other visible evidence of his fate, looked round as one does when one packs one's portmanteau in an hotel bedroom.

When I got my bearings, and carefully returned towards the ship. I had the mood of grave concentration of a boy who has lapsed into poaching. And the business only began to assume proper proportions for me as I got near the ship, to seem any other kind of thing than the killing of a bird or rabbit.

In the night, however, it took on enormous and portentous forms. "By God!" I cried suddenly, starting wide awake; "but it was murder!"

I lay after that wide awake, staring at my memories. In some odd way these visions mixed up with my dream of in my uncle in his despair. The black body which saw now damaged and partly buried, but which, nevertheless, I no longer felt was dead but acutely alive and perceiving, I mixed up with the ochreous slash under my uncle's face. I tried to dismiss this horrible obsession from my mind, but it prevailed over all my efforts.

The next day was utterly black with my sense of that ugly creature's body. I am the least superstitious of men, but it drew me. It drew me back into those thickets to the very place where I had hidden him.

Some evil and detestable beast had been at him, and he lay disinterred.

Methodically I buried his swollen and mangled carcass again, and returned to the ship for another night of dreams. Next day for all the morning I resisted the impulse to go to him, and played nap with Pollack with my secret gnawing at me, and in the evening started to go and was near benighted. I never told a soul of them of this thing I had done.

Next day I went early, and he had gone, and there were human footmarks and ugly stains round the muddy hole from which he had

been dragged.

I returned to the ship, disconcerted and perplexed. That day it was the men came aft, with blistered hands and faces, and sullen eyes. When they proclaimed, through Edwards, their spokesman, "We've had enough of this, and we mean it," I answered very readily, "So have I. Let's go."

VII

We were none too soon. People had been reconnoitring us, the telegraph had been at work, and we were not four hours at sea before we ran against the gunboat that had been sent down the coast to look for us and that would have caught us behind the island like a beast in a trap. It was a night of driving cloud that gave intermittent gleams of moonlight; the wind and sea were strong and we were rolling along through a drift of rails and mist. Suddenly the world was white with moonshine. The gunboat came out as a long dark shape wallowing on the water to the east.

She sighted the Maud Mary at once, and fired some sort of popgun to arrest us.

The mate turned to me.

"Shall I tell the captain?"

"The captain be damned" said I, and we let him sleep through two hours of chase till a rainstorm swallowed us up. Then we changed our course and sailed right across them, and by morning only her smoke was showing.

We were clear of Africa--and with the booty aboard I did not see what stood between us and home.

For the first time since I had fallen sick in the Thames my spirits rose. I was sea-sick and physically disgusted, of course, but I felt kindly in spite of my qualms. So far as I could calculate then the situation was saved. I saw myself returning triumphantly into the Thames, and nothing on earth to prevent old Capern's Perfect Filament going on the market in fortnight. I had the monopoly of electric lamps beneath my feet.

I was released from the spell of that bloodstained black body all mixed up with grey-black mud. I was going back to baths and decent food and aeronautics and Beatrice. I was going back to Beatrice and my real life again--out of this well into which I had fallen. It would have needed something more than sea-sickness and quap fever to prevent my spirits rising.

I told the captain that I agreed with him that the British were the scum of Europe, the westward drift of all the people, a disgusting rabble, and I lost three pounds by attenuated retail to Pollack at ha'penny nap and euchre.

And then you know, as we got out into the Atlantic this side of Cape Verde, the ship began to go to pieces. I don't pretend for one moment to understand what happened. But I think Greiffenhagen's recent work on the effects of radium upon ligneous tissue does rather carry out my idea that emanations from quap have rapid rotting effect upon woody fibre.

From the first there had been a different feel about the ship, and as the big winds and waves began to strain her she commenced leaking. Soon she was leaking--not at any particular point, but everywhere. She did not spring a leak, I mean, but water came in first of all near the decaying edges of her planks, and then through them.

I firmly believe the water came through the wood. First it began to ooze, then to trickle. It was like trying to carry moist sugar in a thin paper bag. Soon we were taking in water as though we had opened a door in her bottom.

Once it began, the thing went ahead beyond all fighting. For a day or so we did our best, and I can still remember in my limbs and back the pumping--the fatigue in my arms and the memory of a clear little dribble of water that jerked as one pumped, and of knocking off and the being awakened to go on again, and of fatigue piling up upon fatigue. At last we ceased to think of anything but pumping; one became a thing of torment enchanted, doomed to pump for ever. I still remember it as pure relief when at last Pollack came to me pipe in mouth.

"The captain says the damned thing's going down right now;' he remarked, chewing his mouthpiece. "Eh?"

"Good idea!" I said. "One can't go on pumping for ever."

And without hurry or alacrity, sullenly and wearily we got into the boats and pulled away from the Maud Mary until we were clear of her, and then we stayed resting on our oars, motionless upon a glassy sea, waiting for her to sink. We were all silent, even the captain was silent until she went down. And then he spoke quite mildly in an undertone.

"Dat is the first ship I haf ever lost.... And it was not a fair game! It wass not a cargo any man should take. No!"

I stared at the slow eddies that circled above the departed Maud Mary, and the last chance of Business Organisations. I felt weary beyond emotion. I thought of my heroics to Beatrice and my uncle, of my prompt "I'LL go," and of all the ineffectual months I had spent after this headlong decision. I was moved to

laughter at myself and fate.

But the captain and the men did not laugh. The men scowled at me and rubbed their sore and blistered hands, and set themselves to row....

As all the world knows we were picked up by the Union Castle liner, Portland Castle.

The hairdresser aboard was a wonderful man, and he even improvised me a dress suit, and produced a clean shirt and warm underclothing. I had a hot bath, and dressed and dined and drank a bottle of Burgundy.

"Now," I said, "are there any newspapers? I want to know what's been happening in the world."

My steward gave me what he had, but I landed at Plymouth still largely ignorant of the course of events. I shook off Pollack, and left the captain and mate in an hotel, and the men in a Sailor's Home until I could send to pay them off, and I made my way to the station.

The newspapers I bought, the placards I saw, all England indeed resounded to my uncle's bankruptcy.

BOOK THE FOURTH

THE AFTERMATH OF TONO-BUNGAY

CHAPTER THE FIRST

THE STICK OF THE ROCKET

I

That evening I talked with my uncle in the Hardingham for the last time. The atmosphere of the place had altered quite shockingly. Instead of the crowd of importunate courtiers there were just half a dozen uninviting men, journalists waiting for an interview. Ropper the big commissionaire was still there, but now indeed he was defending my uncle from something more than time-wasting intrusions. I found the little man alone in the inner office pretending to work, but really brooding. He was looking yellow and deflated.

"Lord!" he said at the sight of me. "You're lean, George. It makes that scar of yours show up."

We regarded each other gravely for a time.

"Quap," I said, "is at the bottom of the Atlantic. There's some bills--We've got to pay the men."

"Seen the papers?"

"Read 'em all in the train."

"At bay," he said. "I been at bay for a week.... Yelping round me.... And me facing the music. I'm feelin' a bit tired."

He blew and wiped his glasses.

"My stomach isn't what it was," he explained. "One finds it--these times. How did it all happen, George? Your Marconigram--it took me in the wind a bit."

I told him concisely. He nodded to the paragraphs of my narrative and at the end he poured something from a medicine

bottle into a sticky little wineglass and drank it. I became aware of the presence of drugs, of three or four small bottles before him among his disorder of papers, of a faint elusively familiar odour in the room.

"Yes," he said, wiping his lips and recorking the bottle.
"You've done your best, George. The luck's been against us."

He reflected, bottle in hand. "Sometimes the luck goes with you and sometimes it doesn't. Sometimes it doesn't. And then where are you? Grass in the oven! Fight or no fight."

He asked a few questions and then his thoughts came back to his own urgent affairs. I tried to get some comprehensive account of the situation from him, but he would not give it.

"Oh, I wish I'd had you. I wish I'd had you, George. I've had a lot on my hands. You're clear headed at times."

"What has happened?"

"Oh! Boom!--infernial things."

"Yes, but--how? I'm just off the sea, remember."

"It'd worry me too much to tell you now. It's tied up in a skein."

He muttered something to himself and mused darkly, and roused himself to say--

"Besides--you'd better keep out of it. It's getting tight. Get 'em talking. Go down to Crest Hill and fly. That's YOUR affair."

For a time his manner set free queer anxieties in my brain again.

I will confess that that Mordet Island nightmare of mine returned, and as I looked at him his hand went out for the drug again. "Stomach, George," he said.

"I been fightin' on that. Every man fights on some thing--gives way somewheres--head, heart, liver--something. Zzzz. Gives way somewhere. Napoleon did at last. All through the Waterloo campaign, his stomach--it wasn't a stomach! Worse than mine, no end."

The mood of depression passed as the drug worked within him. His eyes brightened. He began to talk big. He began to dress up the situation for my eyes, to recover what he had admitted to me. He put it as a retreat from Russia. There were still the chances of Leipzig.

"It's a battle, George--a big fight. We're fighting for millions. I've still chances. There's still a card or so. I can't tell all my plans--like speaking on the stroke."

"You might," I began.

"I can't, George. It's like asking to look at some embryo. You got to wait. I know. In a sort of way, I know. But to tell it-- No! You been away so long. And everything's got complicated."

My perception of disastrous entanglements deepened with the rise of his spirits. It was evident that I could only help to tie him up in whatever net was weaving round his mind by forcing questions and explanations upon him. My thoughts flew off at another angle. "How's Aunt Susan?" said I.

I had to repeat the question. His busy whispering lips stopped for a moment, and he answered in the note of one who repeats a formula.

"She'd like to be in the battle with me. She'd like to be here in London. But there's corners I got to turn alone." His eye rested for a moment on the little bottle beside him. "And things have happened.

"You might go down now and talk to her," he said, in a directer voice. "I shall be down to-morrow night, I think."

He looked up as though he hoped that would end our talk.

"For the week-end?" I asked.

"For the week-end. Thank God for week-ends, George!"

II

My return home to Lady Grove was a very different thing from what I had anticipated when I had got out to sea with my load of quap and fancied the Perfect-Filament was safe within my grasp. As I walked through the evening light along the downs, the summer stillness seemed like the stillness of something newly dead. There were no lurking workmen any more, no cyclists on the high road.

Cessation was manifest everywhere. There had been, I learnt from my aunt, a touching and quite voluntary demonstration when the Crest Hill work had come to an end and the men had drawn their last pay; they had cheered my uncle and hooted the contractors and Lord Boom.

I cannot now recall the manner in which my aunt and I greeted one

another. I must have been very tired there, but whatever impression was made has gone out of my memory. But I recall very clearly how we sat at the little round table near the big window that gave on the terrace, and dined and talked. I remember her talking of my uncle.

She asked after him, and whether he seemed well. "I wish I could help," she said. "But I've never helped him much, never. His way of doing things was never mine. And since--since--. Since he began to get so rich, he's kept things from me. In the old days--it was different....

"There he is--I don't know what he's doing. He won't have me near him....

"More's kept from me than anyone. The very servants won't let me know. They try and stop the worst of the papers--Boom's things--from coming upstairs.... I suppose they've got him in a corner, George. Poor old Teddy! Poor old Adam and Eve we are! Ficial Receivers with flaming swords to drive us out of our garden! I'd hoped we'd never have another Trek. Well--anyway, it won't be Crest Hill.... But it's hard on Teddy. He must be in such a mess up there. Poor old chap. I suppose we can't help him. I suppose we'd only worry him. Have some more soup George--while there is some?..."

The next day was one of those days of strong perception that stand out clear in one's memory when the common course of days is blurred. I can recall now the awakening in the large familiar room that was always kept for me, and how I lay staring at its chintz-covered chairs, its spaced fine furniture, its glimpse of the cedars without, and thought that all this had to end.

I have never been greedy for money, I have never wanted to be rich, but I felt now an immense sense of impending deprivation.

I read the newspapers after breakfast--I and my aunt together--and then I walked up to see what Cothope had done in the matter of Lord Roberts B. Never before had I appreciated so acutely the ample brightness of the Lady Grove gardens, the dignity and wide peace of all about me. It was one of those warm mornings in late May that have won all the glory of summer without losing the gay delicacy of spring. The shrubbery was bright with laburnum and lilac, the beds swarmed with daffodils and narcissi and with lilies of the valley in the shade.

I went along the well-kept paths among the rhododendra and through the private gate into the woods where the bluebells and common orchid were in profusion. Never before had I tasted so completely the fine sense of privilege and ownership. And all this has to end, I told myself, all this has to end.

Neither my uncle nor I had made any provision for disaster; all we had was in the game, and I had little doubt now of the completeness of our ruin. For the first time in my life since he had sent me that wonderful telegram of his I had to consider that common anxiety of mankind,--Employment. I had to come off my magic carpet and walk once more in the world.

And suddenly I found myself at the cross drives where I had seen Beatrice for the first time after so many years. It is strange, but so far as I can recollect I had not thought of her once since I had landed at Plymouth. No doubt she had filled the background of my mind, but I do not remember one definite, clear thought. I had been intent on my uncle and the financial collapse.

It came like a blow in the face now; all that, too, had to end!

Suddenly I was filled with the thought of her and a great longing for her. What would she do when she realised our immense disaster? What would she do? How would she take it? It filled

me with astonishment to realise how little I could tell....

Should I perhaps presently happen upon her?

I went on through the plantations and out upon the downs, and thence I saw Cothope with a new glider of his own design soaring down wind to my old familiar "grounding" place. To judge by its long rhythm it was a very good glider. "Like Cothope's cheek," thought I, "to go on with the research. I wonder if he's keeping notes.... But all this will have to stop."

He was sincerely glad to see me. "It's been a rum go," he said.

He had been there without wages for a month, a man forgotten in the rush of events.

"I just stuck on and did what I could with the stuff. I got a bit of money of my own--and I said to myself, 'Well, here you are with the gear and no one to look after you. You won't get such a chance again, my boy, not in all your born days. Why not make what you can with it?'"

"How's Lord Roberts B?"

Cothope lifted his eyebrows. "I've had to refrain," he said. "But he's looking very handsome."

"Gods!" I said, "I'd like to get him up just once before we smash. You read the papers? You know we're going to smash?"

"Oh! I read the papers. It's scandalous, sir, such work as ours should depend on things like that. You and I ought to be under the State, sir, if you'll excuse me"

"Nothing to excuse," I said. "I've always been a Socialist--of a

sort--in theory. Let's go and have a look at him. How is he?
Deflated?"

"Just about quarter full. That last oil glaze of yours holds the
gas something beautiful. He's not lost a cubic metre a week." ...

Cothope returned to Socialism as we went toward the sheds.

"Glad to think you're a Socialist, sir," he said, "it's the only
civilised state. I been a Socialist some years--off the
Clarion. It's a rotten scramble, this world. It takes the
things we make and invent and it plays the silly fool with 'em.
We scientific people, we'll have to take things over and stop all
this financing and advertisement and that. It's too silly.
It's a noosance. Look at us!"

Lord Roberts B, even in his partially deflated condition in his
shed, was a fine thing to stare up at. I stood side by side with
Cothope regarding him, and it was borne in upon me more acutely
than ever that all this had to end. I had a feeling just like
the feeling of a boy who wants to do wrong, that I would use up
the stuff while I had it before the creditors descended. I had a
queer fancy, too, I remember, that if I could get into the air it
would advertise my return to Beatrice.

"We'll fill her," I said concisely.

"It's all ready," said Cothope, and added as an afterthought,
"unless they cut off the gas." ...

I worked and interested myself with Cothope all the morning and
for a time forgot my other troubles. But the thought of Beatrice
flooded me slowly and steadily. It became an unintelligent sick
longing to see her. I felt that I could not wait for the filling
of Lord Roberts B, that I must hunt her up and see her soon. I

got everything forward and lunched with Cothope, and then with the feeblest excuses left him in order to prowl down through the woods towards Bedley Corner. I became a prey to wretched hesitations and diffidence. Ought I to go near her now? I asked myself, reviewing all the social abasements of my early years. At last, about five, I called at the Dower House. I was greeted by their Charlotte--with a forbidding eye and a cold astonishment.

Both Beatrice and Lady Osprey were out.

There came into my head some prowling dream of meeting her. I went along the lane towards Woking, the lane down which we had walked five months ago in the wind and rain.

I mooned for a time in our former footsteps, then swore and turned back across the fields, and then conceived a distaste for Cothope and went Downward. At last I found myself looking down on the huge abandoned masses of the Crest Hill house.

That gave my mind a twist into a new channel. My uncle came uppermost again. What a strange, melancholy emptiness of intention that stricken enterprise seemed in the even evening sunlight, what vulgar magnificence and crudity and utter absurdity! It was as idiotic as the pyramids. I sat down on the stile, staring at it as though I had never seen that forest of scaffold poles, that waste of walls and bricks and plaster and shaped stones, that wilderness of broken soil and wheeling tracks and dumps before. It struck me suddenly as the compactest image and sample of all that passes for Progress, of all the advertisement-inflated spending, the aimless building up and pulling down, the enterprise and promise of my age. This was our fruit, this was what he had done, I and my uncle, in the fashion of our time. We were its leaders and exponents, we were the thing it most flourishingly produced. For this futility in

its end, for an epoch of such futility, the solemn scroll of history had unfolded....

"Great God!" I cried, "but is this Life?"

For this the armies drilled, for this the Law was administered and the prisons did their duty, for this the millions toiled and perished in suffering, in order that a few of us should build palaces we never finished, make billiard-rooms under ponds, run imbecile walls round irrational estates, scorch about the world in motor-cars, devise flying-machines, play golf and a dozen such foolish games of ball, crowd into chattering dinner parties, gamble and make our lives one vast, dismal spectacle of witless waste! So it struck me then, and for a time I could think of no other interpretation. This was Life! It came to me like a revelation, a revelation at once incredible and indisputable of the abysmal folly of our being.

III

I was roused from such thoughts by the sound of footsteps behind me.

I turned half hopeful--so foolish is a lover's imagination, and stopped amazed. It was my uncle. His face was white--white as I had seen it in my dream.

"Hullo!" I said, and stared. "Why aren't you in London?"

"It's all up," he said....

"Adjudicated?"

"No!"

I stared at him for a moment, and then got off the stile.

We stood swaying and then came forward with a weak motion of his arms like a man who cannot see distinctly, and caught at and leant upon the stile. For a moment we were absolutely still. He made a clumsy gesture towards the great futility below and choked. I discovered that his face was wet with tears, that his wet glasses blinded him. He put up his little fat hand and clawed them off clumsily, felt inefficiently for his pocket-handkerchief, and then, to my horror, as he clung to me, he began to weep aloud, this little, old worldworn swindler. It wasn't just sobbing or shedding tears, it was crying as a child cries. It was oh! terrible!

"It's cruel," he blubbered at last. "They asked me questions. They KEP' asking me questions, George."

He sought for utterance, and spluttered.

"The Bloody bullies!" he shouted. "The Bloody Bullies."

He ceased to weep. He became suddenly rapid and explanatory.

"It's not a fair game, George. They tire you out. And I'm not well. My stomach's all wrong. And I been and got a cold. I always been li'ble to cold, and this one's on my chest. And then they tell you to speak up. They bait you--and bait you, and bait you. It's torture. The strain of it. You can't remember what you said. You're bound to contradict yourself. It's like Russia, George.... It isn't fair play.... Prominent man. I've been next at dinners with that chap, Neal; I've told him stories--and he's bitter! Sets out to ruin me. Don't ask a civil question--bellows." He broke down again. "I've been bellowed at, I been bullied, I been treated like a dog. Dirty cads they are! Dirty cads! I'd rather be a Three-Card Sharper

than a barrister; I'd rather sell cat's-meat in the streets.

"They sprung things on me this morning, things I didn't expect. They rushed me! I'd got it all in my hands and then I was jumped. By Neal! Neal I've given city tips to! Neal! I've helped Neal....

"I couldn't swallow a mouthful--not in the lunch hour. I couldn't face it. It's true, George--I couldn't face it. I said I'd get a bit of air and slipped out and down to the Embankment, and there I took a boat to Richmond. Some idee. I took a rowing boat when I got there and I rowed about on the river for a bit. A lot of chaps and girls there was on the bank laughed at my shirt-sleeves and top hat. Dessay they thought it was a pleasure trip. Fat lot of pleasure! I rowed round for a bit and came in. Then I came on here. Windsor way. And there they are in London doing what they like with me.... I don't care!"

"But" I said, looking down at him, perplexed.

"It's abscondin'. They'll have a warrant."

"I don't understand," I said.

"It's all up, George--all up and over.

"And I thought I'd live in that place, George and die a lord! It's a great place, reely, an imperial--if anyone has the sense to buy it and finish it. That terrace--"

I stood thinking him over.

"Look here!" I said. "What's that about--a warrant? Are you sure they'll get a warrant? I'm sorry uncle; but what have you done?"

"Haven't I told you?"

"Yes, but they won't do very much to you for that. They'll only bring you up for the rest of your examination."

He remained silent for a time. At last he spoke--speaking with difficulty.

"It's worse than that. I've done something. They're bound to get it out. Practically they HAVE got it out."

"What?"

"Writin' things down--I done something."

For the first time in his life, I believe, he felt and looked ashamed. It filled me with remorse to see him suffer so.

"We've all done things," I said. "It's part of the game the world makes us play. If they want to arrest you--and you've got no cards in your hand--! They mustn't arrest you."

"No. That's partly why I went to Richmond. But I never thought--"

His little bloodshot eyes stared at Crest Hill.

"That chap Wittaker Wright," he said, "he had his stuff ready. I haven't. Now you got it, George. That's the sort of hole I'm in."

IV

That memory of my uncle at the gate is very clear and full. I am

able to recall even the undertow of my thoughts while he was speaking. I remember my pity and affection for him in his misery growing and stirring within me, my realisation that at any risk I must help him. But then comes indistinctness again. I was beginning to act. I know I persuaded him to put himself in my hands, and began at once to plan and do. I think that when we act most we remember least, that just in the measure that the impulse of our impressions translates itself into schemes and movements, it ceases to record itself in memories. I know I resolved to get him away at once, and to use the Lord Roberts B in effecting that. It was clear he was soon to be a hunted man, and it seemed to me already unsafe for him to try the ordinary Continental routes in his flight. I had to evolve some scheme, and evolve it rapidly, how we might drop most inconspicuously into the world across the water. My resolve to have one flight at least in my airship fitted with this like hand to glove. It seemed to me we might be able to cross over the water in the night, set our airship adrift, and turn up as pedestrian tourists in Normandy or Brittany, and so get away. That, at any rate, was my ruling idea.

I sent off Cothope with a dummy note to Woking, because I did not want to implicate him, and took my uncle to the pavilion. I went down to my aunt, and made a clean breast of the situation. She became admirably competent. We went into his dressing-room and ruthlessly broke his locks. I got a pair of brown boots, a tweed suit and a cap of his, and indeed a plausible walking outfit, and a little game bag for his pedestrian gear; and, in addition, a big motoring overcoat and a supply of rugs to add to those I had at the pavilion. I also got a flask of brandy, and she made sandwiches. I don't remember any servants appearing, and I forget where she got those sandwiches. Meanwhile we talked. Afterwards I thought with what a sure confidence we talked to each other

"What's he done?" she said.

"D'you mind knowing?"

"No conscience left, thank God!"

"I think--forgery!"

There was just a little pause. "Can you carry this bundle?" she asked.

I lifted it.

"No woman ever has respected the law--ever," she said. "It's too silly.... The things it lets you do! And then pulls you up--like a mad nurse minding a child."

She carried some rugs for me through the shrubbery in the darkling.

"They'll think we're going mooning," she said, jerking her head at the household. "I wonder what they make of us--criminals." ... An immense droning note came as if in answer to that. It startled us both for a moment. "The dears!" she said. "It's the gong for dinner!... But I wish I could help little Teddy, George. It's awful to think of him there with hot eyes, red and dry. And I know--the sight of me makes him feel sore. Things I said, George. If I could have seen, I'd have let him have an omnibusful of Scrymgeours. I cut him up. He'd never thought I meant it before.... I'll help all I can, anyhow."

I turned at something in her voice, and got a moon light gleam of tears upon her face.

"Could SHE have helped?" she asked abruptly.

"SHE?"

"That woman."

"My God!" I cried, "HELPED! Those--things don't help!"

"Tell me again what I ought to do," she said after a silence.

I went over the plans I had made for communicating, and the things I thought she might do. I had given her the address of a solicitor she might put some trust in.

"But you must act for yourself," I insisted.

"Roughly," I said, "it's a scramble. You must get what you can for us, and follow as you can."

She nodded.

She came right up to the pavilion and hovered for a time shyly, and then went away.

I found my uncle in my sitting-room in an arm-chair, with his feet upon the fender of the gas stove, which he had lit, and now he was feebly drunken with my whisky, and very weary in body and spirit, and inclined to be cowardly.

"I lef' my drops," he said.

He changed his clothes slowly and unwillingly. I had to bully him, I had almost to shove him to the airship and tuck him up upon its wicker flat. Single-handed I made but a clumsy start; we scraped along the roof of the shed and bent a van of the propeller, and for a time I hung underneath without his offering

a hand to help me to clamber up. If it hadn't been for a sort of anchoring trolley device of Cothope's, a sort of slip anchor running on a rail, we should never have got clear at all.

V

The incidents of our flight in Lord Roberts B do not arrange themselves in any consecutive order. To think of that adventure is like dipping haphazard into an album of views. One is reminded first of this and then of that. We were both lying down on a horizontal plate of basketwork; for Lord Roberts B had none of the elegant accommodation of a balloon. I lay forward, and my uncle behind me in such a position that he could see hardly anything of our flight. We were protected from rolling over simply by netting between the steel stays. It was impossible for us to stand up at all; we had either to lie or crawl on all fours over the basket work. Amidships were lockers made of Watson's Aulite material,--and between these it was that I had put my uncle, wrapped in rugs. I wore sealskin motoring boots and gloves, and a motoring fur coat over my tweeds, and I controlled the engine by Bowden wires and levers forward.

The early part of that night's experience was made up of warmth, of moonlit Surrey and Sussex landscape, and of a rapid and successful flight, ascending and swooping, and then ascending again southward. I could not watch the clouds because the airship overhung me; I could not see the stars nor gauge the meteorological happening, but it was fairly clear to me that a wind shifting between north and northeast was gathering strength, and after I had satisfied myself by a series of entirely successful expansions and contractions of the real air-worthiness of Lord Roberts B, I stopped the engine to save my petrol, and let the monster drift, checking its progress by the dim landscape below. My uncle lay quite still behind me, saying little and staring in front of him, and I was left to my own thoughts and

sensations.

My thoughts, whatever they were, have long since faded out of memory, and my sensations have merged into one continuous memory of an countryside lying, as it seemed, under snow, with square patches of dimness, white phantoms of roads, rents and pools of velvety blackness, and lamp-jewelled houses. I remember a train boring its way like a hastening caterpillar of fire across the landscape, and how distinctly I heard its clatter. Every town and street was buttoned with street lamps. I came quite close to the South Downs near Lewes, and all the lights were out in the houses, and the people gone to bed. We left the land a little to the east of Brighton, and by that time Brighton was well abed. and the brightly lit sea-front deserted. Then I let out the gas chamber to its fullest extent and rose. I like to be high above water.

I do not clearly know what happened in the night. I think I must have dozed, and probably my uncle slept. I remember that once or twice I heard him talking in an eager, muffled voice to himself, or to an imaginary court. But there can be no doubt the wind changed right round into the east, and that we were carried far down the Channel without any suspicion of the immense leeway we were making. I remember the kind of stupid perplexity with which I saw the dawn breaking over a grey waste of water, below, and realised that something was wrong. I was so stupid that it was only after the sunrise I really noticed the trend of the foam caps below, and perceived we were in a severe easterly gale. Even then, instead of heading southeasterly, I set the engine going, headed south, and so continued a course that must needs have either just hit Ushant, or carry us over the Bay of Biscay. I thought I was east of Cherbourg, when I was far to the west and stopped my engine in that belief, and then set it going again. I did actually sight the coast of Brittany to the southeast in the late afternoon, and that it was woke me up to the gravity of our

position. I discovered it by accident in the southeast, when I was looking for it in the southwest. I turned about east and faced the wind for some time, and finding I had no chance in its teeth, went high, where it seemed less violent, and tried to make a course southeast. It was only then that I realised what a gale I was in. I had been going westward, and perhaps even in gusts north of west, at a pace of fifty or sixty miles an hour.

Then I began what I suppose would be called a Fight against the east wind. One calls it a Fight, but it was really almost as unlike a fight as plain sewing. The wind tried to drive me westwardly, and I tried to get as much as I could eastwardly, with the wind beating and rocking us irregularly, but by no means unbearably, for about twelve hours. My hope lay in the wind abating, and our keeping in the air and eastward of Finisterre until it did, and the chief danger was the exhaustion of our petrol. It was a long and anxious and almost meditative time; we were fairly warm, and only slowly getting hungry, and except that my uncle grumbled a little and produced some philosophical reflections, and began to fuss about having a temperature, we talked very little. I was tired and sulky, and chiefly worried about the engine. I had to resist a tendency to crawl back and look at it. I did not care to risk contracting our gas chamber for fear of losing gas. Nothing was less like a fight. I know that in popular magazines, and so forth, all such occasions as this are depicted in terms of hysteria. Captains save their ships engineers complete their bridges, generals conduct their battles, in a state of dancing excitement, foaming recondite technicalities at the lips. I suppose that sort of thing works up the reader, but so far as it professes to represent reality, I am convinced it is all childish nonsense. schoolboys of fifteen, girls of eighteen, and literary men all their lives, may have these squealing fits, but my own experience is that most exciting scenes are not exciting, and most of the urgent moments in life are met by steady-headed men.

Neither I nor my uncle spent the night in ejaculations, nor in humorous allusions, nor any of these things. We remained lumpish.

My uncle stuck in his place and grumbled about his stomach, and occasionally rambled off into expositions of his financial position and denunciations of Neal--he certainly struck out one or two good phrases for Neal--and I crawled about at rare intervals in a vague sort of way and grunted, and our basketwork creaked continually, and the wind on our quarter made a sort of ruffled flapping in the wall of the gas chamber. For all our wraps we got frightfully cold as the night wore on.

I must have dozed, and it was still dark when I realised with a start that we were nearly due south of, and a long way from, a regularly-flashing lighthouse, standing out before the glow of some great town, and then that the thing that had awakened me was the cessation of our engine, and that we were driving back to the west.

Then, indeed, for a time I felt the grim thrill of life. I crawled forward to the cords of the release valves, made my uncle crawl forward too, and let out the gas until we were falling down through the air like a clumsy glider towards the vague greyness that was land.

Something must have intervened here that I have forgotten.

I saw the lights of Bordeaux when it was quite dark, a nebulous haze against black; of that I am reasonably sure. But certainly our fall took place in the cold, uncertain light of early dawn. I am, at least, equally sure of that. And Mimizan, near where we dropped, is fifty miles from Bordeaux, whose harbour lights I must have seen.

I remember coming down at last with a curious indifference, and actually rousing myself to steer. But the actual coming to earth was exciting enough. I remember our prolonged dragging landfall, and the difficulty I had to get clear, and how a gust of wind caught Lord Roberts B as my uncle stumbled away from the ropes and litter, and dropped me heavily, and threw me on to my knees. Then came the realisation that the monster was almost consciously disentangling itself for escape, and then the light leap of its rebound. The rope slipped out of reach of my hand. I remember running knee-deep in a salt pool in hopeless pursuit of the airship.

As it dragged and rose seaward, and how only after it had escaped my uttermost effort to recapture it, did I realise that this was quite the best thing that could have happened. It drove swiftly over the sandy dunes, lifting and falling, and was hidden by a clump of windbitten trees. Then it reappeared much further off, and still receding. It soared for a time, and sank slowly, and after that I saw it no more. I suppose it fell into the sea and got wetted with salt water and heavy, and so became deflated and sank.

It was never found, and there was never a report of anyone seeing it after it escaped from me.

VI

But if I find it hard to tell the story of our long flight through the air overseas, at least that dawn in France stands cold and clear and full. I see again almost as if I saw once more with my bodily eyes the ridges of sand rising behind ridges of sand, grey and cold and black-browed, with an insufficient grass. I feel again the clear, cold chill of dawn, and hear the distant barking of a dog. I find myself asking again, "What shall we do now?" and trying to scheme with brain tired beyond

measure.

At first my uncle occupied my attention. He was shivering a good deal, and it was all I could do to resist my desire to get him into a comfortable bed at once. But I wanted to appear plausibly in this part of the world. I felt it would not do to turn up anywhere at dawn and rest, it would be altogether too conspicuous; we must rest until the day was well advanced, and then appear as road-stained pedestrians seeking a meal. I gave him most of what was left of the biscuits, emptied our flasks, and advised him to sleep, but at first it was too cold, albeit I wrapped the big fur rug around him.

I was struck now by the flushed weariness of his face, and the look of age the grey stubble on his unshaved chin gave him. He sat crumpled up, shivering and coughing, munching reluctantly, but drinking eagerly, and whimpering a little, a dreadfully pitiful figure to me. But we had to go through with it; there was no way out for us.

Presently the sun rose over the pines, and the sand grew rapidly warm. My uncle had done eating, and sat with his wrists resting on his knees, the most hopeless looking of lost souls.

"I'm ill," he said, "I'm damnably ill! I can feel it in my skin!"

Then--it was horrible to me--he cried, "I ought to be in bed; I ought to be in bed... instead of flying about," and suddenly he burst into tears.

I stood up. "Go to sleep, man!" I said, and took the rug from him, and spread it out and rolled him up in it.

"It's all very well," he protested; "I'm not young enough--"

"Lift up your head," I interrupted, and put his knapsack under it.

"They'll catch us here, just as much as in an inn," he grumbled and then lay still.

Presently, after a long time, I perceived he was asleep. His breath came with peculiar wheezings, and every now and again he would cough. I was very stiff and tired myself, and perhaps I dozed. I don't remember. I remember only sitting, as it seemed, night interminably, beside him, too weary even to think in that sandy desolation.

No one came near us; no creature, not even a dog. I roused myself at last, feeling that it was vain to seek to seem other than abnormal, and with an effort that was like lifting a sky of lead, we made our way through the wearisome sand to a farmhouse. There I feigned even a more insufficient French than I possess naturally, and let it appear that we were pedestrians from Biarritz who had lost our way along the shore and got benighted.

This explained us pretty well, I thought, and we got most heartening coffee and a cart to a little roadside station. My uncle grew more and more manifestly ill with every stage of our journey. I got him to Bayonne, where he refused at first to eat, and was afterwards very sick, and then took him shivering and collapsed up a little branch line to a frontier place called Luzon Gare.

We found one homely inn with two small bedrooms, kept by a kindly Basque woman. I got him to bed, and that night shared his room, and after an hour or so of sleep he woke up in a raging fever and with a wandering mind, cursing Neal and repeating long, inaccurate lists of figures. He was manifestly a case for a doctor, and in the morning we got one in. He was a young man

from Montpellier, just beginning to practise, and very mysterious and technical and modern and unhelpful. He spoke of cold and exposure, and la grippe and pneumonia. He gave many explicit and difficult directions.... I perceived it devolved upon me to organise nursing and a sick-room. I installed a religieuse in the second bedroom of the inn, and took a room for myself in the inn of Port de Luzon, a quarter of a mile away.

VII

And now my story converges on what, in that queer corner of refuge out of the world, was destined to be my uncle's deathbed. There is a background of the Pyrenees, of blue hills and sunlit houses, of the old castle of Luzon and a noisy cascading river, and for a foreground the dim, stuffy room whose windows both the religieuse and hostess conspired to shut, with its waxed floor, its four-poster bed, its characteristically French chairs and fireplace, its champagne bottles and dirty basins and used towels and packets of Somatose on the table. And in the sickly air of the confined space in behind the curtains of the bed lay my little uncle, with an effect of being enthroned and secluded, or sat up, or writhed and tossed in his last dealings of life. One went and drew back the edge of the curtains if one wanted to speak to him or look at him.

Usually he was propped up against pillows, because so he breathed more easily. He slept hardly at all.

I have a confused memory of vigils and mornings and afternoons spent by that bedside, and how the religieuse hovered about me, and how meek and good and inefficient she was, and how horribly black were her nails. Other figures come and go, and particularly the doctor, a young man plumply rococo, in bicycling dress, with fine waxen features, a little pointed beard, and the long black frizzy hair and huge tie of a minor poet. Bright and

clear-cut and irrelevant are memories of the Basque hostess of my uncle's inn and of the family of Spanish people who entertained me and prepared the most amazingly elaborate meals for me, with soup and salad and chicken and remarkable sweets. They were all very kind and sympathetic people, systematically so. And constantly, without attracting attention, I was trying to get newspapers from home.

My uncle is central to all these impressions.

I have tried to make you picture him, time after time, as the young man of the Wimblehurst chemist's shop, as the shabby assistant in Tottenham Court Road, as the adventurer of the early days of Tono-Bungay, as the confident, preposterous plutocrat. And now I have to tell of him strangely changed under the shadow of oncoming death, with his skin lax and yellow and glistening with sweat, his eyes large and glassy, his countenance unfamiliar through the growth of a beard, his nose pinched and thin. Never had he looked so small as now. And he talked to me in a whispering, strained voice of great issues, of why his life had been, and whither he was going. Poor little man! that last phase is, as it were, disconnected from all the other phases. It was as if he crawled out from the ruins of his career, and looked about him before he died. For he had quite clear-minded states in the intervals of his delirium.

He knew he was almost certainly dying. In a way that took the burthen of his cares off his mind. There was no more Neal to face, no more flights or evasions, no punishments.

"It has been a great career, George," he said, "but I shall be glad to rest. Glad to rest!... Glad to rest."

His mind ran rather upon his career, and usually, I am glad to recall, with a note of satisfaction and approval. In his

delirious phases he would most often exaggerate this self-satisfaction, and talk of his splendours. He would pluck at the sheet and stare before him, and whisper half-audible fragments of sentences.

"What is this great place, these cloud-capped towers, these any pinnacles?... Ilion. Sky-pointing.... Ilion House, the residence of one of our great merchant princes.... Terrace above terrace. Reaching to the heavens.... Kingdoms Caesar never knew.... A great poet, George. Zzzz. Kingdoms Caesar never knew.... Under entirely new management.

"Greatness....Millions... Universities.... He stands on the terrace--on the upper terrace--directing--directing--by the globe--directing--the trade."

It was hard at times to tell when his sane talk ceased and his delirium began. The secret springs of his life, the vain imaginations were revealed. I sometimes think that all the life of man sprawls abed, careless and unkempt, until it must needs clothe and wash itself and come forth seemly in act and speech for the encounter with one's fellow-men. I suspect that all things unspoken in our souls partake somewhat of the laxity of delirium and dementia. Certainly from those slimy, tormented lips above the bristling grey beard came nothing but dreams and disconnected fancies....

Sometimes he raved about Neal, threatened Neal. "What has he got invested?" he said. "Does he think he can escape me?... If I followed him up.... Ruin. Ruin.... One would think I had taken his money."

And sometimes he reverted to our airship flight. "It's too long, George, too long and too cold. I'm too old a man--too old--for this sort of thing.... You know you're not saving--you're killing

me."

Towards the end it became evident our identity was discovered. I found the press, and especially Boom's section of it, had made a sort of hue and cry for us, sent special commissioners to hunt for us, and though none of these emissaries reached us until my uncle was dead, one felt the forewash of that storm of energy. The thing got into the popular French press. People became curious in their manner towards us, and a number of fresh faces appeared about the weak little struggle that went on in the closeness behind the curtains of the bed. The young doctor insisted on consultations, and a motor-car came up from Biarritz, and suddenly odd people with questioning eyes began to poke in with inquiries and help. Though nothing was said, I could feel that we were no longer regarded as simple middle-class tourists; about me, as I went, I perceived almost as though it trailed visibly, the prestige of Finance and a criminal notoriety. Local personages of a plump and prosperous quality appeared in the inn making inquiries, the Luzon priest became helpful, people watched our window, and stared at me as I went to and fro; and then we had a raid from a little English clergyman and his amiable, capable wife in severely Anglican blacks, who swooped down upon us like virtuous but resolute vultures from the adjacent village of Saint Jean de Pollack.

The clergyman was one of those odd types that oscillate between remote country towns in England and the conduct of English Church services on mutual terms in enterprising hotels abroad, a tremulous, obstinate little being with sporadic hairs upon his face, spectacles, a red button nose, and aged black raiment. He was evidently enormously impressed by my uncle's monetary greatness, and by his own inkling of our identity, and he shone and brimmed over with tact and fussy helpfulness. He was eager to share the watching of the bedside with me, he proffered services with both hands, and as I was now getting into touch

with affairs in London again, and trying to disentangle the gigantic details of the smash from the papers I had succeeded in getting from Biarritz, I accepted his offers pretty generously, and began the studies in modern finance that lay before me. I had got so out of touch with the old traditions of religion that I overlooked the manifest possibility of his attacking my poor, sinking vestiges of an uncle with theological solitudes. My attention was called to that, however, very speedily by a polite but urgent quarrel between himself and the Basque landlady as to the necessity of her hanging a cheap crucifix in the shadow over the bed, where it might catch my uncle's eye, where, indeed, I found it had caught his eye.

"Good Lord!" I cried; "is THAT still going on!"

That night the little clergyman watched, and in the small hours he raised a false alarm that my uncle was dying, and made an extraordinary fuss. He raised the house. I shall never forget that scene, I think, which began with a tapping at my bedroom door just after I had fallen asleep, and his voice--

"If you want to see your uncle before he goes, you must come now."

The stuffy little room was crowded when I reached it, and lit by three flickering candles. I felt I was back in the eighteenth century. There lay my poor uncle amidst indescribably tumbled bedclothes, weary of life beyond measure, weary and rambling, and the little clergyman trying to hold his hand and his attention, and repeating over and over again:

"Mr. Ponderevo, Mr. Ponderevo, it is all right. It is all right.

Only Believe! 'Believe on me, and ye shall be saved!'"

Close at hand was the doctor with one of those cruel and idiotic injection needles modern science puts in the hands of these half-educated young men, keeping my uncle flickeringly alive for no reason whatever. The religieuse hovered sleepily in the background with an overdue and neglected dose. In addition, the landlady had not only got up herself, but roused an aged crone of a mother and a partially imbecile husband, and there was also a fattish, stolid man in grey alpaca, with an air of importance--who he was and how he got there, I don't know. I rather fancy the doctor explained him to me in French I did not understand. And they were all there, wearily nocturnal, hastily and carelessly dressed, intent upon the life that flickered and sank, making a public and curious show of its going, queer shapes of human beings lit by three uncertain candles, and every soul of them keenly and avidly resolved to be in at the death. The doctor stood, the others were all sitting on chairs the landlady had brought in and arranged for them.

And my uncle spoilt the climax, and did not die.

I replaced the little clergyman on the chair by the bedside, and he hovered about the room.

"I think," he whispered to me mysteriously, as he gave place to me, "I believe--it is well with him."

I heard him trying to render the stock phrases of Low Church piety into French for the benefit of the stolid man in grey alpaca. Then he knocked a glass off the table, and scrabbled for the fragments. From the first I doubted the theory of an immediate death. I consulted the doctor in urgent whispers. I turned round to get champagne, and nearly fell over the clergyman's legs. He was on his knees at the additional chair the Basque landlady had got on my arrival, and he was praying aloud, "Oh, Heavenly Father, have mercy on this thy Child...." I

hustled him up and out of the way, and in another minute he was down at another chair praying again, and barring the path of the religieuse, who had found me the corkscrew. Something put into my head that tremendous blasphemy of Carlyle's about "the last mew of a drowning kitten." He found a third chair vacant presently; it was as if he was playing a game.

"Good Heavens!" I said, "we must clear these people out," and with a certain urgency I did.

I had a temporary lapse of memory, and forgot all my French. I drove them out mainly by gesture, and opened the window, to the universal horror. I intimated the death scene was postponed, and, as a matter of fact, my uncle did not die until the next night.

I did not let the little clergyman come near him again, and I was watchful for any sign that his mind had been troubled. But he made none. He talked once about "that parson chap."

"Didn't bother you?" I asked.

"Wanted something," he said.

I kept silence, listening keenly to his mutterings. I understood him to say, "They wanted too much." His face puckered like a child's going to cry. "You can't get a safe six per cent.," he said. I had for a moment a wild suspicion that those urgent talks had not been altogether spiritual, but that, I think, was a quite unworthy and unjust suspicion. The little clergyman was as simple and honest as the day. My uncle was simply generalising about his class.

But it may have been these talks that set loose some long dormant string of ideas in my uncle's brain, ideas the things of this

world had long suppressed and hidden altogether. Near the end he suddenly became clearminded and lucid, albeit very weak, and his voice was little, but clear.

"George," he said.

"I'm here," I said, "close beside you."

"George. You have always been responsible for the science. George. You know better than I do. Is--Is it proved?"

"What proved?"

"Either way?"

"I don't understand."

"Death ends all. After so much--Such splendid beginnin's. Somewhere. Something."

I stared at him amazed. His sunken eyes were very grave.

"What do you expect?" I said in wonder.

He would not answer. "Aspirations," he whispered. He fell into a broken monologue, regardless of me. "Trailing clouds of glory," he said, and "first-rate poet, first-rate....George was always hard. Always."

For a long time there was silence.

Then he made a gesture that he wished to speak.

"Seems to me, George"

I bent my head down, and he tried to lift his hand to my shoulder. I raised him a little on his pillows, and listened.

"It seems to me, George, always--there must be something in me--that won't die."

He looked at me as though the decision rested with me.

"I think," he said; "--something."

Then, for a moment, his mind wandered. "Just a little link," he whispered almost pleadingly, and lay quite still, but presently he was uneasy again.

"Some other world"

"Perhaps," I said. "Who knows?"

"Some other world."

"Not the same scope for enterprise," I said.

"No."

He became silent. I sat leaning down to him, and following out my own thoughts, and presently the religieuse resumed her periodic conflict with the window fastening. For a time he struggled for breath.... It seemed such nonsense that he should have to suffer so--poor silly little man!

"George," he whispered, and his weak little hand came out.
"PERHAPS--"

He said no more, but I perceived from the expression of his eyes that he thought the question had been put.

"Yes, I think so;" I said stoutly.

"Aren't you sure?"

"Oh--practically sure," said I, and I think he tried to squeeze my hand. And there I sat, holding his hand tight, and trying to think what seeds of immortality could be found in all his being, what sort of ghost there was in him to wander out into the bleak immensities. Queer fancies came to me.... He lay still for a long time, save for a brief struggle or so for breath and ever and again I wiped his mouth and lips.

I fell into a pit of thought. I did not remark at first the change that was creeping over his face. He lay back on his pillow, made a faint zzzing sound that ceased, and presently and quite quietly he died--greatly comforted by my assurance. I do not know when he died. His hand relaxed insensibly. Suddenly, with a start, with a shock, I found that his mouth had fallen open, and that he was dead....

VIII

It was dark night when I left his deathbed and went back to my own inn down the straggling street of Luzon.

That return to my inn sticks in my memory also as a thing apart, as an experience apart. Within was a subdued bustle of women, a flitting of lights, and the doing of petty offices to that queer, exhausted thing that had once been my active and urgent little uncle. For me those offices were irksome and impertinent. I slammed the door, and went out into the warm, foggy drizzle of the village street lit by blurred specks of light in great voids of darkness, and never a soul abroad. That warm veil of fog produced an effect of vast seclusion. The very houses by the

roadside peered through it as if from another world. The stillness of the night was marked by an occasional remote baying of dogs; all these people kept dogs because of the near neighbourhood of the frontier.

Death!

It was one of those rare seasons of relief, when for a little time one walks a little outside of and beside life. I felt as I sometimes feel after the end of a play. I saw the whole business of my uncle's life as something familiar and completed. It was done, like a play one leaves, like a book one closes. I thought of the push and the promotions, the noise of London, the crowded, various company of people through which our lives had gone, the public meetings, the excitements, the dinners and disputations, and suddenly it appeared to me that none of these things existed.

It came to me like a discovery that none of these things existed.

Before and after I have thought and called life a phantasmagoria, but never have I felt its truth as I did that night.... We had parted; we two who had kept company so long had parted. But there was, I knew, no end to him or me. He had died a dream death, and ended a dream; his pain dream was over. It seemed to me almost as though I had died, too. What did it matter, since it was unreality, all of it, the pain and desire, the beginning and the end? There was no reality except this solitary road, this quite solitary road, along which one went rather puzzled, rather tired....

Part of the fog became a big mastiff that came towards me and stopped and slunk round me, growling, barked gruffly, and shortly and presently became fog again.

My mind swayed back to the ancient beliefs and fears of our race.

My doubts and disbeliefs slipped from me like a loosely fitting garment. I wondered quite simply what dogs bayed about the path of that other walker in the darkness, what shapes, what lights, it might be, loomed about him as he went his way from our last encounter on earth--along the paths that are real, and the way that endures for ever?

IX

Last belated figure in that grouping round my uncle's deathbed is my aunt. When it was beyond all hope that my uncle could live I threw aside whatever concealment remained to us and telegraphed directly to her. But she came too late to see him living. She saw him calm and still, strangely unlike his habitual garrulous animation, an unfamiliar inflexibility.

"It isn't like him," she whispered, awed by this alien dignity.

I remember her chiefly as she talked and wept upon the bridge below the old castle. We had got rid of some amateurish reporters from Biarritz, and had walked together in the hot morning sunshine down through Port Luzon. There, for a time, we stood leaning on the parapet of the bridge and surveying the distant peaks, the rich blue masses of the Pyrenees. For a long time we said nothing, and then she began talking.

"Life's a rum Go, George!" she began. "Who would have thought, when I used to darn your stockings at old Wimblehurst, that this would be the end of the story? It seems far away now--that little shop, his and my first home. The glow of the bottles, the big coloured bottles! Do you remember how the light shone on the mahogany drawers? The little gilt letters! Ol Amjig, and Snap! I can remember it all--bright and shining--like a Dutch picture. Real! And yesterday. And here we are in a dream. You

a man--and me an old woman, George. And poor little Teddy, who used to rush about and talk--making that noise he did--Oh!"

She choked, and the tears flowed unrestrained. She wept, and I was glad to see her weeping.

She stood leaning over the bridge; her tear-wet handkerchief gripped in her clenched hand.

"Just an hour in the old shop again--and him talking. Before things got done. Before they got hold of him. And fooled him.

"Men oughtn't to be so tempted with business and things....

"They didn't hurt him, George?" she asked suddenly.

For a moment I was puzzled.

"Here, I mean," she said.

"No," I lied stoutly, suppressing the memory of that foolish injection needle I had caught the young doctor using.

"I wonder, George, if they'll let him talk in Heaven...."

She faced me. "Oh! George, dear, my heart aches, and I don't know what I say and do. Give me your arm to lean on--it's good to have you, dear, and lean upon you.... Yes, I know you care for me. That's why I'm talking. We've always loved one another, and never said anything about it, and you understand, and I understand. But my heart's torn to pieces by this, torn to rags, and things drop out I've kept in it. It's true he wasn't a husband much for me at the last. But he was my child, George, he was my child and all my children, my silly child, and life has knocked him about for me, and I've never had a say in the matter;

never a say; it's puffed him up and smashed him--like an old bag--under my eyes. I was clever enough to see it, and not clever enough to prevent it, and all I could do was to jeer. I've had to make what I could of it. Like most people. Like most of us.... But it wasn't fair, George. It wasn't fair. Life and Death--great serious things--why couldn't they leave him alone, and his lies and ways? If WE could see the lightness of it--

"Why couldn't they leave him alone?" she repeated in a whisper as we went towards the inn.

CHAPTER THE SECOND

LOVE AMONG THE WRECKAGE

I

When I came back I found that my share in the escape and death of my uncle had made me for a time a notorious and even popular character. For two weeks I was kept in London "facing the music," as he would have said, and making things easy for my aunt, and I still marvel at the consideration with which the world treated me. For now it was open and manifest that I and my uncle were no more than specimens of a modern species of brigand, wasting the savings of the public out of the sheer wantonness of enterprise. I think that in a way, his death produced a reaction in my favour and my flight, of which some particulars now appeared stuck in the popular imagination. It seemed a more daring and difficult feat than it was, and I couldn't very well write to the papers to sustain my private estimate. There can be little doubt that men infinitely prefer the appearance of dash and enterprise to simple honesty. No one believed I was not an arch plotter in his financing. Yet they favoured me. I even

got permission from the trustee to occupy my chalet for a fortnight while I cleared up the mass of papers, calculations, notes of work, drawings and the like, that I left in disorder when I started on that impulsive raid upon the Mordet quap heaps.

I was there alone. I got work for Cothope with the Ilchesters, for whom I now build these destroyers. They wanted him at once, and he was short of money, so I let him go and managed very philosophically by myself.

But I found it hard to fix my attention on aeronautics, I had been away from the work for a full half-year and more, a half-year crowded with intense disconcerting things. For a time my brain refused these fine problems of balance and adjustment altogether; it wanted to think about my uncle's dropping jaw, my aunt's reluctant tears, about dead negroes and pestilential swamps, about the evident realities of cruelty and pain, about life and death. Moreover, it was weary with the frightful pile of figures and documents at the Hardingham, a task to which this raid to Lady Grove was simply an interlude. And there was Beatrice.

On the second morning, as I sat out upon the veranda recalling memories and striving in vain to attend to some too succinct pencil notes of Cothope's, Beatrice rode up suddenly from behind the pavilion, and pulled rein and became still; Beatrice, a little flushed from riding and sitting on a big black horse.

I did not instantly rise. I stared at her. "YOU!" I said.

She looked at me steadily. "Me," she said

I did not trouble about any civilities. I stood up and asked point blank a question that came into my head.

"Whose horse is that?" I said.

She looked me in the eyes. "Carnaby's," she answered.

"How did you get here--this way?"

"The wall's down."

"Down? Already?"

"A great bit of it between the plantations."

"And you rode through, and got here by chance?"

"I saw you yesterday. And I rode over to see you." I had now come close to her, and stood looking up into her face.

"I'm a mere vestige," I said.

She made no answer, but remained regarding me steadfastly with a curious air of proprietorship.

"You know I'm the living survivor now of the great smash. I'm rolling and dropping down through all the scaffolding of the social system.... It's all a chance whether I roll out free at the bottom, or go down a crack into the darkness out of sight for a year or two."

"The sun," she remarked irrelevantly, "has burnt you.... I'm getting down."

She swung herself down into my arms, and stood beside me face to face.

"Where's Cothope?" she asked.

"Gone."

Her eyes flitted to the pavilion and back to me. We stood close together, extraordinarily intimate, and extraordinarily apart.

"I've never seen this cottage of yours," she said, "and I want to."

She flung the bridle of her horse round the veranda post, and I helped her tie it.

"Did you get what you went for to Africa?" she asked.

"No," I said, "I lost my ship."

"And that lost everything?"

"Everything."

She walked before me into the living-room of the chalet, and I saw that she gripped her riding-whip very tightly in her hand. She looked about her for a moment,--and then at me.

"It's comfortable," she remarked.

Our eyes met in a conversation very different from the one upon our lips. A sombre glow surrounded us, drew us together; an unwonted shyness kept us apart. She roused herself, after an instant's pause, to examine my furniture.

"You have chintz curtains. I thought men were too feckless to have curtains without a woman. But, of course, your aunt did that! And a couch and a brass fender, and--is that a pianola? That is your desk. I thought men's desks were always untidy, and

covered with dust and tobacco ash."

She flitted to my colour prints and my little case of books. Then she went to the pianola. I watched her intently.

"Does this thing play?" she said.

"What?" I asked.

"Does this thing play?"

I roused myself from my preoccupation.

"Like a musical gorilla with fingers all of one length. And a sort of soul.... It's all the world of music to me."

"What do you play?"

"Beethoven, when I want to clear up my head while I'm working. He is--how one would always like to work. Sometimes Chopin and those others, but Beethoven. Beethoven mainly. Yes."

Silence again between us. She spoke with an effort.

"Play me something." She turned from me and explored the rack of music rolls, became interested and took a piece, the first part of the Kreutzer Sonata, hesitated. "No," she said, "that!"

She gave me Brahms' Second Concerto, Op. 58, and curled up on the sofa watching me as I set myself slowly to play....

"I say," he said when I had done, "that's fine. I didn't know those things could play like that. I'm all astir..."

She came and stood over me, looking at me. "I'm going to have a

concert," she said abruptly, and laughed uneasily and hovered at the pigeon-holes. "Now--now what shall I have?" She chose more of Brahms. Then we came to the Kreutzer Sonata. It is queer how Tolstoy has loaded that with suggestions, debauched it, made it a scandalous and intimate symbol. When I had played the first part of that, she came up to the pianola and hesitated over me. I sat stiffly--waiting.

Suddenly she seized my downcast head and kissed my hair. She caught at my face between her hands and kissed my lips. I put my arms about her and we kissed together. I sprang to my feet and clasped her.

"Beatrice!" I said. "Beatrice!"

"My dear," she whispered, nearly breathless, with her arms about me. "Oh! my dear!"

II

Love, like everything else in this immense process of social disorganisation in which we live, is a thing adrift, a fruitless thing broken away from its connexions. I tell of this love affair here because of its irrelevance, because it is so remarkable that it should mean nothing, and be nothing except itself. It glows in my memory like some bright casual flower starting up amidst the debris of a catastrophe. For nearly a fortnight we two met and made love together. Once more this mighty passion, that our aimless civilisation has fettered and maimed and sterilised and debased, gripped me and filled me with passionate delights and solemn joys--that were all, you know, futile and purposeless. Once more I had the persuasion "This matters. Nothing else matters so much as this." We were both infinitely grave in such happiness as we had. I do not remember any laughter at all between us.

Twelve days it lasted from that encounter in my chalet until our parting.

Except at the end, they were days of supreme summer, and there was a waxing moon. We met recklessly day by day. We were so intent upon each other at first so intent upon expressing ourselves to each other, and getting at each other, that we troubled very little about the appearance of our relationship. We met almost openly.... We talked of ten thousand things, and of ourselves. We loved. We made love. There is no prose of mine that can tell of hours transfigured. The facts are nothing. Everything we touched, the meanest things, became glorious. How can I render bare tenderness and delight and mutual possession? I sit here at my desk thinking of untellable things.

I have come to know so much of love that I know now what love might be. We loved, scarred and stained; we parted--basely and inevitably, but at least I met love.

I remember as we sat in a Canadian canoe, in a reedy, bush-masked shallow we had discovered operating out of that pine-shaded Woking canal, how she fell talking of the things that happened to her before she met me again....

She told me things, and they so joined and welded together other things that lay disconnected in my memory, that it seemed to me I had always known what she told me. And yet indeed I had not known nor suspected it, save perhaps for a luminous, transitory suspicion ever and again.

She made me see how life had shaped her. She told me of her girlhood after I had known her. "We were poor and pretending and managing. We hacked about on visits and things. I ought to have married. The chances I had weren't particularly good chances. I

didn't like 'em."

She paused. "Then Carnaby came along."

I remained quite still. She spoke now with downcast eyes, and one finger just touching the water.

"One gets bored, bored beyond redemption. One does about to these huge expensive houses I suppose--the scale's immense. One makes one's self useful to the other women, and agreeable to the men. One has to dress.... One has food and exercise and leisure, It's the leisure, and the space, and the blank opportunity it seems a sin not to fill. Carnaby isn't like the other men. He's bigger.... They go about making love. Everybody's making love. I did.... And I don't do things by halves."

She stopped.

"You knew?"--she asked, looking up, quite steadily. I nodded.

"Since when?"

"Those last days.... It hasn't seemed to matter really. I was a little surprised"

She looked at me quietly. "Cothope knew," she said. "By instinct. I could feel it."

"I suppose," I began, "once, this would have mattered immensely. Now--"

"Nothing matters," she said, completing me. "I felt I had to tell you. I wanted you to understand why I didn't marry you--with both hands. I have loved you"--she paused--"have loved you ever since the day I kissed you in the bracken. Only--I

forgot."

And suddenly she dropped her face upon her hands, and sobbed passionately--

"I forgot--I forgot," she cried, and became still....

I dabbled my paddle in the water. "Look here!" I said; "forget again! Here am I--a ruined man. Marry me."

She shook her head without looking up.

We were still for a long time. "Marry me!" I whispered.

She looked up, twined back a whisp of hair, and answered dispassionately--

"I wish I could. Anyhow, we have had this time. It has been a fine time--has it been--for you also? I haven't nudged you all I had to give. It's a poor gift--except for what it means and might have been. But we are near the end of it now."

"Why?" I asked. "Marry me! Why should we two--"

"You think," she said, "I could take courage and come to you and be your everyday wife--while you work and are poor?"

"Why not?" said I.

She looked at me gravely, with extended finger. "Do you really think that--of me? Haven't you seen me--all?"

I hesitated.

"Never once have I really meant marrying you," she insisted.

"Never once. I fell in love with you from the first. But when you seemed a successful man, I told myself I wouldn't. I was love-sick for you, and you were so stupid, I came near it then. But I knew I wasn't good enough. What could I have been to you? A woman with bad habits and bad associations, a woman smirched. And what could I do for you or be to you? If I wasn't good enough to be a rich man's wife, I'm certainly not good enough to be a poor one's. Forgive me for talking sense to you now, but I wanted to tell you this somehow."

She stopped at my gesture. I sat up, and the canoe rocked with my movement.

"I don't care," I said. "I want to marry you and make you my wife!"

"No," she said, "don't spoil things. That is impossible!"

"Impossible!"

"Think! I can't do my own hair! Do you mean you will get me a maid?"

"Good God!" I cried, disconcerted beyond measure, "won't you learn to do your own hair for me? Do you mean to say you can love a man--"

She flung out her hands at me. "Don't spoil it," she cried. "I have given you all I have, I have given you all I can. If I could do it, if I was good enough to do it, I would. But I am a woman spoilt and ruined, dear, and you are a ruined man. When we are making love we're lovers--but think of the gulf between us in habits and ways of thought, in will and training, when we are not making love. Think of it--and don't think of it! Don't think of it yet. We have snatched some hours. We still may have some

hours!"

She suddenly knelt forward toward me, with a glowing darkness in her eyes. "Who cares if it upsets?" she cried. "If you say another word I will kiss you. And go to the bottom clutching you.

I'm not afraid of that. I'm not a bit afraid of that. I'll die with you. Choose a death, and I'll die with you--readily. Do listen to me! I love you. I shall always love you. It's because I love you that I won't go down to become a dirty familiar thing with you amidst the grime. I've given all I can. I've had all I can.... Tell me," and she crept nearer, "have I been like the dusk to you, like the warm dusk? Is there magic still? Listen to the ripple of water from your paddle. Look at the warm evening light in the sky. Who cares if the canoe upsets? Come nearer to me. Oh, my love! come near! So."

She drew me to her and our lips met.

III

I asked her to marry me once again.

It was our last morning together, and we had met very early, about sunrise, knowing that we were to part. No sun shone that day. The sky was overcast, the morning chilly and lit by a clear, cold, spiritless light. A heavy dampness in the air verged close on rain. When I think of that morning, it has always the quality of greying ashes wet with rain.

Beatrice too had changed. The spring had gone out of her movement; it came to me, for the first time, that some day she might grow old. She had become one flesh with the rest of common humanity; the softness had gone from her voice and manner, the dusky magic of her presence had gone. I saw these things with

perfect clearness, and they made me sorry for them and for her. But they altered my love not a whit, abated it nothing. And when we had talked awkwardly for half a dozen sentences, I came dully to my point.

"And now," I cried, "will you marry me?"

"No," she said, "I shall keep to my life here."

I asked her to marry me in a year's time. She shook her head.

"This world is a soft world," I said, "in spite of my present disasters. I know now how to do things. If I had you to work for--in a year I could be a prosperous man"

"No," she said, "I will put it brutally, I shall go back to Carnaby."

"But--!" I did not feel angry. I had no sort of jealousy, no wounded pride, no sense of injury. I had only a sense of grey desolation, of hopeless cross-purposes.

"Look here," she said. "I have been awake all night and every night. I have been thinking of this--every moment when we have not been together. I'm not answering you on an impulse. I love you. I love you. I'll say that over ten thousand times. But here we are--"

"The rest of life together," I said.

"It wouldn't be together. Now we are together. Now we have been together. We are full of memories I do not feel I can ever forget a single one."

"Nor I."

"And I want to close it and leave it at that. You see, dear, what else is there to do?"

She turned her white face to me. "All I know of love, all I have ever dreamt or learnt of love I have packed into these days for you. You think we might live together and go on loving. No! For you I will have no vain repetitions. You have had the best and all of me. Would you have us, after this, meet again in London or Paris or somewhere, scuffle to some wretched dressmaker's, meet in a cabinet particulier?"

"No," I said. "I want you to marry me. I want you to play the game of life with me as an honest woman should. Come and live with me. Be my wife and squaw. Bear me children."

I looked at her white, drawn face, and it seemed to me I might carry her yet. I spluttered for words.

"My God! Beatrice!" I cried; "but this is cowardice and folly! Are you afraid of life? You of all people! What does it matter what has been or what we were? Here we are with the world before us! Start clean and new with me. We'll fight it through! I'm not such a simple lover that I'll not tell you plainly when you go wrong, and fight our difference out with you. It's the one thing I want, the one thing I need--to have you, and more of you and more! This love-making--it's love-making. It's just a part of us, an incident--"

She shook her head and stopped me abruptly. "It's all," she said.

"All!" I protested.

"I'm wiser than you. Wiser beyond words." She turned her eyes

to me and they shone with tears.

"I wouldn't have you say anything--but what you're saying," she said. "But it's nonsense, dear. You know it's nonsense as you say it."

I tried to keep up the heroic note, but she would not listen to it.

"It's no good," she cried almost petulantly. "This little world has made us what we are. Don't you see--don't you see what I am? I can make love. I can make love and be loved, prettily. Dear, don't blame me. I have given you all I have. If I had anything more--. I have gone through it all over and over again--thought it out. This morning my head aches, my eyes ache.

The light has gone out of me and I am a sick and tired woman. But I'm talking wisdom--bitter wisdom. I couldn't be any sort of helper to you, any sort of wife, any sort of mother. I'm spoilt.

I'm spoilt by this rich idle way of living, until every habit is wrong, every taste wrong. The world is wrong. People can be ruined by wealth just as much as by poverty. Do you think I wouldn't face life with you if I could, if I wasn't absolutely certain I should be down and dragging in the first half-mile of the journey? Here I am--damned! Damned! But I won't damn you. You know what I am! You know. You are too clear and simple not to know the truth. You try to romance and hector, but you know the truth. I am a little cad--sold and done. I'm--. My dear, you think I've been misbehaving, but all these days I've been on my best behaviour.... You don't understand, because you're a man.

A woman, when she's spoilt, is SPOILT. She's dirty in grain. She's done."

She walked on weeping.

"You're a fool to want me," she said. "You're a fool to want me--for my sake just as much as yours. We've done all we can. It's just romancing--"

She dashed the tears from her eyes and turned upon me. "Don't you understand?" she challenged. "Don't you know?"

We faced one another in silence for a moment.

"Yes," I said, "I know."

For a long time we spoke never a word, but walked on together, slowly and sorrowfully, reluctant to turn about towards our parting. When at last we did, she broke silence again.

"I've had you," she said.

"Heaven and hell," I said, "can't alter that."

"I've wanted--" she went on. "I've talked to you in the nights and made up speeches. Now when I want to make them I'm tongue-tied. But to me it's just as if the moments we have had lasted for ever. Moods and states come and go. To-day my light is out..."

To this day I cannot determine whether she said or whether I imagined she said "chloral." Perhaps a half-conscious diagnosis flashed it on my brain. Perhaps I am the victim of some perverse imaginative freak of memory, some hinted possibility that scratched and seared. There the word stands in my memory, as if it were written in fire.

We came to the door of Lady Osprey's garden at last, and it was

beginning to drizzle.

She held out her hands and I took them.

"Yours," she said, in a weary unimpassioned voice; "all that I had--such as it was. Will you forget?"

"Never," I answered.

"Never a touch or a word of it?"

"No."

"You will," she said.

We looked at one another in silence, and her face full of fatigue and misery.

What could I do? What was there to do?

"I wish--" I said, and stopped.

"Good-bye."

IV

That should have been the last I saw of her, but, indeed, I was destined to see her once again. Two days after I was at Lady Grove, I forget altogether upon what errand, and as I walked back to the station believing her to be gone away she came upon me, and she was riding with Carnaby, just as I had seen them first. The encounter jumped upon us unprepared. She rode by, her eyes dark in her white face, and scarcely noticed me. She winced and grew stiff at the sight of me and bowed her head. But Carnaby, because he thought I was a broken and discomfited man, saluted me

with an easy friendliness, and shouted some genial commonplace to me.

They passed out of sight and left me by the roadside....

And then, indeed, I tasted the ultimate bitterness of life. For the first time I felt utter futility, and was wrung by emotion that begot no action, by shame and pity beyond words. I had parted from her dully and I had seen my uncle break and die with dry eyes and a steady mind, but this chance sight of my lost Beatrice brought me to tears. My face was wrung, and tears came pouring down my cheeks. All the magic she had for me had changed to wild sorrow. "Oh God!" I cried, "this is too much," and turned my face after her and made appealing gestures to the beech trees and cursed at fate. I wanted to do preposterous things, to pursue her, to save her, to turn life back so that she might begin again. I wonder what would have happened had I overtaken them in pursuit, breathless with running, uttering incoherent words, weeping, expostulatory. I came near to doing that.

There was nothing in earth or heaven to respect my curses or weeping. In the midst of it a man who had been trimming the opposite hedge appeared and stared at me.

Abruptly, ridiculously, I dissembled before him and went on and caught my train....

But the pain I felt then I have felt a hundred times; it is with me as I write. It haunts this book, I see, that is what haunts this book, from end to end.

CHAPTER THE THIRD

NIGHT AND THE OPEN SEA

I

I have tried throughout all this story to tell things as they happened to me. In the beginning--the sheets are still here on the table, grimy and dogs-eared and old-looking--I said I wanted to tell MYSELF and the world in which I found myself, and I have done my best. But whether I have succeeded I cannot imagine. All this writing is grey now and dead and trite and unmeaning to me; some of it I know by heart. I am the last person to judge it.

As I turn over the big pile of manuscript before me certain things become clearer to me, and particularly the immense inconsequences of my experiences. It is, I see now that I have it all before me, a story of activity and urgency and sterility. I have called it Tono-Bungay, but I had far better have called it Waste. I have told of childless Marion, of my childless aunt, of Beatrice wasted and wasteful and futile. What hope is there for a people whose women become fruitless? I think of all the energy I have given to vain things. I think of my industrious scheming with my uncle, of Crest Hill's vast cessation, of his resonant strenuous career. Ten thousand men have envied him and wished to live as he lived. It is all one spectacle of forces running to waste, of people who use and do not replace, the story of a country hectic with a wasting aimless fever of trade and money-making and pleasure-seeking. And now I build destroyers!

Other people may see this country in other terms; this is how I have seen it. In some early chapter in this heap I compared all our present colour and abundance to October foliage before the frosts nip down the leaves. That I still feel was a good image. Perhaps I see wrongly. It may be I see decay all about me because I am, in a sense, decay. To others it may be a scene of achievement and construction radiant with hope. I, too, have a sort of hope, but it is a remote hope, a hope that finds no

promise in this Empire or in any of the great things of our time.

How they will look in history I do not know, how time and chance will prove them I cannot guess; that is how they have mirrored themselves on one contemporary mind.

II

Concurrently with writing the last chapter of this book I have been much engaged by the affairs of a new destroyer we have completed. It has been an oddly complementary alternation of occupations. Three weeks or so ago this novel had to be put aside in order that I might give all my time day and night to the fitting and finishing of the engines. Last Thursday X 2, for so we call her, was done and I took her down the Thames and went out nearly to Texel for a trial of speed.

It is curious how at times one's impressions will all fuse and run together into a sort of unity and become continuous with things that have hitherto been utterly alien and remote. That rush down the river became mysteriously connected with this book.

As I passed down the Thames I seemed in a new and parallel manner to be passing all England in review. I saw it then as I had wanted my readers to see it. The thought came to me slowly as I picked my way through the Pool; it stood out clear as I went dreaming into the night out upon the wide North Sea.

It wasn't so much thinking at the time as a sort of photographic thought that came and grew clear. X2 went ripping through the dirty oily water as scissors rip through canvas, and the front of my mind was all intent with getting her through under the bridges and in and out among the steam-boats and barges and rowing-boats and piers. I lived with my hands and eyes hard ahead. I thought nothing then of any appearances but obstacles, but for all that

the back of my mind took the photographic memory of it complete and vivid....

"This," it came to me, "is England. That is what I wanted to give in my book. This!"

We started in the late afternoon. We throbbed out of our yard above Hammersmith Bridge, fussed about for a moment, and headed down stream. We came at an easy rush down Craven Reach, past Fulham and Hurlingham, past the long stretches of muddy meadow And muddy suburb to Battersea and Chelsea, round the cape of tidy frontage that is Grosvenor Road and under Vauxhall Bridge, and Westminster opened before us. We cleared a string of coal barges and there on the left in the October sunshine stood the Parliament houses, and the flag was flying and Parliament was sitting.

I saw it at the time unseeingly; afterwards it came into my mind as the centre of the whole broad panoramic effect of that afternoon. The stiff square lace of Victorian Gothic with its Dutch clock of a tower came upon me suddenly and stared and whirled past in a slow half pirouette and became still, I know, behind me as if watching me recede. "Aren't you going to respect me, then?" it seemed to say.

Not I! There in that great pile of Victorian architecture the landlords and the lawyers, the bishops, the railway men and the magnates of commerce go to and fro--in their incurable tradition of commercialised Bladesoverly, of meretricious gentry and nobility sold for riches. I have been near enough to know. The Irish and the Labour-men run about among their feet, making a fuss, effecting little, they've got no better plans that I can see. Respect it indeed! There's a certain paraphernalia of dignity, but whom does it deceive? The King comes down in a gilt coach to open the show and wears long robes and a crown; and

there's a display of stout and slender legs in white stockings and stout and slender legs in black stockings and artful old gentlemen in ermine. I was reminded of one congested afternoon I had spent with my aunt amidst a cluster of agitated women's hats in the Royal Gallery of the House of Lords and how I saw the King going to open Parliament, and the Duke of Devonshire looking like a gorgeous pedlar and terribly bored with the cap of maintenance on a tray before him hung by slings from his shoulder. A wonderful spectacle!

It is quaint, no doubt, this England--it is even dignified in places--and full of mellow associations. That does not alter the quality of the realities these robes conceal. The realities are greedy trade, base profit-- seeking, bold advertisement; and kingship and chivalry, spite of this wearing of treasured robes, are as dead among it all as that crusader my uncle championed against the nettles outside the Duffield church.

I have thought much of that bright afternoon's panorama.

To run down the Thames so is to run one's hand over the pages in the book of England from end to end. One begins in Craven Reach and it is as if one were in the heart of old England. Behind us are Kew and Hampton Court with their memories of Kings and Cardinals, and one runs at first between Fulham's episcopal garden parties and Hurlingham's playground for the sporting instinct of our race. The whole effect is English. There is space, there are old trees and all the best qualities of the home-land in that upper reach. Putney, too, looks Anglican on a dwindling scale. And then for a stretch the newer developments slop over, one misses Bladesover and there come first squalid stretches of mean homes right and left and then the dingy industrialism of the south side, and on the north bank the polite long front of nice houses, artistic, literary, administrative people's residences, that stretches from Cheyne Walk nearly to

Westminster and hides a wilderness of slums. What a long slow crescendo that is, mile after mile, with the houses crowding closer, the multiplying succession of church towers, the architectural moments, the successive bridges, until you come out into the second movement of the piece with Lambeth's old palace under your quarter and the houses of Parliament on your bow! Westminster Bridge is ahead of you then, and through it you flash, and in a moment the round-faced clock tower cranes up to peer at you again and New Scotland Yard squares at you, a fat beef-eater of a policeman disguised miraculously as a Bastille.

For a stretch you have the essential London; you have Charing Cross railway station, heart of the world, and the Embankment on the north side with its new hotels overshadowing its Georgian and Victorian architecture, and mud and great warehouses and factories, chimneys, shot towers, advertisements on the south. The northward skyline grows more intricate and pleasing, and more and more does one thank God for Wren. Somerset House is as picturesque as the civil war, one is reminded again of the original England, one feels in the fretted sky the quality of Restoration Lace.

And then comes Astor's strong box and the lawyers' Inns.

(I had a passing memory of myself there, how once I had trudged along the Embankment westward, weighing my uncle's offer of three hundred pounds a year....)

Through that central essential London reach I drove, and X2 bored her nose under the foam regardless of it all like a black hound going through reeds--on what trail even I who made her cannot tell.

And in this reach, too, one first meets the seagulls and is reminded of the sea. Blackfriars one takes--just under these two

bridges and just between them is the finest bridge moment in the world--and behold, soaring up, hanging in the sky over a rude tumult of warehouses, over a jostling competition of traders, irrelevantly beautiful and altogether remote, Saint Paul's! "Of course!" one says, "Saint Paul's!" It is the very figure of whatever fineness the old Anglican culture achieved, detached, a more dignified and chastened Saint Peter's, colder, greyer, but still ornate; it has never been over thrown, never disavowed, only the tall warehouses and all the roar of traffic have forgotten it, every one has forgotten it; the steamships, the barges, go heedlessly by regardless of it, intricacies of telephone wires and poles cut blackly into its thin mysteries, and presently, when in a moment the traffic permits you and you look round for it, it has dissolved like a cloud into the grey blues of the London sky.

And then the traditional and ostensible England falls from you altogether. The third movement begins, the last great movement in the London symphony, in which the trim scheme of the old order is altogether dwarfed and swallowed up. Comes London Bridge, and the great warehouses tower up about you, waving stupendous cranes, the gulls circle and scream in your ears, large ships lie among their lighters, and one is in the port of the world. Again and again in this book I have written of England as a feudal scheme overtaken by fatty degeneration and stupendous accidents of hypertrophy.

For the last time I must strike that note as the memory of the dear neat little sunlit ancient Tower of London lying away in a gap among the warehouses comes back to me, that little accumulation of buildings so provincially pleasant and dignified, overshadowed by the vulgarest, most typical exploit of modern England, the sham Gothic casings to the ironwork of the Tower Bridge. That Tower Bridge is the very balance and confirmation of Westminster's dull pinnacles and tower. That

sham Gothic bridge; in the very gates of our mother of change,
the Sea !

But after that one is in a world of accident and nature. For the third part of the panorama of London is beyond all law, order, and precedence; it is the seaport and the sea. One goes down the widening reaches through a monstrous variety of shipping, great steamers, great sailing-ships, trailing the flags of all the world, a monstrous confusion of lighters, witches' conferences of brown-sailed barges, wallowing tugs, a tumultuous crowding and jostling of cranes and spars, and wharves and stores, and assertive inscriptions. Huge vistas of dock open right and left of one, and here and there beyond and amidst it all are church towers, little patches of indescribably old-fashioned and worn-out houses, riverside pubs and the like, vestiges of townships that were long since torn to fragments and submerged in these new growths. And amidst it all no plan appears, no intention, no comprehensive desire. That is the very key of it all. Each day one feels that the pressure of commerce and traffic grew, grew insensibly monstrous, and first this man made a wharf and that erected a crane, and then this company set to work and then that, and so they jostled together to make this unassimilable enormity of traffic. Through it we dodged and drove eager for the high seas.

I remember how I laughed aloud at the glimpse of the name of a London County Council steamboat that ran across me. Caxton it was called, and another was Pepys, and another was Shakespeare. They seemed so wildly out of place, splashing about in that confusion. One wanted to take them out and wipe them and put them back in some English gentleman's library. Everything was alive about them, flashing, splashing, and passing, ships moving, tugs panting, hawsers taut, barges going down with men toiling at the sweeps, the water all a-swirl with the wash of shipping, scaling into millions of little wavelets, curling and

frothing under the whip of the unceasing wind. Past it all we drove. And at Greenwich to the south, you know, there stands a fine stone frontage where all the victories are recorded in a Painted Hall, and beside it is the "Ship" where once upon a time those gentlemen of Westminster used to have an annual dinner--before the port of London got too much for them altogether. The old facade of the Hospital was just warming to the sunset as we went by, and after that, right and left, the river opened, the sense of the sea increased and prevailed, reach after reach from Northfleet to the Nore.

And out you come at last with the sun behind you into the eastern sea. You speed up and tear the oily water louder and faster, siroo, siroo-swish-siroo, and the hills of Kent--over which I once fled from the Christian teachings of Nicodemus Frapp--fall away on the right hand and Essex on the left. They fall away and vanish into blue haze, and the tall slow ships behind the tugs, scarce moving ships and wallowing sturdy tugs, are all wrought of wet gold as one goes frothing by. They stand out, bound on strange missions of life and death, to the killing of men in unfamiliar lands. And now behind us is blue mystery and the phantom flash of unseen lights, and presently even these are gone, and I and my destroyer tear out to the unknown across a great grey space. We tear into the great spaces of the future and the turbines fall to talking in unfamiliar tongues. Out to the open we go, to windy freedom and trackless ways. Light after light goes down. England and the Kingdom, Britain and the Empire, the old prides and the old devotions, glide abeam, astern, sink down upon the horizon, pass--pass. The river passes--London passes, England passes...

III

This is the note I have tried to emphasise, the note that sounds clear in my mind when I think of anything beyond the purely

personal aspects of my story.

It is a note of crumbling and confusion, of change and seemingly aimless swelling, of a bubbling up and medley of futile loves and sorrows. But through the confusion sounds another note. Through the confusion something drives, something that is at once human achievement and the most inhuman of all existing things. Something comes out of it.... How can I express the values of a thing at once so essential and so immaterial. It is something that calls upon such men as I with an irresistible appeal.

I have figured it in my last section by the symbol of my destroyer, stark and swift, irrelevant to most human interests. Sometimes I call this reality Science, sometimes I call it Truth. But it is something we draw by pain and effort out of the heart of life, that we disentangle and make clear. Other men serve it, I know, in art, in literature, in social invention, and see it in a thousand different figures, under a hundred names. I see it always as austerity, as beauty. This thing we make clear is the heart of life. It is the one enduring thing. Men and nations, epochs and civilisation pass each making its contribution I do not know what it is, this something, except that it is supreme. It is, a something, a quality, an element, one may find now in colours, now in norms, now in sounds, now in thoughts. It emerges from life with each year one lives and feels, and generation by generation and age by age, but the how and why of it are all beyond the compass of my mind....

Yet the full sense of it was with me all that night as I drove, lonely above the rush and murmur of my engines, out upon the weltering circle of the sea.

Far out to the northeast there came the flicker of a squadron of warships waving white swords of light about the sky. I kept them hull-down, and presently they were mere summer lightning over

the watery edge of the globe.... I fell into thought that was nearly formless, into doubts and dreams that have no words, and it seemed good to me to drive ahead and on and on through the windy starlight, over the long black waves.

IV

It was morning and day before I returned with the four sick and starving journalists who had got permission to come with me, up the shining river, and past the old grey Tower....

I recall the back views of those journalists very distinctly, going with a certain damp weariness of movement, along a side street away from the river. They were good men and bore me no malice, and they served me up to the public in turgid degenerate Kiplingese, as a modest button on the complacent stomach of the Empire. Though as a matter of fact, X2 isn't intended for the empire, or indeed for the hands of any European power. We offered it to our own people first, but they would have nothing to do with me, and I have long since ceased to trouble much about such questions. I have come to see myself from the outside, my country from the outside--without illusions. We make and pass.

We are all things that make and pass striving upon a hidden mission, out to the open sea.

THE EPILOGUE

PREFACE TO REPRINT EDITION

The reader should grasp clearly the date at which this book was written. It was done in 1907: it appeared in various magazines as a serial in 1908 and it was published in the Fall of that year. At that time the aeroplane was, for most people, merely a rumour and the "Sausage" held the air. The contemporary reader has all the advantage of ten years' experience since this story was imagined. He can correct his author at a dozen points and estimate the value of these warnings by the standard of a decade of realities. The book is weak on anti-aircraft guns, for example, and still more negligent of submarines. Much, no doubt, will strike the reader as quaint and limited but upon much the writer may not unreasonably plume himself. The interpretation of the German spirit must have read as a caricature in 1908. Was it a caricature? Prince Karl seemed a fantasy then. Reality has since copied Prince Carl with an astonishing faithfulness. Is it too much to hope that some democratic "Bert" may not ultimately get even with his Highness? Our author tells us in this book, as he has told us in others, more especially in *The World Set Free*, and as he has been telling us this year in his *War and the Future*, that if mankind goes on with war, the smash-up of civilization is inevitable. It is chaos or the United States of the World for mankind. There is no other choice. Ten years have but added an enormous conviction to the message of this book. It remains essentially right, a pamphlet story--in support of the League to Enforce Peace.

K.

THE WAR IN THE AIR

CHAPTER I OF PROGRESS AND THE SMALLWAYS FAMILY

1

"This here Progress," said Mr. Tom Smallways, "it keeps on.

"You'd hardly think it could keep on," said Mr. Tom Smallways.

It was along before the War in the Air began that Mr. Smallways made this remark. He was sitting on the fence at the end of his garden and surveying the great Bun Hill gas-works with an eye that neither praised nor blamed. Above the clustering gasometers three unfamiliar shapes appeared, thin, wallowing bladders that flapped and rolled about, and grew bigger and bigger and rounder and rounder--balloons in course of inflation for the South of England Aero Club's Saturday-afternoon ascent.

"They goes up every Saturday," said his neighbour, Mr. Stringer, the milkman. "It's only yestiday, so to speak, when all London turned out to see a balloon go over, and now every little place in the country has its weekly-outings--uppings, rather. It's been the salvation of them gas companies."

"Larst Satiday I got three barrer-loads of gravel off my petaters," said Mr. Tom Smallways. "Three barrer-loads! What they dropped as ballase. Some of the plants was broke, and some was buried."

"Ladies, they say, goes up!"

"I suppose we got to call 'em ladies," said Mr Tom Smallways.

"Still, it ain't hardly my idea of a lady--flying about in the air, and throwing gravel at people. It ain't what I been accustomed to consider ladylike, whether or no."

Mr. Stringer nodded his head approvingly, and for a time they continued to regard the swelling bulks with expressions that had changed from indifference to disapproval.

Mr. Tom Smallways was a green-grocer by trade and a gardener by disposition; his little wife Jessica saw to the shop, and Heaven had planned him for a peaceful world. Unfortunately Heaven had not planned a peaceful world for him. He lived in a world of obstinate and incessant change, and in parts where its operations were unsparingly conspicuous. Vicissitude was in the very soil he tilled; even his garden was upon a yearly tenancy, and overshadowed by a huge board that proclaimed it not so much a garden as an eligible building site. He was horticulture under notice to quit, the last patch of country in a district flooded by new and prbaa things. He did his best to console himself, to imagine matters near the turn of the tide.

"You'd hardly think it could keep on," he said.

Mr. Smallways' aged father, could remember Bun Hill as an idyllic Kentish village. He had driven Sir Peter Bone until he was fifty and then he took to drink a little, and driving the station bus, which lasted him until he was seventy-eight. Then he retired. He sat by the fireside, a shrivelled, very, very old coachman, full charged with reminiscences, and ready for any careless stranger. He could tell you of the vanished estate of Sir Peter Bone, long since cut up for building, and how that magnate ruled the country-side when it was country-side, of shooting and

hunting, and of caches along the high road, of how "where the gas-works is" was a cricket-field, and of the coming of the Crystal Palace. The Crystal Palace was six miles away from Bun Hill, a great facade that glittered in the morning, and was a clear blue outline against the sky in the afternoon, and of a night, a source of gratuitous fireworks for all the population of Bun Hill. And then had come the railway, and then villas and villas, and then the gas-works and the water-works, and a great, ugly sea of workmen's houses, and then drainage, and the water vanished out of the Otterbourne and left it a dreadful ditch, and then a second railway station, Bun Hill South, and more houses and more, more shops, more competition, plate-glass shops, a school-board, rates, omnibuses, tramcars--going right away into London itself--bicycles, motor-cars and then more motor-cars, a Carnegie library.

"You'd hardly think it could keep on," said Mr. Tom Smallways, growing up among these marvels.

But it kept on. Even from the first the green-grocer's shop which he had set up in one of the smallest of the old surviving village houses in the tail of the High Street had a submerged air, an air of hiding from something that was looking for it. When they had made up the pavement of the High Street, they levelled that up so that one had to go down three steps into the shop. Tom did his best to sell only his own excellent but limited range of produce; but Progress came shoving things into his window, French artichokes and aubergines, foreign apples--apples from the State of New York, apples from California, apples from Canada, apples from New Zealand, "pretty lookin' fruit, but not what I should call English apples," said Tom--bananas, unfamiliar nuts, grape fruits, mangoes.

The motor-cars that went by northward and southward grew more and more powerful and efficient, whizzed faster and smelt worse,

there appeared great clangorous petrol trolleys delivering coal and parcels in the place of vanishing horse-vans, motor-omnibuses ousted the horse-omnibuses, even the Kentish strawberries going Londonward in the night took to machinery and clattered instead of creaking, and became affected in flavour by progress and petrol.

And then young Bert Smallways got a motor bicycle....

2

Bert, it is necessary to explain, was a progressive Smallways.

Nothing speaks more eloquently of the pitiless insistence of progress and expansion in our time than that it should get into the Smallways blood. But there was something advanced and enterprising about young Smallways before he was out of short frocks. He was lost for a whole day before he was five, and nearly drowned in the reservoir of the new water-works before he was seven. He had a real pistol taken away from him by a real policeman when he was ten. And he learnt to smoke, not with pipes and brown paper and cane as Tom had done, but with a penny packet of Boys of England American cigarettes. His language shocked his father before he was twelve, and by that age, what with touting for parcels at the station and selling the Bun Hill Weekly Express, he was making three shillings a week, or more, and spending it on Chips, Comic Cuts, Ally Sloper's Half-holiday, cigarettes, and all the concomitants of a life of pleasure and enlightenment. All of this without hindrance to his literary studies, which carried him up to the seventh standard at an exceptionally early age. I mention these things so that you may have no doubt at all concerning the sort of stuff Bert had in him.

He was six years younger than Tom, and for a time there was an

attempt to utilise him in the green-grocer's shop when Tom at twenty-one married Jessica--who was thirty, and had saved a little money in service. But it was not Bert's forte to be utilised. He hated digging, and when he was given a basket of stuff to deliver, a nomadic instinct arose irresistibly, it became his pack and he did not seem to care how heavy it was nor where he took it, so long as he did not take it to its destination. Glamour filled the world, and he strayed after it, basket and all. So Tom took his goods out himself, and sought employers for Bert who did not know of this strain of poetry in his nature. And Bert touched the fringe of a number of trades in succession--draper's porter, chemist's boy, doctor's page, junior assistant gas-fitter, envelope addresser, milk-cart assistant, golf caddie, and at last helper in a bicycle shop. Here, apparently, he found the progressive quality his nature had craved. His employer was a pirate-souled young man named Grubb, with a black-smear'd face by day, and a music-hall side in the evening, who dreamt of a patent lever chain; and it seemed to Bert that he was the perfect model of a gentleman of spirit. He hired out quite the dirtiest and unsafest bicycles in the whole south of England, and conducted the subsequent discussions with astonishing verve. Bert and he settled down very well together. Bert lived in, became almost a trick rider--he could ride bicycles for miles that would have come to pieces instantly under you or me--took to washing his face after business, and spent his surplus money upon remarkable ties and collars, cigarettes, and shorthand classes at the Bun Hill Institute.

He would go round to Tom at times, and look and talk so brilliantly that Tom and Jessie, who both had a natural tendency to be respectful to anybody or anything, looked up to him immensely.

"He's a go-ahead chap, is Bert," said Tom. "He knows a thing or two."

"Let's hope he don't know too much," said Jessica, who had a fine sense of limitations.

"It's go-ahead Times," said Tom. "Noo petaters, and English at that; we'll be having 'em in March if things go on as they do go.

I never see such Times. See his tie last night?"

"It wasn't suited to him, Tom. It was a gentleman's tie. He wasn't up to it--not the rest of him, It wasn't becoming" ...

Then presently Bert got a cyclist's suit, cap, badge, and all; and to see him and Grubb going down to Brighton (and back)--heads down, handle-bars down, backbones curved--was a revelation in the possibilities of the Smallways blood.

Go-ahead Times!

Old Smallways would sit over the fire mumbling of the greatness of other days, of old Sir Peter, who drove his coach to Brighton and back in eight-and-twenty hours, of old Sir Peter's white top-hats, of Lady Bone, who never set foot to ground except to walk in the garden, of the great, prize-fights at Crawley. He talked of pink and pig-skin breeches, of foxes at Ring's Bottom, where now the County Council pauper lunatics were enclosed, of Lady Bone's chintzes and crinolines. Nobody heeded him. The world had thrown up a new type of gentleman altogether--a gentleman of most ungentlemanly energy, a gentleman in dusty oilskins and motor goggles and a wonderful cap, a stink-making gentleman, a swift, high-class badger, who fled perpetually along high roads from the dust and stink he perpetually made. And his lady, as they were able to see her at Bun Hill, was a weather-bitten goddess, as free from refinement as a gipsy--not so much dressed as packed for transit at a high velocity.

So Bert grew up, filled with ideals of speed and enterprise, and became, so far as he became anything, a kind of bicycle engineer of the let's-have-a-look-at-it and enamel chipping variety. Even a road-racer, geared to a hundred and twenty, failed to satisfy him, and for a time he pined in vain at twenty miles an hour along roads that were continually more dusty and more crowded with mechanical traffic. But at last his savings accumulated, and his chance came. The hire-purchase system bridged a financial gap, and one bright and memorable Sunday morning he wheeled his new possession through the shop into the road, got on to it with the advice and assistance of Grubb, and teuf-teuffed off into the haze of the traffic-tortured high road, to add himself as one more voluntary public danger to the amenities of the south of England.

"Orf to Brighton!" said old Smallways, regarding his youngest son from the sitting-room window over the green-grocer's shop with something between pride and reprobation. "When I was 'is age, I'd never been to London, never bin south of Crawley--never bin anywhere on my own where I couldn't walk. And nobody didn't go. Not unless they was gentry. Now every body's orf everywhere; the whole dratted country sims flying to pieces. Wonder they all get back. Orf to Brighton indeed! Anybody want to buy 'orses?"

"You can't say I bin to Brighton, father," said Tom.

"Nor don't want to go," said Jessica sharply; "creering about and spendin' your money."

3

For a time the possibilities of the motor-bicycle so occupied Bert's mind that he remained regardless of the new direction in

which the striving soul of man was finding exercise and refreshment. He failed to observe that the type of motor-car, like the type of bicycle, was settling-down and losing its adventurous quality. Indeed, it is as true as it is remarkable that Tom was the first to observe the new development. But his gardening made him attentive to the heavens, and the proximity of the Bun Hill gas-works and the Crystal Palace, from which ascents were continually being made, and presently the descent of ballast upon his potatoes, conspired to bear in upon his unwilling mind the fact that the Goddess of Change was turning her disturbing attention to the sky. The first great boom in aeronautics was beginning.

Grubb and Bert heard of it in a music-hall, then it was driven home to their minds by the cinematograph, then Bert's imagination was stimulated by a sixpenny edition of that aeronautic classic, Mr. George Griffith's "Clipper of the Clouds," and so the thing really got hold of them.

At first the most obvious aspect was the multiplication of balloons. The sky of Bun Hill began to be infested by balloons. On Wednesday and Saturday afternoons particularly you could scarcely look skyward for a quarter of an hour without discovering a balloon somewhere. And then one bright day Bert, motoring toward Croydon, was arrested by the insurgence of a huge, bolster-shaped monster from the Crystal Palace grounds, and obliged to dismount and watch it. It was like a bolster with a broken nose, and below it, and comparatively small, was a stiff framework bearing a man and an engine with a screw that whizzed round in front and a sort of canvas rudder behind. The framework had an air of dragging the reluctant gas-cylinder after it like a brisk little terrier towing a shy gas-distended elephant into society. The combined monster certainly travelled and steered. It went overhead perhaps a thousand feet up (Bert heard the engine), sailed away southward, vanished over the hills,

reappeared a little blue outline far off in the east, going now very fast before a gentle south-west gale, returned above the Crystal Palace towers, circled round them, chose a position for descent, and sank down out of sight.

Bert sighed deeply, and turned to his motor-bicycle again.

And that was only the beginning of a succession of strange phenomena in the heavens--cylinders, cones, pear-shaped monsters, even at last a thing of aluminium that glittered wonderfully, and that Grubb, through some confusion of ideas about armour plates, was inclined to consider a war machine.

There followed actual flight.

This, however, was not an affair that was visible from Bun Hill; it was something that occurred in private grounds or other enclosed places and, under favourable conditions, and it was brought home to Grubb and Bert Smallways only by means of the magazine page of the half-penny newspapers or by cinematograph records. But it was brought home very insistently, and in those days if, ever one heard a man saying in a public place in a loud, reassuring, confident tone, "It's bound to come," the chances were ten to one he was talking of flying. And Bert got a box lid and wrote out in correct window-ticket style, and Grubb put in the window this inscription, "Aeroplanes made and repaired." It quite upset Tom--it seemed taking one's shop so lightly; but most of the neighbours, and all the sporting ones, approved of it as being very good indeed.

Everybody talked of flying, everybody repeated over and over again, "Bound to come," and then you know it didn't come. There was a hitch. They flew--that was all right; they flew in machines heavier than air. But they smashed. Sometimes they smashed the engine, sometimes they smashed the aeronaut, usually

they smashed both. Machines that made flights of three or four miles and came down safely, went up the next time to headlong disaster. There seemed no possible trusting to them. The breeze upset them, the eddies near the ground upset them, a passing thought in the mind of the aeronaut upset them. Also they upset--simply.

"It's this 'stability' does 'em," said Grubb, repeating his newspaper. "They pitch and they pitch, till they pitch themselves to pieces."

Experiments fell away after two expectant years of this sort of success, the public and then the newspapers tired of the expensive photographic reproductions, the optimistic reports, the perpetual sequence of triumph and disaster and silence. Flying slumped, even ballooning fell away to some extent, though it remained a fairly popular sport, and continued to lift gravel from the wharf of the Bun Hill gas-works and drop it upon deserving people's lawns and gardens. There were half a dozen reassuring years for Tom--at least so far as flying was concerned. But that was the great time of mono-rail development, and his anxiety was only diverted from the high heavens by the most urgent threats and symptoms of change in the lower sky.

There had been talk of mono-rails for several years. But the real mischief began when Brennan sprang his gyroscopic mono-rail car upon the Royal Society. It was the leading sensation of the 1907 soirees; that celebrated demonstration-room was all too small for its exhibition. Brave soldiers leading Zionists, deserving novelists, noble ladies, congested the narrow passage and thrust distinguished elbows into ribs the world would not willingly let break, deeming themselves fortunate if they could see "just a little bit of the rail." Inaudible, but convincing, the great inventor expounded his discovery, and sent his obedient little model of the trains of the future up gradients, round

curves, and across a sagging wire. It ran along its single rail, on its single wheels, simple and sufficient; it stopped, reversed, stood still, balancing perfectly. It maintained its astounding equilibrium amidst a thunder of applause. The audience dispersed at last, discussing how far they would enjoy crossing an abyss on a wire cable. "Suppose the gyroscope stopped!" Few of them anticipated a title of what the Brennan mono-rail would do for their railway securities and the face of the world.

In a few years they realised better. In a little while no one thought anything of crossing an abyss on a wire, and the mono-rail was superseding the tram-lines, railways: and indeed every form of track for mechanical locomotion. Where land was cheap the rail ran along the ground, where it was dear the rail lifted up on iron standards and passed overhead; its swift, convenient cars went everywhere and did everything that had once been done along made tracks upon the ground.

When old Smallways died, Tom could think of nothing more striking to say of him than that, "When he was a boy, there wasn't nothing higher than your chimbleys--there wasn't a wire nor a cable in the sky!"

Old Smallways went to his grave under an intricate network of wires and cables, for Bun Hill became not only a sort of minor centre of power distribution--the Home Counties Power Distribution Company set up transformers and a generating station close beside the old gas-works--but, also a junction on the suburban mono-rail system. Moreover, every tradesman in the place, and indeed nearly every house, had its own telephone.

The mono-rail cable standard became a striking fact in urban landscape, for the most part stout iron erections rather like tapering trestles, and painted a bright bluish green. One, it happened, bestrode Tom's house, which looked still more retiring

and apologetic beneath its immensity; and another giant stood just inside the corner of his garden, which was still not built upon and unchanged, except for a couple of advertisement boards, one recommending a two-and-sixpenny watch, and one a nerve restorer. These, by the bye, were placed almost horizontally to catch the eye of the passing mono-rail passengers above, and so served admirably to roof over a tool-shed and a mushroom-shed for Tom. All day and all night the fast cars from Brighton and Hastings went murmuring by overhead long, broad, comfortable-looking cars, that were brightly lit after dusk. As they flew by at night, transient flares of light and a rumbling sound of passage, they kept up a perpetual summer lightning and thunderstorm in the street below.

Presently the English Channel was bridged--a series of great iron Eiffel Tower pillars carrying mono-rail cables at a height of a hundred and fifty feet above the water, except near the middle, where they rose higher to allow the passage of the London and Antwerp shipping and the Hamburg-America liners.

Then heavy motor-cars began to run about on only a couple of wheels, one behind the other, which for some reason upset Tom dreadfully, and made him gloomy for days after the first one passed the shop...

All this gyroscopic and mono-rail development naturally absorbed a vast amount of public attention, and there, was also a huge excitement consequent upon the amazing gold discoveries off the coast of Anglesea made by a submarine prospector, Miss Patricia Giddy. She had taken her degree in geology and mineralogy in the University of London, and while working upon the auriferous rocks of North Wales, after a brief holiday spent in agitating for women's suffrage, she had been struck by the possibility of these reefs cropping up again under the water. She had set herself to verify this supposition by the use of the submarine crawler

invented by Doctor Alberto Cassini. By a happy mingling of reasoning and intuition peculiar to her sex she found gold at her first descent, and emerged after three hours' submersion with about two hundredweight of ore containing gold in the unparalleled quantity of seventeen ounces to the ton. But the whole story of her submarine mining, intensely interesting as it is, must be told at some other time; suffice it now to remark simply that it was during the consequent great rise of prices, confidence, and enterprise that the revival of interest in flying occurred.

It is curious how that revival began. It was like the coming of a breeze on a quiet day; nothing started it, it came. People began to talk of flying with an air of never having for one moment dropped the subject. Pictures of flying and flying machines returned to the newspapers; articles and allusions increased and multiplied in the serious magazines. People asked in mono-rail trains, "When are we going to fly?" A new crop of inventors sprang up in a night or so like fungi. The Aero Club announced the project of a great Flying Exhibition in a large area of ground that the removal of slums in Whitechapel had rendered available.

The advancing wave soon produced a sympathetic ripple in the Bun Hill establishment. Grubb routed out his flying-machine model again, tried it in the yard behind the shop, got a kind of flight out of it, and broke seventeen panes of glass and nine flower-pots in the greenhouse that occupied the next yard but one.

And then, springing from nowhere, sustained one knew not how, came a persistent, disturbing rumour that the problem had been solved, that the secret was known. Bert met it one early-closing afternoon as he refreshed himself in an inn near Nutfield, whither his motor-bicycle had brought him. There smoked and

meditated a person in khaki, an engineer, who presently took an interest in Bert's machine. It was a sturdy piece of apparatus, and it had acquired a kind of documentary value in these quick-changing times; it was now nearly eight years old. Its points discussed, the soldier broke into a new topic with, "My next's going to be an aeroplane, so far as I can see. I've had enough of roads and ways."

"They TORK," said Bert.

"They talk--and they do," said the soldier.

"The thing's coming--"

"It keeps ON coming," said Bert; "I shall believe when I see it."

"That won't be long," said the soldier.

The conversation seemed degenerating into an amiable wrangle of contradiction.

"I tell you they ARE flying," the soldier insisted. "I see it myself."

"We've all seen it," said Bert.

"I don't mean flap up and smash up; I mean real, safe, steady, controlled flying, against the wind, good and right."

"You ain't seen that!"

"I 'AVE! Aldershot. They try to keep it a secret. They got it right enough. You bet--our War Office isn't going to be caught-napping this time."

Bert's incredulity was shaken. He asked questions- and the soldier expanded.

"I tell you they got nearly a square mile fenced in--a sort of valley. Fences of barbed wire ten feet high, and inside that they do things. Chaps about the camp--now and then we get a peep. It isn't only us neither. There's the Japanese; you bet they got, it too--and the Germans!"

The soldier stood with his legs very wide apart, and filled his pipe thoughtfully. Bert sat on the low wall against which his motor-bicycle was leaning.

"Funny thing fighting'll be," he said.

"Flying's going to break out," said the soldier. "When it DOES come, when the curtain does go up, I tell you you'll find every one on the stage--busy.... Such fighting, too!... I suppose you don't read the papers about this sort of thing?"

"I read 'em a bit," said Bert.

"Well, have you noticed what one might call the remarkable case of the disappearing inventor--the inventor who turns up in a blaze of publicity, fires off a few successful experiments, and vanishes?"

"Can't say I 'ave," said Bert.

"Well, I 'ave, anyhow. You get anybody come along who does anything striking in this line, and, you bet, he vanishes. Just goes off quietly out of sight. After a bit, you don't hear anything more of 'em at all. See? They disappear. Gone--no address. First--oh! it's an old story now--there was those Wright Brothers out in America. They glided--they glided miles

and miles. Finally they glided off stage. Why, it must be nineteen hundred and four, or five, THEY vanished! Then there was those people in Ireland--no, I forget their names. Everybody said they could fly. THEY went. They ain't dead that I've heard tell; but you can't say they're alive. Not a feather of 'em can you see. Then that chap who flew round Paris and upset in the Seine. De Booley, was it? I forget. That was a grand fly, in spite of the accident; but where's he got to? The accident didn't hurt him. Eh? _'E_'s gone to cover."

The soldier prepared to light his pipe.

"Looks like a secret society got hold of them," said Bert.

"Secret society! NAW!"

The soldier lit his match, and drew. "Secret society," he repeated, with his pipe between his teeth and the match flaring, in response to his words. "War Departments; that's more like it." He threw his match aside, and walked to his machine. "I tell you, sir," he said, "there isn't a big Power in Europe, OR Asia, OR America, OR Africa, that hasn't got at least one or two flying machines hidden up its sleeve at the present time. Not one. Real, workable, flying machines. And the spying! The spying and manoeuvring to find out what the others have got. I tell you, sir, a foreigner, or, for the matter of that, an unaccredited native, can't get within four miles of Lydd nowadays --not to mention our little circus at Aldershot, and the experimental camp in Galway. No!"

"Well," said Bert, "I'd like to see one of them, anyhow. Jest to help believing. I'll believe when I see, that I'll promise you."

"You'll see 'em, fast enough," said the soldier, and led his machine out into the road.

He left Bert on his wall, grave and pensive, with his cap on the back of his head, and a cigarette smouldering in the corner of his mouth.

"If what he says is true," said Bert, "me and Grubb, we been wasting our blessed old time. Besides incurring expense with thet green-'ouse."

5

It was while this mysterious talk with the soldier still stirred in Bert Smallways' imagination that the most astounding incident in the whole of that dramatic chapter of human history, the coming of flying, occurred. People talk glibly enough of epoch-making events; this was an epoch-making event. It was the unanticipated and entirely successful flight of Mr. Alfred Butteridge from the Crystal Palace to Glasgow and back in a small businesslike-looking machine heavier than air--an entirely manageable and controllable machine that could fly as well as a pigeon.

It wasn't, one felt, a fresh step forward in the matter so much as a giant stride, a leap. Mr. Butteridge remained in the air altogether for about nine hours, and during that time he flew with the ease and assurance of a bird. His machine was, however neither bird-like nor butterfly-like, nor had it the wide, lateral expansion of the ordinary aeroplane. The effect upon the observer was rather something in the nature of a bee or wasp. Parts of the apparatus were spinning very rapidly, and gave one a hazy effect of transparent wings; but parts, including two peculiarly curved "wing-cases"--if one may borrow a figure from the flying beetles--remained expanded stiffly. In the middle was a long rounded body like the body of a moth, and on this Mr. Butteridge could be seen sitting astride, much as a man bestrides

a horse. The wasp-like resemblance was increased by the fact that the apparatus flew with a deep booming hum, exactly the sound made by a wasp at a windowpane.

Mr. Butteridge took the world by surprise. He was one of those gentlemen from nowhere Fate still succeeds in producing for the stimulation of mankind. He came, it was variously said, from Australia and America and the South of France. He was also described quite incorrectly as the son of a man who had amassed a comfortable fortune in the manufacture of gold nibs and the Butteridge fountain pens. But this was an entirely different strain of Butteridges. For some years, in spite of a loud voice, a large presence, an aggressive swagger, and an implacable manner, he had been an undistinguished member of most of the existing aeronautical associations. Then one day he wrote to all the London papers to announce that he had made arrangements for an ascent from the Crystal Palace of a machine that would demonstrate satisfactorily that the outstanding difficulties in the way of flying were finally solved. Few of the papers printed his letter, still fewer were the people who believed in his claim. No one was excited even when a fracas on the steps of a leading hotel in Piccadilly, in which he tried to horse-whip a prominent German musician upon some personal account, delayed his promised ascent. The quarrel was inadequately reported, and his name spelt variously Betteridge and Betridge. Until his flight indeed, he did not and could not contrive to exist in the public mind. There were scarcely thirty people on the look-out for him, in spite of all his clamour, when about six o'clock one summer morning the doors of the big shed in which he had been putting together his apparatus opened--it was near the big model of a megatherium in the Crystal Palace grounds--and his giant insect came droning out into a negligent and incredulous world.

But before he had made his second circuit of the Crystal Palace towers, Fame was lifting her trumpet, she drew a deep breath as

the startled tramps who sleep on the seats of Trafalgar Square were roused by his buzz and awoke to discover him circling the Nelson column, and by the time he had got to Birmingham, which place he crossed about half-past ten, her deafening blast was echoing throughout the country. The despaired-of thing was done.

A man was flying securely and well.

Scotland was agape for his coming. Glasgow he reached by one o'clock, and it is related that scarcely a ship-yard or factory in that busy hive of industry resumed work before half-past two. The public mind was just sufficiently educated in the impossibility of flying to appreciate Mr. Butteridge at his proper value. He eircled the University buildings, and dropped to within shouting distance of the crowds in West End Park and on the slope of Gilmorehill. The thing flew quite steadily at a pace of about three miles an hour, in a wide circle, making a deep hum that, would have drowned his full, rich voice completely had he not provided himself with a megaphone. He avoided churches, buildings, and mono-rail cables with consummate ease as he conversed.

"Me name's Butteridge," he shouted; "B-U-T-T-E-R-I-D-G-E.- Got it? Me mother was Scotch."

And having assured himself that he had been understood, he rose amidst cheers and shouting and patriotic cries, and then flew up very swiftly and easily into the south-eastern sky, rising and falling with long, easy undulations in an extraordinarily wasp-like manner.

His return to London--he visited and hovered over Manchester and Liverpool and Oxford on his way, and spelt his name out to each place--was an occasion of unparalleled excitement. Every one was staring heavenward. More people were run over in the streets

upon that one day, than in the previous three months, and a County Council steamboat, the Isaac Walton, collided with a pier of Westminster Bridge, and narrowly escaped disaster by running ashore--it was low water--on the mud on the south side. He returned to the Crystal Palace grounds, that classic starting-point of aeronautical adventure, about sunset, re-entered his shed without disaster, and had the doors locked immediately upon the photographers and journalists who been waiting his return.

"Look here, you chaps," he said, as his assistant did so, "I'm tired to death, and saddle sore. I can't give you a word of talk. I'm too--done. My name's Butteridge. B-U-T-T-E-R-I-D-G-E. Get that right. I'm an Imperial Englishman. I'll talk to you all to-morrow."

Foggy snapshots still survive to record that incident. His assistant struggles in a sea of aggressive young men carrying note-books or upholding cameras and wearing bowler hats and enterprising ties. He himself towers up in the doorway, a big figure with a mouth--an eloquent cavity beneath a vast black moustache--distorted by his shout to these relentless agents of publicity. He towers there, the most famous man in the country,.

Almost symbolically he holds and gesticulates with a megaphone in his left hand.

6

Tom and Bert Smallways both saw that return. They watched from the crest of Bun Hill, from which they had so often surveyed the pyrotechnics of the Crystal Palace. Bert was excited, Tom kept calm and lumpish, but neither of them realised how their own lives were to be invaded by the fruits of that beginning.

"P'raps old Grubb'll mind the shop a bit now," he said, "and put

his blessed model in the fire. Not that that can save us, if we don't tide over with Steinhart's account."

Bert knew enough of things and the problem of aeronautics to realise that this gigantic imitation of a bee would, to use his own idiom, "give the newspapers fits." The next day it was clear the fits had been given even as he said: their magazine pages were black with hasty photographs, their prose was convulsive they foamed at the headline. The next day they were worse. Before the week was out they were not so much published as carried screaming into the street.

The dominant fact in the uproar was the exceptional personality of Mr. Butteridge, and the extraordinary terms he demanded for the secret of his machine.

For it was a secret and he kept it secret in the most elaborate fashion. He built his apparatus himself in the safe privacy of the great Crystal Palace sheds, with the assistance of inattentive workmen, and the day next following his flight he took it to pieces single handed, packed certain portions, and then secured unintelligent assistance in packing and dispersing the rest. Sealed packing-cases went north and east and west to various pantechinons, and the engines were boxed with peculiar care. It became evident these precautions were not inadvisable in view of the violent demand for any sort of photograph or impressions of his machine. But Mr. Butteridge, having once made his demonstration, intended to keep his secret safe from any further risk of leakage. He faced the British public now with the question whether they wanted his secret or not; he was, he said perpetually, an "Imperial Englishman," and his first wish and his last was to see his invention the privilege and monopoly of the Empire. Only--

It was there the difficulty began.

Mr. Butteridge, it became evident, was a man singularly free from any false modesty--indeed, from any modesty of any kind--singularly willing to see interviewers, answer questions upon any topic except aeronautics, volunteer opinions, criticisms, and autobiography, supply portraits and photographs of himself, and generally spread his personality across the terrestrial sky. The published portraits insisted primarily upon an immense black moustache, and secondarily upon a fierceness behind the moustache. The general impression upon the public was that Butteridge, was a small man. No one big, it was felt, could have so virulently aggressive an expression, though, as a matter of fact, Butteridge had a height of six feet two inches, and a weight altogether proportionate to that. Moreover, he had a love affair of large and unusual dimensions and irregular circumstances and the still largely decorous British public learnt with reluctance and alarm that a sympathetic treatment of this affair was inseparable from the exclusive acquisition of the priceless secret of aerial stability by the British Empire. The exact particulars of the similarity never came to light, but apparently the lady had, in a fit of high-minded inadvertence, had gone through the ceremony of marriage with, one quotes the unpublished discourse of Mr. Butteridge--"a white-livered skunk," and this zoological aberration did in some legal and vexatious manner mar her social happiness. He wanted to talk about the business, to show the splendour of her nature in the light of its complications. It was really most embarrassing to a press that has always possessed a considerable turn for reticence, that wanted things personal indeed in the modern fashion. Yet not too personal. It was embarrassing, I say, to be inexorably confronted with Mr. Butteridge's great heart, to see it laid open in relentless self-vivisection, and its pulsating dissepiments' adorned with emphatic flag labels.

Confronted they were, and there was no getting away from it. He

would make this appalling viscus beat and throb before the shrinking journalists--no uncle with a big watch and a little ever baby ever harped upon it so relentlessly; whatever evasion they attempted he set aside. He "gloried in his love," he said, and compelled them to write it down.

"That's of course a private affair, Mr. Butteridge," they would object.

"The injustice, sorr, is public. I do not care either I am up against institutions or individuals. I do not care if I am up against the universal All. I am pleading the cause of a woman, a woman I lurve, sorr--a noble woman--misunderstood. I intend to vindicate her, sorr, to the four winds of heaven!"

"I lurve England," he used to say--"lurve England, but Puritanism, sorr, I abhor. It fills me with loathing. It raises my gorge. Take my own case."

He insisted relentlessly upon his heart, and upon seeing proofs of the interview. If they had not done justice to his erotic bellowings and gesticulations, he stuck in, in a large inky scrawl, all and more than they had omitted.

It was a strangely embarrassing thing for British journalism. Never was there a more obvious or uninteresting affair; never had the world heard the story of erratic affection with less appetite or sympathy. On the other hand it was extremely curious about Mr. Butteridge's invention. But when Mr. Butteridge could be deflected for a moment from the cause of the lady he championed, then he talked chiefly, and usually with tears of tenderness in his voice, about his mother and his childhood--his mother who crowned a complete encyclopedia of maternal virtue by being "largely Scotch." She was not quite neat, but nearly so. "I owe everything in me to me mother," he asserted--"everything. Eh!"

and--"ask any man who's done anything. You'll hear the same story. All we have we owe to women. They are the species, sorr.

Man is but a dream. He comes and goes. The woman's soul leadeth us upward and on!"

He was always going on like that.

What in particular he wanted from the Government for his secret did not appear, nor what beyond a money payment could be expected from a modern state in such an affair. The general effect upon judicious observers, indeed, was not that he was treating for anything, but that he was using an unexampled opportunity to bellow and show off to an attentive world. Rumours of his real identity spread abroad. It was said that he had been the landlord of an ambiguous hotel in Cape Town, and had there given shelter to, and witnessed, the experiments and finally stolen the papers and plans of, an extremely shy and friendless young inventor named Palliser, who had come to South Africa from England in an advanced stage of consumption, and died there. This, at any rate, was the allegation of the more outspoken American press. But the proof or disproof of that never reached the public.

Mr. Butteridge also involved himself passionately in a tangle of disputes for the possession of a great number of valuable money prizes. Some of these had been offered so long ago as 1906 for successful mechanical flight. By the time of Mr. Butteridge's success a really very considerable number of newspapers, tempted by the impunity of the pioneers in this direction, had pledged themselves to pay in some cases, quite overwhelming sums to the first person to fly from Manchester to Glasgow, from London to Manchester, one hundred miles, two hundred miles in England, and the like. Most had hedged a little with ambiguous conditions, and now offered resistance; one or two paid at once, and

vehemently called attention to the fact; and Mr. Butteridge plunged into litigation with the more recalcitrant, while at the same time sustaining a vigorous agitation and canvass to induce the Government to purchase his invention.

One fact, however, remained permanent throughout all the developments of this affair behind Butteridge's preposterous love interest, his politics and personality, and all his shouting and boasting, and that was that, so far as the mass of people knew, he was in sole possession of the secret of the practicable aeroplane in which, for all one could tell to the contrary, the key of the future empire of the world resided. And presently, to the great consternation of innumerable people, including among others Mr. Bert Smallways, it became apparent that whatever negotiations were in progress for the acquisition of this precious secret by the British Government were in danger of falling through. The London Daily Requiem first voiced the universal alarm, and published an interview under the terrific caption of, "Mr. Butteridge Speaks his Mind."

Therein the inventor--if he was an inventor--poured out his heart.

"I came from the end of the earth," he said, which rather seemed to confirm the Cape Town story, "bringing me Motherland the secret that would give her the empire of the world. And what do I get?" He paused. "I am sniffed at by elderly mandarins! . . . And the woman I love is treated like a leper!"

"I am an Imperial Englishman," he went on in a splendid outburst, subsequently written into the interview by his own hand; "but there there are limits to the human heart! There are younger nations--living nations! Nations that do not snore and gurgle helplessly in paroxysms of plethora upon beds of formality and red tape! There are nations that will not fling away the empire

of earth in order to slight an unknown man and insult a noble woman whose boots they are not fitted to unlatch. There are nations not blinded to Science, not given over hand and foot to effete snobocracies and Degenerate Decadents. In short, mark my words--THERE ARE OTHER NATIONS!"

This speech it was that particularly impressed Bert Smallways. "If them Germans or them Americans get hold of this," he said impressively to his brother, "the British Empire's done. It's U-P. The Union Jack, so to speak, won't be worth the paper it's written on, Tom."

"I suppose you couldn't lend us a hand this morning," said Jessica, in his impressive pause. "Everybody in Bun Hill seems wanting early potatoes at once. Tom can't carry half of them."

"We're living on a volcano," said Bert, disregarding the suggestion. "At any moment war may come--such a war!"

He shook his head portentously.

"You'd better take this lot first, Tom," said Jessica. She turned briskly on Bert. "Can you spare us a morning?" she asked.

"I dessay I can," said Bert. "The shop's very quiet s'morning. Though all this danger to the Empire worries me something frightful."

"Work'll take it off your mind," said Jessica.

And presently he too was going out into a world of change and wonder, bowed beneath a load of potatoes and patriotic insecurity, that merged at last into a very definite irritation at the weight and want of style of the potatoes and a very clear conception of the entire detestableness of Jessica.

CHAPTER II

HOW BERT SMALLWAYS GOT INTO DIFFICULTIES

It did not occur to either Tom or Bert Smallways that this remarkable aerial performance of Mr. Butteridge was likely to affect either of their lives in any special manner, that it would in any way single them out from the millions about them; and when they had witnessed it from the crest of Bun Hill and seen the fly-like mechanism, its rotating planes a golden haze in the sunset, sink humming to the harbour of its shed again, they turned back towards the sunken green-grocery beneath the great iron standard of the London to Brighton mono-rail, and their minds reverted to the discussion that had engaged them before Mr. Butteridge's triumph had come in sight out of the London haze.

It was a difficult and unsuccessful discussions. They had to carry it on in shouts because of the moaning and roaring of the gyroscopic motor-cars that traversed the High Street, and in its nature it was contentious and private. The Grubb business was in difficulties, and Grubb in a moment of financial eloquence had given a half-share in it to Bert, whose relations with his employer had been for some time unsalaried and pallish and informal.

Bert was trying to impress Tom with the idea that the reconstructed Grubb & Smallways offered unprecedented and unparalleled opportunities to the judicious small investor. It was coming home to Bert, as though it were an entirely new fact, that Tom was singularly impervious to ideas. In the end he put the financial issues on one side, and, making the thing entirely a matter of fraternal affection, succeeded in borrowing a sovereign on the security of his word of honour.

The firm of Grubb & Smallways, formerly Grubb, had indeed been singularly unlucky in the last year or so. For many years the business had struggled along with a flavour of romantic insecurity in a small, dissolute-looking shop in the High Street, adorned with brilliantly coloured advertisements of cycles, a display of bells, trouser-clips, oil-cans, pump-clips, frame-cases, wallets, and other accessories, and the announcement of "Bicycles on Hire," "Repairs," "Free inflation," "Petrol," and similar attractions. They were agents for several obscure makes of bicycle,--two samples constituted the stock,--and occasionally they effected a sale; they also repaired punctures and did their best--though luck was not always on their side--with any other repairing that was brought to them. They handled a line of cheap gramophones, and did a little with musical boxes.

The staple of their business was, however, the letting of bicycles on hire. It was a singular trade, obeying no known commercial or economic principles--indeed, no principles. There was a stock of ladies' and gentlemen's bicycles in a state of disrepair that passes description, and these, the hiring stock, were let to unexacting and reckless people, inexpert in the things of this world, at a nominal rate of one shilling for the first hour and sixpence per hour afterwards. But really there were no fixed prices, and insistent boys could get bicycles and the thrill of danger for an hour for so low a sum as threepence, provided they could convince Grubb that that was all they had. The saddle and handle-bar were then sketchily adjusted by Grubb, a deposit exacted, except in the case of familiar boys, the machine lubricated, and the adventurer started upon his career. Usually he or she came back, but at times, when the accident was serious, Bert or Grubb had to go out and fetch the machine home. Hire was always charged up to the hour of return to the shop and deducted from the deposit. It was rare that a bicycle started out from their hands in a state of pedantic efficiency. Romantic

possibilities of accident lurked in the worn thread of the screw that adjusted the saddle, in the precarious pedals, in the loose-knit chain, in the handle-bars, above all in the brakes and tyres. Tappings and clankings and strange rhythmic creakings awoke as the intrepid hirer pedalled out into the country. Then perhaps the bell would jam or a brake fail to act on a hill; or the seat-pillar would get loose, and the saddle drop three or four inches with a disconcerting bump; or the loose and rattling chain would jump the cogs of the chain-wheel as the machine ran downhill, and so bring the mechanism to an abrupt and disastrous stop without at the same time arresting the forward momentum of the rider; or a tyre would bang, or sigh quietly, and give up the struggle for efficiency.

When the hirer returned, a heated pedestrian, Grubb would ignore all verbal complaints, and examine the machine gravely.

"This ain't 'ad fair usage," he used to begin.

He became a mild embodiment of the spirit of reason. "You can't expect a bicycle to take you up in its arms and carry you," he used to say. "You got to show intelligence. After all--it's machinery."

Sometimes the process of liquidating the consequent claims bordered on violence. It was always a very rhetorical and often a trying affair, but in these progressive times you have to make a noise to get a living. It was often hard work, but nevertheless this hiring was a fairly steady source of profit, until one day all the panes in the window and door were broken and the stock on sale in the window greatly damaged and disordered by two over-critical hirers with no sense of rhetorical irrelevance. They were big, coarse stokers from Gravesend. One was annoyed because his left pedal had come off, and the other because his tyre had become deflated, small and

indeed negligible accidents by Bun Hill standards, due entirely to the ungentle handling of the delicate machines entrusted to them--and they failed to see clearly how they put themselves in the wrong by this method of argument. It is a poor way of convincing a man that he has let you a defective machine to throw his foot-pump about his shop, and take his stock of gongs outside in order to return them through the window-panes. It carried no real conviction to the minds of either Grubb or Bert; it only irritated and vexed them. One quarrel makes many, and this unpleasantness led to a violent dispute between Grubb and the landlord upon the moral aspects of and legal responsibility for the consequent re-glazing. In the end Grubb and Smallways were put to the expense of a strategic nocturnal removal to another position.

It was a position they had long considered. It was t small, shed-like shop with a plate-glass window and one room behind, just at the sharp bend in the road at the bottom of Bun Hill; and here they struggled along bravely, in spite of persistent annoyance from their former landlord, hoping for certain eventualities the peculiar situation of the shop seemed to promise. Here, too, they were doomed to disappointment.

The High Road from London to Brighton that ran through Bun Hill was like the British Empire or the British Constitution--a thing that had grown to its present importance. Unlike any other roads in Europe the British high roads have never been subjected to any organised attempts to grade or straighten them out, and to that no doubt their peculiar picturesqueness is to be ascribed. The old Bun Hill High Street drops at its end for perhaps eighty or a hundred feet of descent at an angle of one in five, turns at right angles to the left, runs in a curve for about thirty yards to a brick bridge over the dry ditch that had once been the Otterbourne, and then bends sharply to the right again round a dense clump of trees and goes on, a simple, straightforward,

peaceful high road. There had been one or two horse-and-van and bicycle accidents in the place before the shop Bert and Grubb took was built, and, to be frank, it was the probability of others that attracted them to it.

Its possibilities had come to them first with a humorous flavour.

"Here's one of the places where a chap might get a living by keeping hens," said Grubb.

"You can't get a living by keeping hens," said Bert.

"You'd keep the hen and have it spatch-cocked," said Grubb. "The motor chaps would pay for it."

When they really came to take the place they remembered this conversation. Hens, however, were out of the question; there was no place for a run unless they had it in the shop. It would have been obviously out of place there. The shop was much more modern than their former one, and had a plate-glass front. "Sooner or later," said Bert, "we shall get a motor-car through this."

"That's all right," said Grubb. "Compensation. I don't mind when that motor-car comes along. I don't mind even if it gives me a shock to the system.

"And meanwhile," said Bert, with great artfulness, "I'm going to buy myself a dog."

He did. He bought three in succession. He surprised the people at the Dogs' Home in Battersea by demanding a deaf retriever, and rejecting every candidate that pricked up its ears. "I want a good, deaf, slow-moving dog," he said. "A dog that doesn't put himself out for things."

They displayed inconvenient curiosity; they declared a great scarcity of deaf dogs.

"You see," they said, "dogs aren't deaf."

"Mine's got to be," said Bert. "I've HAD dogs that aren't deaf. All I want. It's like this, you see--I sell gramophones. Naturally I got to make 'em talk and tootle a bit to show 'em orf. Well, a dog that isn't deaf doesn't like it--gets excited, smells round, barks, growls. That upsets the customer. See? Then a dog that has his hearing fancies things. Makes burglars out of passing tramps. Wants to fight every motor that makes a whizz. All very well if you want livening up, but our place is lively enough. I don't want a dog of that sort. I want a quiet dog."

In the end he got three in succession, but none of them turned out well. The first strayed off into the infinite, heeding no appeals; the second was killed in the night by a fruit motor-waggon which fled before Grubb could get down; the third got itself entangled in the front wheel of a passing cyclist, who came through the plate glass, and proved to be an actor out of work and an undischarged bankrupt. He demanded compensation for some fancied injury, would hear nothing of the valuable dog he had killed or the window he had broken, obliged Grubb by sheer physical obduracy to straighten his buckled front wheel, and pestered the struggling firm with a series of inhumanly worded solicitor's letters. Grubb answered them--stingingly, and put himself, Bert thought, in the wrong.

Affairs got more and more exasperating and strained under these pressures. The window was boarded up, and an unpleasant altercation about their delay in repairing it with the new landlord, a Bun Hill butcher--and a loud, bellowing, unreasonable person at that--served to remind them of their unsettled troubles

with the old. Things were at this pitch when Bert bethought himself of creating a sort of debenture capital in the business for the benefit of Tom. But, as I have said, Tom had no enterprise in his composition. His idea of investment was the stocking; he bribed his brother not to keep the offer open.

And then ill-luck made its last lunge at their crumbling business and brought it to the ground.

2

It is a poor heart that never rejoices, and Whitsuntide had an air of coming as an agreeable break in the business complications of Grubb & Smallways. Encouraged by the practical outcome of Bert's negotiations with his brother, and by the fact that half the hiring-stock was out from Saturday to Monday, they decided to ignore the residuum of hiring-trade on Sunday and devote that day to much-needed relaxation and refreshment--to have, in fact, an unstinted good time, a beano on Whit Sunday and return invigorated to grapple with their difficulties and the Bank Holiday repairs on the Monday. No good thing was ever done by exhausted and dispirited men. It happened that they had made the acquaintance of two young ladies in employment in Clapham, Miss Flossie Bright and Miss Edna Bunthorne, and it was resolved therefore to make a cheerful little cyclist party of four into the heart of Kent, and to picnic and spend an indolent afternoon and evening among the trees and bracken between Ashford and Maidstone.

Miss Bright could ride a bicycle, and a machine was found for her, not among the hiring stock, but specially, in the sample held for sale. Miss Bunthorne, whom Bert particularly affected, could not ride, and so with some difficulty he hired a basket-work trailer from the big business of Wray's in the Clapham Road.

To see our young men, brightly dressed and cigarettes alight, wheeling off to the rendezvous, Grubb guiding the lady's machine beside him with one skilful hand and Bert teuf-teuffing steadily, was to realise how pluck may triumph even over insolvency. Their landlord, the butcher, said, "Gurr," as they passed, and shouted, "Go it!" in a loud, savage tone to their receding backs.

Much they cared!

The weather was fine, and though they were on their way southward before nine o'clock, there was already a great multitude of holiday people abroad upon the roads. There were quantities of young men and women on bicycles and motor-bicycles, and a majority of gyroscopic motor-cars running bicycle-fashion on two wheels, mingled with old-fashioned four-wheeled traffic. Bank Holiday times always bring out old stored-away vehicles and odd people; one saw tricars and electric broughams and dilapidated old racing motors with huge pneumatic tyres. Once our holiday-makers saw a horse and cart, and once a youth riding a black horse amidst the badinage of the passersby. And there were several navigable gas air-ships, not to mention balloons, in the air. It was all immensely interesting and refreshing after the dark anxieties of the shop. Edna wore a brown straw hat with poppies, that suited her admirably, and sat in the trailer like a queen, and the eight-year-old motor-bicycle ran like a thing of yesterday.

Little it seemed to matter to Mr. Bert Smallways that a newspaper placard proclaimed:--

GERMANY DENOUNCES THE MONROE
DOCTRINE.

AMBIGUOUS ATTITUTDE OF JAPAN.

WHAT WILL BRITAIN DO? IS IT WAR?

This sort of thing was always going on, and on holidays one disregarded it as a matter of course. Week-days, in the slack time after the midday meal, then perhaps one might worry about the Empire and international politics; but not on a sunny Sunday, with a pretty girl trailing behind one, and envious cyclists trying to race you. Nor did our young people attach any great importance to the flitting suggestions of military activity they glimpsed ever and again. Near Maidstone they came on a string of eleven motor-guns of peculiar construction halted by the roadside, with a number of businesslike engineers grouped about them watching through field-glasses some sort of entrenchment that was going on near the crest of the downs. It signified nothing to Bert.

"What's up?" said Edna.

"Oh!--manoeuvres," stid Bert.

"Oh! I thought they did them at Easter," said Edna, and troubled no more.

The last great British war, the Boer war, was over and forgotten, and the public had lost the fashion of expert military criticism.

Our four young people picnicked cheerfully, and were happy in the manner of a happiness that was an ancient mode in Nineveh. Eyes were bright, Grubb was funny and almost witty, and Bert achieved epigrams; the hedges were full of honeysuckle and dog-roses; in the woods the distant toot-toot-toot of the traffic on the dust-hazy high road might have been no more than the horns of elf-land. They laughed and gossiped and picked flowers and made love and talked, and the girls smoked cigarettes. Also they

scuffled playfully. Among other things they talked aeronautics, and how they would come for a picnic together in Bert's flying-machine before ten years were out. The world seemed full of amusing possibilities that afternoon. They wondered what their great-grandparents would have thought of aeronautics. In the evening, about seven, the party turned homeward, expecting no disaster, and it was only on the crest of the downs between Wrotham and Kingsdown that disaster came.

They had come up the hill in the twilight; Bert was anxious to get as far as possible before he lit--or attempted to light, for the issue was a doubtful one--his lamps, and they had scorched past a number of cyclists, and by a four-wheeled motor-car of the old style lamed by a deflated tyre. Some dust had penetrated Bert's horn, and the result was a curious, amusing, wheezing sound had got into his "honk, honk." For the sake of merriment and glory he was making this sound as much as possible, and Edna was in fits of laughter in the trailer. They made a sort of rushing cheerfulness along the road that affected their fellow travellers variously, according to their temperaments. She did notice a good lot of bluish, evil-smelling smoke coming from about the bearings between his feet, but she thought this was one of the natural concomitants of motor-traction, and troubled no more about it, until abruptly it burst into a little yellow-tipped flame.

"Bert!" she screamed.

But Bert had put on the brakes with such suddenness that she found herself involved with his leg as he dismounted. She got to the side of the road and hastily readjusted her hat, which had suffered.

"Gaw!" said Bert.

He stood for some fatal seconds watching the petrol drip and catch, and the flame, which was now beginning to smell of enamel as well as oil, spread and grew. His chief idea was the sorrowful one that he had not sold the machine second-hand a year ago, and that he ought to have done so--a good idea in its way, but not immediately helpful. He turned upon Edna sharply. "Get a lot of wet sand," he said. Then he wheeled the machine a little towards the side of the roadway, and laid it down and looked about for a supply of wet sand. The flames received this as a helpful attention, and made the most of it. They seemed to brighten and the twilight to deepen about them. The road was a flinty road in the chalk country, and ill-provided with sand.

Edna accosted a short, fat cyclist. "We want wet sand," she said, and added, "our motor's on fire." The short, fat cyclist stared blankly for a moment, then with a helpful cry began to scabble in the road-grit. Whereupon Bert and Edna also scabbled in the road-grit. Other cyclists arrived, dismounted and stood about, and their flame-lit faces expressed satisfaction, interest, curiosity. "Wet sand," said the short, fat man, scabbling terribly--"wet sand." One joined him. They threw hard-earned handfuls of road-grit upon the flames, which accepted them with enthusiasm.

Grubb arrived, riding hard. He was shouting something. He sprang off and threw his bicycle into the hedge. "Don't throw water on it!" he said--"don't throw water on it!" He displayed commanding presence of mind. He became captain of the occasion. Others were glad to repeat the things he said and imitate his actions.

"Don't throw water on it!" they cried. Also there was no water.

"Beat it out, you fools!" he said.

He seized a rug from the trailer (it was an Austrian blanket, and Bert's winter coverlet) and began to beat at the burning petrol. For a wonderful minute he seemed to succeed. But he scattered burning pools of petrol on the road, and others, fired by his enthusiasm, imitated his action. Bert caught up a trailer-cushion and began to beat; there was another cushion and a table-cloth, and these also were seized. A young hero pulled off his jacket and joined the beating. For a moment there was less talking than hard breathing, and a tremendous flapping. Flossie, arriving on the outskirts of the crowd, cried, "Oh, my God!" and burst loudly into tears. "Help!" she said, and "Fire!"

The lame motor-car arrived, and stopped in consternation. A tall, goggled, grey-haired man who was driving inquired with an Oxford intonation and a clear, careful enunciation, "Can WE help at all?"

It became manifest that the rug, the table-cloth, the cushions, the jacket, were getting smeared with petrol and burning. The soul seemed to go out of the cushion Bert was swaying, and the air was full of feathers, like a snowstorm in the still twilight.

Bert had got very dusty and sweaty and strenuous. It seemed to him his weapon had been wrested from him at the moment of victory. The fire lay like a dying thing, close to the ground and wicked; it gave a leap of anguish at every whack of the beaters. But now Grubb had gone off to stomp out the burning blanket; the others were lacking just at the moment of victory. One had dropped the cushion and was running to the motorcar. "ERE!" cried Bert; "keep on!"

He flung the deflated burning rags of cushion aside, whipped off his jacket and sprang at the flames with a shout. He stamped into the ruin until flames ran up his boots. Edna saw him, a red-lit hero, and thought it was good to be a man.

A bystander was hit by a hot halfpenny flying out of the air. Then Bert thought of the papers in his pockets, and staggered back, trying to extinguish his burning jacket--checked, repulsed, dismayed.

Edna was struck by the benevolent appearance of an elderly spectator in a silk hat and Sabbatical garments. "Oh!" she cried to him. "Help this young man! How can you stand and see it?"

A cry of "The tarpaulin!" arose.

An earnest-looking man in a very light grey cycling-suit had suddenly appeared at the side of the lame motor-car and addressed the owner. "Have you a tarpaulin?" he said.

"Yes," said the gentlemanly man. "Yes. We've got a tarpaulin."

"That's it," said the earnest-looking man, suddenly shouting. "Let's have it, quick!"

The gentlemanly man, with feeble and deprecatory gestures, and in the manner of a hypnotised person, produced an excellent large tarpaulin.

"Here!" cried the earnest-looking man to Grubb. "Ketch holt!"

Then everybody realised that a new method was to be tried. A number of willing hands seized upon the Oxford gentleman's tarpaulin. The others stood away with approving noises. The tarpaulin was held over the burning bicycle like a canopy, and then smothered down upon it.

"We ought to have done this before," panted Grubb.

There was a moment of triumph. The flames vanished. Every one who could contrive to do so touched the edge of the tarpaulin. Bert held down a corner with two hands and a foot. The tarpaulin, bulged up in the centre, seemed to be suppressing triumphant exultation. Then its self-approval became too much for it; it burst into a bright red smile in the centre. It was exactly like the opening of a mouth. It laughed with a gust of flames. They were reflected redly in the observant goggles of the gentleman who owned the tarpaulin. Everybody recoiled.

"Save the trailer!" cried some one, and that was the last round in the battle. But the trailer could not be detached; its wicker-work had caught, and it was the last thing to burn. A sort of hush fell upon the gathering. The petrol burnt low, the wicker-work trailer banged and crackled. The crowd divided itself into an outer circle of critics, advisers, and secondary characters, who had played undistinguished parts or no parts at all in the affair, and a central group of heated and distressed principals. A young man with an inquiring mind and a considerable knowledge of motor-bicycles fixed on to Grubb and wanted to argue that the thing could not have happened. Grubb was short and inattentive with him, and the young man withdrew to the back of the crowd, and there told the benevolent old gentleman in the silk hat that people who went out with machines they didn't understand had only themselves to blame if things went wrong.

The old gentleman let him talk for some time, and then remarked, in a tone of rapturous enjoyment: "Stone deaf," and added, "Nasty things."

A rosy-faced man in a straw hat claimed attention. "I DID save the front wheel," he said; "you'd have had that tyre catch, too, if I hadn't kept turning it round." It became manifest that this was so. The front wheel had retained its tyre, was intact, was

still rotating slowly among the blackened and twisted ruins of the rest of the machine. It had something of that air of conscious virtue, of unimpeachable respectability, that distinguishes a rent collector in a low neighbourhood. "That wheel's worth a pound," said the rosy-faced man, making a song of it. "I kep' turning it round."

Newcomers kept arriving from the south with the question, "What's up?" until it got on Grubb's nerves. Londonward the crowd was constantly losing people; they would mount their various wheels with the satisfied manner of spectators who have had the best. Their voices would recede into the twilight; one would hear a laugh at the memory of this particularly salient incident or that.

"I'm afraid," said the gentleman of the motor-car, "my tarpaulin's a bit done for."

Grubb admitted that the owner was the best judge of that.

"Nothin, else I can do for you?" said the gentleman of the motor-car, it may be with a suspicion of irony.

Bert was roused to action. "Look here," he said. "There's my young lady. If she ain't 'ome by ten they lock her out. See? Well, all my money was in my jacket pocket, and it's all mixed up with the burnt stuff, and that's too 'ot to touch. IS Clapham out of your way?"

"All in the day's work," said the gentleman with the motor-car, and turned to Edna. "Very pleased indeed," he said, "if you'll come with us. We're late for dinner as it is, so it won't make much difference for us to go home by way of Clapham. We've got to get to Surbiton, anyhow. I'm afraid you'll find us a little slow."

"But what's Bert going to do?" said Edna.

"I don't know that we can accommodate Bert," said the motor-car gentleman, "though we're tremendously anxious to oblige."

"You couldn't take the whole lot?" said Bert, waving his hand at the deboshed and blackened ruins on the ground.

"I'm awfully afraid I can't," said the Oxford man. "Awfully sorry, you know."

"Then I'll have to stick 'ere for a bit," said Bert. "I got to see the thing through. You go on, Edna."

"Don't like leavin' you, Bert."

"You can't 'elp it, Edna." ...

The last Edna saw of Bert was his figure, in charred and blackened shirtsleeves, standing in the dusk. He was musing deeply by the mixed ironwork and ashes of his vanished motor-bicycle, a melancholy figure. His retinue of spectators had shrunk now to half a dozen figures. Flossie and Grubb were preparing to follow her desertion.

"Cheer up, old Bert!" cried Edna, with artificial cheerfulness. "So long."

"So long, Edna," said Bert.

"See you to-morrer."

"See you to-morrer," said Bert, though he was destined, as a matter of fact, to see much of the habitable globe before he saw

her again.

Bert began to light matches from a borrowed boxful, and search for a half-crown that still eluded him among the charred remains.

His face was grave and melancholy.

"I WISH that 'adn't 'appened," said Flossie, riding on with Grubb....

And at last Bert was left almost alone, a sad, blackened Promethean figure, cursed by the gift of fire. He had entertained vague ideas of hiring a cart, of achieving miraculous repairs, of still snatching some residual value from his one chief possession. Now, in the darkening night, he perceived the vanity of such intentions. Truth came to him bleakly, and laid her chill conviction upon him. He took hold of the handle-bar, stood the thing up, tried to push it forward. The tyreless hind-wheel was jammed hopelessly, even as he feared. For a minute or so he stood upholding his machine, a motionless despair. Then with a great effort he thrust the ruins from him into the ditch, kicked at it once, regarded it for a moment, and turned his face resolutely Londonward.

He did not once look back.

"That's the end of THAT game!" said Bert. "No more teuf-teuf-teuf for Bert Smallways for a year or two. Good-bye 'Olidays! ... Oh! I ought to 'ave sold the blasted thing when I had a chance three years ago."

3

The next morning found the firm of Grubb & Smallways in a state of profound despondency. It seemed a smallmatter to them that the

newspaper and cigarette shop opposite displayed such placards as this:--

REPORTED AMERICAN ULTIMATUM.

BRITAIN MUST FIGHT.

OUR INFATUATED WAR OFFICE STILL
REFUSES TO LISTEN TO MR. BUTTERIDGE.

GREAT MONO-RAIL DISASTER AT TIMBUCTOO.

or this:--

WAR A QUESTION OF HOURS.

NEW YORK CALM.

EXCITEMENT IN BERLIN.

or again:--

WASHINGTON STILL SILENT.

WHAT WILL PARIS DO?

THE PANIC ON THE BOURSE.

THE KING'S GARDEN PARTY TO THE
MASKED TWAREGS.

MR. BUTTERIDGE TAKES AN OFFER.

LATEST BETTING FROM TEHERAN.

or this:--

WILL AMERICA FIGHT?

ANTI-GERMAN RIOT IN BAGDAD.

THE MUNICIPAL SCANDALS AT DAMASCUS.

MR. BUTTERIDGE'S INVENTION FOR AMERICA.

Bert stared at these over the card of pump-clips in the pane in the door with unseeing eyes. He wore a blackened flannel shirt, and the jacketless ruins of the holiday suit of yesterday. The boarded-up shop was dark and depressing beyond words, the few scandalous hiring machines had never looked so hopelessly disreputable. He thought of their fellows who were "out," and of the approaching disputations of the afternoon. He thought of their new landlord, and of their old landlord, and of bills and claims. Life presented itself for the first time as a hopeless fight against fate....

"Grubb, o' man," he said, distilling the quintessence, "I'm fair sick of this shop."

"So'm I," said Grubb.

"I'm out of conceit with it. I don't seem to care ever to speak

to a customer again."

"There's that trailer," said Grubb, after a pause.

"Blow the trailer!" said Bert. "Anyhow, I didn't leave a deposit on it. I didn't do that. Still--"

He turned round on his friend. "Look 'ere," he said, "we aren't gettin' on here. We been losing money hand over fist. We got things tied up in fifty knots."

"What can we do?" said Grubb.

"Clear out. Sell what we can for what it will fetch, and quit. See? It's no good 'anging on to a losing concern. No sort of good. Jest foolishness."

"That's all right," said Grubb--"that's all right; but it ain't your capital been sunk in it."

"No need for us to sink after our capital," said Bert, ignoring the point.

"I'm not going to be held responsible for that trailer, anyhow. That ain't my affair."

"Nobody arst you to make it your affair. If you like to stick on here, well and good. I'm quitting. I'll see Bank Holiday through, and then I'm O-R-P-H. See?"

"Leavin' me?"

"Leavin' you. If you must be left."

Grubb looked round the shop. It certainly had become

distasteful. Once upon a time it had been bright with hope and new beginnings and stock and the prospect of credit. Now--now it was failure and dust. Very likely the landlord would be round presently to go on with the row about the window...."Where d'you think of going, Bert?" Grubb asked.

Bert turned round and regarded him. "I thought it out as I was walking 'ome, and in bed. I couldn't sleep a wink."

"What did you think out?"

"Plans."

"What plans?"

"Oh! You're for stickin, here."

"Not if anything better was to offer."

"It's only an ideer," said Bert

"You made the girls laugh yestiday, that song you sang."

"Seems a long time ago now," said Grubb.

"And old Edna nearly cried--over that bit of mine."

"She got a fly in her eye," said Grubb; "I saw it. But what's this got to do with your plan?"

"No end," said Bert.

"Ow?"

"Don't you see?"

"Not singing in the streets?"

"Streets! No fear! But 'ow about the Tour of the Waterin' Places of England, Grubb? Singing! Young men of family doing it for a lark? You ain't got a bad voice, you know, and mine's all right. I never see a chap singing on the beach yet that I couldn't 'ave sung into a cocked hat. And we both know how to put on the toff a bit. Eh? Well, that's my ideer. Me and you, Grubb, with a refined song and a breakdown. Like we was doing for foolery yestiday. That was what put it into my 'ead. Easy make up a programme--easy. Six choice items, and one or two for encores and patter. I'm all right for the patter anyhow."

Grubb remained regarding his darkened and disheartening shop; he thought of his former landlord and his present landlord, and of the general disgustingness of business in an age which re-echoes to The Bitter Cry of the Middle Class; and then it seemed to him that afar off he heard the twankle, twankle of a banjo, and the voice of a stranded siren singing. He had a sense of hot sunshine upon sand, of the children of it least transiently opulent holiday makers in a circle round about him, of the whisper, "They are really gentlemen," and then dollop, dollop came the coppers in the hat. Sometimes even silver. It was all income; no outgoings, no bills. "I'm on, Bert," he said.

"Right O!" said Bert, and, "Now we shan't be long."

"We needn't start without capital neither," said Grubb. "If we take the best of these machines up to the Bicycle Mart in Finsbury we'd raise six or seven pounds on 'em. We could easy do that tomorrow before anybody much was about...."

"Nice to think of old Suet-and-Bones coming round to make his usual row with us, and finding a card up 'Closed for Repairs.'"

"We'll do that," said Grubb with zest--"we'll do that. And we'll put up another notice, and jest arst all inquirers to go round to 'im and inquire. See? Then they'll know all about us."

Before the day was out the whole enterprise was planned. They decided at first that they would call themselves the Naval Mr. O's, a plagiarism, and not perhaps a very good one, from the title of the well-known troupe of "Scarlet Mr. E's," and Bert rather clung to the idea of a uniform of bright blue serge, with a lot of gold lace and cord and ornamentation, rather like a naval officer's, but more so. But that had to be abandoned as impracticable, it would have taken too much time and money to prepare. They perceived they must wear some cheaper and more readily prepared costume, and Grubb fell back on white dominoes. They entertained the notion for a time of selecting the two worst machines from the hiring-stock, painting them over with crimson enamel paint, replacing the bells by the loudest sort of motor-horn, and doing a ride about to begin and end the entertainment. They doubted the advisability of this step.

"There's people in the world," said Bert, "who wouldn't recognise us, who'd know them bicycles again like a shot, and we don't want to go on with no old stories. We want a fresh start."

"I do," said Grubb, "badly."

"We want to forget things--and cut all these rotten old worries. They ain't doin' us good."

Nevertheless, they decided to take the risk of these bicycles, and they decided their costumes should be brown stockings and sandals, and cheap unbleached sheets with a hole cut in the middle, and wigs and beards of tow. The rest their normal selves! "The Desert Dervishes," they would call themselves, and

their chief songs would be those popular ditties, "In my Trailer," and "What Price Hair-pins Now?"

They decided to begin with small seaside places, and gradually, as they gained confidence, attack larger centres. To begin with they selected Littlestone in Kent, chiefly because of its unassuming name.

So they planned, and it seemed a small and unimportant thing to them that as they clattered the governments of half the world and more were drifting into war. About midday they became aware of the first of the evening-paper placards shouting to them across the street:--

THE WAR-CLOUD DARKENS

Nothing else but that.

"Always rottin' about war now," said Bert.

"They'll get it in the neck in real earnest one of these days, if they ain't precious careful."

4

So you will understand the sudden apparition that surprised rather than delighted the quiet informality of Dymchurch sands. Dymchurch was one of the last places on the coast of England to be reached by the mono-rail, and so its spacious sands were still, at the time of this story, the secret and delight of quite a limited number of people. They went there to flee vulgarity and extravagances, and to bathe and sit and talk and play with their children in peace, and the Desert Dervishes did not please

them at all.

The two white figures on scarlet wheels came upon them out of the infinite along the sands from Littlestone, grew nearer and larger and more audible, honk-honking and emitting weird cries, and generally threatening liveliness of the most aggressive type.

"Good heavens!" said Dymchurch, "what's this?"

Then our young men, according to a preconcerted plan, wheeled round from file to line, dismounted and stood it attention.

"Ladies and gentlemen," they said, "we beg to present ourselves--the Desert Dervishes." They bowed profoundly.

The few scattered groups upon the beach regarded them with horror for the most part, but some of the children and young people were interested and drew nearer. "There ain't a bob on the beach," said Grubb in an undertone, and the Desert Dervishes plied their bicycles with comic "business," that got a laugh from one very unsophisticated little boy. Then they took a deep breath and struck into the cheerful strain of "What Price Hair-pins Now?" Grubb sang the song, Bert did his best to make the chorus a rousing one, and at the end of each verse they danced certain steps, skirts in hand, that they had carefully rehearsed.

"Ting-a-ling-a-ting-a-ling-a-ting-a-ling-a-tang...
What Price Hair-pins Now?"

So they chanted and danced their steps in the sunshine on Dymchurch beach, and the children drew near these foolish young men, marvelling that they should behave in this way, and the older people looked cold and unfriendly.

All round the coasts of Europe that morning banjos were ringing, voices were bawling and singing, children were playing in the sun, pleasure-boats went to and fro; the common abundant life of

the time, unsuspecting of all dangers that gathered darkly against it, flowed on its cheerful aimless way. In the cities men fussed about their businesses and engagements. The newspaper placards that had cried "wolf!" so often, cried "wolf!" now in vain.

5

Now as Bert and Grubb bawled their chorus for the third time, they became aware of a very big, golden-brown balloon low in the sky to the north-west, and coming rapidly towards them.

"Jest as we're gettin' hold of 'em," muttered Grubb, "up comes a counter-attraction. Go it, Bert!"

"Ting-a-ling-a-ting-a-ling-a-ting-a-ling-a-tang
What Price Hair-pins Now?"

The balloon rose and fell, went out of sight--"landed, thank goodness," said Grubb--re-appeared with a leap. "'ENG!" said Grubb. "Step it, Bert, or they'll see it!"

They finished their dance, and then stood frankly staring.

"There's something wrong with that balloon," said Bert.

Everybody now was looking at the balloon, drawing rapidly nearer before a brisk north-westerly breeze. The song and dance were a "dead frost." Nobody thought any more about it. Even Bert and Grubb forgot it, and ignored the next item on the programme altogether. The balloon was bumping as though its occupants were trying to land; it would approach, sinking slowly, touch the ground, and instantly jump fifty feet or so in the air and immediately begin to fall again. Its car touched a clump of trees, and the black figure that had been struggling in the ropes fell back, or jumped back, into the car. In another moment it

was quite close. It seemed a huge affair, as big as a house, and it floated down swiftly towards the sands; a long rope trailed behind it, and enormous shouts came from the man in the car. He seemed to be taking off his clothes, then his head came over the side of the car. "Catch hold of the rope!" they heard, quite plain.

"Salvage, Bert!" cried Grubb, and started to head off the rope.

Bert followed him, and collided, without upsetting, with a fisherman bent upon a similar errand. A woman carrying a baby in her arms, two small boys with toy spades, and a stout gentleman in flannels all got to the trailing rope at about the same time, and began to dance over it in their attempts to secure it. Bert came up to this wriggling, elusive serpent and got his foot on it, went down on all fours and achieved a grip. In half a dozen seconds the whole diffused population of the beach had, as it were, crystallised on the rope, and was pulling against the balloon under the vehement and stimulating directions of the man in the car. "Pull, I tell you!" said the man in the car--"pull!"

For a second or so the balloon obeyed its momentum and the wind and tugged its human anchor seaward. It dropped, touched the water, and made a flat, silvery splash, and recoiled as one's finger recoils when one touches anything hot. "Pull her in," said the man in the car. "SHE'S FAINTED!"

He occupied himself with some unseen object while the people on the rope pulled him in. Bert was nearest the balloon, and much excited and interested. He kept stumbling over the tail of the Dervish costume in his zeal. He had never imagined before what a big, light, wallowing thing a balloon was. The car was of brown coarse wicker-work, and comparatively small. The rope he tugged at was fastened to a stout-looking ring, four or five feet above the car. At each tug he drew in a yard or so of rope, and the

wagging wicker-work was drawn so much nearer. Out of the car came wrathful bellowings: "Fainted, she has!" and then: "It's her heart--broken with all she's had to go through."

The balloon ceased to struggle, and sank downward. Bert dropped the rope, and ran forward to catch it in a new place. In another moment he had his hand on the car. "Lay hold of it," said the man in the ear, and his face appeared close to Bert's--a strangely familiar face, fierce eyebrows, a flattish nose, a huge black moustache. He had discarded coat and waistcoat--perhaps with some idea of presently having to swim for his life--and his black hair was extraordinarily disordered. "Will all you people get hold round the car?" he said. "There's a lady here fainted--or got failure of the heart. Heaven alone knows which! My name is Butteridge. Butteridge, my name is--in a balloon. Now please, all on to the edge. This is the last time I trust myself to one of these paleolithic contrivances. The ripping-cord failed, and the valve wouldn't act. If ever I meet the scoundrel who ought to have seen--"

He stuck his head out between the ropes abruptly, and said, in a note of earnest expostulation: "Get some brandy!--some neat brandy!" Some one went up the beach for it.

In the car, sprawling upon a sort of bed-bench, in an attitude of elaborate self-abandonment, was a large, blond lady, wearing a fur coat and a big floriferous hat. Her head lolled back against the padded corner of the car, and her eyes were shut and her mouth open. "Me dear!" said Mr. Butteridge, in a common, loud voice, "we're safe!"

She gave no sign.

"Me dear!" said Mr. Butteridge, in a greatly intensified loud voice, "we're safe!"

She was still quite impassive.

Then Mr. Butteridge showed the fiery core of his soul. "If she is dead," he said, slowly lifting a fist towards the balloon above him, and speaking in an immense tremulous bellow--"if she is dead, I will r-r-rend the heavens like a garment! I must get her out," he cried, his nostrils dilated with emotion-"I must get her out. I cannot have her die in a wicker-work basket nine feet square--she who was made for kings' palaces! Keep holt of this car! Is there a strong man among ye to take her if I hand her out?"

He swept the lady together by a powerful movement of his arms, and lifted her. "Keep the car from jumping," he said to those who clustered about him. "Keep your weight on it. She is no light woman, and when she is out of it--it will be relieved."

Bert leapt lightly into a sitting position on the edge of the car. The others took a firmer grip upon the ropes and ring.

"Are you ready?" said Mr. Butteridge.

He stood upon the bed-bench and lifted the lady carefully. Then he sat down on the wicker edge opposite to Bert, and put one leg over to dangle outside. A rope or so seemed to incommode him. "Will some one assist me?" he said. "If they would take this lady?"

It was just at this moment, with Mr. Butteridge and the lady balanced finely on the basket brim, that she came-to. She came-to suddenly and violently with a loud, heart-rending cry of "Alfred! Save me!" And she waved her arms searchingly, and then clasped Mr. Butteridge about.

It seemed to Bert that the car swayed for a moment and then buck-jumped and kicked him. Also he saw the boots of the lady and the right leg of the gentleman describing arcs through the air, preparatory to vanishing over the side of the car. His impressions were complex, but they also comprehended the fact that he had lost his balance, and was going to stand on his head inside this creaking basket. He spread out clutching arms. He did stand on his head, more or less, his tow-beard came off and got in his mouth, and his cheek slid along against padding. His nose buried itself in a bag of sand. The car gave a violent lurch, and became still.

"Confound it!" he said.

He had an impression he must be stunned because of a surging in his ears, and because all the voices of the people about him had become small and remote. They were shouting like elves inside a hill.

He found it a little difficult to get on his feet. His limbs were mixed up with the garments Mr. Butteridge had discarded when that gentleman had thought he must needs plunge into the sea. Bert bawled out half angry, half rueful, "You might have said you were going to tip the basket." Then he stood up and clutched the ropes of the car convulsively.

Below him, far below him, shining blue, were the waters of the English Channel. Far off, a little thing in the sunshine, and rushing down as if some one was bending it hollow, was the beach and the irregular cluster of houses that constitutes Dymchurch. He could see the little crowd of people he had so abruptly left. Grubb, in the white wrapper of a Desert Dervish, was running along the edge of the sea. Mr. Butteridge was knee-deep in the water, bawling immensely. The lady was sitting up with her floriferous hat in her lap, shockingly neglected. The beach,

east and west, was dotted with little people--they seemed all heads and feet--looking up. And the balloon, released from the twenty-five stone or so of Mr. Butteridge and his lady, was rushing up into the sky at the pace of a racing motor-car. "My crikey!" said Bert; "here's a go!"

He looked down with a pinched face at the receding beach, and reflected that he wasn't giddy; then he made a superficial survey of the cords and ropes about him with a vague idea of "doing something." "I'm not going to mess about with the thing," he said at last, and sat down upon the mattress. "I'm not going to touch it.... I wonder what one ought to do?"

Soon he got up again and stared for a long time at the sinking world below, at white cliffs to the east and flattening marsh to the left, at a minute wide prospect of weald and downland, at dim towns and harbours and rivers and ribbon-like roads, at ships and ships, decks and foreshortened funnels upon the ever-widening sea, and at the great mono-rail bridge that straddled the Channel from Folkestone to Boulogne, until at last, first little wisps and then a veil of filmy cloud hid the prospect from his eyes. He wasn't at all giddy nor very much frightened, only in a state of enormous consternation.

CHAPTER III THE BALLOON

I

Bert Smallways was a vulgar little creature, the sort of pert, limited soul that the old civilisation of the early twentieth century produced by the million in every country of the world. He had lived all his life in narrow streets, and between mean

houses he could not look over, and in a narrow circle of ideas from which there was no escape. He thought the whole duty of man was to be smarter than his fellows, get his hands, as he put it, "on the dibs," and have a good time. He was, in fact, the sort of man who had made England and America what they were. The luck had been against him so far, but that was by the way. He was a mere aggressive and acquisitive individual with no sense of the State, no habitual loyalty, no devotion, no code of honour, no code even of courage. Now by a curious accident he found himself lifted out of his marvellous modern world for a time, out of all the rush and confused appeals of it, and floating like a thing dead and disembodied between sea and sky. It was as if Heaven was experimenting with him, had picked him out as a sample from the English millions, to look at him more nearly, and to see what was happening to the soul of man. But what Heaven made of him in that case I cannot profess to imagine, for I have long since abandoned all theories about the ideals and satisfactions of Heaven.

To be alone in a balloon at a height of fourteen or fifteen thousand feet--and to that height Bert Smallways presently rose is like nothing else in human experience. It is one of the supreme things possible to man. No flying machine can ever better it. It is to pass extraordinarily out of human things. It is to be still and alone to an unprecedented degree. It is solitude without the suggestion of intervention; it is calm without a single irrelevant murmur. It is to see the sky. No sound reaches one of all the roar and jar of humanity, the air is clear and sweet beyond the thought of defilement. No bird, no insect comes so high. No wind blows ever in a balloon, no breeze rustles, for it moves with the wind and is itself a part of the atmosphere. Once started, it does not rock nor sway; you cannot feel whether it rises or falls. Bert felt acutely cold, but he wasn't mountain-sick; he put on the coat and overcoat and gloves Butteridge had discarded--put them over the "Desert Dervish"

sheet that covered his cheap best suit--and sat very still for a long, time, overawed by the new-found quiet of the world.

Above him was the light, translucent, billowing globe of shining brown oiled silk and the blazing sunlight and the great deep blue dome of the sky.

Below, far below, was a torn floor of sunlit cloud slashed by enormous rents through which he saw the sea.

If you had been watching him from below, you would have seen his head, a motionless little black knob, sticking out from the car first of all for a long time on one side, and then vanishing to reappear after a time at some other point.

He wasn't in the least degree uncomfortable nor afraid. He did think that as this uncontrollable thing had thus rushed up the sky with him it might presently rush down again, but this consideration did not trouble him very much. Essentially his state was wonder. There is no fear nor trouble in balloons--until they descend.

"Gollys!" he said at last, feeling a need for talking; "it's better than a motor-bike.

"It's all right!

"I suppose they're telegraphing about, about me."...

The second hour found him examining the equipment of the car with great particularity. Above him was the throat of the balloon bunched and tied together, but with an open lumen through which, Bert could peer up into a vast, empty, quiet interior, and out of which descended two fine cords of unknown import, one white, one crimson, to pockets below the ring. The netting about the balloon-ended in cords attached to the ring, a big

steel-bound hoop. to which the car was slung by ropes. From it depended the trail rope and grapnel, and over the sides of the car were a number of canvas bags that Bert decided must be ballast to "chuck down" if the balloon fell. ("Not much falling just yet," said Bert.)

There were an aneroid and another box-shaped instrument hanging from the ring. The latter had an ivory plate bearing "statoscope" and other words in French, and a little indicator quivered and wagged, between Montee and Descente. "That's all right," said Bert. "That tells if you're going up or down." On the crimson padded seat of the balloon there lay a couple of rugs and a Kodak, and in opposite corners of the bottom of the car were an empty champagne bottle and a glass. "Refreshments," said Bert meditatively, tilting the empty bottle. Then he had a brilliant idea. The two padded bed-like seats, each with blankets and mattress, he perceived, were boxes, and within he found Mr. Butteridge's conception of an adequate equipment for a balloon ascent: a hamper which included a game pie, a Roman pie, a cold fowl, tomatoes, lettuce, ham sandwiches, shrimp sandwiches, a large cake, knives and forks and paper plates, self-heating tins of coffee and cocoa, bread, butter, and marmalade, several carefully packed bottles of champagne, bottles of Perrier water, and a big jar of water for washing, a portfolio, maps, and a compass, a rucksack containing a number of conveniences, including curling-tongs and hair-pins,, a cap with ear-flaps, and so forth.

"A 'ome from 'ome," said Bert, surveying this provision as he tied the ear-flaps under his chin. He looked over the side of the car. Far below were the shining clouds. They had thickened so that the whole world was hidden. Southward they were piled in great snowy masses, so that he was half disposed to think them mountains; northward and eastward they were in wavelike levels, and blindingly sunlit.

"Wonder how long a balloon keeps up?" he said.

He imagined he was not moving, so insensibly did the monster drift with the air about it. "No good coming down till we shift a bit," he said.

He consulted the statoscope.

"Still Monty," he said.

"Wonder what would happen if you pulled a cord?"

"No," he decided. "I ain't going to mess it about."

Afterwards he did pull both the ripping- and the valve-cords, but, as Mr. Butteridge had already discovered, they had fouled a fold of silk in the throat. Nothing happened. But for that little hitch the ripping-cord would have torn the balloon open as though it had been slashed by a sword, and hurled Mr. Smallways to eternity at the rate of some thousand feet a second. "No go!" he said, giving it a final tug. Then he lunched.

He opened a bottle of champagne, which, as soon as he cut the wire, blew its cork out with incredible violence, and for the most part followed it into space. Bert, however, got about a tumblerful. "Atmospheric pressure," said Bert, finding a use at last for the elementary physiography of his seventh-standard days. "I'll have to be more careful next time. No good wastin' drink."

Then he routed about for matches to utilise Mr. Butteridge's cigars; but here again luck was on his side, and he couldn't find any wherewith to set light to the gas above him. Or else he would have dropped in a flare, a splendid but transitory

pyrotechnic display. "'Eng old Grubb!" said Bert, slapping unproductive pockets. "'E didn't ought to 'ave kep' my box. 'E's always sneaking matches."

He reposed for a time. Then he got up, paddled about, rearranged the ballast bags on the floor, watched the clouds for a time, and turned over the maps on the locker. Bert liked maps, and he spent some time in trying to find one of France or the Channel; but they were all British ordnance maps of English counties. That set him thinking about languages and trying to recall his seventh-standard French. "Je suis Anglais. C'est une meprise. Je suis arrive par accident ici," he decided upon as convenient phrases. Then it occurred to him that he would entertain himself by reading Mr. Butteridge's letters and examining his pocket-book, and in this manner he whiled away the afternoon.

2

He sat upon the padded locker, wrapped about very carefully, for the air, though calm, was exhilaratingly cold and clear. He was wearing first a modest suit of blue serge and all the unpretending underwear of a suburban young man of fashion, with sandal-like cycling-shoes and brown stockings drawn over his trouser ends; then the perforated sheet proper to a Desert Dervish; then the coat and waistcoat and big fur-trimmed overcoat of Mr. Butteridge; then a lady's large fur cloak, and round his knees a blanket. Over his head was a tow wig, surmounted by a large cap of Mr. Butteridge's with the flaps down over his ears. And some fur sleeping-boots of Mr. Butteridge's warmed his feet. The car of the balloon was small and neat, some bags of ballast the untidiest of its contents, and he had found a light folding-table and put it at his elbow, and on that was a glass with champagne. And about him, above and below, was space--such a clear emptiness and silence of space as only the aeronaut can experience.

He did not know where he might be drifting, or what might happen next. He accepted this state of affairs with a serenity creditable to the Smallways' courage, which one might reasonably have expected to be of a more degenerate and contemptible quality altogether. His impression was that he was bound to come down somewhere, and that then, if he wasn't smashed, some one, some "society" perhaps, would probably pack him and the balloon back to England. If not, he would ask very firmly for the British Consul.

"Le consuelo Britannique," he decided this would be. "Apportez moi a le consuelo Britannique, s'il vous plait," he would say, for he was by no means ignorant of French. In the meanwhile, he found the intimate aspects of Mr. Butteridge an interesting study.

There were letters of an entirely private character addressed to Mr. Butteridge, and among others several love-letters of a devouring sort in a large feminine hand. These are no business of ours, and one remarks with regret that Bert read them.

When he had read them he remarked, "Gollys!" in an awestricken tone, and then, after a long interval, "I wonder if that was her?"

"Lord!"

He mused for a time.

He resumed his exploration of the Butteridge interior. It included a number of press cuttings of interviews and also several letters in German, then some in the same German handwriting, but in English. "Hul-LO!" said Bert.

One of the latter, the first he took, began with an apology to

Butteridge for not writing to him in English before, and for the inconvenience and delay that had been caused him by that, and went on to matter that Bert found exciting in, the highest degree. "We can understand entirely the difficulties of your position, and that you shall possibly be watched at the present juncture.--But, sir, we do not believe that any serious obstacles will be put in your way if you wished to endeavour to leave the country and come to us with your plans by the customary routes--either via Dover, Ostend, Boulogne, or Dieppe. We find it difficult to think you are right in supposing yourself to be in danger of murder for your invaluable invention."

"Funny!" said Bert, and meditated.

Then he went through the other letters.

"They seem to want him to come," said Bert, "but they don't seem hurting themselves to get 'im. Or else they're shamming don't care to get his prices down.

"They don't quite seem to be the gov'ment," he reflected, after an interval. "It's more like some firm's paper. All this printed stuff at the top. Drachenflieger. Drachenballons. Ballonstoffe. Kugelballons. Greek to me.

"But he was trying to sell his blessed secret abroad. That's all right. No Greek about that! Gollys! Here IS the secret!"

He tumbled off the seat, opened the locker, and had the portfolio open before him on the folding-table. It was full of drawings done in the peculiar flat style and conventional colours engineers adopt. And, in, addition there were some rather under-exposed photographs, obviously done by an amateur, at close quarters, of the actual machine's mutterings had made, in its shed near the Crystal Palace. Bert found he was trembling.

"Lord" he said, "here am I and the whole blessed secret of flying--lost up here on the roof of everywhere.

"Let's see!" He fell to studying the drawings and comparing them with the photographs. They puzzled him. Half of them seemed to be missing. He tried to imagine how they fitted together, and found the effort too great for his mind.

"It's tryin'," said Bert. "I wish I'd been brought up to the engineering. If I could only make it out!"

He went to the side of the car and remained for a time staring with unseeing eyes at a huge cluster of great clouds--a cluster of slowly dissolving Monte Rosas, sunlit below. His attention was arrested by a strange black spot that moved over them. It alarmed him. It was a black spot moving slowly with him far below, following him down there, indefatigably, over the cloud mountains. Why should such a thing follow him? What could it be?...

He had an inspiration. "Uv course!" he said. It was the shadow of the balloon. But he still watched it dubiously for a time.

He returned to the plans on the table.

He spent a long afternoon between his struggles to understand them and fits of meditation. He evolved a remarkable new sentence in French.

"Voici, Mossoo!--Je suis un inventeur Anglais. Mon nom est Butteridge. Beh. oo. teh. teh. eh. arr. E. deh. geh. eh. J'avais ici pour vendre le secret de le flying-machine. Comprenez? Vendre pour l'argent tout suite, l'argent en main. Comprenez? C'est le machine a jouer dans l'air. Comprenez? C'est le machine a faire l'oiseau. Comprenez? Balancer?"

Oui, exactement! Battir l'oiseau en fait, a son propre jeu. Je desire de vendre ceci a votre government national. Voulez vous me diracter la?

"Bit rummy, I expect, from the point of view of grammar," said Bert, "but they ought to get the hang of it all right.

"But then, if they arst me to explain the blessed thing?"

He returned in a worried way to the plans. "I don't believe it's all here!" he said....

He got more and more perplexed up there among the clouds as to what he should do with this wonderful find of his. At any moment, so far as he knew he might descend among he knew not what foreign people.

"It's the chance of my life!" he said.

It became more and more manifest to him that it wasn't. "Directly I come down they'll telegraph--put it in the papers. Butteridge'll know of it and come along--on my track."

Butteridge would be a terrible person to be on any one's track. Bert thought of the great black moustaches, the triangular nose, the searching bellow and the glare. His afternoon's dream of a marvellous seizure and sale of the great Butteridge secret crumpled up in his mind, dissolved, and vanished. He awoke to sanity again.

"Wouldn't do. What's the good of thinking of it?" He proceeded slowly and reluctantly to replace the Butteridge papers in pockets and portfolio as he had found them. He became aware of a splendid golden light upon the balloon above him, and of a new warmth in the blue dome of the sky. He stood up and beheld the

sun, a great ball of blinding gold, setting upon a tumbled sea of gold-edged crimson and purple clouds, strange and wonderful beyond imagining. Eastward cloud-land stretched for ever, darkling blue, and it seemed to Bert the whole round hemisphere of the world was under his eyes.

Then far, away over the blue he caught sight of three long, dark shapes like hurrying fish that drove one after the other, as porpoises follow one another in the water. They were very fish-like indeed--with tails. It was an unconvincing impression in that light. He blinked his eyes, stared again, and they had vanished. For a long time he scrutinised those remote blue levels and saw no more....

"Wonder if I ever saw anything," he said, and then: "There ain't such things...."

Down went the sun and down, not diving steeply, but passing northward as it sank, and then suddenly daylight and the expansive warmth of daylight had gone altogether, and the index of the statoscope quivered over to Descente.

3

"NOW what's going to 'appen?" said Bert.

He found the cold, grey cloud wilderness rising towards him with a wide, slow steadiness. As he sank down among them the clouds ceased to seem the snowclad mountain-slopes they had resembled heretofore, became unsubstantial, confessed an immense silent drift and eddy in their substance. For a moment, when he was nearly among their twilight masses, his descent was checked. Then abruptly the sky was hidden, the last vestiges of daylight gone, and he was falling rapidly in an evening twilight through a whirl of fine snowflakes that streamed past him towards

the zenith, that drifted in upon the things about him and melted, that touched his face with ghostly fingers. He shivered. His breath came smoking from his lips, and everything was instantly bedewed and wet.

He had an impression of a snowstorm pouring with unexampled and increasing fury UPWARD; then he realised that he was falling faster and faster.

Imperceptibly a sound grew upon his ears. The great silence of the world was at an end. What was this confused sound?

He craned his head over the side, concerned, perplexed.

First he seemed to see, and then not to see. Then he saw clearly little edges of foam pursuing each other, and a wide waste of weltering waters below him. Far away was a pilot boat with a big sail bearing dim black letters, and a little pinkish-yellow light, and it was rolling and pitching, rolling and pitching in a gale, while he could feel no wind at, all. Soon the sound of waters was loud and near. He was dropping, dropping--into the sea!

He became convulsively active.

"Ballast!" he cried, and seized a little sack from the floor, and heaved it overboard. He did not wait for the effect of that, but sent another after it. He looked over in time to see a minute white splash in the dim waters below him, and then he was back in the snow and clouds again.

He sent out quite needlessly a third sack of ballast and a fourth, and presently had the immense satisfaction of soaring up out of the damp and chill into the clear, cold, upper air in which the day still lingered. "Thang-God!" he said, with all his

heart.

A few stars now had pierced the blue, and in the east there shone brightly a prolate moon.

4

That first downward plunge filled Bert with a haunting sense of boundless waters below. It was a summer's night, but it seemed to him, nevertheless, extraordinarily long. He had a feeling of insecurity that he fancied quite irrationally the sunrise would dispel. Also he was hungry. He felt, in the dark, in the locker, put his fingers in the Roman pie, and got some sandwiches, and he also opened rather successfully a half-bottle of champagne. That warmed and restored him, he grumbled at Grubb about the matches, wrapped himself up warmly on the locker, and dozed for a time. He got up once or twice to make sure that he was still securely high above the sea. The first time the moonlit clouds were white and dense, and the shadow of the balloon ran athwart them like a dog that followed; afterwards they seemed thinner. As he lay still, staring up at the huge dark balloon above, he made a discovery. His--or rather Mr. Butteridge's--waistcoat rustled as he breathed. It was lined with papers. But Bert could not see to get them out or examine them, much as he wished to do so....

He was awakened by the crowing of cocks, the barking of dogs, and a clamour of birds. He was driving slowly at a low level over a broad land lit golden by sunrise under a clear sky. He stared out upon hedgeless, well-cultivated fields intersected by roads, each lined with cable-bearing red poles. He had just passed over a compact, whitewashed, village with a straight church tower and steep red-tiled roofs. A number of peasants, men and women, in shiny blouses and lumpish footwear, stood regarding him, arrested on their way to work. He was so low that the end of his rope was

trailing.

He stared out at these people. "I wonder how you land," he thought.

"S'pose I OUGHT to land?"

He found himself drifting down towards a mono-rail line, and hastily flung out two or three handfuls of ballast to clear it.

"Lemme see! One might say just 'Pre'nez'! Wish I knew the French for take hold of the rope!... I suppose they are French?"

He surveyed the country again. "Might be Holland. Or Luxembourg. Or Lorraine 's far as I know. Wonder what those big affairs over there are? Some sort of kiln. Prosperous-looking country..."

The respectability of the country's appearance awakened answering chords in his nature.

"Make myself a bit ship-shape first," he said.

He resolved to rise a little and get rid of his wig (which now felt hot on his head), and so forth. He threw out a bag of ballast, and was astonished to find himself careering up through the air very rapidly.

"Blow!" said Mr. Smallways. "I've over-done the ballast trick.... Wonder when I shall get down again? ... brekfus' on board, anyhow."

He removed his cap and wig, for the air was warm, and an improvident impulse made him cast the latter object overboard. The statoscope responded with a vigorous swing to Monte.

"The blessed thing goes up if you only LOOK overboard," he remarked, and assailed the locker. He found among other items several tins of liquid cocoa containing explicit directions for opening that he followed with minute care. He pierced the bottom with the key provided in the holes indicated, and forthwith the can grew from cold to hotter and hotter, until at last he could scarcely touch it, and then he opened the can at the other end, and there was his cocoa smoking, without the use of match or flame of any sort. It was an old invention, but new to Bert. There was also ham and marmalade and bread, so that he had a really very tolerable breakfast indeed.

Then he took off his overcoat, for the sunshine was now inclined to be hot, and that reminded him of the rustling he had heard in the night. He took off the waistcoat and examined it. "Old Butteridge won't like me unpicking this." He hesitated, and finally proceeded to unpick it. He found the missing drawings of the lateral rotating planes, on which the whole stability of the flying machine depended.

An observant angel would have seen Bert sitting for a long time after this discovery in a state of intense meditation. Then at last he rose with an air of inspiration, took Mr. Butteridge's ripped, demolished, and ransacked waistcoat, and hurled it from the balloon whence it fluttered down slowly and eddyingly until at last it came to rest with a contented flop upon the face of German tourist sleeping peacefully beside the Hohenweg near Wildbad. Also this sent the balloon higher, and so into a position still more convenient for observation by our imaginary angel who would next have seen Mr. Smallways tear open his own jacket and waistcoat, remove his collar, open his shirt, thrust his hand into his bosom, and tear his heart out--or at least, if not his heart, some large bright scarlet object. If the observer, overcoming a thrill of celestial horror, had

scrutinised this scarlet object more narrowly, one of Bert's most cherished secrets, one of his essential weaknesses, would have been laid bare. It was a red-flannel chest-protector, one of those large quasi-hygienic objects that with pills and medicines take the place of beneficial relics and images among the Protestant peoples of Christendom. Always Bert wore this thing; it was his cherished delusion, based on the advice of a shilling fortune-teller at Margate, that he was weak in the lungs.

He now proceeded to unbutton his fetish, to attack it with a periknife, and to thrust the new-found plans between the two layers of imitation Saxony flannel of which it was made. Then with the help of Mr. Butteridge's small shaving mirror and his folding canvas basin he readjusted his costume with the gravity of a man who has taken an irrevocable step in life, buttoned up his jacket, cast the white sheet of the Desert Dervish on one side, washed temperately, shaved, resumed the big cap and the fur overcoat, and, much refreshed by these exercises, surveyed the country below him.

It was indeed a spectacle of incredible magnificence. If perhaps it was not so strange and magnificent as the sunlit cloudland of the previous day, it was at any rate infinitely more interesting.

The air was at its utmost clearness and except to the south and south-west there was not a cloud in the sky. The country was hilly, with occasional fir plantations and bleak upland spaces, but also with numerous farms, and the hills were deeply intersected by the gorges of several winding rivers interrupted at intervals by the banked-up ponds and weirs of electric generating wheels. It was dotted with bright-looking, steep-roofed, villages, and each showed a distinctive and interesting church beside its wireless telegraph steeple; here and there were large chateaux and parks and white roads, and paths lined with red and, white cable posts were extremely

conspicuous in the landscape. There were walled enclosures like gardens and rickyards and great roofs of barns and many electric dairy centres. The uplands were mottled with cattle. At places he would see the track of one of the old railroads (converted now to mono-rails) dodging through tunnels and crossing embankments, and a rushing hum would mark the passing of a train. Everything was extraordinarily clear as well as minute. Once or twice he saw guns and soldiers, and was reminded of the stir of military preparations he had witnessed on the Bank Holiday in England; but there was nothing to tell him that these military preparations were abnormal or to explain an occasional faint irregular firing Of guns that drifted up to him....

"Wish I knew how to get down," said Bert, ten thousand feet or so above it all, and gave himself to much futile tugging at the red and white cords. Afterwards he made a sort of inventory of the provisions. Life in the high air was giving him an appalling appetite, and it seemed to him discreet at this stage to portion out his supply into rations. So far as he could see he might pass a week in the air.

At first all the vast panorama below had been as silent as a painted picture. But as the day wore on and the gas diffused slowly from the balloon, it sank earthward again, details increased, men became more visible, and he began to hear the whistle and moan of trains and cars, sounds of cattle, bugles and kettle drums, and presently even men's voices. And at last his guide-rope was trailing again, and he found it possible to attempt a landing. Once or twice as the rope dragged over cables he found his hair erect with electricity, and once he had a slight shock, and sparks snapped about the car. He took these things among the chances of the voyage. He had one idea now very clear in his mind, and that was to drop the iron grapnel that hung from the ring.

From the first this attempt was unfortunate, perhaps because the place for descent was ill-chosen. A balloon should come down in an empty open space, and he chose a crowd. He made his decision suddenly, and without proper reflection. As he trailed, Bert saw ahead of him one of the most attractive little towns in the world--a cluster of steep gables surmounted by a high church tower and diversified with trees, walled, and with a fine, large gateway opening out upon a tree-lined high road. All the wires and cables of the countryside converged upon it like guests to entertainment. It had a most home-like and comfortable quality, and it was made gayer by abundant flags. Along the road a quantity of peasant folk, in big pair-wheeled carts and afoot, were coming and going, besides an occasional mono-rail, car; and at the car-junction, under the trees outside the town, was a busy little fair of booths. It seemed a warm, human, well-rooted, and altogether delightful place to Bert. He came low over the tree-tops, with his grapnel ready to throw and so anchor him--a curious, interested, and interesting guest, so his imagination figured it, in the very middle of it all.

He thought of himself performing feats with the sign language and chance linguistics amidst a circle of admiring rustics....

And then the chapter of adverse accidents began.

The rope made itself unpopular long before the crowd had fully realised his advent over the trees. An elderly and apparently intoxicated peasant in a shiny black hat, and carrying a large crimson umbrella, caught sight of it first as it trailed past him, and was seized with a discreditable ambition to kill it. He pursued it, briskly with unpleasant cries. It crossed the road obliquely, splashed into a pail of milk upon a stall, and slapped its milky tail athwart a motor-car load of factory girls halted outside the town gates. They screamed loudly. People looked up and saw Bert making what he meant to be genial salutations, but

what they considered, in view of the feminine outcry, to be insulting gestures. Then, the car hit the roof of the gatehouse smartly, snapped a flag staff, played a tune upon some telegraph wires, and sent a broken wire like a whip-lash to do its share in accumulating unpopularity. Bert, by clutching convulsively, just escaped being pitched headlong. Two young soldiers and several peasants shouted things up to him and shook fists at him and began to run in pursuit as he disappeared over the wall into the town.

Admiring rustics, indeed!

The balloon leapt at once, in the manner of balloons when part of their weight is released by touching down, with a sort of flippancy, and in another moment Bert was over a street crowded with peasants and soldiers, that opened into a busy market-square. The wave of unfriendliness pursued him.

"Grapnel," said Bert, and then with an afterthought shouted, "TETES there, you! I say! I say! TETES. 'Eng it!"

The grapnel smashed down a steeply sloping roof, followed by an avalanche of broken tiles, jumped the street amidst shrieks and cries, and smashed into a plate-glass window with an immense and sickening impact. The balloon rolled nauseatingly, and the car pitched. But the grapnel had not held. It emerged at once bearing on one fluke, with a ridiculous air of fastidious selection, a small child's chair, and pursued by a maddened shopman. It lifted its catch, swung about with an appearance of painful indecision amidst a roar of wrath, and dropped it at last neatly, and as if by inspiration, over the head of a peasant woman in charge of an assortment of cabbages in the market-place.

Everybody now was aware of the balloon. Everybody was either trying to dodge the grapnel or catch the trail rope. With a

pendulum-like swoop through the crowd, that sent people flying right and left the grapnel came to earth again, tried for and missed a stout gentleman in a blue suit and a straw hat, smacked away a trestle from under a stall of haberdashery, made a cyclist soldier in knickerbockers leap like a chamois, and secured itself uncertainly among the hind-legs of a sheep--which made convulsive, ungenerous efforts to free itself, and was dragged into a position of rest against a stone cross in the middle of the place. The balloon pulled up with a jerk. In another moment a score of willing hands were tugging it earthward. At the same instant Bert became aware for the first time of a fresh breeze blowing about him.

For some seconds he stood staggering in the car, which now swayed sickeningly, surveying the exasperated crowd below him and trying to collect his mind. He was extraordinarily astonished at this run of mishaps. Were the people really so annoyed? Everybody seemed angry with him. No one seemed interested or amused by his arrival. A disproportionate amount of the outcry had the flavour of imprecation--had, indeed a strong flavour of riot. Several greatly uniformed officials in cocked hats struggled in vain to control the crowd. Fists and sticks were shaken. And when Bert saw a man on the outskirts of the crowd run to a haycart and get a brightly pronged pitch-fork, and a blue-clad soldier unbuckle his belt, his rising doubt whether this little town was after all such a good place for a landing became a certainty.

He had clung to the fancy that they would make something of a hero of him. Now he knew that he was mistaken.

He was perhaps ten feet above the people when he made his decision. His paralysis ceased. He leapt up on the seat, and, at imminent risk of falling headlong, released the grapnel-rope from the toggle that held it, sprang on to the trail rope and disengaged that also. A hoarse shout of disgust greeted the

descent of the grapnel-rope and the swift leap of the balloon, and something--he fancied afterwards it was a turnip--whizzed by his head. The trail-rope followed its fellow. The crowd seemed to jump away from him. With an immense and horrifying rustle the balloon brushed against a telephone pole, and for a tense instant he anticipated either an electric explosion or a bursting of the oiled silk, or both. But fortune was with him.

In another second he was cowering in the bottom of the car, and released from the weight of the grapnel and the two ropes, rushing up once more through the air. For a time he remained crouching, and when at last he looked out again the little town was very small and travelling, with the rest of lower Germany, in a circular orbit round and round the car--or atleast it appeared to be doing that. When he got used to it, he found this rotation of the balloon rather convenient; it saved moving about in the car.

5

Late in the afternoon of a pleasant summer day in the year 191-, if one may borrow a mode of phrasing that once found favour with the readers of the late G. P. R. James, a solitary balloonist--replacing. the solitary horseman of the classic romances--might have been observed wending his way across Franconia in a north-easterly direction, and at a height of about eleven thousand feet above the sea and still spindling slowly. His head was craned over the side of the car, and he surveyed the country below with an expression of profound perplexity; ever and again his lips shaped inaudible words. "Shootin' at a chap," for example, and "I'll come down right enough soon as I find out 'ow." Over the side of the basket the robe of the Desert Dervish was hanging, an appeal for consideration, an ineffectual white flag.

He was now very distinctly aware that the world below him, so far from being the naive countryside of his earlier imaginings that day, sleepily unconscious of him and capable of being amazed and nearly reverential at his descent, was acutely irritated by his career, and extremely impatient with the course he was taking.--But indeed it was not he who took that course, but his masters, the winds of heaven. Mysterious voices spoke to him in his ear, jerking the words up to him by means of megaphones, in a weird and startling ipanner, in a great variety of languages. Official-looking persons had signalled to him by means of flag flapping and arm waving. On the whole a guttural variant of English prevailed in the sentences that alighted upon the balloon; chiefly he was told to "gome down or you will be shot."

"All very well," said Bert, "but 'ow?"

Then they shot a little wide of the car. Latterly he had been shot at six or seven times, and once the bullet had gone by with a sound so persuasively like the tearing of silk that he had resigned himself to the prospect of a headlong fall. But either they were aiming near him or they had missed, and as yet nothing was torn but the air about him--and his anxious soul.

He was now enjoying a respite from these attentions, but he felt it was at best an interlude, and he was doing what he could to appreciate his position. Incidentally he was having some hot coffee and pie in an untidy inadvertent manner, with an eye fluttering nervously over the side of the car. At first he had ascribed the growing interest in his career to his ill-conceived attempt to land in the bright little upland town, but now he was beginning to realise that the military rather than the civil arm was concerned about him.

He was quite involuntarily playing that weird mysterious part--the part of an International Spy. He was seeing secret

things. He had, in fact, crossed the designs of no less a power than the German Empire, he had blundered into the hot focus of Welt-Politik, he was drifting helplessly towards the great Imperial secret, the immense aeronautic park that had been established at a headlong pace in Franconia to develop silently, swiftly, and on an immense scale the great discoveries of Hunstedt and Stossel, and so to give Germany before all other nations a fleet of airships, the air power and the Empire of the world.

Later, just before they shot him down altogether, Bert saw that great area of passionate work, warm lit in the evening light, a great area of upland on which the airships lay like a herd of grazing monsters at their feed. It was a vast busy space stretching away northward as far as he could see, methodically cut up into numbered sheds, gasometers, squad encampments, storage areas, interlaced with the omnipresent mono-rail lines, and altogether free from overhead wires or cables. Everywhere was the white, black and yellow of Imperial Germany, everywhere the black eagles spread their wings. Even without these indications, the large vigorous neatness of everything would have marked it German. Vast multitudes of men went to and fro, many in white and drab fatigue uniforms busy about the balloons, others drilling in sensible drab. Here and there a full uniform glittered. The airships chiefly engaged his attention, and he knew at once it was three of these he had seen on the previous night, taking advantage of the cloud welkin to manoeuvre unobserved. They were altogether fish-like. For the great airships with which Germany attacked New York in her last gigantic effort for world supremacy--before humanity realized that world supremacy was a dream--were the lineal descendants of the Zeppelin airship that flew over Lake Constance in 1906, and of the Lebaudy navigables that made their memorable excursions over Paris in 1907 and 1908.

These German airships were held together by rib-like skeletons of steel and aluminium and a stout inelastic canvas outer-skin, within which was an impervious rubber gas-bag, cut up by transverse dissepiments into from fifty to a hundred compartments. These were all absolutely gas tight and filled with hydrogen, and the entire aerostat was kept at any level by means of a long internal balloonette of oiled and toughened silk canvas, into which air could be forced and from which it could be pumped. So the airship could be made either heavier or lighter than air, and losses of weight through the consumption of fuel, the casting of bombs and so forth, could also be compensated by admitting air to sections of the general gas-bag. Ultimately that made a highly explosive mixture; but in all these matters risks must be taken and guarded against. There was a steel axis to the whole affair, a central backbone which terminated in the engine and propeller, and the men and magazines were forward in a series of cabins under the expanded headlike forepart. The engine, which was of the extraordinarily powerful Pforzheim type, that supreme triumph of German invention, was worked by wires from this forepart, which was indeed the only really habitable part of the ship. If anything went wrong, the engineers went aft along a rope ladder beneath the frame. The tendency of the whole affair to roll was partly corrected by a horizontal lateral fin on either side, and steering was chiefly effected by two vertical fins, which normally lay back like gill-flaps on either side of the head. It was indeed a most complete adaptation of the fish form to aerial conditions, the position of swimming bladder, eyes, and brain being, however, below instead of above. A striking, and unfish-like feature was the apparatus for wireless telegraphy that dangled from the forward cabin--that is to say, under the chin of the fish.

These monsters were capable of ninety miles an hour in a calm, so that they could face and make headway against nearly everything except the fiercest tornado. They varied in length from eight

hundred to two thousand feet, and they had a carrying power of from seventy to two hundred tons. How many Germany possessed history does not record, but Bert counted nearly eighty great bulks receding in perspective during his brief inspection. Such were the instruments on which she chiefly relied to sustain her in her repudiation of the Monroe Doctrine and her bold bid for a share in the empire of the New World. But not altogether did she rely on these; she had also a one-man bomb-throwing Drachenflieger of unknown value among the resources.

But the Drachenflieger were away in the second great aeronautic park east of Hamburg, and Bert Smallways saw nothing of them in the bird's-eye view he took of the Franconian establishment before they shot him down very neatly. The bullet tore past him and made a sort of pop as it pierced his balloon--a pop that was followed by a rustling sigh and a steady downward movement. And when in the confusion of the moment he dropped a bag of ballast, the Germans, very politely but firmly overcame his scruples by shooting his balloon again twice.

CHAPTER IV THE GERMAN AIR-FLEET

1

Of all the productions of the human imagination that make the world in which Mr. Bert Smallways lived confusingly wonderful, there was none quite so strange, so headlong and disturbing, so noisy and persuasive and dangerous, as the modernisations of patriotism produced by imperial and international politics. In the soul of all men is a liking for kind, a pride in one's own atmosphere, a tenderness for one's Mother speech and one's familiar land. Before the coming of the Scientific Age this

group of gentle and noble emotions had been a fine factor in the equipment of every worthy human being, a fine factor that had its less amiable aspect in a usually harmless hostility to strange people, and a usually harmless detraction of strange lands. But with the wild rush of change in the pace, scope, materials, scale, and possibilities of human life that then occurred, the old boundaries, the old seclusions and separations were violently broken down. All the old settled mental habits and traditions of men found themselves not simply confronted by new conditions, but by constantly renewed and changing new conditions. They had no chance of adapting themselves. They were annihilated or perverted or inflamed beyond recognition.

Bert Smallways' grandfather, in the days when Bun Hill was a village under the sway of Sir Peter Bone's parent, had "known his place" to the uttermost farthing, touched his hat to his betters, despised and condescended to his inferiors, and hadn't changed an idea from the cradle to the grave. He was Kentish and English, and that meant hops, beer, dog-rose's, and the sort of sunshine that was best in the world. Newspapers and politics and visits to "Lunnon" weren't for the likes of him. Then came the change. These earlier chapters have given an idea of what happened to Bun Hill, and how the flood of novel things had poured over its devoted rusticity. Bert Smallways was only one of countless millions in Europe and America and Asia who, instead of being born rooted in the soil, were born struggling in a torrent they never clearly understood. All the faiths of their fathers had been taken by surprise, and startled into the strangest forms and reactions. Particularly did the fine old tradition of patriotism get perverted and distorted in the rush of the new times. Instead of the sturdy establishment in prejudice of Bert's grandfather, to whom the word "Frenchified" was the ultimate term of contempt, there flowed through Bert's brain a squittering succession of thinly violent ideas about German competition, about the Yellow Danger, about the Black Peril, about the White

Man's Burthen--that is to say, Bert's preposterous right to muddle further the naturally very muddled politics of the entirely similar little cads to himself (except for a smear of brown) who smoked cigarettes and rode bicycles in Buluwayo, Kingston (Jamaica), or Bombay. These were Bert's "Subject Races," and he was ready to die--by proxy in the person of any one who cared to enlist--to maintain his hold upon that right. It kept him awake at nights to think that he might lose it.

The essential fact of the politics of the age in which Bert Smallways lived--the age that blundered at last into the catastrophe of the War in the Air--was a very simple one, if only people had had the intelligence to be simple about it. The development of Science had altered the scale of human affairs. By means of rapid mechanical traction, it had brought men nearer together, so much nearer socially, economically, physically, that the old separations into nations and kingdoms were no longer possible, a newer, wider synthesis was not only needed, but imperatively demanded. Just as the once independent dukedoms of France had to fuse into a nation, so now the nations had to adapt themselves to a wider coalescence, they had to keep what was precious and possible, and concede what was obsolete and dangerous. A saner world would have perceived this patent need for a reasonable synthesis, would have discussed it temperately, achieved and gone on to organise the great civilisation that was manifestly possible to mankind. The world of Bert Smallways did nothing of the sort. Its national governments, its national interests, would not hear of anything so obvious; they were too suspicious of each other, too wanting in generous imaginations. They began to behave like ill-bred people in a crowded public car, to squeeze against one another, elbow, thrust, dispute and quarrel. Vain to point out to them that they had only to rearrange themselves to be comfortable. Everywhere, all over the world, the historian, of the early twentieth century finds the same thing, the flow and rearrangement of human affairs

inextricably entangled by the old areas, the old prejudices and a sort of heated irascible stupidity, and everywhere congested nations in inconvenient areas, slopping population and produce into each other, annoying each other with tariffs, and every possible commercial vexation, and threatening each other with navies and armies that grew every year more portentous.

It is impossible now to estimate how much of the intellectual and physical energy of the world was wasted in military preparation and equipment, but it was an enormous proportion. Great Britain spent upon army and navy money and capacity, that directed into the channels of physical culture and education would have made the British the aristocracy of the world. Her rulers could have kept the whole population learning and exercising up to the age of eighteen and made a broad-chested and intelligent man of every Bert Smallways in the islands, had they given the resources they spent in war material to the making of men. Instead of which they wagged flags at him until he was fourteen, incited him to cheer, and then turned him out of school to begin that career of private enterprise we have compactly recorded. France achieved similar imbecilities; Germany was, if possible worse; Russia under the waste and stresses of militarism festered towards bankruptcy and decay. All Europe was producing big guns and countless swarms of little Smallways. The Asiatic peoples had been forced in self-defence into a like diversion of the new powers science had brought them. On the eve of the outbreak of the war there were six great powers in the world and a cluster of smaller ones, each armed to the teeth and straining every nerve to get ahead of the others in deadliness of equipment and military efficiency. The great powers were first the United States, a nation addicted to commerce, but roused to military necessities by the efforts of Germany to expand into South America, and by the natural consequences of her own unwary annexations of land in the very teeth of Japan. She maintained two immense fleets east and west, and internally she was in

violent conflict between Federal and State governments upon the question of universal service in a defensive militia. Next came the great alliance of Eastern Asia, a close-knit coalescence of China and Japan, advancing with rapid strides year by year to predominance in the world's affairs. Then the German alliance still struggled to achieve its dream of imperial expansion, and its imposition of the German language upon a forcibly united Europe. These were the three most spirited and aggressive powers in the world. Far more pacific was the British Empire, perilously scattered over the globe, and distracted now by insurrectionary movements in Ireland and among all its Subject Races. It had given these subject races cigarettes, boots, bowler hats, cricket, race meetings, cheap revolvers, petroleum, the factory system of industry, halfpenny newspapers in both English and the vernacular, inexpensive university degrees, motor-bicycles and electric trams; it had produced a considerable literature expressing contempt for the Subject Races, and rendered it freely accessible to them, and it had been content to believe that nothing would result from these stimulants because somebody once wrote "the immemorial east"; and also, in the inspired words of Kipling--

East is east and west is west,
And never the twain shall meet.

Instead of which, Egypt, India, and the subject countries generally had produced new generations in a state of passionate indignation and the utmost energy, activity and modernity. The governing class in Great Britain was slowly adapting itself to a new conception, of the Subject Races as waking peoples, and finding its efforts to keep the Empire together under these strains and changing ideas greatly impeded by the entirely sporting spirit with which Bert Smallways at home (by the million) cast his vote, and by the tendency of his more highly

coloured equivalents to be disrespectful to irascible officials. Their impertinence was excessive; it was no mere stone-throwing and shouting. They would quote Burns at them and Mill and Darwin and confute them in arguments.

Even more pacific than the British Empire were France and its allies, the Latin powers, heavily armed states indeed, but reluctant warriors, and in many ways socially and politically leading western civilisation. Russia was a pacific power perforce, divided within itself, torn between revolutionaries and reactionaries who were equally incapable of social reconstruction, and so sinking towards a tragic disorder of chronic political vendetta. Wedged in among these portentous larger bulks, swayed and threatened by them, the smaller states of the world maintained a precarious independence, each keeping itself armed as dangerously as its utmost ability could contrive.

So it came about that in every country a great and growing body of energetic and inventive men was busied either for offensive or defensive ends, in elaborating the apparatus of war, until the accumulating tensions should reach the breaking-point. Each power sought to keep its preparations secret, to hold new weapons in reserve, to anticipate and learn the preparations of its rivals. The feeling of danger from fresh discoveries affected the patriotic imagination of every people in the world. Now it was rumoured the British had an overwhelming gun, now the French an invincible rifle, now the Japanese a new explosive, now the Americans a submarine that would drive every ironclad from the seas. Each time there would be a war panic.

The strength and heart of the nations was given to the thought of war, and yet the mass of their citizens was a teeming democracy as heedless of and unfitted for fighting, mentally, morally, physically, as any population has ever been--or, one ventures to add, could ever be. That was the paradox of the time. It was a

period altogether unique in the world's history. The apparatus of warfare, the art and method of fighting, changed absolutely every dozen years in a stupendous progress towards perfection, and people grew less and less warlike, and there was no war.

And then at last it came. It came as a surprise to all the world because its real causes were hidden. Relations were strained between Germany and the United States because of the intense exasperation of a tariff conflict and the ambiguous attitude of the former power towards the Monroe Doctrine, and they were strained between the United States and Japan because of the perennial citizenship question. But in both cases these were standing causes of offence. The real deciding cause, it is now known, was the perfecting of the Pforzheim engine by Germany and the consequent possibility of a rapid and entirely practicable airship. At that time Germany was by far the most efficient power in the world, better organised for swift and secret action, better equipped with the resources of modern science, and with her official and administrative classes at a higher level of education and training. These things she knew, and she exaggerated that knowledge to the pitch of contempt for the secret counsels of her neighbours. It may be that with the habit of self-confidence her spying upon them had grown less thorough. Moreover, she had a tradition of unsentimental and unscrupulous action that vitiated her international outlook profoundly. With the coming of these new weapons her collective intelligence thrilled with the sense that now her moment had come. Once again in the history of progress it seemed she held the decisive weapon. Now she might strike and conquer--before the others had anything but experiments in the air.

Particularly she must strike America, swiftly, because there, if anywhere, lay the chance of an aerial rival. It was known that America possessed a flying-machine of considerable practical value, developed out of the Wright model; but it was not supposed

that the Washington War Office had made any wholesale attempts to create air aerial navy. It was necessary to strike before they could do so. France had a fleet of slow navigables, several dating from 1908, that could make no possible headway against the new type. They had been built solely for reconnoitring purposes on the eastern frontier, they were mostly too small to carry more than a couple, of dozen men without arms or provisions, and not one could do forty miles. an hour. Great Britain, it seemed, in an access of meanness, temporised and wrangled with the imperial spirited Butteridge and his extraordinary invention. That also was not in play--and could not be for some months at the earliest. From Asia there, came no sign. The Germans explained this by saying the yellow peoples were without invention. No other competitor was worth considering. "Now or never," said the Germans--"now or never we may seize the air--as once the British seized the seas! While all the other powers are still experimenting."

Swift and systematic and secret were their preparations, and their plan most excellent. So far as their knowledge went, America was the only dangerous possibility; America, which was also now the leading trade rival of Germany and one of the chief barriers to her Imperial expansion. So at once they would strike at America. They would fling a great force across the Atlantic heavens and bear America down unwarned and unprepared.

Altogether it was a well-imagined and most hopeful and spirited enterprise, having regard to the information in the possession of the German government. The chances of it being a successful surprise were very great. The airship and the flying-machine were very different things from ironclads, which take a couple of years to build. Given hands, given plant, they could be made innumerable in a few weeks. Once the needful parks and foundries were organised, air-ships and Dracheinflieger could be poured into the sky. Indeed, when the time came, they did pour into the

sky like, as a bitter French writer put it, flies roused from filth.

The attack upon America was to be the first move in this tremendous game. But no sooner had it started than instantly the aeronautic parks were to proceed to put together and inflate the second fleet which was to dominate Europe and manoeuvre significantly over London, Paris, Rome, St. Petersburg, or wherever else its moral effect was required. A World Surprise it was to be--no less a World Conquest; and it is wonderful how near the calmly adventurous minds that planned it came to succeeding in their colossal design.

Von Sternberg was the Moltke of this War in the Air, but it was the curious hard romanticism of Prince Karl Albert that won over the hesitating Emperor to the scheme. Prince Karl Albert was indeed the central figure of the world drama. He was the darling of the Imperialist spirit in German, and the ideal of the new aristocratic feeling--the new Chivalry, as it was called--that followed the overthrow of Socialism through its internal divisions and lack of discipline, and the concentration of wealth in the hands of a few great families. He was compared by obsequious flatterers to the Black Prince, to Alcibiades, to the young Caesar. To many he seemed Nietzsche's Overman revealed. He was big and blond and virile, and splendidly non-moral. The first great feat that startled Europe, and almost brought about a new Trojan war, was his abduction of the Princess Helena of Norway and his blank refusal to marry her. Then followed his marriage with Gretchen Krass, a Swiss girl of peerless beauty. Then came the gallant rescue, which almost cost him his life, of three drowning sailors whose boat had upset in the sea near Heligoland. For that and his victory over the American yacht Defender, C.C.I., the Emperor forgave him and placed him in control of the new aeronautic arm of the German forces. This he developed with marvellous energy and ability,

being resolved, as he said, to give to Germany land and sea and sky. The national passion for aggression found in him its supreme exponent, and achieved through him its realisation in this astounding war. But his fascination was more than national; all over the world his ruthless strength dominated minds as the Napoleonic legend had dominated minds. Englishmen turned in disgust from the slow, complex, civilised methods of their national politics to this uncompromising, forceful figure. Frenchmen believed in him. Poems were written to him in American.

He made the war.

Quite equally with the rest of the world, the general German population was taken by surprise by the swift vigour of the Imperial government. A considerable literature of military forecasts, beginning as early as 1906 with Rudolf Martin, the author not merely of a brilliant book of anticipations, but of a proverb, "The future of Germany lies in the air," had, however, partially prepared the German imagination for some such enterprise.

2

Of all these world-forces and gigantic designs Bert Smallways knew nothing until he found himself in the very focus of it all and gaped down amazed on the spectacle of that giant herd of air-ships. Each one seemed as long as the Strand, and as big about as Trafalgar Square. Some must have been a third of a mile in length. He had never before seen anything so vast and disciplined as this tremendous park. For the first time in his life he really had an intimation of the extraordinary and quite important things of which a contemporary may go in ignorance. He had always clung to the illusion that Germans were fat, absurd men, who smoked china pipes, and were addicted to knowledge and

horseflesh and sauerkraut and indigestible things generally.

His bird's-eye view was quite transitory. He ducked at the first shot; and directly his balloon began to drop, his mind ran confusedly upon how he might explain himself, and whether he should pretend to be Butteridge or not. "O Lord!" he groaned, in an agony of indecision. Then his eye caught his sandals, and he felt a spasm of self-disgust. "They'll think I'm a bloomin' idiot," he said, and then it was he rose up desperately and threw over the sand-bag and provoked the second and third shots.

It flashed into his head, as he cowered in the bottom of the car, that he might avoid all sorts of disagreeable and complicated explanations by pretending to be mad.

That was his last idea before the airships seemed to rush up about him as if to look at him, and his car hit the ground and bounded and pitched him out on his head....

He awoke to find himself famous, and to hear a voice crying, "Booteraidge! Ja! Jai Herr Booteraidge! Selbst!"

He was lying on a little patch of grass beside one of the main avenues of the aeronautic park. The airships receded down a great vista, an immense perspective, and the blunt prow of each was adorned with a black eagle of a hundred feet or so spread. Down the other side of the avenue ran a series of gas generators, and big hose-pipes trailed everywhere across the intervening space. Close at hand was his now nearly deflated balloon and the car on its side looking minutely small, a mere broken toy, a shrivelled bubble, in contrast with the gigantic bulk of the nearer airship. This he saw almost end-on, rising like a cliff and sloping forward towards its fellow on the other side so as to overshadow the alley between them. There was a crowd of excited people about him, big men mostly in tight uniforms. Everybody

was talking, and several were shouting, in German; he knew that because they splashed and aspirated sounds like startled kittens.

Only one phrase, repeated again and again could he recognize--the name of "Herr Booteraidge."

"Gollys!" said Bert. "They've spotted it."

"Besser," said some one, and some rapid German followed.

He perceived that close at hand was a field telephone, and that a tall officer in blue was talking thereat about him. Another stood close beside him with the portfolio of drawings and photographs in his hand. They looked round at him.

"Do you spik Cherman, Herr Booteraidge?"

Bert decided that he had better be dazed. He did his best to seem thoroughly dazed. "Where AM I?" he asked.

Volubility prevailed. "Der Prinz," was mentioned. A bugle sounded far away, and its call was taken up by one nearer, and then by one close at hand. This seemed to increase the excitement greatly. A mono-rail car bumped past. The telephone bell rang passionately, and the tall officer seemed to engage in a heated altercation. Then he approached the group about Bert, calling out something about "mitbringen."

An earnest-faced, emaciated man with a white moustache appealed to Bert. "Herr Booteraidge, sir, we are chust to start!"

"Where am I?" Bert repeated.

Some one shook him by the other shoulder. "Are you Herr Booteraidge?" he asked.

"Herr Booteraidge, we are chust to start!" repeated the white moustache, and then helplessly, "What is de goot? What can we do?"

The officer from the telephone repeated his sentence about "Der Prinz" and "mitbringen." The man with the moustache stared for a moment, grasped an idea and became violently energetic, stood up and bawled directions at unseen people. Questions were asked, and the doctor at Bert's side answered, "Ja! Ja!" several times, also something about "Kopf." With a certain urgency he got Bert rather unwillingly to his feet. Two huge soldiers in grey advanced upon Bert and seized hold of him. "'Ullo!" said Bert, startled. "What's up?"

"It is all right," the doctor explained; "they are to carry you."

"Where?" asked Bert, unanswered.

"Put your arms roundt their--hals--round them!"

"Yes! but where?"

"Hold tight!"

Before Bert could decide to say anything more he was whisked up by the two soldiers. They joined hands to seat him, and his arms were put about their necks. "Vorwarts!" Some one ran before him with the portfolio, and he was borne rapidly along the broad avenue between the gas generators and the airships, rapidly and on the whole smoothly except that once or twice his bearers stumbled over hose-pipes and nearly let him down.

He was wearing Mr. Butteridge's Alpine cap, and his little shoulders were in Mr. Butteridge's fur-lined overcoat, and he had

responded to Mr. Butteridge's name. The sandals dangled helplessly. Gaw! Everybody seemed in a devil of a hurry. Why? He was carried joggling and gaping through the twilight, marvelling beyond measure.

The systematic arrangement of wide convenient spaces, the quantities of business-like soldiers everywhere, the occasional neat piles of material, the ubiquitous mono-rail lines, and the towering ship-like hulls about him, reminded him a little of impressions he had got as a boy on a visit to Woolwich Dockyard. The whole camp reflected the colossal power of modern science that had created it. A peculiar strangeness was produced by the lowness of the electric light, which lay upon the ground, casting all shadows upwards and making a grotesque shadow figure of himself and his bearers on the airship sides, fusing all three of them into a monstrous animal with attenuated legs and an immense fan-like humped body. The lights were on the ground because as far as possible all poles and standards had been dispensed with to prevent complications when the airships rose.

It was deep twilight now, a tranquil blue-skyed evening; everything rose out from the splashes of light upon the ground into dim translucent tall masses; within the cavities of the airships small inspecting lamps glowed like cloud-veiled stars, and made them seem marvellously unsubstantial. Each airship had its name in black letters on white on either flank, and forward the Imperial eagle sprawled, an overwhelming bird in the dimness.

Bugles sounded, mono-rail cars of quiet soldiers slithered burbling by. The cabins under the heads of the airships were being lit up; doors opened in them, and revealed padded passages.

Now and then a voice gave directions to workers indistinctly seen.

There was a matter of sentinels, gangways and a long narrow passage, a scramble over a disorder of baggage, and then Bert found himself lowered to the ground and standing in the doorway of a spacious cabin--it was perhaps ten feet square and eight high, furnished with crimson padding and aluminium. A tall, bird-like young man with a small head, a long nose, and very pale hair, with his hands full of things like shaving-strops, boot-trees, hair-brushes, and toilet tidies, was saying things about Gott and thunder and Dummer Booteraidge as Bert entered. He was apparently an evicted occupant. Then he vanished, and Bert was lying back on a couch in the corner with a pillow under his head and the door of the cabin shut upon him. He was alone. Everybody had hurried out again astonishingly.

"Gollys!" said Bert. "What next?"

He stared about him at the room.

"Butteridge! Shall I try to keep it up, or shan't I?"

The room he was in puzzled him. "'Tisn't a prison and 'tisn't a norfis?" Then the old trouble came uppermost. "I wish to 'eaven I adn't these silly sandals on," he cried querulously to the universe. "They give the whole blessed show away."

3

His door was flung open, and a compact young man in uniform appeared, carrying Mr. Butteridge's portfolio, rucksac, and shaving-glass.

"I say!" he said in faultless English as he entered. He had a beaming face, and a sort of pinkish blond hair. "Fancy you being Butteridge. He slapped Bert's meagre luggage down.

"We'd have started," he said, "in another half-hour! You didn't give yourself much time!"

He surveyed Bert curiously. His gaze rested for a fraction of a moment on the sandals. "You ought to have come on your flying-machine, Mr. Butteridge."

He didn't wait for an answer. "The Prince says I've got to look after you. Naturally he can't see you now, but he thinks your coming's providential. Last grace of Heaven. Like a sign. Hullo!"

He stood still and listened.

Outside there was a going to and fro of feet, a sound of distant bugles suddenly taken up and echoed close at hand, men called out in loud tones short, sharp, seemingly vital things, and were answered distantly. A bell jangled, and feet went down the corridor. Then came a stillness more distracting than sound, and then a great gurgling and rushing and splashing of water. The young man's eyebrows lifted. He hesitated, and dashed out of the room. Presently came a stupendous bang to vary the noises without, then a distant cheering. The young man re-appeared.

"They're running the water out of the ballonette already."

"What water?" asked Bert.

"The water that anchored us. Artful dodge. Eh?"

Bert tried to take it in.

"Of course!" said the compact young man. "You don't understand."

A gentle quivering crept upon Bert's senses. "That's the engine,"

said the compact young man approvingly. "Now we shan't be long."

Another long listening interval.

The cabin swayed. "By Jove! we're starting already;" he cried. "We're starting!"

"Starting!" cried Bert, sitting up. "Where?"

But the young man was out of the room again. There were noises of German in the passage, and other nerve-shaking sounds.

The swaying increased. The young man reappeared. "We're off, right enough!"

"I say!", said Bert, "where are we starting? I wish you'd explain. What's this place? I don't understand."

"What!" cried the young man, "you don't understand?"

"No. I'm 'all dazed-like from that crack on the nob I got. Where ARE we? WHERE are we starting?"

"Don't you know where you are--what this is?"

"Not a bit of it! What's all the swaying and the row?"

"What a lark!" cried the young man. "I say! What a thundering lark! Don't you know? We're off to America, and you haven't realised. You've just caught us by a neck. You're on the blessed old flagship with the Prince. You won't miss anything. Whatever's on, you bet the Vaterland will be there."

"Us!--off to America?"

"Ra--ther!

"In an airship?"

"What do YOU think?"

"Me! going to America on an airship! After that balloon! 'Ere! I say--I don't want to go! I want to walk about on my legs. Let me get out! I didn't understand."

He made a dive for the door.

The young man arrested Bert with a gesture, took hold of a strap, lifted up a panel in the padded wall, and a window appeared.

"Look!" he said. Side by side they looked out.

"Gaw!" said Bert. "We're going up!"

"We are!" said the young man, cheerfully; "fast!"

They were rising in the air smoothly and quietly, and moving slowly to the throb of the engine athwart the aeronautic park. Down below it stretched, dimly geometrical in the darkness, picked out at regular intervals by glow-worm spangles of light. One black gap in the long line of grey, round-backed airships marked the position from which the Vaterland had come. Beside it a second monster now rose softly, released from its bonds and cables into the air. Then, taking a beautifully exact distance, a third ascended, and then a fourth.

"Too late, Mr. Butteridge!" the young man remarked. "We're off! I daresay it is a bit of a shock to you, but there you are! The Prince said you'd have to come."

"Look 'ere, " said Bert. "I really am dazed. What's this thing?"

Where are we going?"

"This, Mr. Butteridge," said the young man, taking pains to be explicit, "is an airship. It's the flagship of Prince Karl Albert. This is the German air-fleet, and it is going over to America, to give that spirited people 'what for.' The only thing we were at all uneasy about was your invention. And here you are!"

"But!--you a German?" asked Bert.

"Lieutenant Kurt. Luft-lieutenant Kurt, at your service."

"But you speak English!"

"Mother was English--went to school in England. Afterwards, Rhodes scholar. German none the less for that. Detailed for the present, Mr. Butteridge, to look after you. You're shaken by your fall. It's all right, really. They're going to buy your machine and everything. You sit down, and take it quite calmly. You'll soon get the hang of the position."

4

Bert sat down on the locker, collecting his mind, and the young man talked to him about the airship.

He was really a very tactful young man indeed, in a natural sort of way. "Daresay all this is new to you," he said; "not your sort of machine. These cabins aren't half bad."

He got up and walked round the little apartment, showing its points.

"Here is the bed," he said, whipping down a couch from the wall

and throwing it back again with a click. "Here are toilet things," and he opened a neatly arranged cupboard. "Not much washing. No water we've got; no water at all except for drinking. No baths or anything until we get to America and land. Rub over with loofah. One pint of hot for shaving. That's all. In the locker below you are rugs and blankets; you will need them presently. They say it gets cold. I don't know. Never been up before. Except a little work with gliders--which is mostly going down. Three-quarters of the chaps in the fleet haven't. Here's a folding-chair and table behind the door. Compact, eh?"

He took the chair and balanced it on his little finger. "Pretty light, eh? Aluminium and magnesium alloy and a vacuum inside. All these cushions stuffed with hydrogen. Foxy! The whole ship's like that. And not a man in the fleet, except the Prince and one or two others, over eleven stone. Couldn't sweat the Prince, you know. We'll go all over the thing to-morrow. I'm frightfully keen on it."

He beamed at Bert. "You DO look young," he remarked. "I always thought you'd be an old man with a beard--a sort of philosopher. I don't know why one should expect clever people always to be old. I do."

Bert parried that compliment a little awkwardly, and then the lieutenant was struck with the riddle why Herr Butteridge had not come in his own flying machine.

"It's a long story," said Bert. "Look here!" he said abruptly, "I wish you'd lend me a pair of slippers, or something. I'm regular sick of these sandals. They're rotten things. I've been trying them for a friend."

"Right O!"

The ex-Rhodes scholar whisked out of the room and reappeared with a considerable choice of footwear--pumps, cloth bath-slippers, and a purple pair adorned with golden sun-flowers.

But these he repented of at the last moment.

"I don't even wear them myself," he said. "Only brought 'em in the zeal of the moment." He laughed confidentially. "Had 'em worked for me--in Oxford. By a friend. Take 'em everywhere."

So Bert chose the pumps.

The lieutenant broke into a cheerful snigger. "Here we are trying on slippers," he said, "and the world going by like a panorama below. Rather a lark, eh? Look!"

Bert peeped with him out of the window, looking from the bright pettiness of the red-and-silver cabin into a dark immensity. The land below, except for a lake, was black and featureless, and the other airships were hidden. "See more outside," said the lieutenant. "Let's go! There's a sort of little gallery."

He led the way into the long passage, which was lit by one small electric light, past some notices in German, to an open balcony and a light ladder and gallery of metal, lattice overhanging, empty space. Bert followed his leader down to the gallery slowly and cautiously. From it he was able to watch the wonderful spectacle of the first air-fleet flying through the night. They flew in a wedge-shaped formation, the Vaterland highest and leading, the tail receding into the corners of the sky. They flew in long, regular undulations, great dark fish-like shapes, showing hardly any light at all, the engines making a throb-throb-throbbing sound that was very audible out on the gallery. They were going at a level of five or six thousand feet, and rising steadily. Below, the country lay silent, a

clear darkness dotted and lined out with clusters of furnaces, and the lit streets of a group of big towns. The world seemed to lie in a bowl; the overhanging bulk of the airship above hid all but the lowest levels of the sky.

They watched the landscape for a space.

"Jolly it must be to invent things," said the lieutenant suddenly. "How did you come to think of your machine first?"

"Worked it out," said Bert, after a pause. "Jest ground away at it."

"Our people are frightfully keen on you. They thought the British had got you. Weren't the British keen?"

"In a way," said Bert. "Still--its a long story."

"I think it's an immense thing--to invent. I couldn't invent a thing to save my life."

They both fell silent, watching the darkened world and following their thoughts until a bugle summoned them to a belated dinner. Bert was suddenly alarmed. "Don't you 'ave to dress and things?" he said. "I've always been too hard at Science and things to go into Society and all that."

"No fear," said Kurt. "Nobody's got more than the clothes they wear. We're travelling light. You might perhaps take your overcoat off. They've an electric radiator each end of the room."

And so presently Bert found himself sitting to eat in the presence of the "German Alexander"--that great and puissant Prince, Prince Karl Albert, the War Lord, the hero of two

hemispheres. He was a handsome, blond man, with deep-set eyes, a snub nose, upturned moustache, and long white hands, a strange-looking man. He sat higher than the others, under a black eagle with widespread wings and the German Imperial flags; he was, as it were, enthroned, and it struck Bert greatly that as he ate he did not look at people, but over their heads like one who sees visions. Twenty officers of various ranks stood about the table--and Bert. They all seemed extremely curious to see the famous Butteridge, and their astonishment at his appearance was ill-controlled. The Prince gave him a dignified salutation, to which, by an inspiration, he bowed. Standing next the Prince was a brown-faced, wrinkled man with silver spectacles and fluffy, dingy-grey side-whiskers, who regarded Bert with a peculiar and disconcerting attention. The company sat after ceremonies Bert could not understand. At the other end of the table was the bird-faced officer Bert had dispossessed, still looking hostile and whispering about Bert to his neighbour. Two soldiers waited. The dinner was a plain one--a soup, some fresh mutton, and cheese--and there was very little talk.

A curious solemnity indeed brooded over every one. Partly this was reaction after the intense toil and restrained excitement of starting; partly it was the overwhelming sense of strange new experiences, of portentous adventure. The Prince was lost in thought. He roused himself to drink to the Emperor in champagne, and the company cried "Hoch!" like men repeating responses in church.

No smoking was permitted, but some of the officers went down to the little open gallery to chew tobacco. No lights whatever were safe amidst that bundle of inflammable things. Bert suddenly fell yawning and shivering. He was overwhelmed by a sense of his own insignificance amidst these great rushing monsters of the air. He felt life was' too big for him--too much for him altogether.

He said something to Kurt about his head, went up the steep ladder from the swaying little gallery into the airship again, and so, as if it were a refuge, to bed.

5

Bert slept for a time, and then his sleep was broken by dreams. Mostly he was fleeing from formless terrors down an interminable passage in an airship--a passage paved at first with ravenous trap-doors, and then with openwork canvas of the most careless description.

"Gaw!" said Bert, turning over after his seventh fall through infinite space that night.

He sat up in the darkness and nursed his knees. The progress of the airship was not nearly so smooth as a balloon; he could feel a regular swaying up, up, up and then down, down, down, and the throbbing and tremulous quiver of the engines.

His mind began to teem with memories--more memories and more.

Through them, like a struggling swimmer in broken water, came the perplexing question, what am I to do to-morrow? To-morrow, Kurt had told him, the Prince's secretary, the Graf Von Winterfeld, would come to him and discuss his flying-machine, and then he would see the Prince. He would have to stick it out now that he was Butteridge, and sell his invention. And then, if they found him out! He had a vision of infuriated Butteridges.... Suppose after all he owned up? Pretended it was their misunderstanding? He began to scheme devices for selling the secret and circumventing Butteridge.

What should he ask for the thing? Somehow twenty thousand pounds

struck him as about the sum indicated.

He fell into that despondency that lies in wait in the small hours. He had got too big a job on--too big a job....

Memories swamped his scheming.

"Where was I this time last night?"

He recapitulated his evenings tediously and lengthily. Last night he had been up above the clouds in Butteridge's balloon. He thought of the moment when he dropped through them and saw the cold twilight sea close below. He still remembered that disagreeable incident with a nightmare vividness. And the night before he and Grubb had been looking for cheap lodgings at Littlestone in Kent. How remote that seemed now. It might be years ago. For the first time he thought of his fellow Desert Dervish, left with the two red-painted bicycles on Dymchurch sands. "'E won't make much of a show of it, not without me. Any'ow 'e did 'ave the treasury--such as it was--in his pocket!" ...The night before that was Bank Holiday night and they had sat discussing their minstrel enterprise, drawing up a programme and rehearsing steps. And the night before was Whit Sunday. "Lord!" cried Bert, "what a doing that motor-bicycle give me!" He recalled the empty flapping of the eviscerated cushion, the feeling of impotence as the flames rose again. From among the confused memories of that tragic flare one little figure emerged very bright and poignantly sweet, Edna, crying back reluctantly from the departing motor-car, "See you to-morrer, Bert?"

Other memories of Edna clustered round that impression. They led Bert's mind step by step to an agreeable state that found expression in "I'll marry 'ER if she don't look out." And then in a flash it followed in his mind that if he sold the Butteridge secret he could! Suppose after all he did get twenty thousand

pounds; such sums have been paid! With that he could buy house and garden, buy new clothes beyond dreaming, buy a motor, travel, have every delight of the civilised life as he knew it, for himself and Edna. Of course, risks were involved. "I'll 'ave old Butteridge on my track, I expect!"

He meditated upon that. He declined again to despondency. As yet he was only in the beginning of the adventure. He had still to deliver the goods and draw the cash. And before that--Just now he was by no means on his way home. He was flying off to America to fight there. "Not much fighting," he considered; "all our own way." Still, if a shell did happen to hit the Vaterland on the underside!...

"S'pose I ought to make my will."

He lay back for some time composing wills--chiefly in favour of Edna. He had settled now it was to be twenty thousand pounds. He left a number of minor legacies. The wills became more and more meandering and extravagant....

He woke from the eighth repetition of his nightmare fall through space. "This flying gets on one's nerves," he said.

He could feel the airship diving down, down, down, then slowly swinging to up, up, up. Throb, throb, throb, throb, quivered the engine.

He got up presently and wrapped himself about with Mr. Butteridge's overcoat and all the blankets, for the air was very keen. Then he peeped out of the window to see a grey dawn breaking over clouds, then turned up his light and bolted his door, sat down to the table, and produced his chest-protector.

He smoothed the crumpled plans with his hand, and contemplated

them. Then he referred to the other drawings in the portfolio. Twenty thousand pounds. If he worked it right! It was worth trying, anyhow.

Presently he opened the drawer in which Kurt had put paper and writing-materials.

Bert Smallways was by no means a stupid person, and up to a certain limit he had not been badly educated. His board school had taught him to draw up to certain limits, taught him to calculate and understand a specification. If at that point his country had tired of its efforts, and handed him over unfinished to scramble for a living in an atmosphere of advertisements and individual enterprise, that was really not his fault. He was as his State had made him, and the reader must not imagine because he was a little Cockney cad, that he was absolutely incapable of grasping the idea of the Butteridge flying-machine. But he found it stiff and perplexing. His motor-bicycle and Grubb's experiments and the "mechanical drawing" he had done in standard seven all helped him out; and, moreover, the maker of these drawings, whoever he was, had been anxious to make his intentions plain. Bert copied sketches, he made notes, he made a quite tolerable and intelligent copy of the essential drawings and sketches of the others. Then he fell into a meditation upon them.

At last he rose with a sigh, folded up the originals that had formerly been in his chest-protector and put them into the breast-pocket of his jacket, and then very carefully deposited the copies he had made in the place of the originals. He had no very clear plan in his mind in doing this, except that he hated the idea of altogether parting with the secret. For a long time he meditated profoundly--nodding. Then he turned out his light and went to bed again and schemed himself to sleep.

The hochgeboren Graf von Winterfeld was also a light sleeper that night, but then he was one of these people who sleep little and play chess problems in their heads to while away the time--and that night he had a particularly difficult problem to solve.

He came in upon Bert while he was still in bed in the glow of the sunlight reflected from the North Sea below, consuming the rolls and coffee a soldier had brought him. He had a portfolio under his arm, and in the clear, early morning light his dingy grey hair and heavy, silver-rimmed spectacles made him look almost benevolent. He spoke English fluently, but with a strong German flavour. He was particularly bad with his "b's," and his "th's" softened towards weak "z'ds." He called Bert explosively, "Pooterage." He began with some indistinct civilities, bowed, took a folding-table and chair from behind the door, put the former between himself and Bert, sat down on the latter, coughed drily, and opened his portfolio. Then he put his elbows on the table, pinched his lower lip with his two fore-fingers, and regarded Bert disconcertingly with magnified eyes. "You came to us, Herr Pooterage, against your will," he said at last.

"Ow d'you make that out?" asked Bert, after a pause of astonishment.

"I chuge by ze maps in your car. They were all English. And your provisions. They were all picnic. Also your cords were entangled. You haf' been tugging--but no good. You could not manage ze balloon, and anuzzer power than yours prought you to us. Is it not so?"

Bert thought.

"Also--where is ze laty?"

"Ere!--what lady?"

"You started with a lady. That is evident. You started for an afternoon excursion--a picnic. A man of your temperament--he would take a lady. She was not with you in your balloon when you came down at Dornhof. No! Only her chacket! It is your affair. Still, I am curious."

Bert reflected. "'Ow d'you know that?"

"I chuge by ze nature of your farious provisions. I cannot account, Mr. Pooterage, for ze lady, what you haf done with her. Nor can I tell why you should wear nature-sandals, nor why you should wear such cheap plue clothes. These are outside my instructions. Trifles, perhaps. Officially they are to be ignored. Ladies come and go--I am a man of ze worldt. I haf known wise men wear sandals and efen practice vegetarian habits. I haf known men--or at any rate, I haf known chemists--who did not schmoke. You haf, no doubt, put ze lady down somewhere. Well. Let us get to--business. A higher power"--his voice changed its emotional quality, his magnified eyes seemed to dilate--"has prought you and your secret straight to us. So!"--he bowed his head--"so pe it. It is ze Destiny of Chermany and my Prince. I can undershtandt you always carry zat secret. You are afraidt of roppers and spies. So it comes wiz you--to us. Mr. Pooterage, Chermany will puy it."

"Will she?"

"She will," said the secretary, looking hard at Bert's abandoned sandals in the corner of the locker. He roused himself, consulted a paper of notes for a moment, and Bert eyed his brown and wrinkled face with expectation and terror. "Chermany, I am instructed to say," said the secretary, with his eyes on the

table and his notes spread out, "has always been willing to puy your secret. We haf indeed peen eager to acquire it fery eager; and it was only ze fear that you might be, on patriotic groundts, acting in collusion with your Pritish War Office zat has made us discreet in offering for your marvellous invention through intermediaries. We haf no hesitation whatefer now, I am instructed, in agreeing to your proposal of a hundert thousand poundts."

"Crikey!" said Bert, overwhelmed.

"I peg your pardon?"

"Jest a twinge," said Bert, raising his hand to his bandaged head.

"Ah! Also I am instructed to say that as for that noble, unrightly accused laty you haf championed so brafely against Pritish hypocrisy and coldness, all ze chivalry of Chermany is on her site."

"Lady?" said Bert faintly, and then recalled the great Butteridge love story. Had the old chap also read the letters? He must think him a scorcher if he had. "Oh! that's aw-right," he said, "about 'er. I 'adn't any doubts about that. I--"

He stopped. The secretary certainly had a most appalling stare. It seemed ages before he looked down again. "Well, ze laty as you please. She is your affair. I haf performt my instructions. And ze title of Paron, zat also can pe done. It can all pe done, Herr Pooterage."

He drummed on the table for a second or so, and resumed. "I haf to tell you, sir, zat you come to us at a crisis in--Welt-Politik. There can be no harm now for me to put our

plans before you. Before you leave this ship again they will be manifest to all the world. War is perhaps already declared. We go to America. Our fleet will descend out of the air upon the United States--it is a country quite unprepared for war everywhere--everywhere. They have always relied on the Atlantic. And their navy. We have selected a certain point--it is at present the secret of our commanders--which we shall seize, and then we shall establish a depot--a sort of inland Gibraltar. It will be--what will it be?--an eagle's nest. There our airships will gather and repair, and thence they will fly to and fro over the United States, terrorising cities, dominating Washington, levying what is necessary, until the terms we dictate are accepted. You follow me?"

"Go on!" said Bert.

"We could have done all this with such Luftschiffe and Drachenflieger as we possess, but the accession of your machine renders our project complete. It not only gives us a better Drachenflieger, but it removes our last uneasiness as to Great Britain. Without you, sir, Great Britain, the land you loved so well and that has requited you so ill, that land of Pharisees and reptiles, can do nothing!--nothing! You see, I am perfectly frank with you. Well, I am instructed that Germany recognises all this. We want you to place yourself at our disposal. We want you to become our Chief Head Flight Engineer. We want you to manufacture, we want to equip a swarm of hornets under your direction. We want you to direct this force. And it is at our depot in America we want you. So we offer you simply, and without haggling, the full terms you demanded weeks ago--one hundred thousand pounds in cash, a salary of three thousand pounds a year, a pension of one thousand pounds a year, and the title of Baron as you desired. These are my instructions."

He resumed his scrutiny of Bert's face.

"That's all right, of course," said Bert, a little short of breath, but otherwise resolute and calm; and it seemed to him that now was the time to bring his nocturnal scheming to the issue.

The secretary contemplated Bert's collar with sustained attention. Only for one moment did his gaze move to the sandals and back.

"Jes' lemme think a bit," said Bert, finding the stare debilitating. "Look 'ere I" he said at last, with an air of great explicitness, "I GOT the secret."

"Yes."

"But I don't want the name of Butteridge to appear--see? I been thinking that over."

"A little delicacy?"

"Exactly. You buy the secret--leastways, I give it you--from Bearer--see?"

His voice failed him a little, and the stare continued. "I want to do the thing Enonymously. See?"

Still staring. Bert drifted on like a swimmer caught by a current. "Fact is, I'm going to edop' the name of Smallways. I don't want no title of Baron; I've altered my mind. And I want the money quiet-like. I want the hundred thousand pounds paid into benks--thirty thousand into the London and County Benk Branch at Bun Hill in Kent directly I 'and over the plans; twenty thousand into the Benk of England; 'arf the rest into a good French bank, the other 'arf the German National Bank, see? I

want it put there, right away. I don't want it put in the name of Butteridge. I want it put in the name of Albert Peter Smallways; that's the name I'm going to edop'. That's condition one."

"Go on!" said the secretary.

"The nex condition," said Bert, "is that you don't make any inquiries as to title. I mean what English gentlemen do when they sell or let you land. You don't arst 'ow I got it. See? 'Ere I am--I deliver you the goods--that's all right. Some people 'ave the cheek to say this isn't my invention, see? It is, you know--THAT'S all right; but I don't want that gone into. I want a fair and square agreement saying that's all right. See?"

His "See?" faded into a profound silence.

The secretary sighed at last, leant back in his chair and produced a tooth-pick, and used it, to assist his meditation on Bert's case. "What was that name?" he asked at last, putting away the tooth-pick; "I must write it down."

"Albert Peter Smallways," said Bert, in a mild tone.

The secretary wrote it down, after a little difficulty about the spelling because of the different names of the letters of the alphabet in the two languages.

"And now, Mr. Schmallyays," he said at last, leaning back and resuming the stare, "tell me: how did you ket hold of Mister Pooterage's balloon?"

When at last the Graf von Winterfold left Bert Smallways, he left him in an extremely deflated condition, with all his little story told.

He had, as people say, made a clean breast of it. He had been pursued into details. He had had to explain the blue suit, the sandals, the Desert Dervishes--everything. For a time scientific zeal consumed the secretary, and the question of the plans remained in suspense. He even went into speculation about the previous occupants of the balloon. "I suppose," he said, "the lady WAS the lady. But that is not our affair.

"It is very curious and amusing, yes: but I am afraid the Prince may be annoyed. He acted with his usual decision--always he acts with wonderful decision. Like Napoleon. Directly he was told of your descent into the camp at Dornhof, he said, 'Bring him!--bring him! It is my schtar!' His schtar of Destiny! You see? He will be thwarted. He directed you to come as Herr Pooterage, and you have not done so. You have tried, of course; but it has been a poor try. His arrangements of men are very just and right, and it is better for men to act up to them--completely. Especially now. Particularly now."

He resumed that attitude of his, with his underlip pinched between his forefingers. He spoke almost confidentially. "It will be awkward. I tried to suggest some doubt, but I was over-ruled. The Prince does not listen. He is impatient in the high air. Perhaps he will think his schtar has been making a fool of him. Perhaps he will think I have been making a fool of him."

He wrinkled his forehead, and drew in the corners of his mouth.

"I got the plans," said Bert.

"Yes. There is that! Yes. But you see the Prince was interested in Herr Pooterage because of his romantic seit. Herr Pooterage was so much more--ah!--in the picture. I am afraid you are not equal to controlling the flying machine department of our aerial park as he wished you to do. He hadt promised himself that....

"And der was also the prestige--the worldt prestige of Pooterage with us.... Well, we must see what we can do." He held out his hand. "Gif me the plans."

A terrible chill ran through the being of Mr. Smallways. To this day he is not clear in his mind whether he wept or no, but certainly there was weeping in his voice. "'Ere, I say!" he protested. "Ain't I to 'ave--nothin' for 'em?"

The secretary regarded him with benevolent eyes. "You do not deserve anyzing!" he said.

"I might 'ave tore 'em up."

"Zey are not yours!"

"They weren't Butteridge's!"

"No need to pay anyzing."

Bert's being seemed to tighten towards desperate deeds. "Gaw!" he said, clutching his coat, "AIN'T there?"

"Pe galm,"said the secretary. "Listen! You shall haf five hundert poundts. You shall haf it on my promise. I will do that for you, and that is all I can do. Take it from me. Gif me the name of that bank. Write it down. So! I tell you the Prince-- is no choke. I do not think he approffed of your appearance last

night. No! I can't answer for him. He wanted Pooterage, and you haf spoilt it. The Prince--I do not understand quite, he is in a strange state. It is the excitement of the starting and this great soaring in the air. I cannot account for what he does. But if all goes well I will see to it--you shall haf five hundert poundts. Will that do? Then gif me the plans."

"Old beggar!" said Bert, as the door clicked. "Gaw!--what an ole beggar!--SHARP!"

He sat down in the folding-chair, and whistled noiselessly for a time.

"Nice 'old swindle for 'im if I tore 'em up! I could 'ave."

He rubbed the bridge of his nose thoughtfully. "I gave the whole blessed show away. If I'd j'es' kep quiet about being Enonymous.... Gaw! ...Too soon, Bert, my boy--too soon and too rushy. I'd like to kick my silly self.

"I couldn't 'ave kep' it up.

"After all, it ain't so very bad," he said.

"After all, five 'undred pounds....It isn't MY secret, anyhow. It's jes' a pickup on the road. Five 'undred.

"Wonder what the fare is from America back home?"

8

And later in the day an extremely shattered and disorganised Bert Smallways stood in the presence of the Prince Karl Albert.

The proceedings were in German. The Prince was in his own cabin,

the end room of the airship, a charming apartment furnished in wicker-work with a long window across its entire breadth, looking forward. He was sitting at a folding-table of green baize, with Von Winterfeld and two officers sitting beside him, and littered before them was a number of American maps and Mr. Butteridge's letters and his portfolio and a number of loose papers. Bert was not asked to sit down, and remained standing throughout the interview. Von Winterfeld told his story, and every now and then the words Ballon and Pooterage struck on Bert's ears. The Prince's face remained stern and ominous and the two officers watched it cautiously or glanced at Bert. There was something a little strange in their scrutiny of the Prince--a curiosity, an apprehension. Then presently he was struck by an idea, and they fell discussing the plans. The Prince asked Bert abruptly in English. "Did you ever see this thing go op?"

Bert jumped. "Saw it from Bun 'Ill, your Royal Highness."

Von Winterfeld made some explanation.

"How fast did it go?"

"Couldn't say, your Royal Highness. The papers, leastways the Daily Courier, said eighty miles an hour."

They talked German over that for a time.

"Couldt it standt still? Op in the air? That is what I want to know."

"It could 'ovver, your Royal Highness, like a wasp," said Bert.

"Viel besser, nicht wahr?" said the Prince to Von Winterfeld, and then went on in German for a time.

Presently they came to an end, and the two officers looked at Bert. One rang a bell, and the portfolio was handed to an attendant, who took it away.

Then they reverted to the case of Bert, and it was evident the Prince was inclined to be hard with him. Von Winterfeld protested. Apparently theological considerations came in, for there were several mentions of "Gott!" Some conclusions emerged, and it was apparent that Von Winterfeld was instructed to convey them to Bert.

"Mr. Schmallyays, you haf obtained a footing in this airship," he said, "by disgraceful and systematic lying."

"Ardly systematic," said Bert. "I--"

The Prince silenced him by a gesture.

"And it is within the power of his Highness to dispose of you as a spy."

"Ere!--I came to sell--"

"Ssh!" said one of the officers.

"However, in consideration of the happy chance that mate you the instrument unter Gott of this Pooterage flying-machine reaching his Highness's hand, you haf been spared. Yes,--you were the pearer of goot tidings. You will be allowed to remain on this ship until it is convenient to dispose of you. Do you understandt?"

"We will bring him," said the Prince, and added terribly with a terrible glare, "als Ballast."

"You are to come with us," said Winterfeld, "as pallast. Do you understandt?"

Bert opened his mouth to ask about the five hundred pounds, and then a saving gleam of wisdom silenced him. He met Von Winterfeld's eye, and it seemed to him the secretary nodded slightly.

"Go!" said the Prince, with a sweep of the great arm and hand towards the door. Bert went out like a leaf before a gale.

9

But in between the time when the Graf von Winterfeld had talked to him and this alarming conference with the Prince, Bert had explored the Vaterland from end to end. He had found it interesting in spite of grave preoccupations. Kurt, like the greater number of the men upon the German air-fleet, had known hardly anything of aeronautics before his appointment to the new flag-ship. But he was extremely keen upon this wonderful new weapon Germany had assumed so suddenly and dramatically. He showed things to Bert with a boyish eagerness and appreciation. It was as if he showed them, over again to himself, like a child showing a new toy. "Let's go all over the ship," he said with zest. He pointed out particularly the lightness of everything, the use of exhausted aluminium tubing, of springy cushions inflated with compressed hydrogen; the partitions were hydrogen bags covered with light imitation leather, the very crockery was a light biscuit glazed in a vacuum, and weighed next to nothing. Where strength was needed there was the new Charlottenburg alloy, German steel as it was called, the toughest and most resistant metal in the world.

There was no lack of space. Space did not matter, so long as load did not grow. The habitable part of the ship was two

hundred and fifty feet long, and the rooms in two tiers; above these one could go up into remarkable little white-metal turrets with big windows and airtight double doors that enabled one to inspect the vast cavity of the gas-chambers. This inside view impressed Bert very much. He had never realised before that an airship was not one simple continuous gas-bag containing nothing but gas. Now he saw far above him the backbone of the apparatus and its big ribs, "like the neural and haemal canals," said Kurt, who had dabbled in biology.

"Rather!" said Bert appreciatively, though he had not the ghost of an idea what these phrases meant.

Little electric lights could be switched on up there if anything went wrong in the night. There were even ladders across the space. "But you can't go into the gas," protested Bert. "You can't breathe it."

The lieutenant opened a cupboard door and displayed a diver's suit, only that it was made of oiled silk, and both its compressed-air knapsack and its helmet were of an alloy of aluminium and some light metal. "We can go all over the inside netting and stick up bullet holes or leaks," he explained. "There's netting inside and out. The whole outer-case is rope ladder, so to speak."

Aft of the habitable part of the airship was the magazine of explosives, coming near the middle of its length. They were all bombs of various types mostly in glass--none of the German airships carried any guns at all except one small pom-pom (to use the old English nickname dating from the Boer war), which was forward in the gallery upon the shield at the heart of the eagle.

From the magazine amidships a covered canvas gallery with aluminium treads on its floor and a hand-rope, ran back

underneath the gas-chamber to the engine-room at the tail; but along this Bert did not go, and from first to last he never saw the engines. But he went up a ladder against a gale of ventilation--a ladder that was encased in a kind of gas-tight fire escape--and ran right athwart the great forward air-chamber to the little look-out gallery with a telephone, that gallery that bore the light pom-pom of German steel and its locker of shells. This gallery was all of aluminium magnesium alloy, the tight front of the air-ship swelled cliff-like above and below, and the black eagle sprawled overwhelmingly gigantic, its extremities all hidden by the bulge of the gas-bag. And far down, under the soaring' eagles, was England, four thousand feet below perhaps, and looking very small and defenceless indeed in the morning sunlight.

The realisation that there was England gave Bert sudden and unexpected qualms of patriotic compunction. He was struck by a quite novel idea. After all, he might have torn up those plans and thrown them away. These people could not have done so very much to him. And even if they did, ought not an Englishman to die for his country? It was an idea that had hitherto been rather smothered up by the cares of a competitive civilisation. He became violently depressed. He ought, he perceived, to have seen it in that light before. Why hadn't he seen it in that light before?

Indeed, wasn't he a sort of traitor?....He wondered how the aerial fleet must look from down there. Tremendous, no doubt, and dwarfing all the buildings.

He was passing between Manchester and Liverpool, Kurt told him; a gleaming band across the prospect was the Ship Canal, and a weltering ditch of shipping far away ahead, the Mersey estuary. Bert was a Southerner; he had never been north of the Midland counties, and the multitude of factories and chimneys--the latter

for the most part obsolete and smokeless now, superseded by huge electric generating stations that consumed their own reek--old railway viaducts, mono-rail net-works and goods yards, and the vast areas of dingy homes and narrow streets, spreading aimlessly, struck him as though Camberwell and Rotherhithe had run to seed. Here and there, as if caught in a net, were fields and agricultural fragments. It was a sprawl of undistinguished population. There were, no doubt, museums and town halls and even cathedrals of a sort to mark theoretical centres of municipal and religious organisation in this confusion; but Bert could not see them, they did not stand out at all in that wide disorderly vision of congested workers' houses and places to work, and shops and meanly conceived chapels and churches. And across this landscape of an industrial civilisation swept the shadows of the German airships like a hurrying shoal of fishes....

Kurt and he fell talking of aerial tactics, and presently went down to the undergallery in order that Bert might see the Drachenflieger that the airships of the right wing had picked up overnight and were towing behind them; each airship towing three or four. They looked, like big box-kites of an exaggerated form, soaring at the ends of invisible cords. They had long, square heads and flattened tails, with lateral propellers.

"Much skill is required for those!--much skill!"

"Rather!"

Pause.

"Your machine is different from that, Mr. Butteridge?"

"Quite different," said Bert. "More like an insect, and less like a bird. And it buzzes, and don't drive about so. What can

those things do?"

Kurt was not very clear upon that himself, and was still explaining when Bert was called to the conference we have recorded with the Prince.

And after that was over, the last traces of Butteridge fell from Bert like a garment, and he became Smallways to all on board. The soldiers ceased to salute him, and the officers ceased to seem aware of his existence, except Lieutenant Kurt. He was turned out of his nice cabin, and packed in with his belongings to share that of Lieutenant Kurt, whose luck it was to be junior, and the bird-headed officer, still swearing slightly, and carrying strops and aluminium boot-trees and weightless hair-brushes and hand-mirrors and pomade in his hands, resumed possession. Bert was put in with Kurt because there was nowhere else for him to lay his bandaged head in that close-packed vessel. He was to mess, he was told, with the men.

Kurt came and stood with his legs wide apart and surveyed, him for a moment as he sat despondent in his new quarters.

"What's your real name, then?" said Kurt, who was only imperfectly informed of the new state of affairs.

"Smallways."

"I thought you were a bit of a fraud--even when I thought you were Butteridge. You're jolly lucky the Prince took it calmly. He's a pretty tidy blazer when he's roused. He wouldn't stick a moment at pitching a chap of your sort overboard if he thought fit. No!... They've shoved you on to me, but it's my cabin, you know."

"I won't forget," said Bert.

Kurt left him, and when he came to look about him the first thing he saw pasted on the padded wall was a reproduction, of the great picture by Siegfried Schmalz of the War God, that terrible, trampling figure with the viking helmet and the scarlet cloak, wading through destruction, sword in hand, which had so strong a resemblance to Karl Albert, the prince it was painted to please.

CHAPTER V THE BATTLE OF THE NORTH ATLANTIC

1

The Prince Karl Albert had made a profound impression upon Bert. He was quite the most terrifying person Bert had ever encountered. He filled the Smallways soul with passionate dread and antipathy. For a long time Bert sat alone in Kurt's cabin, doing nothing and not venturing even to open the door lest he should be by that much nearer that appalling presence.

So it came about that he was probably the last person on board to hear the news that wireless telegraphy was bringing to the airship in throbs and fragments of a great naval battle in progress in mid-Atlantic.

He learnt it at last from Kurt.

Kurt came in with a general air of ignoring Bert, but muttering to himself in English nevertheless. "Stupendous!" Bert heard him say. "Here!" he said, "get off this locker." And he proceeded to rout out two books and a case of maps. He spread them on the folding-table, and stood regarding them. For a time his Germanic discipline struggled with his English informality and his natural

kindliness and talkativeness, and at last lost.

"They're at it, Smallways," he said.

"At what, sir?" said Bert, broken and respectful.

"Fighting! The American North Atlantic squadron and pretty nearly the whole of our fleet. Our Eiserne Kreuz has had a gruelling and is sinking, and their Miles Standish--she's one of their biggest--has sunk with all hands. Torpedoes, I suppose. She was a bigger ship than the Karl der Grosse, but five or six years older. Gods! I wish we could see it Smallways; a square fight in blue water, guns or nothing, and all of 'em steaming ahead!"

He spread his maps, he had to talk, and so he delivered a lecture on the naval situation to Bert.

"Here it is," he said, latitude 30 degrees 50 minutes N. longitude 30 degrees 50 minutes W. It's a good day off us, anyhow, and they're all going south-west by south at full pelt as hard as they can go. We shan't see a bit of it, worse luck! Not a sniff we shan't get!"

2

The naval situation in the North Atlantic at that time was a peculiar one. The United States was by far the stronger of the two powers upon the sea, but the bulk of the American fleet was still in the Pacific. It was in the direction of Asia that war had been most feared, for the situation between Asiatic and white had become unusually violent and dangerous, and the Japanese government had shown itself quite unprecedentedly difficult. The German attack therefore found half the American strength at Manila, and what was called the Second Fleet strung out across the Pacific in wireless contact between the Asiatic station and

San Francisco. The North Atlantic squadron was the sole American force on her eastern shore, it was returning from a friendly visit to France and Spain, and was pumping oil-fuel from tenders in mid-Atlantic--for most of its ships were steamships--when the international situation became acute. It was made up of four battleships and five armoured cruisers ranking almost with battleships, not one of which was of a later date than 1913. The Americans had indeed grown so accustomed to the idea that Great Britain could be trusted to keep the peace of the Atlantic that a naval attack on the eastern seaboard found them unprepared even in their imaginations. But long before the declaration of war--indeed, on Whit Monday--the whole German fleet of eighteen battleships, with a flotilla of fuel tenders and converted liners containing stores to be used in support of the air-fleet, had passed through the straits of Dover and headed boldly for New York. Not only did these German battleships outnumber the Americans two to one, but they were more heavily armed and more modern in construction--seven of them having high explosive engines built of Charlottenburg steel, and all carrying Charlottenburg steel guns.

The fleets came into contact on Wednesday before any actual declaration of war. The Americans had strung out in the modern fashion at distances of thirty miles or so, and were steaming to keep themselves between the Germans and either the eastern states or Panama; because, vital as it was to defend the seaboard cities and particularly New York, it was still more vital to save the canal from any attack that might prevent the return of the main fleet from the Pacific. No doubt, said Kurt, this was now making records across that ocean, "unless the Japanese have had the same idea as the Germans." It was obviously beyond human possibility that the American North Atlantic fleet could hope to meet and defeat the German; but, on the other hand, with luck it might fight a delaying action and inflict such damage as to greatly weaken the attack upon the coast defences. Its duty, indeed, was

not victory but devotion, the severest task in the world. Meanwhile the submarine defences of New York, Panama, and the other more vital points could be put in some sort of order.

This was the naval situation, and until Wednesday in Whit week it was the only situation the American people had realised. It was then they heard for the first time of the real scale of the Dornhof aeronautic park and the possibility of an attack coming upon them not only by sea, but by the air. But it is curious that so discredited were the newspapers of that period that a large majority of New Yorkers, for example, did not believe the most copious and circumstantial accounts of the German air-fleet until it was actually in sight of New York.

Kurt's talk was half soliloquy. He stood with a map on Mercator's projection before him, swaying to the swinging of the ship and talking of guns and tonnage, of ships and their build and powers and speed, of strategic points, and bases of operation. A certain shyness that reduced him to the status of a listener at the officers' table no longer silenced him.

Bert stood by, saying very little, but watching Kurt's finger on the map. "They've been saying things like this in the papers for a long time," he remarked. "Fancy it coming real!"

Kurt had a detailed knowledge of the Miles Standish. "She used to be a crack ship for gunnery--held the record. I wonder if we beat her shooting, or how? I wish I was in it. I wonder which of our ships beat her. Maybe she got a shell in her engines. It's a running fight! I wonder what the Barbarossa is doing," he went on, "She's my old ship. Not a first-rater, but good stuff. I bet she's got a shot or two home by now if old Schneider's up to form. Just think of it! There they are whacking away at each other, great guns going, shells exploding, magazines bursting, ironwork flying about like straw in a gale, all we've been

dreaming of for years! I suppose we shall fly right away to New York--just as though it wasn't anything at all. I suppose we shall reckon we aren't wanted down there. It's no more than a covering fight on our side. All those tenders and store-ships of ours are going on southwest by west to New York to make a floating depot for us. See?" He dabbed his forefinger on the map. "Here we are. Our train of stores goes there, our battleships elbow the Americans out of our way there."

When Bert went down to the men's mess-room to get his evening ration, hardly any one took notice of him except just to point him out for an instant. Every one was talking of the battle, suggesting, contradicting--at times, until the petty officers hushed them, it rose to a great uproar. There was a new bulletin, but what it said he did not gather except that it concerned the *Barbarossa*. Some of the men stared at him, and he heard the name of "Booteridge" several times; but no one molested him, and there was no difficulty about his soup and bread when his turn at the end of the queue came. He had feared there might be no ration for him, and if so he did not know what he would have done.

Afterwards he ventured out upon the little hanging gallery with the solitary sentinel. The weather was still fine, but the wind was rising and the rolling swing of the airship increasing. He clutched the rail tightly and felt rather giddy. They were now out of sight of land, and over blue water rising and falling in great masses. A dingy old brigantine under the British flag rose and plunged amid the broad blue waves--the only ship in sight.

3

In the evening it began to blow and the air-ship to roll like a porpoise as it swung through the air. Kurt said that several of the men were sea-sick, but the motion did not inconvenience Bert,

whose luck it was to be of that mysterious gastric disposition which constitutes a good sailor. He slept well, but in the small hours the light awoke him, and he found Kurt staggering about in search of something. He found it at last in the locker, and held it in his hand unsteadily--a compass. Then he compared his map.

"We've changed our direction," he said, "and come into the wind. I can't make it out. We've turned away from New York to the south. Almost as if we were going to take a hand--"

He continued talking to himself for some time.

Day came, wet and windy. The window was bedewed externally, and they could see nothing through it. It was also very cold, and Bert decided to keep rolled up in his blankets on the locker until the bugle summoned him to his morning ration. That consumed, he went out on the little gallery; but he could see nothing but eddying clouds driving headlong by, and the dim outlines of the nearer airships. Only at rare intervals could he get a glimpse of grey sea through the pouring cloud-drift.

Later in the morning the Vaterland changed altitude, and soared up suddenly in a high, clear sky, going, Kurt said, to a height of nearly thirteen thousand feet.

Bert was in his cabin, and chanced to see the dew vanish from the window and caught the gleam of sunlight outside. He looked out, and saw once more that sunlit cloud floor he had seen first from the balloon, and the ships of the German air-fleet rising one by one from the white, as fish might rise and become visible from deep water. He stared for a moment and then ran out to the little gallery to see this wonder better. Below was cloudland and storm, a great drift of tumbled weather going hard away to the north-east, and the air about him was clear and cold and serene save for the faintest chill breeze and a rare, drifting

snow-flake. Throb, throb, throb, throb, went the engines in the stillness. That huge herd of airships rising one after another had an effect of strange, portentous monsters breaking into an altogether unfamiliar world.

Either there was no news of the naval battle that morning, or the Prince kept to himself whatever came until past midday. Then the bulletins came with a rush, bulletins that made the lieutenant wild with excitement.

"Barbarossa disabled and sinking," he cried. "Gott im Himmel! Der alte Barbarossa! Aber Welch ein braver kriegler!"

He walked about the swinging cabin, and for a time he was wholly German.

Then he became English again. "Think of it, Smallways! The old ship we kept so clean and tidy! All smashed about, and the iron flying about in fragments, and the chaps one knew--Gott!--flying about too! Scalding water squirting, fire, and the smash, smash of the guns! They smash when you're near! Like everything bursting to pieces! Wool won't stop it--nothing! And me up here--so near and so far! Der alte Barbarossa!"

"Any other ships?" asked Smallways, presently.

"Gott! Yes! We've lost the Karl der Grosse, our best and biggest. Run down in the night by a British liner that blundered into the fighting in trying to blunder out. They're fighting in a gale. The liner's afloat with her nose broken, sagging about! There never was such a battle!--never before! Good ships and good men on both sides,--and a storm and the night and the dawn and all in the open ocean full steam ahead! No stabbing! No submarines! Guns and shooting! Half our ships we don't hear of any more, because their masts are shot away. Latitude, 30

degrees 40 minutes N.--longitude, 40 degrees 30 minutes W.-
-where's that?"

He routed out his map again, and stared at it with eyes that did not see.

"Der alte Barbarossa! I can't get it out of my head--with shells in her engine-room, and the fires flying out of her furnaces, and the stokers and engineers scalded and dead. Men I've messed with, Smallways--men I've talked to close! And they've had their day at last! And it wasn't all luck for them.!

"Disabled and sinking! I suppose everybody can't have all the luck in a battle. Poor old Schneider! I bet he gave 'em something back!"

So it was the news of the battle came filtering through to them all that morning. The Americans had lost a second ship, name unknown; the Hermann had been damaged in covering the Barbarossa.... Kurt fretted like an imprisoned animal about the airship, now going up to the forward gallery under the eagle, now down into the swinging gallery, now poring over his maps. He infected Smallways with a sense of the immediacy of this battle that was going on just over the curve of the earth. But when Bert went down to the gallery the world was empty and still, a clear inky-blue sky above and a rippled veil of still, thin sunlit cirrus below, through which one saw a racing drift of rain-cloud, and never a glimpse of sea. Throb, throb, throb, throb, went the engines, and the long, undulating wedge of airships hurried after the flagship like a flight of swans after their leader. Save for the quiver of the engines it was as noiseless as a dream. And down there, somewhere in the wind and rain, guns roared, shells crashed home, and, after the old manner of warfare, men toiled and died.

As the afternoon wore on the lower weather abated, and the sea became intermittently visible again. The air-fleet dropped slowly to the middle air, and towards sunset they had a glimpse of the disabled Barbarossa far away to the east. Smallways heard men hurrying along the passage, and was drawn out to the gallery, where he found nearly a dozen officers collected and scrutinising the helpless ruins of the battleship through field-glasses. Two other vessels stood by her, one an exhausted petrol tank, very high out of the water, and the other a converted liner. Kurt was at the end of the gallery, a little apart from the others.

"Gott!" he said at last, lowering his binocular, "it is like seeing an old friend with his nose cut off--waiting to be finished. Der Barbarossa!"

With a sudden impulse he handed his glass to Bert, who had peered beneath his hands, ignored by every one, seeing the three ships merely as three brown-black lines upon the sea.

Never had Bert seen the like of that magnified slightly hazy image before. It was not simply a battered ironclad that wallowed helpless, it was a mangled ironclad. It seemed wonderful she still floated. Her powerful engines had been her ruin. In the long chase of the night she had got out of line with her consorts, and nipped in between the Susquehanna and the Kansas City. They discovered her proximity, dropped back until she was nearly broadside on to the former battleship, and signalled up the Theodore Roosevelt and the little Monitor. As dawn broke she had found herself hostess of a circle. The fight had not lasted five minutes before the appearance of the Hermann to the east, and immediately after of the Furst Bismarck in the west, forced the Americans to leave her, but in that time they had smashed her iron to rags. They had vented the accumulated

tensions of their hard day's retreat upon her. As Bert saw her, she seemed a mere metal-worker's fantasy of frozen metal writhings. He could not tell part from part of her, except by its position.

"Gott!" murmured Kurt, taking the glasses Bert restored to him--
"Gott! Da waren Albrecht--der gute Albrecht und der alte Zimmermann--und von Rosen!"

Long after the Barbarosa had been swallowed up in the twilight and distance he remained on the gallery peering through his glasses, and when he came back to his cabin he was unusually silent and thoughtful.

"This is a rough game, Smallways," he said at last--"this war is a rough game. Somehow one sees it different after a thing like that. Many men there were worked to make that Barbarossa, and there were men in it--one does not meet the like of them every day. Albrecht--there was a man named Albrecht--played the zither and improvised; I keep on wondering what has happened to him. He and I--we were very close friends, after the German fashion."

Smallways woke--the next night to discover the cabin in darkness, a draught blowing through it, and Kurt talking to himself in German. He could see him dimly by the window, which he had unscrewed and opened, peering down. That cold, clear, attenuated light which is not so much light as a going of darkness, which casts inky shadows and so often heralds the dawn in the high air, was on his face.

"What's the row?" said Bert.

"Shut up!" said the lieutenant. "Can't you hear?"

Into the stillness came the repeated heavy thud of guns, one,

two, a pause, then three in quick succession.

"Gaw!" said Bert--"guns!" and was instantly at the lieutenant's side. The airship was still very high and the sea below was masked by a thin veil of clouds. The wind had fallen, and Bert, following Kurt's pointing finger, saw dimly through the colourless veil first a red glow, then a quick red flash, and then at a little distance from it another. They were, it seemed for a while, silent flashes, and seconds after, when one had ceased to expect them, came the belated thuds--thud, thud. Kurt spoke in German, very quickly.

A bugle call rang through the airship.

Kurt sprang to his feet, saying something in an excited tone, still using German, and went to the door.

"I say! What's up?" cried Bert. "What's that?"

The lieutenant stopped for an instant in the doorway, dark against the light passage. "You stay where you are, Smallways. You keep there and do nothing. We're going into action," he explained, and vanished.

Bert's heart began to beat rapidly. He felt himself poised over the fighting vessels far below. In a moment, were they to drop like a hawk striking a bird? "Gaw!" he whispered at last, in awestricken tones.

Thud! . . . thud! He discovered far away a second ruddy flare flashing guns back at the first. He perceived some difference on the Vaterland for which he could not account, and then he realised that the engines had slowed to an almost inaudible beat. He stuck his head out of the window--it was a tight fit--and saw in the bleak air the other airships slowed down to a scarcely

perceptible motion.

A second bugle sounded, was taken up faintly from ship to ship. Out went the lights; the fleet became dim, dark bulks against an intense blue sky that still retained an occasional star. For a long time they hung, for an interminable time it seemed to him, and then began the sound of air being pumped into the balloonette, and slowly, slowly the Vaterland sank down towards the clouds.

He craned his neck, but he could not see if the rest of the fleet was following them; the overhang of the gas-chambers intervened. There was something that stirred his imagination deeply in that stealthy, noiseless descent. The obscurity deepened for a time, the last fading star on the horizon vanished, and he felt the cold presence of cloud. Then suddenly the glow beneath assumed distinct outlines, became flames, and the Vaterland ceased to descend and hung observant, and it would seem unobserved, just beneath a drifting stratum of cloud, a thousand feet, perhaps, over the battle below.

In the night the struggling naval battle and retreat had entered upon a new phase. The Americans had drawn together the ends of the flying line skilfully and dexterously, until at last it was a column and well to the south of the lax sweeping pursuit of the Germans. Then in the darkness before the dawn they had come about and steamed northward in close order with the idea of passing through the German battle-line and falling upon the flotilla that was making for New York in support of the German air-fleet. Much had altered since the first contact of the fleets. By this time the American admiral, O'Connor, was fully informed of the existence of the airships, and he was no longer vitally concerned for Panama, since the submarine flotilla was reported arrived there from Key West, and the Delaware and Abraham Lincoln, two powerful and entirely modern ships, were

already at Rio Grande, on the Pacific side of the canal. His manoeuvre was, however, delayed by a boiler explosion on board the Susquehanna, and dawn found this ship in sight of and indeed so close to the Bremen and Weimar that they instantly engaged. There was no alternative to her abandonment but a fleet engagement. O'Connor chose the latter course. It was by no means a hopeless fight. The Germans, though much more numerous and powerful than the Americans, were in a dispersed line measuring nearly forty-five miles from end to end, and there were many chances that before they could gather in for the fight the column of seven Americans would have ripped them from end to end.

The day broke dim and overcast, and neither the Bremen nor the Weimar realised they had to deal with more than the Susquehanna until the whole column drew out from behind her at a distance of a mile or less and bore down on them. This was the position of affairs when the Vaterland appeared in the sky. The red glow Bert had seen through the column of clouds came from the luckless Susquehanna; she lay almost immediately below, burning fore and aft, but still fighting two of her guns and steaming slowly southward. The Bremen and the Weimar, both hit in several places, were going west by south and away from her. The American fleet, headed by the Theodore Roosevelt, was crossing behind them, pounding them in succession, steaming in between them and the big modern Furst Bismarck, which was coming up from the west. To Bert, however, the names of all these ships were unknown, and for a considerable time indeed, misled by the direction in which the combatants were moving, he imagined the Germans to be Americans and the Americans Germans. He saw what appeared to him to be a column of six battleships pursuing three others who were supported by a newcomer, until the fact that the Bremen and Weimar were firing into the Susquehanna upset his calculations. Then for a time he was hopelessly at a loss. The noise of the guns, too, confused him, they no longer seemed to boom; they went whack, whack, whack, whack, and each faint flash made his heart

jump in anticipation of the instant impact. He saw these ironclads, too, not in profile, as he was accustomed to see ironclads in pictures, but in plan and curiously foreshortened. For the most part they presented empty decks, but here and there little knots of men sheltered behind steel bulwarks. The long, agitated noses of their, big guns, jetting thin transparent flashes and the broadside activity of the quick-firers, were the chief facts in this bird's-eye view. The Americans being steam-turbine ships, had from two to four blast funnels each; the Germans lay lower in the water, having explosive engines, which now for some reason made an unwonted muzzling roar. Because of their steam propulsion, the American ships were larger and with a more graceful outline. He saw all these foreshortened ships rolling considerably and fighting their guns over a sea of huge low waves and under the cold, explicit light of dawn. The whole spectacle waved slowly with the long rhythmic rising and beat of the airship.

At first only the Vaterland of all the flying fleet appeared upon the scene below. She hovered high, over the Theodore Roosevelt, keeping pace with the full speed of that ship. From that ship she must have been intermittently visible through the drifting clouds. The rest of the German fleet remained above the cloud canopy at a height of six or seven thousand feet, communicating with the flagship by wireless telegraphy, but risking no exposure to the artillery below.

It is doubtful at what particular time the unlucky Americans realised the presence of this new factor in the fight. No account now survives of their experience. We have to imagine as well as we can what it must have been to a battled-strained sailor suddenly glancing upward to discover that huge long silent shape overhead, vaster than any battleship, and trailing now from its hinder quarter a big German flag. Presently, as the sky cleared, more of such ships appeared in the blue through the

dissolving clouds, and more, all disdainfully free of guns or armour, all flying fast to keep pace with the running fight below.

From first to last no gun whatever was fired at the Vaterland, and only a few rifle shots. It was a mere adverse stroke of chance that she had a man killed aboard her. Nor did she take any direct share in the fight until the end. She flew above the doomed American fleet while the Prince by wireless telegraphy directed the movements of her consorts. Meanwhile the Vogel-stern and Preussen, each with half a dozen drachenflieger in tow, went full speed ahead and then dropped through the clouds, perhaps five miles ahead of the Americans. The Theodore Roosevelt let fly at once with the big guns in her forward barbette, but the shells burst far below the Vogel-stern, and forthwith a dozen single-man drachenflieger were swooping down to make their attack.

Bert, craning his neck through the cabin port-hole, saw, the whole of that incident, that first encounter of aeroplane and ironclad. He saw the queer German drachenflieger, with their wide flat wings and square box-shaped heads, their wheeled bodies, and their single-man riders, soar down the air like a flight of birds. "Gaw!" he said. One to the right pitched extravagantly, shot steeply up into the air, burst with a loud report, and flamed down into the sea; another plunged nose forward into the water and seemed to fly to pieces as it hit the waves. He saw little men on the deck of the Theodore Roosevelt below, men foreshortened in plan into mere heads and feet, running out preparing to shoot at the others. Then the foremost flying-machine was rushing between Bert and the American's deck, and then bang! came the thunder of its bomb flung neatly at the forward barbette, and a thin little crackling of rifle shots in reply. Whack, whack, whack, went the quick-firing guns of the Americans' battery, and smash came an answering shell from the

Furst Bismarck. Then a second and third flying-machine passed between Bert and the American ironclad, dropping bombs also, and a fourth, its rider hit by a bullet, reeled down and dashed itself to pieces and exploded between the shot-torn funnels, blowing them apart. Bert had a momentary glimpse of a little black creature jumping from the crumpling frame of the flying-machine, hitting the funnel, and falling limply, to be instantly caught and driven to nothingness by the blaze and rush of the explosion.

Smash! came a vast explosion in the forward part of the flagship, and a huge piece of metalwork seemed to lift out of her and dump itself into the sea, dropping men and leaving a gap into which a prompt drachenflieger planted a flaring bomb. And then for an instant Bert perceived only too clearly in the growing, pitiless light a number of minute, convulsively active animalcula scorched and struggling in the Theodore Roosevelt's foaming wake. What were they? Not men--surely not men? Those drowning, mangled little creatures tore with their clutching fingers at Bert's soul. "Oh, Gord!" he cried, "Oh, Gord!" almost whimpering. He looked again and they had gone, and the black stem of the Andrew Jackson, a little disfigured by the sinking Bremen's last shot, was parting the water that had swallowed them into two neatly symmetrical waves. For some moments sheer blank horror blinded Bert to the destruction below.

Then, with an immense rushing sound, bearing as it were a straggling volley of crashing minor explosions on its back, the Susquehanna, three miles and more now to the east, blew up and vanished abruptly in a boiling, steaming welter. For a moment nothing was to be seen but tumbled water, and--then there came belching up from below, with immense gulping noises, eructations of steam and air and petrol and fragments of canvas and woodwork and men.

That made a distinct pause in the fight. It seemed a long pause to Bert. He found himself looking for the drachenflieger. The flattened ruin of one was floating abeam of the Monitor, the rest had passed, dropping bombs down the American column; several were in the water and apparently uninjured, and three or four were still in the air and coming round now in a wide circle to return to their mother airships. The American ironclads were no longer in column formation; the Theodore Roosevelt, badly damaged, had turned to the southeast, and the Andrew Jackson, greatly battered but uninjured in any fighting part was passing between her and the still fresh and vigorous Furst Bismarck to intercept and meet the latter's fire. Away to the west the Hermann and the Germanicus had appeared and were coming into action.

In the pause, after the Susquehanna's disaster Bert became aware of a trivial sound like the noise of an ill-greased, ill-hung door that falls ajar--the sound of the men in the Furst Bismarck cheering.

And in that pause in the uproar too, the sun rose, the dark waters became luminously blue, and a torrent of golden light irradiated the world. It came like a sudden smile in a scene of hate and terror. The cloud veil had vanished as if by magic, and the whole immensity of the German air-fleet was revealed in the sky; the air-fleet stooping now upon its prey.

"Whack-bang, whack-bang," the guns resumed, but ironclads were not built to fight the zenith, and the only hits the Americans scored were a few lucky chances in a generally ineffectual rifle fire. Their column was now badly broken, the Susquehanna had gone, the Theodore Roosevelt had fallen astern out of the line, with her forward guns disabled, in a heap of wreckage, and the Monitor was in some grave trouble. These two had ceased fire altogether, and so had the Bremen and Weimar, all four ships lying within shot of each other in an involuntary truce and with

their respective flags still displayed. Only four American ships now, with the Andrew Jackson readings kept to the south-easterly course. And the Furst Bismarck, the Hermann, and the Germanicus steamed parallel to them and drew ahead of them, fighting heavily. The Vaterland rose slowly in the air in preparation for the concluding act of the drama.

Then, falling into place one behind the other, a string of a dozen airships dropped with unhurrying swiftness down the air in pursuit of the American fleet. They kept at a height of two thousand feet or more until they were over and a little in advance of the rearmost ironclad, and then stooped swiftly down into a fountain of bullets, and going just a little faster than the ship below, pelted her thinly protected decks with bombs until they became sheets of detonating flame. So the airships passed one after the other along the American column as it sought to keep up its fight with the Furst Bismarck, the Hermann, and the Germanicus, and each airship added to the destruction and confusion its predecessor had made. The American gunfire ceased, except for a few heroic shots, but they still steamed on, obstinately unsubdued, bloody, battered, and wrathfully resistant, spitting bullets at the airships and unmercifully pounded by the German ironclads. But now Bert had but intermittent glimpses of them between the nearer bulks of the airships that assailed them....

It struck Bert suddenly that the whole battle was receding and growing small and less thunderously noisy. The Vaterland was rising in the air, steadily and silently, until the impact of the guns no longer smote upon the heart but came to the ear dulled by distance, until the four silenced ships to the eastward were little distant things: but were there four? Bert now could see only three of those floating, blackened, and smoking rafts of ruin against the sun. But the Bremen had two boats out; the Theodore Roosevelt was also dropping boats to where the drift of

minute objects struggled, rising and falling on the big, broad Atlantic waves.... The Vaterland was no longer following the fight. The whole of that hurrying tumult drove away to the south-eastward, growing smaller and less audible as it passed. One of the airships lay on the water burning, a remote monstrous fount of flames, and far in the south-west appeared first one and then three other German ironclads hurrying in support of their consorts....

5

Steadily the Vaterland soared, and the air-fleet soared with her and came round to head for New York, and the battle became a little thing far away, an incident before the breakfast. It dwindled to a string of dark shapes and one smoking yellow flare that presently became a mere indistinct smear upon the vast horizon and the bright new day, that was at last altogether lost to sight...

So it was that Bert Smallways saw the first fight of the airship and the last fight of those strangest things in the whole history of war: the ironclad battleships, which began their career with the floating batteries of the Emperor Napoleon III in the Crimean war and lasted, with an enormous expenditure of human energy and resources, for seventy years. In that space of time the world produced over twelve thousand five hundred of these strange monsters, in schools, in types, in series, each larger and heavier and more deadly than its predecessors. Each in its turn was hailed as the last birth of time, most in their turn were sold for old iron. Only about five per cent of them ever fought in a battle. Some foundered, some went ashore, and broke up, several rammed one another by accident and sank. The lives of countless men were spent in their service, the splendid genius, and patience of thousands of engineers and inventors, wealth and material beyond estimating; to their account we must put, stunted

and starved lives on land, millions of children sent to toil unduly, innumerable opportunities of fine living undeveloped and lost. Money had to be found for them at any cost--that was the law of a nation's existence during that strange time. Surely they were the weirdest, most destructive and wasteful megatheria in the whole history of mechanical invention.

And then cheap things of gas and basket-work made an end of them altogether, smiting out of the sky!...

Never before had Bert Smallways seen pure destruction, never had he realised the mischief and waste of war. His startled mind rose to the conception; this also is in life. Out of all this fierce torrent of sensation one impression rose and became cardinal--the impression of the men of the Theodore Roosevelt who had struggled in the water after the explosion of the first bomb. "Gaw!" he said at the memory; "it might 'ave been me and Grubb! ... I suppose you kick about and get the water in your mouf. I don't suppose it lasts long."

He became anxious to see how Kurt was affected by these things. Also he perceived he was hungry. He hesitated towards the door of the cabin and peeped out into the passage. Down forward, near the gangway to the men's mess, stood a little group of air sailors looking at something that was hidden from him in a recess. One of them was in the light diver's costume Bert had already seen in the gas chamber turret, and he was moved to walk along and look at this person more closely and examine the helmet he carried under his arm. But he forgot about the helmet when he got to the recess, because there he found lying on the floor the dead body of the boy who had been killed by a bullet from the Theodore Roosevelt.

Bert had not observed that any bullets at all had reached the Waterland or, indeed, imagined himself under fire. He could not

understand for a time what had killed the lad, and no one explained to him.

The boy lay just as he had fallen and died, with his jacket torn and scorched, his shoulder-blade smashed and burst away from his body and all the left side of his body ripped and rent. There was much blood. The sailors stood listening to the man with the helmet, who made explanations and pointed to the round bullet hole in the floor and the smash in the panel of the passage upon which the still vicious missile had spent the residue of its energy. All the faces were grave and earnest: they were the faces of sober, blond, blue-eyed men accustomed to obedience and an orderly life, to whom this waste, wet, painful thing that had been a comrade came almost as strangely as it did to Bert.

A peal of wild laughter sounded down the passage in the direction of the little gallery and something spoke--almost shouted--in German, in tones of exultation.

Other voices at a lower, more respectful pitch replied.

"Der Prinz," said a voice, and all the men became stiffer and less natural. Down the passage appeared a group of figures, Lieutenant Kurt walking in front carrying a packet of papers.

He stopped point blank when he saw the thing in the recess, and his ruddy face went white.

"So!" said he in surprise.

The Prince was following him, talking over his shoulder to Von Winterfeld and the Kapitan.

"Eh?" he said to Kurt, stopping in mid-sentence, and followed the gesture of Kurt's hand. He glared at the crumpled object in the

recess and seemed to think for a moment.

He made a slight, careless gesture towards the boy's body and turned to the Kapitan.

"Dispose of that," he said in German, and passed on, finishing his sentence to Von Winterfeld in the same cheerful tone in which it had begun.

6

The deep impression of helplessly drowning men that Bert had brought from the actual fight in the Atlantic mixed itself up inextricably with that of the lordly figure of Prince Karl Albert gesturing aside the dead body of the Vaterland sailor. Hitherto he had rather liked the idea of war as being a jolly, smashing, exciting affair, something like a Bank Holiday rag on a large scale, and on the whole agreeable and exhilarating. Now he knew it a little better.

The next day there was added to his growing disillusionment a third ugly impression, trivial indeed to describe, a mere necessary everyday incident of a state of war, but very distressing to his urbanised imagination. One writes "urbanised" to express the distinctive gentleness of the period. It was quite peculiar to the crowded townsmen of that time, and different altogether from the normal experience of any preceding age, that they never saw anything killed, never encountered, save through the mitigating media of book or picture, the fact of lethal violence that underlies all life. Three times in his existence, and three times only, had Bert seen a dead human being, and he had never assisted at the killing of anything bigger than a new-born kitten.

The incident that gave him his third shock was the execution of

one of the men on the Adler for carrying a box of matches. The case was a flagrant one. The man had forgotten he had it upon him when coming aboard. Ample notice had been given to every one of the gravity of this offence, and notices appeared at numerous points all over the airships. The man's defence was that he had grown so used to the notices and had been so preoccupied with his work that he hadn't applied them to himself; he pleaded, in his defence, what is indeed in military affairs another serious crime, inadvertency. He was tried by his captain, and the sentence confirmed by wireless telegraphy by the Prince, and it was decided to make his death an example to the whole fleet. "The Germans," the Prince declared, "hadn't crossed the Atlantic to go wool gathering." And in order that this lesson in discipline and obedience might be visible to every one, it was determined not to electrocute or drown but hang the offender.

Accordingly the air-fleet came clustering round the flagship like carp in a pond at feeding time. The Adler hung at the zenith immediately alongside the flagship. The whole crew of the Waterland assembled upon the hanging gallery; the crews of the other airships manned the air-chambers, that is to say, clambered up the outer netting to the upper sides. The officers appeared upon the machine-gun platforms. Bert thought it an altogether stupendous sight, looking down, as he was, upon the entire fleet. Far off below two steamers on the rippled blue water, one British and the other flying the American flag, seemed the minutest objects, and marked the scale. They were immensely distant. Bert stood on the gallery, curious to see the execution, but uncomfortable, because that terrible blond Prince was within a dozen feet of him, glaring terribly, with his arms folded, and his heels together in military fashion.

They hung the man from the Adler. They gave him sixty feet of rope, so, that he should hang and dangle in the sight of all evil-doers who might be hiding matches or contemplating any

kindred disobedience. Bert saw the man standing, a living, reluctant man, no doubt scared and rebellious enough in his heart, but outwardly erect and obedient, on the lower gallery of the Adler about a hundred yards away. Then they had thrust him overboard.

Down he fell, hands and feet extending, until with a jerk he was at the end of the rope. Then he ought to have died and swung edifyingly, but instead a more terrible thing happened; his head came right off, and down the body went spinning to the sea, feeble, grotesque, fantastic, with the head racing it in its fall.

"Ugh!" said Bert, clutching the rail before him, and a sympathetic grunt came from several of the men beside him.

"So!" said the Prince, stiffer and sterner, glared for some seconds, then turned to the gang way up into the airship.

For a long time Bert remained clinging to the railing of the gallery. He was almost physically sick with the horror of this trifling incident. He found it far more dreadful than the battle. He was indeed a very degenerate, latter-day, civilised person.

Late that afternoon Kurt came into the cabin and found him curled up on his locker, and looking very white and miserable. Kurt had also lost something of his pristine freshness.

"Sea-sick?" he asked.

"No!"

"We ought to reach New York this evening. There's a good breeze coming up under our tails. Then we shall see things."

Bert did not answer.

Kurt opened out folding chair and table, and rustled for a time with his maps. Then he fell thinking darkly. He roused himself presently, and looked at his companion. "What's the matter?" he said.

"Nothing!"

Kurt stared threateningly. "What's the matter?"

"I saw them kill that chap. I saw that flying-machine man hit the funnels of the big ironclad. I saw that dead chap in the passage. I seen too much smashing and killing lately. That's the matter. I don't like it. I didn't know war was this sort of thing. I'm a civilian. I don't like it"

"I don't like it," said Kurt. "By Jove, no!"

"I've read about war, and all that, but when you see it it's different. And I'm gettin' giddy. I'm gettin' giddy. I didn't mind a bit being up in that balloon at first, but all this looking down and floating over things and smashing up people, it's getting on my nerves. See?"

"It'll have to get off again...."

Kurt thought. "You're not the only one. The men are all getting strung up. The flying--that's just flying. Naturally it makes one a little swimmy in the head at first. As for the killing, we've got to be blooded; that's all. We're tame, civilised men. And we've got to get blooded. I suppose there's not a dozen men on the ship who've really seen bloodshed. Nice, quiet, law-abiding Germans they've been so far.... Here they are--in for it.

They're a bit squeamy now, but you wait till they've got their hands in."

He reflected. "Everybody's getting a bit strung up," he said.

He turned again to his maps. Bert sat crumpled up in the corner, apparently heedless of him. For some time both kept silence.

"What did the Prince want to go and 'ang that chap for?" asked Bert, suddenly.

"That was all right," said Kurt, "that was all right. QUITE right. Here were the orders, plain as the nose on your face, and here was that fool going about with matches--"

"Gaw! I shan't forget that bit in a 'urry," said Bert irrelevantly.

Kurt did not answer him. He was measuring their distance from New York and speculating. "Wonder what the American aeroplanes are like?" he said. "Something like our drachenflieger.... We shall know by this time to-morrow.... I wonder what we shall know? I wonder. Suppose, after all, they put up a fight.... Rum sort of fight!"

He whistled softly and mused. Presently he fretted out of the cabin, and later Bert found him in the twilight upon the swinging platform, staring ahead, and speculating about the things that might happen on the morrow. Clouds veiled the sea again, and the long straggling wedge of air-ships rising and falling as they flew seemed like a flock of strange new births in a Chaos that had neither earth nor water but only mist and sky.

CHAPTER VI HOW WAR CAME TO NEW YORK

1

The City of New York was in the year of the German attack the largest, richest, in many respects the most splendid, and in some, the wickedest city the world had ever seen. She was the supreme type of the City of the Scientific Commercial Age; she displayed its greatness, its power, its ruthless anarchic enterprise, and its social disorganisation most strikingly and completely. She had long ousted London from her pride of place as the modern Babylon, she was the centre of the world's finance, the world's trade, and the world's pleasure; and men likened her to the apocalyptic cities of the ancient prophets. She sat drinking up the wealth of a continent as Rome once drank the wealth of the Mediterranean and Babylon the wealth of the east. In her streets one found the extremes of magnificence and misery, of civilisation and disorder. In one quarter, palaces of marble, laced and, crowned with light and flame and flowers, towered up into her marvellous twilights beautiful, beyond description; in another, a black and sinister polyglot population sweltered in indescribable congestion in warrens, and excavations beyond the power and knowledge of government. Her vice, her crime, her law alike were inspired by a fierce and terrible energy, and like the great cities of mediaeval Italy, her ways were dark and adventurous with private war.

It was the peculiar shape of Manhattan Island, pressed in by arms of the sea on either side, and incapable of comfortable expansion, except along a narrow northward belt, that first gave the New York architects their bias for extreme vertical dimensions. Every need was lavishly supplied them--money, material, labour; only space was restricted. To begin, therefore, they built high perforce. But to do so was to

discover a whole new world of architectural beauty, of exquisite ascendant lines, and long after the central congestion had been relieved by tunnels under the sea, four colossal bridges over the east river, and a dozen mono-rail cables east and west, the upward growth went on. In many ways New York and her gorgeous plutocracy repeated Venice in the magnificence of her architecture, painting, metal-work and sculpture, for example, in the grim intensity, of her political method, in her maritime and commercial ascendancy. But she repeated no previous state at all in the lax disorder of her internal administration, a laxity that made vast sections of her area lawless beyond precedent, so that it was possible for whole districts to be impassable, while civil war raged between street and street, and for Alsacias to exist in her midst in which the official police never set foot. She was an ethnic whirlpool. The flags of all nations flew in her harbour, and at the climax, the yearly coming and going overseas numbered together upwards of two million human beings. To Europe she was America, to America she was the gateway of the world. But to tell the story of New York would be to write a social history of the world; saints and martyrs, dreamers and scoundrels, the traditions of a thousand races and a thousand religions, went to her making and throbbed and jostled in her streets. And over all that torrential confusion of men and purposes fluttered that strange flag, the stars and stripes, that meant at once the noblest thing in life, and the least noble, that is to say, Liberty on the one hand, and on the other the base jealousy the individual self-seeker feels towards the common purpose of the State.

For many generations New York had taken no heed of war, save as a thing that happened far away, that affected prices and supplied the newspapers with exciting headlines and pictures. The New Yorkers felt perhaps even more certainly than the English had done that war in their own land was an impossible thing. In that they shared the delusion of all North America. They felt as

secure as spectators at a bullfight; they risked their money perhaps on the result, but that was all. And such ideas of war as the common Americans possessed were derived from the limited, picturesque, adventurous war of the past. They saw war as they saw history, through an iridescent mist, deodorised, scented indeed, with all its essential cruelties tactfully hidden away. They were inclined to regret it as something ennobling, to sigh that it could no longer come into their own private experience. They read with interest, if not with avidity, of their new guns, of their immense and still more immense ironclads, of their incredible and still more incredible explosives, but just what these tremendous engines of destruction might mean for their personal lives never entered their heads. They did not, so far as one can judge from their contemporary literature, think that they meant anything to their personal lives at all. They thought America was safe amidst all this piling up of explosives. They cheered the flag by habit and tradition, they despised other nations, and whenever there was an international difficulty they were intensely patriotic, that is to say, they were ardently against any native politician who did not say, threaten, and do harsh and uncompromising things to the antagonist people. They were spirited to Asia, spirited to Germany, so spirited to Great Britain that the international attitude of the mother country to her great daughter was constantly compared in contemporary caricature to that between a hen-pecked husband and a vicious young wife. And for the rest, they all went about their business and pleasure as if war had died out with the megatherium....

And then suddenly, into a world peacefully busied for the most part upon armaments and the perfection of explosives, war came; came the shock of realising that the guns were going off, that the masses of inflammable material all over the world were at last ablaze.

The immediate effect upon New York of the sudden onset of war was merely to intensify her normal vehemence.

The newspapers and magazines that fed the American mind--for books upon this impatient continent had become simply material for the energy of collectors--were instantly a coruscation of war pictures and of headlines that rose like rockets and burst like shells. To the normal high-strung energy of New York streets was added a touch of war-fever. Great crowds assembled, more especially in the dinner hour, in Madison Square about the Farragut monument, to listen to and cheer patriotic speeches, and a veritable epidemic of little flags and buttons swept through these great torrents of swiftly moving young people, who poured into New York of a morning by car and mono-rail and subway and train, to toil, and ebb home again between the hours of five and seven. It was dangerous not to wear a war button. The splendid music-halls of the time sank every topic in patriotism and evolved scenes of wild enthusiasm, strong men wept at the sight of the national banner sustained by the whole strength of the ballet, and special searchlights and illuminations amazed the watching angels. The churches re-echoed the national enthusiasm in graver key and slower measure, and the aerial and naval preparations on the East River were greatly incommoded by the multitude of excursion steamers which thronged, helpfully cheering, about them. The trade in small-arms was enormously stimulated, and many overwrought citizens found an immediate relief for their emotions in letting off fireworks of a more or less heroic, dangerous, and national character in the public streets. Small children's air-balloons of the latest model attached to string became a serious check to the pedestrian in Central Park. And amidst scenes of indescribable emotion the Albany legislature in permanent session, and with a generous suspension of rules and precedents, passed through both Houses the long-disputed Bill for universal military service in New York

State.

Critics of the American character are disposed to consider--that up to the actual impact of the German attack the people of New York dealt altogether too much with the war as if it was a political demonstration. Little or no damage, they urge, was done to either the German or Japanese forces by the wearing of buttons, the waving of small flags, the fireworks, or the songs. They forgot that, under the conditions of warfare a century of science had brought about, the non-military section of the population could do no serious damage in any form to their enemies, and that there was no reason, therefore, why they should, not do as they did. The balance of military efficiency was shifting back from the many to the few, from the common to the specialised.

The days when the emotional infantryman decided battles had passed by for ever. War had become a matter of apparatus of special training and skill of the most intricate kind. It had become undemocratic. And whatever the value of the popular excitement, there can be no denying that the small regular establishment of the United States Government, confronted by this totally unexpected emergency of an armed invasion from Europe, acted with vigour, science, and imagination. They were taken by surprise so far as the diplomatic situation was concerned, and their equipment for building either navigables or aeroplanes was contemptible in comparison with the huge German parks. Still they set to work at once to prove to the world that the spirit that had created the Monitor and the Southern submarines of 1864 was not dead. The chief of the aeronautic establishment near West Point was Cabot Sinclair, and he allowed himself but one single moment of the posturing that was so universal in that democratic time. "We have chosen our epitaphs," he said to a reporter, "and we are going to have, 'They did all they could.' Now run away!"

The curious thing is that they did all do all they could; there is no exception known. Their only defect indeed was a defect of style. One of the most striking facts historically about this war, and the one that makes the complete separation that had arisen between the methods of warfare and the necessity of democratic support, is the effectual secrecy of the Washington authorities about their airships. They did not bother to confide a single fact of their preparations to the public. They did not even condescend to talk to Congress. They burked and suppressed every inquiry. The war was fought by the President and the Secretaries of State in an entirely autocratic manner. Such publicity as they sought was merely to anticipate and prevent inconvenient agitation to defend particular points. They realised that the chief danger in aerial warfare from an excitable and intelligent public would be a clamour for local airships and aeroplanes to defend local interests. This, with such resources as they possessed, might lead to a fatal division and distribution of the national forces. Particularly they feared that they might be forced into a premature action to defend New York. They realised with prophetic insight that this would be the particular advantage the Germans would seek. So they took great pains to direct the popular mind towards defensive artillery, and to divert it from any thought of aerial battle. Their real preparations they masked beneath ostensible ones. There was at Washington a large reserve of naval guns, and these were distributed rapidly, conspicuously, and with much press attention, among the Eastern cities. They were mounted for the most part upon hills and prominent crests around the threatened centres of population. They were mounted upon rough adaptations of the Doan swivel, which at that time gave the maximum vertical range to a heavy gun. Much of this artillery was still unmounted, and nearly all of it was unprotected when the German air-fleet reached New York. And down in the crowded streets, when that occurred, the readers of the New York papers

were regaling themselves with wonderful and wonderfully illustrated accounts of such matters as:--

THE SECRET OF THE THUNDERBOLT

AGED SCIENTIST PERFECTS ELECTRIC GUN

TO ELECTROCUTE AIRSHIP CREWS BY UPWARD LIGHTNING

WASHINGTON ORDERS FIVE HUNDRED

WAR SECRETARY LODGE DELIGHTED

SAYS THEY WILL SUIT THE GERMANS DOWN TO THE GROUND

PRESIDENT PUBLICLY APPLAUDS THIS MERRY QUIP

3

The German fleet reached New York in advance of the news of the American naval disaster. It reached New York in the late afternoon and was first seen by watchers at Ocean Grove and Long Branch coming swiftly out of the southward sea and going away to the northwest. The flagship passed almost vertically over the Sandy Hook observation station, rising rapidly as it did so, and in a few minutes all New York was vibrating to the Staten Island guns.

Several of these guns, and especially that at Giffords and the one on Beacon Hill above Matawan, were remarkably well handled. The former, at a distance of five miles, and with an elevation of six thousand feet, sent a shell to burst so close to the Waterland that a pane of the Prince's forward window was smashed by a fragment. This sudden explosion made Bert tuck in his head with the celerity of a startled tortoise. The whole air-fleet

immediately went up steeply to a height of about twelve thousand feet and at that level passed unscathed over the ineffectual guns. The airships lined out as they moved forward into the form of a flattened V, with its apex towards the city, and with the flagship going highest at the apex. The two ends of the V passed over Plumfield and Jamaica Bay, respectively, and the Prince directed his course a little to the east of the Narrows, soared over Upper Bay, and came to rest over Jersey City in a position that dominated lower New York. There the monsters hung, large and wonderful in the evening light, serenely regardless of the occasional rocket explosions and flashing shell-bursts in the lower air.

It was a pause of mutual inspection. For a time naive humanity swamped the conventions of warfare altogether; the interest of the millions below and of the thousands above alike was spectacular. The evening was unexpectedly fine--only a few thin level bands of clouds at seven or eight thousand feet broke its luminous clarity. The wind had dropped; it was an evening infinitely peaceful and still. The heavy concussions of the distant guns and those incidental harmless pyrotechnics at the level of the clouds seemed to have as little to do with killing and force, terror and submission, as a salute at a naval review. Below, every point of vantage bristled with spectators, the roofs of the towering buildings, the public squares, the active ferry boats, and every favourable street intersection had its crowds: all the river piers were dense with people, the Battery Park was solid black with east-side population, and every position of advantage in Central Park and along Riverside Drive had its peculiar and characteristic assembly from the adjacent streets. The footways of the great bridges over the East River were also closely packed and blocked. Everywhere shopkeepers had left their shops, men their work, and women and children their homes, to come out and see the marvel.

"It beat," they declared, "the newspapers."

And from above, many of the occupants of the airships stared with an equal curiosity. No city in the world was ever so finely placed as New York, so magnificently cut up by sea and bluff and river, so admirably disposed to display the tall effects of buildings, the complex immensities of bridges and mono-railways and feats of engineering. London, Paris, Berlin, were shapeless, low agglomerations beside it. Its port reached to its heart like Venice, and, like Venice, it was obvious, dramatic, and proud. Seen from above it was alive with crawling trains and cars, and at a thousand points it was already breaking into quivering light. New York was altogether at its best that evening, its splendid best.

"Gaw! What a place!" said Bert.

It was so great, and in its collective effect so pacifically magnificent, that to make war upon it seemed incongruous beyond measure, like laying siege to the National Gallery or attacking respectable people in an hotel dining-room with battle-axe and mail. It was in its entirety so large, so complex, so delicately immense, that to bring it to the issue of warfare was like driving a crowbar into the mechanism of a clock. And the fish-like shoal of great airships hovering light and sunlit above, filling the sky, seemed equally remote from the ugly forcefulness of war. To Kurt, to Smallways, to I know not how many more of the people in the air-fleet came the distinctest apprehension of these incompatibilities. But in the head of the Prince Karl Albert were the vapours of romance: he was a conqueror, and this was the enemy's city. The greater the city, the greater the triumph. No doubt he had a time of tremendous exultation and sensed beyond all precedent the sense of power that night.

There came an end at last to that pause. Some wireless communications had failed of a satisfactory ending, and fleet and city remembered they were hostile powers. "Look!" cried the multitude; "look!"

"What are they doing?"

"What?" ... Down through the twilight sank five attacking airships, one to the Navy Yard on East River, one to City Hall, two over the great business buildings of Wall Street and Lower Broadway, one to the Brooklyn Bridge, dropping from among their fellows through the danger zone from the distant guns smoothly and rapidly to a safe proximity to the city masses. At that descent all the cars in the streets stopped with dramatic suddenness, and all the lights that had been coming on in the streets and houses went out again. For the City Hall had awakened and was conferring by telephone with the Federal command and taking measures for defence. The City Hall was asking for airships, refusing to surrender as Washington advised, and developing into a centre of intense emotion, of hectic activity. Everywhere and hastily the police began to clear the assembled crowds. "Go to your homes," they said; and the word was passed from mouth to mouth, "There's going to be trouble." A chill of apprehension ran through the city, and men hurrying in the unwonted darkness across City Hall Park and Union Square came upon the dim forms of soldiers and guns, and were challenged and sent back. In half an hour New York had passed from serene sunset and gaping admiration to a troubled and threatening twilight.

The first loss of life occurred in the panic rush from Brooklyn Bridge as the airship approached it. With the cessation of the traffic an unusual stillness came upon New York, and the disturbing concussions of the futile defending guns on the hills about grew more and more audible. At last these ceased also. A

pause of further negotiation followed. People sat in darkness, sought counsel from telephones that were dumb. Then into the expectant hush came a great crash and uproar, the breaking down of the Brooklyn Bridge, the rifle fire from the Navy Yard, and the bursting of bombs in Wall Street and the City Hall. New York as a whole could do nothing, could understand nothing. New York in the darkness peered and listened to these distant sounds until presently they died away as suddenly as they had begun. "What could be happening?" They asked it in vain.

A long, vague period intervened, and people looking out of the windows of upper rooms discovered the dark hulls of German airships, gliding slowly and noiselessly, quite close at hand. Then quietly the electric lights came on again, and an uproar of nocturnal newsvendors began in the streets.

The units of that vast and varied population bought and learnt what had happened; there had been a fight and New York had hoisted the white flag.

4

The lamentable incidents that followed the surrender of New York seem now in the retrospect to be but the necessary and inevitable consequence of the clash of modern appliances and social conditions produced by the scientific century on the one hand, and the tradition of a crude, romantic patriotism on the other. At first people received the fact with an irresponsible detachment, much as they would have received the slowing down of the train in which they were travelling or the erection of a public monument by the city to which they belonged.

"We have surrendered. Dear me! HAVE we?" was rather the manner in which the first news was met. They took it in the same spectacular spirit they had displayed at the first apparition of

the air-fleet. Only slowly was this realisation of a capitulation suffused with the flush of passion, only with reflection did they make any personal application. "WE have surrendered!" came later; "in us America is defeated." Then they began to burn and tingle.

The newspapers, which were issued about one in the morning contained no particulars of the terms upon which New York had yielded--nor did they give any intimation of the quality of the brief conflict that had preceded the capitulation. The later issues remedied these deficiencies. There came the explicit statement of the agreement to victual the German airships, to supply the complement of explosives to replace those employed in the fight and in the destruction of the North Atlantic fleet, to pay the enormous ransom of forty million dollars, and to surrender the in the East River. There came, too, longer and longer descriptions of the smashing up of the City Hall and the Navy Yard, and people began to realise faintly what those brief minutes of uproar had meant. They read the tale of men blown to bits, of futile soldiers in that localised battle fighting against hope amidst an indescribable wreckage, of flags hauled down by weeping men. And these strange nocturnal editions contained also the first brief cables from Europe of the fleet disaster, the North Atlantic fleet for which New York had always felt an especial pride and solicitude. Slowly, hour by hour, the collective consciousness woke up, the tide of patriotic astonishment and humiliation came floating in. America had come upon disaster; suddenly New York discovered herself with amazement giving place to wrath unspeakable, a conquered city under the hand of her conqueror.

As that fact shaped itself in the public mind, there sprang up, as flames spring up, an angry repudiation. "No!" cried New York, waking in the dawn. "No! I am not defeated. This is a dream." Before day broke the swift American anger was running through all

the city, through every soul in those contagious millions. Before it took action, before it took shape, the men in the airships could feel the gigantic insurgence of emotion, as cattle and natural creatures feel, it is said, the coming of an earthquake. The newspapers of the Knype group first gave the thing words and a formula. "We do not agree," they said simply. "We have been betrayed!" Men took that up everywhere, it passed from mouth to mouth, at every street corner under the paling lights of dawn orators stood unchecked, calling upon the spirit of America to arise, making the shame a personal reality to every one who heard. To Bert, listening five hundred feet above, it seemed that the city, which had at first produced only confused noises, was now humming like a hive of bees--of very angry bees.

After the smashing of the City Hall and Post-Office, the white flag had been hoisted from a tower of the old Park Row building, and thither had gone Mayor O'Hagen, urged thither indeed by the terror-stricken property owners of lower New York, to negotiate the capitulation with Von Winterfeld. The Vaterland, having dropped the secretary by a rope ladder, remained hovering, circling very slowly above the great buildings, old and new, that clustered round City Hall Park, while the Helmholz, which had done the fighting there, rose overhead to a height of perhaps two thousand feet. So Bert had a near view of all that occurred in that central place. The City Hall and Court House, the Post-Office and a mass of buildings on the west side of Broadway, had been badly damaged, and the three former were a heap of blackened ruins. In the case of the first two the loss of life had not been considerable, but a great multitude of workers, including many girls and women, had been caught in the destruction of the Post-Office, and a little army of volunteers with white badges entered behind the firemen, bringing out the often still living bodies, for the most part frightfully charred, and carrying them into the big Monson building close at hand. Everywhere the busy firemen were directing their bright streams

of water upon the smouldering masses: their hose lay about the square, and long cordons of police held back the gathering lack masses of people, chiefly from the east side, from these central activities.

In violent and extraordinary contrast with this scene of destruction, close at hand were the huge newspaper establishments of Park Row. They were all alight and working; they had not been abandoned even while the actual bomb throwing was going on, and now staff and presses were vehemently active, getting out the story, the immense and dreadful story of the night, developing comment and, in most cases, spreading the idea of resistance under the very noses of the airships. For a long time Bert could not imagine what these callously active offices could be, then he detected the noise of the presses and emitted his "Gaw!"

Beyond these newspaper buildings again, and partially hidden by the arches of the old Elevated Railway of New York (long since converted into a mono-rail), there was another cordon of police and a sort of encampment of ambulances and doctors, busy with the dead and wounded who had been killed early in the night by the panic upon Brooklyn Bridge. All this he saw in the perspectives of a bird's-eye view, as things happening in a big, irregular-shaped pit below him, between cliffs of high building. Northward he looked along the steep canon of Broadway, down whose length at intervals crowds were assembling about excited speakers; and when he lifted his eyes he saw the chimneys and cable-stacks and roof spaces of New York, and everywhere now over these the watching, debating people clustered, except where the fires raged and the jets of water flew. Everywhere, too, were flagstuffs devoid of flags; one white sheet drooped and flapped and drooped again over the Park Row buildings. And upon the lurid lights, the festering movement and intense shadows of this strange scene, there was breaking now the cold, impartial dawn.

For Bert Smallways all this was framed in the frame of the open porthole. It was a pale, dim world outside that dark and tangible rim. All night he had clutched at that rim, jumped and quivered at explosions, and watched phantom events. Now he had been high and now low; now almost beyond hearing, now flying close to crashings and shouts and outcries. He had seen airships flying low and swift over darkened and groaning streets; watched great buildings, suddenly red-lit amidst the shadows, crumple at the smashing impact of bombs; witnessed for the first time in his life the grotesque, swift onset, of insatiable conflagrations. From it all he felt detached, disembodied. The Vaterland did not even fling a bomb; she watched and ruled. Then down they had come at last to hover over City Hall Park, and it had crept in upon his mind,, chillingly, terrifyingly, that these illuminated black masses were great offices afire, and that the going to and fro of minute, dim spectres of lantern-lit grey and white was a harvesting of the wounded and the dead. As the light grew clearer he began to understand more and more what these crumpled black things signified....

He had watched hour after hour since first New York had risen out of the blue indistinctness of the landfall. With the daylight he experienced an intolerable fatigue.

He lifted weary eyes to the pink flush in the sky, yawned immensely, and crawled back whispering to himself across the cabin to the locker. He did not so much lie down upon that as fall upon it and instantly become asleep.

There, hours after, sprawling undignified and sleeping profoundly, Kurt found him, a very image of the democratic mind confronted with the problems of a time too complex for its apprehension. His face was pale and indifferent, his mouth wide open, and he snored. He snored disagreeably.

Kurt regarded him for a moment with a mild distaste. Then he kicked his ankle.

"Wake up," he said to Smallways' stare, "and lie down decent."

Bert sat up and rubbed his eyes.

"Any more fightin' yet?" he asked.

"No," said Kurt, and sat down, a tired man.

"Gott!" he cried presently, rubbing his hands over his face, "but I'd like a cold bath! I've been looking for stray bullet holes in the air-chambers all night until now." He yawned. "I must sleep. You'd better clear out, Smallways. I can't stand you here this morning. You're so infernally ugly and useless. Have you had your rations? No! Well, go in and get 'em, and don't come back. Stick in the gallery...."

5

So Bert, slightly refreshed by coffee and sleep, resumed his helpless co-operation in the War in the Air. He went down into the little gallery as the lieutenant had directed, and clung to the rail at the extreme end beyond the look-out man, trying to seem as inconspicuous and harmless a fragment of life as possible.

A wind was rising rather strongly from the south-east. It obliged the Vaterland to come about in that direction, and made her roll a great deal as she went to and fro over Manhattan Island. Away in the north-west clouds gathered. The throb-throb of her slow screw working against the breeze was much more perceptible than when she was going full speed ahead; and the friction of the wind against the underside of the gas-chamber

drove a series of shallow ripples along it and made a faint flapping sound like, but fainter than, the beating of ripples under the stem of a boat. She was stationed over the temporary City Hall in the Park Row building, and every now and then she would descend to resume communication with the mayor and with Washington. But the restlessness of the Prince would not suffer him to remain for long in any one place. Now he would circle over the Hudson and East River; now he would go up high, as if to peer away into the blue distances; once he ascended so swiftly and so far that mountain sickness overtook him and the crew and forced him down again; and Bert shared the dizziness and nausea.

The swaying view varied with these changes of altitude. Now they would be low and close, and he would distinguish in that steep, unusual perspective, windows, doors, street and sky signs, people and the minutest details, and watch the enigmatical behaviour of crowds and clusters upon the roofs and in the streets; then as they soared the details would shrink, the sides of streets draw together, the view widen, the people cease to be significant. At the highest the effect was that of a concave relief map; Bert saw the dark and crowded land everywhere intersected by shining waters, saw the Hudson River like a spear of silver, and Lower Island Sound like a shield. Even to Bert's unphilosophical mind the contrast of city below and fleet above pointed an opposition, the opposition of the adventurous American's tradition and character with German order and discipline. Below, the immense buildings, tremendous and fine as they were, seemed like the giant trees of a jungle fighting for life; their picturesque magnificence was as planless as the chances of crag and gorge, their casualty enhanced by the smoke and confusion of still unsubdued and spreading conflagrations. In the sky soared the German airships like beings in a different, entirely more orderly world, all oriented to the same angle of the horizon, uniform in build and appearance, moving accurately with one purpose as a pack of wolves will move, distributed with the most precise and

effectual co-operation.

It dawned upon Bert that hardly a third of the fleet was visible. The others had gone upon errands he could not imagine, beyond the compass of that great circle of earth. and sky. He wondered, but there was no one to ask. As the day wore on, about a dozen reappeared in the east with their stores replenished from the flotilla and towing a number of drachenffieger. Towards afternoon the weather thickened, driving clouds appeared in the south-west and ran together and seemed to engender more clouds, and the wind came round into that quarter and blew stronger. Towards the evening the, wind became a gale into which the now tossing airships had to beat.

All that day the Prince was negotiating with Washington, while his detached scouts sought far and wide over the Eastern States looking for anything resembling an aeronautic park. A squadron of twenty airships detached overnight had dropped out of the air upon Niagara and was holding the town and power works.

Meanwhile the insurrectionary movement in the giant city grew uncontrollable. In spite of five great fires already involving many acres, and spreading steadily, New York was still not satisfied that she was beaten.

At first the rebellious spirit below found vent only in isolated shouts, street-crowd speeches, and newspaper suggestions; then it found much more definite expression in the appearance in the morning sunlight of American flags at point after point above the architectural cliffs of the city. It is quite possible that in many cases this spirited display of bunting by a city already surrendered was the outcome of the innocent informality of the American mind, but it is also undeniable that in many it was a deliberate indication that the people "felt wicked."

The German sense of correctitude was deeply shocked by this outbreak. The Graf von Winterfeld immediately communicated with the mayor, and pointed out the irregularity, and the fire look-out stations were instructed in the matter. The New York police was speedily hard at work, and a foolish contest in full swing between impassioned citizens resolved to keep the flag flying, and irritated and worried officers instructed to pull it down.

The trouble became acute at last in the streets above Columbia University. The captain of the airship watching this quarter seems to have stooped to lasso and drag from its staff a flag hoisted upon Morgan Hall. As he did so a volley of rifle and revolver shots was fired from the upper windows of the huge apartment building that stands between the University and Riverside Drive.

Most of these were ineffectual, but two or three perforated gas-chambers, and one smashed the hand and arm of a man upon the forward platform; The sentinel on the lower gallery immediately replied, and the machine gun on the shield of the eagle let fly and promptly stopped any further shots. The airship rose and signalled the flagship and City Hall, police and militiamen were directed at once to the spot, and this particular incident closed.

But hard upon that came the desperate attempt of a party of young clubmen from New York, who, inspired by patriotic and adventurous imaginations, slipped off in half a dozen motor-cars to Beacon Hill, and set to work with remarkable vigour to improvise a fort about the Doan swivel gun that had been placed there. They found it still in the hands of the disgusted gunners, who had been ordered to cease fire at the capitulation, and it was easy to infect these men with their own spirit. They declared their gun hadn't had half a chance, and, were burning to show what it could

do. Directed by the newcomers, they made a trench and bank about the mounting of the piece, and constructed flimsy shelter-pits of corrugated iron.

They were actually loading the gun when they were observed by the airship Preussen and the shell they succeeded in firing before the bombs of the latter smashed them and their crude defences to fragments, burst over the middle gas-chambers of the Bingen, and brought her to earth, disabled, upon Staten Island. She was badly deflated, and dropped among trees, over which her empty central gas-bags spread in canopies and festoons. Nothing, however, had caught fire, and her men were speedily at work upon her repair. They behaved with a confidence that verged upon indiscretion. While most of them commenced patching the tears of the membrane, half a dozen of them started off for the nearest road in search of a gas main, and presently found themselves prisoners in the hands of a hostile crowd. Close at hand was a number of villa residences, whose occupants speedily developed from an unfriendly curiosity to aggression. At that time the police control of the large polyglot population of Staten Island had become very lax, and scarcely a household but had its rifle or pistols and ammunition. These were presently produced, and after two or three misses, one of the men at work was hit in the foot. Thereupon the Germans left their sewing and mending, took cover among the trees, and replied.

The crackling of shots speedily brought the Preussen and Kiel on the scene, and with a few hand grenades they made short work of every villa within a mile. A number of non-combatant American men, women, and children were killed and the actual assailants driven off. For a time the repairs went on in peace under the immediate protection of these two airships. Then when they returned to their quarters, an intermittent sniping and fighting round the stranded Bingen was resumed, and went on all the afternoon, and merged at last in the general combat of the

evening....

About eight the Bingen was rushed by an armed mob, and all its defenders killed after a fierce, disorderly struggle.

The difficulty of the Germans in both these cases came from the impossibility of landing any efficient force or, indeed, any force at all from the air-fleet. The airships were quite unequal to the transport of any adequate landing parties; their complement of men was just sufficient to manoeuvre and fight them in the air. From above they could inflict immense damage; they could reduce any organised Government to a capitulation in the briefest space, but they could not disarm, much less could they occupy, the surrendered areas below. They had to trust to the pressure upon the authorities below of a threat to renew the bombardment. It was their sole resource. No doubt, with a highly organised and undamaged Government and a homogeneous and well-disciplined people that would have sufficed to keep the peace. But this was not the American case. Not only was the New York Government a weak one and insufficiently provided with police, but the destruction of the City Hall--and Post-Office and other central ganglia had hopelessly disorganised the co-operation of part with part. The street cars and railways had ceased; the telephone service was out of gear and only worked intermittently. The Germans had struck at the head, and the head was conquered and stunned--only to release the body from its rule. New York had become a headless monster, no longer capable of collective submission. Everywhere it lifted itself rebelliously; everywhere authorities and officials left to their own imitative were joining in the arming and flag-hoisting and excitement of that afternoon.

6

The disintegrating truce gave place to a definite general breach

with the assassination of the Wetterhorn--for that is the only possible word for the act--above Union Square, and not a mile away from the exemplary ruins of City Hall. This occurred late in the afternoon, between five and six. By that time the weather had changed very much for the worse, and the operations of the airships were embarrassed by the necessity they were under of keeping head on to the gusts. A series of squalls, with hail and thunder, followed one another from the south by south-east, and in order to avoid these as much as possible, the air-fleet came low over the houses, diminishing its range of observation and exposing itself to a rifle attack.

Overnight there had been a gun placed in Union Square. It had never been mounted, much less fired, and in the darkness after the surrender it was taken with its supplies and put out of the way under the arches of the great Dexter building. Here late in the morning it was remarked by a number of patriotic spirits. They set to work to hoist and mount it inside the upper floors of the place. They made, in fact, a masked battery behind the decorous office blinds, and there lay in wait as simply excited as children until at last the stem of the luckless Wetterhorn appeared, beating and rolling at quarter speed over the recently reconstructed pinnacles of Tiffany's. Promptly that one-gun battery unmasked. The airship's look-out man must have seen the whole of the tenth story of the Dexter building crumble out and smash in the street below to discover the black muzzle looking out from the shadows behind. Then perhaps the shell hit him.

The gun fired two shells before the frame of the Dexter building collapsed, and each shell raked the Wetterhorn from stem to stern. They smashed her exhaustively. She crumpled up like a can that has been kicked by a heavy boot, her forepart came down in the square, and the rest of her length, with a great snapping and twisting of shafts and stays, descended, collapsing athwart Tammany Hall and the streets towards Second Avenue. Her gas

escaped to mix with air, and the air of her rent balloonette poured into her deflating gas-chambers. Then with an immense impact she exploded....

The Vaterland at that time was beating up to the south of City Hall from over the ruins of the Brooklyn Bridge, and the reports of the gun, followed by the first crashes of the collapsing Dexter building, brought Kurt and, Smallways to the cabin porthole. They were in time to see the flash of the exploding gun, and then they were first flattened against the window and then rolled head over heels across the floor of the cabin by the air wave of the explosion. The Vaterland bounded like a football some one has kicked and when they looked out again, Union Square was small and remote and shattered, as though some cosmically vast giant had rolled over it. The buildings to the east of it were ablaze at a dozen points, under the flaming tatters and warping skeleton of the airship, and all the roofs and walls were ridiculously askew and crumbling as one looked. "Gaw!" said Bert. "What's happened? Look at the people!"

But before Kurt could produce an explanation, the shrill bells of the airship were ringing to quarters, and he had to go. Bert hesitated and stepped thoughtfully into the passage, looking back at the window as he did so. He was knocked off his feet at once by the Prince, who was rushing headlong from his cabin to the central magazine.

Bert had a momentary impression of the great figure of the Prince, white with rage, bristling with gigantic anger, his huge fist swinging. "Blut und Eisen!" cried the Prince, as one who swears. "Oh! Blut und Eisen!"

Some one fell over Bert--something in the manner of falling suggested Von Winterfeld--and some one else paused and kicked him spitefully and hard. Then he was sitting up in the passage,

rubbing a freshly bruised cheek and readjusting the bandage he still wore on his head. "Dem that Prince," said Bert, indignant beyond measure. "'E 'asn't the menners of a 'og!"

He stood up, collected his wits for a minute, and then went slowly towards the gangway of the little gallery. As he did so he heard noises suggestive of the return of the Prince. The lot of them were coming back again. He shot into his cabin like a rabbit into its burrow, just in time to escape that shouting terror.

He shut the door, waited until the passage was still, then went across to the window and looked out. A drift of cloud made the prospect of the streets and squares hazy, and the rolling of the airship swung the picture up and down. A few people were running to and fro, but for the most part the aspect of the district was desertion. The streets seemed to broaden out, they became clearer, and the little dots that were people larger as the Waterland came down again. Presently she was swaying along above the lower end of Broadway. The dots below, Bert saw, were not running now, but standing and looking up. Then suddenly they were all running again.

Something had dropped from the aeroplane, something that looked small and flimsy. It hit the pavement near a big archway just underneath Bert. A little man was sprinting along the sidewalk within half a dozen yards, and two or three others and one woman were bolting across the roadway. They were odd little figures, so very small were they about the heads, so very active about the elbows and legs. It was really funny to see their legs going. Foreshortened, humanity has no dignity. The little man on the pavement jumped comically--no doubt with terror, as the bomb fell beside him.

Then blinding flames squirted out in all directions from the

point of impact, and the little man who had jumped became, for an instant, a flash of fire and vanished--vanished absolutely. The people running out into the road took preposterous clumsy leaps, then flopped down and lay still, with their torn clothes smouldering into flame. Then pieces of the archway began to drop, and the lower masonry of the building to fall in with the rumbling sound of coals being shot into a cellar. A faint screaming reached Bert, and then a crowd of people ran out into the street, one man limping and gesticulating awkwardly. He halted, and went back towards the building. A falling mass of brick-work hit him and sent him sprawling to lie still and crumpled where he fell. Dust and black smoke came pouring into the street, and were presently shot with red flame....

In this manner the massacre of New York began. She was the first of the great cities of the Scientific Age to suffer by the enormous powers and grotesque limitations of aerial warfare. She was wrecked as in the previous century endless barbaric cities had been bombarded, because she was at once too strong to be occupied and too undisciplined and proud to surrender in order to escape destruction. Given the circumstances, the thing had to be done. It was impossible for the Prince to desist, and own himself defeated, and it was impossible to subdue the city except by largely destroying it. The catastrophe was the logical outcome of the situation, created by the application of science to warfare. It was unavoidable that great cities should be destroyed. In spite of his intense exasperation with his dilemma, the Prince sought to be moderate even in massacre. He tried to give a memorable lesson with the minimum waste of life and the minimum expenditure of explosives. For that night he proposed only the wrecking of Broadway. He directed the air-fleet to move in column over the route of this thoroughfare, dropping bombs, the Vaterland leading. And so our Bert Smallways became a participant in one of the most cold-blooded slaughters in the world's history, in which men who were neither excited

nor, except for the remotest chance of a bullet, in any danger, poured death and destruction upon homes and crowds below.

He clung to the frame of the porthole as the airship tossed and swayed, and stared down through the light rain that now drove before the wind, into the twilight streets, watching people running out of the houses, watching buildings collapse and fires begin. As the airships sailed along they smashed up the city as a child will shatter its cities of brick and card. Below, they left ruins and blazing conflagrations and heaped and scattered dead; men, women, and children mixed together as though they had been no more than Moors, or Zulus, or Chinese. Lower New York was soon a furnace of crimson flames, from which there was no escape. Cars, railways, ferries, all had ceased, and never a light lit the way of the distracted fugitives in that dusky confusion but the light of burning. He had glimpses of what, it must mean to be down there--glimpses. And it came to him suddenly as an incredible discovery, that such disasters were not only possible now in this strange, gigantic, foreign New York, but also in London--in Bun Hill! that the little island in the silver seas was at the end of its immunity, that nowhere in the world any more was there a place left where a Smallways might lift his head proudly and vote for war and a spirited foreign policy, and go secure from such horrible things.

CHAPTER VII THE "VATERLAND" IS DISABLED

1

And then above the flames of Manhattan Island came a battle, the first battle in the air. The Americans had realised the price their waiting game must cost, and struck with all the strength

they had, if haply they might still save New York from this mad Prince of Blood and Iron, and from fire and death.

They came down upon the Germans on the wings of a great gale in the twilight, amidst thunder and rain. They came from the yards of Washington and Philadelphia, full tilt in two squadrons, and but for one sentinel airship hard by Trenton, the surprise would have been complete.

The Germans, sick and weary with destruction, and half empty of ammunition, were facing up into the weather when the news of this onset reached them. New York they had left behind to the south-eastward, a darkened city with one hideous red scar of flames. All the airships rolled and staggered, bursts of hailstorm bore them down and forced them to fight their way up again; the air had become bitterly cold. The Prince was on the point of issuing orders to drop earthward and trail copper lightning chains when the news of the aeroplane attack came to him. He faced his fleet in line abreast south, had the drachenflieger manned and held ready to cast loose, and ordered a general ascent into the freezing clearness above the wet and darkness.

The news of what was imminent came slowly to Bert's perceptions. He was standing in the messroom at the time and the evening rations were being served out. He had resumed Butteridge's coat and gloves, and in addition he had wrapped his blanket about him. He was dipping his bread into his soup and was biting off big mouthfuls. His legs were wide apart, and he leant against the partition in order to steady himself amidst the pitching and oscillation of the airship. The men about him looked tired and depressed; a few talked, but most were sullen and thoughtful, and one or two were air-sick. They all seemed to share the peculiarly outcast feeling that had followed the murders of the evening, a sense of a land beneath them, and an outraged humanity

grown more hostile than the Sea.

Then the news hit them. A red-faced sturdy man, a man with light eyelashes and a scar, appeared in the doorway and shouted something in German that manifestly startled every one. Bert felt the shock of the altered tone, though he could not understand a word that was said. The announcement was followed by a pause, and then a great outcry of questions and suggestions. Even the air-sick men flushed and spoke. For some minutes the mess-room was Bedlam, and then, as if it were a confirmation of the news, came the shrill ringing of the bells that called the men to their posts.

Bert with pantomime suddenness found himself alone.

"What's up?" he said, though he partly guessed.

He stayed only to gulp down the remainder of his soup, and then ran along the swaying passage and, clutching tightly, down the ladder to the little gallery. The weather hit him like cold water squirted from a hose. The airship engaged in some new feat of atmospheric Jiu-Jitsu. He drew his blanket closer about him, clutching with one straining hand. He found himself tossing in a wet twilight, with nothing to be seen but mist pouring past him. Above him the airship was warm with lights and busy with the movements of men going to their quarters. Then abruptly the lights went out, and the Vaterland with bounds and twists and strange writhings was fighting her way up the air.

He had a glimpse, as the Vaterland rolled over, of some large buildings burning close below them, a quivering acanthus of flames, and then he saw indistinctly through the driving weather another airship wallowing along like a porpoise, and also working up. Presently the clouds swallowed her again for a time, and then she came back to sight as a dark and whale-like monster,

amidst streaming weather. The air was full of flappings and pipings, of void, gusty shouts and noises; it buffeted him and confused him; ever and again his attention became rigid--a blind and deaf balancing and clutching.

"Wow!"

Something fell past him out of the vast darkneses above and vanished into the tumults below, going obliquely downward. It was a German drachenflieger. The thing was going so fast he had but an instant apprehension of the dark figure of the aeronaut crouched together clutching at his wheel. It might be a manoeuvre, but it looked like a catastrophe.

"Gaw!" said Bert.

"Pup-pup-pup" went a gun somewhere in the mirk ahead and suddenly and quite horribly the Vaterland lurched, and Bert and the sentinel were clinging to the rail for dear life. "Bang!" came a vast impact out of the zenith, followed by another huge roll, and all about him the tumbled clouds flashed red and lurid in response to flashes unseen, revealing immense gulfs. The rail went right overhead, and he was hanging loose in the air holding on to it.

For a time Bert's whole mind and being was given to clutching. "I'm going into the cabin," he said, as the airship righted again and brought back the gallery floor to his feet. He began to make his way cautiously towards the ladder. "Whee-wow!" he cried as the whole gallery reared itself up forward, and then plunged down like a desperate horse.

Crack! Bang! Bang! Bang! And then hard upon this little rattle of shots and bombs came, all about him, enveloping him, engulfing him, immense and overwhelming, a quivering white blaze of

lightning and a thunder-clap that was like the bursting of a world.

Just for the instant before that explosion the universe seemed to be standing still in a shadowless glare.

It was then he saw the American aeroplane. He saw it in the light of the flash as a thing altogether motionless. Even its screw appeared still, and its men were rigid dolls. (For it was so near he could see the men upon it quite distinctly.) Its stern was tilting down, and the whole machine was heeling over. It was of the Colt-Coburn-Langley pattern, with double up-tilted wings and the screw ahead, and the men were in a boat-like body netted over. From this very light long body, magazine guns projected on either side. One thing that was strikingly odd and wonderful in that moment of revelation was that the left upper wing was burning downward with a reddish, smoky flame. But this was not the most wonderful thing about this apparition. The most wonderful thing was that it and a German airship five hundred yards below were threaded as it were on the lightning flash, which turned out of its path as if to take them, and, that out from the corners and projecting points of its huge wings everywhere, little branching thorn-trees of lightning were streaming.

Like a picture Bert saw these things, a picture a little blurred by a thin veil of wind-torn mist.

The crash of the thunder-clap followed the flash and seemed a part of it, so that it is hard to say whether Bert was the rather deafened or blinded in that instant.

And then darkness, utter darkness, and a heavy report and a thin small sound of voices that went wailing downward into the abyss below.

There followed upon these things a long, deep swaying of the airship, and then Bert began a struggle to get back to his cabin. He was drenched and cold and terrified beyond measure, and now more than a little air-sick. It seemed to him that the strength had gone out of his knees and hands, and that his feet had become icily slippery over the metal they trod upon. But that was because a thin film of ice had frozen upon the gallery.

He never knew how long his ascent of the ladder back into the airship took him, but in his dreams afterwards, when he recalled it, that experience seemed to last for hours. Below, above, around him were gulfs, monstrous gulfs of howling wind and eddies of dark, whirling snowflakes, and he was protected from it all by a little metal grating and a rail, a grating and rail that seemed madly infuriated with him, passionately eager to wrench him off and throw him into the tumult of space.

Once he had a fancy that a bullet tore by his ear, and that the clouds and snowflakes were lit by a flash, but he never even turned his head to see what new assailant whirled past them in the void. He wanted to get into the passage! He wanted to get into the passage! He wanted to get into the passage! Would the arm by which he was clinging hold out, or would it give way and snap? A handful of hail smacked him in the face, so that for a time he was breathless and nearly insensible. Hold tight, Bert! He renewed his efforts.

He found himself, with an enormous sense of relief and warmth, in the passage. The passage was behaving like a dice-box, its disposition was evidently to rattle him about and then throw him out again. He hung on with the convulsive clutch of instinct until the passage lurched down ahead. Then he would make a short

run cabin-ward, and clutch again as the fore-end rose.

Behold! He was in the cabin!

He snapped-to the door, and for a time he was not a human being, he was a case of air-sickness. He wanted to get somewhere that would fix him, that he needn't clutch. He opened the locker and got inside among the loose articles, and sprawled there helplessly, with his head sometimes bumping one side and sometimes the other. The lid shut upon him with a click. He did not care then what was happening any more. He did not care who fought who, or what bullets were fired or explosions occurred. He did not care if presently he was shot or smashed to pieces. He was full of feeble, inarticulate rage and despair. "Foolery!" he said, his one exhaustive comment on human enterprise, adventure, war, and the chapter of accidents that had entangled him. "Foolery! Ugh!" He included the order of the universe in that comprehensive condemnation. He wished he was dead.

He saw nothing of the stars, as presently the Vaterland cleared the rush and confusion of the lower weather, nor of the duel she fought with two circling aeroplanes, how they shot her rear-most chambers through, and how she fought them off with explosive bullets and turned to run as she did so.

The rush and swoop of these wonderful night birds was all lost upon him; their heroic dash and self-sacrifice. The Vaterland was rammed, and for some moments she hung on the verge of destruction, and sinking swiftly, with the American aeroplane entangled with her smashed propeller, and the Americans trying to scramble aboard. It signified nothing to Bert. To him it conveyed itself simply as vehement swaying. Foolery! When the American airship dropped off at last, with most of its crew shot or fallen, Bert in his locker appreciated nothing but that the Vaterland had taken a hideous upward leap.

But then came infinite relief, incredibly blissful relief. The rolling, the pitching, the struggle ceased, ceased instantly and absolutely. The Vaterland was no longer fighting the gale; her smashed and exploded engines throbbed no more; she was disabled and driving before the wind as smoothly as a balloon, a huge, windspread, tattered cloud of aerial wreckage.

To Bert it was no more than the end of a series of disagreeable sensations. He was not curious to know what had happened to the airship, nor what had happened to the battle. For a long time he lay waiting apprehensively for the pitching and tossing and his qualms to return, and so, lying, boxed up in the locker, he presently fell asleep.

3

He awoke tranquil but very stuffy, and at the same time very cold, and quite unable to recollect where he could be. His head ached, and his breath was suffocated. He had been dreaming confusedly of Edna, and desert dervishes, and of riding bicycles in an extremely perilous manner through the upper air amidst a pyrotechnic display of crackers and Bengal lights--to the great annoyance of a sort of composite person made up of the Prince and Mr. Butteridge. Then for some reason Edna and he had begun to cry pitifully for each other, and he woke up with wet eye-lashes into this ill-ventilated darkness of the locker. He would never see Edna any more, never see Edna any more.

He thought he must be back in the bedroom behind the cycle shop at the bottom of Bun Hill, and he was sure the vision he had had of the destruction of a magnificent city, a city quite incredibly great and splendid, by means of bombs, was no more than a particularly vivid dream.

"Grubb!" he called, anxious to tell him.

The answering silence, and the dull resonance of the locker to his voice, supplementing the stifling quality of the air, set going a new train of ideas. He lifted up his hands and feet, and met an inflexible resistance. He was in a coffin, he thought! He had been buried alive! He gave way at once to wild panic. "Elp!" he screamed. "Elp!" and drummed with his feet, and kicked and struggled. "Let me out! Let me out!"

For some seconds he struggled with this intolerable horror, and then the side of his imagined coffin gave way, and he was flying out into daylight. Then he was rolling about on what seemed to be a padded floor with Kurt, and being punched and sworn at lustily.

He sat up. His head bandage had become loose and got over one eye, and he whipped the whole thing off. Kurt was also sitting up, a yard away from him, pink as ever, wrapped in blankets, and with an aluminium diver's helmet over his knee, staring at him with a severe expression, and rubbing his downy unshaven chin. They were both on a slanting floor of crimson padding, and above them was an opening like a long, low cellar flap that Bert by an effort perceived to be the cabin door in a half-inverted condition. The whole cabin had in fact turned on its side.

"What the deuce do you mean by it, Smallways?" said Kurt, "jumping out of that locker when I was certain you had gone overboard with the rest of them? Where have you been?"

"What's up?" asked Bert.

"This end of the airship is up. Most other things are down."

"Was there a battle?"

"There was."

"Who won?"

"I haven't seen the papers, Smallways. We left before the finish. We got disabled and unmanageable, and our colleagues--consorts I mean--were too busy most of them to trouble about us, and the wind blew us--Heaven knows where the wind IS blowing us. It blew us right out of action at the rate of eighty miles an hour or so. Gott! what a wind that was! What a fight! And here we are!"

"Where?"

"In the air, Smallways--in the air! When we get down on the earth again we shan't know what to do with our legs."

"But what's below us?"

"Canada, to the best of my knowledge--and a jolly bleak, empty, inhospitable country it looks."

"But why ain't we right ways up?"

Kurt made no answer for a space.

"Last I remember was seeing a sort of flying-machine in a lightning flash," said Bert. "Gaw! that was 'orrible. Guns going off ! Things explodin'! Clouds and 'ail. Pitching and tossing. I got so scared and desperate--and sick. You don't know how the fight came off?"

"Not a bit of it. I was up with my squad in those divers' dresses, inside the gas-chambers, with sheets of silk for caulking. We couldn't see a thing outside except the lightning

flashes. I never saw one of those American aeroplanes. Just saw the shots flicker through the chambers and sent off men for the tears. We caught fire a bit--not much, you know. We were too wet, so the fires spluttered out before we banged. And then one of their infernal things dropped out of the air on us and rammed. Didn't you feel it?"

"I felt everything," said Bert. "I didn't notice any particular smash--"

"They must have been pretty desperate if they meant it. They slashed down on us like a knife; simply ripped the after gas-chambers like gutting herrings, crumpled up the engines and screw. Most of the engines dropped off as they fell off us--or we'd have grounded--but the rest is sort of dangling. We just turned up our nose to the heavens and stayed there. Eleven men rolled off us from various points, and poor old Winterfeld fell through the door of the Prince's cabin into the chart-room and broke his ankle. Also we got our electric gear shot or carried away--no one knows how. That's the position, Smallways. We're driving through the air like a common aerostat, at the mercy of the elements, almost due north--probably to the North Pole. We don't know what aeroplanes the Americans have, or anything at all about it. Very likely we have finished 'em up. One fouled us, one was struck by lightning, some of the men saw a third upset, apparently just for fun. They were going cheap anyhow. Also we've lost most of our drachenflieger. They just skated off into the night. No stability in 'em. That's all. We don't know if we've won or lost. We don't know if we're at war with the British Empire yet or at peace. Consequently, we daren't get down. We don't know what we are up to or what we are going to do. Our Napoleon is alone, forward, and I suppose he's rearranging his plans. Whether New York was our Moscow or not remains to be seen. We've had a high old time and murdered no end of people! War! Noble war! I'm sick of it this morning. I

like sitting in rooms rightway up and not on slippery partitions. I'm a civilised man. I keep thinking of old Albrecht and the Barbarossa.... I feel I want a wash and kind words and a quiet home. When I look at you, I KNOW I want a wash. Gott!"--he stifled a vehement yawn--"What a Cockney tadpole of a ruffian you look!"

"Can we get any grub?" asked Bert.

"Heaven knows!" said Kurt.

He meditated upon Bert for a time. "So far as I can judge, Smallways," he said, "the Prince will probably want to throw you overboard--next time he thinks of you. He certainly will if he sees you.... After all, you know, you came als Ballast.... And we shall have to lighten ship extensively pretty soon. Unless I'm mistaken, the Prince will wake up presently and start doing things with tremendous vigour.... I've taken a fancy to you. It's the English strain in me. You're a rum little chap. I shan't like seeing you whizz down the air.... You'd better make yourself useful, Smallways. I think I shall requisition you for my squad. You'll have to work, you know, and be infernally intelligent and all that. And you'll have to hang about upside down a bit. Still, it's the best chance you have. We shan't carry passengers much farther this trip, I fancy. Ballast goes over-board--if we don't want to ground precious soon and be taken prisoners of war. The Prince won't do that anyhow. He'll be game to the last."

4

By means of a folding chair, which was still in its place behind the door, they got to the window and looked out in turn and contemplated a sparsely wooded country below, with no railways nor roads, and only occasional signs of habitation. Then a bugle

sounded, and Kurt interpreted it as a summons to food. They got through the door and clambered with some difficulty up the nearly vertical passage, holding on desperately with toes and finger-tips, to the ventilating perforations in its floor. The mess stewards had found their fireless heating arrangements intact, and there was hot cocoa for the officers and hot soup for the men.

Bert's sense of the queerness of this experience was so keen that it blotted out any fear he might have felt. Indeed, he was far more interested now than afraid. He seemed to have touched down to the bottom of fear and abandonment overnight. He was growing accustomed to the idea that he would probably be killed presently, that this strange voyage in the air was in all probability his death journey. No human being can keep permanently afraid: fear goes at last to the back of one's mind, accepted, and shelved, and done with. He squatted over his soup, sopping it up with his bread, and contemplated his comrades. They were all rather yellow and dirty, with four-day beards, and they grouped themselves in the tired, unpremeditated manner of men on a wreck. They talked little. The situation perplexed them beyond any suggestion of ideas. Three had been hurt in the pitching up of the ship during the fight, and one had a bandaged bullet wound. It was incredible that this little band of men had committed murder and massacre on a scale beyond precedent. None of them who squatted on the sloping gas-padded partition, soup mug in hand, seemed really guilty of anything of the sort, seemed really capable of hurting a dog wantonly. They were all so manifestly built for homely chalets on the solid earth and carefully tilled fields and blond wives and cheery merrymaking. The red-faced, sturdy man with light eyelashes who had brought the first news of the air battle to the men's mess had finished his soup, and with an expression of maternal solicitude was readjusting the bandages of a youngster whose arm had been sprained.

Bert was crumbling the last of his bread into the last of his soup, eking it out as long as possible, when suddenly he became aware that every one was looking at a pair of feet that were dangling across the downturned open doorway. Kurt appeared and squatted across the hinge. In some mysterious way he had shaved his face and smoothed down his light golden hair. He looked extraordinarily cherubic. "Der Prinz," he said.

A second pair of boots followed, making wide and magnificent gestures in their attempts to feel the door frame. Kurt guided them to a foothold, and the Prince, shaved and brushed and beeswaxed and clean and big and terrible, slid down into position astride of the door. All the men and Bert also stood up and saluted.

The Prince surveyed them with the gesture of a man who sits a steed. The head of the Kapitan appeared beside him.

Then Bert had a terrible moment. The blue blaze of the Prince's eye fell upon him, the great finger pointed, a question was asked. Kurt intervened with explanations.

"So," said the Prince, and Bert was disposed of.

Then the Prince addressed the men in short, heroic sentences, steadying himself on the hinge with one hand and waving the other in a fine variety of gesture. What he said Bert could not tell, but he perceived that their demeanor changed, their backs stiffened. They began to punctuate the Prince's discourse with cries of approval. At the end their leader burst into song and all the men with him. "Ein feste Burg ist unser Gott," they chanted in deep, strong tones, with an immense moral uplifting. It was glaringly inappropriate in a damaged, half-overturned, and sinking airship, which had been disabled and blown out of action

after inflicting the cruellest bombardment in the world's history; but it was immensely stirring nevertheless. Bert was deeply moved. He could not sing any of the words of Luther's great hymn, but he opened his mouth and emitted loud, deep, and partially harmonious notes....

Far below, this deep chanting struck on the ears of a little camp of Christianised half-breeds who were lumbering. They were breakfasting, but they rushed out cheerfully, quite prepared for the Second Advent. They stared at the shattered and twisted Vaterland driving before the gale, amazed beyond words. In so many respects it was like their idea of the Second Advent, and then again in so many respects, it wasn't. They stared at its passage, awe-stricken and perplexed beyond their power of words. The hymn ceased. Then after a long interval a voice came out of heaven. "Vat id diss blace here galled itself; vat?"

They made no answer. Indeed they did not understand, though the question repeated itself.

And at last the monster drove away northward over a crest of pine woods and was no more seen. They fell into a hot and long disputation....

The hymn ended. The Prince's legs dangled up the passage again, and every one was briskly prepared for heroic exertion and triumphant acts. "Smallways!" cried Kurt, "come here!"

5

Then Bert under Kurt's direction, had his first experience of the work of an air-sailor.

The immediate task before the captain of the Vaterland was a very simple one. He had to keep afloat. The wind, though it had

fallen from its earlier violence, was still blowing strongly enough to render the grounding of so clumsy a mass extremely dangerous, even if it had been desirable for the Prince to land in inhabited country, and so risk capture. It was necessary to keep the airship up until the wind fell and then, if possible, to descend in some lonely district of the Territory where there would be a chance of repair or rescue by some searching consort. In order to do this weight had to be dropped, and Kurt was detailed with a dozen men to climb down among the wreckage of the deflated air-chambers and cut the stuff clear, portion by portion, as the airship sank. So Bert, armed with a sharp cutlass, found himself clambering about upon netting four thousand feet up in the air, trying to understand Kurt when he spoke in English and to divine him when he used German.

It was giddy work, but not nearly so giddy as a rather overnourished reader sitting in a warm room might imagine. Bert found it quite possible to look down and contemplate the wild sub-arctic landscape below, now devoid of any sign of habitation, a land of rocky cliffs and cascades and broad swirling desolate rivers, and of trees and thickets that grew more stunted and scrubby as the day wore on. Here and there on the hills were patches and pockets of snow. And over all this he worked, hacking away at the tough and slippery oiled silk and clinging stoutly to the netting. Presently they cleared and dropped a tangle of bent steel rods and wires from the frame, and a big chunk of silk bladder. That was trying. The airship flew up at once as this loose hamper parted. It seemed almost as though they were dropping all Canada. The stuff spread out in the air and floated down and hit and twisted up in a nasty fashion on the lip of a gorge. Bert clung like a frozen monkey to his ropes and did not move a muscle for five minutes.

But there was something very exhilarating, he found, in this dangerous work, and above every thing else, there was the sense

of fellowship. He was no longer an isolated and distrustful stranger among these others, he had now a common object with them, he worked with a friendly rivalry to get through with his share before them. And he developed a great respect and affection for Kurt, which had hitherto been only latent in him. Kurt with a job to direct was altogether admirable; he was resourceful, helpful, considerate, swift. He seemed to be everywhere. One forgot his pinkness, his light cheerfulness of manner. Directly one had trouble he was at hand with sound and confident advice. He was like an elder brother to his men.

All together they cleared three considerable chunks of wreckage, and then Bert was glad to clamber up into the cabins again and give place to a second squad. He and his companions were given hot coffee, and indeed, even gloved as they were, the job had been a cold one. They sat drinking it and regarding each other with satisfaction. One man spoke to Bert amiably in German, and Bert nodded and smiled. Through Kurt, Bert, whose ankles were almost frozen, succeeded in getting a pair of top-boots from one of the disabled men.

In the afternoon the wind abated greatly, and small, infrequent snowflakes came drifting by. Snow also spread more abundantly below, and the only trees were clumps of pine and spruce in the lower valleys. Kurt went with three men into the still intact gas-chambers, let out a certain quantity of gas from them, and prepared a series of ripping panels for the descent. Also the residue of the bombs and explosives in the magazine were thrown overboard and fell, detonating loudly, in the wilderness below. And about four o'clock in the afternoon upon a wide and rocky plain within sight of snow-crested cliffs, the Vaterland ripped and grounded.

It was necessarily a difficult and violent affair, for the Vaterland had not been planned for the necessities of a balloon.

The captain got one panel ripped too soon and the others not soon enough. She dropped heavily, bounced clumsily, and smashed the hanging gallery into the fore-part, mortally injuring Von Winterfeld, and then came down in a collapsing heap after dragging for some moments. The forward shield and its machine gun tumbled in upon the things below. Two men were hurt badly--one got a broken leg and one was internally injured--by flying rods and wires, and Bert was pinned for a time under the side. When at last he got clear and could take a view of the situation, the great black eagle that had started so splendidly from Franconia six evenings ago, sprawled deflated over the cabins of the airship and the frost-bitten rocks of this desolate place and looked a most unfortunate bird--as though some one had caught it and wrung its neck and cast it aside. Several of the crew of the airship were standing about in silence, contemplating the wreckage and the empty wilderness into which they had fallen. Others were busy under the impromptu tent made by the empty gas-chambers. The Prince had gone a little way off and was scrutinising the distant heights through his field-glass. They had the appearance of old sea cliffs; here and there were small clumps of conifers, and in two places tall cascades. The nearer ground was strewn with glaciated boulders and supported nothing but a stunted Alpine vegetation of compact clustering stems and stalkless flowers. No river was visible, but the air was full of the rush and babble of a torrent close at hand. A bleak and biting wind was blowing. Ever and again a snowflake drifted past. The springless frozen earth under Bert's feet felt strangely dead and heavy after the buoyant airship.

6

So it came about that that great and powerful Prince Karl Albert was for a time thrust out of the stupendous conflict he chiefly had been instrumental in provoking. The chances of battle and the weather conspired to maroon him in Labrador, and there he

raged for six long days, while war and wonder swept the world. Nation rose against nation and air-fleet grappled air-fleet, cities blazed and men died in multitudes; but in Labrador one might have dreamt that, except for a little noise of hammering, the world was at peace.

There the encampment lay; from a distance the cabins, hovered over with the silk of the balloon part, looked like a gipsy's tent on a rather exceptional scale, and all the available hands were busy in building out of the steel of the framework a mast from which the Vaterland's electricians might hang the long conductors of the apparatus for wireless telegraphy that was to link the Prince to the world again. There were times when it seemed they would never rig that mast. From the outset the party suffered hardship. They were not too abundantly provisioned, and they were put on short rations, and for all the thick garments they had, they were but ill-equipped against the piercing wind and inhospitable violence of this wilderness. The first night was spent in darkness and without fires. The engines that had supplied power were smashed and dropped far away to the south, and there was never a match among the company. It had been death to carry matches. All the explosives had been thrown out of the magazine, and it was only towards morning that the bird-faced man whose cabin Bert had taken in the beginning confessed to a brace of duelling pistols and cartridges, with which a fire could be started. Afterwards the lockers of the machine gun were found to contain a supply of unused ammunition.

The night was a distressing one and seemed almost interminable. Hardly any one slept. There were seven wounded men aboard, and Von Winterfeld's head had been injured, and he was shivering and in delirium, struggling with his attendant and shouting strange things about the burning of New York. The men crept together in the mess-room in the darkling, wrapped in what they could find and drank cocoa from the fireless heaters and listened to his

cries. In the morning the Prince made them a speech about Destiny, and the God of his Fathers and the pleasure and glory of giving one's life for his dynasty, and a number of similar considerations that might otherwise have been neglected in that bleak wilderness. The men cheered without enthusiasm, and far away a wolf howled.

Then they set to work, and for a week they toiled to put up a mast of steel, and hang from it a gridiron of copper wires two hundred feet by twelve. The theme of all that time was work, work continually, straining and toilsome work, and all the rest was grim hardship and evil chances, save for a certain wild splendour in the sunset and sunrise in the torrents and drifting weather, in the wilderness about them. They built and tended a ring of perpetual fires, gangs roamed for brushwood and met with wolves, and the wounded men and their beds were brought out from the airship cabins, and put in shelters about the fires. There old Von Winterfeld raved and became quiet and presently died, and three of the other wounded sickened for want of good food, while their fellows mended. These things happened, as it were, in the wings; the central facts before Bert's consciousness were always firstly the perpetual toil, the holding and lifting, and lugging at heavy and clumsy masses, the tedious filing and winding of wires, and secondly, the Prince, urgent and threatening whenever a man relaxed. He would stand over them, and point over their heads, southward into the empty sky. "The world there," he said in German, "is waiting for us! Fifty Centuries come to their Consummation." Bert did not understand the words, but he read the gesture. Several times the Prince grew angry; once with a man who was working slowly, once with a man who stole a comrade's ration. The first he scolded and set to a more tedious task; the second he struck in the face and ill-used. He did no work himself. There was a clear space near the fires in which he would walk up and down, sometimes for two hours together, with arms folded, muttering to himself of Patience and his destiny.

At times these mutterings broke out into rhetoric, into shouts and gestures that would arrest the workers; they would stare at him until they perceived that his blue eyes glared and his waving hand addressed itself always to the southward hills. On Sunday the work ceased for half an hour, and the Prince preached on faith and God's friendship for David, and afterwards they all sang: "Ein feste Burg ist unser Gott."

In an improvised hovel lay Von Winterfeld, and all one morning he raved of the greatness of Germany. "Blut und Eisen!" he shouted, and then, as if in derision, "Welt-Politik--ha, ha!" Then he would explain complicated questions of polity to imaginary hearers, in low, wily tones. The other sick men kept still, listening to him. Bert's distracted attention would be recalled by Kurt. "Smallways, take that end. So!"

Slowly, tediously, the great mast was rigged and hoisted foot by foot into place. The electricians had contrived a catchment pool and a wheel in the torrent close at hand--for the little Mulhausen dynamo with its turbinal volute used by the telegraphists was quite adaptable to water driving, and on the sixth day in the evening the apparatus was in working order and the Prince was calling--weakly, indeed, but calling--to his air-fleet across the empty spaces of the world. For a time he called unheeded.

The effect of that evening was to linger long in Bert's memory. A red fire spluttered and blazed close by the electricians at their work, and red gleams xan up the vertical steel mast and threads of copper wire towards the zenith. The Prince sat on a rock close by, with his chin on his hand, waiting. Beyond and to the northward was the cairn that covered Von Winterfeld, surmounted by a cross of steel, and from among the tumbled rocks in the distance the eyes of a wolf gleamed redly. On the other hand was the wreckage of the great airship and the men bivouacked

about a second ruddy flare. They were all keeping very still, as if waiting to hear what news might presently be given them. Far away, across many hundreds of miles of desolation, other wireless masts would be clicking, and snapping, and waking into responsive vibration. Perhaps they were not. Perhaps those throbs upon the etherz .wasted themselves upon a regardless world. When the men spoke, they spoke in low tones. Now and then a bird shrieked remotely, and once a wolf howled. All these things were set in the immense cold spaciousness of the wild.

7

Bert got the news last, and chiefly in broken English, from a linguist among his mates. It was only far on in the night that the weary telegraphist got an answer to his calls, but then the messages came clear and strong. And such news it was!

"I say," said Bert at his breakfast, amidst a great clamour, "tell us a bit."

"All de vorlt is at vor!" said the linguist, waving his cocoa in an illustrative manner, "all de vorlt is at vor!"

Bert stared southward into the dawn. It did not seem so.

"All de vorlt is at vor! They haf burn' Berlin; they haf burn' London; they haf burn' Hamburg and Paris. Chapan hass burn San Francisco. We haf mate a camp at Niagara. Dat is whad they are telling us. China has cot drachenflieger and luftschiffe beyont counting. All de vorlt is at vor!"

"Gaw I" said Bert.

"Yess," said the linguist, drinking his cocoa.

"Burnt up London, 'ave they? Like we did New York?"

"It wass a bombardment."

"They don't say anything about a place called Clapham, or Bun Hill, do they?"

"I haf heard noding," said the linguist.

That was all Bert could get for a time. But the excitement of all the men about him was contagious, and presently he saw Kurt standing alone, hands behind him, and looking at one of the distant waterfalls very steadfastly. He went up and saluted, soldier-fashion. "Beg pardon, lieutenant," he said.

Kurt turned his face. It was unusually grave that morning. "I was just thinking I would like to see that waterfall closer," he said. "It reminds me--what do you want?"

"I can't make 'ead or tail of what they're saying, sir. Would you mind telling me the news?"

"Damn the news," said Kurt. "You'll get news enough before the day's out. It's the end of the world. They're sending the Graf Zeppelin for us. She'll be here by the morning, and we ought to be at Niagara--or eternal smash--within eight and forty hours.... I want to look at that waterfall. You'd better come with me. Have you had your rations?"

"Yessir."

"Very well. Come."

And musing profoundly, Kurt led the way across the rocks towards the distant waterfall.

For a time Bert walked behind him in the character of an escort; then as they passed out of the atmosphere of the encampment, Kurt lagged for him to come alongside.

"We shall be back in it all in two days' time," he said. "And it's a devil of a war to go back to. That's the news. The world's gone mad. Our fleet beat the Americans the night we got disabled, that's clear. We lost eleven--eleven airships certain, and all their aeroplanes got smashed. God knows how much we smashed or how many we killed. But that was only the beginning. Our start's been like firing a magazine. Every country was hiding flying-machines. They're fighting in the air all over Europe--all over the world. The Japanese and Chinese have joined in. That's the great fact. That's the supreme fact. They've pounced into our little quarrels.... The Yellow Peril was a peril after all! They've got thousands of airships. They're all over the world. We bombarded London and Paris, and now the French and English have smashed up Berlin. And now Asia is at us all, and on the top of us all.... It's mania. China on the top. And they don't know where to stop. It's limitless. It's the last confusion. They're bombarding capitals, smashing up dockyards and factories, mines and fleets."

"Did they do much to London, sir?" asked Bert.

"Heaven knows...."

He said no more for a time.

"This Labrador seems a quiet place," he resumed at last. "I'm half a mind to stay here. Can't do that. No! I've got to see it through. I've got to see it through. You've got to, too. Every one.... But why?... I tell you--our world's gone to pieces. There's no way out of it, no way back. Here we are! We're like

mice caught in a house on fire, we're like cattle overtaken by a flood. Presently we shall be picked up, and back we shall go into the fighting. We shall kill and smash again--perhaps. It's a Chino-Japanese air-fleet this time, and the odds are against us. Our turns will come. What will happen to you I don't know, but for myself, I know quite well; I shall be killed."

"You'll be all right," said Bert, after a queer pause.

"No!" said Kurt, "I'm going to be killed. I didn't know, it before, but this morning, at dawn, I knew it-as though I'd been told."

"Ow?"

"I tell you I know."

"But 'ow COULD you know?"

"I know."

"Like being told?"

"Like being certain."

"I know," he repeated, and for a time they walked in silence towards the waterfall.

Kurt, wrapped in his thoughts, walked heedlessly, and at last broke out again. "I've always felt young before, Smallways, but this morning I feel old--old. So old! Nearer to death than old men feel. And I've always. thought life was a lark. It isn't.... This sort of thing has always been happening, I suppose--these things, wars and earthquakes, that sweep across all the decency of life. It's just as though I had woke up to it all for the

first time. Every night since we were at New York I've dreamt of it... And it's always been so--it's the way of life. People are torn away from the people they care for; homes are smashed, creatures full of life, and memories, and little peculiar gifts are scalded and smashed, and torn to pieces, and starved, and spoilt. London! Berlin! San Francisco! Think of all the human histories we ended in New York!... And the others go on again as though such things weren't possible. As I went on! Like animals! Just like animals."

He said nothing for a long time, and then he dropped out, "The Prince is a lunatic!"

They came to a place where they had to climb, and then to a long peat level beside rivulet. There a quantity of delicate little pink flowers caught Bert's eye. "Gaw!" he said, and stooped to pick one. "In a place like this."

Kurt stopped and half turned. His face winced.

"I never see such a flower," said Bert. "It's so delicate."

"Pick some more if you want to," said Kurt.

Bert did so, while Kurt stood and watched him.

"Funny 'ow one always wants to pick flowers," said Bert.

Kurt had nothing to add to that.

They went on again, without talking, for a long time.

At last they came to a rocky hummock, from which the view of the waterfall opened out. There Kurt stopped and seated himself on a rock.

"That's as much as I wanted to see," he explained. "It isn't very like, but it's like enough."

"Like what?"

"Another waterfall I knew."

He asked a question abruptly. "Got a girl, Smallways?"

"Funny thing," said Bert, "those flowers, I suppose.--I was jes' thinking of 'er."

"So was I."

"WHAT! Edna?"

"No. I was thinking of MY Edna. We've all got Ednas, I suppose, for our imaginations to play about. This was a girl. But all that's past for ever. It's hard to think I can't see her just for a minute--just let her know I'm thinking of her."

"Very likely," said Bert, "you'll see 'er all right."

"No," said Kurt with decision, "I KNOW."

"I met her," he went on, "in a place like this--in the Alps--Engstlen Alp. There's a waterfall rather like this one--a broad waterfall down towards Innertkirchen. That's why I came here this morning. We slipped away and had half a day together beside it. And we picked flowers. Just such flowers as you picked. The same for all I know. And gentian."

"I know" said Bert, "me and Edna--we done things like that. Flowers. And all that. Seems years off now."

"She was beautiful and daring and shy, Mein Gott! I can hardly hold myself for the desire to see her and hear her voice again before I die. Where is she?... Look here, Smallways, I shall write a sort of letter-- And there's her portrait." He touched his breast pocket.

"You'll see 'er again all right," said Bert.

"No! I shall never see her again.... I don't understand why people should meet just to be torn apart. But I know she and I will never meet again. That I know as surely as that the sun will rise, and that cascade come shining over the rocks after I am dead and done.... Oh! It's all foolishness and haste and violence and cruel folly, stupidity and blundering hate and selfish ambition--all the things that men have done--all the things they will ever do. Gott! Smallways, what a muddle and confusion life has always been--the battles and massacres and disasters, the hates and harsh acts, the murders and sweatings, the lynchings and cheatings. This morning I am tired of it all, as though I'd just found it out for the first time. I HAVE found it out. When a man is tired of life, I suppose it is time for him to die. I've lost heart, and death is over me. Death is close to me, and I know I have got to end. But think of all the hopes I had only a little time ago, the sense of fine beginnings!... It was all a sham. There were no beginnings.... We're just ants in ant-hill cities, in a world that doesn't matter; that goes on and rambles into nothingness. New York--New York doesn't even strike me as horrible. New York was nothing but an ant-hill kicked to pieces by a fool!

"Think of it, Smallways: there's war everywhere! They're smashing up their civilisation before they have made it. The sort of thing the English did at Alexandria, the Japanese at Port Arthur, the French at Casablanca, is going on everywhere.

Everywhere! Down in South America even they are fighting among themselves! No place is safe--no place is at peace. There is no place where a woman and her daughter can hide and be at peace. The war comes through the air, bombs drop in the night. Quiet people go out in the morning, and see air-fleets passing overhead--dripping death--dripping death!"

CHAPTER VIII A WORLD AT WAR

1

It was only very slowly that Bert got hold of this idea that the whole world was at war, that he formed any image at all of the crowded countries south of these Arctic solitudes stricken with terror and dismay as these new-born aerial navies swept across their skies. He was not used to thinking of the world as a whole, but as a limitless hinterland of happenings beyond the range of his immediate vision. War in his imagination was something, a source of news and emotion, that happened in a restricted area, called the Seat of War. But now the whole atmosphere was the Seat of War, and every land a cockpit. So closely had the nations raced along the path of research and invention, so secret and yet so parallel had been their plans and acquisitions, that it was within a few hours of the launching of the first fleet in Franconia that an Asiatic Armada beat its west-ward way across, high above the marvelling millions in the plain of the Ganges. But the preparations of the Confederation of Eastern Asia had been on an altogether more colossal scale than the German. "With this step," said Tan Ting-siang, "we overtake and pass the West. We recover the peace of the world that these barbarians have destroyed."

Their secrecy and swiftness and inventions had far surpassed those of the Germans, and where the Germans had had a hundred men at work the Asiatics had ten thousand. There came to their great aeronaut parks at Chinsi-fu and Tsingyen by the mono-rails that now laced the whole surface of China a limitless supply of skilled and able workmen, workmen far above the average European in industrial efficiency. The news of the German World Surprise simply quickened their efforts. At the time of the bombardment of New York it is doubtful if the Germans had three hundred airships all together in the world; the score of Asiatic fleets flying east and west and south must have numbered several thousand. Moreover the Asiatics had a real fighting flying-machine, the Niais as they were called, a light but quite efficient weapon, infinitely superior to the German drachenflieger. Like that, it was a one-man machine, but it was built very lightly of steel and cane and chemical silk, with a transverse engine, and a flapping sidewing. The aeronaut carried a gun firing explosive bullets loaded with oxygen, and in addition, and true to the best tradition of Japan, a sword. Mostly they were Japanese, and it is characteristic that from the first it was contemplated that the aeronaut should be a swordsman. The wings of these flyers had bat-like hooks forward, by which they were to cling to their antagonist's gas-chambers while boarding him. These light flying-machines were carried with the fleets, and also sent overland or by sea to the front with the men. They were capable of flights of from two to five hundred miles according to the wind.

So, hard upon the uprush of the first German air-fleet, these Asiatic swarms took to the atmosphere. Instantly every organised Government in the world, was frantically and vehemently building airships and whatever approach to a flying machine its inventors' had discovered. There was no time for diplomacy. Warnings and ultimatums wer telegraphed to and fro, and in a few hours all the panic-fierce world was openly at war, and at war in the most

complicated way. For Britain and France and Italy had declared war upon Germany and outraged Swiss neutrality; India, at the sight of Asiatic airships, had broken into a Hindoo insurrection in Bengal and a Mohametan revolt hostile to this in the North-west Provinces--the latter spreading like wildfire from Gobi to the Gold Coast--and the Confederation of Eastern Asia had seized the oil wells of Burmha and was impartially attacking America and Germany. In a week they were building airships in Damascus and Cairo and Johannesburg; Australia and New Zealand were frantically equipping themselves. One unique and terrifying aspect of this development was the swiftness with which these monsters could be produced. To build an ironclad took from two to four years; an airship could be put together in as many weeks. Moreover, compared with even a torpedo boat, the airship was remarkably simple to construct, given the air-chamber material, the engines, the gas plant, and the design, it was reallt not more complicated and far easier than an ordinary wooden boat had been a hundred years before. And now from Cape Horn to Nova Zembla, and from Canton round to Canton again, there were factories and workshops and industrial resources.

And the German airships were barely in sight of the Atlantic waters, the first Asiatic fleet was scarcely reported from Upper Burmah, before the fantastic fabric of credit and finance that had held the world together economically for a hundred years strained and snapped. A tornado of realisation swept through every stock exchange in the world; banks stopped payment, business shrank and ceased, factories ran on for a day or so by a sort of inertia, completing the orders of bankrupt and extinguished customers, then stopped. The New York Bert Smallways saw, for all its glare of light and traffic, was in the pit of an economic and financial collapse unparalleled in history. The flow of the food supply was already a little checked. And before the world-war had lasted two weeks--by the time, that is, that mast was rigged in Labrador--there was not a

city or town in the world outside China, however far from the actual centres of destruction, where police and government were not adopting special emergency methods to deal with a want of food and a glut of unemployed people.

The special peculiarities of aerial warfare were of such a nature as to trend, once it had begun, almost inevitably towards social disorganisation. The first of these peculiarities was brought home to the Germans in their attack upon New York; the immense power of destruction an airship has over the thing below, and its relative inability to occupy or police or guard or garrison a surrendered position. Necessarily, in the face of urban populations in a state of economic disorganisation and infuriated and starving, this led to violent and destructive collisions, and even where the air-fleet floated inactive above, there would be civil conflict and passionate disorder below. Nothing comparable to this state of affairs had been known in the previous history of warfare, unless we take such a case as that of a nineteenth century warship attacking some large savage or barbaric settlement, or one of those naval bombardments that disfigure the history of Great Britain in the late eighteenth century. Then, indeed, there had been cruelties and destruction that faintly foreshadowed the horrors of the aerial war. Moreover, before the twentieth century the world had had but one experience, and that a comparatively light one, in the Communist insurrection of Paris, 1871, of the possibilities of a modern urban population under warlike stresses.

A second peculiarity of airship war as it first came to the world that also made for social collapse, was the ineffectiveness of the early air-ships against each other. Upon anything below they could rain explosives in the most deadly fashion, forts and ships and cities lay at their mercy, but unless they were prepared for a suicidal grapple they could do remarkably little mischief to each other. The armament of the huge German airships, big as the

biggest mammoth liners afloat, was one machine gun that could easily have been packed up on a couple of mules. In addition, when it became evident that the air must be fought for, the air-sailors were provided with rifles with explosive bullets of oxygen or inflammable substance, but no airship at any time ever carried as much in the way of guns and armour as the smallest gunboat on the navy list had been accustomed to do. Consequently, when these monsters met in battle, they manoeuvred for the upper place, or grappled and fought like junks, throwing grenades fighting hand to hand in an entirely medieval fashion. The risks of a collapse and fall on either side came near to balancing in every case the chances of victory. As a consequence, and after their first experiences of battle, one finds a growing tendency on the part of the air-fleet admirals to evade joining battle, and to seek rather the moral advantage of a destructive counter attack.

And if the airships were too ineffective, the early drachenflieger were either too unstable, like the German, or too light, like the Japanese, to produce immediately decisive results. Later, it is true, the Brazilians launched a flying-machine of a type and scale that was capable of dealing with an airship, but they built only three or four, they operated only in South America, and they vanished from history untraceably in the time when world-bankruptcy put a stop to all further engineering production on any considerable scale.

The third peculiarity of aerial warfare was that it was at once enormously destructive and entirely indecisive. It had this unique feature, that both sides lay open to punitive attack. In all previous forms of war, both by land and sea, the losing side was speedily unable to raid its antagonist's territory and the communications. One fought on a "front," and behind that front the winner's supplies and resources, his towns and factories and capital, the peace of his country, were secure. If the war was a

naval one, you destroyed your enemy's battle fleet and then blockaded his ports, secured his coaling stations, and hunted down any stray cruisers that threatened your ports of commerce. But to blockade and watch a coastline is one thing, to blockade and watch the whole surface of a country is another, and cruisers and privateers are things that take long to make, that cannot be packed up and hidden and carried unostentatiously from point to point. In aerial war the stronger side, even supposing it destroyed the main battle fleet of the weaker, had then either to patrol and watch or destroy every possible point at which he might produce another and perhaps a novel and more deadly form of flyer. It meant darkening his air with airships. It meant building them by the thousand and making aeronauts by the hundred thousand. A small uninitiated airship could be hidden in a railway shed, in a village street, in a wood; a flying machine is even less conspicuous.

And in the air are no streets, no channels, no point where one can say of an antagonist, "If he wants to reach my capital he must come by here." In the air all directions lead everywhere.

Consequently it was impossible to end a war by any of the established methods. A, having outnumbered and overwhelmed B, hovers, a thousand airships strong, over his capital, threatening to bombard it unless B submits. B replies by wireless telegraphy that he is now in the act of bombarding the chief manufacturing city of A by means of three raider airships. A denounces B's raiders as pirates and so forth, bombards B's capital, and sets off to hunt down B's airships, while B, in a state of passionate emotion and heroic unconquerableness, sets to work amidst his ruins, making fresh airships and explosives for the benefit of A. The war became perforce a universal guerilla war, a war inextricably involving civilians and homes and all the apparatus of social life.

These aspects of aerial fighting took the world by surprise. There had been no foresight to deduce these consequences. If there had been, the world would have arranged for a Universal Peace Conference in 1900. But mechanical invention had gone faster than intellectual and social organisation, and the world, with its silly old flags, its silly unmeaning tradition of nationality, its cheap newspapers and cheaper passions and imperialisms, its base commercial motives and habitual insincerities and vulgarities, its race lies and conflicts, was taken by surprise. Once the war began there was no stopping it. The flimsy fabric of credit that had grown with no man foreseeing, and that had held those hundreds of millions in an economic interdependence that no man clearly understood, dissolved in panic. Everywhere went the airships dropping bombs, destroying any hope of a rally, and everywhere below were economic catastrophe, starving workless people, rioting, and social disorder. Whatever constructive guiding intelligence there had been among the nations vanished in the passionate stresses of the time. Such newspapers and documents and histories as survive from this period all tell one universal story of towns and cities with the food supply interrupted and their streets congested with starving unemployed; of crises in administration and states of siege, of provisional Governments and Councils of Defence, and, in the cases of India and Egypt, insurrectionary committees taking charge of the re-arming of the population, of the making of batteries and gun-pits, of the vehement manufacture of airships and flying-machines.

One sees these things in glimpses, in illuminated moments, as if through a driving reek of clouds, going on all over the world. It was the dissolution of an age; it was the collapse of the civilisation that had trusted to machinery, and the instruments of its destruction were machines. But while the collapse of the previous great civilisation, that of Rome, had been a matter of centuries, had been a thing of phase and phase, like the ageing

and dying of a man, this, like his killing by railway or motor car, was one swift, conclusive smashing and an end.

2

The early battles of the aerial war were no doubt determined by attempts to realise the old naval maxim, to ascertain the position of the enemy's fleet and to destroy it. There was first the battle of the Bernese Oberland, in which the Italian and French navigables in their flank raid upon the Franconian Park were assailed by the Swiss experimental squadron, supported as the day wore on by German airships, and then the encounter of the British Winterhouse-Dunn aeroplanes with three unfortunate Germans.

Then came the Battle of North India, in which the entire Anglo-Indian aeronautic settlement establishment fought for three days against overwhelming odds, and was dispersed and destroyed in detail.

And simultaneously with the beginning of that, commenced the momentous struggle of the Germans and Asiatics that is usually known as the Battle of Niagara because of the objective of the Asiatic attack. But it passed gradually into a sporadic conflict over half a continent. Such German airships as escaped destruction in battle descended and surrendered to the Americans, and were re-manned, and in the end it became a series of pitiless and heroic encounters between the Americans, savagely resolved to exterminate their enemies, and a continually reinforced army of invasion from Asia quartered upon the Pacific slope and supported by an immense fleet. From the first the war in America was fought with implacable bitterness; no quarter was asked, no prisoners were taken. With ferocious and magnificent energy the Americans constructed and launched ship after ship to battle and perish against the Asiatic multitudes. All other affairs were

subordinate to this war, the whole population was presently living or dying for it. Presently, as I shall tell, the white men found in the Butteridge machine a weapon that could meet and fight the flying-machines of the Asiatic swordsman.

The Asiatic invasion of America completely effaced the German-American conflict. It vanishes from history. At first it had seemed to promise quite sufficient tragedy in itself--beginning as it did in unforgettable massacre. After the destruction of central New York all America had risen like one man, resolved to die a thousand deaths rather than submit to Germany. The Germans grimly resolved upon beating the Americans into submission and, following out the plans developed by the Prince, had seized Niagara--in order to avail themselves of its enormous powerworks; expelled all its inhabitants and made a desert of its environs as far as Buffalo. They had also, directly Great Britain and France declare war, wrecked the country upon the Canadian side for nearly ten miles inland. They began to bring up men and material from the fleet off the east coast, stringing out to and fro like bees getting honey. It was then that the Asiatic forces appeared, and it was in their attack upon this German base at Niagara that the air-fleets of East and West first met and the greater issue became clear.

One conspicuous peculiarity of the early aerial fighting arose from the profound secrecy with which the airships had been prepared. Each power had had but the dimmest inkling of the schemes of its rivals, and even experiments with its own devices were limited by the needs of secrecy. None of the designers of airships and aeroplanes had known clearly what their inventions might have to fight; many had not imagined they would have to fight anything whatever in the air; and had planned them only for the dropping of explosives. Such had been the German idea. The only weapon for fighting another airship with which the Franconian fleet had been provided was the machine gun forward.

Only after the fight over New York were the men given short rifles with detonating bullets. Theoretically, the drachenflieger were to have been the fighting weapon. They were declared to be aerial torpedo-boats, and the aeronaut was supposed to swoop close to his antagonist and cast his bombs as he whirled past. But indeed these contrivances were hopelessly unstable; not one-third in any engagement succeeded in getting back to the mother airship. The rest were either smashed up or grounded.

The allied Chino-Japanese fleet made the same distinction as the Germans between airships and fighting machines heavier than air, but the type in both cases was entirely different from the occidental models, and--it is eloquent of the vigour with which these great peoples took up and bettered the European methods of scientific research in almost every particular the invention of Asiatic engineers. Chief among these, it is worth remarking, was Mohini K. Chatterjee, a political exile who had formerly served in the British-Indian aeronautic park at Lahore.

The German airship was fish-shaped, with a blunted head; the Asiatic airship was also fish-shaped, but not so much on the lines of a cod or goby as of a ray or sole. It had a wide, flat underside, unbroken by windows or any opening except along the middle line. Its cabins occupied its axis,, with a sort of bridge deck above, and the gas-chambers gave the whole affair the shape of a gipsy's hooped tent, except that it was much flatter. The German airship was essentially a navigable balloon very much lighter than air; the Asiatic airship was very little lighter than air and skimmed through it with much greater velocity if with considerably less stability. They carried fore and aft guns, the latter much the larger, throwing inflammatory shells, and in addition they had nests for riflemen on both the upper and the under side. Light as this armament was in comparison with the smallest gunboat that ever sailed, it was sufficient for them

to outfight as well as outfly the German monster airships. In action they flew to get behind or over the Germans: they even dashed underneath, avoiding only passing immediately beneath the magazine, and then as soon as they had crossed let fly with their rear gun, and sent flares or oxygen shells into the antagonist's gas-chambers.

It was not in their airships, but, as I have said, in their flying-machines proper, that the strength of the Asiatics lay. Next only to the Butteridge machine, these were certainly the most efficient heavier-than-air fliers that had ever appeared. They were the invention of a Japanese artist, and they differed in type extremely from the box-kite quality of the German drachenflieger. They had curiously curved, flexible side wings, more like BENT butterfly's wings than anything else, and made of a substance like celluloid and of brightly painted silk, and they had a long humming-bird tail. At the forward corner of the wings were hooks, rather like the claws of a bat, by which the machine could catch and hang and tear at the walls of an airship's gas-chamber. The solitary rider sat between the wings above a transverse explosive engine, an explosive engine that differed in no essential particular from those in use in the light motor bicycles of the period. Below was a single large wheel. The rider sat astride of a saddle, as in the Butteridge machine, and he carried a large double-edged two-handed sword, in addition to his explosive-bullet firing rifle.

3

One sets down these particulars and compares the points of the American and German pattern of aeroplane and navigable, but none of these facts were clearly known to any of those who fought in this monstrously confused battle above the American great lakes.

Each side went into action against it knew not what, under novel

conditions and with apparatus that even without hostile attacks was capable of producing the most disconcerting surprises. Schemes of action, attempts at collective manoeuvring necessarily went to pieces directly the fight began, just as they did in almost all the early ironclad battles of the previous century. Each captain then had to fall back upon individual action and his own devices; one would see triumph in what another read as a cue for flight and despair. It is as true of the Battle of Niagara as of the Battle of Lissa that it was not a battle but a bundle of "battlettes"!

To such a spectator as Bert it presented itself as a series of incidents, some immense, some trivial, but collectively incoherent. He never had a sense of any plain issue joined, of any point struggled for and won or lost. He saw tremendous things happen and in the end his world darkened to disaster and ruin.

He saw the battle from the ground, from Prospect Park and from Goat Island, whither he fled.

But the manner in which he came to be on the ground needs explaining.

The Prince had resumed command of his fleet through wireless telegraphy long before the Zeppelin had located his encampment in Labrador. By his direction the German air-fleet, whose advance scouts had been in contact with the Japanese over the Rocky Mountains, had concentrated upon Niagara and awaited his arrival. He had rejoined his command early in the morning of the twelfth, and Bert had his first prospect of the Gorge of Niagara while he was doing net drill outside the middle gas-chamber at sunrise. The Zeppelin was flying very high at the time, and far below he saw the water in the gorge marbled with froth and then away to the west the great crescent of the Canadian Fall shining,

flickering and foaming in the level sunlight and sending up a deep, incessant thudding rumble to the sky. The air-fleet was keeping station in an enormous crescent, with its horns pointing south-westward, a long array of shining monsters with tails rotating slowly and German ensigns now trailing from their bellies aft of their Marconi pendants.

Niagara city was still largely standing then, albeit its streets were empty of all life. Its bridges were intact; its hotels and restaurants still flying flags and inviting sky signs; its power-stations running. But about it the country on both sides of the gorge might have been swept by a colossal broom. Everything that could possibly give cover to an attack upon the German position at Niagara had been levelled as ruthlessly as machinery and explosives could contrive; houses blown up and burnt, woods burnt, fences and crops destroyed. The mono-rails had been torn up, and the roads in particular cleared of all possibility of concealment or shelter. Seen from above, the effect of this wreckage was grotesque. Young woods had been destroyed whole-sale by dragging wires, and the spoilt saplings, smashed or uprooted, lay in swathes like corn after the sickle. Houses had an appearance of being flattened down by the pressure of a gigantic finger. Much burning was still going on, and large areas had been reduced to patches of smouldering and sometimes still glowing blackness.

Here and there lay the debris of belated fugitives, carts, and dead bodies of horses and men; and where houses had had water-supplies there were pools of water and running springs from the ruptured pipes. In unscorched fields horses and cattle still fed peacefully. Beyond this desolated area the countryside was still standing, but almost all the people had fled. Buffalo was on fire to an enormous extent, and there were no signs of any efforts to grapple with the flames. Niagara city itself was being rapidly converted to the needs of a military depot. A

large number of skilled engineers had already been brought from the fleet and were busily at work adapting the exterior industrial apparatus of the place to the purposes of an aeronautic park. They had made a gas recharging station at the corner of the American Fall above the funicular railway, and they were, opening up a much larger area to the south for the same purpose. Over the power-houses and hotels and suchlike prominent or important points the German flag was flying.

The Zeppelin circled slowly over this scene twice while the Prince surveyed it from the swinging gallery; it then rose towards the centre of the crescent and transferred the Prince and his suite, Kurt included, to the Hohenzollern, which had been chosen as the flagship during the impending battle. They were swung up on a small cable from the forward gallery, and the men of the Zeppelin manned the outer netting as the Prince and his staff left them. The Zeppelin then came about, circled down and grounded in Prospect Park, in order to land the wounded and take aboard explosives; for she had come to Labrador with her magazines empty, it being uncertain what weight she might need to carry. She also replenished the hydrogen in one of her forward chambers which had leaked.

Bert was detailed as a bearer and helped carry the wounded one by one into the nearest of the large hotels that faced the Canadian shore. The hotel was quite empty except that there were two trained American nurses and a negro porter, and three or four Germans awaiting them. Bert went with the Zeppelin's doctor into the main street of the place, and they broke into a drug shop and obtained various things of which they stood in need. As they returned they found an officer and two men making a rough inventory of the available material in the various stores. Except for them the wide, main street of the town was quite deserted, the people had been given three hours to clear out, and everybody, it seemed, had done so. At one corner a dead man lay

against the wall--shot. Two or three dogs were visible up the empty vista, but towards its river end the passage of a string of mono-rail cars broke the stillness and the silence. They were loaded with hose, and were passing to the trainful of workers who were converting Prospect Park into an airship dock.

Bert pushed a case of medicine balanced on a bicycle taken from an adjacent shop, to the hotel, and then he was sent to load bombs into the Zeppelin magazine, a duty that called for elaborate care. From this job he was presently called off by the captain of the Zeppelin, who sent him with a note to the officer in charge of the Anglo-American Power Company, for the field telephone had still to be adjusted. Bert received his instructions in German, whose meaning he guessed, and saluted and took the note, not caring to betray his ignorance of the language. He started off with a bright air of knowing his way and turned a corner or so, and was only beginning to suspect that he did not know where he was going when his attention was recalled to the sky by the report of a gun from the Hohenzollern and celestial cheering.

He looked up and found the view obstructed by the houses on either side of the street. He hesitated, and then curiosity took him back towards the bank of the river. Here his view was inconvenienced by trees, and it was with a start that he discovered the Zeppelin, which he knew had still a quarter of her magazines to fill, was rising over Goat Island. She had not waited for her complement of ammunition. It occurred to him that he was left behind. He ducked back among the trees and bushes until he felt secure from any after-thought on the part of the Zeppelin's captain. Then his curiosity to see what the German air-fleet faced overcame him, and drew him at last halfway across the bridge to Goat Island.

From that point he had nearly a hemisphere of sky and got his

first glimpse of the Asiatic airships low in the sky above the glittering tumults of the Upper Rapids.

They were far less impressive than the German ships. He could not judge the distance, and they flew edgeways to him, so as to conceal the broader aspect of their bulk.

Bert stood there in the middle of the bridge, in a place that most people who knew it remembered as a place populous with sightseers and excursionists, and he was the only human being in sight there. Above him, very high in the heavens, the contending air-fleets manoeuvred; below him the river seethed like a sluice towards the American Fall. He was curiously dressed. His cheap blue serge trousers were thrust into German airship rubber boots, and on his head he wore an aeronaut's white cap that was a trifle too large for him. He thrust that back to reveal his staring little Cockney face, still scarred upon the brow. "Gaw!" he whispered.

He stared. He gesticulated. Once or twice he shouted and applauded.

Then at a certain point terror seized him and he took to his heels in the direction of Goat Island.

4

For a time after they were in sight of each other, neither fleet attempted to engage. The Germans numbered sixty-seven great airships and they maintained the crescent formation at a height of nearly four thousand feet. They kept a distance of about one and a half lengths, so that the horns of the crescent were nearly thirty miles apart. Closely in tow of the airships of the extreme squadrons on either wing were about thirty drachenflieger ready manned,, but these were too small and distant for Bert to

distinguish.

At first, only what was called the Southern fleet of the Asiatics was visible to him. It consisted of forty airships, carrying all together nearly four hundred one-man flying-machines upon their flanks, and for some time it flew slowly and at a minimum distance of perhaps a dozen miles from the Germans, eastward across their front. At first Bert could distinguish only the greater bulks, then he perceived the one-man machines as a multitude of very small objects drifting like motes in the sunshine about and beneath the larger shapes.

Bert saw nothing then of the second fleet of the Asiatics, though probably that was coming into sight of the Germans at the time, in the north-west.

The air was very still, the sky almost without a cloud, and the German fleet had risen to an immense height, so that the airships seemed no longer of any considerable size. Both ends of their crescent showed plainly. As they beat southward they passed slowly between Bert and the sunlight, and became black outlines of themselves. The drachenflieger appeared as little flecks of black on either wing of this aerial Armada.

The two fleets seemed in no hurry to engage. The Asiatics went far away into the east, quickening their pace and rising as they did so, and then tailed out into a long column and came flying back, rising towards the German left. The squadrons of the latter came about, facing this oblique advance, and suddenly little flickerings and a faint crepitating sound told that they had opened fire. For a time no effect was visible to the watcher on the bridge. Then, like a handful of snowflakes, the drachenflieger swooped to the attack, and a multitude of red specks whirled up to meet them. It was to Bert's sense not only enormously remote but singularly inhuman. Not four hours since

he had been on one of those very airships, and yet they seemed to him now not gas-bags carrying men, but strange sentient creatures that moved about and did things with a purpose of their own. The flight of the Asiatic and German flying-machines joined and dropped earthward, became like a handful of white and red rose petals flung from a distant window, grew larger, until Bert could see the overturned ones spinning through the air, and were hidden by great volumes of dark smoke that were rising in the direction of Buffalo. For a time they all were hidden, then two or three white and a number of red ones rose again into the sky, like a swarm of big butterflies, and circled fighting and drove away out of sight again towards the east.

A heavy report recalled Bert's eyes to the zenith, and behold, the great crescent had lost its dressing and burst into a disorderly long cloud of airships! One had dropped halfway down the sky. It was flaming fore and aft, and even as Bert looked it turned over and fell, spinning over and over itself and vanished into the smoke of Buffalo.

Bert's mouth opened and shut, and he clutched tighter on the rail of the bridge. For some moments--they seemed long moments--the two fleets remained without any further change flying obliquely towards each other, and making what came to Bert's ears as a midget uproar. Then suddenly from either side airships began dropping out of alignment, smitten by missiles he could neither see nor trace. The string of Asiatic ships swung round and either charged into or over (it was difficult to say from below) the shattered line of the Germans, who seemed to open out to give way to them. Some sort of manoeuvring began, but Bert could not grasp its import. The left of the battle became a confused dance of airships. For some minutes up there the two crossing lines of ships looked so close it seemed like a hand-to-hand scuffle in the sky. Then they broke up into groups and duels. The descent of German air-ships towards the lower sky increased. One of them

flared down and vanished far away in the north; two dropped with something twisted and crippled in their movements; then a group of antagonists came down from the zenith in an eddying conflict, two Asiatics against one German, and were presently joined by another, and drove away eastward all together with others dropping out of the German line to join them.

One Asiatic either rammed or collided with a still more gigantic German, and the two went spinning to destruction together. The northern squadron of Asiatics came into the battle unnoted by Bert, except that the multitude of ships above seemed presently increased. In a little while the fight was utter confusion, drifting on the whole to the southwest against the wind. It became more and more a series of group encounters. Here a huge German airship flamed earthward with a dozen flat Asiatic craft about her, crushing her every attempt to recover. Here another hung with its screw fighting off the swordsman from a swarm of flying-machines. Here, again, an Asiatic aflame at either end swooped out of the battle. His attention went from incident to incident in the vast clearness overhead; these conspicuous cases of destruction caught and held his mind; it was only very slowly that any sort of scheme manifested itself between those nearer, more striking episodes.

The mass of the airships that eddied remotely above was, however, neither destroying nor destroyed. The majority of them seemed to be going at full speed and circling upward for position, exchanging ineffectual shots as they did so. Very little ramming was essayed after the first tragic downfall of rammer and rammed, and what ever attempts at boarding were made were invisible to Bert. There seemed, however, a steady attempt to isolate antagonists, to cut them off from their fellows and bear them down, causing a perpetual sailing back and interlacing of these shoaling bulks. The greater numbers of the Asiatics and their swifter heeling movements gave them the effect of persistently

attacking the Germans. Overhead, and evidently endeavouring to keep itself in touch with the works of Niagara, a body of German airships drew itself together into a compact phalanx, and the Asiatics became more and more intent upon breaking this up. He was grotesquely reminded of fish in a fish-pond struggling for crumbs. He could see puny puffs of smoke and the flash of bombs, but never a sound came down to him....

A flapping shadow passed for a moment between Bert and the sun and was followed by another. A whirring of engines, click, clock, clitter clock, smote upon his ears. Instantly he forgot the zenith.

Perhaps a hundred yards above the water, out of the south, riding like Valkyries swiftly through the air on the strange steeds the engineering of Europe had begotten upon the artistic inspiration of Japan, came a long string of Asiatic swordsman. The wings flapped jerkily, click, block, clitter clock, and the machines drove up; they spread and ceased, and the apparatus came soaring through the air. So they rose and fell and rose again. They passed so closely overhead that Bert could hear their voices calling to one another. They swooped towards Niagara city and landed one after another in a long line in a clear space before the hotel. But he did not stay to watch them land. One yellow face had craned over and looked at him, and for one enigmatical instant met his eyes....

It was then the idea came to Bert that he was altogether too conspicuous in the middle of the bridge, and that he took to his heels towards Goat Island. Thence, dodging about among the trees, with perhaps an excessive self-consciousness, he watched the rest of the struggle.

When Bert's sense of security was sufficiently restored for him to watch the battle again, he perceived that a brisk little fight was in progress between the Asiatic aeronauts and the German engineers for the possession of Niagara city. It was the first time in the whole course of the war that he had seen anything resembling fighting as he had studied it in the illustrated papers of his youth. It seemed to him almost as though things were coming right. He saw men carrying rifles and taking cover and running briskly from point to point in a loose attacking formation. The first batch of aeronauts had probably been under the impression that the city was deserted. They had grounded in the open near Prospect Park and approached the houses towards the power-works before they were disillusioned by a sudden fire. They had scattered back to the cover of a bank near the water--it was too far for them to reach their machines again; they were lying and firing at the men in the hotels and frame-houses about the power-works.

Then to their support came a second string of red flying-machines driving up from the east. They rose up out of the haze above the houses and came round in a long curve as if surveying the position below. The fire of the Germans rose to a roar, and one of those soaring shapes gave an abrupt jerk backward and fell among the houses. The others swooped down exactly like great birds upon the roof of the power-house. They caught upon it, and from each sprang a nimble little figure and ran towards the parapet.

Other flapping bird-shapes came into this affair, but Bert had not seen their coming. A staccato of shots came over to him, reminding him of army manoeuvres, of newspaper descriptions of fights, of all that was entirely correct in his conception of warfare. He saw quite a number of Germans running from the outlying houses towards the power-house. Two fell. One lay still, but the other wriggled and made efforts for a time. The

hotel that was used as a hospital, and to which he had helped carry the wounded men from the Zeppelin earlier in the day, suddenly ran up the Geneva flag. The town that had seemed so quiet had evidently been concealing a considerable number of Germans, and they were now concentrating to hold the central power-house. He wondered what ammunition they might have. More and more of the Asiatic flying-machines came into the conflict. They had disposed of the unfortunate German drachenflieger and were now aiming at the incipient aeronautic park,--the electric gas generators and repair stations which formed the German base. Some, landed, and their aeronauts took cover and became energetic infantry soldiers. Others hovered above the fight, their men ever and again firing shots down at some chance exposure below. The firing came in paroxysms; now there would be a watchful lull and now a rapid tattoo of shots, rising to a roar. Once or twice flying machines, as they circled warily, came right overhead, and for a time Bert gave himself body and soul to cowering.

Ever and again a larger thunder mingled with the rattle and reminded him of the grapple of airships far above, but the nearer fight held his attention.

Abruptly something dropped from the zenith; something like a barrel or a huge football.

CRASH! It smashed with an immense report. It had fallen among the grounded Asiatic aeroplanes that lay among the turf and flower-beds near the river. They flew in scraps and fragments, turf, trees, and gravel leapt and fell; the aeronauts still lying along the canal bank were thrown about like sacks, catspaws flew across the foaming water. All the windows of the hotel hospital that had been shingly reflecting blue sky and airships the moment before became vast black stars. Bang!--a second followed. Bert looked up and was filled with a sense of a number of monstrous bodies swooping down, coming down on the whole affair

like a flight of bellying blankets, like a string of vast dish-covers. The central tangle of the battle above was circling down as if to come into touch with the power-house fight. He got a new effect of airships altogether, as vast things coming down upon him, growing swiftly larger and larger and more overwhelming, until the houses over the way seemed small, the American rapids narrow, the bridge flimsy, the combatants infinitesimal. As they came down they became audible as a complex of shootings and vast creakings and groanings and beatings and throbbings and shouts and shots. The fore-shortened black eagles at the fore-ends of the Germans had an effect of actual combat of flying feathers.

Some of these fighting airships came within five hundred feet of the ground. Bert could see men on the lower galleries of the Germans, firing rifles; could see Asiatics clinging to the ropes; saw one man in aluminium diver's gear fall flashing head-long into the waters above Goat Island. For the first time he saw the Asiatic airships closely. From this aspect they reminded him more than anything else of colossal snowshoes; they had a curious patterning in black and white, in forms that reminded him of the engine-turned cover of a watch. They had no hanging galleries, but from little openings on the middle line peeped out men and the muzzles of guns. So, driving in long, descending and ascending curves, these monsters wrestled and fought. It was like clouds fighting, like puddings trying to assassinate each other. They whirled and circled about each other, and for a time threw Goat Island and Niagara into a smoky twilight, through which the sunlight smote in shafts and beams. They spread and closed and spread and grappled and drove round over the rapids, and two miles away or more into Canada, and back over the Falls again. A German caught fire, and the whole crowd broke away from her flare and rose about her dispersing, leaving her to drop towards Canada and blow up as she dropped. Then with renewed uproar the others closed again. Once from the men in Niagara

city came a sound like an ant-hill cheering. Another German burnt, and one badly deflated by the prow of an antagonist, flopped out of action southward.

It became more and more evident that the Germans were getting the worst of the unequal fight. More and more obviously were they being persecuted. Less and less did they seem to fight with any object other than escape. The Asiatics swept by them and above them, ripped their bladders, set them alight, picked off their dimly seen men in diving clothes, who struggled against fire and tear with fire extinguishers and silk ribbons in the inner netting. They answered only with ineffectual shots. Thence the battle circled back over Niagara, and then suddenly the Germans, as if at a preconcerted signal, broke and dispersed, going east, west, north, and south, in open and confused flight. The Asiatics, as they realised this, rose to fly above them and after them. Only one little knot of four Germans and perhaps a dozen Asiatics remained fighting about the Hohenzollern and the Prince as he circled in a last attempt to save Niagara.

Round they swooped once again over the Canadian Fall, over the waste of waters eastward, until they were distant and small, and then round and back, hurrying, bounding, swooping towards the one gaping spectator.

The whole struggling mass approached very swiftly, growing rapidly larger, and coming out black and featureless against the afternoon sun and above the blinding welter of the Upper Rapids. It grew like a storm cloud until once more it darkened the sky. The flat Asiatic airships kept high above the Germans and behind them, and fired unanswered bullets into their gas-chambers and upon their flanks--the one-man flying-machines hovered and alighted like a swarm of attacking bees. Nearer they came, and nearer, filling the lower heaven. Two of the Germans swooped and rose again, but the Hohenzollern had suffered too much for that.

She lifted weakly, turned sharply as if to get out of the battle, burst into flames fore and aft, swept down to the water, splashed into it obliquely, and rolled over and over and came down stream rolling and smashing and writhing like a thing alive, halting and then coming on again, with her torn and bent propeller still beating the air. The bursting flames spluttered out again in clouds of steam. It was a disaster gigantic in its dimensions. She lay across the rapids like an island, like tall cliffs, tall cliffs that came rolling, smoking, and crumpling, and collapsing, advancing with a sort of fluctuating rapidity upon Bert. One Asiatic airship--it looked to Bert from below like three hundred yards of pavement--whirled back and circled two or three times over that great overthrow, and half a dozen crimson flying-machines danced for a moment like great midges in the sunlight before they swept on after their fellows. The rest of the fight had already gone over the island, a wild crescendo of shots and yells and smashing uproar. It was hidden from Bert now by the trees of the island, and forgotten by him in the nearer spectacle of the huge advance of the defeated German airship. Something fell with a mighty smashing and splintering of boughs unheeded behind him.

It seemed for a time that the Hohenzollern must needs break her back upon the Parting of the Waters, and then for a time her propeller flopped and frothed in the river and thrust the mass of buckling, crumpled wreckage towards the American shore. Then the sweep of the torrent that foamed down to the American Fall caught her, and in another minute the immense mass of deflating wreckage, with flames spurting out in three new places, had crashed against the bridge that joined Goat Island and Niagara city, and forced a long arm, as it were, in a heaving tangle under the central span. Then the middle chambers blew up with a loud report, and in another moment the bridge had given way and the main bulk of the airship, like some grotesque cripple in rags, staggered, flapping and waving flambeaux to the crest of

the Fall and hesitated there and vanished in a desperate suicidal leap.

Its detached fore-end remained jammed against that little island, Green Island it used to be called, which forms the stepping-stone between the mainland and Goat Island's patch of trees.

Bert followed this disaster from the Parting of the Waters to the bridge head. Then, regardless of cover, regardless of the Asiatic airship hovering like a huge house roof without walls above the Suspension Bridge, he sprinted along towards the north and came out for the first time upon that rocky point by Luna Island that looks sheer down upon the American Fall. There he stood breathless amidst that eternal rush of sound, breathless and staring.

Far below, and travelling rapidly down the gorge, whirled something like a huge empty sack. For him it meant--what did it not mean?--the German air-fleet, Kurt, the Prince, Europe, all things stable and familiar, the forces that had brought him, the forces that had seemed indisputably victorious. And it went down the rapids like an empty sack and left the visible world to Asia, to yellow people beyond Christendom, to all that was terrible and strange!

Remote over Canada receded the rest of that conflict and vanished beyond the range of his vision....

CHAPTER IX ON GOAT ISLAND

The whack of a bullet on the rocks beside him reminded him that he was a visible object and wearing at least portions of a German uniform. It drove him into the trees again, and for a time he dodged and dropped and sought cover like a chick hiding among reeds from imaginary hawks.

"Beaten," he whispered. "Beaten and done for... Chinese! Yellow chaps chasing 'em!"

At last he came to rest in a clump of bushes near a locked-up and deserted refreshment shed within view of the American side. They made a sort of hole and harbour for him; they met completely overhead. He looked across the rapids, but the firing had ceased now altogether and everything seemed quiet. The Asiatic aeroplane had moved from its former position above the Suspension Bridge, was motionless now above Niagara city, shadowing all that district about the power-house which had been the scene of the land fight. The monster had an air of quiet and assured predominance, and from its stern it trailed, serene and ornamental, a long streaming flag, the red, black, and yellow of the great alliance, the Sunrise and the Dragon. Beyond, to the east, at a much higher level, hung a second consort, and Bert, presently gathering courage, wriggled out and craned his neck to find another still airship against the sunset in the south.

"Gaw!" he said. "Beaten and chased! My Gawd!"

The fighting, it seemed at first, was quite over in Niagara city, though a German flag was still flying from one shattered house. A white sheet was hoisted above the power-house, and this remained flying all through the events that followed. But presently came a sound of shots and then German soldiers running. They disappeared among the houses, and then came two engineers in blue shirts and trousers hotly pursued by three Japanese swordsmen. The foremost of the two fugitives was a shapely man,

and ran lightly and well; the second was a sturdy little man, and rather fat. He ran comically in leaps and bounds, with his plump arms bent up by his side and his head thrown back. The pursuers ran with uniforms and dark thin metal and leather head-dresses. The little man stumbled, and Bert gasped, realising a new horror in war.

The foremost swordsman won three strides on him and was near enough to slash at him and miss as he spurted.

A dozen yards they ran, and then the swordsman slashed again, and Bert could hear across the waters a little sound like the moo of an elfin cow as the fat little man fell forward. Slash went the swordsman and slash at something on the ground that tried to save itself with ineffectual hands. "Oh, I carn't!" cried Bert, near blubbering, and staring with starting eyes.

The swordsman slashed a fourth time and went on as his fellows came up after the better runner. The hindmost swordsman stopped and turned back. He had perceived some movement perhaps; but at any rate he stood, and ever and again slashed at the fallen body.

"Oo-oo!" groaned Bert at every slash, and shrank closer into the bushes and became very still. Presently came a sound of shots from the town, and then everything was quiet, everything, even the hospital.

He saw presently little figures sheathing swords come out from the houses and walk to the debris of the flying-machines the bomb had destroyed. Others appeared wheeling undamaged aeroplanes upon their wheels as men might wheel bicycles, and sprang into the saddles and flapped into the air. A string of three airships appeared far away in the east and flew towards the zenith. The one that hung low above Niagara city came still lower and dropped a rope ladder to pick up men from the power-house.

For a long time he watched the further happenings in Niagara city as a rabbit might watch a meet. He saw men going from building to building, to set fire to them, as he presently realised, and he heard a series of dull detonations from the wheel pit of the power-house. Some similar business went on among the works on the Canadian side. Meanwhile more and more airships appeared, and many more flying-machines, until at last it seemed to him nearly a third of the Asiatic fleet had re-assembled. He watched them from his bush, cramped but immovable, watched them gather and range themselves and signal and pick up men, until at last they sailed away towards the glowing sunset, going to the great Asiatic rendez-vous, above the oil wells of Cleveland. They dwindled and passed away, leaving him alone, so far as he could tell, the only living man in a world of ruin and strange loneliness almost beyond describing. He watched them recede and vanish. He stood gaping after them.

"Gaw!" he said at last, like one who rouses himself from a trance.

It was far more than any personal desolation extremity that flooded his soul. It seemed to him indeed that this must be the sunset of his race.

2

He did not at first envisage his own plight in definite and comprehensible terms. Things happened to him so much of late, his own efforts had counted for so little, that he had become passive and planless. His last scheme had been to go round the coast of England as a desert dervish giving refined entertainment to his fellow-creatures. Fate had quashed that. Fate had seen fit to direct him to other destinies, had hurried him from point to point, and dropped him at last upon this little wedge of rock

between the cataracts. It did not instantly occur to him that now it was his turn to play. He had a singular feeling that all must end as a dream ends, that presently surely he would be back in the world of Grubb and Edna and Bun Hill, that this roar, this glittering presence of incessant water, would be drawn aside as a curtain is drawn aside after a holiday lantern show, and old familiar, customary things re-assume their sway. It would be interesting to tell people how he had seen Niagara. And then Kurt's words came into his head: "People torn away from the people they care for; homes smashed, creatures full of life and memories and peculiar little gifts--torn to pieces, starved, and spoilt." ...

He wondered, half incredulous, if that was in deed true. It was so hard to realise it. Out beyond there was it possible that Tom and Jessica were also in some dire extremity? that the little green-grocer's shop was no longer standing open, with Jessica serving respectfully, warming Tom's ear in sharp asides, or punctually sending out the goods?

He tried to think what day of the week it was, and found he had lost his reckoning. Perhaps it was Sunday. If so, were they going to church or, were they hiding, perhaps in bushes? What had happened to the landlord, the butcher, and to Butteridge and all those people on Dymchurch beach? Something, he knew, had happened to London--a bombardment. But who had bombarded? Were Tom and Jessica too being chased by strange brown men with long bare swords and evil eyes? He thought of various possible aspects of affliction, but presently one phase ousted all the others. Were they getting much to eat? The question haunted him, obsessed him.

If one was very hungry would one eat rats?

It dawned upon him that a peculiar misery that oppressed him was

not so much anxiety and patriotic sorrow as hunger. Of course he was hungry!

He reflected and turned his steps towards the little refreshment shed that stood near the end of the ruined bridge. "Ought to be somethin'--"

He strolled round it once or twice, and then attacked the shutters with his pocket-knife, reinforced presently by a wooden stake he found conveniently near. At last he got a shutter to give, and tore it back and stuck in his head.

"Grub," he remarked, "anyhow. Leastways--"

He got at the inside fastening of the shutter and had presently this establishment open for his exploration. He found several sealed bottles of sterilized milk, much mineral water, two tins of biscuits and a crock of very stale cakes, cigarettes in great quantity but very dry, some rather dry oranges, nuts, some tins of canned meat and fruit, and plates and knives and forks and glasses sufficient for several score of people. There was also a zinc locker, but he was unable to negotiate the padlock of this.

"Shan't starve," said Bert, "for a bit, anyhow." He sat on the vendor's seat and regaled himself with biscuits and milk, and felt for a moment quite contented.

"Quite restful," he muttered, munching and glancing about him restlessly, "after what I been through.

"Crikey! WOT a day! Oh! WOT a day!"

Wonder took possession of him. "Gaw!" he cried: "Wot a fight it's been! Smashing up the poor fellers! 'Eadlong! The airships--the fliers and all. I wonder what happened to the

Zeppelin? ... And that chap Kurt--I wonder what happened to 'im? 'E was a good sort of chap, was Kurt."

Some phantom of imperial solicitude floated through his mind. "Injia," he said....

A more practical interest arose.

"I wonder if there's anything to open one of these tins of corned beef?"

3

After he had feasted, Bert lit a cigarette and sat meditative for a time. "Wonder where Grubb is?" he said; "I do wonder that! Wonder if any of 'em wonder about me?"

He reverted to his own circumstances. "Dessay I shall 'ave to stop on this island for some time."

He tried to feel at his ease and secure, but presently the indefinable restlessness of the social animal in solitude distressed him. He began to want to look over his shoulder, and, as a corrective, roused himself to explore the rest of the island.

It was only very slowly that he began to realise the peculiarities of his position, to perceive that the breaking down of the arch between Green Island and the mainland had cut him off completely from the world. Indeed it was only when he came back to where the fore-end of the Hohenzollern lay like a stranded ship, and was contemplating the shattered bridge, that this dawned upon him. Even then it came with no sort of shock to his mind, a fact among a number of other extraordinary and unmanageable facts. He stared at the shattered cabins of the

Hohenzollern and its widow's garment of dishevelled silk for a time, but without any idea of its containing any living thing; it was all so twisted and smashed and entirely upside down. Then for a while he gazed at the evening sky. A cloud haze was now appearing and not an airship was in sight. A swallow flew by and snapped some invisible victim. "Like a dream," he repeated.

Then for a time the rapids held his mind. "Roaring. It keeps on roaring and splashin' always and always. Keeps on...."

At last his interests became personal. "Wonder what I ought to do now?"

He reflected. "Not an idee," he said.

He was chiefly conscious that a fortnight ago he had been in Bun Hill with no idea of travel in his mind, and that now he was between the Falls of Niagara amidst the devastation and ruins of the greatest air fight in the world, and that in the interval he had been across France, Belgium, Germany, England, Ireland, and a number of other countries. It was an interesting thought and suitable for conversation, but of no great practical utility. "Wonder 'ow I can get orf this?" he said. "Wonder if there is a way out? If not... rummy!"

Further reflection decided, "I believe I got myself in a bit of a 'ole coming over that bridge...."

"Any'ow--got me out of the way of them Japanesy chaps. Wouldn't 'ave taken 'em long to cut MY froat. No. Still--"

He resolved to return to the point of Luna Island. For a long time he stood without stirring, scrutinising the Canadian shore and the wreckage of hotels and houses and the fallen trees of the Victoria Park, pink now in the light of sundown. Not a human

being was perceptible in that scene of headlong destruction. Then he came back to the American side of the island, crossed close to the crumpled aluminium wreckage of the Hohenzollern to Green Islet, and scrutinised the hopeless breach in the further bridge and the water that boiled beneath it. Towards Buffalo there was still much smoke, and near the position of the Niagara railway station the houses were burning vigorously. Everything was deserted now, everything was still. One little abandoned thing lay on a transverse path between town and road, a crumpled heap of clothes with sprawling limbs....

"Ave a look round," said Bert, and taking a path that ran through the middle of the island he presently discovered the wreckage of the two Asiatic aeroplanes that had fallen out of the struggle that ended the Hohenzollern.

With the first he found the wreckage of an aeronaut too.

The machine had evidently dropped vertically and was badly knocked about amidst a lot of smashed branches in a clump of trees. Its bent and broken wings and shattered stays sprawled amidst new splintered wood, and its forepeak stuck into the ground. The aeronaut dangled weirdly head downward among the leaves and branches some yards away, and Bert only discovered him as he turned from the aeroplane. In the dusky evening light and stillness--for the sun had gone now and the wind had altogether fallen--this inverted yellow face was anything but a tranquilising object to discover suddenly a couple of yards away. A broken branch had run clean through the man's thorax, and he hung, so stabbed, looking limp and absurd. In his hand he still clutched, with the grip of death, a short light rifle.

For some time Bert stood very still, inspecting this thing.

Then he began to walk away from it, looking constantly back at

it.

Presently in an open glade he came to a stop.

"Gaw!" he whispered, "I don' like dead bodies some'ow! I'd almost rather that chap was alive."

He would not go along the path athwart which the Chinaman hung. He felt he would rather not have trees round him any more, and that it would be more comfortable to be quite close to the sociable splash and uproar of the rapids.

He came upon the second aeroplane in a clear grassy space by the side of the streaming water, and it seemed scarcely damaged at all. It looked as though it had floated down into a position of rest. It lay on its side with one wing in the air. There was no aeronaut near it, dead or alive. There it lay abandoned, with the water lapping about its long tail.

Bert remained a little aloof from it for a long time, looking into the gathering shadows among the trees, in the expectation of another Chinaman alive or dead. Then very cautiously he approached the machine and stood regarding its widespread vans, its big steering wheel and empty saddle. He did not venture to touch it.

"I wish that other chap wasn't there," he said. "I do wish 'e wasn't there!"

He saw a few yards away, something bobbing about in an eddy that spun within a projecting head of rock. As it went round it seemed to draw him unwillingly towards it....

What could it be?

"Blow!" said Bert. "It's another of 'em."

It held him. He told himself that it was the other aeronaut that had been shot in the fight and fallen out of the saddle as he strove to land. He tried to go away, and then it occurred to him that he might get a branch or something and push this rotating object out into the stream. That would leave him with only one dead body to worry about. Perhaps he might get along with one. He hesitated and then with a certain emotion forced himself to do this. He went towards the bushes and cut himself a wand and returned to the rocks and clambered out to a corner between the eddy and the stream, By that time the sunset was over and the bats were abroad--and he was wet with perspiration.

He prodded the floating blue-clad thing with his wand, failed, tried again successfully as it came round, and as it went out into the stream it turned over, the light gleamed on golden hair and--it was Kurt!

It was Kurt, white and dead and very calm. There was no mistaking him. There was still plenty of light for that. The stream took him and he seemed to compose himself in its swift grip as one who stretches himself to rest. White-faced he was now, and all the colour gone out of him.

A feeling of infinite distress swept over Bert as the body swept out of sight towards the fall. "Kurt!" he cried, "Kurt! I didn't mean to! Kurt! don' leave me 'ere! Don' leave me!"

Loneliness and desolation overwhelmed him. He gave way. He stood on the rock in the evening light, weeping and wailing passionately like a child. It was as though some link that had held him to all these things had broken and gone. He was afraid like a child in a lonely room, shamelessly afraid.

The twilight was closing about him. The trees were full now of strange shadows. All the things about him became strange and unfamiliar with that subtle queerness one feels oftenest in dreams. "O God! I carn' stand, this," he said, and crept back from the rocks to the grass and crouched down, and suddenly wild sorrow for the death of Kurt, Kurt the brave, Kurt the kindly, came to his help and he broke from whimpering to weeping. He ceased to crouch; he sprawled upon the grass and clenched an impotent fist.

"This war," he cried, "this blarsted foolery of a war.

"O Kurt! Lieutenant Kurt!

"I done," he said, "I done. I've 'ad all I want, and more than I want. The world's all rot, and there ain't no sense in it. The night's coming.... If 'E comes after me--'E can't come after me--'E can't! ...

"If 'E comes after me, I'll fro' myself into the water." ...

Presently he was talking again in a low undertone.

"There ain't nothing to be afraid of reely. It's jest imagination. Poor old Kurt--he thought it would happen. Prevision like. 'E never gave me that letter or tole me who the lady was. It's like what 'e said--people tore away from everything they belonged to--everywhere. Exactly like what 'e said.... 'Ere I am cast away--thousands of miles from Edna or Grubb or any of my lot--like a plant tore up by the roots.... And every war's been like this, only I 'adn't the sense to understand it. Always. All sorts of 'oles and corners chaps 'ave died in. And people 'adn't the sense to understand, 'adn't the sense to feel it and stop it. Thought war was fine. My Gawd! ...

"Dear old Edna. She was a fair bit of all right--she was. That time we 'ad a boat at Kingston

"I bet--I'll see 'er again yet. Won't be my fault if I don't."...

4

Suddenly, on the very verge of this heroic resolution, Bert became rigid with terror. Something was creeping towards him through the grass. Something was creeping and halting and creeping again towards him through the dim dark grass. The night was electrical with horror. For a time everything was still. Bert ceased to breathe. It could not be. No, it was too small!

It advanced suddenly upon him with a rush, with a little meawling cry and tail erect. It rubbed its head against him and purred. It was a tiny, skinny little kitten.

"Gaw, Pussy! 'ow you frightened me!" said Bert, with drops of perspiration on his brow.

5

He sat with his back to a tree stump all that night, holding the kitten in his arms. His mind was tired, and he talked or thought coherently no longer. Towards dawn he dozed.

When he awoke, he was stiff but in better heart, and the kitten slept warmly and reassuringly inside his jacket. And fear, he found, had gone from amidst the trees.

He stroked the kitten, and the little creature woke up to excessive fondness and purring. "You want some milk," said Bert. "That's what you want. And I could do with a bit of brekker too."

He yawned and stood up, with the kitten on his shoulder, and stared about him, recalling the circumstances of the previous day, the grey, immense happenings.

"Mus' do something," he said.

He turned towards the trees, and was presently contemplating the dead aeronaut again. The kitten he held companionably against his neck. The body was horrible, but not nearly so horrible as it had been at twilight, and now the limbs were limper and the gun had slipped to the ground and lay half hidden in the grass.

"I suppose we ought to bury 'im, Kitty," said Bert, and looked helplessly at the rocky soil about him. "We got to stay on the island with 'im."

It was some time before he could turn away and go on towards that provision shed. "Brekker first," he said, "anyhow," stroking the kitten on his shoulder. She rubbed his cheek affectionately with her furry little face and presently nibbled at his ear. "Wan' some milk, eh?" he said, and turned his back on the dead man as though he mattered nothing.

He was puzzled to find the door of the shed open, though he had closed and latched it very carefully overnight, and he found also some dirty plates he had not noticed before on the bench. He discovered that the hinges of the tin locker were unscrewed and that it could be opened. He had not observed this overnight.

"Silly of me!" said Bert. "'Ere I was puzzlin' and whackin' away at the padlock, never noticing." It had been used apparently as an ice-chest, but it contained nothing now but the remains of half-dozen boiled chickens, some ambiguous substance that might once have been butter, and a singularly unappetising smell. He

closed the lid again carefully.

He gave the kitten some milk in a dirty plate and sat watching its busy little tongue for a time. Then he was moved to make an inventory of the provisions. There were six bottles of milk unopened and one opened, sixty bottles of mineral water and a large stock of syrups, about two thousand cigarettes and upwards of a hundred cigars, nine oranges, two unopened tins of corned beef and one opened, and five large tins California peaches. He jotted it down on a piece of paper "'Ain't much solid food," he said. "Still--A fortnight, say!

"Anything might happen in a fortnight."

He gave the kitten a small second helping and a scrap of beef and then went down with the little creature running after him, tail erect and in high spirits, to look at the remains of the Hohenzollern.

It had shifted in the night and seemed on the whole more firmly grounded on Green Island than before. From it his eye went to the shattered bridge and then across to the still desolation of Niagara city. Nothing moved over there but a number of crows. They were busy with the engineer he had seen cut down on the previous day. He saw no dogs, but he heard one howling.

"We got to get out of this some'ow, Kitty," he said. "That milk won't last forever--not at the rate you lap it."

He regarded the sluice-like flood before him.

"Plenty of water," he said. "Wont be drink we shall want."

He decided to make a careful exploration of the island. Presently he came to a locked gate labelled "Biddle Stairs," and

clambered over to discover a steep old wooden staircase leading down the face of the cliff amidst a vast and increasing uproar of waters. He left the kitten above and descended these, and discovered with a thrill of hope a path leading among the rocks at the foot of the roaring downrush of the Centre Fall. Perhaps this was a sort of way!

It led him only to the choking and deafening experience of the Cave of the Winds, and after he had spent a quarter of an hour in a partially stupefied condition flattened between solid rock and nearly as solid waterfall, he decided that this was after all no practicable route to Canada and retraced his steps. As he reascended the Biddle Stairs, he heard what he decided at last must be a sort of echo, a sound of some one walking about on the gravel paths above. When he got to the top, the place was as solitary as before.

Thence he made his way, with the kitten skirmishing along beside him in the grass, to a staircase that led to a lump of projecting rock that enfiladed the huge green majesty of the Horseshoe Fall. He stood there for some time in silence.

"You wouldn't think," he said at last, "there was so much water.... This roarin' and splashin', it gets on one's nerves at last.... Sounds like people talking.... Sounds like people going about.... Sounds like anything you fancy."

He retired up the staircase again. "I s'pose I shall keep on goin' round this blessed island," he said drearily. "Round and round and round."

He found himself presently beside the less damaged Asiatic aeroplane again. He stared at it and the kitten smelt it. "Broke!" he said.

He looked up with a convulsive start.

Advancing slowly towards him out from among the trees were two tall gaunt figures. They were blackened and tattered and bandaged; the hind-most one limped and had his head swathed in white, but the foremost one still carried himself as a Prince should do, for all that his left arm was in a sling and one side of his face scalded a livid crimson. He was the Prince Karl Albert, the War Lord, the "German Alexander," and the man behind him was the bird-faced man whose cabin had once been taken from him and given to Bert.

6

With that apparition began a new phase of GoatIsland in Bert's experience. He ceased to be a solitary representative of humanity in a vast and violent and incomprehensible universe, and became once more a social creature, a man in a world of other men. For an instant these two were terrible, then they seemed sweet and desirable as brothers. They too were in this scrape with him, marooned and puzzled. He wanted extremely to hear exactly what had happened to them. What mattered it if one was a Prince and both were foreign soldiers, if neither perhaps had adequate English? His native Cockney freedom flowed too generously for him to think of that, and surely the Asiatic fleets had purged all such trivial differences. "UI-LO!" he said; "'ow did you get 'ere?"

"It is the Englishman who brought us the Butteridge machine," said the bird-faced officer in German, and then in a tone of horror, as Bert advanced, "Salute!" and again louder, "SALUTE!"

"Gaw!" said Bert, and stopped with a second comment under his breath. He stared and saluted awkwardly and became at once a masked defensive thing with whom co-operation was impossible.

For a time these two perfected modern aristocrats stood regarding the difficult problem of the Anglo-Saxon citizen, that ambiguous citizen who, obeying some mysterious law in his blood, would neither drill nor be a democrat. Bert was by no means a beautiful object, but in some inexplicable way he looked resistant. He wore his cheap suit of serge, now showing many signs of wear, and its loose fit made him seem sturdier than he was; above his disengaging face was a white German cap that was altogether too big for him, and his trousers were crumpled up his legs and their ends tucked into the rubber highlows of a deceased German aeronaut. He looked an inferior, though by no means an easy inferior, and instinctively they hated him.

The Prince pointed to the flying-machine and said something in broken English that Bert took for German and failed to understand. He intimated as much.

"Dummer Kerl!" said the bird-faced officer from among his bandages.

The Prince pointed again with his undamaged hand. "You verstehen dis drachenflieger?"

Bert began to comprehend the situation. He regarded the Asiatic machine. The habits of Bun Hill returned to him. "It's a foreign make," he said ambiguously.

The two Germans consulted. "You are an expert?" said the Prince.

"We reckon to repair," said Bert, in the exact manner of Grubb.

The Prince sought in his vocabulary. "Is dat," he said, "goot to fly?"

Bert reflected and scratched his cheek slowly. "I got to look at it," he replied.... "It's 'ad rough usage!"

He made a sound with his teeth he had also acquired from Grubb, put his hands in his trouser pockets, and strolled back to the machine. Typically Grubb chewed something, but Bert could chew only imaginatively. "Three days' work in this," he said, teething. For the first time it dawned on him that there were possibilities in this machine. It was evident that the wing that lay on the ground was badly damaged. The three stays that held it rigid had snapped across a ridge of rock and there was also a strong possibility of the engine being badly damaged. The wing hook on that side was also askew, but probably that would not affect the flight. Beyond that there probably wasn't much the matter. Bert scratched his cheek again and contemplated the broad sunlit waste of the Upper Rapids. "We might make a job of this.... You leave it to me."

He surveyed it intently again, and the Prince and his officer watched him. In Bun Hill Bert and Grubb had developed to a very high pitch among the hiring stock a method of repair by substituting; they substituted bits of other machines. A machine that was too utterly and obviously done for even to proffer for hire, had nevertheless still capital value. It became a sort of quarry for nuts and screws and wheels, bars and spokes, chain-links and the like; a mine of ill-fitting "parts" to replace the defects of machines still current. And back among the trees was a second Asiatic aeroplane....

The kitten caressed Bert's airship boots unheeded.

"Mend dat drachenflieger," said the Prince.

"If I do mend it," said Bert, struck by a new thought, "none of us ain't to be trusted to fly it."

"_I_ vill fly it," said the Prince.

"Very likely break your neck," said Bert, after a pause.

The Prince did not understand him and disregarded what he said. He pointed his gloved finger to the machine and turned to the bird-faced officer with some remark in German. The officer answered and the Prince responded with a sweeping gesture towards the sky. Then he spoke--it seemed eloquently. Bert watched him and guessed his meaning. "Much more likely to break your, neck," he said. "'Owever. 'Ere goes."

He began to pry about the saddle and engine of the drachenflieger in search for tools. Also he wanted some black oily stuff for his hands and face. For the first rule in the art of repairing, as it was known to the firm of Grubb and Smallways, was to get your hands and face thoroughly and conclusively blackened. Also he took off his jacket and waistcoat and put his cap carefully to the back of his head in order to facilitate scratching.

The Prince and the officer seemed disposed to watch him, but he succeeded in making it clear to them that this would inconvenience him and that he had to "puzzle out a bit" before he could get to work. They thought him over, but his shop experience had given him something of the authoritative way of the expert with common men. And at last they went away. Thereupon he went straight to the second aeroplane, got the aeronaut's gun and ammunition and hid them in a clump of nettles close at hand. "That's all right," said Bert, and then proceeded to a careful inspection of the debris of the wings in the trees. Then he went back to the first aeroplane to compare the two. The Bun Hill method was quite possibly practicable if there was nothing hopeless or incomprehensible in the engine.

The Germans returned presently to find him already generously smutty and touching and testing knobs and screws and levers with an expression of profound sagacity. When the bird-faced officer addressed a remark to him, he waved him aside with, "Nong comprong. Shut it! It's no good."

Then he had an idea. "Dead chap back there wants burying," he said, jerking a thumb over his shoulder.

7

With the appearance of these two men Bert's whole universe had changed again. A curtain fell before the immense and terrible desolation that had overwhelmed him. He was in a world of three people, a minute human world that nevertheless filled his brain with eager speculations and schemes and cunning ideas. What were they thinking of? What did they think of him? What did they mean to do? A hundred busy threads interlaced in his mind as he pottered studiously over the Asiatic aeroplane. New ideas came up like bubbles in soda water.

"Gaw!" he said suddenly. He had just appreciated as a special aspect of this irrational injustice of fate that these two men were alive and that Kurt was dead. All the crew of the Hohenzollern were shot or burnt or smashed or drowned, and these two lurking in the padded forward cabin had escaped.

"I suppose 'e thinks it's 'is bloomin' Star," he muttered, and found himself uncontrollably exasperated.

He stood up, facing round to the two men. They were standing side by side regarding him.

"It's no good," he said, "starin' at me. You only put me out." And then seeing they did not understand, he advanced towards

them, wrench in hand. It occurred to him as he did so that the Prince was really a very big and powerful and serene-looking person. But he said, nevertheless, pointing through the trees, "dead man!"

The bird-faced man intervened with a reply in German.

"Dead man!" said Bert to him. "There."

He had great difficulty in inducing them to inspect the dead Chinaman, and at last led them to him. Then they made it evident that they proposed that he, as a common person below the rank of officer should have the sole and undivided privilege of disposing of the body by dragging it to the water's edge. There was some heated gesticulation, and at last the bird-faced officer abased himself to help. Together they dragged the limp and now swollen Asiatic through the trees, and after a rest or so--for he trailed very heavily--dumped him into the westward rapid. Bert returned to his expert investigation of the flying-machine at last with aching arms and in a state of gloomy rebellion. "Brasted cheek!" he said. "One'd think I was one of 'is beastly German slaves!

"Prancing beggar!"

And then he fell speculating what would happen when the flying-machine, was repaired--if it could be repaired.

The two Germans went away again, and after some reflection Bert removed several nuts, resumed his jacket and vest, pocketed those nuts and his tools and hid the set of tools from the second aeroplane in the fork of a tree. "Right O," he said, as he jumped down after the last of these precautions. The Prince and his companion reappeared as he returned to the machine by the water's edge. The Prince surveyed his progress for a time, and then went towards the Parting of the Waters and stood with folded

arms gazing upstream in profound thought. The bird-faced officer came up to Bert, heavy with a sentence in English.

"Go," he said with a helping gesture, "und eat."

When Bert got to the refreshment shed, he found all the food had vanished except one measured ration of corned beef and three biscuits.

He regarded this with open eyes and mouth.

The kitten appeared from under the vendor's seat with an ingratiating purr. "Of course!" said Bert. "Why! where's your milk?"

He accumulated wrath for a moment or so, then seized the plate in one hand, and the biscuits in another, and went in search of the Prince, breathing vile words anent "grub" and his intimate interior. He approached without saluting.

"Ere!" he said fiercely. "Whad the devil's this?"

An entirely unsatisfactory altercation followed. Bert expounded the Bun Hill theory of the relations of grub to efficiency in English, the bird-faced man replied with points about nations and discipline in German. The Prince, having made an estimate of Bert's quality and physique, suddenly hectored. He gripped Bert by the shoulder and shook him, making his pockets rattle, shouted something to him, and flung him struggling back. He hit him as though he was a German private. Bert went back, white and scared, but resolved by all his Cockney standards upon one thing. He was bound in honour to "go for" the Prince. "Gaw!" he gasped, buttoning his jacket.

"Now," cried the Prince, "Vil you go?" and then catching the

heroic gleam in Bert's eye, drew his sword.

The bird-faced officer intervened, saying something in German and pointing skyward.

Far away in the southwest appeared a Japanese airship coming fast toward them. Their conflict ended at that. The Prince was first to grasp the situation and lead the retreat. All three scuttled like rabbits for the trees, and ran to and for cover until they found a hollow in which the grass grew rank. There they all squatted within six yards of one another. They sat in this place for a long time, up to their necks in the grass and watching through the branches for the airship. Bert had dropped some of his corned beef, but he found the biscuits in his hand and ate them quietly. The monster came nearly overhead and then went away to Niagara and dropped beyond the power-works. When it was near, they all kept silence, and then presently they fell into an argument that was robbed perhaps of immediate explosive effect only by their failure to understand one another.

It was Bert began the talking and he talked on regardless of what they understood or failed to understand. But his voice must have conveyed his cantankerous intentions.

"You want that machine done, he said first, "you better keep your 'ands off me!"

They disregarded that and he repeated it.

Then he expanded his idea and the spirit of speech took hold of him. "You think you got 'old of a chap you can kick and 'it like you do your private soldiers--you're jolly well mistaken. See? I've 'ad about enough of you and your antics. I been thinking you over, you and your war and your Empire and all the rot of it. Rot it is! It's you Germans made all the trouble in Europe first

and last. And all for nothin'. Jest silly prancing! Jest because you've got the uniforms and flags! 'Ere I was--I didn't want to 'ave anything to do with you. I jest didn't care a 'eng at all about you. Then you get 'old of me--steal me practically--and 'ere I am, thousands of miles away from 'ome and everything, and all your silly fleet smashed up to rags. And you want to go on prancin' NOW! Not if 'I know it!

"Look at the mischief you done! Look at the way you smashed up New York--the people you killed, the stuff you wasted. Can't you learn?"

"Dummer Kerl!" said the bird-faced man suddenly in a tone of concentrated malignancy, glaring under his bandages. "Esel!"

"That's German for silly ass!--I know. But who's the silly ass--'im or me? When I was a kid, I used to read penny dreadfuls about 'avin adventures and bein' a great c'mander and all that rot. I stowed it. But what's 'e got in 'is head? Rot about Napoleon, rot about Alexander, rot about 'is blessed family and 'im and Gord and David and all that. Any one who wasn't a dressed-up silly fool of a Prince could 'ave told all this was goin' to 'appen. There was us in Europe all at sixes and sevens with our silly flags and our silly newspapers raggin' us up against each other and keepin' us apart, and there was China, solid as a cheese, with millions and millions of men only wantin' a bit of science and a bit of enterprise to be as good as all of us. You thought they couldn't get at you. And then they got flying-machines. And bif!--'ere we are. Why, when they didn't go on making guns and armies in China, we went and poked 'em up until they did. They 'AD to give us this lickin' they've give us. We wouldn't be happy until they did, and as I say, 'ere we are!"

The bird-faced officer shouted to him to be quiet, and then began a conversation with the Prince.

"British citizen," said Bert. "You ain't obliged to listen, but I ain't obliged to shut up."

And for some time he continued his dissertation upon Imperialism, militarism, and international politics. But their talking put him out, and for a time he was certainly merely repeating abusive terms, "prancin' nincompoops" and the like, old terms and new. Then suddenly he remembered his essential grievance. "'Owever, look 'ere--'ere!--the thing I started this talk about is where's that food there was in that shed? That's what I want to know. Where you put it?"

He paused. They went on talking in German. He repeated his question. They disregarded him. He asked a third time in a manner insupportably aggressive.

There fell a tense silence. For some seconds the three regarded one another. The Prince eyed Bert steadfastly, and Bert quailed under his eye. Slowly the Prince rose to his feet and the bird-faced officer jerked up beside him. Bert remained squatting.

"Be quaiat," said the Prince.

Bert perceived this was no moment for eloquence.

The two Germans regarded him as he crouched there. Death for a moment seemed near.

Then the Prince turned away and the two of them went towards the flying-machine.

"Gaw!" whispered Bert, and then uttered under his breath one single word of abuse. He sat crouched together for perhaps three

minutes, then he sprang to his feet and went off towards the Chinese aeronaut's gun hidden among the weeds.

8

There was no pretence after that moment that Bert was under the orders of the Prince or that he was going on with the repairing of the flying-machine. The two Germans took possession of that and set to work upon it. Bert, with his new weapon went off to the neighbourhood of Terrapin Rock, and there sat down to examine it. It was a short rifle with a big cartridge, and a nearly full magazine. He took out the cartridges carefully and then tried the trigger and fittings until he felt sure he had the use of it. He reloaded carefully. Then he remembered he was hungry and went off, gun under his arm, to hunt in and about the refreshment shed. He had the sense to perceive that he must not show himself with the gun to the Prince and his companion. So long as they thought him unarmed they would leave him alone, but there was no knowing what the Napoleonic person might do if he saw Bert's weapon. Also he did not go near them because he knew that within himself boiled a reservoir of rage and fear that he wanted to shoot these two men. He wanted to shoot them, and he thought that to shoot them would be a quite horrible thing to do. The two sides of his inconsistent civilisation warred within him.

Near the shed the kitten turned up again, obviously keen for milk. This greatly enhanced his own angry sense of hunger. He began to talk as he hunted about, and presently stood still, shouting insults. He talked of war and pride and Imperialism. "Any other Prince but you would have died with his men and his ship!" he cried.

The two Germans at the machine heard his voice going ever and again amidst the clamour of the waters. Their eyes met and they smiled slightly.

He was disposed for a time to sit in the refreshment shed waiting for them, but then it occurred to him that so he might get them both at close quarters. He strolled off presently to the point of Luna Island to think the situation out.

It had seemed a comparatively simple one at first, but as he turned it over in his mind its possibilities increased and multiplied. Both these men had swords,--had either a revolver?

Also, if he shot them both, he might never find the food!

So far he had been going about with this gun under his arm, and a sense of lordly security in his mind, but what if they saw the gun and decided to ambush him? Goat Island is nearly all cover, trees, rocks, thickets, and irregularities.

Why not go and murder them both now?

"I can't," said Bert, dismissing that. "I got to be worked up."

But it was a mistake to get right away from them. That suddenly became clear. He ought to keep them under observation, ought to "scout" them. Then he would be able to see what they were doing, whether either of them had a revolver, where they had hidden the food. He would be better able to determine what they meant to do to him. If he didn't "scout" them, presently they would begin to "scout" him. This seemed so eminently reasonable that he acted upon it forthwith. He thought over his costume and threw his collar and the tell-tale aeronaut's white cap into the water far below. He turned his coat collar up to hide any gleam of his dirty shirt. The tools and nuts in his pockets were disposed to clank, but he rearranged them and wrapped some letters and his pocket-handkerchief about them. He started off circumspectly and noiselessly, listening and peering at every step. As he drew

near his antagonists, much grunting and creaking served to locate them. He discovered them engaged in what looked like a wrestling match with the Asiatic flying-machine. Their coats were off, their swords laid aside, they were working magnificently. Apparently they were turning it round and were having a good deal of difficulty with the long tail among the trees. He dropped flat at the sight of them and wriggled into a little hollow, and so lay watching their exertions. Ever and again, to pass the time, he would cover one or other of them with his gun.

He found them quite interesting to watch, so interesting that at times he came near shouting to advise them. He perceived that when they had the machine turned round, they would then be in immediate want of the nuts and tools he carried. Then they would come after him. They would certainly conclude he had them or had hidden them. Should he hide his gun and do a deal for food with these tools? He felt he would not be able to part with the gun again now he had once felt its reassuring company. The kitten turned up again and made a great fuss with him and licked and bit his ear.

The sun clambered to midday, and once that morning he saw, though the Germans did not, an Asiatic airship very far to the south, going swiftly eastward.

At last the flying-machine was turned and stood poised on its wheel, with its hooks pointing up the Rapids. The two officers wiped their faces, resumed jackets and swords, spoke and bore themselves like men who congratulated themselves on a good laborious morning. Then they went off briskly towards the refreshment shed, the Prince leading. Bert became active in pursuit; but he found it impossible to stalk them quickly enough and silently enough to discover the hiding-place of the food. He found them, when he came into sight of them again, seated with their backs against the shed, plates on knee, and a tin of corned

beef and a plateful of biscuits between them. They seemed in fairly good spirits, and once the Prince laughed. At this vision of eating Bert's plans gave way. Fierce hunger carried him. He appeared before them suddenly at a distance of perhaps twenty yards, gun in hand.

"Ands up!" he said in a hard, ferocious voice.

The Prince hesitated, and then up went two pairs of hands. The gun had surprised them both completely.

"Stand up," said Bert.... "Drop that fork!"

They obeyed again.

"What nex'?" said Bert to himself. "'Orf stage, I suppose. That way," he said. "Go!"

The Prince obeyed with remarkable alacrity. When he reached the head of the clearing, he said something quickly to the bird-faced man and they both, with an entire lack of dignity, RAN!

Bert was struck with an exasperating afterthought.

"Gord!" he cried with infinite vexation. "Why! I ought to 'ave took their swords! 'Ere!"

But the Germans were already out of sight, and no doubt taking cover among the trees. Bert fell back upon imprecations, then he went up to the shed, cursorily examined the possibility of a flank attack, put his gun handy, and set to work, with a convulsive listening pause before each mouthful on the Prince's plate of corned beef. He had finished that up and handed its gleanings to the kitten and he was falling-to on the second plateful, when the plate broke in his hand! He stared, with the

fact slowly creeping upon him that an instant before he had heard a crack among the thickets. Then he sprang to his feet, snatched up his gun in one hand and the tin of corned beef in the other, and fled round the shed to the other side of the clearing. As he did so came a second crack from the thickets, and something went phwit! by his ear.

He didn't stop running until he was in what seemed to him a strongly defensible position near Luna Island. Then he took cover, panting, and crouched expectant.

"They got a revolver after all!" he panted....

"Wonder if they got two? If they 'ave--Gord! I'm done!
"Where's the kitten? Finishin' up that corned beef, I suppose.
Little beggar!"

9

So it was that war began upon Goat Island. It lasted a day and a night, the longest day and the longest night in Bert's life. He had to lie close and listen And watch. Also he had to scheme what he should do. It was clear now that he had to kill these two men if he could, and that if they could, they would kill him. The prize was first food and then the flying-machine and the doubtful privilege of trying' to ride it. If one failed, one would certainly be killed; if one succeeded, one would get away somewhere over there. For a time Bert tried to imagine what it was like over there. His mind ran over possibilities, deserts, angry Americans, Japanese, Chinese--perhaps Red Indians! (Were there still Red Indians?)

"Got to take what comes," said Bert. "No way out of it that I can see!"

Was that voices? He realised that his attention was wandering. For a time all his senses were very alert. The uproar of the Falls was very confusing, and it mixed in all sorts of sounds, like feet walking, like voices talking, like shouts and cries.

"Silly great catarac'," said Bert. "There ain't no sense in it, fallin' and fallin'."

Never mind that, now! What were the Germans doing?

Would they go back to the flying-machine? They couldn't do anything with it, because he had those nuts and screws and the wrench and other tools. But suppose they found the second set of tools he had hidden in a tree! He had hidden the things well, of course, but they MIGHT find them. One wasn't sure, of course--one wasn't sure. He tried to remember just exactly how he had hidden those tools. He tried to persuade himself they were certainly and surely hidden, but his memory began to play antics. Had he really left the handle of the wrench sticking out, shining out at the fork of the branch?

Ssh! What was that? Some one stirring in those bushes? Up went an expectant muzzle. No! Where was the kitten? No! It was just imagination, not even the kitten.

The Germans would certainly miss and hunt about for the tools and nuts and screws he carried in his pockets; that was clear., Then they would decide he had them and come for him. He had only to remain still under cover, therefore, and he would get them. Was there any flaw in that? Would they take off more removable parts of the flying-machine and then lie up for him? No, they wouldn't do that, because they were two to one; they would have no apprehension of his getting off in the flying-machine, and no sound reason for supposing he would approach it, and so they would do nothing to damage or disable it. That he decided was

clear. But suppose they lay up for him by the food. Well, that they wouldn't do, because they would know he had this corned beef; there was enough in this can to last, with moderation, several days. Of course they might try to tire him out instead of attacking him--

He roused himself with a start. He had just grasped the real weakness of his position. He might go to sleep!

It needed but ten minutes under the suggestion of that idea, before he realised that he was going to sleep!

He rubbed his eyes and handled his gun. He had never before realised the intensely soporific effect of the American sun, of the American air, the drowsy, sleep-compelling uproar of Niagara. Hitherto these things had on the whole seemed stimulating....

If he had not eaten so much and eaten it so fast, he would not be so heavy. Are vegetarians always bright? ...

He roused himself with a jerk again.

If he didn't do something, he would fall asleep, and if he fell asleep, it was ten to one they would find him snoring, and finish him forthwith. If he sat motionless and noiseless, he would inevitably sleep. It was better, he told himself, to take even the risks of attacking than that. This sleep trouble, he felt, was going to beat him, must beat him in the end. They were all right; one could sleep and the other could watch. That, come to think of it, was what they would always do; one would do anything they wanted done, the other would lie under cover near at hand, ready to shoot. They might even trap him like that. One might act as a decoy.

That set him thinking of decoys. What a fool he had been to

throw his cap away. It would have been invaluable on a stick--especially at night.

He found himself wishing for a drink. He settled that for a time by putting a pebble in his mouth. And then the sleep craving returned.

It became clear to him he must attack. Like many great generals before him, he found his baggage, that is to say his tin of corned beef, a serious impediment to mobility. At last he decided to put the beef loose in his pocket and abandon the tin. It was not perhaps an ideal arrangement, but one must make sacrifices when one is campaigning. He crawled perhaps ten yards, and then for a time the possibilities of the situation paralysed him.

The afternoon was still. The roar of the cataract simply threw up that immense stillness in relief. He was doing his best to contrive the death of two better men than himself. Also they were doing their best to contrive his. What, behind this silence, were they doing.

Suppose he came upon them suddenly and fired, and missed?

10

He crawled, and halted listening, and crawled again until nightfall, and no doubt the German Alexander and his lieutenant did the same. A large scale map of Goat Island marked with red and blue lines to show these strategic movements would no doubt have displayed much interlacing, but as a matter of fact neither side saw anything of the other throughout that age-long day of tedious alertness. Bert never knew how near he got to them nor how far he kept from them. Night found him no longer sleepy, but athirst, and near the American Fall. He was inspired by the idea

that his antagonists might be in the wreckage of the Hohenzollern cabins that was jammed against Green Island. He became enterprising, broke from any attempt to conceal himself, and went across the little bridge at the double. He found nobody. It was his first visit to these huge fragments of airships, and for a time he explored them curiously in the dim light. He discovered the forward cabin was nearly intact, with its door slanting downward and a corner under water. He crept in, drank, and then was struck by the brilliant idea of shutting the door and sleeping on it.

But now he could not sleep at all.

He nodded towards morning and woke up to find it fully day. He breakfasted on corned beef and water, and sat for a long time appreciative of the security of his position. At last he became enterprising and bold. He would, he decided, settle this business forthwith, one way or the other. He was tired of all this crawling. He set out in the morning sunshine, gun in hand, scarcely troubling to walk softly. He went round the refreshment shed without finding any one, and then through the trees towards the flying-machine. He came upon the bird-faced man sitting on the ground with his back against a tree, bent up over his folded arms, sleeping, his bandage very much over one eye.

Bert stopped abruptly and stood perhaps fifteen yards away, gun in hand ready. Where was the Prince? Then, sticking out at the side of the tree beyond, he saw a shoulder. Bert took five deliberate paces to the left. The great man became visible, leaning up against the trunk, pistol in one hand and sword in the other, and yawning--yawning. You can't shoot a yawning man Bert found. He advanced upon his antagonist with his gun levelled, some foolish fancy of "hands up" in his mind. The Prince became aware of him, the yawning mouth shut like a trap and he stood stiffly up. Bert stopped, silent. For a moment the two regarded

one another.

Had the Prince been a wise man he would, I suppose, have dodged behind the tree. Instead, he gave vent to a shout, and raised pistol and sword. At that, like an automaton, Bert pulled his trigger.

It was his first experience of an oxygen-containing bullet. A great flame spurted from the middle of the Prince, a blinding flare, and there came a thud like the firing of a gun. Something hot and wet struck Bert's face. Then through a whirl of blinding smoke and steam he saw limbs and a collapsing, burst body fling themselves to earth.

Bert was so astonished that he stood agape, and the bird-faced officer might have cut him to the earth without a struggle. But instead the bird-faced officer was running away through the undergrowth, dodging as he went. Bert roused himself to a brief ineffectual pursuit, but he had no stomach for further killing. He returned to the mangled, scattered thing that had so recently been the great Prince Karl Albert. He surveyed the scorched and splashed vegetation about it. He made some speculative identifications. He advanced gingerly and picked up the hot revolver, to find all its chambers strained and burst. He became aware of a cheerful and friendly presence. He was greatly shocked that one so young should see so frightful a scene.

"Ere, Kitty," he said, "this ain't no place for you."

He made three strides across the devastated area, captured the kitten neatly, and went his way towards the shed, with her purring loudly on his shoulder.

"YOU don't seem to mind," he said.

For a time he fussed about the shed, and at last discovered the rest of the provisions hidden in the roof. "Seems 'ard," he said, as he administered a saucerful of milk, "when you get three men in a 'ole like this, they can't work together. But 'im and 'is princing was jest a bit too thick!"

"Gaw!" he reflected, sitting on the counter and eating, "what a thing life is! 'Ere am I; I seen 'is picture, 'eard 'is name since I was a kid in frocks. Prince Karl Albert! And if any one 'ad tole me I was going to blow lim to smithereens--there! I shouldn't 'ave believed it, Kitty.

"That chap at Margit ought to 'ave tole me about it. All 'e tole me was that I got a weak chess.

"That other chap, 'e ain't going to do much. Wonder what I ought to do about 'im?"

He surveyed the trees with a keen blue eye and fingered the gun on his knee. "I don't like this killing, Kitty," he said. "It's like Kurt said about being blooded. Seems to me you got to be blooded young.... If that Prince 'ad come up to me and said, 'Shake 'ands!' I'd 'ave shook 'ands.... Now 'ere's that other chap, dodging about! 'E's got 'is 'ead 'urt already, and there's something wrong with his leg. And burns. Golly! it isn't three weeks ago I first set eyes on 'im, and then 'e was smart and set up--'ands full of 'air-brushes and things, and swearin' at me. A regular gentleman! Now 'e's 'arfway to a wild man. What am I to do with 'im? What the 'ell am I to do with 'im? I can't leave 'im 'ave that flying-machine; that's a bit too good, and if I don't kill 'im, 'e'll jest 'ang about this island and starve....

"'E's got a sword, of course"....

He resumed his philosophising after he had lit a cigarette.

"War's a silly gaim, Kitty. It's a silly gaim! We common people--we were fools. We thought those big people knew what they were up to--and they didn't. Look at that chap! 'E 'ad all Germany be'ind 'im, and what 'as 'e made of it? Smeshin' and blunderin' and destroyin', and there 'e 'is! Jest a mess of blood and boots and things! Jest an 'orrid splash! Prince Karl Albert! And all the men 'e led and the ships 'e 'ad, the airships, and the dragon-fliers--all scattered like a paper-chase between this 'ole and Germany. And fightin' going on and burnin' and killin' that 'e started, war without end all over the world!

"I suppose I shall 'ave to kill that other chap. I suppose I must. But it ain't at all the sort of job I fancy, Kitty!"

For a time he hunted about the island amidst the uproar of the waterfall, looking for the wounded officer, and at last he started him out of some bushes near the head of Biddle Stairs. But as he saw the bent and bandaged figure in limping flight before him, he found his Cockney softness too much for him again; he could neither shoot nor pursue. "I carn't," he said, "that's flat. I 'aven't the guts for it! 'E'll 'ave to go."

He turned his steps towards the flying-machine....

He never saw the bird-faced officer again, nor any further evidence of his presence. Towards evening he grew fearful of ambushes and hunted vigorously for an hour or so, but in vain. He slept in a good defensible position at the extremity of the rocky point that runs out to the Canadian Fall, and in the night he woke in panic terror and fired his gun. But it was nothing. He slept no more that night. In the morning he became curiously concerned for the vanished man, and hunted for him as one might for an erring brother.

"If I knew some German," he said, "I'd 'oller. It's jest not knowing German does it. You can't explain"

He discovered, later, traces of an attempt to cross the gap in the broken bridge. A rope with a bolt attached had been flung across and had caught in a fenestration of a projecting fragment of railing. The end of the rope trailed in the seething water towards the fall.

But the bird-faced officer was already rubbing shoulders with certain inert matter that had once been Lieutenant Kurt and the Chinese aeronaut and a dead cow, and much other uncongenial company, in the huge circle of the Whirlpool two and a quarter miles away. Never had that great gathering place, that incessant, aimless, unprogressive hurry of waste and battered things, been so crowded with strange and melancholy derelicts. Round they went and round, and every day brought its new contributions, luckless brutes, shattered fragments of boat and flying-machine, endless citizens from the cities upon the shores of the great lakes above. Much came from Cleveland. It all gathered here, and whirled about indefinitely, and over it all gathered daily a greater abundance of birds.

CHAPTER X THE WORLD UNDER THE WAR

1

Bert spent two more days upon Goat Island, and finished all his provisions except the cigarettes and mineral water, before he brought himself to try the Asiatic flying-machine.

Even at last he did not so much go off upon it as get carried

off. It had taken only an hour or so to substitute wing stays from the second flying-machine and to replace the nuts he had himself removed. The engine was in working order, and differed only very simply and obviously from that of a contemporary motor-bicycle. The rest of the time was taken up by a vast musing and delaying and hesitation. Chiefly he saw himself splashing into the rapids and whirling down them to the Fall, clutching and drowning, but also he had a vision of being hopelessly in the air, going fast and unable to ground. His mind was too concentrated upon the business of flying for him to think very much of what might happen to an indefinite-spirited Cockney without credential who arrived on an Asiatic flying-machine amidst the war-infuriated population beyond.

He still had a lingering solicitude for the bird-faced officer. He had a haunting fancy he might be lying disabled or badly smashed in some way in some nook or cranny of the Island; and it was only after a most exhaustive search that he abandoned that distressing idea. "If I found 'im," he reasoned the while, "what could I do wiv 'im? You can't blow a chap's brains out when 'e's down. And I don' see 'ow else I can 'elp 'im."

Then the kitten bothered his highly developed sense of social responsibility. "If I leave 'er, she'll starve.... Ought to catch mice for 'erself.... ARE there mice?... Birds? ... She's too young.... She's like me; she's a bit too civilised."

Finally he stuck her in his side pocket and she became greatly interested in the memories of corned beef she found there. With her in his pocket, he seated himself in the saddle of the flying-machine. Big, clumsy thing it was--and not a bit like a bicycle. Still the working of it was fairly plain. You set the engine going--SO; kicked yourself up until the wheel was vertical, SO; engaged the gyroscope, SO, and then--then--you just pulled up this lever.

Rather stiff it was, but suddenly it came over--

The big curved wings on either side flapped disconcertingly, flapped again' click, clock, click, clock, clitter-clock!

Stop! The thing was heading for the water; its wheel was in the water. Bert groaned from his heart and struggled to restore the lever to its first position. Click, clock, clitter-clock, he was ising! The machine was lifting its dripping wheel out of the eddies, and he was going up! There was no stopping now, no good in stopping now. In another moment Bert, clutching and convulsive and rigid, with staring eyes and a face pale as death, was flapping up above the Rapids, jerking to every jerk of the wings, and rising, rising.

There was no comparison in dignity and comfort between a flying-machine and a balloon. Except in its moments of descent, the balloon was a vehicle of faultless urbanity; this was a buck-jumping mule, a mule that jumped up and never came down again. Click, clock, click, clock; with each beat of the strangely shaped wings it jumped Bert upward and caught him neatly again half a second later on the saddle. And while in ballooning there is no wind, since the balloon is a part of the wind, flying is a wild perpetual creation of and plunging into wind. It was a wind that above all things sought to blind him, to force him to close his eyes. It occurred to him presently to twist his knees and legs inward and grip with them, or surely he would have been bumped into two clumsy halves. And he was going up, a hundred yards high, two hundred, three hundred, over the streaming, frothing wilderness of water below--up, up, up. That was all right, but how presently would one go horizontally? He tried to think if these things did go horizontally. No! They flapped up and then they soared down. For a time he would keep on flapping up. Tears streamed from his eyes. He wiped them with one

temerariouly disengaged hand.

Was it better to risk a fall over land or over water--such water?

He was flapping up above the Upper Rapids towards Buffalo. It was at any rate a comfort that the Falls and the wild swirl of waters below them were behind him. He was flying up straight. That he could see. How did one turn?

He was presently almost cool, and his eyes got more used to the rush of air, but he was getting very high, very high. He tilted his head forwards and surveyed the country, blinking. He could see all over Buffalo, a place with three great blackened scars of ruin, and hills and stretches beyond. He wondered if he was half a mile high, or more. There were some people among some houses near a railway station between Niagara and Buffalo, and then more people. They went like ants busily in and out of the houses. He saw two motor cars gliding along the road towards Niagara city. Then far away in the south he saw a great Asiatic airship going eastward. "Oh, Gord!" he said, and became earnest in his ineffectual attempts to alter his direction. But that airship took no notice of him, and he continued to ascend convulsively. The world got more and more extensive and maplike. Click, clock, clitter-clock. Above him and very near to him now was a hazy stratum of cloud.

He determined to disengage the wing clutch. He did so. The lever resisted his strength for a time, then over it came, and instantly the tail of the machine cocked up and the wings became rigidly spread. Instantly everything was swift and smooth and silent. He was gliding rapidly down the air against a wild gale of wind, his eyes three-quarters shut.

A little lever that had hitherto been obdurate now confessed itself mobile. He turned it over gently to the right, and

whiroo!--the left wing had in some mysterious way given at its edge and he was sweeping round and downward in an immense right-handed spiral. For some moments he experienced all the helpless sensations of catastrophe. He restored the lever to its middle position with some difficulty, and the wings were equalised again.

He turned it to the left and had a sensation of being spun round backwards. "Too much!" he gasped.

He discovered that he was rushing down at a headlong pace towards a railway line and some factory buildings. They appeared to be tearing up to him to devour him. He must have dropped all that height. For a moment he had the ineffectual sensations of one whose bicycle bolts downhill. The ground had almost taken him by surprise. "Ere!" he cried; and then with a violent effort of all his being he got the beating engine at work again and set the wings flapping. He swooped down and up and resumed his quivering and pulsating ascent of the air.

He went high again, until he had a wide view of the pleasant upland country of western New York State, and then made a long coast down, and so up again, and then a coast. Then as he came swooping a quarter of a mile above a village he saw people running about, running away--evidently in relation to his hawk-like passage. He got an idea that he had been shot at.

"Up!" he said, and attacked that lever again. It came over with remarkable docility, and suddenly the wings seemed to give way in the middle. But the engine was still! It had stopped. He flung the lever back rather by instinct than design. What to do?

Much happened in a few seconds, but also his mind was quick, he thought very quickly. He couldn't get up again, he was gliding down the air; he would have to hit something.

He was travelling at the rate of perhaps thirty miles an hour down, down.

That plantation of larches looked the softest thing--mossy almost!

Could he get it? He gave himself to the steering. Round to the right--left!

Swirroo! Crackle! He was gliding over the tops of the trees, ploughing through them, tumbling into a cloud of green sharp leaves and black twigs. There was a sudden snapping, and he fell off the saddle forward, a thud and a crashing of branches. Some twigs hit him smartly in the face....

He was between a tree-stem and the saddle, with his leg over the steering lever and, so far as he could realise, not hurt. He tried to alter his position and free his leg, and found himself slipping and dropping through branches with everything giving way beneath him. He clutched and found himself in the lower branches of a tree beneath the flying-machine. The air was full of a pleasant resinous smell. He stared for a moment motionless, and then very carefully clambered down branch by branch to the soft needle-covered ground below.

"Good business," he said, looking up at the bent and tilted kite-wings above.

"I dropped soft!"

He rubbed his chin with his hand and meditated. "Blowed if I don't think I'm a rather lucky fellow!" he said, surveying the pleasant sun-bespattered ground under the trees. Then he became aware of a violent tumult at his side. "Lord!" he said, "You

must be 'arf smothered," and extracted the kitten from his pocket-handkerchief and pocket. She was twisted and crumpled and extremely glad to see the light again. Her little tongue peeped between her teeth. He put her down, and she ran a dozen paces and shook herself and stretched and sat up and began to wash.

"Nex'?" he said, looking about him, and then with a gesture of vexation, "Desh it! I ought to 'ave brought that gun!"

He had rested it against a tree when he had seated himself in the flying-machine saddle.

He was puzzled for a time by the immense peacefulness in the quality of the world, and then he perceived that the roar of the cataract was no longer in his ears.

2

He had no very clear idea of what sort of people he might come upon in this country. It was, he knew, America. Americans he had always understood were the citizens of a great and powerful nation, dry and humorous in their manner, addicted to the use of the bowie-knife and revolver, and in the habit of talking through the nose like Norfolkshire, and saying "allow" and "reckon" and "calculate," after the manner of the people who live on the New Forest side of Hampshire. Also they were very rich, had rocking-chairs, and put their feet at unusual altitudes, and they chewed tobacco, gum, and other substances, with untiring industry. Commingled with them were cowboys, Red Indians, and comic, respectful niggers. This he had learnt from the fiction in his public library. Beyond that he had learnt very little. He was not surprised therefore when he met armed men.

He decided to abandon the shattered flying-machine. He wandered through the trees for some time, and then struck a road that

seemed to his urban English eyes to be remarkably wide but not properly "made." Neither hedge nor ditch nor curbed distinctive footpath separated it from the woods, and it went in that long easy curve which distinguishes the tracks of an open continent. Ahead he saw a man carrying a gun under his arm, a man in a soft black hat, a blue blouse, and black trousers, and with a broad round-fat face quite innocent of goatee. This person regarded him askance and heard him speak with a start.

"Can you tell me whereabouts I am at all?" asked Bert.

The man regarded him, and more particularly his rubber boots, with sinister suspicion. Then he replied in a strange outlandish tongue that was, as a matter of fact, Czech. He ended suddenly at the sight of Bert's blank face with "Don't spik English."

"Oh!" said Bert. He reflected gravely for a moment, and then went his way.

"Thanks," he, said as an afterthought. The man regarded his back for a moment, was struck with an idea, began an abortive gesture, sighed, gave it up, and went on also with a depressed countenance.

Presently Bert came to a big wooden house standing casually among the trees. It looked a bleak, bare box of a house to him, no creeper grew on it, no hedge nor wall nor fence parted it off from the woods about it. He stopped before the steps that led up to the door, perhaps thirty yards away. The place seemed deserted. He would have gone up to the door and rapped, but suddenly a big black dog appeared at the side and regarded him. It was a huge heavy-jawed dog of some unfamiliar breed, and it, wore a spike-studded collar. It did not bark nor approach him, it just bristled quietly and emitted a single sound like a short, deep cough.

Bert hesitated and went on.

He stopped thirty paces away and stood peering about him among the trees. "If I 'aven't been and lef' that kitten," he said.

Acute sorrow wrenched him for a time. The black dog came through the trees to get a better look at him and coughed that well-bred cough again. Bert resumed the road.

"She'll do all right," he said.... "She'll catch things.

"She'll do all right," he said presently, without conviction. But if it had not been for the black dog, he would have gone back.

When he was out of sight of the house and the black dog, he went into the woods on the other side of the way and emerged after an interval trimming a very tolerable cudgel with his pocket-knife. Presently he saw an attractive-looking rock by the track and picked it up and put it in his pocket. Then he came to three or four houses, wooden like the last, each with an ill-painted white verandah (that was his name for it) and all standing in the same casual way upon the ground. Behind, through the woods, he saw pig-stys and a rooting black sow leading a brisk, adventurous family. A wild-looking woman with sloe-black eyes and dishevelled black hair sat upon the steps of one of the houses nursing a baby, but at the sight of Bert she got up and went inside, and he heard her bolting the door. Then a boy appeared among the pig-stys, but he would not understand Bert's hail.

"I suppose it is America!" said Bert.

The houses became more frequent down the road, and he passed two other extremely wild and dirty-looking men without addressing

them. One carried a gun and the other a hatchet, and they scrutinised him and his cudgel scornfully. Then he struck a cross-road with a mono-rail at its side, and there was a notice board at the corner with "Wait here for the cars." "That's all right, any'ow," said Bert. "Wonder 'ow long I should 'ave to wait?" It occurred to him that in the present disturbed state of the country the service might be interrupted, and as there seemed more houses to the right than the left he turned to the right. He passed an old negro. "Ullo!" said Bert. "Goo' morning!"

"Good day, sah!" said the old negro, in a voice of almost incredible richness.

"What's the name of this place?" asked Bert.

"Tanooda, sah!" said the negro.

"Thenks!" said Bert.

"Thank YOU, sah!" said the negro, overwhelmingly.

Bert came to houses of the same detached, unwalled, wooden type, but adorned now with enamelled advertisements partly in English and partly in Esperanto. Then he came to what he concluded was a grocer's shop. It was the first house that professed the hospitality of an open door, and from within came a strangely familiar sound. "Gaw!" he said searching in his pockets. "Why! I 'aven't wanted money for free weeks! I wonder if I--Grubb 'ad most of it. Ah!" He produced a handful of coins and regarded it; three pennies, sixpence, and a shilling. "That's all right," he said, forgetting a very obvious consideration.

He approached the door, and as he did so a compactly built, grey-faced man in shirt sleeves appeared in it and scrutinised him and his cudgel. "Mornin'," said Bert. "Can I get anything to

eat 'r drink in this shop?"

The man in the door replied, thank Heaven, in clear, good American. "This, sir, is not A shop, it is A store."

"Oh!" said Bert, and then, "Well, can I get anything to eat?"

"You can," said the American in a tone of confident encouragement, and led the way inside.

The shop seemed to him by his Bun Hill standards extremely roomy, well lit, and unencumbered. There was a long counter to the left of him, with drawers and miscellaneous commodities ranged behind it, a number of chairs, several tables, and two spittoons to the right, various barrels, cheeses, and bacon up the vista, and beyond, a large archway leading to more space. A little group of men was assembled round one of the tables, and a woman of perhaps five-and-thirty leant with her elbows on the counter. All the men were armed with rifles, and the barrel of a gun peeped above the counter. They were all listening idly, inattentively, to a cheap, metallic-toned gramophone that occupied a table near at hand. From its brazen throat came words that gave Bert a qualm of homesickness, that brought back in his memory a sunlit beach, a group of children, red-painted bicycles, Grubb, and an approaching balloon:--

"Ting-a-ling-a-ting-a-ling-a-ting-a ling-a-tang...
What Price Hair-pins Now?"

A heavy-necked man in a straw hat, who was chewing something, stopped the machine with a touch, and they all, turned their eyes on Bert. And all their eyes were tired eyes.

"Can we give this gentleman anything to eat, mother, or can we not?" said the proprietor.

"He kin have what he likes?" said the woman at the counter, without moving, "right up from a cracker to a square meal." She struggled with a yawn, after the manner of one who has been up all night.

"I want a meal," said Bert, "but I 'aven't very much money. I don' want to give mor'n a shillin'."

"Mor'n a WHAT?" said the proprietor, sharply.

"Mor'n a shillin'," said Bert, with a sudden disagreeable realisation coming into his mind.

"Yes," said the proprietor, startled for a moment from his courtly bearing. "But what in hell is a shilling?"

"He means a quarter," said a wise-looking, lank young man in riding gaiters.

Bert, trying to conceal his consternation, produced a coin.

"That's a shilling," he said.

"He calls A store A shop," said the proprietor, "and he wants A meal for A shilling. May I ask you, sir, what part of America you hail from?"

Bert replaced the shilling, in his pocket as he spoke, "Niagara," he said.

"And when did you leave Niagara?"

"'Bout an hour ago."

"Well," said the proprietor, and turned with a puzzled smile to

the others. "Well!"

They asked various questions simultaneously.

Bert selected one or two for reply. "You see," he said, "I been with the German air-fleet. I got caught up by them, sort of by accident, and brought over here."

"From England?"

"Yes--from England. Way of Germany. I was in a great battle with them Asiatics, and I got lef' on a little island between the Falls."

"Goat Island?"

"I don' know what it was called. But any'ow I found a flying-machine and made a sort of fly with it and got here."

Two men stood up with incredulous eyes on him. "Where's the flying-machine?" they asked; "outside?"

"It's back in the woods here--'bout arf a mile away."

"Is it good?" said a thick-lipped man with a scar.

"I come down rather a smash--."

Everybody got up and stood about him and talked confusingly. They wanted him to take them to the flying-machine at once.

"Look 'ere," said Bert, "I'll show you--only I 'aven't 'ad anything to eat since yestiday--except mineral water."

A gaunt soldierly-looking young man with long lean legs in riding

gaiters and a bandolier, who had hitherto not spoken, intervened now on his behalf in a note of confident authority. "That's aw right," he said. "Give him a feed, Mr. Logan--from me. I want to hear more of that story of his. We'll see his machine afterwards. If you ask me, I should say it's a remarkably interesting accident had dropped this gentleman here. I guess we requisition that flying-machine--if we find it--,for local defence."

3

So Bert fell on his feet again, and sat eating cold meat and good bread and mustard and drinking very good beer, and telling in the roughest outline and with the omissions and inaccuracies of statement natural to his type of mind, the simple story of his adventures. He told how he and a "gentleman friend" had been visiting the seaside for their health, how a "chep" came along in a balloon and fell out as he fell in, how he had drifted to Franconia, how the Germans had seemed to mistake him for some one and had "took him prisoner" and brought him to New York, how he had been to Labrador and back, how he had got to Goat Island and found himself there alone. He omitted the matter of the Prince and the Butteridge aspect of the affair, not out of any deep deceitfulness, but because he felt the inadequacy of his narrative powers. He wanted everything to seem easy and natural and correct, to present himself as a trustworthy and understandable Englishman in a sound mediocre position, to whom refreshment and accommodation might be given with freedom and confidence.

When his fragmentary story came to New York and the battle of Niagara, they suddenly produced newspapers which had been lying about on the table, and began to check him and question him by these vehement accounts. It became evident to him that his descent had revived and roused to flames again a discussion, a topic, that had been burning continuously, that had smouldered

only through sheer exhaustion of material during the temporary diversion of the gramophone, a discussion that had drawn these men together, rifle in hand, the one supreme topic of the whole world, the War and the methods of the War. He found any question of his personality and his personal adventures falling into the background, found himself taken for granted, and no more than a source of information. The ordinary affairs of life, the buying and selling of everyday necessities, the cultivation of the ground, the tending of beasts, was going on as it were by force of routine, as the common duties of life go on in a house whose master lies under the knife of some supreme operation. The overruling interest was furnished by those great Asiatic airships that went upon incalculable missions across the sky, the crimson-clad swordsmen who might come fluttering down demanding petrol, or food, or news. These men were asking, all the continent was asking, "What are we to do? What can we try? How can we get at them?" Bert fell into his place as an item, ceased even in his own thoughts to be a central and independent thing.

After he had eaten and drunken his fill and sighed and stretched and told them how good the food seemed to him, he lit a cigarette they gave him and led the way, with some doubts and trouble, to the flying-machine amidst the larches. It became manifest that the gaunt young man, whose name, it seemed, was Laurier, was a leader both by position and natural aptitude. He knew the names and characters and capabilities of all the men who were with him, and he set them to work at once with vigour and effect to secure this precious instrument of war. They got the thing down to the ground deliberately and carefully, felling a couple of trees in the process, and they built a wide flat roof of timbers and tree boughs to guard their precious find against its chance discovery by any passing Asiatics. Long before evening they had an engineer from the next township at work upon it, and they were casting lots among the seventeen picked men who wanted to take it for its first flight. And Bert found his kitten and carried it

back to Logan's store and handed it with earnest admonition to Mrs. Logan. And it was reassuringly clear to him that in Mrs. Logan both he and the kitten had found a congenial soul.

Laurier was not only a masterful person and a wealthy property owner and employer--he was president, Bert learnt with awe, of the Tanooda Canning Corporation--but he was popular and skilful in the arts of popularity. In the evening quite a crowd of men gathered in the store and talked of the flying-machine and of the war that was tearing the world to pieces. And presently came a man on a bicycle with an ill-printed newspaper of a single sheet which acted like fuel in a blazing furnace of talk. It was nearly all American news; the old-fashioned cables had fallen into disuse for some years, and the Marconi stations across the ocean and along the Atlantic coastline seemed to have furnished particularly tempting points of attack.

But such news it was.

Bert sat in the background--for by this time they had gauged his personal quality pretty completely--listening. Before his staggering mind passed strange vast images as they talked, of great issues at a crisis, of nations in tumultuous march, of continents overthrown, of famine and destruction beyond measure. Ever and again, in spite of his efforts to suppress them, certain personal impressions would scamper across the weltering confusion, the horrible mess of the exploded Prince, the Chinese aeronaut upside down, the limping and bandaged bird-faced officer blundering along in miserable and hopeless flight....

They spoke of fire and massacre, of cruelties and counter cruelties, of things that had been done to harmless Asiatics by race-mad men, of the wholesale burning and smashing up of towns, railway junctions, bridges, of whole populations in hiding and exodus. "Every ship they've got is in the Pacific," he heard one

man exclaim. "Since the fighting began they can't have landed on the Pacific slope less than a million men. They've come to stay in these States, and they will--living or dead."

Slowly, broadly, invincibly, there grew upon Bert's mind realisation of the immense tragedy of humanity into which his life was flowing; the appalling and universal nature of the epoch that had arrived; the conception of an end to security and order and habit. The whole world was at war and it could not get back to peace, it might never recover peace.

He had thought the things he had seen had been exceptional, conclusive things, that the besieging of New York and the battle of the Atlantic were epoch-making events between long years of security. And they had been but the first warning impacts of universal cataclysm. Each day destruction and hate and disaster grew, the fissures widened between man and man, new regions of the fabric of civilisation crumbled and gave way. Below, the armies grew and the people perished; above, the airships and aeroplanes fought and fled, raining destruction.

It is difficult perhaps for the broad-minded and long-perspectived reader to understand how incredible the breaking down of the scientific civilisation seemed to those, who actually lived at this time, who in their own persons went down in that debacle. Progress had marched as it seemed invincible about the earth, never now to rest again. For three hundred years and more the long steadily accelerated diastole of Europeanised civilisation had been in progress: towns had been multiplying, populations increasing, values rising, new countries developing; thought, literature, knowledge unfolding and spreading. It seemed but a part of the process that every year the instruments of war were vaster and more powerful, and that armies and explosives outgrew all other growing things....

Three hundred years of diastole, and then came the swift and unexpected systole, like the closing of a fist. They could not understand it was systole.

They could not think of it as anything but a jolt, a hitch, a mere oscillatory indication of the swiftness of their progress. Collapse, though it happened all about them, remained incredible. Presently some falling mass smote them down, or the ground opened beneath their feet. They died incredulous....

These men in the store made a minute, remote group under this immense canopy of disaster. They turned from one little aspect to another. What chiefly concerned them was defence against Asiatic raiders swooping for petrol or to destroy weapons or communications. Everywhere levies were being formed at that time to defend the plant of the railroads day and night in the hope that communication would speedily be restored. The land war was still far away. A man with a flat voice distinguished himself by a display of knowledge and cunning. He told them all with confidence just what had been wrong with the German drachenflieger and the American aeroplanes, just what advantage the Japanese flyers possessed. He launched out into a romantic description of the Butteridge machine and riveted Bert's attention. "I SEE that," said Bert, and was smitten silent by a thought. The man with the flat voice talked on, without heeding him, of the strange irony of Butteridge's death. At that Bert had a little twinge of relief--he would never meet Butteridge again. It appeared Butteridge had died suddenly, very suddenly.

"And his secret, sir, perished with him! When they came to look for the parts--none could find them. He had hidden them all too well."

"But couldn't he tell?" asked the man in the straw hat. "Did he die so suddenly as that?"

"Struck down, sir. Rage and apoplexy. At a place called Dymchurch in England."

"That's right, said Laurier. "I remember a page about it in the Sunday American. At the time they said it was a German spy had stolen his balloon."

"Well, sir," said the flat-voiced man, "that fit of apoplexy at Dyrnchurch was the worst thing--absolutely the worst thing that ever happened to the world. For if it had not been for the death of Mr. Butteridge--"

"No one knows his secret?"

"Not a soul. It's gone. His balloon, it appears, was lost at sea, with all the plans. Down it went, and they went with it."

Pause.

"With machines such as he made we could fight these Asiatic fliers on more than equal terms. We could outfly and beat down those scarlet humming-birds wherever they appeared. But it's gone, it's gone, and there's no time to reinvent it now. We got to fight with what we got--and the odds are against us. THAT won't stop us fightin'. No! but just think of it!"

Bert was trembling violently. He cleared his throat hoarsely.

"I say," he said, "look here, I--"

Nobody regarded him. The man with the flat voice was opening a new branch of the subject.

"I allow--" he began.

Bert became violently excited. He stood up.

He made clawing motions with his hands. "I say!" he exclaimed, "Mr. Laurier. Look 'ere--I want--about that Butteridge machine--."

Mr. Laurier, sitting on an adjacent table, with a magnificent gesture, arrested the discourse of the flat-voiced man. "What's HE saying?" said he.

Then the whole company realised that something was happening to Bert; either he was suffocating or going mad. He was spluttering.

"Look 'ere! I say! 'Old on a bit!" and trembling and eagerly unbuttoning himself.

He tore open his collar and opened vest and shirt. He plunged into his interior and for an instant it seemed he was plucking forth his liver. Then as he struggled with buttons on his shoulder they perceived this flattened horror was in fact a terribly dirty flannel chest-protector. In an other moment Bert, in a state of irregular decolletage, was standing over the table displaying a sheaf of papers.

"These!" he gasped. "These are the plans!... You know! Mr. Butteridge--his machine ! What died! I was the chap that went off in that balloon!"

For some seconds every one was silent. They stared from these papers to Bert's white face and blazing eyes, and back to the papers on the table. Nobody moved. Then the man with the flat voice spoke.

"Irony!" he said, with a note of satisfaction. "Real rightdown Irony! When it's too late to think of making 'em any more!"

4

They would all no doubt have been eager to hear Bert's story over again, but it was at this point that Laurier showed his quality. "No, SIR," he said, and slid from off his table.

He impounded the dispersing Butteridge plans with one comprehensive sweep of his arm, rescuing them even from the expository finger-marks of the man with the flat voice, and handed them to Bert. "Put those back," he said, "where you had 'em. We have a journey before us."

Bert took them.

"Whar?" said the man in the straw hat.

"Why, sir, we are going to find the President of these States and give these plans over to him. I decline to believe, sir, we are too late."

"Where is the President?" asked Bert weakly in that pause that followed.

"Logan," said Laurier, disregarding that feeble inquiry, "you must help us in this."

It seemed only a matter of a few minutes before Bert and Laurier and the storekeeper were examining a number of bicycles that were stowed in the hinder room of the store. Bert didn't like any of them very much. They had wood rims and an experience of wood rims in the English climate had taught him to hate them. That, however, and one or two other objections to an immediate start

were overruled by Laurier. "But where IS the President?" Bert repeated as they stood behind Logan while he pumped up a deflated tyre.

Laurier looked down on him. "He is reported in the neighbourhood of Albany--out towards the Berkshire Hills. He is moving from place to place and, as far as he can, organising the defence by telegraph and telephones The Asiatic air-fleet is trying to locate him. When they think they have located the seat of government, they throw bombs. This inconveniences him, but so far they have not come within ten miles of him. The Asiatic air-fleet is at present scattered all over the Eastern States, seeking out and destroying gas-works and whatever seems conducive to the building of airships or the transport of troops. Our retaliatory measures are slight in the extreme. But with these machines--Sir, this ride of ours will count among the historical rides of the world!"

He came near to striking an attitude. "We shan't get to him to-night?" asked Bert.

"No, sir!" said Laurier. "We shall have to ride some days, sure!"

"And suppose we can.'t get a lift on a train--or anything?"

"No, sir! There's been no transit by Tanooda for three days. It is no good waiting. We shall have to get on as well as we can."

"Startin' now?"

"Starting now!"

"But 'ow about--We shan't be able to do much to-night."

"May as well ride till we're fagged and sleep then. So much clear gain. Our road is eastward."

"Of course," began Bert, with memories of the dawn upon Goat Island, and left his sentence unfinished.

He gave his attention to the more scientific packing of the chest-protector, for several of the plans flapped beyond his vest.

5

For a week Bert led a life of mixed sensations. Amidst these fatigue in the legs predominated. Mostly he rode, rode with Laurier's back inexorably ahead, through a land like a larger England, with bigger hills and wider valleys, larger fields, wider roads, fewer hedges, and wooden houses with commodious piazzas. He rode. Laurier made inquiries, Laurier chose the turnings, Laurier doubted, Laurier decided. Now it seemed they were in telephonic touch with the President; now something had happened and he was lost again. But always they had to go on, and always Bert rode. A tyre was deflated. Still he rode. He grew saddle sore. Laurier declared that unimportant. Asiatic flying ships passed overhead, the two cyclists made a dash for cover until the sky was clear. Once a red Asiatic flying-machine came fluttering after them, so low they could distinguish the aeronaut's head. He followed them for a mile. Now they came to regions of panic, now to regions of destruction; here people were fighting for food, here they seemed hardly stirred from the countryside routine. They spent a day in a deserted and damaged Albany. The Asiatics had descended and cut every wire and made a cinder-heap of the Junction, and our travellers pushed on eastward. They passed a hundred half-heeded incidents, and always Bert was toiling after Laurier's indefatigable back....

Things struck upon Bert's attention and perplexed him, and then he passed on with unanswered questionings fading from his mind.

He saw a large house on fire on a hillside to the right, and no man heeding it....

They came to a narrow railroad bridge and presently to a mono-rail train standing in the track on its safety feet. It was a remarkably sumptuous train, the Last Word Trans-Continental Express, and the passengers were all playing cards or sleeping or preparing a picnic meal on a grassy slope near at hand. They had been there six days....

At one point ten dark-complexioned men were hanging in a string from the trees along the roadside. Bert wondered why....

At one peaceful-looking village where they stopped off to get Bert's tyre mended and found beer and biscuits, they were approached by an extremely dirty little boy without boots, who spoke as follows:--

"Deyse been hanging a Chink in dose woods!"

"Hanging a Chinaman?" said Laurier.

"Sure. Der sleuths got him rubberin' der rail-road sheds!"

"Oh!"

"Dose guys done wase cartridges. Deyse hung him and dey pulled his legs. Deyse doin' all der Chinks dey can fine dat weh! Dey ain't takin' no risks. All der Chinks dey can fine."

Neither Bert nor Laurier made any reply, and presently, after a

little skilful expectoration, the young gentleman was attracted by the appearance of two of his friends down the road and shuffled off, whooping weirdly....

That afternoon they almost ran over a man shot through the body and partly decomposed, lying near the middle of the road, just outside Albany. He must have been lying there for some days....

Beyond Albany they came upon a motor car with a tyre burst and a young woman sitting absolutely passive beside the driver's seat. An old man was under the car trying to effect some impossible repairs. Beyond, sitting with a rifle across his knees, with his back to the car, and staring into the woods, was a young man.

The old man crawled out at their approach and still on all-fours accosted Bert and Laurier. The car had broken down overnight. The old man, said he could not understand what was wrong, but he was trying to puzzle it out. Neither he nor his son-in-law had any mechanical aptitude. They had been assured this was a fool-proof car. It was dangerous to have to stop in this place. The party had been attacked by tramps and had had to fight. It was known they had provisions. He mentioned a great name in the world of finance. Would Laurier and Bert stop and help him? He proposed it first hopefully, then urgently, at last in tears and terror.

"No!" said Laurier inexorable. "We must go on! We have something more than a woman to save. We have to save America!"

The girl never stirred.

And once they passed a madman singing.

And at last they found the President hiding in a small saloon upon the outskirts of a place called Pinkerville on the Hudson,

and gave the plans of the Butteridge machine into his hands.

CHAPTER XI THE GREAT COLLAPSE

1

And now the whole fabric of civilisation was bending and giving, and dropping to pieces and melting in the furnace of the war.

The stages of the swift and universal collapse of the financial and scientific civilisation with which the twentieth century opened followed each other very swiftly, so swiftly that upon the foreshortened page of history--they seem altogether to overlap. To begin with, one sees the world nearly at a maximum wealth and prosperity. To its inhabitants indeed it seemed also at a maximum of security. When now in retrospect the thoughtful observer surveys the intellectual history of this time, when one reads its surviving fragments of literature, its scraps of political oratory, the few small voices that chance has selected out of a thousand million utterances to speak to later days, the most striking thing of all this web of wisdom and error is surely that hallucination of security. To men living in our present world state, orderly, scientific and secured, nothing seems so precarious, so giddily dangerous, as the fabric of the social order with which the men of the opening of the twentieth century were content. To us it seems that every institution and relationship was the fruit of haphazard and tradition and the manifest sport of chance, their laws each made for some separate occasion and having no relation to any future needs, their customs illogical, their education aimless and wasteful. Their method of economic exploitation indeed impresses a trained and informed mind as the most frantic and destructive scramble it is

possible to conceive; their credit and monetary system resting on an unsubstantial tradition of the worthiness of gold, seems a thing almost fantastically unstable. And they lived in planless cities, for the most part dangerously congested; their rails and roads and population were distributed over the earth in the wanton confusion ten thousand irrelevant considerations had made.

Yet they thought confidently that this was a secure and permanent progressive system, and on the strength of some three hundred years of change and irregular improvement answered the doubter with, "Things always have gone well. We'll worry through!"

But when we contrast the state of man in the opening of the twentieth century with the condition of any previous period in his history, then perhaps we may begin to understand something of that blind confidence. It was not so much a reasoned confidence as the inevitable consequence of sustained good fortune. By such standards as they possessed, things HAD gone amazingly well for them. It is scarcely an exaggeration to say that for the first time in history whole populations found themselves regularly supplied with more than enough to eat, and the vital statistics of the time witness to an amelioration of hygienic conditions rapid beyond all precedent, and to a vast development of intelligence and ability in all the arts that make life wholesome. The level and quality of the average education had risen tremendously; and at the dawn of the twentieth century comparatively few people in Western Europe or America were unable to read or write. Never before had there been such reading masses. There was wide social security. A common man might travel safely over three-quarters of the habitable globe, could go round the earth at a cost of less than the annual earnings of a skilled artisan. Compared with the liberality and comfort of the ordinary life of the time, the order of the Roman Empire under the Antonines was local and limited. And every year, every month, came some new increment to human achievement, a new

country opened up, new mines, new scientific discoveries, a new machine!

For those three hundred years, indeed, the movement of the world seemed wholly beneficial to mankind. Men said, indeed, that moral organisation was not keeping pace with physical progress, but few attached any meaning to these phrases, the understanding of which lies at the basis of our present safety. Sustaining and constructive forces did indeed for a time more than balance the malign drift of chance and the natural ignorance, prejudice, blind passion, and, wasteful self-seeking of mankind.

The accidental balance on the side of Progress was far slighter and infinitely more complex and delicate in its adjustments than the people of that time suspected; but that did not alter the fact that it was an effective balance. They did not realise that this age of relative good fortune was an age of immense but temporary opportunity for their kind. They complacently assumed a necessary progress towards which they had no moral responsibility. They did not realise that this security of progress was a thing still to be won--or lost, and that the time to win it was a time that passed. They went about their affairs energetically enough and yet with a curious idleness towards those threatening things. No one troubled over the real dangers of mankind. They, saw their armies and navies grow larger and more portentous; some of their ironclads at the last cost as much as the whole annual expenditure upon advanced education; they accumulated explosives and the machinery of destruction; they allowed their national traditions and jealousies to accumulate; they contemplated a steady enhancement of race hostility as the races drew closer without concern or understanding, and they permitted the growth in their midst of an evil-spirited press, mercenary, and unscrupulous, incapable of good, and powerful for evil. The State had practically no control over the press at all. Quite heedlessly they allowed this touch-paper to lie at the

door of their war magazine for any spark to fire. The precedents of history were all one tale of the collapse of civilisations, the dangers of the time were manifest. One is incredulous now to believe they could not see.

Could mankind have prevented this disaster of the War in the Air?

An idle question that, as idle as to ask could mankind have prevented the decay that turned Assyria and Babylon to empty deserts or the slow decline and fall, the gradual social disorganisation, phase by phase, that closed the chapter of the Empire of the West! They could not, because they did not, they had not the will to arrest it. What mankind could achieve with a different will is a speculation as idle as it is magnificent.

And this was no slow decadence that came to the Europeanised world; those other civilisations rotted and crumbled down, the Europeanised civilisation was, as it were, blown up. Within the space of five years it was altogether disintegrated and destroyed. Up to the very eve of the War in the Air one sees a spacious spectacle of incessant advance, a world-wide security, enormous areas with highly organised industry and settled populations, gigantic cities spreading gigantically, the seas and oceans dotted with shipping, the land netted with rails, and open ways. Then suddenly the German air-fleets sweep across the scene, and we are in the beginning of the end.

2

This story has already told of the swift rush upon New York of the first German air-fleet and of the wild, inevitable orgy of inconclusive destruction that ensued. Behind it a second air-fleet was already swelling at its gasometers when England and France and Spain and Italy showed their hands. None of these countries had prepared for aeronautic warfare on the magnificent scale of the Germans, but each guarded secrets, each in a measure

was making ready, and a common dread of German vigour and that aggressive spirit Prince Karl Albert embodied, had long been drawing these powers together in secret anticipation of some such attack. This rendered their prompt co-operation possible, and they certainly co-operated promptly. The second aerial power in Europe at this time was France; the British, nervous for their Asiatic empire, and sensible of the immense moral effect of the airship upon half-educated populations, had placed their aeronautic parks in North India, and were able to play but a subordinate part in the European conflict. Still, even in England they had nine or ten big navigables, twenty or thirty smaller ones, and a variety of experimental aeroplanes. Before the fleet of Prince Karl Albert had crossed England, while Bert was still surveying Manchester in bird's-eye view, the diplomatic exchanges were going on that led to an attack upon Germany. A heterogeneous collection of navigable balloons of all sizes and types gathered over the Bernese Oberland, crushed and burnt the twenty-five Swiss air-ships' that unexpectedly resisted this concentration in the battle of the Alps, and then, leaving the Alpine glaciers and valleys strewn with strange wreckage, divided into two fleets and set itself to terrorise Berlin and destroy the Franconian Park, seeking to do this before the second air-fleet could be inflated.

Both over Berlin and Franconia the assailants with their modern explosives effected great damage before they were driven off. In Franconia twelve fully distended and five partially filled and manned giants were able to make head against and at last, with the help of a squadron of drachenflieger from Hamburg, defeat and pursue the attack and to relieve Berlin, and the Germans were straining every nerve to get an overwhelming fleet in the air, and were already raiding London and Paris when the advance fleets from the Asiatic air-parks, the first intimation of a new factor in the conflict, were reported from Burmah and Armenia.

Already the whole financial fabric of the world was staggering when that occurred. With the destruction of the American fleet in the North Atlantic, and the smashing conflict that ended the naval existence of Germany in the North Sea, with the burning and wrecking of billions of pounds' worth of property in the four cardinal cities of the world, the fact of the hopeless costliness of war came home for the first time, came, like a blow in the face, to the consciousness of mankind. Credit went down in a wild whirl of selling. Everywhere appeared a phenomenon that had already in a mild degree manifested itself in preceding periods of panic; a desire to SECURE AND HOARD GOLD before prices reached

bottom. But now it spread like wild-fire, it became universal. Above was visible conflict and destruction; below something was happening far more deadly and incurable to the flimsy fabric of finance and commercialism in which men had so blindly put their trust. As the airships fought above, the visible gold supply of the world vanished below. An epidemic of private cornering and universal distrust swept the world. In a few weeks, money, except for depreciated paper, vanished into vaults, into holes, into the walls of houses, into ten million hiding-places. Money vanished, and at its disappearance trade and industry came to an end. The economic world staggered and fell dead. It was like the stroke of some disease it was like the water vanishing out of the blood of a living creature; it was a sudden, universal coagulation of intercourse....

And as the credit system, that had been the living fortress of the scientific civilisation, reeled and fell upon the millions it had held together in economic relationship, as these people, perplexed and helpless, faced this marvel of credit utterly destroyed, the airships of Asia, countless and relentless, poured across the heavens, swooped eastward to America and westward to Europe. The page of history becomes a long crescendo of battle. The main body of the British-Indian air-fleet perished upon a

pyre of blazing antagonists in Burmah; the Germans were scattered in the great battle of the Carpathians; the vast peninsula of India burst into insurrection and civil war from end to end, and from Gobi to Morocco rose the standards of the "Jihad." For some weeks of warfare and destruction it seemed as though the Confederation of Eastern Asia must needs conquer the world, and then the jerry-built "modern" civilisation of China too gave way under the strain. The teeming and peaceful population of China had been "westernised" during the opening years of the twentieth century with the deepest resentment and reluctance; they had been dragooned and disciplined under Japanese and European--influence into an acquiescence with sanitary methods, police controls, military service, and wholesale process of exploitation against which their whole tradition rebelled. Under the stresses of the war their endurance reached the breaking point, the whole of China rose in incoherent revolt, and the practical destruction of the central government at Peking by a handful of British and German airships that had escaped from the main battles rendered that revolt invincible. In Yokohama appeared barricades, the black flag and the social revolution. With that the whole world became a welter of conflict.

So that a universal social collapse followed, as it were a logical consequence, upon world-wide war. Wherever there were great populations, great masses of people found themselves without work, without money, and unable to get food. Famine was in every working-class quarter in the world within three weeks of the beginning of the war. Within a month there was not a city anywhere in which the ordinary law and social procedure had not been replaced by some form of emergency control, in which firearms and military executions were not being used to keep order and prevent violence. And still in the poorer quarters, and in the populous districts, and even here and there already among those who had been wealthy, famine spread.

So what historians have come to call the Phase of the Emergency Committees sprang from the opening phase and from the phase of social collapse. Then followed a period of vehement and passionate conflict against disintegration; everywhere the struggle to keep order and to keep fighting went on. And at the same time the character of the war altered through the replacement of the huge gas-filled airships by flying-machines as the instruments of war. So soon as the big fleet engagements were over, the Asiatics endeavoured to establish in close proximity to the more vulnerable points of the countries against which they were acting, fortified centres from which flying-machine raids could be made. For a time they had everything their own way in this, and then, as this story has told, the lost secret of the Butteridge machine came to light, and the conflict became equalized and less conclusive than ever. For these small flying-machines, ineffectual for any large expedition or conclusive attack, were horribly convenient for guerilla warfare, rapidly and cheaply made, easily used, easily hidden. The design of them was hastily copied and printed in Pinkerville and scattered broadcast over the United States and copies were sent to Europe, and there reproduced. Every man, every town, every parish that could, was exhorted to make and use them. In a little while they were being constructed not only by governments and local authorities, but by robber bands, by insurgent committees, by every type of private person. The peculiar social destructiveness of the Butteridge machine lay in its complete simplicity. It was nearly as simple as a motor-bicycle. The broad outlines of the earlier stages of the war disappeared under its influence, the spacious antagonism of nations and empires and races vanished in a seething mass of detailed conflict. The world passed at a stride from a unity and simplicity broader than that of the Roman Empire at its best, to as social fragmentation as complete as the robber-baron period of

the Middle Ages. But this time, for a long descent down gradual slopes of disintegration, comes a fall like a fall over a cliff. Everywhere were men and women perceiving this and struggling desperately to keep as it were a hold upon the edge of the cliff.

A fourth phase follows. Through the struggle against Chaos, in the wake of the Famine, came now another old enemy of humanity--the Pestilence, the Purple Death. But the war does not pause. The flags still fly. Fresh air-fleets rise, new forms of airship, and beneath their swooping struggles the world darkens--scarcely heeded by history.

It is not within the design of this book to tell what further story, to tell how the War in the Air kept on through the sheer inability of any authorities to meet and agree and end it, until every organised government in the world was as shattered and broken as a heap of china beaten with a stick. With every week of those terrible years history becomes more detailed and confused, more crowded and uncertain. Not without great and heroic resistance was civilisation borne down. Out of the bitter social conflict below rose patriotic associations, brotherhoods of order, city mayors, princes, provisional committees, trying to establish an order below and to keep the sky above. The double effort destroyed them. And as the exhaustion of the mechanical resources of civilisation clears the heavens of airships at last altogether, Anarchy, Famine and Pestilence are discovered triumphant below. The great nations and empires have become but names in the mouths of men. Everywhere there are ruins and unburied dead, and shrunken, yellow-faced survivors in a mortal apathy. Here there are robbers, here vigilance committees, and here guerilla bands ruling patches of exhausted territory, strange federations and brotherhoods form and dissolve, and religious fanaticisms begotten of despair gleam in famine-bright eyes. It is a universal dissolution. The fine order and welfare of the earth have crumpled like an exploded bladder. In five

short years the world and the scope of human life have undergone a retrogressive change as great as that between the age of the Antonines and the Europe of the ninth century....

4

Across this sombre spectacle of disaster goes a minute and insignificant person for whom perhaps the readers of this story have now some slight solicitude. Of him there remains to be told just one single and miraculous thing. Through a world darkened and lost, through a civilisation in its death agony, our little Cockney errant went and found his Edna! He found his Edna!

He got back across the Atlantic partly by means of an order from the President and partly through his own good luck. He contrived to get himself aboard a British brig in the timber trade that put out from Boston without cargo, chiefly, it would seem, because its captain had a vague idea of "getting home" to South Shields. Bert was able to ship himself upon her mainly because of the seamanlike appearance of his rubber boots. They had a long, eventful voyage; they were chased, or imagined themselves to be chased, for some hours by an Asiatic ironclad, which was presently engaged by a British cruiser. The two ships fought for three hours, circling and driving southward as they fought, until the twilight and the cloud-drift of a rising gale swallowed them up. A few days later Bert's ship lost her rudder and mainmast in a gale. The crew ran out of food and subsisted on fish. They saw strange air-ships going eastward near the Azores and landed to get provisions and repair the rudder at Teneriffe. There they found the town destroyed and two big liners, with dead still aboard, sunken in the harbour. From there they got canned food and material for repairs, but their operations were greatly impeded by the hostility of a band of men amidst the ruins of the town, who sniped them and tried to drive them away.

At Mogador, they stayed and sent a boat ashore for water, and were nearly captured by an Arab ruse. Here too they got the Purple Death aboard, and sailed with it incubating in their blood. The cook sickened first, and then the mate, and presently every one was down and three in the fore-castle were dead. It chanced to be calm weather, and they drifted helplessly and indeed careless of their fate backwards towards the Equator. The captain doctored them all with rum. Nine died all together, and of the four survivors none understood navigation; when at last they took heart again and could handle a sail, they made a course by the stars roughly northward and were already short of food once more when they fell in with a petrol-driven ship from Rio to Cardiff, shorthanded by reason of the Purple Death and glad to take them aboard. So at last, after a year of wandering Bert reached England. He landed in bright June weather, and found the Purple Death was there just beginning its ravages.

The people were in a state of panic in Cardiff and many had fled to the hills, and directly the steamer came to the harbour she was boarded and her residue of food impounded by some unauthenticated Provisional Committee. Bert tramped through a country disorganised by pestilence, foodless, and shaken to the very base of its immemorial order. He came near death and starvation many times, and once he was drawn into scenes of violence that might have ended his career. But the Bert Smallways who tramped from Cardiff to London vaguely "going home," vaguely seeking something of his own that had no tangible form but Edna, was a very different person from the Desert Dervish who was swept out of England in Mr. Butteridge's balloon a year before. He was brown and lean and enduring, steady-eyed and pestilence-salted, and his mouth, which had once hung open, shut now like a steel trap. Across his brow ran a white scar that he had got in a fight on the brig. In Cardiff he had felt the need of new clothes and a weapon, and had, by means that would have shocked him a year ago, secured a flannel shirt, a

corduroy suit, and a revolver and fifty cartridges from an abandoned pawnbroker's. He also got some soap and had his first real wash for thirteen months in a stream outside the town. The Vigilance bands that had at first shot plunderers very freely were now either entirely dispersed by the plague, or busy between town and cemetery in a vain attempt to keep pace with it. He prowled on the outskirts of the town for three or four days, starving, and then went back to join the Hospital Corps for a week, and so fortified himself with a few square meals before he started eastward.

The Welsh and English countryside at that time presented the strangest mingling of the assurance and wealth of the opening twentieth century with a sort of Dureresque medievalism. All the gear, the houses and mono-rails, the farm hedges and power cables, the roads and pavements, the sign-posts and advertisements of the former order were still for the most part intact. Bankruptcy, social collapse, famine, and pestilence had done nothing to damage these, and it was only to the great capitals and ganglionic centres, as it were, of this State, that positive destruction had come. Any one dropped suddenly into the country would have noticed very little difference. He would have remarked first, perhaps, that all the hedges needed clipping, that the roadside grass grew rank, that the road-tracks were unusually rainworn, and that the cottages by the wayside seemed in many cases shut up, that a telephone wire had dropped here, and that a cart stood abandoned by the wayside. But he would still find his hunger whetted by the bright assurance that Wilder's Canned Peaches were excellent, or that there was nothing so good for the breakfast table as Gobble's Sausages. And then suddenly would come the Dureresque element; the skeleton of a horse, or some crumpled mass of rags in the ditch, with gaunt extended feet and a yellow, purple-blotched skin and face, or what had been a face, gaunt and glaring and devastated. Then here would be a field that had been ploughed and not sown, and

here a field of corn carelessly trampled by beasts, and here a hoarding torn down across the road to make a fire.

Then presently he would meet a man or a woman, yellow-faced and probably negligently dressed and armed--prowling for food. These people would have the complexions and eyes and expressions of tramps or criminals, and often the clothing of prosperous middle-class or upper-class people. Many of these would be eager for news, and willing to give help and even scraps of queer meat, or crusts of grey and doughy bread, in return for it. They would listen to Bert's story with avidity, and attempt to keep him with them for a day or so. The virtual cessation of postal distribution and the collapse of all newspaper enterprise had left an immense and aching gap in the mental life of this time. Men had suddenly lost sight of the ends of the earth and had still to recover the rumour-spreading habits of the Middle Ages. In their eyes, in their bearing, in their talk, was the quality of lost and deoriented souls.

As Bert travelled from parish to parish, and from district to district, avoiding as far as possible those festering centres of violence and despair, the larger towns, he found the condition of affairs varying widely. In one parish he would find the large house burnt, the vicarage wrecked, evidently in violent conflict for some suspected and perhaps imaginary store of food unburied dead everywhere, and the whole mechanism of the community at a standstill. In another he would find organising forces stoutly at work, newly-painted notice boards warning off vagrants, the roads and still cultivated fields policed by armed men, the pestilence under control, even nursing going on, a store of food husbanded, the cattle and sheep well guarded, and a group of two or three justices, the village doctor or a farmer, dominating the whole place; a reversion, in fact, to the autonomous community of the fifteenth century. But at any time such a village would be liable to a raid of Asiatics or Africans or such-like

air-pirates, demanding petrol and alcohol or provisions. The price of its order was an almost intolerable watchfulness and tension.

Then the approach to the confused problems of some larger centre of population and the presence of a more intricate conflict would be marked by roughly smeared notices of "Quarantine" or "Strangers Shot," or by a string of decaying plunderers dangling from the telephone poles at the roadside. About Oxford big boards were put on the roofs warning all air wanderers off with the single word, "Guns."

Taking their risks amidst these things, cyclists still kept abroad, and once or twice during Bert's long tramp powerful motor cars containing masked and goggled figures went tearing past him. There were few police in evidence, but ever and again squads of gaunt and tattered soldier-cyclists would come drifting along, and such encounters became more frequent as he got out of Wales into England. Amidst all this wreckage they were still campaigning. He had had some idea of resorting to the workhouses for the night if hunger pressed him too closely, but some of these were closed and others converted into temporary hospitals, and one he came up to at twilight near a village in Gloucestershire stood with all its doors and windows open, silent as the grave, and, as he found to his horror by stumbling along evil-smelling corridors, full of unburied dead.

From Gloucestershire Bert went northward to the British aeronautic park outside Birmingham, in the hope that he might be taken on and given food, for there the Government, or at any rate the War Office, still existed as an energetic fact, concentrated amidst collapse and social disaster upon the effort to keep the British flag still flying in the air, and trying to brisk up mayor and mayor and magistrate and magistrate in a new effort of organisation. They had brought together all the best of the

surviving artisans from that region, they had provisioned the park for a siege, and they were urgently building a larger type of Butteridge machine. Bert could get no footing at this work: he was not sufficiently skilled, and he had drifted to Oxford when the great fight occurred in which these works were finally wrecked. He saw something, but not very much, of the battle from a place called Boar Hill. He saw the Asiatic squadron coming up across the hills to the south-west, and he saw one of their airships circling southward again chased by two aeroplanes, the one that was ultimately overtaken, wrecked and burnt at Edge Hill. But he never learnt the issue of the combat as a whole.

He crossed the Thames from Eton to Windsor and made his way round the south of London to Bun Hill, and there he found his brother Tom, looking like some dark, defensive animal in the old shop, just recovering from the Purple Death, and Jessica upstairs delirious, and, as it seemed to him, dying grimly. She raved of sending out orders to customers, and scolded Tom perpetually lest he should be late with Mrs. Thompson's potatoes and Mrs. Hopkins' cauliflower, though all business had long since ceased and Tom had developed a quite uncanny skill in the snaring of rats and sparrows and the concealment of certain stores of cereals and biscuits from plundered grocers' shops. Tom received his brother with a sort of guarded warmth.

"Lor!" he said, "it's Bert. I thought you'd be coming back some day, and I'm glad to see you. But I can't arst you to eat anything, because I 'aven't got anything to eat.... Where you been, Bert, all this time?"

Bert reassured his brother by a glimpse of a partly eaten swede, and was still telling his story in fragments and parentheses, when he discovered behind the counter a yellow and forgotten note addressed to himself. "What's this?" he said, and found it was a year-old note from Edna. "She came 'ere," said Tom, like one who

recalls a trivial thing, "arstin' for you and arstin' us to take 'er in. That was after the battle and settin' Clapham Rise afire. I was for takin' 'er in, but Jessica wouldn't 'ave it--and so she borrowed five shillings of me quiet like and went on. I dessay she's tole you--"

She had, Bert found. She had gone on, she said in her note, to an aunt and uncle who had a brickfield near Horsham. And there at last, after another fortnight of adventurous journeying, Bert found her.

5

When Bert and Edna set eyes on one another, they stared and laughed foolishly, so changed they were, and so ragged and surprised. And then they both fell weeping.

"Oh! Bertie, boy!" she cried. "You've come--you've come!" and put out her arms and staggered. "I told 'im. He said he'd kill me if I didn't marry him."

But Edna was not married, and when presently Bert could get talk from her, she explained the task before him. That little patch of lonely agricultural country had fallen under the power of a band of bullies led by a chief called Bill Gore who had begun life as a butcher boy and developed into a prize-fighter and a professional sport. They had been organised by a local nobleman of former eminence upon the turf, but after a time he had disappeared, no one quite knew how and Bill had succeeded to the leadership of the countryside, and had developed his teacher's methods with considerable vigour. There had been a strain of advanced philosophy about the local nobleman, and his mind ran to "improving the race" and producing the Over-Man, which in practice took the form of himself especially and his little band in moderation marrying with some frequency. Bill followed up the

idea with an enthusiasm that even trenched upon his popularity with his followers. One day he had happened upon Edna tending her pigs, and had at once fallen a-wooing with great urgency among the troughs of slush. Edna had made a gallant resistance, but he was still vigorously about and extraordinarily impatient. He might, she said, come at any time, and she looked Bert in the eyes. They were back already in the barbaric stage when a man must fight for his love.

And here one deplores the conflicts of truth with the chivalrous tradition. One would like to tell of Bert sallying forth to challenge his rival, of a ring formed and a spirited encounter, and Bert by some miracle of pluck and love and good fortune winning. But indeed nothing of the sort occurred. Instead, he reloaded his revolver very carefully, and then sat in the best room of the cottage by the derelict brickfield, looking anxious and perplexed, and listening to talk about Bill and his ways, and thinking, thinking. Then suddenly Edna's aunt, with a thrill in her voice, announced the appearance of that individual. He was coming with two others of his gang through the garden gate. Bert got up, put the woman aside, and looked out. They presented remarkable figures. They wore a sort of uniform of red golfing jackets and white sweaters, football singlet, and stockings and boots and each had let his fancy play about his head-dress. Bill had a woman's hat full of cock's feathers, and all had wild, slouching cowboy brims.

Bert sighed and stood up, deeply thoughtful, and Edna watched him, marvelling. The women stood quite still. He left the window, and went out into the passage rather slowly, and with the careworn expression of a man who gives his mind to a complex and uncertain business. "Edna!" he called, and when she came he opened the front door.

He asked very simply, and pointing to the foremost of the three,

"That 'im? ... Sure?" ... and being told that it was, shot his rival instantly and very accurately through the chest. He then shot Bill's best man much less tidily in the head, and then shot at and winged the third man as he fled. The third gentleman yelped, and continued running with a comical end-on twist.

Then Bert stood still meditating, with the pistol in his hand, and quite regardless of the women behind him.

So far things had gone well.

It became evident to him that if he did not go into politics at once, he would be hanged as an assassin and accordingly, and without a word to the women, he went down to the village public-house he had passed an hour before on his way to Edna, entered it from the rear, and confronted the little band of ambiguous roughs, who were drinking in the tap-room and discussing matrimony and Bill's affection in a facetious but envious manner, with a casually held but carefully reloaded revolver, and an invitation to join what he called, I regret to say, a "Vigilance Committee" under his direction. "It's wanted about 'ere, and some of us are gettin' it up." He presented himself as one having friends outside, though indeed, he had no friends at all in the world but Edna and her aunt and two female cousins.

There was a quick but entirely respectful discussion of the situation. They thought him a lunatic who had tramped into, this neighbourhood ignorant of Bill. They desired to temporise until their leader came. Bill would settle him. Some one spoke of Bill.

"Bill's dead, I jest shot 'im," said Bert. "We don't need reckon with 'IM. 'E's shot, and a red-'aired chap with a squint, 'E'S shot. We've settled up all that. There ain't going to be no more

Bill, ever. 'E'd got wrong ideas about marriage and things. It's 'is sort of chap we're after."

That carried the meeting.

Bill was perfunctorily buried, and Bert's Vigilance Committee (for so it continued to be called) reigned in his stead.

That is the end of this story so far as Bert Smallways is concerned. We leave him with his Edna to become squatters among the clay and oak thickets of the Weald, far away from the stream of events. From that time forth life became a succession of peasant encounters, an affair of pigs and hens and small needs and little economies and children, until Clapham and Bun Hill and all the life of the Scientific Age became to Bert no more than the fading memory of a dream. He never knew how the War in the Air went on, nor whether it still went on. There were rumours of airships going and coming, and of happenings Londonward. Once or twice their shadows fell on him as he worked, but whence they came or whither they went he could not tell. Even his desire to tell died out for want of food. At times came robbers and thieves, at times came diseases among the beasts and shortness of food, once the country was worried by a pack of boar-hounds he helped to kill; he went through many inconsecutive, irrelevant adventures. He survived them all.

Accident and death came near them both ever and again and passed them by, and they loved and suffered and were happy, and she bore him many children--eleven children--one after the other, of whom only four succumbed to the necessary hardships of their simple life. They lived and did well, as well was understood in those days. They went the way of all flesh, year by year.

THE EPILOGUE

It happened that one bright summer's morning exactly thirty years after the launching of the first German air-fleet, an old man took a small boy to look for a missing hen through the ruins of Bun Hill and out towards the splintered pinnacles of the Crystal Palace. He was not a very old man; he was, as a matter of fact, still within a few weeks of sixty-three, but constant stooping over spades and forks and the carrying of roots and manure, and exposure to the damps of life in the open-air without a change of clothing, had bent him into the form of a sickle. Moreover, he had lost most of his teeth and that had affected his digestion and through that his skin and temper. In face and expression he was curiously like that old Thomas Smallways who had once been coachman to Sir Peter Bone, and this was just as it should be, for he was Tom Smallways the son, who formerly kept the little green-grocer's shop under the straddle of the mono-rail viaduct in the High Street of Bun Hill. But now there were no green-grocer's shops, and Tom was living in one of the derelict villas hard by that unoccupied building site that had been and was still the scene of his daily horticulture. He and his wife lived upstairs, and in the drawing and dining rooms, which had each French windows opening on the lawn, and all about the ground floor generally, Jessica, who was now a lean and lined and baldish but still very efficient and energetic old woman, kept her three cows and a multitude of gawky hens. These two were part of a little community of stragglers and returned fugitives, perhaps a hundred and fifty souls of them all together, that had settled down to the new conditions of things after the Panic and Famine and Pestilence that followed in the wake of the War. They had come back from strange refuges and hiding-places and had squatted down among the familiar houses and begun that hard struggle against nature for food which was now the chief interest of their lives. They were by sheer preoccupation with that a peaceful people, more particularly after Wilkes, the house agent,

driven by some obsolete dream of acquisition, had been drowned in the pool by the ruined gas-works for making inquiries into title and displaying a litigious turn of mind. (He had not been murdered, you understand, but the people had carried an exemplary ducking ten minutes or so beyond its healthy limits.)

This little community had returned from its original habits of suburban parasitism to what no doubt had been the normal life of humanity for nearly immemorial years, a life of homely economies in the most intimate, contact with cows and hens and patches of around, a life that breathes and exhales the scent of cows and finds the need for stimulants satisfied by the activity of the bacteria and vermin it engenders. Such had been the life of the European peasant from the dawn of history to the beginning of the Scientific Era, so it was the large majority of the people of Asia and Africa had always been wont to live. For a time it had seemed that, by virtue of machines, and scientific civilisation, Europe was to be lifted out of this perpetual round of animal drudgery, and that America was to evade it very largely from the outset. And with the smash of the high and dangerous and splendid edifice of mechanical civilisation that had arisen so marvellously, back to the land came the common man, back to the manure.

The little communities, still haunted by ten thousand memories of a greater state, gathered and developed almost tacitly a customary law and fell under the guidance of a medicine man or a priest. The world rediscovered religion and the need of something to hold its communities together. At Bun Hill this function was entrusted to an old Baptist minister. He taught a simple but adequate faith. In his teaching a good principle called the Word fought perpetually against a diabolical female influence called the Scarlet Woman and an evil being called Alcohol. This Alcohol had long since become a purely spiritualised conception deprived of any element of material

application; it had no relation to the occasional finds of whiskey and wine in Londoners' cellars that gave Bun Hill its only holidays. He taught this doctrine on Sundays, and on weekdays he was an amiable and kindly old man, distinguished by his quaint disposition to wash his hands, and if possible his face, daily, and with a wonderful genius for cutting up pigs. He held his Sunday services in the old church in the Beckenham Road, and then the countryside came out in a curious reminiscence of the urban dress of Edwardian times. All the men without exception wore frock coats, top hats, and white shirts, though many had no boots. Tom was particularly distinguished on these occasions because he wore a top hat with gold lace about it and a green coat and trousers that he had found upon a skeleton in the basement of the Urban and District Bank. The women, even Jessica, came in jackets and immense hats extravagantly trimmed with artificial flowers and exotic birds' feathers--of which there were abundant supplies in the shops to the north--and the children (there were not many children, because a large proportion of the babies born in Bun Hill died in a few days' time of inexplicable maladies) had similar clothes cut down to accommodate them; even Stringer's little grandson of four wore a large top hat.

That was the Sunday costume of the Bun Hill district, a curious and interesting survival of the genteel traditions of the Scientific Age. On a weekday the folk were dingily and curiously hung about with dirty rags of housecloth and scarlet flannel, sacking, curtain serge, and patches of old carpet, and went either bare-footed or on rude wooden sandals. These people, the reader must understand, were an urban population sunken back to the state of a barbaric peasantry, and so without any of the simple arts a barbaric peasantry would possess. In many ways they were curiously degenerate and incompetent. They had lost any idea of making textiles, they could hardly make up clothes when they had material, and they were forced to plunder the

continually dwindling supplies of the ruins about them for cover.

All the simple arts they had ever known they had lost, and with the breakdown of modern drainage, modern water supply, shopping, and the like, their civilised methods were useless. Their cooking was worse than primitive. It was a feeble muddling with food over wood fires in rusty drawing-room fireplaces; for the kitcheners burnt too much. Among them all no sense of baking or brewing or metal-working was to be found.

Their employment of sacking and such-like coarse material for work-a-day clothing, and their habit of tying it on with string and of thrusting wadding and straw inside it for warmth, gave these people an odd, "packed" appearance, and as it was a week-day when Tom took his little nephew for the hen-seeking excursion, so it was they were attired.

"So you've really got to Bun Hill at last, Teddy," said old Tom, beginning to talk and slackening his pace so soon as they were out of range of old Jessica. "You're the last of Bert's boys for me to see. Wat I've seen, young Bert I've seen, Sissie and Matt, Tom what's called after me, and Peter. The traveller people brought you along all right, eh?"

"I managed," said Teddy, who was a dry little boy.

"Didn't want to eat you on the way?"

"They was all right," said Teddy. "and on the way near Leatherhead we saw a man riding on a bicycle."

"My word!" said Tom, "there ain't many of those about nowadays. Where was he going?"

"Said 'e was going to Dorking if the High Road was good enough.

But I doubt if he got there. All about Burford it was flooded. We came over the hill, uncle--what they call the Roman Road. That's high and safe."

"Don't know it," said old Tom. "But a bicycle! You're sure it was a bicycle? Had two wheels?"

"It was a bicycle right enough."

"Why! I remember a time, Teddy, where there was bicycles no end, when you could stand just here--the road was as smooth as a board then--and see twenty or thirty coming and going at the same time, bicycles and moty-bicycles; moty cars, all sorts of whirly things."

"No!" said Teddy.

"I do. They'd keep on going by all day,--'undreds and 'undreds."

"But where was they all going?" asked Teddy.

"Tearin' off to Brighton--you never seen Brighton, I expect--it's down by the sea, used to be a moce 'mazing place--and coming and going from London."

"Why?"

"They did."

"But why?"

"Lord knows why, Teddy. They did. Then you see that great thing there like a great big rusty nail sticking up higher than all the houses, and that one yonder, and that, and how something's fell in between 'em among the houses. They was parts of the

mono-rail. They went down to Brighton too and all day and night there was people going, great cars as big as 'ouses full of people."

The little boy regarded the rusty evidences acrosss the narrow muddy ditch of cow-droppings that had once been a High Street. He was clearly disposed to be sceptical, and yet there the ruins were! He grappled with ideas beyond the strength of his imagination.

"What did they go for?" he asked, "all of 'em?"

"They 'AD to. Everything was on the go those days--everything."

"Yes, but where did they come from?"

"All round 'ere, Teddy, there was people living in those 'ouses, and up the road more 'ouses and more people. You'd 'ardly believe me, Teddy, but it's Bible truth. You can go on that way for ever and ever, and keep on coming on 'ouses, more 'ouses, and more. There's no end to 'em. No end. They get bigger and bigger." His voice dropped as though he named strange names.

"It's LONDON," he said.

"And it's all empty now and left alone. All day it's left alone.

You don't find 'ardly a man, you won't find nothing but dogs and cats after the rats until you get round by Bromley and Beckenham, and there you find the Kentish men herding swine. (Nice rough lot they are too!) I tell you that so long as the sun is up it's as still as the grave. I been about by day--orfen and orfen." He paused.

"And all those 'ouses and streets and ways used to be full of

people before the War in the Air and the Famine and the Purple Death. They used to be full of people, Teddy, and then came a time when they was full of corpses, when you couldn't go a mile that way before the stink of 'em drove you back. It was the Purple Death 'ad killed 'em every one. The cats and dogs and 'ens and vermin caught it. Everything and every one 'ad it. Jest a few of us 'appened to live. I pulled through, and your aunt, though it made 'er lose 'er 'air. Why, you find the skeletons in the 'ouses now. This way we been into all the 'ouses and took what we wanted and buried moce of the people, but up that way, Norwood way, there's 'ouses with the glass in the windows still, and the furniture not touched--all dusty and falling to pieces--and the bones of the people lying, some in bed, some about the 'ouse, jest as the Purple Death left 'em five-and-twenty years ago. I went into one--me and old Higgins las' year--and there was a room with books, Teddy--you know what I mean by books, Teddy?"

"I seen 'em. I seen 'em with pictures."

"Well, books all round, Teddy, 'undreds of books, beyond-rhyme or reason, as the saying goes, green-mouldy and dry. I was for leaven' 'em alone--I was never much for reading--but ole Higgins he must touch em. 'I believe I could read one of 'em NOW,' 'e says.

"'Not it,' I says.

"'I could,' 'e says, laughing and takes one out and opens it.

"I looked, and there, Teddy, was a cullud picture, oh, so lovely! It was a picture of women and serpents in a garden. I never see anything like it.

"'This suits me,' said old Higgins, 'to rights.'

"And then kind of friendly he gave the book a pat--

Old Tom Smallways paused impressively.

"And then?" said Teddy.

"It all fell to dus'. White dus'!" He became still more impressive. "We didn't touch no more of them books that day. Not after that."

For a long time both were silent. Then Tom, playing with a subject that attracted him with a fatal fascination, repeated, "All day long they lie--still as the grave."

Teddy took the point at last. "Don't they lie o' nights?" he asked.

Old Tom shook his head. "Nobody knows, boy, nobody knows."

"But what could they do?"

"Nobody knows. Nobody ain't seen to tell not nobody."

"Nobody?"

"They tell tales," said old Tom. "They tell tales, but there ain't no believing 'em. I gets 'ome about sundown, and keeps indoors, so I can't say nothing, can I? But there's them that thinks some things and them as thinks others. I've 'eard it's unlucky to take clo'es off of 'em unless they got white bones. There's stories--"

The boy watched his uncle sharply. "WOT stories?" he said.

"Stories of moonlight nights and things walking about. But I take no stock in 'em. I keeps in bed. If you listen to stories --Lord! You'll get afraid of yourself in a field at midday."

The little boy looked round and ceased his questions for a space.

"They say there's a 'og man in Beck'n'am what was lost in London three days and three nights. 'E went up after whiskey to Cheapside, and lorst 'is way among the ruins and wandered. Three days and three nights 'e wandered about and the streets kep' changing so's he couldn't get 'ome. If 'e 'adn't remembered some words out of the Bible 'e might 'ave been there now. All day 'e went and all night--and all day long it was still. It was as still as death all day long, until the sunset came and the twilight thickened, and then it began to rustle and whisper and go pit-a-pat with a sound like 'urrying feet."

He paused.

"Yes," said the little boy breathlessly. "Go on. What then?"

"A sound of carts and 'orses there was, and a sound of cabs and omnibuses, and then a lot of whistling, shrill whistles, whistles that froze 'is marrer. And directly the whistles began things begun to show, people in the streets 'urrying, people in the 'ouses and shops busying themselves, moty cars in the streets, a sort of moonlight in all the lamps and winders. People, I say, Teddy, but they wasn't people. They was the ghosts of them that was overtook, the ghosts of them that used to crowd those streets. And they went past 'im and through 'im and never 'eeded 'im, went by like fogs and vapours, Teddy. And sometimes they was cheerful and sometimes they was 'orrible, 'orrible beyond words. And once 'e come to a place called Piccadilly, Teddy, and there was lights blazing like daylight and ladies and gentlemen in splendid clo'es crowding the pavement, and taxicabs follering

along the road. And as 'e looked, they all went evil--evil in the face, Teddy. And it seemed to 'im SUDDENLY THEY SAW 'IM, and the women began to look at 'im and say things to 'im--'orrible--wicked things. One come very near 'im, Teddy, right up to 'im, and looked into 'is face--close. And she 'adn't got a face to look with, only a painted skull, and then 'e see; they was all painted skulls. And one after another they crowded on 'im saying 'orrible things, and catchin' at 'im and threatenin' and coaxing 'im, so that 'is 'eart near left 'is body for fear."

"Yes," gasped Teddy in an unendurable pause.

"Then it was he remembered the words of Scripture and saved himself alive. 'The Lord is my 'Elper, 'e says, 'therefore I will fear nothing,' and straightaway there came a cock-crowing and the street was empty from end to end. And after that the Lord was good to 'im and guided 'im 'ome."

Teddy stared and caught at another question. "But who was the people," he asked, "who lived in all these 'ouses? What was they?"

"Gent'men in business, people with money--leastways we thought it was money till everything smashed up, and then seemingly it was jes' paper--all sorts. Why, there was 'undreds of thousands of them. There was millions. I've seen that 'I Street there regular so's you couldn't walk along the pavements, shoppin' time, with women and people shoppin'."

"But where'd they get their food and things?"

"Bort 'em in shops like I used to 'ave. I'll show you the place, Teddy, if we go back. People nowadays 'aven't no idee of a shop--no idee. Plate-glass winders--it's all Greek to them. Why, I've 'ad as much as a ton and a 'arf of petaties to 'andle

all at one time. You'd open your eyes till they dropped out to see jes' what I used to 'ave in my shop. Baskets of pears 'eaped up, marrers, apples and pears, d'licious great nuts." His voice became luscious--"Benanas, oranges."

"What's benanas?" asked the boy, "and Oranges?"

"Fruits they was. Sweet, juicy, d'licious fruits. Foreign fruits. They brought 'em from Spain and N' York and places. In ships and things. They brought 'em to me from all over the world, and I sold 'em in my shop. _I_ sold 'em, Teddy! me what goes about now with you, dressed up in old sacks and looking for lost 'ens. People used to come into my shop, great beautiful ladies like you'd 'ardly dream of now, dressed up to the nines, and say, 'Well, Mr. Smallways, what you got 'smorning?' and I'd say, 'Well, I got some very nice C'nadian apples, 'or p'raps I got custed marrers. See? And they'd buy 'em. Right off they'd say, 'Send me some up.' Lord! what a life that was. The business of it, the bussel, the smart things you saw, moty cars going by, kerridges, people, organ-grinders, German bands. Always something going past--always. If it wasn't for those empty 'ouses, I'd think it all a dream."

"But what killed all the people, uncle?" asked Teddy.

"It was a smash-up," said old Tom. "Everything was going right until they started that War. Everything was going like clock-work. Everybody was busy and everybody was 'appy and everybody got a good square meal every day."

He met incredulous eyes. "Everybody," he said firmly. "If you couldn't get it anywhere else, you could get it in the workhuss, a nice 'ot bowl of soup called skilly, and bread better'n any one knows 'ow to make now, reg'lar WHITE bread, gov'ment bread."

Teddy marvelled, but said nothing. It made him feel deep longings that he found it wisest to fight down.

For a time the old man resigned himself to the pleasures of gustatory reminiscence. His lips moved. "Pickled Sammin!" he whispered, "an' vinegar.... Dutch cheese, BEER! A pipe of terbakker."

"But 'OW did the people get killed?" asked Teddy presently.

"There was the War. The War was the beginning of it. The War banged and flummocked about, but it didn't really KILL many people. But it upset things. They came and set fire to London and burnt and sank all the ships there used to be in the Thames--we could see the smoke and steam for weeks--and they threw a bomb into the Crystal Palace and made a bust-up, and broke down the rail lines and things like that. But as for killin' people, it was just accidental if they did. They killed each other more. There was a great fight all hereabout one day, Teddy--up in the air. Great things bigger than fifty 'ouses, bigger than the Crystal Palace--bigger, bigger than anything, flying about up in the air and whacking at each other and dead men fallin' off 'em. T'riffic! But, it wasn't so much the people they killed as the business they stopped. There wasn't any business doin', Teddy, there wasn't any money about, and nothin' to buy if you 'ad it."

"But 'ow did the people get KILLED?" said the little boy in the pause.

"I'm tellin' you, Teddy," said the old man. "It was the stoppin' of business come next. Suddenly there didn't seem to be any money. There was cheques--they was a bit of paper written on, and they was jes' as good as money--jes' as good if they come from customers you knew. Then all of a sudden they wasn't. I was left with three of 'em and two I'd given' change. Then it got

about that five-pun' notes were no good, and then the silver sort of went off. Gold you 'couldn't get for love or--anything. The banks in London 'ad got it, and the banks was all smashed up. Everybody went bankrup'. Everybody was thrown out of work. Everybody!"

He paused, and scrutinised his hearer. The small boy's intelligent face expressed hopeless perplexity.

"That's 'ow it 'appened," said old Tom. He sought for some means of expression. "It was like stoppin' a clock," he said. "Things were quiet for a bit, deadly quiet, except for the air-ships fighting about in the sky, and then people begun to get excited. I remember my lars' customer, the very lars' customer that ever I 'ad. He was a Mr. Moses Gluckstein, a city gent and very pleasant and fond of sparrowgrass and chokes, and 'e cut in--there 'adn't been no customers for days--and began to talk very fast, offerin' me for anything I 'ad, anything, petaties or anything, its weight in gold. 'E said it was a little speculation 'e wanted to try. 'E said it was a sort of bet reely, and very likely 'e'd lose; but never mind that, 'e wanted to try. 'E always 'ad been a gambler, 'e said. 'E said I'd only got to weigh it out and 'e'd give me 'is cheque right away. Well, that led to a bit of a argument, perfect respectful it was, but a argument about whether a cheque was still good, and while 'e was explaining there come by a lot of these here unemployed with a great banner they 'ad for every one to read--every one could read those days--'We want Food.' Three or four of 'em suddenly turns and comes into my shop.

"'Got any food?' says one.

"'No, I says, 'not to sell. I wish I 'ad. But if I 'ad, I'm afraid I couldn't let you have it. This gent, 'e's been offerin' me--'

"Mr. Gluckstein 'e tried to stop me, but it was too late.

"'What's 'e been offerin' you?' says a great big chap with a 'atchet; 'what's 'e been offerin you?' I 'ad to tell.

"'Boys,' 'e said, 'ere's another feenancier!' and they took 'im out there and then, and 'ung 'im on a lam'pose down the street. 'E never lifted a finger to resist. After I tole on 'im 'e never said a word...."

Tom meditated for a space. "First chap I ever sin 'ung!" he said.

"Ow old was you?" asked Teddy.

"'Bout thirty," said old Tom.

"Why! I saw free pig-stealers 'ung before I was six," said Teddy. "Father took me because of my birfday being near. Said I ought to be blooded...."

"Well, you never saw no-one killed by a moty car, any'ow," said old Tom after a moment of chagrin. "And you never saw no dead men carried into a chemis' shop."

Teddy's momentary triumph faded. "No," he said, "I 'aven't."

"Nor won't. Nor won't. You'll never see the things I've seen, never. Not if you live to be a 'undred... Well, as I was saying, that's how the Famine and Riotin' began. Then there was strikes and Socialism, things I never did 'old with, worse and worse. There was fightin' and shootin' down, and burnin' and plundering. They broke up the banks up in London and got the gold, But they couldn't make food out of gold. 'Ow did WE get

on? Well, we kep' quiet. We didn't interfere with no-one and no-one didn't interfere with us. We 'ad some old 'tatoes about, but mocely we lived on rats. Ours was a old 'ouse, full of rats, and the famine never seemed to bother 'em. Orfen we got a rat. Orfen. But moce of the people who lived hereabouts was too tender stummicked for rats. Didn't seem to fancy 'em. They'd been used to all sorts of fallals, and they didn't take to 'onest feeding, not till it was too late. Died rather.

"It was the famine began to kill people. Even before the Purple Death came along they was dying like flies at the end of the summer. 'Ow I remember it all! I was one of the first to 'ave it. I was out, seein' if I mightn't get 'old of a cat or somethin', and then I went round to my bit of ground to see whether I couldn't get up some young turnips I'd forgot, and I was took something awful. You've no idee the pain, Teddy--it doubled me up pretty near. I jes' lay down by 'at there corner, and your aunt come along to look for me and dragged me 'ome like a sack.

"I'd never 'ave got better if it 'adn't been for your aunt. 'Tom,' she says to me, 'you got to get well,' and I 'AD to. Then SHE sickened. She sickened but there ain't much dyin' about your aunt. 'Lor!' she says, 'as if I'd leave you to go muddlin' along alone!' That's what she says. She's got a tongue, 'as your aunt.

But it took 'er 'air off--and arst though I might, she's never cared for the wig I got 'er--orf the old lady what was in the vicarage garden.

"Well, this 'ere Purple Death,--it jes' wiped people out, Teddy. You couldn't bury 'em. And it took the dogs and the cats too, and the rats and 'orses. At last every house and garden was full of dead bodies. London way, you couldn't go for the smell of there, and we 'ad to move out of the 'I street into that villa we

got. And all the water run short that way. The drains and underground tunnels took it. Gor' knows where the Purple Death come from; some say one thing and some another. Some said it come from eatin' rats and some from eatin' nothin'. Some say the Asiatics brought it from some 'I place, Thibet, I think, where it never did nobody much 'arm. All I know is it come after the Famine. And the Famine come after the Penic and the Penic come after the War."

Teddy thought. "What made the Purple Death?" he asked.

"'Aven't I tole you!"

"But why did they 'ave a Penic?"

"They 'ad it."

"But why did they start the War?"

"They couldn't stop theirselves. 'Aving them airships made 'em."

"And 'ow did the War end?"

"Lord knows if it's ended, boy," said old Tom. "Lord knows if it's ended. There's been travellers through 'ere--there was a chap only two summers ago--say it's goin' on still. They say there's bands of people up north who keep on with it and people in Germany and China and 'Merica and places. 'E said they still got flying-machines and gas and things. But we 'aven't seen nothin' in the air now for seven years, and nobody 'asn't come nigh of us. Last we saw was a crumpled sort of airship going away--over there. It was a littleish-sized thing and lopsided, as though it 'ad something the matter with it."

He pointed, and came to a stop at a gap in the fence, the

vestiges of the old fence from which, in the company of his neighbour Mr. Stringer the milkman, he had once watched the South of England Aero Club's Saturday afternoon ascents. Dim memories, it may be, of that particular afternoon returned to him.

"There, down there, where all that rus' looks so red and bright, that's the gas-works."

"What's gas?" asked the little boy.

"Oh, a hairy sort of nothin' what you put in balloons to make 'em go up. And you used to burn it till the 'lectricity come."

The little boy tried vainly to imagine gas on the basis of these particulars. Then his thoughts reverted to a previous topic.

"But why didn't they end the War?"

"Obstinacy. Everybody was getting 'urt, but everybody was 'urtin' and everybody was 'igh-spirited and patriotic, and so they smeshed up things instead. They jes' went on smeshin'. And afterwards they jes' got desp'rite and savige."

"It ought to 'ave ended," said the little boy.

"It didn't ought to 'ave begun," said old Tom, "But people was proud. People was la-dy-da-ish and uppish and proud. Too much meat and drink they 'ad. Give in--not them! And after a bit nobody arst 'em to give in. Nobody arst 'em...."

He sucked his old gums thoughtfully, and his gaze strayed away across the valley to where the shattered glass of the Crystal Palace glittered in the sun. A dim large sense of waste and irrevocable lost opportunities pervaded his mind. He repeated his ultimate judgment upon all these things, obstinately, slowly,

and conclusively, his final saying upon the matter.

"You can say what you like," he said. "It didn't ought ever to 'ave begun."

He said it simply--somebody somewhere ought to have stopped something, but who or how or why were all beyond his ken.

ANN VERONICA

CHAPTER THE FIRST

ANN VERONICA TALKS TO HER FATHER

Part 1

One Wednesday afternoon in late September, Ann Veronica Stanley came down from London in a state of solemn excitement and quite resolved to have things out with her father that very evening. She had trembled on the verge of such a resolution before, but this time quite definitely she made it. A crisis had been reached, and she was almost glad it had been reached. She made up her mind in the train home that it should be a decisive crisis. It is for that reason that this novel begins with her there, and neither earlier nor later, for it is the history of this crisis and its consequences that this novel has to tell.

She had a compartment to herself in the train from London to Morningside Park, and she sat with both her feet on the seat in an attitude that would certainly have distressed her mother to see, and horrified her grandmother beyond measure; she sat with her knees up to her chin and her hands clasped before them, and she was so lost in thought that she discovered with a start, from a lettered lamp, that she was at Morningside Park, and thought she was moving out of the station, whereas she was only moving in. "Lord!" she said. She jumped up at once, caught up a leather clutch containing notebooks, a fat text-book, and a chocolate-and-yellow-covered pamphlet, and leaped neatly from the carriage, only to discover that the train was slowing down and that she had to traverse the full length of the platform past it

again as the result of her precipitation. "Sold again," she remarked. "Idiot!" She raged inwardly while she walked along with that air of self-contained serenity that is proper to a young lady of nearly two-and-twenty under the eye of the world.

She walked down the station approach, past the neat, obtrusive offices of the coal merchant and the house agent, and so to the wicket-gate by the butcher's shop that led to the field path to her home. Outside the post-office stood a no-hatted, blond young man in gray flannels, who was elaborately affixing a stamp to a letter. At the sight of her he became rigid and a singularly bright shade of pink. She made herself serenely unaware of his existence, though it may be it was his presence that sent her by the field detour instead of by the direct path up the Avenue.

"Umph!" he said, and regarded his letter doubtfully before consigning it to the pillar-box. "Here goes," he said. Then he hovered undecidedly for some seconds with his hands in his pockets and his mouth puckered to a whistle before he turned to go home by the Avenue.

Ann Veronica forgot him as soon as she was through the gate, and her face resumed its expression of stern preoccupation. "It's either now or never," she said to herself. . . .

Morningside Park was a suburb that had not altogether, as people say, come off. It consisted, like pre-Roman Gaul, of three parts. There was first the Avenue, which ran in a consciously elegant curve from the railway station into an undeveloped wilderness of agriculture, with big, yellow brick villas on either side, and then there was the pavement, the little clump of shops about the post-office, and under the railway arch was a congestion of workmen's dwellings. The road from Surbiton and Epsom ran under the arch, and, like a bright fungoid growth in the ditch, there was now appearing a sort of fourth estate of

little red-and-white rough-cast villas, with meretricious gables and very brassy window-blinds. Behind the Avenue was a little hill, and an iron-fenced path went over the crest of this to a stile under an elm-tree, and forked there, with one branch going back into the Avenue again.

"It's either now or never," said Ann Veronica, again ascending this stile. "Much as I hate rows, I've either got to make a stand or give in altogether."

She seated herself in a loose and easy attitude and surveyed the backs of the Avenue houses; then her eyes wandered to where the new red-and-white villas peeped among the trees. She seemed to be making some sort of inventory. "Ye Gods!" she said at last. "WHAT a place!

"Stuffy isn't the word for it.

"I wonder what he takes me for?"

When presently she got down from the stile a certain note of internal conflict, a touch of doubt, had gone from her warm-tinted face. She had now the clear and tranquil expression of one whose mind is made up. Her back had stiffened, and her hazel eyes looked steadfastly ahead.

As she approached the corner of the Avenue the blond, no-hatted man in gray flannels appeared. There was a certain air of forced fortuity in his manner. He saluted awkwardly. "Hello, Vee!" he said.

"Hello, Teddy!" she answered.

He hung vaguely for a moment as she passed.

But it was clear she was in no mood for Teddys. He realized that he was committed to the path across the fields, an uninteresting walk at the best of times.

"Oh, dammit!" he remarked, "dammit!" with great bitterness as he faced it.

Part 2

Ann Veronica Stanley was twenty-one and a half years old. She had black hair, fine eyebrows, and a clear complexion; and the forces that had modelled her features had loved and lingered at their work and made them subtle and fine. She was slender, and sometimes she seemed tall, and walked and carried herself lightly and joyfully as one who commonly and habitually feels well, and sometimes she stooped a little and was preoccupied. Her lips came together with an expression between contentment and the faintest shadow of a smile, her manner was one of quiet reserve, and behind this mask she was wildly discontented and eager for freedom and life.

She wanted to live. She was vehemently impatient--she did not clearly know for what--to do, to be, to experience. And experience was slow in coming. All the world about her seemed to be--how can one put it? --in wrappers, like a house when people leave it in the summer. The blinds were all drawn, the sunlight kept out, one could not tell what colors these gray swathings hid. She wanted to know. And there was no intimation whatever that the blinds would ever go up or the windows or doors be opened, or the chandeliers, that seemed to promise such a blaze of fire, unveiled and furnished and lit. Dim souls flitted about her, not only speaking but it would seem even thinking in

undertones. . . .

During her school days, especially her earlier school days, the world had been very explicit with her, telling her what to do, what not to do, giving her lessons to learn and games to play and interests of the most suitable and various kinds. Presently she woke up to the fact that there was a considerable group of interests called being in love and getting married, with certain attractive and amusing subsidiary developments, such as flirtation and "being interested" in people of the opposite sex. She approached this field with her usual liveliness of apprehension. But here she met with a check. These interests her world promptly, through the agency of schoolmistresses, older school-mates, her aunt, and a number of other responsible and authoritative people, assured her she must on no account think about. Miss Moffatt, the history and moral instruction mistress, was particularly explicit upon this score, and they all agreed in indicating contempt and pity for girls whose minds ran on such matters, and who betrayed it in their conversation or dress or bearing. It was, in fact, a group of interests quite unlike any other group, peculiar and special, and one to be thoroughly ashamed of. Nevertheless, Ann Veronica found it a difficult matter not to think of these things. However having a considerable amount of pride, she decided she would disavow these undesirable topics and keep her mind away from them just as far as she could, but it left her at the end of her school days with that wrapped feeling I have described, and rather at loose ends.

The world, she discovered, with these matters barred had no particular place for her at all, nothing for her to do, except a functionless existence varied by calls, tennis, selected novels, walks, and dusting in her father's house. She thought study would be better. She was a clever girl, the best of her year in the High School, and she made a valiant fight for Somerville or Newnham but her father had met and argued with a Somerville girl

at a friend's dinner-table and he thought that sort of thing unsexed a woman. He said simply that he wanted her to live at home. There was a certain amount of disputation, and meanwhile she went on at school. They compromised at length on the science course at the Tredgold Women's College--she had already matriculated into London University from school--she came of age, and she bickered with her aunt for latch-key privileges on the strength of that and her season ticket. Shamefaced curiosities began to come back into her mind, thinly disguised as literature and art. She read voraciously, and presently, because of her aunt's censorship, she took to smuggling any books she thought might be prohibited instead of bringing them home openly, and she went to the theatre whenever she could produce an acceptable friend to accompany her. She passed her general science examination with double honors and specialized in science. She happened to have an acute sense of form and unusual mental lucidity, and she found in biology, and particularly in comparative anatomy, a very considerable interest, albeit the illumination it cast upon her personal life was not altogether direct. She dissected well, and in a year she found herself chafing at the limitations of the lady B. Sc. who retailed a store of faded learning in the Tredgold laboratory. She had already realized that this instructress was hopelessly wrong and foggy--it is the test of the good comparative anatomist--upon the skull. She discovered a desire to enter as a student in the Imperial College at Westminster, where Russell taught, and go on with her work at the fountain-head.

She had asked about that already, and her father had replied, evasively: "We'll have to see about that, little Vee; we'll have to see about that." In that posture of being seen about the matter hung until she seemed committed to another session at the Tredgold College, and in the mean time a small conflict arose and brought the latch-key question, and in fact the question of Ann Veronica's position generally, to an acute issue.

In addition to the various business men, solicitors, civil servants, and widow ladies who lived in the Morningside Park Avenue, there was a certain family of alien sympathies and artistic quality, the Widgetts, with which Ann Veronica had become very friendly. Mr. Widgett was a journalist and art critic, addicted to a greenish-gray tweed suit and "art" brown ties; he smoked corncob pipes in the Avenue on Sunday morning, travelled third class to London by unusual trains, and openly despised golf. He occupied one of the smaller houses near the station. He had one son, who had been co-educated, and three daughters with peculiarly jolly red hair that Ann Veronica found adorable. Two of these had been her particular intimates at the High School, and had done much to send her mind exploring beyond the limits of the available literature at home. It was a cheerful, irresponsible, shamelessly hard-up family in the key of faded green and flattened purple, and the girls went on from the High School to the Fadden Art School and a bright, eventful life of art student dances, Socialist meetings, theatre galleries, talking about work, and even, at intervals, work; and ever and again they drew Ann Veronica from her sound persistent industry into the circle of these experiences. They had asked her to come to the first of the two great annual Fadden Dances, the October one, and Ann Veronica had accepted with enthusiasm. And now her father said she must not go.

He had "put his foot down," and said she must not go.

Going involved two things that all Ann Veronica's tact had been ineffectual to conceal from her aunt and father. Her usual dignified reserve had availed her nothing. One point was that she was to wear fancy dress in the likeness of a Corsair's bride, and the other was that she was to spend whatever vestiges of the night remained after the dance was over in London with the Widgett girls and a select party in "quite a decent little hotel"

near Fitzroy Square.

"But, my dear!" said Ann Veronica's aunt.

"You see," said Ann Veronica, with the air of one who shares a difficulty, "I've promised to go. I didn't realize-- I don't see how I can get out of it now."

Then it was her father issued his ultimatum. He had conveyed it to her, not verbally, but by means of a letter, which seemed to her a singularly ignoble method of prohibition. "He couldn't look me in the face and say it," said Ann Veronica.

"But of course it's aunt's doing really."

And thus it was that as Ann Veronica neared the gates of home, she said to herself: "I'll have it out with him somehow. I'll have it out with him. And if he won't--"

But she did not give even unspoken words to the alternative at that time.

Part 3

Ann Veronica's father was a solicitor with a good deal of company business: a lean, trustworthy, worried-looking, neuralgic, clean-shaven man of fifty-three, with a hard mouth, a sharp nose, iron-gray hair, gray eyes, gold-framed glasses, and a small, circular baldness at the crown of his head. His name was Peter. He had had five children at irregular intervals, of whom Ann Veronica was the youngest, so that as a parent he came to her perhaps a little practised and jaded and inattentive; and he

called her his "little Vee," and patted her unexpectedly and disconcertingly, and treated her promiscuously as of any age between eleven and eight-and-twenty. The City worried him a good deal, and what energy he had left over he spent partly in golf, a game he treated very seriously, and partly in the practices of microscopic petrography.

He "went in" for microscopy in the unphilosophical Victorian manner as his "hobby." A birthday present of a microscope had turned his mind to technical microscopy when he was eighteen, and a chance friendship with a Holborn microscope dealer had confirmed that bent. He had remarkably skilful fingers and a love of detailed processes, and he had become one of the most dexterous amateur makers of rock sections in the world. He spent a good deal more money and time than he could afford upon the little room at the top of the house, in producing new lapidary apparatus and new microscopic accessories and in rubbing down slices of rock to a transparent thinness and mounting them in a beautiful and dignified manner. He did it, he said, "to distract his mind." His chief successes he exhibited to the Lowndean Microscopical Society, where their high technical merit never failed to excite admiration. Their scientific value was less considerable, since he chose rocks entirely with a view to their difficulty of handling or their attractiveness at conversaziones when done. He had a great contempt for the sections the "theorizers" produced. They proved all sorts of things perhaps, but they were thick, unequal, pitiful pieces of work. Yet an indiscriminating, wrong-headed world gave such fellows all sorts of distinctions....

He read but little, and that chiefly healthy light fiction with chromatic titles, *The Red Sword*, *The Black Helmet*, *The Purple Robe*, also in order "to distract his mind." He read it in winter in the evening after dinner, and Ann Veronica associated it with a tendency to monopolize the lamp, and to spread a very worn pair

of dappled fawn-skin slippers across the fender. She wondered occasionally why his mind needed so much distraction. His favorite newspaper was the Times, which he began at breakfast in the morning often with manifest irritation, and carried off to finish in the train, leaving no other paper at home.

It occurred to Ann Veronica once that she had known him when he was younger, but day had followed day, and each had largely obliterated the impression of its predecessor. But she certainly remembered that when she was a little girl he sometimes wore tennis flannels, and also rode a bicycle very dexterously in through the gates to the front door. And in those days, too, he used to help her mother with her gardening, and hover about her while she stood on the ladder and hammered creepers to the scullery wall.

It had been Ann Veronica's lot as the youngest child to live in a home that became less animated and various as she grew up. Her mother had died when she was thirteen, her two much older sisters had married off--one submissively, one insubordinately; her two brothers had gone out into the world well ahead of her, and so she had made what she could of her father. But he was not a father one could make much of.

His ideas about girls and women were of a sentimental and modest quality; they were creatures, he thought, either too bad for a modern vocabulary, and then frequently most undesirably desirable, or too pure and good for life. He made this simple classification of a large and various sex to the exclusion of all intermediate kinds; he held that the two classes had to be kept apart even in thought and remote from one another. Women are made like the potter's vessels--either for worship or contumely, and are withal fragile vessels. He had never wanted daughters. Each time a daughter had been born to him he had concealed his chagrin with great tenderness and effusion from his wife, and had

sworn unwontedly and with passionate sincerity in the bathroom. He was a manly man, free from any strong maternal strain, and he had loved his dark-eyed, dainty bright-colored, and active little wife with a real vein of passion in his sentiment. But he had always felt (he had never allowed himself to think of it) that the promptitude of their family was a little indelicate of her, and in a sense an intrusion. He had, however, planned brilliant careers for his two sons, and, with a certain human amount of warping and delay, they were pursuing these. One was in the Indian Civil Service and one in the rapidly developing motor business. The daughters, he had hoped, would be their mother's care.

He had no ideas about daughters. They happen to a man.

Of course a little daughter is a delightful thing enough. It runs about gayly, it romps, it is bright and pretty, it has enormous quantities of soft hair and more power of expressing affection than its brothers. It is a lovely little appendage to the mother who smiles over it, and it does things quaintly like her, gestures with her very gestures. It makes wonderful sentences that you can repeat in the City and are good enough for Punch. You call it a lot of nicknames--"Babs" and "Bibs" and "Viddles" and "Vee"; you whack at it playfully, and it whacks you back. It loves to sit on your knee. All that is jolly and as it should be.

But a little daughter is one thing and a daughter quite another. There one comes to a relationship that Mr. Stanley had never thought out. When he found himself thinking about it, it upset him so that he at once resorted to distraction. The chromatic fiction with which he relieved his mind glanced but slightly at this aspect of life, and never with any quality of guidance. Its heroes never had daughters, they borrowed other people's. The one fault, indeed, of this school of fiction for him was that it

had rather a light way with parental rights. His instinct was in the direction of considering his daughters his absolute property, bound to obey him, his to give away or his to keep to be a comfort in his declining years just as he thought fit. About this conception of ownership he perceived and desired a certain sentimental glamour, he liked everything properly dressed, but it remained ownership. Ownership seemed only a reasonable return for the cares and expenses of a daughter's upbringing. Daughters were not like sons. He perceived, however, that both the novels he read and the world he lived in discountenanced these assumptions. Nothing else was put in their place, and they remained sotto voce, as it were, in his mind. The new and the old cancelled out; his daughters became quasi-independent dependents--which is absurd. One married as he wished and one against his wishes, and now here was Ann Veronica, his little Vee, discontented with her beautiful, safe, and sheltering home, going about with hatless friends to Socialist meetings and art-class dances, and displaying a disposition to carry her scientific ambitions to unwomanly lengths. She seemed to think he was merely the paymaster, handing over the means of her freedom. And now she insisted that she MUST leave the chastened security of the Tredgold Women's College for Russell's unbridled classes, and wanted to go to fancy dress dances in pirate costume and spend the residue of the night with Widgett's ramshackle girls in some indescribable hotel in Soho!

He had done his best not to think about her at all, but the situation and his sister had become altogether too urgent. He had finally put aside *The Lilac Sunbonnet*, gone into his study, lit the gas fire, and written the letter that had brought these unsatisfactory relations to a head.

MY DEAR VEE, he wrote.

These daughters! He gnawed his pen and reflected, tore the sheet up, and began again.

"MY DEAR VERONICA,--Your aunt tells me you have involved yourself in some arrangement with the Widgeott girls about a Fancy Dress Ball in London. I gather you wish to go up in some fantastic get-up, wrapped about in your opera cloak, and that after the festivities you propose to stay with these friends of yours, and without any older people in your party, at an hotel. Now I am sorry to cross you in anything you have set your heart upon, but I regret to say--"

"H'm," he reflected, and crossed out the last four words.

"--but this cannot be."

"No," he said, and tried again: "but I must tell you quite definitely that I feel it to be my duty to forbid any such exploit."

"Damn!" he remarked at the defaced letter; and, taking a fresh sheet, he recopied what he had written. A certain irritation crept into his manner as he did so.

"I regret that you should ever have proposed it," he went on.

He meditated, and began a new paragraph.

"The fact of it is, and this absurd project of yours only brings it to a head, you have begun to get hold of some very queer ideas about what a young lady in your position may or may not venture to do. I do not think you quite understand my ideals or what is becoming as between father and daughter. Your attitude to me--"

He fell into a brown study. It was so difficult to put precisely.

"--and your aunt--"

For a time he searched for the mot juste. Then he went on:

"--and, indeed, to most of the established things in life is, frankly, unsatisfactory. You are restless, aggressive, critical with all the crude unthinking criticism of youth. You have no grasp upon the essential facts of life (I pray God you never may), and in your rash ignorance you are prepared to dash into positions that may end in lifelong regret. The life of a young girl is set about with prowling pitfalls."

He was arrested for a moment by an indistinct picture of Veronica reading this last sentence. But he was now too deeply moved to trace a certain unsatisfactoriness to its source in a mixture of metaphors. "Well," he said, argumentatively, "it IS. That's all about it. It's time she knew."

"The life of a young girl is set about with prowling pitfalls, from which she must be shielded at all costs."

His lips tightened, and he frowned with solemn resolution.

"So long as I am your father, so long as your life is entrusted to my care, I feel bound by every obligation to use my authority to check this odd disposition of yours toward extravagant enterprises. A day will come when you will thank me. It is not, my dear Veronica, that I think there is any harm in you; there is not. But a girl is soiled not only by evil but by the proximity of evil, and a reputation for rashness may do her as serious an injury as really reprehensible conduct. So do please believe

that in this matter I am acting for the best."

He signed his name and reflected. Then he opened the study door and called "Mollie!" and returned to assume an attitude of authority on the hearthrug, before the blue flames and orange glow of the gas fire.

His sister appeared.

She was dressed in one of those complicated dresses that are all lace and work and confused patternings of black and purple and cream about the body, and she was in many ways a younger feminine version of the same theme as himself. She had the same sharp nose--which, indeed, only Ann Veronica, of all the family, had escaped. She carried herself well, whereas her brother slouched, and there was a certain aristocratic dignity about her that she had acquired through her long engagement to a curate of family, a scion of the Wiltshire Edmondshaws. He had died before they married, and when her brother became a widower she had come to his assistance and taken over much of the care of his youngest daughter. But from the first her rather old-fashioned conception of life had jarred with the suburban atmosphere, the High School spirit and the memories of the light and little Mrs. Stanley, whose family had been by any reckoning inconsiderable--to use the kindest term. Miss Stanley had determined from the outset to have the warmest affection for her youngest niece and to be a second mother in her life--a second and a better one; but she had found much to battle with, and there was much in herself that Ann Veronica failed to understand. She came in now with an air of reserved solicitude.

Mr. Stanley pointed to the letter with a pipe he had drawn from his jacket pocket. "What do you think of that?" he asked.

She took it up in her many-ringed hands and read it judicially.

He filled his pipe slowly.

"Yes," she said at last, "it is firm and affectionate."

"I could have said more."

"You seem to have said just what had to be said. It seems to me exactly what is wanted. She really must not go to that affair."

She paused, and he waited for her to speak.

"I don't think she quite sees the harm of those people or the sort of life to which they would draw her," she said. "They would spoil every chance."

"She has chances?" he said, helping her out.

"She is an extremely attractive girl," she said; and added, "to some people. Of course, one doesn't like to talk about things until there are things to talk about."

"All the more reason why she shouldn't get herself talked about."

"That is exactly what I feel."

Mr. Stanley took the letter and stood with it in his hand thoughtfully for a time. "I'd give anything," he remarked, "to see our little Vee happily and comfortably married."

He gave the note to the parlormaid the next morning in an inadvertent, casual manner just as he was leaving the house to catch his London train. When Ann Veronica got it she had at first a wild, fantastic idea that it contained a tip.

Part 5

Ann Veronica's resolve to have things out with her father was not accomplished without difficulty.

He was not due from the City until about six, and so she went and played Badminton with the Widdett girls until dinner-time. The atmosphere at dinner was not propitious. Her aunt was blandly amiable above a certain tremulous undertow, and talked as if to a caller about the alarming spread of marigolds that summer at the end of the garden, a sort of Yellow Peril to all the smaller hardy annuals, while her father brought some papers to table and presented himself as preoccupied with them. "It really seems as if we shall have to put down marigolds altogether next year," Aunt Molly repeated three times, "and do away with marguerites. They seed beyond all reason." Elizabeth, the parlormaid, kept coming in to hand vegetables whenever there seemed a chance of Ann Veronica asking for an interview. Directly dinner was over Mr. Stanley, having pretended to linger to smoke, fled suddenly up-stairs to petrography, and when Veronica tapped he answered through the locked door, "Go away, Vee! I'm busy," and made a lapidary's wheel buzz loudly.

Breakfast, too, was an impossible occasion. He read the Times with an unusually passionate intentness, and then declared suddenly for the earlier of the two trains he used.

"I'll come to the station," said Ann Veronica. "I may as well come up by this train."

"I may have to run," said her father, with an appeal to his watch.

"I'll run, too," she volunteered.

Instead of which they walked sharply. . . .

"I say, daddy," she began, and was suddenly short of breath.

"If it's about that dance project," he said, "it's no good, Veronica. I've made up my mind."

"You'll make me look a fool before all my friends."

"You shouldn't have made an engagement until you'd consulted your aunt."

"I thought I was old enough," she gasped, between laughter and crying.

Her father's step quickened to a trot. "I won't have you quarrelling and crying in the Avenue," he said. "Stop it! . . . If you've got anything to say, you must say it to your aunt--"

"But look here, daddy!"

He flapped the Times at her with an imperious gesture.

"It's settled. You're not to go. You're NOT to go."

"But it's about other things."

"I don't care. This isn't the place."

"Then may I come to the study to-night--after dinner?"

"I'm--BUSY!"

"It's important. If I can't talk anywhere else--I DO want an

understanding."

Ahead of them walked a gentleman whom it was evident they must at their present pace very speedily overtake. It was Ramage, the occupant of the big house at the end of the Avenue. He had recently made Mr. Stanley's acquaintance in the train and shown him one or two trifling civilities. He was an outside broker and the proprietor of a financial newspaper; he had come up very rapidly in the last few years, and Mr. Stanley admired and detested him in almost equal measure. It was intolerable to think that he might overhear words and phrases. Mr. Stanley's pace slackened.

"You've no right to badger me like this, Veronica," he said. "I can't see what possible benefit can come of discussing things that are settled. If you want advice, your aunt is the person. However, if you must air your opinions--"

"To-night, then, daddy!"

He made an angry but conceivably an assenting noise, and then Ramage glanced back and stopped, saluted elaborately, and waited for them to come up. He was a square-faced man of nearly fifty, with iron-gray hair a mobile, clean-shaven mouth and rather protuberant black eyes that now scrutinized Ann Veronica. He dressed rather after the fashion of the West End than the City, and affected a cultured urbanity that somehow disconcerted and always annoyed Ann Veronica's father extremely. He did not play golf, but took his exercise on horseback, which was also unsympathetic.

"Stuffy these trees make the Avenue," said Mr. Stanley as they drew alongside, to account for his own ruffled and heated expression. "They ought to have been lopped in the spring."

"There's plenty of time," said Ramage. "Is Miss Stanley coming up with us?"

"I go second," she said, "and change at Wimbledon."

"We'll all go second," said Ramage, "if we may?"

Mr. Stanley wanted to object strongly, but as he could not immediately think how to put it, he contented himself with a grunt, and the motion was carried. "How's Mrs. Ramage?" he asked.

"Very much as usual," said Ramage. "She finds lying up so much very irksome. But, you see, she HAS to lie up."

The topic of his invalid wife bored him, and he turned at once to Ann Veronica. "And where are YOU going?" he said. "Are you going on again this winter with that scientific work of yours? It's an instance of heredity, I suppose." For a moment Mr. Stanley almost liked Ramage. "You're a biologist, aren't you?"

He began to talk of his own impressions of biology as a commonplace magazine reader who had to get what he could from the monthly reviews, and was glad to meet with any information from nearer the fountainhead. In a little while he and she were talking quite easily and agreeably. They went on talking in the train--it seemed to her father a slight want of deference to him--and he listened and pretended to read the Times. He was struck disagreeably by Ramage's air of gallant consideration and Ann Veronica's self-possessed answers. These things did not harmonize with his conception of the forthcoming (if unavoidable) interview. After all, it came to him suddenly as a harsh discovery that she might be in a sense regarded as grownup. He was a man who in all things classified without nuance, and for him there were in the matter of age just two feminine classes and no more--girls and women. The distinction lay chiefly in the

right to pat their heads. But here was a girl--she must be a girl, since she was his daughter and pat-able--imitating the woman quite remarkably and cleverly. He resumed his listening. She was discussing one of those modern advanced plays with a remarkable, with an extraordinary, confidence.

"His love-making," she remarked, "struck me as unconvincing. He seemed too noisy."

The full significance of her words did not instantly appear to him. Then it dawned. Good heavens! She was discussing love-making. For a time he heard no more, and stared with stony eyes at a Book-War proclamation in leaded type that filled half a column of the Times that day. Could she understand what she was talking about? Luckily it was a second-class carriage and the ordinary fellow-travellers were not there. Everybody, he felt, must be listening behind their papers.

Of course, girls repeat phrases and opinions of which they cannot possibly understand the meaning. But a middle-aged man like Ramage ought to know better than to draw out a girl, the daughter of a friend and neighbor. . . .

Well, after all, he seemed to be turning the subject. "Broddick is a heavy man," he was saying, "and the main interest of the play was the embezzlement." Thank Heaven! Mr. Stanley allowed his paper to drop a little, and scrutinized the hats and brows of their three fellow-travellers .

They reached Wimbledon, and Ramage whipped out to hand Miss Stanley to the platform as though she had been a duchess, and she descended as though such attentions from middle-aged, but still gallant, merchants were a matter of course. Then, as Ramage readjusted himself in a corner, he remarked: "These young people shoot up, Stanley. It seems only yesterday that she was running

down the Avenue, all hair and legs."

Mr. Stanley regarded him through his glasses with something approaching animosity.

"Now she's all hat and ideas," he said, with an air of humor.

"She seems an unusually clever girl," said Ramage.

Mr. Stanley regarded his neighbor's clean-shaven face almost warily. "I'm not sure whether we don't rather overdo all this higher education," he said, with an effect of conveying profound meanings.

Part 6

He became quite sure, by a sort of accumulation of reflection, as the day wore on. He found his youngest daughter intrusive in his thoughts all through the morning, and still more so in the afternoon. He saw her young and graceful back as she descended from the carriage, severely ignoring him, and recalled a glimpse he had of her face, bright and serene, as his train ran out of Wimbledon. He recalled with exasperating perplexity her clear, matter-of-fact tone as she talked about love-making being unconvincing. He was really very proud of her, and extraordinarily angry and resentful at the innocent and audacious self-reliance that seemed to intimate her sense of absolute independence of him, her absolute security without him. After all, she only LOOKED a woman. She was rash and ignorant, absolutely inexperienced. Absolutely. He began to think of speeches, very firm, explicit speeches, he would make.

He lunched in the Legal Club in Chancery Lane, and met Ogilvy.

Daughters were in the air that day. Ogilvy was full of a client's trouble in that matter, a grave and even tragic trouble. He told some of the particulars.

"Curious case," said Ogilvy, buttering his bread and cutting it up in a way he had. "Curious case--and sets one thinking."

He resumed, after a mouthful: "Here is a girl of sixteen or seventeen, seventeen and a half to be exact, running about, as one might say, in London. Schoolgirl. Her family are solid West End people, Kensington people. Father--dead. She goes out and comes home. Afterward goes on to Oxford. Twenty-one, twenty-two. Why doesn't she marry? Plenty of money under her father's will. Charming girl."

He consumed Irish stew for some moments.

"Married already," he said, with his mouth full. "Shopman."

"Good God!" said Mr. Stanley.

"Good-looking rascal she met at Worthing. Very romantic and all that. He fixed it."

"But--"

"He left her alone. Pure romantic nonsense on her part. Sheer calculation on his. Went up to Somerset House to examine the will before he did it. Yes. Nice position."

"She doesn't care for him now?"

"Not a bit. What a girl of sixteen cares for is hair and a high color and moonlight and a tenor voice. I suppose most of our daughters would marry organ-grinders if they had a chance--at

that age. My son wanted to marry a woman of thirty in a tobacconist's shop. Only a son's another story. We fixed that. Well, that's the situation. My people don't know what to do. Can't face a scandal. Can't ask the gent to go abroad and condone a bigamy. He misstated her age and address; but you can't get home on him for a thing like that. . . . There you are! Girl spoilt for life. Makes one want to go back to the Oriental system!"

Mr. Stanley poured wine. "Damned Rascal!" he said. "Isn't there a brother to kick him?"

"Mere satisfaction," reflected Ogilvy. "Mere sensuality. I rather think they have kicked him, from the tone of some of the letters. Nice, of course. But it doesn't alter the situation."

"It's these Rascals," said Mr. Stanley, and paused.

"Always has been," said Ogilvy. "Our interest lies in heading them off."

"There was a time when girls didn't get these extravagant ideas."

"Lydia Languish, for example. Anyhow, they didn't run about so much."

"Yes. That's about the beginning. It's these damned novels. All this torrent of misleading, spurious stuff that pours from the press. These sham ideals and advanced notions. Women who Dids, and all that kind of thing. . . ."

Ogilvy reflected. "This girl--she's really a very charming, frank person--had had her imagination fired, so she told me, by a school performance of Romeo and Juliet."

Mr. Stanley decided to treat that as irrelevant. "There ought to be a Censorship of Books. We want it badly at the present time. Even WITH the Censorship of Plays there's hardly a decent thing to which a man can take his wife and daughters, a creeping taint of suggestion everywhere. What would it be without that safeguard?"

Ogilvy pursued his own topic. "I'm inclined to think, Stanley, myself that as a matter of fact it was the expurgated Romeo and Juliet did the mischief. If our young person hadn't had the nurse part cut out, eh? She might have known more and done less. I was curious about that. All they left it was the moon and stars. And the balcony and 'My Romeo!' "

"Shakespeare is altogether different from the modern stuff. Altogether different. I'm not discussing Shakespeare. I don't want to Bowdlerize Shakespeare. I'm not that sort I quite agree.

But this modern miasma--"

Mr. Stanley took mustard savagely.

"Well, we won't go into Shakespeare," said Ogilvy "What interests me is that our young women nowadays are running about as free as air practically, with registry offices and all sorts of accommodation round the corner. Nothing to check their proceedings but a declining habit of telling the truth and the limitations of their imaginations. And in that respect they stir up one another. Not my affair, of course, but I think we ought to teach them more or restrain them more. One or the other. They're too free for their innocence or too innocent for their freedom. That's my point. Are you going to have any apple-tart, Stanley? The apple-tart's been very good lately--very good!"

Part 7

At the end of dinner that evening Ann Veronica began: "Father!"

Her father looked at her over his glasses and spoke with grave deliberation; "If there is anything you want to say to me," he said, "you must say it in the study. I am going to smoke a little here, and then I shall go to the study. I don't see what you can have to say. I should have thought my note cleared up everything. There are some papers I have to look through to-night--important papers."

"I won't keep you very long, daddy," said Ann Veronica.

"I don't see, Mollie," he remarked, taking a cigar from the box on the table as his sister and daughter rose, "why you and Vee shouldn't discuss this little affair--whatever it is--without bothering me."

It was the first time this controversy had become triangular, for all three of them were shy by habit.

He stopped in mid-sentence, and Ann Veronica opened the door for her aunt. The air was thick with feelings. Her aunt went out of the room with dignity and a rustle, and up-stairs to the fastness of her own room. She agreed entirely with her brother. It distressed and confused her that the girl should not come to her.

It seemed to show a want of affection, to be a deliberate and unmerited disregard, to justify the reprisal of being hurt.

When Ann Veronica came into the study she found every evidence of a carefully foreseen grouping about the gas fire. Both

arm-chairs had been moved a little so as to face each other on either side of the fender, and in the circular glow of the green-shaded lamp there lay, conspicuously waiting, a thick bundle of blue and white papers tied with pink tape. Her father held some printed document in his hand, and appeared not to observe her entry. "Sit down," he said, and perused--"perused" is the word for it--for some moments. Then he put the paper by. "And what is it all about, Veronica?" he asked, with a deliberate note of irony, looking at her a little quizzically over his glasses.

Ann Veronica looked bright and a little elated, and she disregarded her father's invitation to be seated. She stood on the mat instead, and looked down on him. "Look here, daddy," she said, in a tone of great reasonableness, "I MUST go to that dance, you know."

Her father's irony deepened. "Why?" he asked, suavely.

Her answer was not quite ready. "Well, because I don't see any reason why I shouldn't."

"You see I do."

"Why shouldn't I go?"

"It isn't a suitable place; it isn't a suitable gathering."

"But, daddy, what do you know of the place and the gathering?"

"And it's entirely out of order; it isn't right, it isn't correct; it's impossible for you to stay in an hotel in London--the idea is preposterous. I can't imagine what possessed you, Veronica."

He put his head on one side, pulled down the corners of his mouth, and looked at her over his glasses.

"But why is it preposterous?" asked Ann Veronica, and fiddled with a pipe on the mantel.

"Surely!" he remarked, with an expression of worried appeal.

"You see, daddy, I don't think it IS preposterous. That's really what I want to discuss. It comes to this--am I to be trusted to take care of myself, or am I not?"

"To judge from this proposal of yours, I should say not."

"I think I am."

"As long as you remain under my roof--" he began, and paused.

"You are going to treat me as though I wasn't. Well, I don't think that's fair."

"Your ideas of fairness--" he remarked, and discontinued that sentence. "My dear girl," he said, in a tone of patient reasonableness, "you are a mere child. You know nothing of life, nothing of its dangers, nothing of its possibilities. You think everything is harmless and simple, and so forth. It isn't. It isn't. That's where you go wrong. In some things, in many things, you must trust to your elders, to those who know more of life than you do. Your aunt and I have discussed all this matter. There it is. You can't go."

The conversation hung for a moment. Ann Veronica tried to keep hold of a complicated situation and not lose her head. She had turned round sideways, so as to look down into the fire.

"You see, father," she said, "it isn't only this affair of the dance. I want to go to that because it's a new experience, because I think it will be interesting and give me a view of things. You say I know nothing. That's probably true. But how am I to know of things?"

"Some things I hope you may never know," he said.

"I'm not so sure. I want to know--just as much as I can."

"Tut!" he said, fuming, and put out his hand to the papers in the pink tape.

"Well, I do. It's just that I want to say. I want to be a human being; I want to learn about things and know about things, and not to be protected as something too precious for life, cooped up in one narrow little corner."

"Cooped up!" he cried. "Did I stand in the way of your going to college? Have I ever prevented you going about at any reasonable hour? You've got a bicycle!"

"H'm!" said Ann Veronica, and then went on "I want to be taken seriously. A girl--at my age--is grown-up. I want to go on with my University work under proper conditions, now that I've done the Intermediate. It isn't as though I haven't done well. I've never muffed an exam. yet. Roddy muffed two. . . ."

Her father interrupted. "Now look here, Veronica, let us be plain with each other. You are not going to that infidel Russell's classes. You are not going anywhere but to the Tredgold College. I've thought that out, and you must make up your mind to it. All sorts of considerations come in. While you live in my house you must follow my ideas. You are wrong even about that man's scientific position and his standard of work.

There are men in the Lowndean who laugh at him--simply laugh at him. And I have seen work by his pupils myself that struck me as being--well, next door to shameful. There's stories, too, about his demonstrator, Capes Something or other. The kind of man who isn't content with his science, and writes articles in the monthly reviews. Anyhow, there it is: YOU ARE NOT GOING THERE."

The girl received this intimation in silence. but the face that looked down upon the gas fire took an expression of obstinacy that brought out a hitherto latent resemblance between parent and child. When she spoke, her lips twitched.

"Then I suppose when I have graduated I am to come home?"

"It seems the natural course "

"And do nothing?"

"There are plenty of things a girl can find to do at home."

"Until some one takes pity on me and marries me?"

He raised his eyebrows in mild appeal. His foot tapped impatiently, and he took up the papers.

"Look here, father," she said, with a change in her voice, "suppose I won't stand it?"

He regarded her as though this was a new idea.

"Suppose, for example, I go to this dance?"

"You won't."

"Well"--her breath failed her for a moment. "How would you

prevent it?" she asked.

"But I have forbidden it!" he said, raising his voice.

"Yes, I know. But suppose I go?"

"Now, Veronica! No, no. This won't do. Understand me! I forbid it. I do not want to hear from you even the threat of disobedience." He spoke loudly. "The thing is forbidden!"

"I am ready to give up anything that you show to be wrong."

"You will give up anything I wish you to give up."

They stared at each other through a pause, and both faces were flushed and obstinate.

She was trying by some wonderful, secret, and motionless gymnastics to restrain her tears. But when she spoke her lips quivered, and they came. "I mean to go to that dance!" she blubbered. "I mean to go to that dance! I meant to reason with you, but you won't reason. You're dogmatic."

At the sight of her tears his expression changed to a mingling of triumph and concern. He stood up, apparently intending to put an arm about her, but she stepped back from him quickly. She produced a handkerchief, and with one sweep of this and a simultaneous gulp had abolished her fit of weeping. His voice now had lost its ironies.

"Now, Veronica," he pleaded, "Veronica, this is most unreasonable. All we do is for your good. Neither your aunt nor I have any other thought but what is best for you."

"Only you won't let me live. Only you won't let me exist!"

Mr. Stanley lost patience. He bullied frankly.

"What nonsense is this? What raving! My dear child, you DO live, you DO exist! You have this home. You have friends, acquaintances, social standing, brothers and sisters, every advantage! Instead of which, you want to go to some mixed classes or other and cut up rabbits and dance about at nights in wild costumes with casual art student friends and God knows who. That--that isn't living! You are beside yourself. You don't know what you ask nor what you say. You have neither reason nor logic. I am sorry to seem to hurt you, but all I say is for your good. You MUST not, you SHALL not go. On this I am resolved. I put my foot down like--like adamant. And a time will come, Veronica, mark my words, a time will come when you will bless me for my firmness to-night. It goes to my heart to disappoint you, but this thing must not be."

He sidled toward her, but she recoiled from him, leaving him in possession of the hearth-rug.

"Well," she said, "good-night, father."

"What!" he asked; "not a kiss?"

She affected not to hear.

The door closed softly upon her. For a long time he remained standing before the fire, staring at the situation. Then he sat down and filled his pipe slowly and thoughtfully. . . .

"I don't see what else I could have said," he remarked.

CHAPTER THE SECOND

ANN VERONICA GATHERS POINTS OF VIEW

Part 1

"Are you coming to the Fadden Dance, Ann Veronica?" asked Constance Widgett.

Ann Veronica considered her answer. "I mean to," she replied.

"You are making your dress?"

"Such as it is."

They were in the elder Widgett girl's bedroom; Hetty was laid up, she said, with a sprained ankle, and a miscellaneous party was gossiping away her tedium. It was a large, littered, self-forgetful apartment, decorated with unframed charcoal sketches by various incipient masters; and an open bookcase, surmounted by plaster casts and the half of a human skull, displayed an odd miscellany of books--Shaw and Swinburne, Tom Jones, Fabian Essays, Pope and Dumas, cheek by jowl. Constance Widgett's abundant copper-red hair was bent down over some dimly remunerative work--stencilling in colors upon rough, white material--at a kitchen table she had dragged up-stairs for the purpose, while on her bed there was seated a slender lady of thirty or so in a dingy green dress, whom Constance had introduced with a wave of her hand as Miss Miniver. Miss Miniver looked out on the world through large emotional blue eyes that were further magnified by the glasses she wore, and her nose was pinched and pink, and her mouth was whimsically petulant. Her glasses moved quickly as her glance travelled from face to face. She seemed bursting with the desire to talk, and watching for her

opportunity. On her lapel was an ivory button, bearing the words "Votes for Women." Ann Veronica sat at the foot of the sufferer's bed, while Teddy Widgett, being something of an athlete, occupied the only bed-room chair--a decadent piece, essentially a tripod and largely a formality--and smoked cigarettes, and tried to conceal the fact that he was looking all the time at Ann Veronica's eyebrows. Teddy was the hatless young man who had turned Ann Veronica aside from the Avenue two days before. He was the junior of both his sisters, co-educated and much broken in to feminine society. A bowl of roses, just brought by Ann Veronica, adorned the communal dressing-table, and Ann Veronica was particularly trim in preparation for a call she was to make with her aunt later in the afternoon.

Ann Veronica decided to be more explicit. "I've been," she said, "forbidden to come."

"Hul-LO!" said Hetty, turning her head on the pillow; and Teddy remarked with profound emotion, "My God!"

"Yes," said Ann Veronica, "and that complicates the situation."

"Auntie?" asked Constance, who was conversant with Ann Veronica's affairs.

"No! My father. It's--it's a serious prohibition."

"Why?" asked Hetty.

"That's the point. I asked him why, and he hadn't a reason."

"YOU ASKED YOUR FATHER FOR A REASON!" said Miss Miniver, with great intensity.

"Yes. I tried to have it out with him, but he wouldn't have it out. "Ann Veronica reflected for an instant "That's why I think I ought to come."

"You asked your father for a reason!" Miss Miniver repeated.

"We always have things out with OUR father, poor dear!" said Hetty. "He's got almost to like it."

"Men," said Miss Miniver, "NEVER have a reason. Never! And they don't know it! They have no idea of it. It's one of their worst traits, one of their very worst."

"But I say, Vee," said Constance, "if you come and you are forbidden to come there'll be the deuce of a row."

Ann Veronica was deciding for further confidences. Her situation was perplexing her very much, and the Widgett atmosphere was lax and sympathetic, and provocative of discussion. "It isn't only the dance," she said.

"There's the classes," said Constance, the well-informed.

"There's the whole situation. Apparently I'm not to exist yet. I'm not to study, I'm not to grow. I've got to stay at home and remain in a state of suspended animation."

"DUSTING!" said Miss Miniver, in a sepulchral voice.

"Until you marry, Vee," said Hetty.

"Well, I don't feel like standing it."

"Thousands of women have married merely for freedom," said Miss Miniver. "Thousands! Ugh! And found it a worse slavery."

"I suppose," said Constance, stencilling away at bright pink petals, "it's our lot. But it's very beastly."

"What's our lot?" asked her sister.

"Slavery! Downtroddenness! When I think of it I feel all over boot marks--men's boots. We hide it bravely, but so it is. Damn! I've splashed."

Miss Miniver's manner became impressive. She addressed Ann Veronica with an air of conveying great open secrets to her. "As things are at present," she said, "it is true. We live under man-made institutions, and that is what they amount to. Every girl in the world practically, except a few of us who teach or type-write, and then we're underpaid and sweated--it's dreadful to think how we are sweated!" She had lost her generalization, whatever it was. She hung for a moment, and then went on, conclusively, "Until we have the vote that is how things WILL be."

"I'm all for the vote," said Teddy.

"I suppose a girl MUST be underpaid and sweated," said Ann Veronica. "I suppose there's no way of getting a decent income--independently."

"Women have practically NO economic freedom," said Miss Miniver, "because they have no political freedom. Men have seen to that. The one profession, the one decent profession, I mean, for a woman--except the stage--is teaching, and there we trample on one another. Everywhere else--the law, medicine, the Stock Exchange--prejudice bars us."

"There's art," said Ann Veronica, "and writing."

"Every one hasn't the Gift. Even there a woman never gets a fair chance. Men are against her. Whatever she does is minimized. All the best novels have been written by women, and yet see how men sneer at the lady novelist still! There's only one way to get on for a woman, and that is to please men. That is what they think we are for!"

"We're beasts," said Teddy. "Beasts!"

But Miss Miniver took no notice of his admission.

"Of course," said Miss Miniver--she went on in a regularly undulating voice--"we DO please men. We have that gift. We can see round them and behind them and through them, and most of us use that knowledge, in the silent way we have, for our great ends. Not all of us, but some of us. Too many. I wonder what men would say if we threw the mask aside--if we really told them what WE thought of them, really showed them what WE were." A flush of excitement crept into her cheeks.

"Maternity," she said, "has been our undoing."

From that she opened out into a long, confused emphatic discourse on the position of women, full of wonderful statements, while Constance worked at her stencilling and Ann Veronica and Hetty listened, and Teddy contributed sympathetic noises and consumed cheap cigarettes. As she talked she made weak little gestures with her hands, and she thrust her face forward from her bent shoulders; and she peered sometimes at Ann Veronica and sometimes at a photograph of the Axenstrasse, near Fluelen, that hung upon the wall. Ann Veronica watched her face, vaguely sympathizing with her, vaguely disliking her physical insufficiency and her convulsive movements, and the fine eyebrows were knit with a faint perplexity. Essentially the talk was a mixture of

fragments of sentences heard, of passages read, or arguments indicated rather than stated, and all of it was served in a sauce of strange enthusiasm, thin yet intense. Ann Veronica had had some training at the Tredgold College in disentangling threads from confused statements, and she had a curious persuasion that in all this fluent muddle there was something--something real, something that signified. But it was very hard to follow. She did not understand the note of hostility to men that ran through it all, the bitter vindictiveness that lit Miss Miniver's cheeks and eyes, the sense of some at last insupportable wrong slowly accumulated. She had no inkling of that insupportable wrong.

"We are the species," said Miss Miniver, "men are only incidents.

They give themselves airs, but so it is. In all the species of animals the females are more important than the males; the males have to please them. Look at the cock's feathers, look at the competition there is everywhere, except among humans. The stags and oxen and things all have to fight for us, everywhere. Only in man is the male made the most important. And that happens through our maternity; it's our very importance that degrades us.

While we were minding the children they stole our rights and liberties. The children made us slaves, and the men took advantage of it. It's --Mrs. Shalford says--the accidental conquering the essential. Originally in the first animals there were no males, none at all. It has been proved. Then they appear among the lower things"--she made meticulous gestures to figure the scale of life; she seemed to be holding up specimens, and peering through her glasses at them--"among crustaceans and things, just as little creatures, ever so inferior to the females. Mere hangers on. Things you would laugh at. And among human beings, too, women to begin with were the rulers and leaders; they owned all the property, they invented all the arts.

The primitive government was the Matriarchate. The Matriarchate! The Lords of Creation just ran about and did what they were told."

"But is that really so?" said Ann Veronica.

"It has been proved," said Miss Miniver, and added, "by American professors."

"But how did they prove it?"

"By science," said Miss Miniver, and hurried on, putting out a rhetorical hand that showed a slash of finger through its glove. "And now, look at us! See what we have become. Toys! Delicate trifles! A sex of invalids. It is we who have become the parasites and toys."

It was, Ann Veronica felt, at once absurd and extraordinarily right. Hetty, who had periods of lucid expression, put the thing for her from her pillow. She charged boldly into the space of Miss Miniver's rhetorical pause.

"It isn't quite that we're toys. Nobody toys with me. Nobody regards Constance or Vee as a delicate trifle."

Teddy made some confused noise, a thoracic street row; some remark was assassinated by a rival in his throat and buried hastily under a cough.

"They'd better not," said Hetty. "The point is we're not toys, toys isn't the word; we're litter. We're handfuls. We're regarded as inflammable litter that mustn't be left about. We are the species, and maternity is our game; that's all right, but nobody wants that admitted for fear we should all catch fire, and set about fulfilling the purpose of our beings without waiting

for further explanations. As if we didn't know! The practical trouble is our ages. They used to marry us off at seventeen, rush us into things before we had time to protest. They don't now. Heaven knows why! They don't marry most of us off now until high up in the twenties. And the age gets higher. We have to hang about in the interval. There's a great gulf opened, and nobody's got any plans what to do with us. So the world is choked with waste and waiting daughters. Hanging about! And they start thinking and asking questions, and begin to be neither one thing nor the other. We're partly human beings and partly females in suspense."

Miss Miniver followed with an expression of perplexity, her mouth shaped to futile expositions. The Widgeott method of thought puzzled her weakly rhetorical mind. "There is no remedy, girls," she began, breathlessly, "except the Vote. Give us that--"

Ann Veronica came in with a certain disregard of Miss Miniver. "That's it," she said. "They have no plans for us. They have no ideas what to do with us."

"Except," said Constance, surveying her work with her head on one side, "to keep the matches from the litter."

"And they won't let us make plans for ourselves."

"We will," said Miss Miniver, refusing to be suppressed, "if some of us have to be killed to get it." And she pressed her lips together in white resolution and nodded, and she was manifestly full of that same passion for conflict and self-sacrifice that has given the world martyrs since the beginning of things. "I wish I could make every woman, every girl, see this as clearly as I see it--just what the Vote means to us. Just what it means. . . ."

Part 2

As Ann Veronica went back along the Avenue to her aunt she became aware of a light-footed pursuer running. Teddy overtook her, a little out of breath, his innocent face flushed, his straw-colored hair disordered. He was out of breath, and spoke in broken sentences.

"I say, Vee. Half a minute, Vee. It's like this: You want freedom. Look here. You know--if you want freedom. Just an idea of mine. You know how those Russian students do? In Russia. Just a formal marriage. Mere formality. Liberates the girl from parental control. See? You marry me. Simply. No further responsibility whatever. Without hindrance--present occupation. Why not? Quite willing. Get a license--just an idea of mine. Doesn't matter a bit to me. Do anything to please you, Vee. Anything. Not fit to be dust on your boots. Still--there you are!"

He paused.

Ann Veronica's desire to laugh unrestrainedly was checked by the tremendous earnestness of his expression. "Awfully good of you, Teddy." she said.

He nodded silently, too full for words.

"But I don't see," said Ann Veronica, "just how it fits the present situation."

"No! Well, I just suggested it. Threw it out. Of course, if at any time--see reason--alter your opinion. Always at your service.

No offence, I hope. All right! I'm off. Due to play hockey. Jackson's. Horrid snorters! So long, Vee! Just suggested it. See? Nothing really. Passing thought."

"Teddy," said Ann Veronica, "you're a dear!"

"Oh, quite!" said Teddy, convulsively, and lifted an imaginary hat and left her.

Part 3

The call Ann Veronica paid with her aunt that afternoon had at first much the same relation to the Widgett conversation that a plaster statue of Mr. Gladstone would have to a carelessly displayed interior on a dissecting-room table. The Widgetts talked with a remarkable absence of external coverings; the Palsworthys found all the meanings of life on its surfaces. They seemed the most wrapped things in all Ann Veronica's wrapped world. The Widgett mental furniture was perhaps worn and shabby, but there it was before you, undisguised, fading visibly in an almost pitiless sunlight. Lady Palsworthy was the widow of a knight who had won his spurs in the wholesale coal trade, she was of good seventeenth-century attorney blood, a county family, and distantly related to Aunt Mollie's deceased curate. She was the social leader of Morningside Park, and in her superficial and euphuistic way an extremely kind and pleasant woman. With her lived a Mrs. Pramlay, a sister of the Morningside Park doctor, and a very active and useful member of the Committee of the Impoverished Gentlewomen's Aid Society. Both ladies were on easy and friendly terms with all that was best in Morningside Park society; they had an afternoon once a month that was quite well

attended, they sometimes gave musical evenings, they dined out and gave a finish to people's dinners, they had a full-sized croquet lawn and tennis beyond, and understood the art of bringing people together. And they never talked of anything at all, never discussed, never even encouraged gossip. They were just nice.

Ann Veronica found herself walking back down the Avenue that had just been the scene of her first proposal beside her aunt, and speculating for the first time in her life about that lady's mental attitudes. Her prevailing effect was one of quiet and complete assurance, as though she knew all about everything, and was only restrained by her instinctive delicacy from telling what she knew. But the restraint exercised by her instinctive delicacy was very great; over and above coarse or sexual matters it covered religion and politics and any mention of money matters or crime, and Ann Veronica found herself wondering whether these exclusions represented, after all, anything more than suppressions. Was there anything at all in those locked rooms of her aunt's mind? Were they fully furnished and only a little dusty and cobwebby and in need of an airing, or were they stark vacancy except, perhaps, for a cockroach or so or the gnawing of a rat? What was the mental equivalent of a rat's gnawing? The image was going astray. But what would her aunt think of Teddy's recent off-hand suggestion of marriage? What would she think of the Widgett conversation? Suppose she was to tell her aunt quietly but firmly about the parasitic males of degraded crustacea. The girl suppressed a chuckle that would have been inexplicable.
