There came a wild rush of anthropological lore into her brain, a flare of indecorous humor. It was one of the secret troubles of her mind, this grotesque twist her ideas would sometimes take, as though they rebelled and rioted. After all, she found herself reflecting, behind her aunt's complacent visage there was a past

as lurid as any one's--not, of course, her aunt's own personal past, which was apparently just that curate and almost incredibly jejune, but an ancestral past with all sorts of scandalous things in it: fire and slaughterings, exogamy, marriage by capture, corroborees, cannibalism! Ancestresses with perhaps dim anticipatory likenesses to her aunt, their hair less neatly done, no doubt, their manners and gestures as yet undisciplined, but still ancestresses in the direct line, must have danced through a brief and stirring life in the woody buff. Was there no echo anywhere in Miss Stanley's pacified brain? Those empty rooms, if they were empty, were the equivalents of astoundingly decorated predecessors. Perhaps it was just as well there was no inherited memory.

Ann Veronica was by this time quite shocked at her own thoughts, and yet they would go on with their freaks. Great vistas of history opened, and she and her aunt were near reverting to the primitive and passionate and entirely indecorous arboreal--were swinging from branches by the arms, and really going on quite dread-fully--when their arrival at the Palsworthys' happily checked this play of fancy, and brought Ann Veronica back to the exigencies of the wrapped life again.

Lady Palsworthy liked Ann Veronica because she was never awkward, had steady eyes, and an almost invariable neatness and dignity in her clothes. She seemed just as stiff and shy as a girl ought to be, Lady Palsworthy thought, neither garrulous nor unready, and free from nearly all the heavy aggressiveness, the overgrown, overblown quality, the egotism and want of consideration of the typical modern girl. But then Lady Palsworthy had never seen Ann Veronica running like the wind at hockey. She had never seen her sitting on tables nor heard her discussing theology, and had failed to observe that the graceful figure was a natural one and not due to ably chosen stays. She took it for granted Ann Veronica wore stays--mild stays, perhaps, but stays, and thought

no more of the matter. She had seen her really only at teas, with the Stanley strain in her uppermost. There are so many girls nowadays who are quite unpresentable at tea, with their untrimmed laughs, their awful dispositions of their legs when they sit down, their slangy disrespect; they no longer smoke, it is true, like the girls of the eighties and nineties, nevertheless to a fine intelligence they have the flavor of tobacco. They have no amenities, they scratch the mellow surface of things almost as if they did it on purpose; and Lady Palsworthy and Mrs. Pramlay lived for amenities and the mellowed surfaces of things. Ann Veronica was one of the few young people--and one must have young people just as one must have flowers--one could ask to a little gathering without the risk of a painful discord. Then the distant relationship to Miss Stanley gave them a slight but pleasant sense of proprietorship in the girl. They had their little dreams about her.

Mrs. Pramlay received them in the pretty chintz drawing-room, which opened by French windows on the trim garden, with its croquet lawn, its tennis-net in the middle distance, and its remote rose alley lined with smart dahlias and flaming sunflowers. Her eye met Miss Stanley's understandingly, and she was if anything a trifle more affectionate in her greeting to Ann Veronica. Then Ann Veronica passed on toward the tea in the garden, which was dotted with the elite of Morningside Park society, and there she was pounced upon by Lady Palsworthy and given tea and led about. Across the lawn and hovering indecisively, Ann Veronica saw and immediately affected not to see Mr. Manning, Lady Palsworthy's nephew, a tall young man of seven-and-thirty with a handsome, thoughtful, impassive face, a full black mustache, and a certain heavy luxuriousness of gesture. The party resolved itself for Ann Veronica into a game in which she manoeuvred unostentatiously and finally unsuccessfully to avoid talking alone with this gentleman.

Mr. Manning had shown on previous occasions that he found Ann Veronica interesting and that he wished to interest her. He was a civil servant of some standing, and after a previous conversation upon aesthetics of a sententious, nebulous, and sympathetic character, he had sent her a small volume, which he described as the fruits of his leisure and which was as a matter of fact rather carefully finished verse. It dealt with fine aspects of Mr. Manning's feelings, and as Ann Veronica's mind was still largely engaged with fundamentals and found no pleasure in metrical forms, she had not as yet cut its pages. So that as she saw him she remarked to herself very faintly but definitely, "Oh, golly!" and set up a campaign of avoidance that Mr. Manning at last broke down by coming directly at her as she talked with the vicar's aunt about some of the details of the alleged smell of the new church lamps. He did not so much cut into this conversation as loom over it, for he was a tall, if rather studiously stooping, man.

The face that looked down upon Ann Veronica was full of amiable intention. "Splendid you are looking to-day, Miss Stanley," he said. "How well and jolly you must be feeling."

He beamed over the effect of this and shook hands with effusion, and Lady Palsworthy suddenly appeared as his confederate and disentangled the vicar's aunt.

"I love this warm end of summer more than words can tell," he said. "I've tried to make words tell it. It's no good. Mild, you know, and boon. You want music."

Ann Veronica agreed, and tried to make the manner of her assent cover a possible knowledge of a probable poem.

"Splendid it must be to be a composer. Glorious! The Pastoral. Beethoven; he's the best of them. Don't you think? Tum, tay,

tum, tay."

Ann Veronica did.

"What have you been doing since our last talk? Still cutting up rabbits and probing into things? I've often thought of that talk of ours--often."

He did not appear to require any answer to his question.

"Often," he repeated, a little heavily.

"Beautiful these autumn flowers are," said Ann Veronica, in a wide, uncomfortable pause.

"Do come and see the Michaelmas daisies at the end of the garden," said Mr. Manning, "they're a dream." And Ann Veronica found herself being carried off to an isolation even remoter and more conspicuous than the corner of the lawn, with the whole of the party aiding and abetting and glancing at them. "Damn!" said Ann Veronica to herself, rousing herself for a conflict.

Mr. Manning told her he loved beauty, and extorted a similar admission from her; he then expatiated upon his own love of beauty. He said that for him beauty justified life, that he could not imagine a good action that was not a beautiful one nor any beautiful thing that could be altogether bad. Ann Veronica hazarded an opinion that as a matter of history some very beautiful people had, to a quite considerable extent, been bad, but Mr. Manning questioned whether when they were bad they were really beautiful or when they were beautiful bad. Ann Veronica found her attention wandering a little as he told her that he was not ashamed to feel almost slavish in the presence of really beautiful people, and then they came to the Michaelmas daisies. They were really very fine and abundant, with a blaze of

perennial sunflowers behind them.

"They make me want to shout," said Mr. Manning, with a sweep of the arm.

"They're very good this year," said Ann Veronica, avoiding controversial matter.

"Either I want to shout," said Mr. Manning, "when I see beautiful things, or else I want to weep." He paused and looked at her, and said, with a sudden drop into a confidential undertone, "Or else I want to pray."

"When is Michaelmas Day?" said Ann Veronica, a little abruptly.

"Heaven knows!" said Mr. Manning; and added, "the twenty-ninth."

"I thought it was earlier," said Ann Veronica. "Wasn't Parliament to reassemble?"

He put out his hand and leaned against a tree and crossed his legs. "You're not interested in politics?" he asked, almost with a note of protest.

"Well, rather," said Ann Veronica. "It seems-- It's interesting."

"Do you think so? I find my interest in that sort of thing decline and decline."

"I'm curious. Perhaps because I don't know. I suppose an intelligent person OUGHT to be interested in political affairs. They concern us all."

"I wonder," said Mr. Manning, with a baffling smile.

"I think they do. After all, they're history in the making."

"A sort of history," said Mr. Manning; and repeated, "a sort of history. But look at these glorious daisies!"

"But don't you think political questions ARE important?"

"I don't think they are this afternoon, and I don't think they are to you."

Ann Veronica turned her back on the Michaelmas daisies, and faced toward the house with an air of a duty completed.

"Just come to that seat now you are here, Miss Stanley, and look down the other path; there's a vista of just the common sort. Better even than these."

Ann Veronica walked as he indicated.

"You know I'm old-fashioned, Miss Stanley. I don't think women need to trouble about political questions."

"I want a vote," said Ann Veronica.

"Really!" said Mr. Manning, in an earnest voice, and waved his hand to the alley of mauve and purple. "I wish you didn't."

"Why not?" She turned on him.

"It jars. It jars with all my ideas. Women to me are something so serene, so fine, so feminine, and politics are so dusty, so sordid, so wearisome and quarrelsome. It seems to me a woman's duty to be beautiful, to BE beautiful and to behave beautifully, and politics are by their very nature ugly. You see, I--I am a

woman worshipper. I worshipped women long before I found any woman I might ever hope to worship. Long ago. And--the idea of committees, of hustings, of agenda-papers!"

"I don't see why the responsibility of beauty should all be shifted on to the women," said Ann Veronica, suddenly remembering a part of Miss Miniver's discourse.

"It rests with them by the nature of things. Why should you who are queens come down from your thrones? If you can afford it, WE can't. We can't afford to turn our women, our Madonnas, our Saint Catherines, our Mona Lisas, our goddesses and angels and fairy princesses, into a sort of man. Womanhood is sacred to me.

My politics in that matter wouldn't be to give women votes. I'm a Socialist, Miss Stanley."

"WHAT?" said Ann Veronica, startled.

"A Socialist of the order of John Ruskin. Indeed I am! I would make this country a collective monarchy, and all the girls and women in it should be the Queen. They should never come into contact with politics or economics--or any of those things. And we men would work for them and serve them in loyal fealty."

"That's rather the theory now," said Ann Veronica. "Only so many men neglect their duties."

"Yes," said Mr. Manning, with an air of emerging from an elaborate demonstration, "and so each of us must, under existing conditions, being chivalrous indeed to all women, choose for himself his own particular and worshipful queen."

"So far as one can judge from the system in practice," said Ann Veronica, speaking in a loud, common-sense, detached tone, and

beginning to walk slowly but resolutely toward the lawn, "it doesn't work."

"Every one must be experimental," said Mr. Manning, and glanced round hastily for further horticultural points of interest in secluded corners. None presented themselves to save him from that return.

"That's all very well when one isn't the material experimented upon," Ann Veronica had remarked.

"Women would--they DO have far more power than they think, as influences, as inspirations."

Ann Veronica said nothing in answer to that.

"You say you want a vote," said Mr. Manning, abruptly.

"I think I ought to have one."

"Well, I have two," said Mr. Manning--"one in Oxford University and one in Kensington." He caught up and went on with a sort of clumsiness: "Let me present you with them and be your voter."

There followed an instant's pause, and then Ann Veronica had decided to misunderstand.

"I want a vote for myself," she said. "I don't see why I should take it second-hand. Though it's very kind of you. And rather unscrupulous. Have you ever voted, Mr. Manning? I suppose there's a sort of place like a ticket-office. And a ballot-box--" Her face assumed an expression of intellectual conflict. "What is a ballot-box like, exactly?" she asked, as though it was very important to her.

Mr. Manning regarded her thoughtfully for a moment and stroked his mustache. "A ballot-box, you know," he said, "is very largely just a box." He made quite a long pause, and went on, with a sigh: "You have a voting paper given you--"

They emerged into the publicity of the lawn.

"Yes," said Ann Veronica, "yes," to his explanation, and saw across the lawn Lady Palsworthy talking to her aunt, and both of them staring frankly across at her and Mr. Manning as they talked.

CHAPTER THE THIRD

THE MORNING OF THE CRISIS

Part 1

Two days after came the day of the Crisis, the day of the Fadden Dance. It would have been a crisis anyhow, but it was complicated in Ann Veronica's mind by the fact that a letter lay on the breakfast-table from Mr. Manning, and that her aunt focussed a brightly tactful disregard upon this throughout the meal. Ann Veronica had come down thinking of nothing in the world but her inflexible resolution to go to the dance in the teeth of all opposition. She did not know Mr. Manning's handwriting, and opened his letter and read some lines before its import appeared. Then for a time she forgot the Fadden affair altogether. With a well-simulated unconcern and a heightened color she finished her breakfast.

She was not obliged to go to the Tredgold College, because as yet the College had not settled down for the session. She was

supposed to be reading at home, and after breakfast she strolled into the vegetable garden, and having taken up a position upon the staging of a disused greenhouse that had the double advantage of being hidden from the windows of the house and secure from the sudden appearance of any one, she resumed the reading of Mr. Manning's letter.

Mr. Manning's handwriting had an air of being clear without being easily legible; it was large and rather roundish, with a lack of definition about the letters and a disposition to treat the large ones as liberal-minded people nowadays treat opinions, as all amounting to the same thing really--a years-smoothed boyish rather than an adult hand. And it filled seven sheets of notepaper, each written only on one side.

"MY DEAR MISS STANLEY," it began,--"I hope you will forgive my bothering you with a letter, but I have been thinking very much over our conversation at Lady Palsworthy's, and I feel there are things I want to say to you so much that I cannot wait until we meet again. It is the worst of talk under such social circumstances that it is always getting cut off so soon as it is beginning; and I went home that afternoon feeling I had said nothing--literally nothing--of the things I had meant to say to you and that were coursing through my head. They were things I had meant very much to talk to you about, so that I went home vexed and disappointed, and only relieved myself a little by writing a few verses. I wonder if you will mind very much when I tell you they were suggested by you. You must forgive the poet's license I take. Here is one verse. The metrical irregularity is intentional, because I want, as it were, to put you apart: to change the lilt and the mood altogether when I speak of you.

" 'A SONG OF LADIES AND MY LADY

" 'Saintly white and a lily is Mary,
Margaret's violets, sweet and shy;
Green and dewy is Nellie-bud fairy,
Forget-me-nots live in Gwendolen's eye.
Annabel shines like a star in the darkness,
Rosamund queens it a rose, deep rose;
But the lady I love is like sunshine in April weather,

She gleams and gladdens, she warms--and goes.'

"Crude, I admit. But let that verse tell my secret. All bad verse--originally the epigram was Lang's, I believe--is written in a state of emotion.

"My dear Miss Stanley, when I talked to you the other afternoon of work and politics and such-like things, my mind was all the time resenting it beyond measure. There we were discussing whether you should have a vote, and I remembered the last occasion we met it was about your prospects of success in the medical profession or as a Government official such as a number of women now are, and all the time my heart was crying out within me, 'Here is the Queen of your career.' I wanted, as I have never wanted before, to take you up, to make you mine, to carry you off and set you apart from all the strain and turmoil of life. For nothing will ever convince me that it is not the man's share in life to shield, to protect, to lead and toil and watch and battle with the world at large. I want to be your knight, your servant, your protector, your--I dare scarcely write the word--your husband. So I come suppliant. I am five-and-thirty, and I have knocked about in the world and tasted the quality of life. I had a hard fight to begin with to win my way into the Upper Division--I was third on a list of forty-seven--and since then I have found myself promoted almost yearly in a widening sphere of social service. Before I met you I never met any one whom I felt I could love, but you have discovered depths in my

own nature I had scarcely suspected. Except for a few early ebullitions of passion, natural to a warm and romantic disposition, and leaving no harmful after-effects--ebullitions that by the standards of the higher truth I feel no one can justly cast a stone at, and of which I for one am by no means ashamed--I come to you a pure and unencumbered man. I love you. In addition to my public salary I have a certain private property and further expectations through my aunt, so that I can offer you a life of wide and generous refinement, travel, books, discussion, and easy relations with a circle of clever and brilliant and thoughtful people with whom my literary work has brought me into contact, and of which, seeing me only as you have done alone in Morningside Park, you can have no idea. I have a certain standing not only as a singer but as a critic, and I belong to one of the most brilliant causerie dinner clubs of the day, in which successful Bohemianism, politicians, men of affairs, artists, sculptors, and cultivated noblemen generally, mingle together in the easiest and most delightful intercourse. That is my real milieu, and one that I am convinced you would not only adorn but delight in.

"I find it very hard to write this letter. There are so many things I want to tell you, and they stand on such different levels, that the effect is necessarily confusing and discordant, and I find myself doubting if I am really giving you the thread of emotion that should run through all this letter. For although I must confess it reads very much like an application or a testimonial or some such thing as that, I can assure you I am writing this in fear and trembling with a sinking heart. My mind is full of ideas and images that I have been cherishing and accumulating--dreams of travelling side by side, of lunching quietly together in some jolly restaurant, of moonlight and music and all that side of life, of seeing you dressed like a queen and shining in some brilliant throng--mine; of your looking at flowers in some old-world garden, our garden--there are splendid

places to be got down in Surrey, and a little runabout motor is quite within my means. You know they say, as, indeed, I have just quoted already, that all bad poetry is written in a state of emotion, but I have no doubt that this is true of bad offers of marriage. I have often felt before that it is only when one has nothing to say that one can write easy poetry. Witness Browning. And how can I get into one brief letter the complex accumulated desires of what is now, I find on reference to my diary, nearly sixteen months of letting my mind run on you--ever since that jolly party at Surbiton, where we raced and beat the other boat. You steered and I rowed stroke. My very sentences stumble and give way. But I do not even care if I am absurd. I am a resolute man, and hitherto when I have wanted a thing I have got it; but I have never yet wanted anything in my life as I have wanted you. It isn't the same thing. I am afraid because I love you, so that the mere thought of failure hurts. If I did not love you so much I believe I could win you by sheer force of character, for people tell me I am naturally of the dominating type. Most of my successes in life have been made with a sort of reckless vigor.

"Well, I have said what I had to say, stumblingly and badly, and baldly. But I am sick of tearing up letters and hopeless of getting what I have to say better said. It would be easy enough for me to write an eloquent letter about something else. Only I do not care to write about anything else. Let me put the main question to you now that I could not put the other afternoon. Will you marry me, Ann Veronica?"

Very sincerely yours,
"HUBERT MANNING."

Ann Veronica read this letter through with grave, attentive eyes.

Her interest grew as she read, a certain distaste disappeared.

Twice she smiled, but not unkindly. Then she went back and mixed up the sheets in a search for particular passages. Finally she fell into reflection.

"Odd!" she said. "I suppose I shall have to write an answer. It's so different from what one has been led to expect."

She became aware of her aunt, through the panes of the greenhouse, advancing with an air of serene unconsciousness from among the raspberry canes.

"No you don't!" said Ann Veronica, and walked out at a brisk and business-like pace toward the house.

"I'm going for a long tramp, auntie," she said.

"Alone, dear?"

"Yes, aunt. I've got a lot of things to think about."

Miss Stanley reflected as Ann Veronica went toward the house. She thought her niece very hard and very self-possessed and self-confident. She ought to be softened and tender and confidential at this phase of her life. She seemed to have no idea whatever of the emotional states that were becoming to her age and position. Miss Stanley walked round the garden thinking, and presently house and garden reverberated to Ann Veronica's slamming of the front door.

"I wonder!" said Miss Stanley.

For a long time she surveyed a row of towering holly-hocks, as though they offered an explanation. Then she went in and up-stairs, hesitated on the landing, and finally, a little breathless and with an air of great dignity, opened the door and

walked into Ann Veronica's room. It was a neat, efficient-looking room, with a writing-table placed with a business-like regard to the window, and a bookcase surmounted by a pig's skull, a dissected frog in a sealed bottle, and a pile of shiny, black-covered note-books. In the corner of the room were two hockey-sticks and a tennis-racket, and upon the walls Ann Veronica, by means of autotypes, had indicated her proclivities in art. But Miss Stanley took no notice of these things. She walked straight across to the wardrobe and opened it. There, hanging among Ann Veronica's more normal clothing, was a skimpy dress of red canvas, trimmed with cheap and tawdry braid, and short--it could hardly reach below the knee. On the same peg and evidently belonging to it was a black velvet Zouave jacket. And then! a garment that was conceivably a secondary skirt.

Miss Stanley hesitated, and took first one and then another of the constituents of this costume off its peg and surveyed it.

The third item she took with a trembling hand by its waistbelt. As she raised it, its lower portion fell apart into two baggy crimson masses.

"TROUSERS!" she whispered.

Her eyes travelled about the room as if in appeal to the very chairs.

Tucked under the writing-table a pair of yellow and gold Turkish slippers of a highly meretricious quality caught her eye. She walked over to them still carrying the trousers in her hands, and stooped to examine them. They were ingenious disguises of gilt paper destructively gummed, it would seem, to Ann Veronicas' best dancing-slippers.

Then she reverted to the trousers.

"How CAN I tell him?" whispered Miss Stanley.

Part 2

Ann Veronica carried a light but business-like walking-stick. She walked with an easy quickness down the Avenue and through the proletarian portion of Morningside Park, and crossing these fields came into a pretty overhung lane that led toward Caddington and the Downs. And then her pace slackened. She tucked her stick under her arm and re-read Manning's letter.

"Let me think," said Ann Veronica. "I wish this hadn't turned up to-day of all days."

She found it difficult to begin thinking, and indeed she was anything but clear what it was she had to think about. Practically it was most of the chief interests in life that she proposed to settle in this pedestrian meditation. Primarily it was her own problem, and in particular the answer she had to give to Mr. Manning's letter, but in order to get data for that she found that she, having a logical and ordered mind, had to decide upon the general relations of men to women, the objects and conditions of marriage and its bearing upon the welfare of the race, the purpose of the race, the purpose, if any, of everything. . . .

"Frightful lot of things aren't settled," said Ann Veronica. In addition, the Fadden Dance business, all out of proportion, occupied the whole foreground of her thoughts and threw a color of rebellion over everything. She kept thinking she was thinking about Mr. Manning's proposal of marriage and finding she was thinking of the dance.

For a time her efforts to achieve a comprehensive concentration were dispersed by the passage of the village street of Caddington, the passing of a goggled car-load of motorists, and the struggles of a stable lad mounted on one recalcitrant horse and leading another. When she got back to her questions again in the monotonous high-road that led up the hill, she found the image of Mr. Manning central in her mind. He stood there, large and dark, enunciating, in his clear voice from beneath his large mustache, clear flat sentences, deliberately kindly. He proposed, he wanted to possess her! He loved her.

Ann Veronica felt no repulsion at the prospect. That Mr. Manning loved her presented itself to her bloodlessly, stilled from any imaginative quiver or thrill of passion or disgust. The relationship seemed to have almost as much to do with blood and body as a mortgage. It was something that would create a mutual claim, a relationship. It was in another world from that in which men will die for a kiss, and touching hands lights fires that burn up lives--the world of romance, the world of passionately beautiful things.

But that other world, in spite of her resolute exclusion of it, was always looking round corners and peeping through chinks and crannies, and rustling and raiding into the order in which she chose to live, shining out of pictures at her, echoing in lyrics and music; it invaded her dreams, it wrote up broken and enigmatical sentences upon the passage walls of her mind. She was aware of it now as if it were a voice shouting outside a house, shouting passionate verities in a hot sunlight, a voice that cries while people talk insincerely in a darkened room and pretend not to hear. Its shouting now did in some occult manner convey a protest that Mr. Manning would on no account do, though he was tall and dark and handsome and kind, and thirty-five and adequately prosperous, and all that a husband should be. But

there was, it insisted, no mobility in his face, no movement, nothing about him that warmed. If Ann Veronica could have put words to that song they would have been, "Hot-blooded marriage or none!" but she was far too indistinct in this matter to frame any words at all.

"I don't love him," said Ann Veronica, getting a gleam. "I don't see that his being a good sort matters. That really settles about that. . . . But it means no end of a row."

For a time she sat on a rail before leaving the road for the downland turf. "But I wish," she said, "I had some idea what I was really up to."

Her thoughts went into solution for a time, while she listened to a lark singing.

"Marriage and mothering," said Ann Veronica, with her mind crystallizing out again as the lark dropped to the nest in the turf. "And all the rest of it perhaps is a song."

Part 3

Her mind got back to the Fadden Ball.

She meant to go, she meant to go, she meant to go. Nothing would stop her, and she was prepared to face the consequences. Suppose her father turned her out of doors! She did not care, she meant to go. She would just walk out of the house and go. . . .

She thought of her costume in some detail and with considerable satisfaction, and particularly of a very jolly property dagger

with large glass jewels in the handle, that reposed in a drawer in her room. She was to be a Corsair's Bride. "Fancy stabbing a man for jealousy!" she thought. "You'd have to think how to get in between his bones."

She thought of her father, and with an effort dismissed him from her mind.

She tried to imagine the collective effect of the Fadden Ball; she had never seen a fancy-dress gathering in her life. Mr. Manning came into her thoughts again, an unexpected, tall, dark, self-contained presence at the Fadden. One might suppose him turning up; he knew a lot of clever people, and some of them might belong to the class. What would he come as?

Presently she roused herself with a guilty start from the task of dressing and re-dressing Mr. Manning in fancy costume, as though he was a doll. She had tried him as a Crusader, in which guise he seemed plausible but heavy--"There IS something heavy about him; I wonder if it's his mustache?"--and as a Hussar, which made him preposterous, and as a Black Brunswicker, which was better, and as an Arab sheik. Also she had tried him as a dragoman and as a gendarme, which seemed the most suitable of all to his severely handsome, immobile profile. She felt he would tell people the way, control traffic, and refuse admission to public buildings with invincible correctness and the very finest explicit feelings possible. For each costume she had devised a suitable form of matrimonial refusal. "Oh, Lord!" she said, discovering what she was up to, and dropped lightly from the fence upon the turf and went on her way toward the crest.

"I shall never marry," said Ann Veronica, resolutely; "I'm not the sort. That's why it's so important I should take my own line now."

Part 4

Ann Veronica's ideas of marriage were limited and unsystematic. Her teachers and mistresses had done their best to stamp her mind with an ineradicable persuasion that it was tremendously important, and on no account to be thought about. Her first intimations of marriage as a fact of extreme significance in a woman's life had come with the marriage of Alice and the elopement of her second sister, Gwen.

These convulsions occurred when Ann Veronica was about twelve. There was a gulf of eight years between her and the youngest of her brace of sisters--an impassable gulf inhabited chaotically by two noisy brothers. These sisters moved in a grown-up world inaccessible to Ann Veronica's sympathies, and to a large extent remote from her curiosity. She got into rows through meddling with their shoes and tennis-rackets, and had moments of carefully concealed admiration when she was privileged to see them just before her bedtime, rather radiantly dressed in white or pink or amber and prepared to go out with her mother. She thought Alice a bit of a sneak, an opinion her brothers shared, and Gwen rather a snatch at meals. She saw nothing of their love-making, and came home from her boarding-school in a state of decently suppressed curiosity for Alice's wedding.

Her impressions of this cardinal ceremony were rich and confused, complicated by a quite transitory passion that awakened no reciprocal fire for a fat curly headed cousin in black velveteen and a lace collar, who assisted as a page. She followed him about persistently, and succeeded, after a brisk, unchivalrous struggle (in which he pinched and asked her to "cheese it"), in kissing him among the raspberries behind the greenhouse. Afterward her brother Roddy, also strange in velveteen, feeling

rather than knowing of this relationship, punched this Adonis's head.

A marriage in the house proved to be exciting but extremely disorganizing. Everything seemed designed to unhinge the mind and make the cat wretched. All the furniture was moved, all the meals were disarranged, and everybody, Ann Veronica included, appeared in new, bright costumes. She had to wear cream and a brown sash and a short frock and her hair down, and Gwen cream and a brown sash and a long skirt and her hair up. And her mother, looking unusually alert and hectic, wore cream and brown also, made up in a more complicated manner.

Ann Veronica was much impressed by a mighty trying on and altering and fussing about Alice's "things"--Alice was being re-costumed from garret to cellar, with a walking-dress and walking-boots to measure, and a bride's costume of the most ravishing description, and stockings and such like beyond the dreams of avarice --and a constant and increasing dripping into the house of irrelevant remarkable objects, such as--

Real lace bedspread;

Gilt travelling clock;

Ornamental pewter plaque;

Salad bowl (silver mounted) and servers;

Madgett's "English Poets" (twelve volumes), bound purple morocco;

Etc., etc.

Through all this flutter of novelty there came and went a solicitous, preoccupied, almost depressed figure. It was Doctor

Ralph, formerly the partner of Doctor Stickell in the Avenue, and now with a thriving practice of his own in Wamblesmith. He had shaved his side-whiskers and come over in flannels, but he was still indisputably the same person who had attended Ann Veronica for the measles and when she swallowed the fish-bone. But his role was altered, and he was now playing the bridegroom in this remarkable drama. Alice was going to be Mrs. Ralph. He came in apologetically; all the old "Well, and how ARE we?" note gone; and once he asked Ann Veronica, almost furtively,

"How's Alice getting on, Vee?" Finally, on the Day, he appeared like his old professional self transfigured, in the most beautiful light gray trousers Ann Veronica had ever seen and a new shiny silk hat with a most becoming roll. . . .

It was not simply that all the rooms were rearranged and everybody dressed in unusual fashions, and all the routines of life abolished and put away: people's tempers and emotions also seemed strangely disturbed and shifted about. Her father was distinctly irascible, and disposed more than ever to hide away among the petrological things--the study was turned out. At table he carved in a gloomy but resolute manner. On the Day he had trumpet-like outbreaks of cordiality, varied by a watchful preoccupation. Gwen and Alice were fantastically friendly, which seemed to annoy him, and Mrs. Stanley was throughout enigmatical, with an anxious eye on her husband and Alice.

There was a confused impression of livery carriages and whips with white favors, people fussily wanting other people to get in before them, and then the church. People sat in unusual pews, and a wide margin of hassocky emptiness intervened between the ceremony and the walls.

Ann Veronica had a number of fragmentary impressions of Alice strangely transfigured in bridal raiment. It seemed to make her

sister downcast beyond any precedent. The bridesmaids and pages got rather jumbled in the aisle, and she had an effect of Alice's white back and sloping shoulders and veiled head receding toward the altar. In some incomprehensible way that back view made her feel sorry for Alice. Also she remembered very vividly the smell of orange blossom, and Alice, drooping and spiritless, mumbling responses, facing Doctor Ralph, while the Rev. Edward Bribble stood between them with an open book. Doctor Ralph looked kind and large, and listened to Alice's responses as though he was listening to symptoms and thought that on the whole she was progressing favorably.

And afterward her mother and Alice kissed long and clung to each other. And Doctor Ralph stood by looking considerate. He and her father shook hands manfully.

Ann Veronica had got quite interested in Mr. Bribble's rendering of the service--he had the sort of voice that brings out things--and was still teeming with ideas about it when finally a wild outburst from the organ made it clear that, whatever snivelling there might be down in the chancel, that excellent wind instrument was, in its Mendelssohnian way, as glad as ever it could be. "Pump, pump, per-um-pump, Pum, Pump, Per-um. . . ."

The wedding-breakfast was for Ann Veronica a spectacle of the unreal consuming the real; she liked that part very well, until she was carelessly served against her expressed wishes with mayonnaise. She was caught by an uncle, whose opinion she valued, making faces at Roddy because he had exulted at this.

Of the vast mass of these impressions Ann Veronica could make nothing at the time; there they were--Fact! She stored them away in a mind naturally retentive, as a squirrel stores away nuts, for further digestion. Only one thing emerged with any reasonable clarity in her mind at once, and that was that unless

she was saved from drowning by an unmarried man, in which case the ceremony is unavoidable, or totally destitute of under-clothing, and so driven to get a trousseau, in which hardship a trousseau would certainly be "ripping," marriage was an experience to be strenuously evaded.

When they were going home she asked her mother why she and Gwen and Alice had cried.

"Ssh!" said her mother, and then added, "A little natural feeling, dear."

"But didn't Alice want to marry Doctor Ralph?"

"Oh, ssh, Vee!" said her mother, with an evasion as patent as an advertisement board. "I am sure she will be very happy indeed with Doctor Ralph."

But Ann Veronica was by no means sure of that until she went over to Wamblesmith and saw her sister, very remote and domestic and authoritative, in a becoming tea-gown, in command of Doctor Ralph's home. Doctor Ralph came in to tea and put his arm round Alice and kissed her, and Alice called him "Squiggles," and stood in the shelter of his arms for a moment with an expression of satisfied proprietorship. She HAD cried, Ann Veronica knew. There had been fusses and scenes dimly apprehended through half-open doors. She had heard Alice talking and crying at the same time, a painful noise. Perhaps marriage hurt. But now it was all over, and Alice was getting on well. It reminded Ann Veronica of having a tooth stopped.

And after that Alice became remoter than ever, and, after a time, ill. Then she had a baby and became as old as any really grown-up person, or older, and very dull. Then she and her husband went off to a Yorkshire practice, and had four more

babies, none of whom photographed well, and so she passed beyond the sphere of Ann Veronica's sympathies altogether.

Part 5

The Gwen affair happened when she was away at school at Marticombe-on-Sea, a term before she went to the High School, and was never very clear to her.

Her mother missed writing for a week, and then she wrote in an unusual key. "My dear," the letter ran, "I have to tell you that your sister Gwen has offended your father very much. I hope you will always love her, but I want you to remember she has offended your father and married without his consent. Your father is very angry, and will not have her name mentioned in his hearing. She has married some one he could not approve of, and gone right away. . . ."

When the next holidays came Ann Veronica's mother was ill, and Gwen was in the sick-room when Ann Veronica returned home. She was in one of her old walking-dresses, her hair was done in an unfamiliar manner, she wore a wedding-ring, and she looked as if she had been crying.

"Hello, Gwen!" said Ann Veronica, trying to put every one at their ease. "Been and married? . . . What's the name of the happy man?"

Gwen owned to "Fortescue."

"Got a photograph of him or anything?" said Ann Veronica, after kissing her mother.

Gwen made an inquiry, and, directed by Mrs. Stanley, produced a portrait from its hiding-place in the jewel-drawer under the mirror. It presented a clean-shaven face with a large Corinthian nose, hair tremendously waving off the forehead and more chin and neck than is good for a man.

"LOOKS all right," said Ann Veronica, regarding him with her head first on one side and then on the other, and trying to be agreeable. "What's the objection?"

"I suppose she ought to know?" said Gwen to her mother, trying to alter the key of the conversation.

"You see, Vee," said Mrs. Stanley, "Mr. Fortescue is an actor, and your father does not approve of the profession."

"Oh!" said Ann Veronica. "I thought they made knights of actors?"

"They may of Hal some day," said Gwen. "But it's a long business."

"I suppose this makes you an actress?" said Ann Veronica.

"I don't know whether I shall go on," said Gwen, a novel note of languorous professionalism creeping into her voice. "The other women don't much like it if husband and wife work together, and I don't think Hal would like me to act away from him."

Ann Veronica regarded her sister with a new respect, but the traditions of family life are strong. "I don't suppose you'll be able to do it much," said Ann Veronica.

Later Gwen's trouble weighed so heavily on Mrs. Stanley in her

illness that her husband consented to receive Mr. Fortescue in the drawing-room, and actually shake hands with him in an entirely hopeless manner and hope everything would turn out for the best.

The forgiveness and reconciliation was a cold and formal affair, and afterwards her father went off gloomily to his study, and Mr. Fortescue rambled round the garden with soft, propitiatory steps, the Corinthian nose upraised and his hands behind his back, pausing to look long and hard at the fruit-trees against the wall.

Ann Veronica watched him from the dining-room window, and after some moments of maidenly hesitation rambled out into the garden in a reverse direction to Mr. Fortescue's steps, and encountered him with an air of artless surprise.

"Hello!" said Ann Veronica, with arms akimbo and a careless, breathless manner. "You Mr. Fortescue?"

"At your service. You Ann Veronica?"

"Rather! I say--did you marry Gwen?"

"Yes."

"Why?"

Mr. Fortescue raised his eyebrows and assumed a light-comedy expression. "I suppose I fell in love with her, Ann Veronica."

"Rum," said Ann Veronica. "Have you got to keep her now?"

"To the best of my ability," said Mr. Fortescue, with a bow.

"Have you much ability?" asked Ann Veronica.

Mr. Fortescue tried to act embarrassment in order to conceal its reality, and Ann Veronica went on to ask a string of questions about acting, and whether her sister would act, and was she beautiful enough for it, and who would make her dresses, and so on.

As a matter of fact Mr. Fortescue had not much ability to keep her sister, and a little while after her mother's death Ann Veronica met Gwen suddenly on the staircase coming from her father's study, shockingly dingy in dusty mourning and tearful and resentful, and after that Gwen receded from the Morningside Park world, and not even the begging letters and distressful communications that her father and aunt received, but only a vague intimation of dreadfulness, a leakage of incidental comment, flashes of paternal anger at "that blackguard," came to Ann Veronica's ears.

Part 6

These were Ann Veronica's leading cases in the question of marriage. They were the only real marriages she had seen clearly. For the rest, she derived her ideas of the married state from the observed behavior of married women, which impressed her in Morningside Park as being tied and dull and inelastic in comparison with the life of the young, and from a remarkably various reading among books. As a net result she had come to think of all married people much as one thinks of insects that have lost their wings, and of her sisters as new hatched creatures who had scarcely for a moment had wings. She evolved a dim image of herself cooped up in a house under the benevolent

shadow of Mr. Manning. Who knows?--on the analogy of "Squiggles" she might come to call him "Mangles!"

"I don't think I can ever marry any one," she said, and fell suddenly into another set of considerations that perplexed her for a time. Had romance to be banished from life? . . .

It was hard to part with romance, but she had never thirsted so keenly to go on with her University work in her life as she did that day. She had never felt so acutely the desire for free initiative, for a life unhampered by others. At any cost! Her brothers had it practically--at least they had it far more than it seemed likely she would unless she exerted herself with quite exceptional vigor. Between her and the fair, far prospect of freedom and self-development manoeuvred Mr. Manning, her aunt and father, neighbors, customs, traditions, forces. They seemed to her that morning to be all armed with nets and prepared to throw them over her directly her movements became in any manner truly free.

She had a feeling as though something had dropped from her eyes, as though she had just discovered herself for the first time--discovered herself as a sleep-walker might do, abruptly among dangers, hindrances, and perplexities, on the verge of a cardinal crisis.

The life of a girl presented itself to her as something happy and heedless and unthinking, yet really guided and controlled by others, and going on amidst unsuspected screens and concealments.

And in its way it was very well. Then suddenly with a rush came reality, came "growing up"; a hasty imperative appeal for seriousness, for supreme seriousness. The Ralphs and Mannings and Fortescues came down upon the raw inexperience, upon the blinking ignorance of the newcomer; and before her eyes were

fairly open, before she knew what had happened, a new set of guides and controls, a new set of obligations and responsibilities and limitations, had replaced the old. "I want to be a Person," said Ann Veronica to the downs and the open sky; "I will not have this happen to me, whatever else may happen in its place."

Ann Veronica had three things very definitely settled by the time when, a little after mid-day, she found herself perched up on a gate between a bridle-path and a field that commanded the whole wide stretch of country between Chalking and Waldersham. Firstly, she did not intend to marry at all, and particularly she did not mean to marry Mr. Manning; secondly, by some measure or other, she meant to go on with her studies, not at the Tredgold Schools but at the Imperial College; and, thirdly, she was, as an immediate and decisive act, a symbol of just exactly where she stood, a declaration of free and adult initiative, going that night to the Fadden Ball.

But the possible attitude of her father she had still to face. So far she had the utmost difficulty in getting on to that vitally important matter. The whole of that relationship persisted in remaining obscure. What would happen when next morning she returned to Morningside Park?

He couldn't turn her out of doors. But what he could do or might do she could not imagine. She was not afraid of violence, but she was afraid of something mean, some secondary kind of force. Suppose he stopped all her allowance, made it imperative that she should either stay ineffectually resentful at home or earn a living for herself at once. . . . It appeared highly probable to her that he would stop her allowance.

What can a girl do?

Somewhere at this point Ann Veronica's speculations were interrupted and turned aside by the approach of a horse and rider. Mr. Ramage, that iron-gray man of the world, appeared dressed in a bowler hat and a suit of hard gray, astride of a black horse. He pulled rein at the sight of her, saluted, and regarded her with his rather too protuberant eyes. The girl's gaze met his in interested inquiry.

"You've got my view," he said, after a pensive second. "I always get off here and lean over that rail for a bit. May I do so to-day?"

"It's your gate," she said, amiably; "you got it first. It's for you to say if I may sit on it."

He slipped off the horse. "Let me introduce you to Caesar," he said; and she patted Caesar's neck, and remarked how soft his nose was, and secretly deplored the ugliness of equine teeth. Ramage tethered the horse to the farther gate-post, and Caesar blew heavily and began to investigate the hedge.

Ramage leaned over the gate at Ann Veronica's side, and for a moment there was silence.

He made some obvious comments on the wide view warming toward its autumnal blaze that spread itself in hill and valley, wood and village, below.

"It's as broad as life," said Mr. Ramage, regarding it and putting a well-booted foot up on the bottom rail.

"And what are you doing here, young lady," he said, looking up at her face, "wandering alone so far from home?"

"I like long walks," said Ann Veronica, looking down on him.

"Solitary walks?"

"That's the point of them. I think over all sorts of things."

"Problems?"

"Sometimes quite difficult problems."

"You're lucky to live in an age when you can do so. Your mother, for instance, couldn't. She had to do her thinking at home--under inspection."

She looked down on him thoughtfully, and he let his admiration of her free young poise show in his face.

"I suppose things have changed?" she said.

"Never was such an age of transition."

She wondered what to. Mr. Ramage did not know. "Sufficient unto me is the change thereof," he said, with all the effect of an epigram.

"I must confess," he said, "the New Woman and the New Girl intrigue me profoundly. I am one of those people who are interested in women, more interested than I am in anything else. I don't conceal it. And the change, the change of attitude! The way all the old clingingness has been thrown aside is amazing. And all the old--the old trick of shrinking up like a snail at a

touch. If you had lived twenty years ago you would have been called a Young Person, and it would have been your chief duty in life not to know, never to have heard of, and never to understand."

"There's quite enough still," said Ann Veronica, smiling, "that one doesn't understand."

"Quite. But your role would have been to go about saying, 'I beg your pardon' in a reproving tone to things you understood quite well in your heart and saw no harm in. That terrible Young Person! she's vanished. Lost, stolen, or strayed, the Young Person! . . . I hope we may never find her again."

He rejoiced over this emancipation. "While that lamb was about every man of any spirit was regarded as a dangerous wolf. We wore invisible chains and invisible blinkers. Now, you and I can gossip at a gate, and { }Honi soit qui mal y pense. The change has given man one good thing he never had before," he said. "Girl friends. And I am coming to believe the best as well as the most beautiful friends a man can have are girl friends."

He paused, and went on, after a keen look at her:

"I had rather gossip to a really intelligent girl than to any man alive."

"I suppose we ARE more free than we were?" said Ann Veronica, keeping the question general.

"Oh, there's no doubt of it! Since the girls of the eighties broke bounds and sailed away on bicycles--my young days go back to the very beginnings of that--it's been one triumphant relaxation."

"Relaxation, perhaps. But are we any more free?"

"Well?"

"I mean we've long strings to tether us, but we are bound all the same. A woman isn't much freer--in reality."

Mr. Ramage demurred.

"One runs about," said Ann Veronica.

"Yes."

"But it's on condition one doesn't do anything."

"Do what?"

"Oh!--anything."

He looked interrogation with a faint smile.

"It seems to me it comes to earning one's living in the long run," said Ann Veronica, coloring faintly. "Until a girl can go away as a son does and earn her independent income, she's still on a string. It may be a long string, long enough if you like to tangle up all sorts of people; but there it is! If the paymaster pulls, home she must go. That's what I mean."

Mr. Ramage admitted the force of that. He was a little impressed by Ann Veronica's metaphor of the string, which, indeed, she owed to Hetty Widdett. "YOU wouldn't like to be independent?" he asked, abruptly. "I mean REALLY independent. On your own. It isn't such fun as it seems."

"Every one wants to be independent," said Ann Veronica. "Every one. Man or woman."

"And you?"

"Rather!"

"I wonder why?"

"There's no why. It's just to feel--one owns one's self."

"Nobody does that," said Ramage, and kept silence for a moment.

"But a boy--a boy goes out into the world and presently stands on his own feet. He buys his own clothes, chooses his own company, makes his own way of living."

"You'd like to do that?"

"Exactly."

"Would you like to be a boy?"

"I wonder! It's out of the question, any way."

Ramage reflected. "Why don't you?"

"Well, it might mean rather a row."

"I know--" said Ramage, with sympathy.

"And besides," said Ann Veronica, sweeping that aspect aside, "what could I do? A boy sails out into a trade or profession. But--it's one of the things I've just been thinking over. Suppose--suppose a girl did want to start in life, start in life

for herself--" She looked him frankly in the eyes. "What ought she to do?"

"Suppose you--"

"Yes, suppose I--"

He felt that his advice was being asked. He became a little more personal and intimate. "I wonder what you could do?" he said. "I should think YOU could do all sorts of things. . . ."

"What ought you to do?" He began to produce his knowledge of the world for her benefit, jerkily and allusively, and with a strong, rank flavor of "savoir faire." He took an optimist view of her chances. Ann Veronica listened thoughtfully, with her eyes on the turf, and now and then she asked a question or looked up to discuss a point. In the meanwhile, as he talked, he scrutinized her face, ran his eyes over her careless, gracious poise, wondered hard about her. He described her privately to himself as a splendid girl. It was clear she wanted to get away from home, that she was impatient to get away from home. Why? While the front of his mind was busy warning her not to fall into the hopeless miseries of underpaid teaching, and explaining his idea that for women of initiative, quite as much as for men, the world of business had by far the best chances, the back chambers of his brain were busy with the problem of that "Why?"

His first idea as a man of the world was to explain her unrest by a lover, some secret or forbidden or impossible lover. But he dismissed that because then she would ask her lover and not him all these things. Restlessness, then, was the trouble, simple restlessness: home bored her. He could quite understand the daughter of Mr. Stanley being bored and feeling limited. But was that enough? Dim, formless suspicions of something more vital wandered about his mind. Was the young lady impatient for

experience? Was she adventurous? As a man of the world he did not think it becoming to accept maidenly calm as anything more than a mask. Warm life was behind that always, even if it slept. If it was not an actual personal lover, it still might be the lover not yet incarnate, not yet perhaps suspected. . . .

He had diverged only a little from the truth when he said that his chief interest in life was women. It wasn't so much women as Woman that engaged his mind. His was the Latin turn of thinking; he had fallen in love at thirteen, and he was still capable--he prided himself--of falling in love. His invalid wife and her money had been only the thin thread that held his life together; beaded on that permanent relation had been an inter-weaving series of other feminine experiences, disturbing, absorbing, interesting, memorable affairs. Each one had been different from the others, each had had a quality all its own, a distinctive freshness, a distinctive beauty. He could not understand how men could live ignoring this one predominant interest, this wonderful research into personality and the possibilities of pleasing, these complex, fascinating expeditions that began in interest and mounted to the supremest, most passionate intimacy. All the rest of his existence was subordinate to this pursuit; he lived for it, worked for it, kept himself in training for it.

So while he talked to this girl of work and freedom, his slightly protuberant eyes were noting the gracious balance of her limbs and body across the gate, the fine lines of her chin and neck. Her grave fine face, her warm clear complexion, had already aroused his curiosity as he had gone to and fro in Morningside Park, and here suddenly he was near to her and talking freely and intimately. He had found her in a communicative mood, and he used the accumulated skill of years in turning that to account.

She was pleased and a little flattered by his interest and sympathy. She became eager to explain herself, to show herself

in the right light. He was manifestly exerting his mind for her, and she found herself fully disposed to justify his interest.

She, perhaps, displayed herself rather consciously as a fine person unduly limited. She even touched lightly on her father's unreasonableness.

"I wonder," said Ramage, "that more girls don't think as you do and want to strike out in the world."

And then he speculated. "I wonder if you will?"

"Let me say one thing," he said. "If ever you do and I can help you in any way, by advice or inquiry or recommendation-- You see, I'm no believer in feminine incapacity, but I do perceive there is such a thing as feminine inexperience. As a sex you're a little under-trained--in affairs. I'd take it--forgive me if I seem a little urgent--as a sort of proof of friendliness. I can imagine nothing more pleasant in life than to help you, because I know it would pay to help you. There's something about you, a little flavor of Will, I suppose, that makes one feel--good luck about you and success. . . ."

And while he talked and watched her as he talked, she answered, and behind her listening watched and thought about him. She liked the animated eagerness of his manner.

His mind seemed to be a remarkably full one; his knowledge of detailed reality came in just where her own mind was most weakly equipped. Through all he said ran one quality that pleased her--the quality of a man who feels that things can be done, that one need not wait for the world to push one before one moved. Compared with her father and Mr. Manning and the men in "fixed" positions generally that she knew, Ramage, presented by himself, had a fine suggestion of freedom, of power, of deliberate and

sustained adventure. . . .

She was particularly charmed by his theory or friendship. It was really very jolly to talk to a man in this way--who saw the woman in her and did not treat her as a child. She was inclined to think that perhaps for a girl the converse of his method was the case; an older man, a man beyond the range of anything "nonsensical," was, perhaps, the most interesting sort of friend one could meet. But in that reservation it may be she went a little beyond the converse of his view. . . .

They got on wonderfully well together. They talked for the better part of an hour, and at last walked together to the junction of highroad and the bridle-path. There, after protestations of friendliness and helpfulness that were almost ardent, he mounted a little clumsily and rode off at an amiable pace, looking his best, making a leg with his riding gaiters, smiling and saluting, while Ann Veronica turned northward and so came to Micklechesil. There, in a little tea and sweet-stuff shop, she bought and consumed slowly and absent-mindedly the insufficient nourishment that is natural to her sex on such occasions.

CHAPTER THE FOURTH

THE CRISIS

Part 1

We left Miss Stanley with Ann Veronica's fancy dress in her hands and her eyes directed to Ann Veronica's pseudo-Turkish slippers.

When Mr. Stanley came home at a quarter to six--an earlier train by fifteen minutes than he affected--his sister met him in the hall with a hushed expression. "I'm so glad you're here, Peter," she said. "She means to go."

"Go!" he said. "Where?"

"To that ball."

"What ball?" The question was rhetorical. He knew.

"I believe she's dressing up-stairs--now."

"Then tell her to undress, confound her!" The City had been thoroughly annoying that day, and he was angry from the outset.

Miss Stanley reflected on this proposal for a moment.

"I don't think she will," she said.

"She must," said Mr. Stanley, and went into his study. His sister followed. "She can't go now. She'll have to wait for dinner," he said, uncomfortably.

"She's going to have some sort of meal with the Widgetts down the Avenue, and go up with them.

"She told you that?"

"Yes."

"When?"

"At tea."

"But why didn't you prohibit once for all the whole thing? How dared she tell you that?"

"Out of defiance. She just sat and told me that was her arrangement. I've never seen her quite so sure of herself."

"What did you say?"

"I said, 'My dear Veronica! how can you think of such things?' "

"And then?"

"She had two more cups of tea and some cake, and told me of her walk."

"She'll meet somebody one of these days--walking about like that."

"She didn't say she'd met any one."

"But didn't you say some more about that ball?"

"I said everything I could say as soon as I realized she was trying to avoid the topic. I said, 'It is no use your telling me about this walk and pretend I've been told about the ball, because you haven't. Your father has forbidden you to go!' "

"Well?"

"She said, 'I hate being horrid to you and father, but I feel it my duty to go to that ball!' "

"Felt it her duty!"

" 'Very well,' I said, 'then I wash my hands of the whole business. Your disobedience be upon your own head.' "

"But that is flat rebellion!" said Mr. Stanley, standing on the hearthrug with his back to the unlit gas-fire. "You ought at once--you ought at once to have told her that. What duty does a girl owe to any one before her father? Obedience to him, that is surely the first law. What CAN she put before that?" His voice began to rise. "One would think I had said nothing about the matter. One would think I had agreed to her going. I suppose this is what she learns in her infernal London colleges. I suppose this is the sort of damned rubbish--"

"Oh! Ssh, Peter!" cried Miss Stanley.

He stopped abruptly. In the pause a door could be heard opening and closing on the landing up-stairs. Then light footsteps became audible, descending the staircase with a certain deliberation and a faint rustle of skirts.

"Tell her," said Mr. Stanley, with an imperious gesture, "to come in here."

Part 2

Miss Stanley emerged from the study and stood watching Ann Veronica descend.

The girl was flushed with excitement, bright-eyed, and braced for a struggle; her aunt had never seen her looking so fine or so pretty. Her fancy dress, save for the green-gray stockings, the pseudo-Turkish slippers, and baggy silk trousered ends natural to

a Corsair's bride, was hidden in a large black-silk-hooded opera-cloak. Beneath the hood it was evident that her rebellious hair was bound up with red silk, and fastened by some device in her ears (unless she had them pierced, which was too dreadful a thing to suppose!) were long brass filigree earrings.

"I'm just off, aunt," said Ann Veronica.

"Your father is in the study and wishes to speak to you."

Ann Veronica hesitated, and then stood in the open doorway and regarded her father's stern presence. She spoke with an entirely false note of cheerful off-handedness. "I'm just in time to say good-bye before I go, father. I'm going up to London with the Widgetts to that ball."

"Now look here, Ann Veronica," said Mr. Stanley, "just a moment. You are NOT going to that ball!"

Ann Veronica tried a less genial, more dignified note.

"I thought we had discussed that, father."

"You are not going to that ball! You are not going out of this house in that get-up!"

Ann Veronica tried yet more earnestly to treat him, as she would treat any man, with an insistence upon her due of masculine respect. "You see," she said, very gently, "I AM going. I am sorry to seem to disobey you, but I am. I wish"--she found she had embarked on a bad sentence--"I wish we needn't have quarrelled."

She stopped abruptly, and turned about toward the front door. In a moment he was beside her. "I don't think you can have heard

me, Vee," he said, with intensely controlled fury. "I said you were"--he shouted--"NOT TO GO!"

She made, and overdid, an immense effort to be a princess. She tossed her head, and, having no further words, moved toward the door. Her father intercepted her, and for a moment she and he struggled with their hands upon the latch. A common rage flushed their faces. "Let go!" she gasped at him, a blaze of anger.

"Veronica!" cried Miss Stanley, warningly, and, "Peter!"

For a moment they seemed on the verge of an altogether desperate scuffle. Never for a moment had violence come between these two since long ago he had, in spite of her mother's protest in the background, carried her kicking and squalling to the nursery for some forgotten crime. With something near to horror they found themselves thus confronted.

The door was fastened by a catch and a latch with an inside key, to which at night a chain and two bolts were added. Carefully abstaining from thrusting against each other, Ann Veronica and her father began an absurdly desperate struggle, the one to open the door, the other to keep it fastened. She seized the key, and he grasped her hand and squeezed it roughly and painfully between the handle and the ward as she tried to turn it. His grip twisted her wrist. She cried out with the pain of it.

A wild passion of shame and self-disgust swept over her. Her spirit awoke in dismay to an affection in ruins, to the immense undignified disaster that had come to them.

Abruptly she desisted, recoiled, and turned and fled up-stairs.

She made noises between weeping and laughter as she went. She gained her room, and slammed her door and locked it as though she

feared violence and pursuit.

"Oh God!" she cried, "Oh God!" and flung aside her opera-cloak, and for a time walked about the room--a Corsair's bride at a crisis of emotion. "Why can't he reason with me," she said, again and again, "instead of doing this?"

Part 3

There presently came a phase in which she said: "I WON'T stand it even now. I will go to-night."

She went as far as her door, then turned to the window. She opened this and scrambled out--a thing she had not done for five long years of adolescence--upon the leaded space above the built-out bath-room on the first floor. Once upon a time she and Roddy had descended thence by the drain-pipe.

But things that a girl of sixteen may do in short skirts are not things to be done by a young lady of twenty-one in fancy dress and an opera-cloak, and just as she was coming unaided to an adequate realization of this, she discovered Mr. Pragmar, the wholesale druggist, who lived three gardens away, and who had been mowing his lawn to get an appetite for dinner, standing in a fascinated attitude beside the forgotten lawn-mower and watching her intently.

She found it extremely difficult to infuse an air of quiet correctitude into her return through the window, and when she was safely inside she waved clinched fists and executed a noiseless dance of rage.

When she reflected that Mr. Pragmar probably knew Mr. Ramage, and might describe the affair to him, she cried "Oh!" with renewed vexation, and repeated some steps of her dance in a new and more ecstatic measure.

Part 4

At eight that evening Miss Stanley tapped at Ann Veronica's bedroom door.

"I've brought you up some dinner, Vee," she said.

Ann Veronica was lying on her bed in a darkling room staring at the ceiling. She reflected before answering. She was frightfully hungry. She had eaten little or no tea, and her mid-day meal had been worse than nothing.

She got up and unlocked the door.

Her aunt did not object to capital punishment or war, or the industrial system or casual wards, or flogging of criminals or the Congo Free State, because none of these things really got hold of her imagination; but she did object, she did not like, she could not bear to think of people not having and enjoying their meals. It was her distinctive test of an emotional state, its interference with a kindly normal digestion. Any one very badly moved choked down a few mouthfuls; the symptom of supreme distress was not to be able to touch a bit. So that the thought of Ann Veronica up-stairs had been extremely painful for her through all the silent dinner-time that night. As soon as dinner was over she went into the kitchen and devoted herself to compiling a tray --not a tray merely of half-cooled dinner

things, but a specially prepared "nice" tray, suitable for tempting any one. With this she now entered.

Ann Veronica found herself in the presence of the most disconcerting fact in human experience, the kindness of people you believe to be thoroughly wrong. She took the tray with both hands, gulped, and gave way to tears.

Her aunt leaped unhappily to the thought of penitence.

"My dear," she began, with an affectionate hand on Ann Veronica's shoulder, "I do SO wish you would realize how it grieves your father."

Ann Veronica flung away from her hand, and the pepper-pot on the tray upset, sending a puff of pepper into the air and instantly filling them both with an intense desire to sneeze.

"I don't think you see," she replied, with tears on her cheeks, and her brows knitting, "how it shames and, ah!--disgraces me--AH TISHU!"

She put down the tray with a concussion on her toilet-table.

"But, dear, think! He is your father. SHOOH!"

"That's no reason," said Ann Veronica, speaking through her handkerchief and stopping abruptly.

Niece and aunt regarded each other for a moment over their pocket-handkerchiefs with watery but antagonistic eyes, each far too profoundly moved to see the absurdity of the position.

"I hope," said Miss Stanley, with dignity, and turned doorward with features in civil warfare. "Better state of mind," she

gasped. . . .

Ann Veronica stood in the twilight room staring at the door that had slammed upon her aunt, her pocket-handkerchief rolled tightly in her hand. Her soul was full of the sense of disaster. She had made her first fight for dignity and freedom as a grown-up and independent Person, and this was how the universe had treated her. It had neither succumbed to her nor wrathfully overwhelmed her. It had thrust her back with an undignified scuffle, with vulgar comedy, with an unendurable, scornful grin.

"By God!" said Ann Veronica for the first time in her life. "But I will! I will!"

CHAPTER THE FIFTH

THE FLIGHT TO LONDON

Part 1

Ann Veronica had an impression that she did not sleep at all that night, and at any rate she got through an immense amount of feverish feeling and thinking.

What was she going to do?

One main idea possessed her: she must get away from home, she must assert herself at once or perish. "Very well," she would say, "then I must go." To remain, she felt, was to concede everything. And she would have to go to-morrow. It was clear it must be to-morrow. If she delayed a day she would delay two

days, if she delayed two days she would delay a week, and after a week things would be adjusted to submission forever. "I'll go," she vowed to the night, "or I'll die!" She made plans and estimated means and resources. These and her general preparations had perhaps a certain disproportion. She had a gold watch, a very good gold watch that had been her mother's, a pearl necklace that was also pretty good, some unpretending rings, some silver bangles and a few other such inferior trinkets, three pounds thirteen shillings unspent of her dress and book allowance and a few good salable books. So equipped, she proposed to set up a separate establishment in the world.

And then she would find work.

For most of a long and fluctuating night she was fairly confident that she would find work; she knew herself to be strong, intelligent, and capable by the standards of most of the girls she knew. She was not quite clear how she should find it, but she felt she would. Then she would write and tell her father what she had done, and put their relationship on a new footing.

That was how she projected it, and in general terms it seemed plausible and possible. But in between these wider phases of comparative confidence were gaps of disconcerting doubt, when the universe was presented as making sinister and threatening faces at her, defying her to defy, preparing a humiliating and shameful overthrow. "I don't care," said Ann Veronica to the darkness; "I'll fight it."

She tried to plan her proceedings in detail. The only difficulties that presented themselves clearly to her were the difficulties of getting away from Morningside Park, and not the difficulties at the other end of the journey. These were so outside her experience that she found it possible to thrust them almost out of sight by saying they would be "all right" in

confident tones to herself. But still she knew they were not right, and at times they became a horrible obsession as of something waiting for her round the corner. She tried to imagine herself "getting something," to project herself as sitting down at a desk and writing, or as returning after her work to some pleasantly equipped and free and independent flat. For a time she furnished the flat. But even with that furniture it remained extremely vague, the possible good and the possible evil as well!

The possible evil! "I'll go," said Ann Veronica for the hundredth time. "I'll go. I don't care WHAT happens."

She awoke out of a doze, as though she had never been sleeping. It was time to get up.

She sat on the edge of her bed and looked about her, at her room, at the row of black-covered books and the pig's skull. "I must take them," she said, to help herself over her own incredulity. "How shall I get my luggage out of the house? . . ."

The figure of her aunt, a little distant, a little propitiatory, behind the coffee things, filled her with a sense of almost catastrophic adventure. Perhaps she might never come back to that breakfast-room again. Never! Perhaps some day, quite soon, she might regret that breakfast-room. She helped herself to the remainder of the slightly congealed bacon, and reverted to the problem of getting her luggage out of the house. She decided to call in the help of Teddy Widgett, or, failing him, of one of his sisters.

Part 2

She found the younger generation of the Widgetts engaged in languid reminiscences, and all, as they expressed it, a "bit decayed." Every one became tremendously animated when they heard that Ann Veronica had failed them because she had been, as she expressed it, "locked in."

"My God!" said Teddy, more impressively than ever.

"But what are you going to do?" asked Hetty.

"What can one do?" asked Ann Veronica. "Would you stand it? I'm going to clear out."

"Clear out?" cried Hetty.

"Go to London," said Ann Veronica.

She had expected sympathetic admiration, but instead the whole Widgett family, except Teddy, expressed a common dismay. "But how can you?" asked Constance. "Who will you stop with?"

"I shall go on my own. Take a room!"

"I say!" said Constance. "But who's going to pay for the room?"

"I've got money," said Ann Veronica. "Anything is better than this--this stifled life down here." And seeing that Hetty and Constance were obviously developing objections, she plunged at once into a demand for help. "I've got nothing in the world to pack with except a toy size portmanteau. Can you lend me some stuff?"

"You ARE a chap!" said Constance, and warmed only slowly from the idea of dissuasion to the idea of help. But they did what they could for her. They agreed to lend her their hold-all and a

large, formless bag which they called the communal trunk. And Teddy declared himself ready to go to the ends of the earth for her, and carry her luggage all the way.

Hetty, looking out of the window--she always smoked her after-breakfast cigarette at the window for the benefit of the less advanced section of Morningside Park society--and trying not to raise objections, saw Miss Stanley going down toward the shops.

"If you must go on with it," said Hetty, "now's your time." And Ann Veronica at once went back with the hold-all, trying not to hurry indecently but to keep up her dignified air of being a wronged person doing the right thing at a smart trot, to pack. Teddy went round by the garden backs and dropped the bag over the fence. All this was exciting and entertaining. Her aunt returned before the packing was done, and Ann Veronica lunched with an uneasy sense of bag and hold-all packed up-stairs and inadequately hidden from chance intruders by the valance of the bed. She went down, flushed and light-hearted, to the Widgetts' after lunch to make some final arrangements and then, as soon as her aunt had retired to lie down for her usual digestive hour, took the risk of the servants having the enterprise to report her proceedings and carried her bag and hold-all to the garden gate, whence Teddy, in a state of ecstatic service, bore them to the railway station. Then she went up-stairs again, dressed herself carefully for town, put on her most businesslike-looking hat, and with a wave of emotion she found it hard to control, walked down to catch the 3.17 up-train.

Teddy handed her into the second-class compartment her season-ticket warranted, and declared she was "simply splendid." "If you want anything," he said, "or get into any trouble, wire me. I'd come back from the ends of the earth. I'd do anything, Vee. It's horrible to think of you!"

"You're an awful brick, Teddy!" she said.

"Who wouldn't be for you?"

The train began to move. "You're splendid!" said Teddy, with his hair wild in the wind. "Good luck! Good luck!"

She waved from the window until the bend hid him.

She found herself alone in the train asking herself what she must do next, and trying not to think of herself as cut off from home or any refuge whatever from the world she had resolved to face. She felt smaller and more adventurous even than she had expected to feel. "Let me see," she said to herself, trying to control a slight sinking of the heart, "I am going to take a room in a lodging-house because that is cheaper. . . . But perhaps I had better get a room in an hotel to-night and look round. . . .

"It's bound to be all right," she said.

But her heart kept on sinking. What hotel should she go to? If she told a cabman to drive to an hotel, any hotel, what would he do--or say? He might drive to something dreadfully expensive, and not at all the quiet sort of thing she required. Finally she decided that even for an hotel she must look round, and that meanwhile she would "book" her luggage at Waterloo. She told the porter to take it to the booking-office, and it was only after a disconcerting moment or so that she found she ought to have directed him to go to the cloak-room. But that was soon put right, and she walked out into London with a peculiar exaltation of mind, an exaltation that partook of panic and defiance, but was chiefly a sense of vast unexampled release.

She inhaled a deep breath of air--London air.

Part 3

She dismissed the first hotels she passed, she scarcely knew why, mainly perhaps from the mere dread of entering them, and crossed Waterloo Bridge at a leisurely pace. It was high afternoon, there was no great throng of foot-passengers, and many an eye from omnibus and pavement rested gratefully on her fresh, trim presence as she passed young and erect, with the light of determination shining through the quiet self-possession of her face. She was dressed as English girls do dress for town, without either coquetry or harshness: her collarless blouse confessed a pretty neck, her eyes were bright and steady, and her dark hair waved loosely and graciously over her ears. . . .

It seemed at first the most beautiful afternoon of all time to her, and perhaps the thrill of her excitement did add a distinctive and culminating keenness to the day. The river, the big buildings on the north bank, Westminster, and St. Paul's, were rich and wonderful with the soft sunshine of London, the softest, the finest grained, the most penetrating and least emphatic sunshine in the world. The very carts and vans and cabs that Wellington Street poured out incessantly upon the bridge seemed ripe and good in her eyes. A traffic of copious barges slumbered over the face of the river-barges either altogether stagnant or dreaming along in the wake of fussy tugs; and above circled, urbanely voracious, the London seagulls. She had never been there before at that hour, in that light, and it seemed to her as if she came to it all for the first time. And this great mellow place, this London, now was hers, to struggle with, to go where she pleased in, to overcome and live in. "I am glad," she told herself, "I came."

She marked an hotel that seemed neither opulent nor odd in a little side street opening on the Embankment, made up her mind with an effort, and, returning by Hungerford Bridge to Waterloo, took a cab to this chosen refuge with her two pieces of luggage. There was just a minute's hesitation before they gave her a room.

The young lady in the bureau said she would inquire, and Ann Veronica, while she affected to read the appeal on a hospital collecting-box upon the bureau counter, had a disagreeable sense of being surveyed from behind by a small, whiskered gentleman in a frock-coat, who came out of the inner office and into the hall among a number of equally observant green porters to look at her and her bags. But the survey was satisfactory, and she found herself presently in Room No. 47, straightening her hat and waiting for her luggage to appear.

"All right so far," she said to herself. . . .

Part 4

But presently, as she sat on the one antimacassared red silk chair and surveyed her hold-all and bag in that tidy, rather vacant, and dehumanized apartment, with its empty wardrobe and desert toilet-table and pictureless walls and stereotyped furnishings, a sudden blankness came upon her as though she didn't matter, and had been thrust away into this impersonal corner, she and her gear. . . .

She decided to go out into the London afternoon again and get something to eat in an Aerated Bread shop or some such place, and perhaps find a cheap room for herself. Of course that was what

she had to do; she had to find a cheap room for herself and work!

This Room No. 47 was no more than a sort of railway compartment on the way to that.

How does one get work?

She walked along the Strand and across Trafalgar Square, and by the Haymarket to Piccadilly, and so through dignified squares and palatial alleys to Oxford Street; and her mind was divided between a speculative treatment of employment on the one hand, and breezes --zephyr breezes--of the keenest appreciation for London, on the other. The jolly part of it was that for the first time in her life so far as London was concerned, she was not going anywhere in particular; for the first time in her life it seemed to her she was taking London in.

She tried to think how people get work. Ought she to walk into some of these places and tell them what she could do? She hesitated at the window of a shipping-office in Cockspur Street and at the Army and Navy Stores, but decided that perhaps there would be some special and customary hour, and that it would be better for her to find this out before she made her attempt. And, besides, she didn't just immediately want to make her attempt.

She fell into a pleasant dream of positions and work. Behind every one of these myriad fronts she passed there must be a career or careers. Her ideas of women's employment and a modern woman's pose in life were based largely on the figure of Vivie Warren in Mrs. Warren's Profession. She had seen Mrs. Warren's Profession furtively with Hetty Widdett from the gallery of a Stage Society performance one Monday afternoon. Most of it had been incomprehensible to her, or comprehensible in a way that checked further curiosity, but the figure of Vivien, hard, capable, successful, and bullying, and ordering about a veritable

Teddy in the person of Frank Gardner, appealed to her. She saw herself in very much Vivie's position--managing something.

Her thoughts were deflected from Vivie Warren by the peculiar behavior of a middle-aged gentleman in Piccadilly. He appeared suddenly from the infinite in the neighborhood of the Burlington Arcade, crossing the pavement toward her and with his eyes upon her. He seemed to her indistinguishably about her father's age. He wore a silk hat a little tilted, and a morning coat buttoned round a tight, contained figure; and a white slip gave a finish to his costume and endorsed the quiet distinction of his tie. His face was a little flushed perhaps, and his small, brown eyes were bright. He stopped on the curb-stone, not facing her but as if he was on his way to cross the road, and spoke to her suddenly over his shoulder.

"Whither away?" he said, very distinctly in a curiously wheedling voice. Ann Veronica stared at his foolish, propitiatory smile, his hungry gaze, through one moment of amazement, then stepped aside and went on her way with a quickened step. But her mind was ruffled, and its mirror-like surface of satisfaction was not easily restored.

Queer old gentleman!

The art of ignoring is one of the accomplishments of every well-bred girl, so carefully instilled that at last she can even ignore her own thoughts and her own knowledge. Ann Veronica could at the same time ask herself what this queer old gentleman could have meant by speaking to her, and know--know in general terms, at least--what that accosting signified. About her, as she had gone day by day to and from the Tredgold College, she had seen and not seen many an incidental aspect of those sides of life about which girls are expected to know nothing, aspects that were extraordinarily relevant to her own position and outlook on

the world, and yet by convention ineffably remote. For all that she was of exceptional intellectual enterprise, she had never yet considered these things with unaverted eyes. She had viewed them askance, and without exchanging ideas with any one else in the world about them.

She went on her way now no longer dreaming and appreciative, but disturbed and unwillingly observant behind her mask of serene contentment.

That delightful sense of free, unembarrassed movement was gone.

As she neared the bottom of the dip in Piccadilly she saw a woman approaching her from the opposite direction--a tall woman who at the first glance seemed altogether beautiful and fine. She came along with the fluttering assurance of some tall ship. Then as she drew nearer paint showed upon her face, and a harsh purpose behind the quiet expression of her open countenance, and a sort of unreality in her splendor betrayed itself for which Ann Veronica could not recall the right word --a word, half understood, that lurked and hid in her mind, the word "meretricious." Behind this woman and a little to the side of her, walked a man smartly dressed, with desire and appraisal in his eyes. Something insisted that those two were mysteriously linked--that the woman knew the man was there.

It was a second reminder that against her claim to go free and untrammelled there was a case to be made, that after all it was true that a girl does not go alone in the world unchallenged, nor ever has gone freely alone in the world, that evil walks abroad and dangers, and petty insults more irritating than dangers, lurk.

It was in the quiet streets and squares toward Oxford Street that it first came into her head disagreeably that she herself was

being followed. She observed a man walking on the opposite side of the way and looking toward her.

"Bother it all!" she swore. "Bother!" and decided that this was not so, and would not look to right or left again.

Beyond the Circus Ann Veronica went into a British Tea-Table Company shop to get some tea. And as she was yet waiting for her tea to come she saw this man again. Either it was an unfortunate recovery of a trail, or he had followed her from Mayfair. There was no mistaking his intentions this time. He came down the shop looking for her quite obviously, and took up a position on the other side against a mirror in which he was able to regard her steadfastly.

Beneath the serene unconcern of Ann Veronica's face was a boiling tumult. She was furiously angry. She gazed with a quiet detachment toward the window and the Oxford Street traffic, and in her heart she was busy kicking this man to death. He HAD followed her! What had he followed her for? He must have followed her all the way from beyond Grosvenor Square.

He was a tall man and fair, with bluish eyes that were rather protuberant, and long white hands of which he made a display. He had removed his silk hat, and now sat looking at Ann Veronica over an untouched cup of tea; he sat gloating upon her, trying to catch her eye. Once, when he thought he had done so, he smiled an ingratiating smile. He moved, after quiet intervals, with a quick little movement, and ever and again stroked his small mustache and coughed a self-conscious cough.

"That he should be in the same world with me!" said Ann Veronica, reduced to reading the list of good things the British Tea-Table Company had priced for its patrons.

Heaven knows what dim and tawdry conceptions of passion and desire were in that blond cranium, what romance-begotten dreams of intrigue and adventure! but they sufficed, when presently Ann Veronica went out into the darkling street again, to inspire a flitting, dogged pursuit, idiotic, exasperating, indecent.

She had no idea what she should do. If she spoke to a policeman she did not know what would ensue. Perhaps she would have to charge this man and appear in a police-court next day.

She became angry with herself. She would not be driven in by this persistent, sneaking aggression. She would ignore him. Surely she could ignore him. She stopped abruptly, and looked in a flower-shop window. He passed, and came loitering back and stood beside her, silently looking into her face.

The afternoon had passed now into twilight. The shops were lighting up into gigantic lanterns of color, the street lamps were glowing into existence, and she had lost her way. She had lost her sense of direction, and was among unfamiliar streets. She went on from street to street, and all the glory of London had departed. Against the sinister, the threatening, monstrous inhumanity of the limitless city, there was nothing now but this supreme, ugly fact of a pursuit--the pursuit of the undesired, persistent male.

For a second time Ann Veronica wanted to swear at the universe.

There were moments when she thought of turning upon this man and talking to him. But there was something in his face at once stupid and invincible that told her he would go on forcing himself upon her, that he would esteem speech with her a great point gained. In the twilight he had ceased to be a person one could tackle and shame; he had become something more general, a something that crawled and sneaked toward her and would not let

her alone. . . .

Then, when the tension was getting unendurable, and she was on the verge of speaking to some casual passer-by and demanding help, her follower vanished. For a time she could scarcely believe he was gone. He had. The night had swallowed him up, but his work on her was done. She had lost her nerve, and there was no more freedom in London for her that night. She was glad to join in the stream of hurrying homeward workers that was now welling out of a thousand places of employment, and to imitate their driven, preoccupied haste. She had followed a bobbing white hat and gray jacket until she reached the Euston Road corner of Tottenham Court Road, and there, by the name on a bus and the cries of a conductor, she made a guess of her way. And she did not merely affect to be driven--she felt driven. She was afraid people would follow her, she was afraid of the dark, open doorways she passed, and afraid of the blazes of light; she was afraid to be alone, and she knew not what it was she feared.

It was past seven when she got back to her hotel. She thought then that she had shaken off the man of the bulging blue eyes forever, but that night she found he followed her into her dreams. He stalked her, he stared at her, he craved her, he sidled slinking and propitiatory and yet relentlessly toward her, until at last she awoke from the suffocating nightmare nearness of his approach, and lay awake in fear and horror listening to the unaccustomed sounds of the hotel.

She came very near that night to resolving that she would return to her home next morning. But the morning brought courage again, and those first intimations of horror vanished completely from her mind.

Part 5

She had sent her father a telegram from the East Strand post-office worded thus:

```
| All | is | well | with | me |  
|-----|-----|-----|-----|-----|  
| and | quite | safe | Veronica | |  
-----
```

and afterward she had dined a la carte upon a cutlet, and had then set herself to write an answer to Mr. Manning's proposal of marriage. But she had found it very difficult.

"DEAR MR. MANNING, she had begun. So far it had been plain sailing, and it had seemed fairly evident to go on: "I find it very difficult to answer your letter."

But after that neither ideas nor phrases had come and she had fallen thinking of the events of the day. She had decided that she would spend the next morning answering advertisements in the papers that abounded in the writing-room; and so, after half an hour's perusal of back numbers of the Sketch in the drawing-room, she had gone to bed.

She found next morning, when she came to this advertisement answering, that it was more difficult than she had supposed. In the first place there were not so many suitable advertisements as she had expected. She sat down by the paper-rack with a general feeling of resemblance to Vivie Warren, and looked through the Morning Post and Standard and Telegraph, and afterward the half-penny sheets. The Morning Post was hungry for governesses and nursery governesses, but held out no other hopes; the Daily

Telegraph that morning seemed eager only for skirt hands. She went to a writing-desk and made some memoranda on a sheet of note-paper, and then remembered that she had no address as yet to which letters could be sent.

She decided to leave this matter until the morrow and devote the morning to settling up with Mr. Manning. At the cost of quite a number of torn drafts she succeeded in evolving this:

"DEAR MR. MANNING,--I find it very difficult to answer your letter. I hope you won't mind if I say first that I think it does me an extraordinary honor that you should think of any one like myself so highly and seriously, and, secondly, that I wish it had not been written."

She surveyed this sentence for some time before going on. "I wonder," she said, "why one writes him sentences like that? It'll have to go," she decided, "I've written too many already." She went on, with a desperate attempt to be easy and colloquial:

"You see, we were rather good friends, I thought, and now perhaps it will be difficult for us to get back to the old friendly footing. But if that can possibly be done I want it to be done. You see, the plain fact of the case is that I think I am too young and ignorant for marriage. I have been thinking these things over lately, and it seems to me that marriage for a girl is just the supremest thing in life. It isn't just one among a number of important things; for her it is the important thing, and until she knows far more than I know of the facts of life, how is she to undertake it? So please; if you will, forget that you wrote that letter, and forgive this answer. I want you to think of me just as if I was a man, and quite outside marriage altogether.

"I do hope you will be able to do this, because I value men

friends. I shall be very sorry if I cannot have you for a friend. I think that there is no better friend for a girl than a man rather older than herself.

"Perhaps by this time you will have heard of the step I have taken in leaving my home. Very likely you will disapprove highly of what I have done--I wonder? You may, perhaps, think I have done it just in a fit of childish petulance because my father locked me in when I wanted to go to a ball of which he did not approve. But really it is much more than that. At Morningside Park I feel as though all my growing up was presently to stop, as though I was being shut in from the light of life, and, as they say in botany, etiolated. I was just like a sort of dummy that does things as it is told--that is to say, as the strings are pulled. I want to be a person by myself, and to pull my own strings. I had rather have trouble and hardship like that than be taken care of by others. I want to be myself. I wonder if a man can quite understand that passionate feeling? It is quite a passionate feeling. So I am already no longer the girl you knew at Morningside Park. I am a young person seeking employment and freedom and self-development, just as in quite our first talk of all I said I wanted to be.

"I do hope you will see how things are, and not be offended with me or frightfully shocked and distressed by what I have done.

"Very sincerely yours,

"ANN VERONICA STANLEY."

In the afternoon she resumed her search for apartments. The intoxicating sense of novelty had given place to a more business-like mood. She drifted northward from the Strand, and came on some queer and dingy quarters.

She had never imagined life was half so sinister as it looked to her in the beginning of these investigations. She found herself again in the presence of some element in life about which she had been trained not to think, about which she was perhaps instinctively indisposed to think; something which jarred, in spite of all her mental resistance, with all her preconceptions of a clean and courageous girl walking out from Morningside Park as one walks out of a cell into a free and spacious world. One or two landladies refused her with an air of conscious virtue that she found hard to explain. "We don't let to ladies," they said.

She drifted, via Theobald's Road, obliquely toward the region about Titchfield Street. Such apartments as she saw were either scandalously dirty or unaccountably dear, or both. And some were adorned with engravings that struck her as being more vulgar and undesirable than anything she had ever seen in her life. Ann Veronica loved beautiful things, and the beauty of undraped loveliness not least among them; but these were pictures that did but insist coarsely upon the roundness of women's bodies. The windows of these rooms were obscured with draperies, their floors a carpet patchwork; the china ornaments on their mantels were of a class apart. After the first onset several of the women who had apartments to let said she would not do for them, and in effect dismissed her. This also struck her as odd.

About many of these houses hung a mysterious taint as of something weakly and commonly and dustily evil; the women who negotiated the rooms looked out through a friendly manner as though it was a mask, with hard, defiant eyes. Then one old crone, short-sighted and shaky-handed, called Ann Veronica

"dearie," and made some remark, obscure and slangy, of which the spirit rather than the words penetrated to her understanding.

For a time she looked at no more apartments, and walked through gaunt and ill-cleaned streets, through the sordid under side of life, perplexed and troubled, ashamed of her previous obtuseness.

She had something of the feeling a Hindoo must experience who has been into surroundings or touched something that offends his caste. She passed people in the streets and regarded them with a quickening apprehension, once or twice came girls dressed in slatternly finery, going toward Regent Street from out these places. It did not occur to her that they at least had found a way of earning a living, and had that much economic superiority to herself. It did not occur to her that save for some accidents of education and character they had souls like her own.

For a time Ann Veronica went on her way gauging the quality of sordid streets. At last, a little way to the northward of Euston Road, the moral cloud seemed to lift, the moral atmosphere to change; clean blinds appeared in the windows, clean doorsteps before the doors, a different appeal in the neatly placed cards bearing the word

APARTMENTS

in the clear bright windows. At last in a street near the Hampstead Road she hit upon a room that had an exceptional quality of space and order, and a tall woman with a kindly face to show it. "You're a student, perhaps?" said the tall woman. "At the Tredgold Women's College," said Ann Veronica. She felt it would save explanations if she did not state she had left her home and was looking for employment. The room was papered with green, large-patterned paper that was at worst a trifle dingy,

and the arm-chair and the seats of the other chairs were covered with the unusual brightness of a large-patterned chintz, which also supplied the window-curtain. There was a round table covered, not with the usual "tapestry" cover, but with a plain green cloth that went passably with the wall-paper. In the recess beside the fireplace were some open bookshelves. The carpet was a quiet drugget and not excessively worn, and the bed in the corner was covered by a white quilt. There were neither texts nor rubbish on the walls, but only a stirring version of Belshazzar's feast, a steel engraving in the early Victorian manner that had some satisfactory blacks. And the woman who showed this room was tall, with an understanding eye and the quiet manner of the well-trained servant.

Ann Veronica brought her luggage in a cab from the hotel; she tipped the hotel porter sixpence and overpaid the cabman eighteenpence, unpacked some of her books and possessions, and so made the room a little homelike, and then sat down in a by no means uncomfortable arm-chair before the fire. She had arranged for a supper of tea, a boiled egg, and some tinned peaches. She had discussed the general question of supplies with the helpful landlady. "And now," said Ann Veronica surveying her apartment with an unprecedented sense of proprietorship, "what is the next step?"

She spent the evening in writing--it was a little difficult--to her father and--which was easier--to the Widgetts. She was greatly heartened by doing this. The necessity of defending herself and assuming a confident and secure tone did much to dispell the sense of being exposed and indefensible in a huge dingy world that abounded in sinister possibilities. She addressed her letters, meditated on them for a time, and then took them out and posted them. Afterward she wanted to get her letter to her father back in order to read it over again, and, if it tallied with her general impression of it, re-write it.

He would know her address to-morrow. She reflected upon that with a thrill of terror that was also, somehow, in some faint remote way, gleeful.

"Dear old Daddy," she said, "he'll make a fearful fuss. Well, it had to happen somewhen. . . . Somehow. I wonder what he'll say?"

CHAPTER THE SIXTH

EXPOSTULATIONS

Part 1

The next morning opened calmly, and Ann Veronica sat in her own room, her very own room, and consumed an egg and marmalade, and read the advertisements in the Daily Telegraph. Then began expostulations, preluded by a telegram and headed by her aunt. The telegram reminded Ann Veronica that she had no place for interviews except her bed-sitting-room, and she sought her landlady and negotiated hastily for the use of the ground floor parlor, which very fortunately was vacant. She explained she was expecting an important interview, and asked that her visitor should be duly shown in. Her aunt arrived about half-past ten, in black and with an unusually thick spotted veil. She raised this with the air of a conspirator unmasking, and displayed a tear-flushed face. For a moment she remained silent.

"My dear," she said, when she could get her breath, "you must come home at once."

Ann Veronica closed the door quite softly and stood still.

"This has almost killed your father. . . . After Gwen!"

"I sent a telegram."

"He cares so much for you. He did so care for you."

"I sent a telegram to say I was all right."

"All right! And I never dreamed anything of the sort was going on. I had no idea!" She sat down abruptly and threw her wrists limply upon the table. "Oh, Veronica!" she said, "to leave your home!"

She had been weeping. She was weeping now. Ann Veronica was overcome by this amount of emotion.

"Why did you do it?" her aunt urged. "Why could you not confide in us?"

"Do what?" said Ann Veronica.

"What you have done."

"But what have I done?"

"Elope! Go off in this way. We had no idea. We had such a pride in you, such hope in you. I had no idea you were not the happiest girl. Everything I could do! Your father sat up all night. Until at last I persuaded him to go to bed. He wanted to put on his overcoat and come after you and look for you--in London. We made sure it was just like Gwen. Only Gwen left a letter on the pincushion. You didn't even do that Vee; not even that."

"I sent a telegram, aunt," said Ann Veronica.

"Like a stab. You didn't even put the twelve words."

"I said I was all right."

"Gwen said she was happy. Before that came your father didn't even know you were gone. He was just getting cross about your being late for dinner--you know his way--when it came. He opened it--just off-hand, and then when he saw what it was he hit at the table and sent his soup spoon flying and splashing on to the tablecloth. 'My God!' he said, 'I'll go after them and kill him.

I'll go after them and kill him.' For the moment I thought it was a telegram from Gwen."

"But what did father imagine?"

"Of course he imagined! Any one would! 'What has happened, Peter?' I asked. He was standing up with the telegram crumpled in his hand. He used a most awful word! Then he said, 'It's Ann Veronica gone to join her sister!' 'Gone!' I said. 'Gone!' he said. 'Read that,' and threw the telegram at me, so that it went into the tureen. He swore when I tried to get it out with the ladle, and told me what it said. Then he sat down again in a chair and said that people who wrote novels ought to be strung up. It was as much as I could do to prevent him flying out of the house there and then and coming after you. Never since I was a girl have I seen your father so moved. 'Oh! little Vee!' he cried, 'little Vee!' and put his face between his hands and sat still for a long time before he broke out again."

Ann Veronica had remained standing while her aunt spoke.

"Do you mean, aunt," she asked, "that my father thought I had gone off--with some man?"

"What else COULD he think? Would any one DREAM you would be so mad as to go off alone?"

"After--after what had happened the night before?"

"Oh, why raise up old scores? If you could see him this morning, his poor face as white as a sheet and all cut about with shaving! He was for coming up by the very first train and looking for you, but I said to him, 'Wait for the letters,' and there, sure enough, was yours. He could hardly open the envelope, he trembled so. Then he threw the letter at me. 'Go and fetch her home,' he said; 'it isn't what we thought! It's just a practical joke of hers.' And with that he went off to the City, stern and silent, leaving his bacon on his plate--a great slice of bacon hardly touched. No breakfast, he's had no dinner, hardly a mouthful of soup--since yesterday at tea."

She stopped. Aunt and niece regarded each other silently.

"You must come home to him at once," said Miss Stanley.

Ann Veronica looked down at her fingers on the claret-colored table-cloth. Her aunt had summoned up an altogether too vivid picture of her father as the masterful man, overbearing, emphatic, sentimental, noisy, aimless. Why on earth couldn't he leave her to grow in her own way? Her pride rose at the bare thought of return

"I don't think I CAN do that," she said. She looked up and said, a little breathlessly, "I'm sorry, aunt, but I don't think I can."

Part 2

Then it was the expostulations really began.

From first to last, on this occasion, her aunt expostulated for about two hours. "But, my dear," she began, "it is Impossible! It is quite out of the Question. You simply can't." And to that, through vast rhetorical meanderings, she clung. It reached her only slowly that Ann Veronica was standing to her resolution. "How will you live?" she appealed. "Think of what people will say!" That became a refrain. "Think of what Lady Palsworthy will say! Think of what"--So-and-so--"will say! What are we to tell people?

"Besides, what am I to tell your father?"

At first it had not been at all clear to Ann Veronica that she would refuse to return home; she had had some dream of a capitulation that should leave her an enlarged and defined freedom, but as her aunt put this aspect and that of her flight to her, as she wandered illogically and inconsistently from one urgent consideration to another, as she mingled assurances and aspects and emotions, it became clearer and clearer to the girl that there could be little or no change in the position of things if she returned. "And what will Mr. Manning think?" said her aunt.

"I don't care what any one thinks," said Ann Veronica.

"I can't imagine what has come over you," said her aunt. "I can't conceive what you want. You foolish girl!"

Ann Veronica took that in silence. At the back of her mind, dim

and yet disconcerting, was the perception that she herself did not know what she wanted. And yet she knew it was not fair to call her a foolish girl.

"Don't you care for Mr. Manning?" said her aunt.

"I don't see what he has to do with my coming to London?"

"He--he worships the ground you tread on. You don't deserve it, but he does. Or at least he did the day before yesterday. And here you are!"

Her aunt opened all the fingers of her gloved hand in a rhetorical gesture. "It seems to me all madness--madness! Just because your father--wouldn't let you disobey him!"

Part 3

In the afternoon the task of expostulation was taken up by Mr. Stanley in person. Her father's ideas of expostulation were a little harsh and forcible, and over the claret-colored table-cloth and under the gas chandelier, with his hat and umbrella between them like the mace in Parliament, he and his daughter contrived to have a violent quarrel. She had intended to be quietly dignified, but he was in a smouldering rage from the beginning, and began by assuming, which alone was more than flesh and blood could stand, that the insurrection was over and that she was coming home submissively. In his desire to be emphatic and to avenge himself for his over-night distresses, he speedily became brutal, more brutal than she had ever known him before.

"A nice time of anxiety you've given me, young lady," he said, as he entered the room. "I hope you're satisfied."

She was frightened--his anger always did frighten her--and in her resolve to conceal her fright she carried a queen-like dignity to what she felt even at the time was a preposterous pitch. She said she hoped she had not distressed him by the course she had felt obliged to take, and he told her not to be a fool. She tried to keep her side up by declaring that he had put her into an impossible position, and he replied by shouting, "Nonsense! Nonsense! Any father in my place would have done what I did."

Then he went on to say: "Well, you've had your little adventure, and I hope now you've had enough of it. So go up-stairs and get your things together while I look out for a hansom."

To which the only possible reply seemed to be, "I'm not coming home."

"Not coming home!"

"No!" And, in spite of her resolve to be a Person, Ann Veronica began to weep with terror at herself. Apparently she was always doomed to weep when she talked to her father. But he was always forcing her to say and do such unexpectedly conclusive things. She feared he might take her tears as a sign of weakness. So she said: "I won't come home. I'd rather starve!"

For a moment the conversation hung upon that declaration. Then Mr. Stanley, putting his hands on the table in the manner rather of a barrister than a solicitor, and regarding her balefully through his glasses with quite undisguised animosity, asked, "And may I presume to inquire, then, what you mean to do?--how do you propose to live?"

"I shall live," sobbed Ann Veronica. "You needn't be anxious about that! I shall contrive to live."

"But I AM anxious," said Mr. Stanley, "I am anxious. Do you think it's nothing to me to have my daughter running about London looking for odd jobs and disgracing herself?"

"Sha'n't get odd jobs," said Ann Veronica, wiping her eyes.

And from that point they went on to a thoroughly embittering wrangle. Mr. Stanley used his authority, and commanded Ann Veronica to come home, to which, of course, she said she wouldn't; and then he warned her not to defy him, warned her very solemnly, and then commanded her again. He then said that if she would not obey him in this course she should "never darken his doors again," and was, indeed, frightfully abusive. This threat terrified Ann Veronica so much that she declared with sobs and vehemence that she would never come home again, and for a time both talked at once and very wildly. He asked her whether she understood what she was saying, and went on to say still more precisely that she should never touch a penny of his money until she came home again--not one penny. Ann Veronica said she didn't care.

Then abruptly Mr. Stanley changed his key. "You poor child!" he said; "don't you see the infinite folly of these proceedings? Think! Think of the love and affection you abandon! Think of your aunt, a second mother to you. Think if your own mother was alive!"

He paused, deeply moved.

"If my own mother was alive," sobbed Ann Veronica, "she would understand."

The talk became more and more inconclusive and exhausting. Ann Veronica found herself incompetent, undignified, and detestable, holding on desperately to a hardening antagonism to her father, quarrelling with him, wrangling with him, thinking of repartees--almost as if he was a brother. It was horrible, but what could she do? She meant to live her own life, and he meant, with contempt and insults, to prevent her. Anything else that was said she now regarded only as an aspect of or diversion from that.

In the retrospect she was amazed to think how things had gone to pieces, for at the outset she had been quite prepared to go home again upon terms. While waiting for his coming she had stated her present and future relations with him with what had seemed to her the most satisfactory lucidity and completeness. She had looked forward to an explanation. Instead had come this storm, this shouting, this weeping, this confusion of threats and irrelevant appeals. It was not only that her father had said all sorts of inconsistent and unreasonable things, but that by some incomprehensible infection she herself had replied in the same vein. He had assumed that her leaving home was the point at issue, that everything turned on that, and that the sole alternative was obedience, and she had fallen in with that assumption until rebellion seemed a sacred principle. Moreover, atrociously and inexorably, he allowed it to appear ever and again in horrible gleams that he suspected there was some man in the case. . . . Some man!

And to conclude it all was the figure of her father in the doorway, giving her a last chance, his hat in one hand, his umbrella in the other, shaken at her to emphasize his point.

"You understand, then," he was saying, "you understand?"

"I understand," said Ann Veronica, tear-wet and flushed with a

reciprocal passion, but standing up to him with an equality that amazed even herself, "I understand." She controlled a sob. "Not a penny--not one penny--and never darken your doors again!"

Part 4

The next day her aunt came again and expostulated, and was just saying it was "an unheard-of thing" for a girl to leave her home as Ann Veronica had done, when her father arrived, and was shown in by the pleasant-faced landlady.

Her father had determined on a new line. He put down his hat and umbrella, rested his hands on his hips, and regarded Ann Veronica firmly.

"Now," he said, quietly, "it's time we stopped this nonsense."

Ann Veronica was about to reply, when he went on, with a still more deadly quiet: "I am not here to bandy words with you. Let us have no more of this humbug. You are to come home."

"I thought I explained--"

"I don't think you can have heard me," said her father; "I have told you to come home."

"I thought I explained--"

"Come home!"

Ann Veronica shrugged her shoulders.

"Very well," said her father.

"I think this ends the business," he said, turning to his sister.

"It's not for us to supplicate any more. She must learn wisdom--as God pleases."

"But, my dear Peter!" said Miss Stanley.

"No," said her brother, conclusively, "it's not for a parent to go on persuading a child."

Miss Stanley rose and regarded Ann Veronica fixedly. The girl stood with her hands behind her back, sulky, resolute, and intelligent, a strand of her black hair over one eye and looking more than usually delicate-featured, and more than ever like an obdurate child.

"She doesn't know."

"She does."

"I can't imagine what makes you fly out against everything like this," said Miss Stanley to her niece.

"What is the good of talking?" said her brother. "She must go her own way. A man's children nowadays are not his own. That's the fact of the matter. Their minds are turned against him. . . . Rubbishy novels and pernicious rascals. We can't even protect them from themselves."

An immense gulf seemed to open between father and daughter as he said these words.

"I don't see," gasped Ann Veronica, "why parents and children . .

. shouldn't be friends."

"Friends!" said her father. "When we see you going through disobedience to the devil! Come, Molly, she must go her own way."

I've tried to use my authority. And she defies me. What more is there to be said? She defies me!"

It was extraordinary. Ann Veronica felt suddenly an effect of tremendous pathos; she would have given anything to have been able to frame and make some appeal, some utterance that should bridge this bottomless chasm that had opened between her and her father, and she could find nothing whatever to say that was in the least sincere and appealing.

"Father," she cried, "I have to live!"

He misunderstood her. "That," he said, grimly, with his hand on the door-handle, "must be your own affair, unless you choose to live at Morningside Park."

Miss Stanley turned to her. "Vee," she said, "come home. Before it is too late."

"Come, Molly," said Mr. Stanley, at the door.

"Vee!" said Miss Stanley, "you hear what your father says!"

Miss Stanley struggled with emotion. She made a curious movement toward her niece, then suddenly, convulsively, she dabbed down something lumpy on the table and turned to follow her brother. Ann Veronica stared for a moment in amazement at this dark-green object that clashed as it was put down. It was a purse. She made a step forward. "Aunt!" she said, "I can't--"

Then she caught a wild appeal in her aunt's blue eye, halted, and the door clicked upon them.

There was a pause, and then the front door slammed. . . .

Ann Veronica realized that she was alone with the world. And this time the departure had a tremendous effect of finality. She had to resist an impulse of sheer terror, to run out after them and give in.

"Gods," she said, at last, "I've done it this time!"

"Well!" She took up the neat morocco purse, opened it, and examined the contents.

It contained three sovereigns, six and fourpence, two postage stamps, a small key, and her aunt's return half ticket to Morningside Park.

Part 5

After the interview Ann Veronica considered herself formally cut off from home. If nothing else had clinched that, the purse had.

Nevertheless there came a residuum of expostulations. Her brother Roddy, who was in the motor line, came to expostulate; her sister Alice wrote. And Mr. Manning called.

Her sister Alice seemed to have developed a religious sense away there in Yorkshire, and made appeals that had no meaning for Ann Veronica's mind. She exhorted Ann Veronica not to become one of "those unsexed intellectuals, neither man nor woman."

Ann Veronica meditated over that phrase. "That's HIM," said Ann Veronica, in sound, idiomatic English. "Poor old Alice!"

Her brother Roddy came to her and demanded tea, and asked her to state a case. "Bit thick on the old man, isn't it?" said Roddy, who had developed a bluff, straightforward style in the motor shop.

"Mind my smoking?" said Roddy. "I don't see quite what your game is, Vee, but I suppose you've got a game on somewhere.

"Rummy lot we are!" said Roddy. "Alice--Alice gone dotty, and all over kids. Gwen--I saw Gwen the other day, and the paint's thicker than ever. Jim is up to the neck in Mahatmas and Theosophy and Higher Thought and rot--writes letters worse than Alice. And now YOU'RE on the war-path. I believe I'm the only sane member of the family left. The G.V.'s as mad as any of you, in spite of all his respectability; not a bit of him straight anywhere, not one bit."

"Straight?"

"Not a bit of it! He's been out after eight per cent. since the beginning. Eight per cent.! He'll come a cropper one of these days, if you ask me. He's been near it once or twice already. That's got his nerves to rags. I suppose we're all human beings really, but what price the sacred Institution of the Family! Us as a bundle! Eh? . . . I don't half disagree with you, Vee, really; only thing is, I don't see how you're going to pull it off. A home MAY be a sort of cage, but still--it's a home. Gives you a right to hang on to the old man until he busts--practically. Jolly hard life for a girl, getting a living. Not MY affair."

He asked questions and listened to her views for a time.

"I'd chuck this lark right off if I were you, Vee," he said.
"I'm five years older than you, and no end wiser, being a man. What you're after is too risky. It's a damned hard thing to do. It's all very handsome starting out on your own, but it's too damned hard. That's my opinion, if you ask me. There's nothing a girl can do that isn't sweated to the bone. You square the G.V., and go home before you have to. That's my advice. If you don't eat humble-pie now you may live to fare worse later. I can't help you a cent. Life's hard enough nowadays for an unprotected male. Let alone a girl. You got to take the world as it is, and the only possible trade for a girl that isn't sweated is to get hold of a man and make him do it for her. It's no good flying out at that, Vee; I didn't arrange it. It's Providence. That's how things are; that's the order of the world. Like appendicitis. It isn't pretty, but we're made so. Rot, no doubt; but we can't alter it. You go home and live on the G.V., and get some other man to live on as soon as possible. It isn't sentiment but it's horse sense. All this Woman-who-Diddery--no damn good. After all, old P.--Providence, I mean--HAS arranged it so that men will keep you, more or less. He made the universe on those lines. You've got to take what you can get."

That was the quintessence of her brother Roddy.

He played variations on this theme for the better part of an hour.

"You go home," he said, at parting; "you go home. It's all very fine and all that, Vee, this freedom, but it isn't going to work.

The world isn't ready for girls to start out on their own yet; that's the plain fact of the case. Babies and females have got to keep hold of somebody or go under--anyhow, for the next few

generations. You go home and wait a century, Vee, and then try again. Then you may have a bit of a chance. Now you haven't the ghost of one--not if you play the game fair."

Part 6

It was remarkable to Ann Veronica how completely Mr. Manning, in his entirely different dialect, indorsed her brother Roddy's view of things. He came along, he said, just to call, with large, loud apologies, radiantly kind and good. Miss Stanley, it was manifest, had given him Ann Veronica's address. The kindly faced landlady had failed to catch his name, and said he was a tall, handsome gentleman with a great black mustache. Ann Veronica, with a sigh at the cost of hospitality, made a hasty negotiation for an extra tea and for a fire in the ground-floor apartment, and preened herself carefully for the interview. In the little apartment, under the gas chandelier, his inches and his stoop were certainly very effective. In the bad light he looked at once military and sentimental and studious, like one of Ouida's guardsmen revised by Mr. Haldane and the London School of Economics and finished in the Keltic school.

"It's unforgivable of me to call, Miss Stanley," he said, shaking hands in a peculiar, high, fashionable manner; "but you know you said we might be friends."

"It's dreadful for you to be here," he said, indicating the yellow presence of the first fog of the year without, "but your aunt told me something of what had happened. It's just like your Splendid Pride to do it. Quite!"

He sat in the arm-chair and took tea, and consumed several of the

extra cakes which she had sent out for and talked to her and expressed himself, looking very earnestly at her with his deep-set eyes, and carefully avoiding any crumbs on his mustache the while. Ann Veronica sat firelit by her tea-tray with, quite unconsciously, the air of an expert hostess.

"But how is it all going to end?" said Mr. Manning.

"Your father, of course," he said, "must come to realize just how Splendid you are! He doesn't understand. I've seen him, and he doesn't a bit understand. I didn't understand before that letter. It makes me want to be just everything I CAN be to you. You're like some splendid Princess in Exile in these Dreadful Dingy apartments!"

"I'm afraid I'm anything but a Princess when it comes to earning a salary," said Ann Veronica. "But frankly, I mean to fight this through if I possibly can."

"My God!" said Manning, in a stage-aside. "Earning a salary!"

"You're like a Princess in Exile!" he repeated, overruling her. "You come into these sordid surroundings--you mustn't mind my calling them sordid--and it makes them seem as though they didn't matter. . . . I don't think they do matter. I don't think any surroundings could throw a shadow on you."

Ann Veronica felt a slight embarrassment. "Won't you have some more tea, Mr. Manning?" she asked.

"You know--," said Mr. Manning, relinquishing his cup without answering her question, "when I hear you talk of earning a living, it's as if I heard of an archangel going on the Stock Exchange--or Christ selling doves. . . . Forgive my daring. I couldn't help the thought."

"It's a very good image," said Ann Veronica.

"I knew you wouldn't mind."

"But does it correspond with the facts of the case? You know, Mr. Manning, all this sort of thing is very well as sentiment, but does it correspond with the realities? Are women truly such angelic things and men so chivalrous? You men have, I know, meant to make us Queens and Goddesses, but in practice--well, look, for example, at the stream of girls one meets going to work of a morning, round-shouldered, cheap, and underfed! They aren't queens, and no one is treating them as queens. And look, again, at the women one finds letting lodgings. . . . I was looking for rooms last week. It got on my nerves--the women I saw. Worse than any man. Everywhere I went and rapped at a door I found behind it another dreadful dingy woman--another fallen queen, I suppose--dingier than the last, dirty, you know, in grain. Their poor hands!"

"I know," said Mr. Manning, with entirely suitable emotion.

"And think of the ordinary wives and mothers, with their anxiety, their limitations, their swarms of children!"

Mr. Manning displayed distress. He fended these things off from him with the rump of his fourth piece of cake. "I know that our social order is dreadful enough," he said, "and sacrifices all that is best and most beautiful in life. I don't defend it."

"And besides, when it comes to the idea of queens," Ann Veronica went on, "there's twenty-one and a half million women to twenty million men. Suppose our proper place is a shrine. Still, that leaves over a million shrines short, not reckoning widows who re-marry. And more boys die than girls, so that the real

disproportion among adults is even greater."

"I know," said Mr Manning, "I know these Dreadful Statistics. I know there's a sort of right in your impatience at the slowness of Progress. But tell me one thing I don't understand--tell me one thing: How can you help it by coming down into the battle and the mire? That's the thing that concerns me."

"Oh, I'm not trying to help it," said Ann Veronica. "I'm only arguing against your position of what a woman should be, and trying to get it clear in my own mind. I'm in this apartment and looking for work because-- Well, what else can I do, when my father practically locks me up?"

"I know," said Mr. Manning, "I know. Don't think I can't sympathize and understand. Still, here we are in this dingy, foggy city. Ye gods! what a wilderness it is! Every one trying to get the better of every one, every one regardless of every one--it's one of those days when every one bumps against you--every one pouring coal smoke into the air and making confusion worse confounded, motor omnibuses clattering and smelling, a horse down in the Tottenham Court Road, an old woman at the corner coughing dreadfully--all the painful sights of a great city, and here you come into it to take your chances. It's too valiant, Miss Stanley, too valiant altogether!"

Ann Veronica meditated. She had had two days of employment-seeking now. "I wonder if it is."

"It isn't," said Mr. Manning, "that I mind Courage in a Woman--I love and admire Courage. What could be more splendid than a beautiful girl facing a great, glorious tiger? Una and the Lion again, and all that! But this isn't that sort of thing; this is just a great, ugly, endless wilderness of selfish, sweating, vulgar competition!"

"That you want to keep me out of?"

"Exactly!" said Mr. Manning.

"In a sort of beautiful garden-close--wearing lovely dresses and picking beautiful flowers?"

"Ah! If one could!"

"While those other girls trudge to business and those other women let lodgings. And in reality even that magic garden-close resolves itself into a villa at Morningside Park and my father being more and more cross and overbearing at meals--and a general feeling of insecurity and futility."

Mr. Manning relinquished his cup, and looked meaningly at Ann Veronica. "There," he said, "you don't treat me fairly, Miss Stanley. My garden-close would be a better thing than that."

CHAPTER THE SEVENTH

IDEALS AND A REALITY

Part 1

And now for some weeks Ann Veronica was to test her market value in the world. She went about in a negligent November London that had become very dark and foggy and greasy and forbidding indeed, and tried to find that modest but independent employment she had so rashly assumed. She went about, intent-looking and

self-possessed, trim and fine, concealing her emotions whatever they were, as the realities of her position opened out before her. Her little bed-sitting-room was like a lair, and she went out from it into this vast, dun world, with its smoke-gray houses, its glaring streets of shops, its dark streets of homes, its orange-lit windows, under skies of dull copper or muddy gray or black, much as an animal goes out to seek food. She would come back and write letters, carefully planned and written letters, or read some book she had fetched from Mudie's--she had invested a half-guinea with Mudie's--or sit over her fire and think.

Slowly and reluctantly she came to realize that Vivie Warren was what is called an "ideal." There were no such girls and no such positions. No work that offered was at all of the quality she had vaguely postulated for herself. With such qualifications as she possessed, two chief channels of employment lay open, and neither attracted her, neither seemed really to offer a conclusive escape from that subjection to mankind against which, in the person of her father, she was rebelling. One main avenue was for her to become a sort of salaried accessory wife or mother, to be a governess or an assistant schoolmistress, or a very high type of governess-nurse. The other was to go into business --into a photographer's reception-room, for example, or a costumer's or hat-shop. The first set of occupations seemed to her to be altogether too domestic and restricted; for the latter she was dreadfully handicapped by her want of experience. And also she didn't like them. She didn't like the shops, she didn't like the other women's faces; she thought the smirking men in frock-coats who dominated these establishments the most intolerable persons she had ever had to face. One called her very distinctly "My dear!"

Two secretarial posts did indeed seem to offer themselves in which, at least, there was no specific exclusion of womanhood;

one was under a Radical Member of Parliament, and the other under a Harley Street doctor, and both men declined her proffered services with the utmost civility and admiration and terror.

There was also a curious interview at a big hotel with a middle-aged, white-powdered woman, all covered with jewels and reeking of scent, who wanted a Companion. She did not think Ann Veronica would do as her companion.

And nearly all these things were fearfully ill-paid. They carried no more than bare subsistence wages; and they demanded all her time and energy. She had heard of women journalists, women writers, and so forth; but she was not even admitted to the presence of the editors she demanded to see, and by no means sure that if she had been she could have done any work they might have given her. One day she desisted from her search and went unexpectedly to the Tredgold College. Her place was not filled; she had been simply noted as absent, and she did a comforting day of admirable dissection upon the tortoise. She was so interested, and this was such a relief from the trudging anxiety of her search for work, that she went on for a whole week as if she was still living at home. Then a third secretarial opening occurred and renewed her hopes again: a position as amanuensis--with which some of the lighter duties of a nurse were combined--to an infirm gentleman of means living at Twickenham, and engaged upon a great literary research to prove that the "Faery Queen" was really a treatise upon molecular chemistry written in a peculiar and picturesquely handled cipher.

Part 2

Now, while Ann Veronica was taking these soundings in the industrial sea, and measuring herself against the world as it is,

she was also making extensive explorations among the ideas and attitudes of a number of human beings who seemed to be largely concerned with the world as it ought to be. She was drawn first by Miss Miniver, and then by her own natural interest, into a curious stratum of people who are busied with dreams of world progress, of great and fundamental changes, of a New Age that is to replace all the stresses and disorders of contemporary life.

Miss Miniver learned of her flight and got her address from the Widgetts. She arrived about nine o'clock the next evening in a state of tremulous enthusiasm. She followed the landlady half way up-stairs, and called up to Ann Veronica, "May I come up? It's me! You know--Nettie Miniver!" She appeared before Ann Veronica could clearly recall who Nettie Miniver might be.

There was a wild light in her eye, and her straight hair was out demonstrating and suffragetting upon some independent notions of its own. Her fingers were bursting through her gloves, as if to get at once into touch with Ann Veronica. "You're Glorious!" said Miss Miniver in tones of rapture, holding a hand in each of hers and peering up into Ann Veronica's face. "Glorious! You're so calm, dear, and so resolute, so serene!

"It's girls like you who will show them what We are," said Miss Miniver; "girls whose spirits have not been broken!"

Ann Veronica sunned herself a little in this warmth.

"I was watching you at Morningside Park, dear," said Miss Miniver. "I am getting to watch all women. I thought then perhaps you didn't care, that you were like so many of them. NOW it's just as though you had grown up suddenly."

She stopped, and then suggested: "I wonder--I should love--if it was anything I said."

She did not wait for Ann Veronica's reply. She seemed to assume that it must certainly be something she had said. "They all catch on," she said. "It spreads like wildfire. This is such a grand time! Such a glorious time! There never was such a time as this! Everything seems so close to fruition, so coming on and leading on! The Insurrection of Women! They spring up everywhere. Tell me all that happened, one sister-woman to another."

She chilled Ann Veronica a little by that last phrase, and yet the magnetism of her fellowship and enthusiasm was very strong; and it was pleasant to be made out a heroine after so much expostulation and so many secret doubts.

But she did not listen long; she wanted to talk. She sat, crouched together, by the corner of the hearthrug under the bookcase that supported the pig's skull, and looked into the fire and up at Ann Veronica's face, and let herself go. "Let us put the lamp out," she said; "the flames are ever so much better for talking," and Ann Veronica agreed. "You are coming right out into life--facing it all."

Ann Veronica sat with her chin on her hand, red-lit and saying little, and Miss Miniver discoursed. As she talked, the drift and significance of what she was saying shaped itself slowly to Ann Veronica's apprehension. It presented itself in the likeness of a great, gray, dull world--a brutal, superstitious, confused, and wrong-headed world, that hurt people and limited people unaccountably. In remote times and countries its evil tendencies had expressed themselves in the form of tyrannies, massacres, wars, and what not; but just at present in England they shaped as commercialism and competition, silk hats, suburban morals, the sweating system, and the subjection of women. So far the thing was acceptable enough. But over against the world Miss Miniver

assembled a small but energetic minority, the Children of Light--people she described as "being in the van," or "altogether in the van," about whom Ann Veronica's mind was disposed to be more sceptical.

Everything, Miss Miniver said, was "working up," everything was "coming on"--the Higher Thought, the Simple Life, Socialism, Humanitarianism, it was all the same really. She loved to be there, taking part in it all, breathing it, being it. Hitherto in the world's history there had been precursors of this Progress at great intervals, voices that had spoken and ceased, but now it was all coming on together in a rush. She mentioned, with familiar respect, Christ and Buddha and Shelley and Nietzsche and Plato. Pioneers all of them. Such names shone brightly in the darkness, with black spaces of unilluminated emptiness about them, as stars shine in the night; but now--now it was different; now it was dawn--the real dawn.

"The women are taking it up," said Miss Miniver; "the women and the common people, all pressing forward, all roused."

Ann Veronica listened with her eyes on the fire.

"Everybody is taking it up," said Miss Miniver. "YOU had to come in. You couldn't help it. Something drew you. Something draws everybody. From suburbs, from country towns--everywhere. I see all the Movements. As far as I can, I belong to them all. I keep my finger on the pulse of things."

Ann Veronica said nothing.

"The dawn!" said Miss Miniver, with her glasses reflecting the fire like pools of blood-red flame.

"I came to London," said Ann Veronica, "rather because of my own

difficulty. I don't know that I understand altogether."

"Of course you don't," said Miss Miniver, gesticulating triumphantly with her thin hand and thinner wrist, and patting Ann Veronica's knee. "Of course you don't. That's the wonder of it. But you will, you will. You must let me take you to things--to meetings and things, to conferences and talks. Then you will begin to see. You will begin to see it all opening out. I am up to the ears in it all--every moment I can spare. I throw up work--everything! I just teach in one school, one good school, three days a week. All the rest--Movements! I can live now on fourpence a day. Think how free that leaves me to follow things up! I must take you everywhere. I must take you to the Suffrage people, and the Tolstoyans, and the Fabians."

"I have heard of the Fabians," said Ann Veronica.

"It's THE Society!" said Miss Miniver. "It's the centre of the intellectuals. Some of the meetings are wonderful! Such earnest, beautiful women! Such deep-browed men! . . . And to think that there they are making history! There they are putting together the plans of a new world. Almos light-heartedly. There is Shaw, and Webb, and Wilkins the author, and Toomer, and Doctor Tumpany--the most wonderful people! There you see them discussing, deciding, planning! Just think--THEY ARE MAKING A NEW WORLD!"

"But ARE these people going to alter everything?" said Ann Veronica.

"What else can happen?" asked Miss Miniver, with a little weak gesture at the glow. "What else can possibly happen--as things are going now?"

Part 3

Miss Miniver let Ann Veronica into her peculiar levels of the world with so enthusiastic a generosity that it seemed ingratitude to remain critical. Indeed, almost insensibly Ann Veronica became habituated to the peculiar appearance and the peculiar manners of the people "in the van." The shock of their intellectual attitude was over, usage robbed it of the first quaint effect of deliberate unreason. They were in many respects so right; she clung to that, and shirked more and more the paradoxical conviction that they were also somehow, and even in direct relation to that rightness, absurd.

Very central in Miss Miniver's universe were the Goopes. The Goopes were the oddest little couple conceivable, following a fruitarian career upon an upper floor in Theobald's Road. They were childless and servantless, and they had reduced simple living to the finest of fine arts. Mr. Goopes, Ann Veronica gathered, was a mathematical tutor and visited schools, and his wife wrote a weekly column in *New Ideas* upon vegetarian cookery, vivisection, degeneration, the lacteal secretion, appendicitis, and the Higher Thought generally, and assisted in the management of a fruit shop in the Tottenham Court Road. Their very furniture had mysteriously a high-browed quality, and Mr. Goopes when at home dressed simply in a pajama-shaped suit of canvas sacking tied with brown ribbons, while his wife wore a purple djibbah with a richly embroidered yoke. He was a small, dark, reserved man, with a large inflexible-looking convex forehead, and his wife was very pink and high-spirited, with one of those chins that pass insensibly into a full, strong neck. Once a week, every Saturday, they had a little gathering from nine till the small hours, just talk and perhaps reading aloud and fruitarian refreshments--chestnut sandwiches buttered with nut

tose, and so forth--and lemonade and unfermented wine; and to one of these symposia Miss Miniver after a good deal of preliminary solicitude, conducted Ann Veronica.

She was introduced, perhaps a little too obviously for her taste, as a girl who was standing out against her people, to a gathering that consisted of a very old lady with an extremely wrinkled skin and a deep voice who was wearing what appeared to Ann Veronica's inexperienced eye to be an antimacassar upon her head, a shy, blond young man with a narrow forehead and glasses, two undistinguished women in plain skirts and blouses, and a middle-aged couple, very fat and alike in black, Mr. and Mrs. Alderman Dunstable, of the Borough Council of Marylebone. These were seated in an imperfect semicircle about a very copper-adorned fireplace, surmounted by a carved wood inscription:

"DO IT NOW."

And to them were presently added a roguish-looking young man, with reddish hair, an orange tie, and a fluffy tweed suit, and others who, in Ann Veronica's memory, in spite of her efforts to recall details, remained obstinately just "others."

The talk was animated, and remained always brilliant in form even when it ceased to be brilliant in substance. There were moments when Ann Veronica rather more than suspected the chief speakers to be, as school-boys say, showing off at her.

They talked of a new substitute for dripping in vegetarian cookery that Mrs. Goopes was convinced exercised an exceptionally purifying influence on the mind. And then they talked of Anarchism and Socialism, and whether the former was the exact opposite of the latter or only a higher form. The reddish-haired young man contributed allusions to the Hegelian philosophy that

momentarily confused the discussion. Then Alderman Dunstable, who had hitherto been silent, broke out into speech and went off at a tangent, and gave his personal impressions of quite a number of his fellow-councillors. He continued to do this for the rest of the evening intermittently, in and out, among other topics. He addressed himself chiefly to Goopes, and spoke as if in reply to long-sustained inquiries on the part of Goopes into the personnel of the Marylebone Borough Council. "If you were to ask me," he would say, "I should say Blinders is straight. An ordinary type, of course--"

Mrs. Dunstable's contributions to the conversation were entirely in the form of nods; whenever Alderman Dunstable praised or blamed she nodded twice or thrice, according to the requirements of his emphasis. And she seemed always to keep one eye on Ann Veronica's dress. Mrs. Goopes disconcerted the Alderman a little by abruptly challenging the roguish-looking young man in the orange tie (who, it seemed, was the assistant editor of *New Ideas*) upon a critique of Nietzsche and Tolstoy that had appeared in his paper, in which doubts had been cast upon the perfect sincerity of the latter. Everybody seemed greatly concerned about the sincerity of Tolstoy.

Miss Miniver said that if once she lost her faith in Tolstoy's sincerity, nothing she felt would really matter much any more, and she appealed to Ann Veronica whether she did not feel the same; and Mr. Goopes said that we must distinguish between sincerity and irony, which was often indeed no more than sincerity at the sublimated level.

Alderman Dunstable said that sincerity was often a matter of opportunity, and illustrated the point to the fair young man with an anecdote about Blinders on the Dust Destructor Committee, during which the young man in the orange tie succeeded in giving the whole discussion a daring and erotic flavor by questioning

whether any one could be perfectly sincere in love.

Miss Miniver thought that there was no true sincerity except in love, and appealed to Ann Veronica, but the young man in the orange tie went on to declare that it was quite possible to be sincerely in love with two people at the same time, although perhaps on different planes with each individual, and deceiving them both. But that brought Mrs. Goopes down on him with the lesson Titian teaches so beautifully in his "Sacred and Profane Love," and became quite eloquent upon the impossibility of any deception in the former.

Then they discoursed on love for a time, and Alderman Dunstable, turning back to the shy, blond young man and speaking in undertones of the utmost clearness, gave a brief and confidential account of an unfounded rumor of the bifurcation of the affections of Blinders that had led to a situation of some unpleasantness upon the Borough Council.

The very old lady in the antimacassar touched Ann Veronica's arm suddenly, and said, in a deep, arch voice:

"Talking of love again; spring again, love again. Oh! you young people!"

The young man with the orange tie, in spite of Sisyphus-like efforts on the part of Goopes to get the topic on to a higher plane, displayed great persistence in speculating upon the possible distribution of the affections of highly developed modern types.

The old lady in the antimacassar said, abruptly, "Ah! you young people, you young people, if you only knew!" and then laughed and then mused in a marked manner; and the young man with the narrow forehead and glasses cleared his throat and asked the young man

in the orange tie whether he believed that Platonic love was possible. Mrs. Goopes said she believed in nothing else, and with that she glanced at Ann Veronica, rose a little abruptly, and directed Goopes and the shy young man in the handing of refreshments.

But the young man with the orange tie remained in his place, disputing whether the body had not something or other which he called its legitimate claims. And from that they came back by way of the Kreutzer Sonata and Resurrection to Tolstoy again.

So the talk went on. Goopes, who had at first been a little reserved, resorted presently to the Socratic method to restrain the young man with the orange tie, and bent his forehead over him, and brought out at last very clearly from him that the body was only illusion and everything nothing but just spirit and molecules of thought. It became a sort of duel at last between them, and all the others sat and listened--every one, that is, except the Alderman, who had got the blond young man into a corner by the green-stained dresser with the aluminum things, and was sitting with his back to every one else, holding one hand over his mouth for greater privacy, and telling him, with an accent of confidential admission, in whispers of the chronic struggle between the natural modesty and general inoffensiveness of the Borough Council and the social evil in Marylebone.

So the talk went on, and presently they were criticising novelists, and certain daring essays of Wilkins got their due share of attention, and then they were discussing the future of the theatre. Ann Veronica intervened a little in the novelist discussion with a defence of Esmond and a denial that the Egoist was obscure, and when she spoke every one else stopped talking and listened. Then they deliberated whether Bernard Shaw ought to go into Parliament. And that brought them to vegetarianism and teetotalism, and the young man in the orange tie and Mrs.

Goopes had a great set-to about the sincerity of Chesterton and Belloc that was ended by Goopes showing signs of resuming the Socratic method.

And at last Ann Veronica and Miss Miniver came down the dark staircase and out into the foggy spaces of the London squares, and crossed Russell Square, Woburn Square, Gordon Square, making an oblique route to Ann Veronica's lodging. They trudged along a little hungry, because of the fruitarian refreshments, and mentally very active. And Miss Miniver fell discussing whether Goopes or Bernard Shaw or Tolstoy or Doctor Tumpany or Wilkins the author had the more powerful and perfect mind in existence at the present time. She was clear there were no other minds like them in all the world.

Part 4

Then one evening Ann Veronica went with Miss Miniver into the back seats of the gallery at Essex Hall, and heard and saw the giant leaders of the Fabian Society who are re-making the world: Bernard Shaw and Toomer and Doctor Tumpany and Wilkins the author, all displayed upon a platform. The place was crowded, and the people about her were almost equally made up of very good-looking and enthusiastic young people and a great variety of Goopes-like types. In the discussion there was the oddest mixture of things that were personal and petty with an idealist devotion that was fine beyond dispute. In nearly every speech she heard was the same implication of great and necessary changes in the world--changes to be won by effort and sacrifice indeed, but surely to be won. And afterward she saw a very much larger and more enthusiastic gathering, a meeting of the advanced section of the woman movement in Caxton Hall, where the same note

of vast changes in progress sounded; and she went to a soiree of the Dress Reform Association and visited a Food Reform Exhibition, where imminent change was made even alarmingly visible. The women's meeting was much more charged with emotional force than the Socialists'. Ann Veronica was carried off her intellectual and critical feet by it altogether, and applauded and uttered cries that subsequent reflection failed to endorse. "I knew you would feel it," said Miss Miniver, as they came away flushed and heated. "I knew you would begin to see how it all falls into place together."

It did begin to fall into place together. She became more and more alive, not so much to a system of ideas as to a big diffused impulse toward change, to a great discontent with and criticism of life as it is lived, to a clamorous confusion of ideas for reconstruction--reconstruction of the methods of business, of economic development, of the rules of property, of the status of children, of the clothing and feeding and teaching of every one; she developed a quite exaggerated consciousness of a multitude of people going about the swarming spaces of London with their minds full, their talk and gestures full, their very clothing charged with the suggestion of the urgency of this pervasive project of alteration. Some indeed carried themselves, dressed themselves even, rather as foreign visitors from the land of "Looking Backward" and "News from Nowhere" than as the indigenous Londoners they were. For the most part these were detached people: men practising the plastic arts, young writers, young men in employment, a very large proportion of girls and women--self-supporting women or girls of the student class. They made a stratum into which Ann Veronica was now plunged up to her neck; it had become her stratum.

None of the things they said and did were altogether new to Ann Veronica, but now she got them massed and alive, instead of by glimpses or in books--alive and articulate and insistent. The

London backgrounds, in Bloomsbury and Marylebone, against which these people went to and fro, took on, by reason of their gray facades, their implacably respectable windows and window-blinds, their reiterated unmeaning iron railings, a stronger and stronger suggestion of the flavor of her father at his most obdurate phase, and of all that she felt herself fighting against.

She was already a little prepared by her discursive reading and discussion under the Widgett influence for ideas and "movements," though temperamentally perhaps she was rather disposed to resist and criticise than embrace them. But the people among whom she was now thrown through the social exertions of Miss Miniver and the Widgetts--for Teddy and Hetty came up from Morningside Park and took her to an eighteen-penny dinner in Soho and introduced her to some art students, who were also Socialists, and so opened the way to an evening of meandering talk in a studio--carried with them like an atmosphere this implication, not only that the world was in some stupid and even obvious way WRONG, with which indeed she was quite prepared to agree, but that it needed only a few pioneers to behave as such and be thoroughly and indiscriminately "advanced," for the new order to achieve itself.

When ninety per cent. out of the ten or twelve people one meets in a month not only say but feel and assume a thing, it is very hard not to fall into the belief that the thing is so.

Imperceptibly almost Ann Veronica began to acquire the new attitude, even while her mind still resisted the felt ideas that went with it. And Miss Miniver began to sway her.

The very facts that Miss Miniver never stated an argument clearly, that she was never embarrassed by a sense of self-contradiction, and had little more respect for consistency of statement than a washerwoman has for wisps of vapor, which made Ann Veronica critical and hostile at their first encounter in Morningside Park, became at last with constant association the

secret of Miss Miniver's growing influence. The brain tires of resistance, and when it meets again and again, incoherently active, the same phrases, the same ideas that it has already slain, exposed and dissected and buried, it becomes less and less energetic to repeat the operation. There must be something, one feels, in ideas that achieve persistently a successful resurrection. What Miss Miniver would have called the Higher Truth supervenes.

Yet through these talks, these meetings and conferences, these movements and efforts, Ann Veronica, for all that she went with her friend, and at times applauded with her enthusiastically, yet went nevertheless with eyes that grew more and more puzzled, and fine eyebrows more and more disposed to knit. She was with these movements--akin to them, she felt it at times intensely--and yet something eluded her. Morningside Park had been passive and defective; all this rushed about and was active, but it was still defective. It still failed in something. It did seem germane to the matter that so many of the people "in the van" were plain people, or faded people, or tired-looking people. It did affect the business that they all argued badly and were egotistical in their manners and inconsistent in their phrases. There were moments when she doubted whether the whole mass of movements and societies and gatherings and talks was not simply one coherent spectacle of failure protecting itself from abjection by the glamour of its own assertions. It happened that at the extremest point of Ann Veronica's social circle from the Widgetts was the family of the Morningside Park horse-dealer, a company of extremely dressy and hilarious young women, with one equestrian brother addicted to fancy waistcoats, cigars, and facial spots. These girls wore hats at remarkable angles and bows to startle and kill; they liked to be right on the spot every time and up to everything that was it from the very beginning and they rendered their conception of Socialists and all reformers by the words "positively frightening" and "weird." Well, it was beyond

dispute that these words did convey a certain quality of the Movements in general amid which Miss Miniver disported herself. They WERE weird. And yet for all that--

It got into Ann Veronica's nights at last and kept her awake, the perplexing contrast between the advanced thought and the advanced thinker. The general propositions of Socialism, for example, struck her as admirable, but she certainly did not extend her admiration to any of its exponents. She was still more stirred by the idea of the equal citizenship of men and women, by the realization that a big and growing organization of women were giving form and a generalized expression to just that personal pride, that aspiration for personal freedom and respect which had brought her to London; but when she heard Miss Miniver discoursing on the next step in the suffrage campaign, or read of women badgering Cabinet Ministers, padlocked to railings, or getting up in a public meeting to pipe out a demand for votes and be carried out kicking and screaming, her soul revolted. She could not part with dignity. Something as yet unformulated within her kept her estranged from all these practical aspects of her beliefs.

"Not for these things, O Ann Veronica, have you revolted," it said; "and this is not your appropriate purpose."

It was as if she faced a darkness in which was something very beautiful and wonderful as yet unimagined. The little pucker in her brows became more perceptible.

Part 5

In the beginning of December Ann Veronica began to speculate

privately upon the procedure of pawning. She had decided that she would begin with her pearl necklace. She spent a very disagreeable afternoon and evening--it was raining fast outside, and she had very unwisely left her soundest pair of boots in the boothole of her father's house in Morningside Park--thinking over the economic situation and planning a course of action. Her aunt had secretly sent on to Ann Veronica some new warm underclothing, a dozen pairs of stockings, and her last winter's jacket, but the dear lady had overlooked those boots.

These things illuminated her situation extremely. Finally she decided upon a step that had always seemed reasonable to her, but that hitherto she had, from motives too faint for her to formulate, refrained from taking. She resolved to go into the City to Ramage and ask for his advice. And next morning she attired herself with especial care and neatness, found his address in the Directory at a post-office, and went to him.

She had to wait some minutes in an outer office, wherein three young men of spirited costume and appearance regarded her with ill-concealed curiosity and admiration. Then Ramage appeared with effusion, and ushered her into his inner apartment. The three young men exchanged expressive glances.

The inner apartment was rather gracefully furnished with a thick, fine Turkish carpet, a good brass fender, a fine old bureau, and on the walls were engravings of two young girls' heads by Greuze, and of some modern picture of boys bathing in a sunlit pool.

"But this is a surprise!" said Ramage. "This is wonderful! I've been feeling that you had vanished from my world. Have you been away from Morningside Park?"

"I'm not interrupting you?"

"You are. Splendidly. Business exists for such interruptions. There you are, the best client's chair."

Ann Veronica sat down, and Ramage's eager eyes feasted on her.

"I've been looking out for you," he said. "I confess it."

She had not, she reflected, remembered how prominent his eyes were.

"I want some advice," said Ann Veronica.

"Yes?"

"You remember once, how we talked--at a gate on the Downs? We talked about how a girl might get an independent living."

"Yes, yes."

"Well, you see, something has happened at home."

She paused.

"Nothing has happened to Mr. Stanley?"

"I've fallen out with my father. It was about--a question of what I might do or might not do. He--In fact, he--he locked me in my room. Practically."

Her breath left her for a moment.

"I SAY!" said Mr. Ramage.

"I wanted to go to an art-student ball of which he disapproved."

"And why shouldn't you?"

"I felt that sort of thing couldn't go on. So I packed up and came to London next day."

"To a friend?"

"To lodgings--alone."

"I say, you know, you have some pluck. You did it on your own?"

Ann Veronica smiled. "Quite on my own," she said.

"It's magnificent!" He leaned back and regarded her with his head a little on one side. "By Jove!" he said, "there is something direct about you. I wonder if I should have locked you up if I'd been your father. Luckily I'm not. And you started out forthwith to fight the world and be a citizen on your own basis?" He came forward again and folded his hands under him on his desk.

"How has the world taken it?" he asked. "If I was the world I think I should have put down a crimson carpet, and asked you to say what you wanted, and generally walk over me. But the world didn't do that."

"Not exactly."

"It presented a large impenetrable back, and went on thinking about something else."

"It offered from fifteen to two-and-twenty shillings a week--for drudgery."

"The world has no sense of what is due to youth and courage. It never has had."

"Yes," said Ann Veronica. "But the thing is, I want a job."

"Exactly! And so you came along to me. And you see, I don't turn my back, and I am looking at you and thinking about you from top to toe."

"And what do you think I ought to do?"

"Exactly!" He lifted a paper-weight and dabbed it gently down again. "What ought you to do?"

"I've hunted up all sorts of things."

"The point to note is that fundamentally you don't want particularly to do it."

"I don't understand."

"You want to be free and so forth, yes. But you don't particularly want to do the job that sets you free--for its own sake. I mean that it doesn't interest you in itself."

"I suppose not."

"That's one of our differences. We men are like children. We can get absorbed in play, in games, in the business we do. That's really why we do them sometimes rather well and get on. But women--women as a rule don't throw themselves into things like that. As a matter of fact it isn't their affair. And as a natural consequence, they don't do so well, and they don't get on--and so the world doesn't pay them. They don't catch on to discursive interests, you see, because they are more serious, they are concentrated on the central reality of life, and a little impatient of its--its outer aspects. At least that, I

think, is what makes a clever woman's independent career so much more difficult than a clever man's."

"She doesn't develop a specialty." Ann Veronica was doing her best to follow him.

"She has one, that's why. Her specialty is the central thing in life, it is life itself, the warmth of life, sex--and love."

He pronounced this with an air of profound conviction and with his eyes on Ann Veronica's face. He had an air of having told her a deep, personal secret. She winced as he thrust the fact at her, was about to answer, and checked herself. She colored faintly.

"That doesn't touch the question I asked you," she said. "It may be true, but it isn't quite what I have in mind."

"Of course not," said Ramage, as one who rouses himself from deep preoccupations. And he began to question her in a business-like way upon the steps she had taken and the inquiries she had made. He displayed none of the airy optimism of their previous talk over the downland gate. He was helpful, but gravely dubious. "You see," he said, "from my point of view you're grown up--you're as old as all the goddesses and the contemporary of any man alive. But from the--the economic point of view you're a very young and altogether inexperienced person."

He returned to and developed that idea. "You're still," he said, "in the educational years. From the point of view of most things in the world of employment which a woman can do reasonably well and earn a living by, you're unripe and half-educated. If you had taken your degree, for example."

He spoke of secretarial work, but even there she would need to be

able to do typing and shorthand. He made it more and more evident to her that her proper course was not to earn a salary but to accumulate equipment. "You see," he said, "you are like an inaccessible gold-mine in all this sort of matter. You're splendid stuff, you know, but you've got nothing ready to sell. That's the flat business situation."

He thought. Then he slapped his hand on his desk and looked up with the air of a man struck by a brilliant idea. "Look here," he said, protruding his eyes; "why get anything to do at all just yet? Why, if you must be free, why not do the sensible thing? Make yourself worth a decent freedom. Go on with your studies at the Imperial College, for example, get a degree, and make yourself good value. Or become a thorough-going typist and stenographer and secretarial expert."

"But I can't do that."

"Why not?"

"You see, if I do go home my father objects to the College, and as for typing--"

"Don't go home."

"Yes, but you forget; how am I to live?"

"Easily. Easily. . . . Borrow. . . . From me."

"I couldn't do that," said Ann Veronica, sharply.

"I see no reason why you shouldn't."

"It's impossible."

"As one friend to another. Men are always doing it, and if you set up to be a man--"

"No, it's absolutely out of the question, Mr. Ramage." And Ann Veronica's face was hot.

Ramage pursed his rather loose lips and shrugged his shoulders, with his eyes fixed steadily upon her. "Well anyhow-- I don't see the force of your objection, you know. That's my advice to you. Here I am. Consider you've got resources deposited with me. Perhaps at the first blush--it strikes you as odd. People are brought up to be so shy about money. As though it was indelicate--it's just a sort of shyness. But here I am to draw upon. Here I am as an alternative either to nasty work--or going home."

"It's very kind of you--" began Ann Veronica.

"Not a bit. Just a friendly polite suggestion. I don't suggest any philanthropy. I shall charge you five per cent., you know, fair and square."

Ann Veronica opened her lips quickly and did not speak. But the five per cent. certainly did seem to improve the aspect of Ramage's suggestion.

"Well, anyhow, consider it open." He dabbed with his paper-weight again, and spoke in an entirely indifferent tone. "And now tell me, please, how you eloped from Morningside Park. How did you get your luggage out of the house? Wasn't it--wasn't it rather in some respects--rather a lark? It's one of my regrets for my lost youth. I never ran away from anywhere with anybody anywhen. And now--I suppose I should be considered too old. I don't feel it. . . . Didn't you feel rather EVENTFUL--in the train--coming up to Waterloo?"

Part 6

Before Christmas Ann Veronica had gone to Ramage again and accepted this offer she had at first declined.

Many little things had contributed to that decision. The chief influence was her awakening sense of the need of money. She had been forced to buy herself that pair of boots and a walking-skirt, and the pearl necklace at the pawnbrokers' had yielded very disappointingly. And, also, she wanted to borrow that money. It did seem in so many ways exactly what Ramage said it was--the sensible thing to do. There it was--to be borrowed. It would put the whole adventure on a broader and better footing; it seemed, indeed, almost the only possible way in which she might emerge from her rebellion with anything like success. If only for the sake of her argument with her home, she wanted success. And why, after all, should she not borrow money from Ramage?

It was so true what he said; middle-class people WERE ridiculously squeamish about money. Why should they be?

She and Ramage were friends, very good friends. If she was in a position to help him she would help him; only it happened to be the other way round. He was in a position to help her. What was the objection?

She found it impossible to look her own diffidence in the face. So she went to Ramage and came to the point almost at once.

"Can you spare me forty pounds?" she said.

Mr. Ramage controlled his expression and thought very quickly.

"Agreed," he said, "certainly," and drew a checkbook toward him.

"It's best," he said, "to make it a good round sum.

"I won't give you a check though-- Yes, I will. I'll give you an uncrossed check, and then you can get it at the bank here, quite close by. . . . You'd better not have all the money on you; you had better open a small account in the post-office and draw it out a fiver at a time. That won't involve references, as a bank account would--and all that sort of thing. The money will last longer, and--it won't bother you."

He stood up rather close to her and looked into her eyes. He seemed to be trying to understand something very perplexing and elusive. "It's jolly," he said, "to feel you have come to me. It's a sort of guarantee of confidence. Last time--you made me feel snubbed."

He hesitated, and went off at a tangent. "There's no end of things I'd like to talk over with you. It's just upon my lunch-time. Come and have lunch with me."

Ann Veronica fenced for a moment. "I don't want to take up your time."

"We won't go to any of these City places. They're just all men, and no one is safe from scandal. But I know a little place where we'll get a little quiet talk."

Ann Veronica for some indefinable reason did not want to lunch with him, a reason indeed so indefinable that she dismissed it, and Ramage went through the outer office with her, alert and

attentive, to the vivid interest of the three clerks. The three clerks fought for the only window, and saw her whisked into a hansom. Their subsequent conversation is outside the scope of our story.

"Ritter's!" said Ramage to the driver, "Dean Street."

It was rare that Ann Veronica used hansom, and to be in one was itself eventful and exhilarating. She liked the high, easy swing of the thing over its big wheels, the quick clatter-patter of the horse, the passage of the teeming streets. She admitted her pleasure to Ramage.

And Ritter's, too, was very amusing and foreign and discreet; a little rambling room with a number of small tables, with red electric light shades and flowers. It was an overcast day, albeit not foggy, and the electric light shades glowed warmly, and an Italian waiter with insufficient English took Ramage's orders, and waited with an appearance of affection. Ann Veronica thought the whole affair rather jolly. Ritter sold better food than most of his compatriots, and cooked it better, and Ramage, with a fine perception of a feminine palate, ordered Vero Capri. It was, Ann Veronica felt, as a sip or so of that remarkable blend warmed her blood, just the sort of thing that her aunt would not approve, to be lunching thus, *tete-a-tete* with a man; and yet at the same time it was a perfectly innocent as well as agreeable proceeding.

They talked across their meal in an easy and friendly manner about Ann Veronica's affairs. He was really very bright and clever, with a sort of conversational boldness that was just within the limits of permissible daring. She described the Goopes and the Fabians to him, and gave him a sketch of her landlady; and he talked in the most liberal and entertaining way of a modern young woman's outlook. He seemed to know a great

deal about life. He gave glimpses of possibilities. He roused curiosities. He contrasted wonderfully with the empty showing-off of Teddy. His friendship seemed a thing worth having. . . .

But when she was thinking it over in her room that evening vague and baffling doubts came drifting across this conviction. She doubted how she stood toward him and what the restrained gleam of his face might signify. She felt that perhaps, in her desire to play an adequate part in the conversation, she had talked rather more freely than she ought to have done, and given him a wrong impression of herself.

Part 7

That was two days before Christmas Eve. The next morning came a compact letter from her father.

"MY DEAR DAUGHTER," it ran,--"Here, on the verge of the season of forgiveness I hold out a last hand to you in the hope of a reconciliation. I ask you, although it is not my place to ask you, to return home. This roof is still open to you. You will not be taunted if you return and everything that can be done will be done to make you happy.

"Indeed, I must implore you to return. This adventure of yours has gone on altogether too long; it has become a serious distress to both your aunt and myself. We fail altogether to understand your motives in doing what you are doing, or, indeed, how you are managing to do it, or what you are managing on. If you will think only of one trifling aspect--the inconvenience it must be

to us to explain your absence--I think you may begin to realize what it all means for us. I need hardly say that your aunt joins with me very heartily in this request.

"Please come home. You will not find me unreasonable with you.

"Your affectionate

"FATHER."

Ann Veronica sat over her fire with her father's note in her hand. "Queer letters he writes," she said. "I suppose most people's letters are queer. Roof open--like a Noah's Ark. I wonder if he really wants me to go home. It's odd how little I know of him, and of how he feels and what he feels."

"I wonder how he treated Gwen."

Her mind drifted into a speculation about her sister. "I ought to look up Gwen," she said. "I wonder what happened."

Then she fell to thinking about her aunt. "I would like to go home," she cried, "to please her. She has been a dear. Considering how little he lets her have."

The truth prevailed. "The unaccountable thing is that I wouldn't go home to please her. She is, in her way, a dear. One OUGHT to want to please her. And I don't. I don't care. I can't even make myself care."

Presently, as if for comparison with her father's letter, she got out Ramage's check from the box that contained her papers. For so far she had kept it uncashed. She had not even endorsed it.

"Suppose I chuck it," she remarked, standing with the mauve slip in her hand--"suppose I chuck it, and surrender and go home! Perhaps, after all, Roddy was right!"

"Father keeps opening the door and shutting it, but a time will come--"

"I could still go home!"

She held Ramage's check as if to tear it across. "No," she said at last; "I'm a human being--not a timid female. What could I do at home? The other's a crumple-up--just surrender. Funk! I'll see it out."

CHAPTER THE EIGHTH

BIOLOGY

Part 1

January found Ann Veronica a student in the biological laboratory of the Central Imperial College that towers up from among the back streets in the angle between Euston Road and Great Portland Street. She was working very steadily at the Advanced Course in Comparative Anatomy, wonderfully relieved to have her mind engaged upon one methodically developing theme in the place of the discursive uncertainties of the previous two months, and doing her utmost to keep right in the back of her mind and out of sight the facts, firstly, that she had achieved this haven of satisfactory activity by incurring a debt to Ramage of forty pounds, and, secondly, that her present position was necessarily

temporary and her outlook quite uncertain.

The biological laboratory had an atmosphere that was all its own.

It was at the top of the building, and looked clear over a clustering mass of inferior buildings toward Regent's Park. It was long and narrow, a well-lit, well-ventilated, quiet gallery of small tables and sinks, pervaded by a thin smell of methylated spirit and of a mitigated and sterilized organic decay. Along the inner side was a wonderfully arranged series of displayed specimens that Russell himself had prepared. The supreme effect for Ann Veronica was its surpassing relevance; it made every other atmosphere she knew seem discursive and confused. The whole place and everything in it aimed at one thing--to illustrate, to elaborate, to criticise and illuminate, and make ever plainer and plainer the significance of animal and vegetable structure. It dealt from floor to ceiling and end to end with the Theory of the Forms of Life; the very duster by the blackboard was there to do its share in that work, the very washers in the taps; the room was more simply concentrated in aim even than a church. To that, perhaps, a large part of its satisfyingness was due. Contrasted with the confused movement and presences of a Fabian meeting, or the inexplicable enthusiasm behind the suffrage demand, with the speeches that were partly egotistical displays, partly artful manoeuvres, and partly incoherent cries for unsoundly formulated ends, compared with the comings and goings of audiences and supporters that were like the eddy-driven drift of paper in the street, this long, quiet, methodical chamber shone like a star seen through clouds.

Day after day for a measured hour in the lecture-theatre, with elaborate power and patience, Russell pieced together difficulty and suggestion, instance and counter-instance, in the elaborate construction of the family tree of life. And then the students went into the long laboratory and followed out these facts in

almost living tissue with microscope and scalpel, probe and microtome, and the utmost of their skill and care, making now and then a raid into the compact museum of illustration next door, in which specimens and models and directions stood in disciplined ranks, under the direction of the demonstrator Capes. There was a couple of blackboards at each end of the aisle of tables, and at these Capes, with quick and nervous speech that contrasted vividly with Russell's slow, definitive articulation, directed the dissection and made illuminating comments on the structures under examination. Then he would come along the laboratory, sitting down by each student in turn, checking the work and discussing its difficulties, and answering questions arising out of Russell's lecture.

Ann Veronica had come to the Imperial College obsessed by the great figure of Russell, by the part he had played in the Darwinian controversies, and by the resolute effect of the grim-lipped, yellow, leonine face beneath the mane of silvery hair. Capes was rather a discovery. Capes was something superadded. Russell burned like a beacon, but Capes illuminated by darting flashes and threw light, even if it was but momentary light, into a hundred corners that Russell left steadfastly in the shade.

Capes was an exceptionally fair man of two or three-and-thirty, so ruddily blond that it was a mercy he had escaped light eyelashes, and with a minor but by no means contemptible reputation of his own. He talked at the blackboard in a pleasant, very slightly lispng voice with a curious spontaneity, and was sometimes very clumsy in his exposition, and sometimes very vivid. He dissected rather awkwardly and hurriedly, but, on the whole, effectively, and drew with an impatient directness that made up in significance what it lacked in precision. Across the blackboard the colored chalks flew like flights of variously tinted rockets as diagram after diagram flickered into being.

There happened that year to be an unusual proportion of girls and women in the advanced laboratory, perhaps because the class as a whole was an exceptionally small one. It numbered nine, and four of these were women students. As a consequence of its small size, it was possible to get along with the work on a much easier and more colloquial footing than a larger class would have permitted. And a custom had grown up of a general tea at four o'clock, under the auspices of a Miss Garvice, a tall and graceful girl of distinguished intellectual incompetence, in whom the hostess instinct seemed to be abnormally developed.

Capes would come to these teas; he evidently liked to come, and he would appear in the doorway of the preparation-room, a pleasing note of shyness in his manner, hovering for an invitation.

From the first, Ann Veronica found him an exceptionally interesting man. To begin with, he struck her as being the most variable person she had ever encountered. At times he was brilliant and masterful, talked round and over every one, and would have been domineering if he had not been extraordinarily kindly; at times he was almost monosyllabic, and defeated Miss Garvice's most skilful attempts to draw him out. Sometimes he was obviously irritable and uncomfortable and unfortunate in his efforts to seem at ease. And sometimes he overflowed with a peculiarly malignant wit that played, with devastating effect, upon any topics that had the courage to face it. Ann Veronica's experiences of men had been among more stable types--Teddy, who was always absurd; her father, who was always authoritative and sentimental; Manning, who was always Manning. And most of the others she had met had, she felt, the same steadfastness. Goopes, she was sure was always high-browed and slow and Socratic. And Ramage too--about Ramage there would always be that air of avidity, that air of knowledge and inquiry, the

mixture of things in his talk that were rather good with things that were rather poor. But one could not count with any confidence upon Capes.

The five men students were a mixed company. There was a very white-faced youngster of eighteen who brushed back his hair exactly in Russell's manner, and was disposed to be uncomfortably silent when he was near her, and to whom she felt it was only Christian kindness to be consistently pleasant; and a lax young man of five-and-twenty in navy blue, who mingled Marx and Bebel with the more orthodox gods of the biological pantheon. There was a short, red-faced, resolute youth who inherited an authoritative attitude upon bacteriology from his father; a Japanese student of unassuming manners who drew beautifully and had an imperfect knowledge of English; and a dark, unwashed Scotchman with complicated spectacles, who would come every morning as a sort of volunteer supplementary demonstrator, look very closely at her work and her, tell her that her dissections were "fairish," or "very fairish indeed," or "high above the normal female standard," hover as if for some outbreak of passionate gratitude and with admiring retrospects that made the faceted spectacles gleam like diamonds, return to his own place.

The women, Ann Veronica thought, were not quite so interesting as the men. There were two school-mistresses, one of whom--Miss Klegg--might have been a first cousin to Miss Miniver, she had so many Miniver traits; there was a preoccupied girl whose name Ann Veronica never learned, but who worked remarkably well; and Miss Garvice, who began by attracting her very greatly--she moved so beautifully--and ended by giving her the impression that moving beautifully was the beginning and end of her being.

The next few weeks were a time of the very liveliest thought and growth for Ann Veronica. The crowding impressions of the previous weeks seemed to run together directly her mind left the chaotic search for employment and came into touch again with a coherent and systematic development of ideas. The advanced work at the Central Imperial College was in the closest touch with living interests and current controversies; it drew its illustrations and material from Russell's two great researches--upon the relation of the brachiopods to the echinodermata, and upon the secondary and tertiary mammalian and pseudo-mammalian factors in the free larval forms of various marine organisms. Moreover, a vigorous fire of mutual criticism was going on now between the Imperial College and the Cambridge Mendelians and echoed in the lectures. From beginning to end it was first-hand stuff.

But the influence of the science radiated far beyond its own special field--beyond those beautiful but highly technical problems with which we do not propose for a moment to trouble the naturally terrified reader. Biology is an extraordinarily digestive science. It throws out a number of broad experimental generalizations, and then sets out to bring into harmony or relation with these an infinitely multifarious collection of phenomena. The little streaks upon the germinating area of an egg, the nervous movements of an impatient horse, the trick of a calculating boy, the senses of a fish, the fungus at the root of a garden flower, and the slime upon a sea-wet rock--ten thousand such things bear their witness and are illuminated. And not only did these tentacular generalizations gather all the facts of natural history and comparative anatomy together, but they seemed always stretching out further and further into a world of interests that lay altogether outside their legitimate bounds.

It came to Ann Veronica one night after a long talk with Miss Miniver, as a sudden remarkable thing, as a grotesque, novel aspect, that this slowly elaborating biological scheme had something more than an academic interest for herself. And not only so, but that it was after all, a more systematic and particular method of examining just the same questions that underlay the discussions of the Fabian Society, the talk of the West Central Arts Club, the chatter of the studios and the deep, the bottomless discussions of the simple-life homes. It was the same Bios whose nature and drift and ways and methods and aspects engaged them all. And she, she in her own person too, was this eternal Bios, beginning again its recurrent journey to selection and multiplication and failure or survival.

But this was but a momentary gleam of personal application, and at this time she followed it up no further.

And now Ann Veronica's evenings were also becoming very busy. She pursued her interest in the Socialist movement and in the Suffragist agitation in the company of Miss Miniver. They went to various central and local Fabian gatherings, and to a number of suffrage meetings. Teddy Widgett hovered on the fringe of all these gatherings, blinking at Ann Veronica and occasionally making a wildly friendly dash at her, and carrying her and Miss Miniver off to drink cocoa with a choice diversity of other youthful and congenial Fabians after the meetings. Then Mr. Manning loomed up ever and again into her world, full of a futile solicitude, and almost always declaring she was splendid, splendid, and wishing he could talk things out with her. Teas he contributed to the commissariat of Ann Veronica's campaign--quite a number of teas. He would get her to come to tea with him, usually in a pleasant tea-room over a fruit-shop in Tottenham Court Road, and he would discuss his own point of view and hint at a thousand devotions were she but to command him. And he would express various artistic sensibilities and aesthetic

appreciations in carefully punctuated sentences and a large, clear voice. At Christmas he gave her a set of a small edition of Meredith's novels, very prettily bound in flexible leather, being guided in the choice of an author, as he intimated, rather by her preferences than his own.

There was something markedly and deliberately liberal-minded in his manner in all their encounters. He conveyed not only his sense of the extreme want of correctitude in their unsanctioned meetings, but also that, so far as he was concerned, this irregularity mattered not at all, that he had flung--and kept on flinging --such considerations to the wind.

And, in addition, she was now seeing and talking to Ramage almost weekly, on a theory which she took very gravely, that they were exceptionally friends. He would ask her to come to dinner with him in some little Italian or semi-Bohemian restaurant in the district toward Soho, or in one of the more stylish and magnificent establishments about Piccadilly Circus, and for the most part she did not care to refuse. Nor, indeed, did she want to refuse. These dinners, from their lavish display of ambiguous hors d'oeuvre to their skimpy ices in dishes of frilled paper, with their Chianti flasks and Parmesan dishes and their polyglot waiters and polyglot clientele, were very funny and bright; and she really liked Ramage, and valued his help and advice. It was interesting to see how different and characteristic his mode of approach was to all sorts of questions that interested her, and it was amusing to discover this other side to the life of a Morningside Park inhabitant. She had thought that all Morningside Park householders came home before seven at the latest, as her father usually did. Ramage talked always about women or some woman's concern, and very much about Ann Veronica's own outlook upon life. He was always drawing contrasts between a woman's lot and a man's, and treating her as a wonderful new departure in this comparison. Ann Veronica liked their

relationship all the more because it was an unusual one.

After these dinners they would have a walk, usually to the Thames Embankment to see the two sweeps of river on either side of Waterloo Bridge; and then they would part at Westminster Bridge, perhaps, and he would go on to Waterloo. Once he suggested they should go to a music-hall and see a wonderful new dancer, but Ann Veronica did not feel she cared to see a new dancer. So, instead, they talked of dancing and what it might mean in a human life. Ann Veronica thought it was a spontaneous release of energy expressive of well-being, but Ramage thought that by dancing, men, and such birds and animals as dance, come to feel and think of their bodies.

This intercourse, which had been planned to warm Ann Veronica to a familiar affection with Ramage, was certainly warming Ramage to a constantly deepening interest in Ann Veronica. He felt that he was getting on with her very slowly indeed, but he did not see how he could get on faster. He had, he felt, to create certain ideas and vivify certain curiosities and feelings in her. Until that was done a certain experience of life assured him that a girl is a locked coldness against a man's approach. She had all the fascination of being absolutely perplexing in this respect. On the one hand, she seemed to think plainly and simply, and would talk serenely and freely about topics that most women have been trained either to avoid or conceal; and on the other she was unconscious, or else she had an air of being unconscious--that was the riddle--to all sorts of personal applications that almost any girl or woman, one might have thought, would have made. He was always doing his best to call her attention to the fact that he was a man of spirit and quality and experience, and she a young and beautiful woman, and that all sorts of constructions upon their relationship were possible, trusting her to go on from that to the idea that all sorts of relationships were possible. She responded with an unfaltering appearance of insensibility,

and never as a young and beautiful woman conscious of sex; always in the character of an intelligent girl student.

His perception of her personal beauty deepened and quickened with each encounter. Every now and then her general presence became radiantly dazzling in his eyes; she would appear in the street coming toward him, a surprise, so fine and smiling and welcoming was she, so expanded and illuminated and living, in contrast with his mere expectation. Or he would find something--a wave in her hair, a little line in the contour of her brow or neck, that made an exquisite discovery.

He was beginning to think about her inordinately. He would sit in his inner office and compose conversations with her, penetrating, illuminating, and nearly conclusive--conversations that never proved to be of the slightest use at all with her when he met her face to face. And he began also at times to wake at night and think about her.

He thought of her and himself, and no longer in that vein of incidental adventure in which he had begun. He thought, too, of the fretful invalid who lay in the next room to his, whose money had created his business and made his position in the world.

"I've had most of the things I wanted," said Ramage, in the stillness of the night.

Part 3

For a time Ann Veronica's family had desisted from direct offers of a free pardon; they were evidently waiting for her resources to come to an end. Neither father, aunt, nor brothers made a

sign, and then one afternoon in early February her aunt came up in a state between expostulation and dignified resentment, but obviously very anxious for Ann Veronica's welfare. "I had a dream in the night," she said. "I saw you in a sort of sloping, slippery place, holding on by your hands and slipping. You seemed to me to be slipping and slipping, and your face was white. It was really most vivid, most vivid! You seemed to be slipping and just going to tumble and holding on. It made me wake up, and there I lay thinking of you, spending your nights up here all alone, and no one to look after you. I wondered what you could be doing and what might be happening to you. I said to myself at once, 'Either this is a coincidence or the caper sauce.' But I made sure it was you. I felt I MUST do something anyhow, and up I came just as soon as I could to see you."

She had spoken rather rapidly. "I can't help saying it," she said, with the quality of her voice altering, "but I do NOT think it is right for an unprotected girl to be in London alone as you are."

"But I'm quite equal to taking care of myself, aunt."

"It must be most uncomfortable here. It is most uncomfortable for every one concerned."

She spoke with a certain asperity. She felt that Ann Veronica had duped her in that dream, and now that she had come up to London she might as well speak her mind.

"No Christmas dinner," she said, "or anything nice! One doesn't even know what you are doing."

"I'm going on working for my degree."

"Why couldn't you do that at home?"

"I'm working at the Imperial College. You see, aunt, it's the only possible way for me to get a good degree in my subjects, and father won't hear of it. There'd only be endless rows if I was at home. And how could I come home--when he locks me in rooms and all that?"

"I do wish this wasn't going on," said Miss Stanley, after a pause. "I do wish you and your father could come to some agreement."

Ann Veronica responded with conviction: "I wish so, too."

"Can't we arrange something? Can't we make a sort of treaty?"

"He wouldn't keep it. He would get very cross one evening and no one would dare to remind him of it."

"How can you say such things?"

"But he would!"

"Still, it isn't your place to say so."

"It prevents a treaty."

"Couldn't I make a treaty?"

Ann Veronica thought, and could not see any possible treaty that would leave it open for her to have quasi-surreptitious dinners with Ramage or go on walking round the London squares discussing Socialism with Miss Miniver toward the small hours. She had tasted freedom now, and so far she had not felt the need of protection. Still, there certainly was something in the idea of a treaty.

"I don't see at all how you can be managing," said Miss Stanley, and Ann Veronica hastened to reply, "I do on very little." Her mind went back to that treaty.

"And aren't there fees to pay at the Imperial College?" her aunt was saying--a disagreeable question.

"There are a few fees."

"Then how have you managed?"

"Bother!" said Ann Veronica to herself, and tried not to look guilty. "I was able to borrow the money."

"Borrow the money! But who lent you the money?"

"A friend," said Ann Veronica.

She felt herself getting into a corner. She sought hastily in her mind for a plausible answer to an obvious question that didn't come. Her aunt went off at a tangent. "But my dear Ann Veronica, you will be getting into debt!"

Ann Veronica at once, and with a feeling of immense relief, took refuge in her dignity. "I think, aunt," she said, "you might trust to my self-respect to keep me out of that."

For the moment her aunt could not think of any reply to this counterstroke, and Ann Veronica followed up her advantage by a sudden inquiry about her abandoned boots.

But in the train going home her aunt reasoned it out.

"If she is borrowing money," said Miss Stanley, "she **MUST** be

getting into debt. It's all nonsense. . . ."

Part 4

It was by imperceptible degrees that Capes became important in Ann Veronica's thoughts. But then he began to take steps, and, at last, strides to something more and more like predominance. She began by being interested in his demonstrations and his biological theory, then she was attracted by his character, and then, in a manner, she fell in love with his mind.

One day they were at tea in the laboratory and a discussion sprang up about the question of women's suffrage. The movement was then in its earlier militant phases, and one of the women only, Miss Garvice, opposed it, though Ann Veronica was disposed to be lukewarm. But a man's opposition always inclined her to the suffrage side; she had a curious feeling of loyalty in seeing the more aggressive women through. Capes was irritatingly judicial in the matter, neither absurdly against, in which case one might have smashed him, or hopelessly undecided, but tepidly sceptical. Miss Klegg and the youngest girl made a vigorous attack on Miss Garvice, who had said she thought women lost something infinitely precious by mingling in the conflicts of life. The discussion wandered, and was punctuated with bread and butter. Capes was inclined to support Miss Klegg until Miss Garvice cornered him by quoting him against himself, and citing a recent paper in the *Nineteenth Century*, in which, following Atkinson, he had made a vigorous and damaging attack on Lester Ward's case for the primitive matriarchate and the predominant importance of the female throughout the animal kingdom.

Ann Veronica was not aware of this literary side of her teacher;

she had a little tinge of annoyance at Miss Garvice's advantage. Afterwards she hunted up the article in question, and it seemed to her quite delightfully written and argued. Capes had the gift of easy, unaffected writing, coupled with very clear and logical thinking, and to follow his written thought gave her the sensation of cutting things with a perfectly new, perfectly sharp knife. She found herself anxious to read more of him, and the next Wednesday she went to the British Museum and hunted first among the half-crown magazines for his essays and then through various scientific quarterlies for his research papers. The ordinary research paper, when it is not extravagant theorizing, is apt to be rather sawdusty in texture, and Ann Veronica was delighted to find the same easy and confident luminosity that distinguished his work for the general reader. She returned to these latter, and at the back of her mind, as she looked them over again, was a very distinct resolve to quote them after the manner of Miss Garvice at the very first opportunity.

When she got home to her lodgings that evening she reflected with something like surprise upon her half-day's employment, and decided that it showed nothing more nor less than that Capes was a really very interesting person indeed.

And then she fell into a musing about Capes. She wondered why he was so distinctive, so unlike other men, and it never occurred to her for some time that this might be because she was falling in love with him.

Part 5

Yet Ann Veronica was thinking a very great deal about love. A dozen shynesses and intellectual barriers were being outflanked

or broken down in her mind. All the influences about her worked with her own predisposition and against all the traditions of her home and upbringing to deal with the facts of life in an unabashed manner. Ramage, by a hundred skilful hints had led her to realize that the problem of her own life was inseparably associated with, and indeed only one special case of, the problems of any woman's life, and that the problem of a woman's life is love.

"A young man comes into life asking how best he may place himself," Ramage had said; "a woman comes into life thinking instinctively how best she may give herself."

She noted that as a good saying, and it germinated and spread tentacles of explanation through her brain. The biological laboratory, perpetually viewing life as pairing and breeding and selection, and again pairing and breeding, seemed only a translated generalization of that assertion. And all the talk of the Miniver people and the Widgeott people seemed always to be like a ship in adverse weather on the lee shore of love. "For seven years," said Ann Veronica, "I have been trying to keep myself from thinking about love. . . ."

"I have been training myself to look askance at beautiful things."

She gave herself permission now to look at this squarely. She made herself a private declaration of liberty. "This is mere nonsense, mere tongue-tied fear!" she said. "This is the slavery of the veiled life. I might as well be at Morningside Park. This business of love is the supreme affair in life, it is the woman's one event and crisis that makes up for all her other restrictions, and I cower--as we all cower--with a blushing and paralyzed mind until it overtakes me! . . ."

"I'll be hanged if I do."

But she could not talk freely about love, she found, for all that manumission.

Ramage seemed always fencing about the forbidden topic, probing for openings, and she wondered why she did not give him them. But something instinctive prevented that, and with the finest resolve not to be "silly" and prudish she found that whenever he became at all bold in this matter she became severely scientific and impersonal, almost entomological indeed, in her method; she killed every remark as he made it and pinned it out for examination. In the biological laboratory that was their invincible tone. But she disapproved more and more of her own mental austerity. Here was an experienced man of the world, her friend, who evidently took a great interest in this supreme topic and was willing to give her the benefit of his experiences! Why should not she be at her ease with him? Why should not she know things? It is hard enough anyhow for a human being to learn, she decided, but it is a dozen times more difficult than it need be because of all this locking of the lips and thoughts.

She contrived to break down the barriers of shyness at last in one direction, and talked one night of love and the facts of love with Miss Miniver.

But Miss Miniver was highly unsatisfactory. She repeated phrases of Mrs. Goopes's: "Advanced people," she said, with an air of great elucidation, "tend to GENERALIZE love. 'He prayeth best who loveth best--all things both great and small.' For my own part I go about loving."

"Yes, but men;" said Ann Veronica, plunging; "don't you want the love of men?"

For some seconds they remained silent, both shocked by this question.

Miss Miniver looked over her glasses at her friend almost balefully. "NO!" she said, at last, with something in her voice that reminded Ann Veronica of a sprung tennis-racket.

"I've been through all that," she went on, after a pause.

She spoke slowly. "I have never yet met a man whose intellect I could respect."

Ann Veronica looked at her thoughtfully for a moment, and decided to persist on principle.

"But if you had?" she said.

"I can't imagine it," said Miss Miniver. "And think, think"--her voice sank--"of the horrible coarseness!"

"What coarseness?" said Ann Veronica.

"My dear Vee!" Her voice became very low. "Don't you know?"

"Oh! I know--"

"Well--" Her face was an unaccustomed pink.

Ann Veronica ignored her friend's confusion.

"Don't we all rather humbug about the coarseness? All we women, I mean," said she. She decided to go on, after a momentary halt.

"We pretend bodies are ugly. Really they are the most beautiful things in the world. We pretend we never think of everything that makes us what we are."

"No," cried Miss Miniver, almost vehemently. "You are wrong! I did not think you thought such things. Bodies! Bodies! Horrible things! We are souls. Love lives on a higher plane. We are not animals. If ever I did meet a man I could love, I should love him" --her voice dropped again--"platonically."

She made her glasses glint. "Absolutely platonically," she said.

"Soul to soul."

She turned her face to the fire, gripped her hands upon her elbows, and drew her thin shoulders together in a shrug. "Ugh!" she said.

Ann Veronica watched her and wondered about her.

"We do not want the men," said Miss Miniver; "we do not want them, with their sneers and loud laughter. Empty, silly, coarse brutes. Brutes! They are the brute still with us! Science some day may teach us a way to do without them. It is only the women matter. It is not every sort of creature needs--these males. Some have no males."

"There's green-fly," admitted Ann Veronica. "And even then--"

The conversation hung for a thoughtful moment.

Ann Veronica readjusted her chin on her hand. "I wonder which of us is right," she said. "I haven't a scrap--of this sort of aversion."

"Tolstoy is so good about this," said Miss Miniver, regardless of her friend's attitude. "He sees through it all. The Higher Life and the Lower. He sees men all defiled by coarse thoughts,

coarse ways of living cruelties. Simply because they are hardened by--by bestiality, and poisoned by the juices of meat slain in anger and fermented drinks--fancy! drinks that have been swarmed in by thousands and thousands of horrible little bacteria!"

"It's yeast," said Ann Veronica--"a vegetable."

"It's all the same," said Miss Miniver. "And then they are swollen up and inflamed and drunken with matter. They are blinded to all fine and subtle things--they look at life with bloodshot eyes and dilated nostrils. They are arbitrary and unjust and dogmatic and brutish and lustful."

"But do you really think men's minds are altered by the food they eat?"

"I know it," said Miss Miniver. "Experte credo. When I am leading a true life, a pure and simple life free of all stimulants and excitements, I think--I think --oh! with pellucid clearness; but if I so much as take a mouthful of meat--or anything--the mirror is all blurred."

Part 6

Then, arising she knew not how, like a new-born appetite, came a craving in Ann Veronica for the sight and sound of beauty.

It was as if her aesthetic sense had become inflamed. Her mind turned and accused itself of having been cold and hard. She began to look for beauty and discover it in unexpected aspects and places. Hitherto she had seen it chiefly in pictures and

other works of art, incidentally, and as a thing taken out of life. Now the sense of beauty was spreading to a multitude of hitherto unsuspected aspects of the world about her.

The thought of beauty became an obsession. It interwove with her biological work. She found herself asking more and more curiously, "Why, on the principle of the survival of the fittest, have I any sense of beauty at all?" That enabled her to go on thinking about beauty when it seemed to her right that she should be thinking about biology.

She was very greatly exercised by the two systems of values--the two series of explanations that her comparative anatomy on the one hand and her sense of beauty on the other, set going in her thoughts. She could not make up her mind which was the finer, more elemental thing, which gave its values to the other. Was it that the struggle of things to survive produced as a sort of necessary by-product these intense preferences and appreciations, or was it that some mystical outer thing, some great force, drove life beautyward, even in spite of expediency, regardless of survival value and all the manifest discretions of life? She went to Capes with that riddle and put it to him very carefully and clearly, and he talked well--he always talked at some length when she took a difficulty to him--and sent her to a various literature upon the markings of butterflies, the incomprehensible elaboration and splendor of birds of Paradise and humming-birds' plumes, the patterning of tigers, and a leopard's spots. He was interesting and inconclusive, and the original papers to which he referred her discursive were at best only suggestive. Afterward, one afternoon, he hovered about her, and came and sat beside her and talked of beauty and the riddle of beauty for some time. He displayed a quite unprofessional vein of mysticism in the matter. He contrasted with Russell, whose intellectual methods were, so to speak, sceptically dogmatic. Their talk drifted to the beauty of music, and they took that up again at tea-time.

But as the students sat about Miss Garvice's tea-pot and drank tea or smoked cigarettes, the talk got away from Capes. The Scotchman informed Ann Veronica that your view of beauty necessarily depended on your metaphysical premises, and the young man with the Russell-like hair became anxious to distinguish himself by telling the Japanese student that Western art was symmetrical and Eastern art asymmetrical, and that among the higher organisms the tendency was toward an external symmetry veiling an internal want of balance. Ann Veronica decided she would have to go on with Capes another day, and, looking up, discovered him sitting on a stool with his hands in his pockets and his head a little on one side, regarding her with a thoughtful expression. She met his eye for a moment in curious surprise.

He turned his eyes and stared at Miss Garvice like one who wakes from a reverie, and then got up and strolled down the laboratory toward his refuge, the preparation-room.

Part 7

Then one day a little thing happened that clothed itself in significance.

She had been working upon a ribbon of microtome sections of the developing salamander, and he came to see what she had made of them. She stood up and he sat down at the microscope, and for a time he was busy scrutinizing one section after another. She looked down at him and saw that the sunlight was gleaming from his cheeks, and that all over his cheeks was a fine golden down of delicate hairs. And at the sight something leaped within her.

Something changed for her.

She became aware of his presence as she had never been aware of any human being in her life before. She became aware of the modelling of his ear, of the muscles of his neck and the textures of the hair that came off his brow, the soft minute curve of eyelid that she could just see beyond his brow; she perceived all these familiar objects as though they were acutely beautiful things. They WERE, she realized, acutely beautiful things. Her sense followed the shoulders under his coat, down to where his flexible, sensitive-looking hand rested lightly upon the table. She felt him as something solid and strong and trustworthy beyond measure. The perception of him flooded her being.

He got up. "Here's something rather good," he said, and with a start and an effort she took his place at the microscope, while he stood beside her and almost leaning over her.

She found she was trembling at his nearness and full of a thrilling dread that he might touch her. She pulled herself together and put her eye to the eye-piece.

"You see the pointer?" he asked.

"I see the pointer," she said.

"It's like this," he said, and dragged a stool beside her and sat down with his elbow four inches from hers and made a sketch. Then he got up and left her.

She had a feeling at his departure as of an immense cavity, of something enormously gone; she could not tell whether it was infinite regret or infinite relief. . . .

But now Ann Veronica knew what was the matter with her.

Part 8

And as she sat on her bed that night, musing and half-undressed, she began to run one hand down her arm and scrutinize the soft flow of muscle under her skin. She thought of the marvellous beauty of skin, and all the delightfulness of living texture. Oh the back of her arm she found the faintest down of hair in the world. "Etherealized monkey," she said. She held out her arm straight before her, and turned her hand this way and that.

"Why should one pretend?" she whispered. "Why should one pretend?"

"Think of all the beauty in the world that is covered up and overlaid."

She glanced shyly at the mirror above her dressing-table, and then about her at the furniture, as though it might penetrate to the thoughts that peeped in her mind.

"I wonder," said Ann Veronica at last, "if I am beautiful? I wonder if I shall ever shine like a light, like a translucent goddess?--"

"I wonder--"

"I suppose girls and women have prayed for this, have come to this-- In Babylon, in Nineveh.

"Why shouldn't one face the facts of one's self?"

She stood up. She posed herself before her mirror and surveyed herself with gravely thoughtful, gravely critical, and yet admiring eyes. "And, after all, I am just one common person!"

She watched the throb of the arteries in the stem of her neck, and put her hand at last gently and almost timidly to where her heart beat beneath her breast.

Part 9

The realization that she was in love flooded Ann Veronica's mind, and altered the quality of all its topics.

She began to think persistently of Capes, and it seemed to her now that for some weeks at least she must have been thinking persistently of him unawares. She was surprised to find how stored her mind was with impressions and memories of him, how vividly she remembered his gestures and little things that he had said. It occurred to her that it was absurd and wrong to be so continuously thinking of one engrossing topic, and she made a strenuous effort to force her mind to other questions.

But it was extraordinary what seemingly irrelevant things could restore her to the thought of Capes again. And when she went to sleep, then always Capes became the novel and wonderful guest of her dreams.

For a time it really seemed all-sufficient to her that she should love. That Capes should love her seemed beyond the compass of her imagination. Indeed, she did not want to think of him as loving her. She wanted to think of him as her beloved person, to

be near him and watch him, to have him going about, doing this and that, saying this and that, unconscious of her, while she too remained unconscious of herself. To think of him as loving her would make all that different. Then he would turn his face to her, and she would have to think of herself in his eyes. She would become defensive--what she did would be the thing that mattered. He would require things of her, and she would be passionately concerned to meet his requirements. Loving was better than that. Loving was self-forgetfulness, pure delighting in another human being. She felt that with Capes near to her she would be content always to go on loving.

She went next day to the schools, and her world seemed all made of happiness just worked up roughly into shapes and occasions and duties. She found she could do her microscope work all the better for being in love. She winced when first she heard the preparation-room door open and Capes came down the laboratory; but when at last he reached her she was self-possessed. She put a stool for him at a little distance from her own, and after he had seen the day's work he hesitated, and then plunged into a resumption of their discussion about beauty.

"I think," he said, "I was a little too mystical about beauty the other day."

"I like the mystical way," she said.

"Our business here is the right way. I've been thinking, you know-- I'm not sure that primarily the perception of beauty isn't just intensity of feeling free from pain; intensity of perception without any tissue destruction."

"I like the mystical way better," said Ann Veronica, and thought.

"A number of beautiful things are not intense."

"But delicacy, for example, may be intensely perceived."

"But why is one face beautiful and another not?" objected Ann Veronica; "on your theory any two faces side by side in the sunlight ought to be equally beautiful. One must get them with exactly the same intensity."

He did not agree with that. "I don't mean simply intensity of sensation. I said intensity of perception. You may perceive harmony, proportion, rhythm, intensely. They are things faint and slight in themselves, as physical facts, but they are like the detonator of a bomb: they let loose the explosive. There's the internal factor as well as the external. . . . I don't know if I express myself clearly. I mean that the point is that vividness of perception is the essential factor of beauty; but, of course, vividness may be created by a whisper."

"That brings us back," said Ann Veronica, "to the mystery. Why should some things and not others open the deeps?"

"Well, that might, after all, be an outcome of selection --like the preference for blue flowers, which are not nearly so bright as yellow, of some insects."

"That doesn't explain sunsets."

"Not quite so easily as it explains an insect alighting on colored paper. But perhaps if people didn't like clear, bright, healthy eyes--which is biologically understandable--they couldn't like precious stones. One thing may be a necessary collateral of the others. And, after all, a fine clear sky of bright colors is the signal to come out of hiding and rejoice and go on with life."

"H'm!" said Ann Veronica, and shook her head.

Capes smiled cheerfully with his eyes meeting hers. "I throw it out in passing," he said. "What I am after is that beauty isn't a special inserted sort of thing; that's my idea. It's just life, pure life, life nascent, running clear and strong."

He stood up to go on to the next student.

"There's morbid beauty," said Ann Veronica.

"I wonder if there is!" said Capes, and paused, and then bent down over the boy who wore his hair like Russell.

Ann Veronica surveyed his sloping back for a moment, and then drew her microscope toward her. Then for a time she sat very still. She felt that she had passed a difficult corner, and that now she could go on talking with him again, just as she had been used to do before she understood what was the matter with her. .

..

She had one idea, she found, very clear in her mind--that she would get a Research Scholarship, and so contrive another year in the laboratory.

"Now I see what everything means," said Ann Veronica to herself; and it really felt for some days as though the secret of the universe, that had been wrapped and hidden from her so obstinately, was at last altogether displayed.

CHAPTER THE NINTH

DISCORDS

Part 1

One afternoon, soon after Ann Veronica's great discovery, a telegram came into the laboratory for her. It ran:

```
-----  
| Bored | and   | nothing | to   | do   |  
|-----|-----|-----|-----|-----|  
| will  | you  | dine  | with | me  |  
|-----|-----|-----|-----|-----|  
| to-night | somewhere | and  | talk | I   |  
|-----|-----|-----|-----|-----|  
| shall | be  | grateful | Ramage |    |  
-----
```

Ann Veronica was rather pleased by this. She had not seen Ramage for ten or eleven days, and she was quite ready for a gossip with him. And now her mind was so full of the thought that she was in love--in love!--that marvellous state! that I really believe she had some dim idea of talking to him about it. At any rate, it would be good to hear him saying the sort of things he did--perhaps now she would grasp them better--with this world--shaking secret brandishing itself about inside her head within a yard of him.

She was sorry to find Ramage a little disposed to be melancholy.

"I have made over seven hundred pounds in the last week," he said.

"That's exhilarating," said Ann Veronica.

"Not a bit of it," he said; "it's only a score in a game."

"It's a score you can buy all sorts of things with."

"Nothing that one wants."

He turned to the waiter, who held a wine-card. "Nothing can cheer me," he said, "except champagne." He meditated. "This," he said, and then: "No! Is this sweeter? Very well."

"Everything goes well with me," he said, folding his arms under him and regarding Ann Veronica with the slightly projecting eyes wide open. "And I'm not happy. I believe I'm in love."

He leaned back for his soup.

Presently he resumed: "I believe I must be in love."

"You can't be that," said Ann Veronica, wisely.

"How do you know?"

"Well, it isn't exactly a depressing state, is it?"

"YOU don't know."

"One has theories," said Ann Veronica, radiantly.

"Oh, theories! Being in love is a fact."

"It ought to make one happy."

"It's an unrest--a longing-- What's that?" The waiter had intervened. "Parmesan--take it away!"

He glanced at Ann Veronica's face, and it seemed to him that she

really was exceptionally radiant. He wondered why she thought love made people happy, and began to talk of the smilax and pinks that adorned the table. He filled her glass with champagne.

"You MUST," he said, "because of my depression."

They were eating quails when they returned to the topic of love.

"What made you think" he said, abruptly, with the gleam of avidity in his face, "that love makes people happy?"

"I know it must."

"But how?"

He was, she thought, a little too insistent. "Women know these things by instinct," she answered.

"I wonder," he said, "if women do know things by instinct? I have my doubts about feminine instinct. It's one of our conventional superstitions. A woman is supposed to know when a man is in love with her. Do you think she does?"

Ann Veronica picked among her salad with a judicial expression of face. "I think she would," she decided.

"Ah!" said Ramage, impressively.

Ann Veronica looked up at him and found him regarding her with eyes that were almost woebegone, and into which, indeed, he was trying to throw much more expression than they could carry.

There was a little pause between them, full for Ann Veronica of rapid elusive suspicions and intimations.

"Perhaps one talks nonsense about a woman's instinct," she said.

"It's a way of avoiding explanations. And girls and women, perhaps, are different. I don't know. I don't suppose a girl

can tell if a man is in love with her or not in love with her." Her mind went off to Capes. Her thoughts took words for themselves. "She can't. I suppose it depends on her own state of mind. If one wants a thing very much, perhaps one is inclined to think one can't have it. I suppose if one were to love some one, one would feel doubtful. And if one were to love some one very much, it's just so that one would be blindest, just when one wanted most to see."

She stopped abruptly, afraid that Ramage might be able to infer Capes from the things she had said, and indeed his face was very eager.

"Yes?" he said.

Ann Veronica blushed. "That's all," she said "I'm afraid I'm a little confused about these things."

Ramage looked at her, and then fell into deep reflection as the waiter came to paraphrase their talk again.

"Have you ever been to the opera, Ann Veronica?" said Ramage.

"Once or twice."

"Shall we go now?"

"I think I would like to listen to music. What is there?"

"Tristan."

"I've never heard Tristan and Isolde."

"That settles it. We'll go. There's sure to be a place somewhere."

"It's rather jolly of you," said Ann Veronica.

"It's jolly of you to come," said Ramage.

So presently they got into a hansom together, and Ann Veronica sat back feeling very luxurious and pleasant, and looked at the light and stir and misty glitter of the street traffic from under slightly drooping eyelids, while Ramage sat closer to her than he need have done, and glanced ever and again at her face, and made to speak and said nothing. And when they got to Covent Garden Ramage secured one of the little upper boxes, and they came into it as the overture began.

Ann Veronica took off her jacket and sat down in the corner chair, and leaned forward to look into the great hazy warm brown cavity of the house, and Ramage placed his chair to sit beside her and near her, facing the stage. The music took hold of her slowly as her eyes wandered from the indistinct still ranks of the audience to the little busy orchestra with its quivering violins, its methodical movements of brown and silver instruments, its brightly lit scores and shaded lights. She had never been to the opera before except as one of a congested mass of people in the cheaper seats, and with backs and heads and women's hats for the frame of the spectacle; there was by contrast a fine large sense of space and ease in her present position. The curtain rose out of the concluding bars of the overture and revealed Isolde on the prow of the barbaric ship. The voice of the young seaman came floating down from the masthead, and the story of the immortal lovers had begun. She knew the story only imperfectly, and followed it now with a passionate and deepening interest. The splendid voices sang on from phase to phase of love's unfolding, the ship drove across the sea to the beating rhythm of the rowers. The lovers broke into passionate knowledge of themselves and each other, and then,

a jarring intervention, came King Mark amidst the shouts of the sailormen, and stood beside them.

The curtain came festooning slowly down, the music ceased, the lights in the auditorium glowed out, and Ann Veronica woke out of her confused dream of involuntary and commanding love in a glory of sound and colors to discover that Ramage was sitting close beside her with one hand resting lightly on her waist. She made a quick movement, and the hand fell away.

"By God! Ann Veronica," he said, sighing deeply. "This stirs one."

She sat quite still looking at him.

"I wish you and I had drunk that love potion," he said.

She found no ready reply to that, and he went on: "This music is the food of love. It makes me desire life beyond measure. Life!

Life and love! It makes me want to be always young, always strong, always devoting my life--and dying splendidly."

"It is very beautiful," said Ann Veronica in a low tone.

They said no more for a moment, and each was now acutely aware of the other. Ann Veronica was excited and puzzled, with a sense of a strange and disconcerting new light breaking over her relations with Ramage. She had never thought of him at all in that way before. It did not shock her; it amazed her, interested her beyond measure. But also this must not go on. She felt he was going to say something more--something still more personal and intimate. She was curious, and at the same time clearly resolved she must not hear it. She felt she must get him talking upon some impersonal theme at any cost. She snatched about in her mind.

"What is the exact force of a motif?" she asked at random.
"Before I heard much Wagnerian music I heard enthusiastic descriptions of it from a mistress I didn't like at school. She gave me an impression of a sort of patched quilt; little bits of patterned stuff coming up again and again."

She stopped with an air of interrogation.

Ramage looked at her for a long and discriminating interval without speaking. He seemed to be hesitating between two courses of action. "I don't know much about the technique of music," he said at last, with his eyes upon her. "It's a matter of feeling with me."

He contradicted himself by plunging into an exposition of motifs.

By a tacit agreement they ignored the significant thing between them, ignored the slipping away of the ground on which they had stood together hitherto. . . .

All through the love music of the second act, until the hunting horns of Mark break in upon the dream, Ann Veronica's consciousness was flooded with the perception of a man close beside her, preparing some new thing to say to her, preparing, perhaps, to touch her, stretching hungry invisible tentacles about her. She tried to think what she should do in this eventuality or that. Her mind had been and was full of the thought of Capes, a huge generalized Capes-lover. And in some incomprehensible way, Ramage was confused with Capes; she had a grotesque disposition to persuade herself that this was really Capes who surrounded her, as it were, with wings of desire. The fact that it was her trusted friend making illicit love to her remained, in spite of all her effort, an insignificant thing in her mind. The music confused and distracted her, and made her struggle against a feeling of intoxication. Her head swam. That

was the inconvenience of it; her head was swimming. The music throbbed into the warnings that preceded the king's irruption.

Abruptly he gripped her wrist. "I love you, Ann Veronica. I love you--with all my heart and soul."

She put her face closer to his. She felt the warm nearness of his. "DON'T!" she said, and wrenched her wrist from his retaining hand.

"My God! Ann Veronica," he said, struggling to keep his hold upon her; "my God! Tell me--tell me now--tell me you love me!"

His expression was as it were rapaciously furtive. She answered in whispers, for there was the white arm of a woman in the next box peeping beyond the partition within a yard of him.

"My hand! This isn't the place."

He released her hand and talked in eager undertones against an auditory background of urgency and distress.

"Ann Veronica," he said, "I tell you this is love. I love the soles of your feet. I love your very breath. I have tried not to tell you--tried to be simply your friend. It is no good. I want you. I worship you. I would do anything--I would give anything to make you mine. . . . Do you hear me? Do you hear what I am saying? . . . Love!"

He held her arm and abandoned it again at her quick defensive movement. For a long time neither spoke again.

She sat drawn together in her chair in the corner of the box, at a loss what to say or do--afraid, curious, perplexed. It seemed to her that it was her duty to get up and clamor to go home to

her room, to protest against his advances as an insult. But she did not in the least want to do that. These sweeping dignities were not within the compass of her will; she remembered she liked Ramage, and owed things to him, and she was interested--she was profoundly interested. He was in love with her! She tried to grasp all the welter of values in the situation simultaneously, and draw some conclusion from their disorder.

He began to talk again in quick undertones that she could not clearly hear.

"I have loved you," he was saying, "ever since you sat on that gate and talked. I have always loved you. I don't care what divides us. I don't care what else there is in the world. I want you beyond measure or reckoning. . . ."

His voice rose and fell amidst the music and the singing of Tristan and King Mark, like a voice heard in a badly connected telephone. She stared at his pleading face.

She turned to the stage, and Tristan was wounded in Kurvenal's arms, with Isolde at his feet, and King Mark, the incarnation of masculine force and obligation, the masculine creditor of love and beauty, stood over him, and the second climax was ending in wreaths and reek of melodies; and then the curtain was coming down in a series of short rushes, the music had ended, and the people were stirring and breaking out into applause, and the lights of the auditorium were resuming. The lighting-up pierced the obscurity of the box, and Ramage stopped his urgent flow of words abruptly and sat back. This helped to restore Ann Veronica's self-command.

She turned her eyes to him again, and saw her late friend and pleasant and trusted companion, who had seen fit suddenly to change into a lover, babbling interesting unacceptable things.

He looked eager and flushed and troubled. His eyes caught at hers with passionate inquiries. "Tell me," he said; "speak to me." She realized it was possible to be sorry for him--acutely sorry for the situation. Of course this thing was absolutely impossible. But she was disturbed, mysteriously disturbed. She remembered abruptly that she was really living upon his money. She leaned forward and addressed him.

"Mr. Ramage," she said, "please don't talk like this."

He made to speak and did not.

"I don't want you to do it, to go on talking to me. I don't want to hear you. If I had known that you had meant to talk like this I wouldn't have come here."

"But how can I help it? How can I keep silence?"

"Please!" she insisted. "Please not now."

"I MUST talk with you. I must say what I have to say!"

"But not now--not here."

"It came," he said. "I never planned it-- And now I have begun--"

She felt acutely that he was entitled to explanations, and as acutely that explanations were impossible that night. She wanted to think.

"Mr. Ramage," she said, "I can't-- Not now. Will you please-- Not now, or I must go."

He stared at her, trying to guess at the mystery of her thoughts.

"You don't want to go?"

"No. But I must--I ought--"

"I MUST talk about this. Indeed I must."

"Not now."

"But I love you. I love you--unendurably."

"Then don't talk to me now. I don't want you to talk to me now. There is a place-- This isn't the place. You have misunderstood.

I can't explain--"

They regarded one another, each blinded to the other. "Forgive me," he decided to say at last, and his voice had a little quiver of emotion, and he laid his hand on hers upon her knee. "I am the most foolish of men. I was stupid--stupid and impulsive beyond measure to burst upon you in this way. I--I am a love-sick idiot, and not accountable for my actions. Will you forgive me--if I say no more?"

She looked at him with perplexed, earnest eyes.

"Pretend," he said, "that all I have said hasn't been said. And let us go on with our evening. Why not? Imagine I've had a fit of hysteria--and that I've come round."

"Yes," she said, and abruptly she liked him enormously. She felt this was the sensible way out of this oddly sinister situation.

He still watched her and questioned her.

"And let us have a talk about this--some other time. Somewhere, where we can talk without interruption. Will you?"

She thought, and it seemed to him she had never looked so self-disciplined and deliberate and beautiful. "Yes," she said, "that is what we ought to do." But now she doubted again of the quality of the armistice they had just made.

He had a wild impulse to shout. "Agreed," he said with queer exaltation, and his grip tightened on her hand. "And to-night we are friends?"

"We are friends," said Ann Veronica, and drew her hand quickly away from him.

"To-night we are as we have always been. Except that this music we have been swimming in is divine. While I have been pestering you, have you heard it? At least, you heard the first act. And all the third act is love-sick music. Tristan dying and Isolde coming to crown his death. Wagner had just been in love when he wrote it all. It begins with that queer piccolo solo. Now I shall never hear it but what this evening will come pouring back over me."

The lights sank, the prelude to the third act was beginning, the music rose and fell in crowded intimations of lovers separated--lovers separated with scars and memories between them, and the curtain went reefing up to display Tristan lying wounded on his couch and the shepherd crouching with his pipe.

Part 2

They had their explanations the next evening, but they were explanations in quite other terms than Ann Veronica had anticipated, quite other and much more startling and illuminating terms. Ramage came for her at her lodgings, and she met him graciously and kindly as a queen who knows she must needs give sorrow to a faithful liege. She was unusually soft and gentle in her manner to him. He was wearing a new silk hat, with a slightly more generous brim than its predecessor, and it suited his type of face, robbed his dark eyes a little of their aggressiveness and gave him a solid and dignified and benevolent air. A faint anticipation of triumph showed in his manner and a subdued excitement.

"We'll go to a place where we can have a private room," he said. "Then--then we can talk things out."

So they went this time to the Rococo, in Germain Street, and up-stairs to a landing upon which stood a bald-headed waiter with whiskers like a French admiral and discretion beyond all limits in his manner. He seemed to have expected them. He ushered them with an amiable flat hand into a minute apartment with a little gas-stove, a silk crimson-covered sofa, and a bright little table, gay with napery and hot-house flowers.

"Odd little room," said Ann Veronica, dimly apprehending that obtrusive sofa.

"One can talk without undertones, so to speak," said Ramage. "It's--private." He stood looking at the preparations before them with an unusual preoccupation of manner, then roused himself to take her jacket, a little awkwardly, and hand it to the waiter who hung it in the corner of the room. It appeared he had already ordered dinner and wine, and the whiskered waiter waved in his subordinate with the soup forthwith.

"I'm going to talk of indifferent themes," said Ramage, a little fussily, "until these interruptions of the service are over. Then--then we shall be together. . . . How did you like Tristan?"

Ann Veronica paused the fraction of a second before her reply came.

"I thought much of it amazingly beautiful."

"Isn't it. And to think that man got it all out of the poorest little love-story for a respectable titled lady! Have you read of it?"

"Never."

"It gives in a nutshell the miracle of art and the imagination. You get this queer irascible musician quite impossibly and unfortunately in love with a wealthy patroness, and then out of his brain comes THIS, a tapestry of glorious music, setting out love to lovers, lovers who love in spite of all that is wise and respectable and right."

Ann Veronica thought. She did not want to seem to shrink from conversation, but all sorts of odd questions were running through her mind. "I wonder why people in love are so defiant, so careless of other considerations?"

"The very hares grow brave. I suppose because it IS the chief thing in life." He stopped and said earnestly: "It is the chief thing in life, and everything else goes down before it. Everything, my dear, everything! . . . But we have got to talk upon indifferent themes until we have done with this blond young gentleman from Bavaria. . . ."

The dinner came to an end at last, and the whiskered waiter

presented his bill and evacuated the apartment and closed the door behind him with an almost ostentatious discretion. Ramage stood up, and suddenly turned the key in the door in an off-hand manner. "Now," he said, "no one can blunder in upon us. We are alone and we can say and do what we please. We two." He stood still, looking at her.

Ann Veronica tried to seem absolutely unconcerned. The turning of the key startled her, but she did not see how she could make an objection. She felt she had stepped into a world of unknown usages.

"I have waited for this," he said, and stood quite still, looking at her until the silence became oppressive.

"Won't you sit down," she said, "and tell me what you want to say?" Her voice was flat and faint. Suddenly she had become afraid. She struggled not to be afraid. After all, what could happen?

He was looking at her very hard and earnestly. "Ann Veronica," he said.

Then before she could say a word to arrest him he was at her side. "Don't!" she said, weakly, as he had bent down and put one arm about her and seized her hands with his disengaged hand and kissed her--kissed her almost upon her lips. He seemed to do ten things before she could think to do one, to leap upon her and take possession.

Ann Veronica's universe, which had never been altogether so respectful to her as she could have wished, gave a shout and whirled head over heels. Everything in the world had changed for her. If hate could kill, Ramage would have been killed by a flash of hate. "Mr. Ramage!" she cried, and struggled to her

feet.

"My darling!" he said, clasping her resolutely in his arms, "my dearest!"

"Mr. Ramage!" she began, and his mouth sealed hers and his breath was mixed with her breath. Her eye met his four inches away, and his was glaring, immense, and full of resolution, a stupendous monster of an eye.

She shut her lips hard, her jaw hardened, and she set herself to struggle with him. She wrenched her head away from his grip and got her arm between his chest and hers. They began to wrestle fiercely. Each became frightfully aware of the other as a plastic energetic body, of the strong muscles of neck against cheek, of hands gripping shoulder-blade and waist. "How dare you!" she panted, with her world screaming and grimacing insult at her. "How dare you!"

They were both astonished at the other's strength. Perhaps Ramage was the more astonished. Ann Veronica had been an ardent hockey player and had had a course of jiu-jitsu in the High School. Her defence ceased rapidly to be in any sense ladylike, and became vigorous and effective; a strand of black hair that had escaped its hairpins came athwart Ramage's eyes, and then the knuckles of a small but very hardly clinched fist had thrust itself with extreme effectiveness and painfulness under his jawbone and ear.

"Let go!" said Ann Veronica, through her teeth, strenuously inflicting agony, and he cried out sharply and let go and receded a pace.

"NOW!" said Ann Veronica. "Why did you dare to do that?"

Part 3

Each of them stared at the other, set in a universe that had changed its system of values with kaleidoscopic completeness. She was flushed, and her eyes were bright and angry; her breath came sobbing, and her hair was all abroad in wandering strands of black. He too was flushed and ruffled; one side of his collar had slipped from its stud and he held a hand to the corner of his jaw.

"You vixen!" said Mr. Ramage, speaking the simplest first thought of his heart.

"You had no right--" panted Ann Veronica.

"Why on earth," he asked, "did you hurt me like that?"

Ann Veronica did her best to think she had not deliberately attempted to cause him pain. She ignored his question.

"I never dreamt!" she said.

"What on earth did you expect me to do, then?" he asked.

Part 4

Interpretation came pouring down upon her almost blindingly; she understood now the room, the waiter, the whole situation. She understood. She leaped to a world of shabby knowledge, of furtive base realizations. She wanted to cry out upon herself for

the uttermost fool in existence.

"I thought you wanted to have a talk to me," she said.

"I wanted to make love to you.

"You knew it," he added, in her momentary silence.

"You said you were in love with me," said Ann Veronica; "I wanted to explain--"

"I said I loved and wanted you." The brutality of his first astonishment was evaporating. "I am in love with you. You know I am in love with you. And then you go--and half throttle me. . . . I believe you've crushed a gland or something. It feels like it."

"I am sorry," said Ann Veronica. "What else was I to do?"

For some seconds she stood watching him. and both were thinking very quickly. Her state of mind would have seemed altogether discreditable to her grandmother. She ought to have been disposed to faint and scream at all these happenings; she ought to have maintained a front of outraged dignity to veil the sinking of her heart. I would like to have to tell it so. But indeed that is not at all a good description of her attitude. She was an indignant queen, no doubt she was alarmed and disgusted within limits; but she was highly excited, and there was something, some low adventurous strain in her being, some element, subtle at least if base, going about the rioting ways and crowded insurgent meeting-places of her mind declaring that the whole affair was after all--they are the only words that express it--a very great lark indeed. At the bottom of her heart she was not a bit afraid of Ramage. She had unaccountable gleams of sympathy with and liking for him. And the grotesquest fact was that she did not so

much loathe, as experience with a quite critical condemnation this strange sensation of being kissed. Never before had any human being kissed her lips. . . .

It was only some hours after that these ambiguous elements evaporated and vanished and loathing came, and she really began to be thoroughly sick and ashamed of the whole disgraceful quarrel and scuffle.

He, for his part, was trying to grasp the series of unexpected reactions that had so wrecked their tete-a-tete. He had meant to be master of his fate that evening and it had escaped him altogether. It had, as it were, blown up at the concussion of his first step. It dawned upon him that he had been abominably used by Ann Veronica.

"Look here," he said, "I brought you here to make love to you."

"I didn't understand--your idea of making love. You had better let me go again."

"Not yet," he said. "I do love you. I love you all the more for the streak of sheer devil in you. . . . You are the most beautiful, the most desirable thing I have ever met in this world. It was good to kiss you, even at the price. But, by Jove! you are fierce! You are like those Roman women who carry stilettos in their hair."

"I came here to talk reasonably, Mr. Ramage. It is abominable--"

"What is the use of keeping up this note of indignation, Ann Veronica? Here I am! I am your lover, burning for you. I mean to have you! Don't frown me off now. Don't go back into Victorian respectability and pretend you don't know and you can't think and all the rest of it. One comes at last to the step from

dreams to reality. This is your moment. No one will ever love you as I love you now. I have been dreaming of your body and you night after night. I have been imaging--"

"Mr. Ramage, I came here-- I didn't suppose for one moment you would dare--"

"Nonsense! That is your mistake! You are too intellectual. You want to do everything with your mind. You are afraid of kisses. You are afraid of the warmth in your blood. It's just because all that side of your life hasn't fairly begun."

He made a step toward her.

"Mr. Ramage," she said, sharply, "I have to make it plain to you. I don't think you understand. I don't love you. I don't. I can't love you. I love some one else. It is repulsive. It disgusts me that you should touch me."

He stared in amazement at this new aspect of the situation. "You love some one else?" he repeated.

"I love some one else. I could not dream of loving you."

And then he flashed his whole conception of the relations of men and women upon her in one astonishing question. His hand went with an almost instinctive inquiry to his jawbone again. "Then why the devil," he demanded, "do you let me stand you dinners and the opera--and why do you come to a cabinet particulier with me?"

He became radiant with anger. "You mean to tell me" he said, "that you have a lover? While I have been keeping you! Yes--keeping you!"

This view of life he hurled at her as if it were an offensive

missile. It stunned her. She felt she must fly before it and could no longer do so. She did not think for one moment what interpretation he might put upon the word "lover."

"Mr. Ramage," she said, clinging to her one point, "I want to get out of this horrible little room. It has all been a mistake. I have been stupid and foolish. Will you unlock that door?"

"Never!" he said. "Confound your lover! Look here! Do you really think I am going to run you while he makes love to you? No fear! I never heard of anything so cool. If he wants you, let him get you. You're mine. I've paid for you and helped you, and I'm going to conquer you somehow--if I have to break you to do it. Hitherto you've seen only my easy, kindly side. But now confound it! how can you prevent it? I will kiss you."

"You won't!" said Ann Veronica; with the clearest note of determination.

He seemed to be about to move toward her. She stepped back quickly, and her hand knocked a wine-glass from the table to smash noisily on the floor. She caught at the idea. "If you come a step nearer to me," she said, "I will smash every glass on this table."

"Then, by God!" he said, "you'll be locked up!"

Ann Veronica was disconcerted for a moment. She had a vision of policemen, reprovng magistrates, a crowded court, public disgrace. She saw her aunt in tears, her father white-faced and hard hit. "Don't come nearer!" she said.

There was a discreet knocking at the door, and Ramage's face changed.

"No," she said, under her breath, "you can't face it." And she knew that she was safe.

He went to the door. "It's all right," he said, reassuringly to the inquirer without.

Ann Veronica glanced at the mirror to discover a flushed and dishevelled disorder. She began at once a hasty readjustment of her hair, while Ramage parleyed with inaudible interrogations. "A glass slipped from the table," he explained. . . . "Non. Fas du tout. Non. . . . Niente. . . . Bitte! . . . Oui, dans la note. . . . Presently. Presently." That conversation ended and he turned to her again.

"I am going," she said grimly, with three hairpins in her mouth.

She took her hat from the peg in the corner and began to put it on. He regarded that perennial miracle of pinning with wrathful eyes.

"Look here, Ann Veronica," he began. "I want a plain word with you about all this. Do you mean to tell me you didn't understand why I wanted you to come here?"

"Not a bit of it," said Ann Veronica stoutly.

"You didn't expect that I should kiss you?"

"How was I to know that a man would--would think it was possible--when there was nothing--no love?"

"How did I know there wasn't love?"

That silenced her for a moment. "And what on earth," he said, "do you think the world is made of? Why do you think I have been

doing things for you? The abstract pleasure of goodness? Are you one of the members of that great white sisterhood that takes and does not give? The good accepting woman! Do you really suppose a girl is entitled to live at free quarters on any man she meets without giving any return?"

"I thought," said Ann Veronica, "you were my friend."

"Friend! What have a man and a girl in common to make them friends? Ask that lover of yours! And even with friends, would you have it all Give on one side and all Take on the other? . . . Does HE know I keep you? . . . You won't have a man's lips near you, but you'll eat out of his hand fast enough."

Ann Veronica was stung to helpless anger.

"Mr. Ramage," she cried, "you are outrageous! You understand nothing. You are--horrible. Will you let me go out of this room?"

"No," cried Ramage; "hear me out! I'll have that satisfaction, anyhow. You women, with your tricks of evasion, you're a sex of swindlers. You have all the instinctive dexterity of parasites. You make yourself charming for help. You climb by disappointing men. This lover of yours--"

"He doesn't know!" cried Ann Veronica.

"Well, you know."

Ann Veronica could have wept with vexation. Indeed, a note of weeping broke her voice for a moment as she burst out, "You know as well as I do that money was a loan!"

"Loan!"

"You yourself called it a loan!"

"Euphuism. We both understood that."

"You shall have every penny of it back."

"I'll frame it--when I get it."

"I'll pay you if I have to work at shirt-making at threepence an hour."

"You'll never pay me. You think you will. It's your way of glossing over the ethical position. It's the sort of way a woman always does gloss over her ethical positions. You're all dependents--all of you. By instinct. Only you good ones--shirk. You shirk a straightforward and decent return for what you get from us--taking refuge in purity and delicacy and such-like when it comes to payment."

"Mr. Ramage," said Ann Veronica, "I want to go--NOW!"

Part 5

But she did not get away just then.

Ramage's bitterness passed as abruptly as his aggression. "Oh, Ann Veronica!" he cried, "I cannot let you go like this! You don't understand. You can't possibly understand!"

He began a confused explanation, a perplexing contradictory apology for his urgency and wrath. He loved Ann Veronica, he

said; he was so mad to have her that he defeated himself, and did crude and alarming and senseless things. His vicious abusiveness vanished. He suddenly became eloquent and plausible. He did make her perceive something of the acute, tormenting desire for her that had arisen in him and possessed him. She stood, as it were, directed doorward, with her eyes watching every movement, listening to him, repelled by him and yet dimly understanding.

At any rate he made it very clear that night that there was an ineradicable discord in life, a jarring something that must shatter all her dreams of a way of living for women that would enable them to be free and spacious and friendly with men, and that was the passionate predisposition of men to believe that the love of women can be earned and won and controlled and compelled.

He flung aside all his talk of help and disinterested friendship as though it had never been even a disguise between them, as though from the first it was no more than a fancy dress they had put quite understandingly upon their relationship. He had set out to win her, and she had let him start. And at the thought of that other lover--he was convinced that that beloved person was a lover, and she found herself unable to say a word to explain to him that this other person, the person she loved, did not even know of her love--Ramage grew angry and savage once more, and returned suddenly to gibe and insult. Men do services for the love of women, and the woman who takes must pay. Such was the simple code that displayed itself in all his thoughts. He left that arid rule clear of the least mist of refinement or delicacy.

That he should pay forty pounds to help this girl who preferred another man was no less in his eyes than a fraud and mockery that made her denial a maddening and outrageous disgrace to him. And this though he was evidently passionately in love with her.

For a while he threatened her. "You have put all your life in my

hands," he declared. "Think of that check you endorsed. There it is--against you. I defy you to explain it away. What do you think people will make of that? What will this lover of yours make of that?"

At intervals Ann Veronica demanded to go, declaring her undying resolve to repay him at any cost, and made short movements doorward.

But at last this ordeal was over, and Ramage opened the door. She emerged with a white face and wide-open eyes upon a little, red-lit landing. She went past three keenly observant and ostentatiously preoccupied waiters down the thick-carpeted staircase and out of the Hotel Rococo, that remarkable laboratory of relationships, past a tall porter in blue and crimson, into a cool, clear night.

Part 6

When Ann Veronica reached her little bed-sitting-room again, every nerve in her body was quivering with shame and self-disgust.

She threw hat and coat on the bed and sat down before the fire.

"And now," she said, splintering the surviving piece of coal into indignant flame-spurting fragments with one dexterous blow, "what am I to do?"

"I'm in a hole!--mess is a better word, expresses it better .
I'm in a mess--a nasty mess! a filthy mess! Oh, no end of a mess!"

Do you hear, Ann Veronica?--you're in a nasty, filthy, unforgivable mess!

"Haven't I just made a silly mess of things?"

"Forty pounds! I haven't got twenty!"

She got up, stamped with her foot, and then, suddenly remembering the lodger below, sat down and wrenched off her boots.

"This is what comes of being a young woman up to date. By Jove! I'm beginning to have my doubts about freedom!"

"You silly young woman, Ann Veronica! You silly young woman! The smeariness of the thing!"

"The smeariness of this sort of thing! . . . Mauled about!"

She fell to rubbing her insulted lips savagely with the back of her hand. "Ugh!" she said.

"The young women of Jane Austen's time didn't get into this sort of scrape! At least--one thinks so. . . . I wonder if some of them did--and it didn't get reported. Aunt Jane had her quiet moments. Most of them didn't, anyhow. They were properly brought up, and sat still and straight, and took the luck fate brought them as gentlewomen should. And they had an idea of what men were like behind all their nicety. They knew they were all Bogey in disguise. I didn't! I didn't! After all--"

For a time her mind ran on daintiness and its defensive restraints as though it was the one desirable thing. That world of fine printed cambrics and escorted maidens, of delicate secondary meanings and refined allusiveness, presented itself to her imagination with the brightness of a lost paradise, as indeed

for many women it is a lost paradise.

"I wonder if there is anything wrong with my manners," she said.
"I wonder if I've been properly brought up. If I had been quite quiet and white and dignified, wouldn't it have been different? Would he have dared? . . ."

For some creditable moments in her life Ann Veronica was utterly disgusted with herself; she was wrung with a passionate and belated desire to move gently, to speak softly and ambiguously--to be, in effect, prim.

Horrible details recurred to her.

"Why, among other things, did I put my knuckles in his neck--deliberately to hurt him?"

She tried to sound the humorous note.

"Are you aware, Ann Veronica, you nearly throttled that gentleman?"

Then she reviled her own foolish way of putting it.

"You ass and imbecile, Ann Veronica! You female cad! Cad! Cad! . . . Why aren't you folded up clean in lavender--as every young woman ought to be? What have you been doing with yourself? . . ."

She raked into the fire with the poker.

"All of which doesn't help me in the slightest degree to pay back that money."

That night was the most intolerable one that Ann Veronica had

ever spent. She washed her face with unwonted elaboration before she went to bed. This time, there was no doubt, she did not sleep. The more she disentangled the lines of her situation the deeper grew her self-disgust. Occasionally the mere fact of lying in bed became unendurable, and she rolled out and marched about her room and whispered abuse of herself--usually until she hit against some article of furniture.

Then she would have quiet times, in which she would say to herself, "Now look here! Let me think it all out!"

For the first time, it seemed to her, she faced the facts of a woman's position in the world--the meagre realities of such freedom as it permitted her, the almost unavoidable obligation to some individual man under which she must labor for even a foothold in the world. She had flung away from her father's support with the finest assumption of personal independence. And here she was--in a mess because it had been impossible for her to avoid leaning upon another man. She had thought--What had she thought? That this dependence of women was but an illusion which needed only to be denied to vanish. She had denied it with vigor, and here she was!

She did not so much exhaust this general question as pass from it to her insoluble individual problem again: "What am I to do?"

She wanted first of all to fling the forty pounds back into Ramage's face. But she had spent nearly half of it, and had no conception of how such a sum could be made good again. She thought of all sorts of odd and desperate expedients, and with passionate petulance rejected them all.

She took refuge in beating her pillow and inventing insulting epithets for herself. She got up, drew up her blind, and stared out of window at a dawn-cold vision of chimneys for a time, and

then went and sat on the edge of her bed. What was the alternative to going home? No alternative appeared in that darkness.

It seemed intolerable that she should go home and admit herself beaten. She did most urgently desire to save her face in Morningside Park, and for long hours she could think of no way of putting it that would not be in the nature of unconditional admission of defeat.

"I'd rather go as a chorus-girl," she said.

She was not very clear about the position and duties of a chorus-girl, but it certainly had the air of being a last desperate resort. There sprang from that a vague hope that perhaps she might extort a capitulation from her father by a threat to seek that position, and then with overwhelming clearness it came to her that whatever happened she would never be able to tell her father about her debt. The completest capitulation would not wipe out that trouble. And she felt that if she went home it was imperative to pay. She would always be going to and fro up the Avenue, getting glimpses of Ramage, seeing him in trains. . . .

For a time she promenaded the room.

"Why did I ever take that loan? An idiot girl in an asylum would have known better than that!

"Vulgarity of soul and innocence of mind--the worst of all conceivable combinations. I wish some one would kill Ramage by accident! . . .

"But then they would find that check endorsed in his bureau. . .

.

"I wonder what he will do?" She tried to imagine situations that might arise out of Ramage's antagonism, for he had been so bitter and savage that she could not believe that he would leave things as they were.

The next morning she went out with her post-office savings bank-book, and telegraphed for a warrant to draw out all the money she had in the world. It amounted to two-and-twenty pounds. She addressed an envelope to Ramage, and scrawled on a half-sheet of paper, "The rest shall follow." The money would be available in the afternoon, and she would send him four five-pound notes. The rest she meant to keep for her immediate necessities. A little relieved by this step toward reinstatement, she went on to the Imperial College to forget her muddle of problems for a time, if she could, in the presence of Capes.

Part 7

For a time the biological laboratory was full of healing virtue. Her sleepless night had left her languid but not stupefied, and for an hour or so the work distracted her altogether from her troubles.

Then, after Capes had been through her work and had gone on, it came to her that the fabric of this life of hers was doomed to almost immediate collapse; that in a little while these studies would cease, and perhaps she would never set eyes on him again. After that consolations fled.

The overnight nervous strain began to tell; she became

inattentive to the work before her, and it did not get on. She felt sleepy and unusually irritable. She lunched at a creamery in Great Portland Street, and as the day was full of wintry sunshine, spent the rest of the lunch-hour in a drowsy gloom, which she imagined to be thought upon the problems of her position, on a seat in Regent's Park. A girl of fifteen or sixteen gave her a handbill that she regarded as a tract until she saw "Votes for Women" at the top. That turned her mind to the more generalized aspects of her perplexities again. She had never been so disposed to agree that the position of women in the modern world is intolerable.

Capes joined the students at tea, and displayed himself in an impish mood that sometimes possessed him. He did not notice that Ann Veronica was preoccupied and heavy-eyed. Miss Klegg raised the question of women's suffrage, and he set himself to provoke a duel between her and Miss Garvice. The youth with the hair brushed back and the spectacled Scotchman joined in the fray for and against the women's vote.

Ever and again Capes appealed to Ann Veronica. He liked to draw her in, and she did her best to talk. But she did not talk readily, and in order to say something she plunged a little, and felt she plunged. Capes scored back with an uncompromising vigor that was his way of complimenting her intelligence. But this afternoon it discovered an unusual vein of irritability in her. He had been reading Belfort Bax, and declared himself a convert. He contrasted the lot of women in general with the lot of men, presented men as patient, self-immolating martyrs, and women as the pampered favorites of Nature. A vein of conviction mingled with his burlesque.

For a time he and Miss Klegg contradicted one another.

The question ceased to be a tea-table talk, and became suddenly

tragically real for Ann Veronica. There he sat, cheerfully friendly in his sex's freedom--the man she loved, the one man she cared should unlock the way to the wide world for her imprisoned feminine possibilities, and he seemed regardless that she stifled under his eyes; he made a jest of all this passionate insurgence of the souls of women against the fate of their conditions.

Miss Garvice repeated again, and almost in the same words she used at every discussion, her contribution to the great question.

She thought that women were not made for the struggle and turmoil of life--their place was the little world, the home; that their power lay not in votes but in influence over men and in making the minds of their children fine and splendid.

"Women should understand men's affairs, perhaps," said Miss Garvice, "but to mingle in them is just to sacrifice that power of influencing they can exercise now."

"There IS something sound in that position," said Capes, intervening as if to defend Miss Garvice against a possible attack from Ann Veronica. "It may not be just and so forth, but, after all, it is how things are. Women are not in the world in the same sense that men are--fighting individuals in a scramble. I don't see how they can be. Every home is a little recess, a niche, out of the world of business and competition, in which women and the future shelter."

"A little pit!" said Ann Veronica; "a little prison!"

"It's just as often a little refuge. Anyhow, that is how things are."

"And the man stands as the master at the mouth of the den."

"As sentinel. You forget all the mass of training and tradition and instinct that go to make him a tolerable master. Nature is a mother; her sympathies have always been feminist, and she has tempered the man to the shorn woman."

"I wish," said Ann Veronica, with sudden anger, "that you could know what it is to live in a pit!"

She stood up as she spoke, and put down her cup beside Miss Garvice's. She addressed Capes as though she spoke to him alone.

"I can't endure it," she said.

Every one turned to her in astonishment.

She felt she had to go on. "No man can realize," she said, "what that pit can be. The way--the way we are led on! We are taught to believe we are free in the world, to think we are queens. . . . Then we find out. We find out no man will treat a woman fairly as man to man--no man. He wants you--or he doesn't; and then he helps some other woman against you. . . . What you say is probably all true and necessary. . . . But think of the disillusionment! Except for our sex we have minds like men, desires like men. We come out into the world, some of us--"

She paused. Her words, as she said them, seemed to her to mean nothing, and there was so much that struggled for expression. "Women are mocked," she said. "Whenever they try to take hold of life a man intervenes."

She felt, with a sudden horror, that she might weep. She wished she had not stood up. She wondered wildly why she had stood up. No one spoke, and she was impelled to flounder on. "Think of the mockery!" she said. "Think how dumb we find ourselves and stifled! I know we seem to have a sort of freedom. . . . Have

you ever tried to run and jump in petticoats, Mr. Capes? Well, think what it must be to live in them--soul and mind and body! It's fun for a man to jest at our position."

"I wasn't jesting," said Capes, abruptly.

She stood face to face with him, and his voice cut across her speech and made her stop abruptly. She was sore and overstrung, and it was intolerable to her that he should stand within three yards of her unsuspectingly, with an incalculably vast power over her happiness. She was sore with the perplexities of her preposterous position. She was sick of herself, of her life, of everything but him; and for him all her masked and hidden being was crying out.

She stopped abruptly at the sound of his voice, and lost the thread of what she was saying. In the pause she realized the attention of the others converged upon her, and that the tears were brimming over her eyes. She felt a storm of emotion surging up within her. She became aware of the Scotch student regarding her with stupendous amazement, a tea-cup poised in one hairy hand and his faceted glasses showing a various enlargement of segments of his eye.

The door into the passage offered itself with an irresistible invitation--the one alternative to a public, inexplicable passion of weeping.

Capes flashed to an understanding of her intention, sprang to his feet, and opened the door for her retreat.

"Why should I ever come back?" she said to herself, as she went down the staircase.

She went to the post-office and drew out and sent off her money to Ramage. And then she came out into the street, sure only of one thing--that she could not return directly to her lodgings. She wanted air--and the distraction of having moving and changing things about her. The evenings were beginning to draw out, and it would not be dark for an hour. She resolved to walk across the Park to the Zoological gardens, and so on by way of Primrose Hill to Hampstead Heath. There she would wander about in the kindly darkness. And think things out. . . .

Presently she became aware of footsteps hurrying after her, and glanced back to find Miss Klegg, a little out of breath, in pursuit.

Ann Veronica halted a pace, and Miss Klegg came alongside.

"Do YOU go across the Park?"

"Not usually. But I'm going to-day. I want a walk."

"I'm not surprised at it. I thought Mr. Capes most trying."

"Oh, it wasn't that. I've had a headache all day."

"I thought Mr. Capes most unfair," Miss Klegg went on in a small, even voice; "MOST unfair! I'm glad you spoke out as you did."

"I didn't mind that little argument."

"You gave it him well. What you said wanted saying. After you went he got up and took refuge in the preparation-room. Or else

I would have finished him."

Ann Veronica said nothing, and Miss Klegg went on: "He very often IS--most unfair. He has a way of sitting on people. He wouldn't like it if people did it to him. He jumps the words out of your mouth; he takes hold of what you have to say before you have had time to express it properly."

Pause.

"I suppose he's frightfully clever," said Miss Klegg.

"He's a Fellow of the Royal Society, and he can't be much over thirty," said Miss Klegg.

"He writes very well," said Ann Veronica.

"He can't be more than thirty. He must have married when he was quite a young man."

"Married?" said Ann Veronica.

"Didn't you know he was married?" asked Miss Klegg, and was struck by a thought that made her glance quickly at her companion.

Ann Veronica had no answer for a moment. She turned her head away sharply. Some automaton within her produced in a quite unfamiliar voice the remark, "They're playing football."

"It's too far for the ball to reach us," said Miss Klegg.

"I didn't know Mr. Capes was married," said Ann Veronica, resuming the conversation with an entire disappearance of her former lassitude.

"Oh yes," said Miss Klegg; "I thought every one knew."

"No," said Ann Veronica, offhandedly. "Never heard anything of it."

"I thought every one knew. I thought every one had heard about it."

"But why?"

"He's married--and, I believe, living separated from his wife. There was a case, or something, some years ago."

"What case?"

"A divorce--or something--I don't know. But I have heard that he almost had to leave the schools. If it hadn't been for Professor Russell standing up for him, they say he would have had to leave."

"Was he divorced, do you mean?"

"No, but he got himself mixed up in a divorce case. I forget the particulars, but I know it was something very disagreeable. It was among artistic people."

Ann Veronica was silent for a while.

"I thought every one had heard," said Miss Klegg. "Or I wouldn't have said anything about it."

"I suppose all men," said Ann Veronica, in a tone of detached criticism, "get some such entanglement. And, anyhow, it doesn't matter to us." She turned abruptly at right angles to the path

they followed. "This is my way back to my side of the Park," she said.

"I thought you were coming right across the Park."

"Oh no," said Ann Veronica; "I have some work to do. I just wanted a breath of air. And they'll shut the gates presently. It's not far from twilight."

Part 9

She was sitting brooding over her fire about ten o'clock that night when a sealed and registered envelope was brought up to her.

She opened it and drew out a letter, and folded within it were the notes she had sent off to Ramage that day. The letter began:

"MY DEAREST GIRL,--I cannot let you do this foolish thing--"

She crumpled notes and letter together in her hand, and then with a passionate gesture flung them into the fire. Instantly she seized the poker and made a desperate effort to get them out again. But she was only able to save a corner of the letter. The twenty pounds burned with avidity.

She remained for some seconds crouching at the fender, poker in hand.

"By Jove!" she said, standing up at last, "that about finishes it, Ann Veronica!"

CHAPTER THE TENTH

THE SUFFRAGETTES

Part 1

"There is only one way out of all this," said Ann Veronica, sitting up in her little bed in the darkness and biting at her nails.

"I thought I was just up against Morningside Park and father, but it's the whole order of things--the whole blessed order of things. . . ."

She shivered. She frowned and gripped her hands about her knees very tightly. Her mind developed into savage wrath at the present conditions of a woman's life.

"I suppose all life is an affair of chances. But a woman's life is all chance. It's artificially chance. Find your man, that's the rule. All the rest is humbug and delicacy. He's the handle of life for you. He will let you live if it pleases him. . . ."

"Can't it be altered?"

"I suppose an actress is free? . . ."

She tried to think of some altered state of affairs in which

these monstrous limitations would be alleviated, in which women would stand on their own feet in equal citizenship with men. For a time she brooded on the ideals and suggestions of the Socialists, on the vague intimations of an Endowment of Motherhood, of a complete relaxation of that intense individual dependence for women which is woven into the existing social order. At the back of her mind there seemed always one irrelevant qualifying spectator whose presence she sought to disregard. She would not look at him, would not think of him; when her mind wavered, then she muttered to herself in the darkness so as to keep hold of her generalizations.

"It is true. It is no good waiving the thing; it is true. Unless women are never to be free, never to be even respected, there must be a generation of martyrs. . . . Why shouldn't we be martyrs? There's nothing else for most of us, anyhow. It's a sort of blacklegging to want to have a life of one's own. . . ."

She repeated, as if she answered an objector: "A sort of blacklegging.

"A sex of blacklegging clients."

Her mind diverged to other aspects, and another type of womanhood.

"Poor little Miniver! What can she be but what she is? . . . Because she states her case in a tangle, drags it through swamps of nonsense, it doesn't alter the fact that she is right."

That phrase about dragging the truth through swamps of nonsense she remembered from Capes. At the recollection that it was his, she seemed to fall through a thin surface, as one might fall through the crust of a lava into glowing depths. She wallowed for a time in the thought of Capes, unable to escape from his

image and the idea of his presence in her life.

She let her mind run into dreams of that cloud paradise of an altered world in which the Goopes and Minivers, the Fabians and reforming people believed. Across that world was written in letters of light, "Endowment of Motherhood." Suppose in some complex yet conceivable way women were endowed, were no longer economically and socially dependent on men. "If one was free," she said, "one could go to him. . . . This vile hovering to catch a man's eye! . . . One could go to him and tell him one loved him. I want to love him. A little love from him would be enough. It would hurt no one. It would not burden him with any obligation."

She groaned aloud and bowed her forehead to her knees. She floundered deep. She wanted to kiss his feet. His feet would have the firm texture of his hands.

Then suddenly her spirit rose in revolt. "I will not have this slavery," she said. "I will not have this slavery."

She shook her fist ceilingward. "Do you hear!" she said "whatever you are, wherever you are! I will not be slave to the thought of any man, slave to the customs of any time. Confound this slavery of sex! I am a man! I will get this under if I am killed in doing it!"

She scowled into the cold blacknesses about her.

"Manning," she said, and contemplated a figure of inaggressive persistence. "No!" Her thoughts had turned in a new direction.

"It doesn't matter," she said, after a long interval, "if they are absurd. They mean something. They mean everything that women can mean--except submission. The vote is only the

beginning, the necessary beginning. If we do not begin--"

She had come to a resolution. Abruptly she got out of bed, smoothed her sheet and straightened her pillow and lay down, and fell almost instantly asleep.

Part 2

The next morning was as dark and foggy as if it was mid-November instead of early March. Ann Veronica woke rather later than usual, and lay awake for some minutes before she remembered a certain resolution she had taken in the small hours. Then instantly she got out of bed and proceeded to dress.

She did not start for the Imperial College. She spent the morning up to ten in writing a series of unsuccessful letters to Ramage, which she tore up unfinished; and finally she desisted and put on her jacket and went out into the lamp-lit obscurity and slimy streets. She turned a resolute face southward.

She followed Oxford Street into Holborn, and then she inquired for Chancery Lane. There she sought and at last found 107A, one of those heterogeneous piles of offices which occupy the eastern side of the lane. She studied the painted names of firms and persons and enterprises on the wall, and discovered that the Women's Bond of Freedom occupied several contiguous suites on the first floor. She went up-stairs and hesitated between four doors with ground-glass panes, each of which professed "The Women's Bond of Freedom" in neat black letters. She opened one and found herself in a large untidy room set with chairs that were a little disarranged as if by an overnight meeting. On the walls were notice-boards bearing clusters of newspaper slips, three or four

big posters of monster meetings, one of which Ann Veronica had attended with Miss Miniver, and a series of announcements in purple copying-ink, and in one corner was a pile of banners. There was no one at all in this room, but through the half-open door of one of the small apartments that gave upon it she had a glimpse of two very young girls sitting at a littered table and writing briskly.

She walked across to this apartment and, opening the door a little wider, discovered a press section of the movement at work.

"I want to inquire," said Ann Veronica.

"Next door," said a spectacled young person of seventeen or eighteen, with an impatient indication of the direction.

In the adjacent apartment Ann Veronica found a middle-aged woman with a tired face under the tired hat she wore, sitting at a desk opening letters while a dusky, untidy girl of eight-or-nine-and-twenty hammered industriously at a typewriter. The tired woman looked up in inquiring silence at Ann Veronica's diffident entry.

"I want to know more about this movement," said Ann Veronica.

"Are you with us?" said the tired woman.

"I don't know," said Ann Veronica; "I think I am. I want very much to do something for women. But I want to know what you are doing."

The tired woman sat still for a moment. "You haven't come here to make a lot of difficulties?" she asked.

"No," said Ann Veronica, "but I want to know."

The tired woman shut her eyes tightly for a moment, and then looked with them at Ann Veronica. "What can you do?" she asked.

"Do?"

"Are you prepared to do things for us? Distribute bills? Write letters? Interrupt meetings? Canvass at elections? Face dangers?"

"If I am satisfied--"

"If we satisfy you?"

"Then, if possible, I would like to go to prison."

"It isn't nice going to prison."

"It would suit me."

"It isn't nice getting there."

"That's a question of detail," said Ann Veronica.

The tired woman looked quietly at her. "What are your objections?" she said.

"It isn't objections exactly. I want to know what you are doing; how you think this work of yours really does serve women."

"We are working for the equal citizenship of men and women," said the tired woman. "Women have been and are treated as the inferiors of men, we want to make them their equals."

"Yes," said Ann Veronica, "I agree to that. But--"

The tired woman raised her eyebrows in mild protest.

"Isn't the question more complicated than that?" said Ann Veronica.

"You could have a talk to Miss Kitty Brett this afternoon, if you liked. Shall I make an appointment for you?"

Miss Kitty Brett was one of the most conspicuous leaders of the movement. Ann Veronica snatched at the opportunity, and spent most of the intervening time in the Assyrian Court of the British Museum, reading and thinking over a little book upon the feminist movement the tired woman had made her buy. She got a bun and some cocoa in the little refreshment-room, and then wandered through the galleries up-stairs, crowded with Polynesian idols and Polynesian dancing-garments, and all the simple immodest accessories to life in Polynesia, to a seat among the mummies. She was trying to bring her problems to a head, and her mind insisted upon being even more discursive and atmospheric than usual. It generalized everything she put to it.

"Why should women be dependent on men?" she asked; and the question was at once converted into a system of variations upon the theme of "Why are things as they are?"--"Why are human beings viviparous?"--"Why are people hungry thrice a day?"--"Why does one faint at danger?"

She stood for a time looking at the dry limbs and still human face of that desiccated unwrapped mummy from the very beginnings of social life. It looked very patient, she thought, and a little self-satisfied. It looked as if it had taken its world for granted and prospered on that assumption--a world in which children were trained to obey their elders and the wills of women over-ruled as a matter of course. It was wonderful to think this

thing had lived, had felt and suffered. Perhaps once it had desired some other human being intolerably. Perhaps some one had kissed the brow that was now so cadaverous, rubbed that sunken cheek with loving fingers, held that stringy neck with passionately living hands. But all of that was forgotten. "In the end," it seemed to be thinking, "they embalmed me with the utmost respect--sound spices chosen to endure--the best! I took my world as I found it. THINGS ARE SO!"

Part 3

Ann Veronica's first impression of Kitty Brett was that she was aggressive and disagreeable; her next that she was a person of amazing persuasive power. She was perhaps three-and-twenty, and very pink and healthy-looking, showing a great deal of white and rounded neck above her business-like but altogether feminine blouse, and a good deal of plump, gesticulating forearm out of her short sleeve. She had animated dark blue-gray eyes under her fine eyebrows, and dark brown hair that rolled back simply and effectively from her broad low forehead. And she was about as capable of intelligent argument as a runaway steam-roller. She was a trained being--trained by an implacable mother to one end.

She spoke with fluent enthusiasm. She did not so much deal with Ann Veronica's interpolations as dispose of them with quick and use-hardened repartee, and then she went on with a fine directness to sketch the case for her agitation, for that remarkable rebellion of the women that was then agitating the whole world of politics and discussion. She assumed with a kind of mesmeric force all the propositions that Ann Veronica wanted her to define.

"What do we want? What is the goal?" asked Ann Veronica.

"Freedom! Citizenship! And the way to that--the way to everything--is the Vote."

Ann Veronica said something about a general change of ideas.

"How can you change people's ideas if you have no power?" said Kitty Brett.

Ann Veronica was not ready enough to deal with that counter-stroke .

"One doesn't want to turn the whole thing into a mere sex antagonism."

"When women get justice," said Kitty Brett, "there will be no sex antagonism. None at all. Until then we mean to keep on hammering away."

"It seems to me that much of a woman's difficulties are economic."

"That will follow," said Kitty Brett--"that will follow."

She interrupted as Ann Veronica was about to speak again, with a bright contagious hopefulness. "Everything will follow," she said.

"Yes," said Ann Veronica, trying to think where they were, trying to get things plain again that had seemed plain enough in the quiet of the night.

"Nothing was ever done," Miss Brett asserted, "without a certain element of Faith. After we have got the Vote and are recognized

as citizens, then we can come to all these other things."

Even in the glamour of Miss Brett's assurance it seemed to Ann Veronica that this was, after all, no more than the gospel of Miss Miniver with a new set of resonances. And like that gospel it meant something, something different from its phrases, something elusive, and yet something that in spite of the superficial incoherence of its phrasing, was largely essentially true. There was something holding women down, holding women back, and if it wasn't exactly man-made law, man-made law was an aspect of it. There was something indeed holding the whole species back from the imaginable largeness of life. . . .

"The Vote is the symbol of everything," said Miss Brett.

She made an abrupt personal appeal.

"Oh! please don't lose yourself in a wilderness of secondary considerations," she said. "Don't ask me to tell you all that women can do, all that women can be. There is a new life, different from the old life of dependence, possible. If only we are not divided. If only we work together. This is the one movement that brings women of different classes together for a common purpose. If you could see how it gives them souls, women who have taken things for granted, who have given themselves up altogether to pettiness and vanity. . . ."

"Give me something to do," said Ann Veronica, interrupting her persuasions at last. "It has been very kind of you to see me, but I don't want to sit and talk and use your time any longer. I want to do something. I want to hammer myself against all this that pens women in. I feel that I shall stifle unless I can do something--and do something soon."

Part 4

It was not Ann Veronica's fault that the night's work should have taken upon itself the forms of wild burlesque. She was in deadly earnest in everything she did. It seemed to her the last desperate attack upon the universe that would not let her live as she desired to live, that penned her in and controlled her and directed her and disapproved of her, the same invincible wrapping, the same leaden tyranny of a universe that she had vowed to overcome after that memorable conflict with her father at Morningside Park.

She was listed for the raid--she was informed it was to be a raid upon the House of Commons, though no particulars were given her--and told to go alone to 14, Dexter Street, Westminster, and not to ask any policeman to direct her. 14, Dexter Street, Westminster, she found was not a house but a yard in an obscure street, with big gates and the name of Podgers & Carlo, Carriers and Furniture Removers, thereon. She was perplexed by this, and stood for some seconds in the empty street hesitating, until the appearance of another circumspect woman under the street lamp at the corner reassured her. In one of the big gates was a little door, and she rapped at this. It was immediately opened by a man with light eyelashes and a manner suggestive of restrained passion. "Come right in," he hissed under his breath, with the true conspirator's note, closed the door very softly and pointed, "Through there!"

By the meagre light of a gas lamp she perceived a cobbled yard with four large furniture vans standing with horses and lamps alight. A slender young man, wearing glasses, appeared from the shadow of the nearest van. "Are you A, B, C, or D?" he asked.

"They told me D," said Ann Veronica.

"Through there," he said, and pointed with the pamphlet he was carrying.

Ann Veronica found herself in a little stirring crowd of excited women, whispering and tittering and speaking in undertones.

The light was poor, so that she saw their gleaming faces dimly and indistinctly. No one spoke to her. She stood among them, watching them and feeling curiously alien to them. The oblique ruddy lighting distorted them oddly, made queer bars and patches of shadow upon their clothes. "It's Kitty's idea," said one, "we are to go in the vans."

"Kitty is wonderful," said another.

"Wonderful!"

"I have always longed for prison service," said a voice, "always.

From the beginning. But it's only now I'm able to do it."

A little blond creature close at hand suddenly gave way to a fit of hysterical laughter, and caught up the end of it with a sob.

"Before I took up the Suffrage," a firm, flat voice remarked, "I could scarcely walk up-stairs without palpitations."

Some one hidden from Ann Veronica appeared to be marshalling the assembly. "We have to get in, I think," said a nice little old lady in a bonnet to Ann Veronica, speaking with a voice that quavered a little. "My dear, can you see in this light? I think I would like to get in. Which is C?"

Ann Veronica, with a curious sinking of the heart, regarded the black cavities of the vans. Their doors stood open, and placards with big letters indicated the section assigned to each. She directed the little old woman and then made her way to van D. A young woman with a white badge on her arm stood and counted the sections as they entered their vans.

"When they tap the roof," she said, in a voice of authority, "you are to come out. You will be opposite the big entrance in Old Palace Yard. It's the public entrance. You are to make for that and get into the lobby if you can, and so try and reach the floor of the House, crying 'Votes for Women!' as you go."

She spoke like a mistress addressing school-children.

"Don't bunch too much as you come out," she added.

"All right?" asked the man with the light eyelashes, suddenly appearing in the doorway. He waited for an instant, wasting an encouraging smile in the imperfect light, and then shut the doors of the van, leaving the women in darkness. . . .

The van started with a jerk and rumbled on its way.

"It's like Troy!" said a voice of rapture. "It's exactly like Troy!"

Part 5

So Ann Veronica, enterprising and a little dubious as ever, mingled with the stream of history and wrote her Christian name upon the police-court records of the land.

But out of a belated regard for her father she wrote the surname of some one else.

Some day, when the rewards of literature permit the arduous research required, the Campaign of the Women will find its Carlyle, and the particulars of that marvellous series of exploits by which Miss Brett and her colleagues nagged the whole Western world into the discussion of women's position become the material for the most delightful and amazing descriptions. At present the world waits for that writer, and the confused record of the newspapers remains the only resource of the curious. When he comes he will do that raid of the pantehnicons the justice it deserves; he will picture the orderly evening scene about the Imperial Legislature in convincing detail, the coming and going of cabs and motor-cabs and broughams through the chill, damp evening into New Palace Yard, the reinforced but untroubled and unsuspecting police about the entries of those great buildings whose square and panelled Victorian Gothic streams up from the glare of the lamps into the murkiness of the night; Big Ben shining overhead, an unassailable beacon, and the incidental traffic of Westminster, cabs, carts, and glowing omnibuses going to and from the bridge. About the Abbey and Abingdon Street stood the outer pickets and detachments of the police, their attention all directed westward to where the women in Caxton Hall, Westminster, hummed like an angry hive. Squads reached to the very portal of that centre of disturbance. And through all these defences and into Old Palace Yard, into the very vitals of the defenders' position, lumbered the unsuspected vans.

They travelled past the few idle sightseers who had braved the uninviting evening to see what the Suffragettes might be doing; they pulled up unchallenged within thirty yards of those coveted portals.

And then they disgorged.

Were I a painter of subject pictures, I would exhaust all my skill in proportion and perspective and atmosphere upon the august seat of empire, I would present it gray and dignified and immense and respectable beyond any mere verbal description, and then, in vivid black and very small, I would put in those valiantly impertinent vans, squatting at the base of its altitudes and pouring out a swift, straggling rush of ominous little black objects, minute figures of determined women at war with the universe.

Ann Veronica was in their very forefront.

In an instant the expectant calm of Westminster was ended, and the very Speaker in the chair blanched at the sound of the policemen's whistles. The bolder members in the House left their places to go lobbyward, grinning. Others pulled hats over their noses, cowered in their seats, and feigned that all was right with the world. In Old Palace Yard everybody ran. They either ran to see or ran for shelter. Even two Cabinet Ministers took to their heels, grinning insincerely. At the opening of the van doors and the emergence into the fresh air Ann Veronica's doubt and depression gave place to the wildest exhilaration. That same adventurousness that had already buoyed her through crises that would have overwhelmed any normally feminine girl with shame and horror now became uppermost again. Before her was a great Gothic portal. Through that she had to go.

Past her shot the little old lady in the bonnet, running incredibly fast, but otherwise still alertly respectable, and she was making a strange threatening sound as she ran, such as one would use in driving ducks out of a garden--"B-r-r-r-r--!" and pawing with black-gloved hands. The policemen were closing in from the sides to intervene. The little old lady struck like a projectile upon the resounding chest of the foremost of these,

and then Ann Veronica had got past and was ascending the steps.

Then most horribly she was clasped about the waist from behind and lifted from the ground.

At that a new element poured into her excitement, an element of wild disgust and terror. She had never experienced anything so disagreeable in her life as the sense of being held helplessly off her feet. She screamed involuntarily--she had never in her life screamed before --and then she began to wriggle and fight like a frightened animal against the men who were holding her.

The affair passed at one leap from a spree to a nightmare of violence and disgust. Her hair got loose, her hat came over one eye, and she had no arm free to replace it. She felt she must suffocate if these men did not put her down, and for a time they would not put her down. Then with an indescribable relief her feet were on the pavement, and she was being urged along by two policemen, who were gripping her wrists in an irresistible expert manner. She was writhing to get her hands loose and found herself gasping with passionate violence, "It's damnable!--damnable!" to the manifest disgust of the fatherly policeman on her right.

Then they had released her arms and were trying to push her away.

"You be off, missie," said the fatherly policeman. "This ain't no place for you."

He pushed her a dozen yards along the greasy pavement with flat, well-trained hands that there seemed to be no opposing. Before her stretched blank spaces, dotted with running people coming toward her, and below them railings and a statue. She almost submitted to this ending of her adventure. But at the word "home" she turned again.

"I won't go home," she said; "I won't!" and she evaded the clutch of the fatherly policeman and tried to thrust herself past him in the direction of that big portal. "Steady on!" he cried.

A diversion was created by the violent struggles of the little old lady. She seemed to be endowed with superhuman strength. A knot of three policemen in conflict with her staggered toward Ann Veronica's attendants and distracted their attention. "I WILL be arrested! I WON'T go home!" the little old lady was screaming over and over again. They put her down, and she leaped at them; she smote a helmet to the ground.

"You'll have to take her!" shouted an inspector on horseback, and she echoed his cry: "You'll have to take me!" They seized upon her and lifted her, and she screamed. Ann Veronica became violently excited at the sight. "You cowards!" said Ann Veronica, "put her down!" and tore herself from a detaining hand and battered with her fists upon the big red ear and blue shoulder of the policeman who held the little old lady.

So Ann Veronica also was arrested.

And then came the vile experience of being forced and borne along the street to the police-station. Whatever anticipation Ann Veronica had formed of this vanished in the reality. Presently she was going through a swaying, noisy crowd, whose faces grinned and stared pitilessly in the light of the electric standards.

"Go it, miss!" cried one. "Kick aht at 'em!" though, indeed, she went now with Christian meekness, resenting only the thrusting policemen's hands. Several people in the crowd seemed to be fighting. Insulting cries became frequent and various, but for the most part she could not understand what was said. "Who'll mind the baby nar?" was one of the night's inspirations, and very frequent. A lean young man in spectacles pursued her for some

time, crying "Courage! Courage!" Somebody threw a dab of mud at her, and some of it got down her neck. Immeasurable disgust possessed her. She felt dragged and insulted beyond redemption.

She could not hide her face. She attempted by a sheer act of will to end the scene, to will herself out of it anywhere. She had a horrible glimpse of the once nice little old lady being also borne stationward, still faintly battling and very muddy--one lock of grayish hair straggling over her neck, her face scared, white, but triumphant. Her bonnet dropped off and was trampled into the gutter. A little Cockney recovered it, and made ridiculous attempts to get to her and replace it.

"You must arrest me!" she gasped, breathlessly, insisting insanely on a point already carried; "you shall!"

The police-station at the end seemed to Ann Veronica like a refuge from unnamable disgraces. She hesitated about her name, and, being prompted, gave it at last as Ann Veronica Smith, 107A, Chancery Lane. . . .

Indignation carried her through that night, that men and the world could so entreat her. The arrested women were herded in a passage of the Panton Street Police-station that opened upon a cell too unclean for occupation, and most of them spent the night standing. Hot coffee and cakes were sent in to them in the morning by some intelligent sympathizer, or she would have starved all day. Submission to the inevitable carried her through the circumstances of her appearance before the magistrate.

He was no doubt doing his best to express the attitude of society toward these wearily heroic defendants, but he seemed to be merely rude and unfair to Ann Veronica. He was not, it seemed, the proper stipendiary at all, and there had been some demur to

his jurisdiction that had ruffled him. He resented being regarded as irregular. He felt he was human wisdom prudentially interpolated. . . . "You silly wimmin," he said over and over again throughout the hearing, plucking at his blotting-pad with busy hands. "You silly creatures! Ugh! Fie upon you!" The court was crowded with people, for the most part supporters and admirers of the defendants, and the man with the light eyelashes was conspicuously active and omnipresent.

Ann Veronica's appearance was brief and undistinguished. She had nothing to say for herself. She was guided into the dock and prompted by a helpful police inspector. She was aware of the body of the court, of clerks seated at a black table littered with papers, of policemen standing about stiffly with expressions of conscious integrity, and a murmuring background of the heads and shoulders of spectators close behind her. On a high chair behind a raised counter the stipendiary's substitute regarded her malevolently over his glasses. A disagreeable young man, with red hair and a loose mouth, seated at the reporter's table, was only too manifestly sketching her.

She was interested by the swearing of the witnesses. The kissing of the book struck her as particularly odd, and then the policemen gave their evidence in staccato jerks and stereotyped phrases.

"Have you anything to ask the witness?" asked the helpful inspector.

The ribald demons that infested the back of Ann Veronica's mind urged various facetious interrogations upon her, as, for example, where the witness had acquired his prose style. She controlled herself, and answered meekly, "No."

"Well, Ann Veronica Smith," the magistrate remarked when the case

was all before him, "you're a good-looking, strong, respectable gell, and it's a pity you silly young wimmin can't find something better to do with your exuberance. Two-and-twenty! I can't imagine what your parents can be thinking about to let you get into these scrapes."

Ann Veronica's mind was filled with confused unutterable replies.

"You are persuaded to come and take part in these outrageous proceedings--many of you, I am convinced, have no idea whatever of their nature. I don't suppose you could tell me even the derivation of suffrage if I asked you. No! not even the derivation! But the fashion's been set and in it you must be."

The men at the reporter's table lifted their eyebrows, smiled faintly, and leaned back to watch how she took her scolding. One with the appearance of a bald little gnome yawned agonizingly. They had got all this down already--they heard the substance of it now for the fourteenth time. The stipendiary would have done it all very differently.

She found presently she was out of the dock and confronted with the alternative of being bound over in one surety for the sum of forty pounds--whatever that might mean or a month's imprisonment.

"Second class," said some one, but first and second were all alike to her. She elected to go to prison.

At last, after a long rumbling journey in a stuffy windowless van, she reached Canongate Prison--for Holloway had its quota already. It was bad luck to go to Canongate.

Prison was beastly. Prison was bleak without spaciousness, and pervaded by a faint, oppressive smell; and she had to wait two hours in the sullenly defiant company of two unclean women

thieves before a cell could be assigned to her. Its dreariness, like the filthiness of the police cell, was a discovery for her. She had imagined that prisons were white-tiled places, reeking of lime-wash and immaculately sanitary. Instead, they appeared to be at the hygienic level of tramps' lodging-houses. She was bathed in turbid water that had already been used. She was not allowed to bathe herself: another prisoner, with a privileged manner, washed her. Conscientious objectors to that process are not permitted, she found, in Canongate. Her hair was washed for her also. Then they dressed her in a dirty dress of coarse serge and a cap, and took away her own clothes. The dress came to her only too manifestly unwashed from its former wearer; even the under-linen they gave her seemed unclean. Horrible memories of things seen beneath the microscope of the baser forms of life crawled across her mind and set her shuddering with imagined irritations. She sat on the edge of the bed--the wardress was too busy with the flood of arrivals that day to discover that she had it down--and her skin was shivering from the contact of these garments. She surveyed accommodation that seemed at first merely austere, and became more and more manifestly inadequate as the moments fled by. She meditated profoundly through several enormous cold hours on all that had happened and all that she had done since the swirl of the suffrage movement had submerged her personal affairs. . . .

Very slowly emerging out of a phase of stupefaction, these personal affairs and her personal problem resumed possession of her mind. She had imagined she had drowned them altogether.

CHAPTER THE ELEVENTH

THOUGHTS IN PRISON

Part 1

The first night in prison she found it impossible to sleep. The bed was hard beyond any experience of hers, the bed-clothes coarse and insufficient, the cell at once cold and stuffy. The little grating in the door, the sense of constant inspection, worried her. She kept opening her eyes and looking at it. She was fatigued physically and mentally, and neither mind nor body could rest. She became aware that at regular intervals a light flashed upon her face and a bodiless eye regarded her, and this, as the night wore on, became a torment. . . .

Capes came back into her mind. He haunted a state between hectic dreaming and mild delirium, and she found herself talking aloud to him. All through the night an entirely impossible and monumental Capes confronted her, and she argued with him about men and women. She visualized him as in a policeman's uniform and quite impassive. On some insane score she fancied she had to state her case in verse. "We are the music and you are the instrument," she said; "we are verse and you are prose.

"For men have reason, women rhyme
A man scores always, all the time."

This couplet sprang into her mind from nowhere, and immediately begot an endless series of similar couplets that she began to compose and address to Capes. They came teeming distressfully through her aching brain:

"A man can kick, his skirts don't tear;
A man scores always, everywhere.

"His dress for no man lays a snare;

A man scores always, everywhere.
For hats that fail and hats that flare;
Toppers their universal wear;
A man scores always, everywhere.

"Men's waists are neither here nor there;
A man scores always, everywhere.

"A man can manage without hair;
A man scores always, everywhere.

"There are no males at men to stare;
A man scores always, everywhere.

"And children must we women bear--

"Oh, damn!" she cried, as the hundred-and-first couplet or so presented itself in her unwilling brain.

For a time she worried about that compulsory bath and cutaneous diseases.

Then she fell into a fever of remorse for the habit of bad language she had acquired.

"A man can smoke, a man can swear;
A man scores always, everywhere."

She rolled over on her face, and stuffed her fingers in her ears to shut out the rhythm from her mind. She lay still for a long time, and her mind resumed at a more tolerable pace. She found herself talking to Capes in an undertone of rational admission.

"There is something to be said for the lady-like theory after all," she admitted. "Women ought to be gentle and submissive

persons, strong only in virtue and in resistance to evil compulsion. My dear--I can call you that here, anyhow--I know that. The Victorians over-did it a little, I admit. Their idea of maidenly innocence was just a blank white--the sort of flat white that doesn't shine. But that doesn't alter the fact that there IS innocence. And I've read, and thought, and guessed, and looked--until MY innocence--it's smirched.

"Smirched! . . .

"You see, dear, one IS passionately anxious for something--what is it? One wants to be CLEAN. You want me to be clean. You would want me to be clean, if you gave me a thought, that is. . .

.

"I wonder if you give me a thought. . . .

"I'm not a good woman. I don't mean I'm not a good woman--I mean that I'm not a GOOD woman. My poor brain is so mixed, dear, I hardly know what I am saying. I mean I'm not a good specimen of a woman. I've got a streak of male. Things happen to women--proper women--and all they have to do is to take them well. They've just got to keep white. But I'm always trying to make things happen. And I get myself dirty . . .

"It's all dirt that washes off, dear, but it's dirt.

"The white unaggressive woman who corrects and nurses and serves, and is worshipped and betrayed--the martyr-queen of men, the white mother. . . . You can't do that sort of thing unless you do it over religion, and there's no religion in me--of that sort--worth a rap.

"I'm not gentle. Certainly not a gentlewoman.

"I'm not coarse--no! But I've got no purity of mind--no real purity of mind. A good woman's mind has angels with flaming swords at the portals to keep out fallen thoughts. . . .

"I wonder if there are any good women really.

"I wish I didn't swear. I do swear. It began as a joke. . . . It developed into a sort of secret and private bad manners. It's got to be at last like tobacco-ash over all my sayings and doings. . . .

" 'Go it, missie,' they said; 'kick aht!'

"I swore at that policeman--and disgusted him. Disgusted him!

"For men policemen never blush;
A man in all things scores so much . . .

"Damn! Things are getting plainer. It must be the dawn creeping in.

"Now here hath been dawning another blue day;
I'm just a poor woman, please take it away.

"Oh, sleep! Sleep! Sleep! Sleep!"

Part 2

"Now," said Ann Veronica, after the half-hour of exercise, and sitting on the uncomfortable wooden seat without a back that was

her perch by day, "it's no good staying here in a sort of maze. I've got nothing to do for a month but think. I may as well think. I ought to be able to think things out.

"How shall I put the question? What am I? What have I got to do with myself? . . .

"I wonder if many people HAVE thought things out?

"Are we all just seizing hold of phrases and obeying moods?

"It wasn't so with old-fashioned people, they knew right from wrong; they had a clear-cut, religious faith that seemed to explain everything and give a rule for everything. We haven't. I haven't, anyhow. And it's no good pretending there is one when there isn't. . . . I suppose I believe in God. . . . Never really thought about Him--people don't. . . . I suppose my creed is, 'I believe rather indistinctly in God the Father Almighty, substratum of the evolutionary process, and, in a vein of vague sentimentality that doesn't give a datum for anything at all, in Jesus Christ, His Son.' . . .

"It's no sort of good, Ann Veronica, pretending one does believe when one doesn't. . . .

"And as for praying for faith--this sort of monologue is about as near as any one of my sort ever gets to prayer. Aren't I asking--asking plainly now? . . .

"We've all been mixing our ideas, and we've got intellectual hot coppers--every blessed one of us. . . .

"A confusion of motives--that's what I am! . . .

"There is this absurd craving for Mr. Capes--the 'Capes crave,'

they would call it in America. Why do I want him so badly? Why do I want him, and think about him, and fail to get away from him?

"It isn't all of me.

"The first person you love, Ann Veronica, is yourself--get hold of that! The soul you have to save is Ann Veronica's soul. . . ."

She knelt upon the floor of her cell and clasped her hands, and remained for a long time in silence.

"Oh, God!" she said at last, "how I wish I had been taught to pray!"

Part 3

She had some idea of putting these subtle and difficult issues to the chaplain when she was warned of his advent. But she had not reckoned with the etiquette of Canongate. She got up, as she had been told to do, at his appearance, and he amazed her by sitting down, according to custom, on her stool. He still wore his hat, to show that the days of miracles and Christ being civil to sinners are over forever. She perceived that his countenance was only composed by a great effort, his features severely compressed. He was ruffled, and his ears were red, no doubt from some adjacent controversy. He classified her as he seated himself.

"Another young woman, I suppose," he said, "who knows better than her Maker about her place in the world. Have you anything to ask

me?"

Ann Veronica readjusted her mind hastily. Her back stiffened. She produced from the depths of her pride the ugly investigatory note of the modern district visitor. "Are you a special sort of clergyman," she said, after a pause, and looking down her nose at him, "or do you go to the Universities?"

"Oh!" he said, profoundly.

He panted for a moment with unuttered replies, and then, with a scornful gesture, got up and left the cell.

So that Ann Veronica was not able to get the expert advice she certainly needed upon her spiritual state.

Part 4

After a day or so she thought more steadily. She found herself in a phase of violent reaction against the suffrage movement, a phase greatly promoted by one of those unreasonable objections people of Ann Veronica's temperament take at times--to the girl in the next cell to her own. She was a large, resilient girl, with a foolish smile, a still more foolish expression of earnestness, and a throaty contralto voice. She was noisy and hilarious and enthusiastic, and her hair was always abominably done. In the chapel she sang with an open-lunged gusto that silenced Ann Veronica altogether, and in the exercising-yard slouched round with carelessly dispersed feet. Ann Veronica decided that "hoydenish ragger" was the only phrase to express her. She was always breaking rules, whispering asides, intimating signals. She became at times an embodiment for Ann

Veronica of all that made the suffrage movement defective and unsatisfying.

She was always initiating petty breaches of discipline. Her greatest exploit was the howling before the mid-day meal. This was an imitation of the noises made by the carnivora at the Zoological Gardens at feeding-time; the idea was taken up by prisoner after prisoner until the whole place was alive with barkings, yappings, roarings, pelican chatterings, and feline yowlings, interspersed with shrieks of hysterical laughter. To many in that crowded solitude it came as an extraordinary relief. It was better even than the hymn-singing. But it annoyed Ann Veronica.

"Idiots!" she said, when she heard this pandemonium, and with particular reference to this young lady with the throaty contralto next door. "Intolerable idiots! . . ."

It took some days for this phase to pass, and it left some scars and something like a decision. "Violence won't do it," said Ann Veronica. "Begin violence, and the woman goes under. . . ."

"But all the rest of our case is right. . . . Yes."

As the long, solitary days wore on, Ann Veronica found a number of definite attitudes and conclusions in her mind.

One of these was a classification of women into women who are and women who are not hostile to men. "The real reason why I am out of place here," she said, "is because I like men. I can talk with them. I've never found them hostile. I've got no feminine class feeling. I don't want any laws or freedoms to protect me from a man like Mr. Capes. I know that in my heart I would take whatever he gave. . . ."

"A woman wants a proper alliance with a man, a man who is better stuff than herself. She wants that and needs it more than anything else in the world. It may not be just, it may not be fair, but things are so. It isn't law, nor custom, nor masculine violence settled that. It is just how things happen to be. She wants to be free--she wants to be legally and economically free, so as not to be subject to the wrong man; but only God, who made the world, can alter things to prevent her being slave to the right one.

"And if she can't have the right one?"

"We've developed such a quality of preference!"

She rubbed her knuckles into her forehead. "Oh, but life is difficult!" she groaned. "When you loosen the tangle in one place you tie a knot in another. . . . Before there is any change, any real change, I shall be dead--dead--dead and finished--two hundred years! . . ."

Part 5

One afternoon, while everything was still, the wardress heard her cry out suddenly and alarmingly, and with great and unmistakable passion, "Why in the name of goodness did I burn that twenty pounds?"

Part 6

She sat regarding her dinner. The meat was coarse and

disagreeably served.

"I suppose some one makes a bit on the food," she said. . . .

"One has such ridiculous ideas of the wicked common people and the beautiful machinery of order that ropes them in. And here are these places, full of contagion!

"Of course, this is the real texture of life, this is what we refined secure people forget. We think the whole thing is straight and noble at bottom, and it isn't. We think if we just defy the friends we have and go out into the world everything will become easy and splendid. One doesn't realize that even the sort of civilization one has at Morningside Park is held together with difficulty. By policemen one mustn't shock.

"This isn't a world for an innocent girl to walk about in. It's a world of dirt and skin diseases and parasites. It's a world in which the law can be a stupid pig and the police-stations dirty dens. One wants helpers and protectors--and clean water.

"Am I becoming reasonable or am I being tamed?

"I'm simply discovering that life is many-sided and complex and puzzling. I thought one had only to take it by the throat.

"It hasn't GOT a throat!"

Part 7

One day the idea of self-sacrifice came into her head, and she made, she thought, some important moral discoveries.

It came with an extreme effect of re-discovery, a remarkable novelty. "What have I been all this time?" she asked herself, and answered, "Just stark egotism, crude assertion of Ann Veronica, without a modest rag of religion or discipline or respect for authority to cover me!"

It seemed to her as though she had at last found the touchstone of conduct. She perceived she had never really thought of any one but herself in all her acts and plans. Even Capes had been for her merely an excitant to passionate love--a mere idol at whose feet one could enjoy imaginative wallowings. She had set out to get a beautiful life, a free, untrammelled life, self-development, without counting the cost either for herself or others.

"I have hurt my father," she said; "I have hurt my aunt. I have hurt and snubbed poor Teddy. I've made no one happy. I deserve pretty much what I've got. . . .

"If only because of the way one hurts others if one kicks loose and free, one has to submit. . . .

"Broken-in people! I suppose the world is just all egotistical children and broken-in people.

"Your little flag of pride must flutter down with the rest of them, Ann Veronica. . . .

"Compromise--and kindness.

"Compromise and kindness.

"Who are YOU that the world should lie down at your feet?"

"You've got to be a decent citizen, Ann Veronica. Take your half loaf with the others. You mustn't go clawing after a man that doesn't belong to you--that isn't even interested in you. That's one thing clear.

"You've got to take the decent reasonable way. You've got to adjust yourself to the people God has set about you. Every one else does."

She thought more and more along that line. There was no reason why she shouldn't be Capes' friend. He did like her, anyhow; he was always pleased to be with her. There was no reason why she shouldn't be his restrained and dignified friend. After all, that was life. Nothing was given away, and no one came so rich to the stall as to command all that it had to offer. Every one has to make a deal with the world.

It would be very good to be Capes' friend.

She might be able to go on with biology, possibly even work upon the same questions that he dealt with. . . .

Perhaps her granddaughter might marry his grandson. . . .

It grew clear to her that throughout all her wild raid for independence she had done nothing for anybody, and many people had done things for her. She thought of her aunt and that purse that was dropped on the table, and of many troublesome and ill-requited kindnesses; she thought of the help of the Widgetts, of Teddy's admiration; she thought, with a new-born charity, of her father, of Manning's conscientious unselfishness, of Miss Miniver's devotion.

"And for me it has been Pride and Pride and Pride!"

"I am the prodigal daughter. I will arise and go to my father, and will say unto him--

"I suppose pride and self-assertion are sin? Sinned against heaven-- Yes, I have sinned against heaven and before thee. . . .

"Poor old daddy! I wonder if he'll spend much on the fatted calf? . . .

"The wrapped life-discipline! One comes to that at last. I begin to understand Jane Austen and chintz covers and decency and refinement and all the rest of it. One puts gloves on one's greedy fingers. One learns to sit up . . .

"And somehow or other," she added, after a long interval, "I must pay Mr. Ramage back his forty pounds."

CHAPTER THE TWELFTH

ANN VERONICA PUTS THINGS IN ORDER

Part 1

Ann Veronica made a strenuous attempt to carry out her good resolutions. She meditated long and carefully upon her letter to her father before she wrote it, and gravely and deliberately again before she despatched it.

"MY DEAR FATHER," she wrote,--"I have been thinking hard about everything since I was sent to this prison. All these experiences

have taught me a great deal about life and realities. I see that compromise is more necessary to life than I ignorantly supposed it to be, and I have been trying to get Lord Morley's book on that subject, but it does not appear to be available in the prison library, and the chaplain seems to regard him as an undesirable writer."

At this point she had perceived that she was drifting from her subject.

"I must read him when I come out. But I see very clearly that as things are a daughter is necessarily dependent on her father and bound while she is in that position to live harmoniously with his ideals."

"Bit starchy," said Ann Veronica, and altered the key abruptly. Her concluding paragraph was, on the whole, perhaps, hardly starchy enough.

"Really, daddy, I am sorry for all I have done to put you out. May I come home and try to be a better daughter to you?"

"ANN VERONICA."

Part 2

Her aunt came to meet her outside Canongate, and, being a little confused between what was official and what was merely a rebellious slight upon our national justice, found herself involved in a triumphal procession to the Vindicator Vegetarian Restaurant, and was specifically and personally cheered by a small, shabby crowd outside that rendezvous. They decided quite

audibly, "She's an Old Dear, anyhow. Voting wouldn't do no 'arm to 'er." She was on the very verge of a vegetarian meal before she recovered her head again. Obeying some fine instinct, she had come to the prison in a dark veil, but she had pushed this up to kiss Ann Veronica and never drawn it down again. Eggs were procured for her, and she sat out the subsequent emotions and eloquence with the dignity becoming an injured lady of good family. The quiet encounter and home-coming Ann Veronica and she had contemplated was entirely disorganized by this misadventure; there were no adequate explanations, and after they had settled things at Ann Veronica's lodgings, they reached home in the early afternoon estranged and depressed, with headaches and the trumpet voice of the indomitable Kitty Brett still ringing in their ears.

"Dreadful women, my dear!" said Miss Stanley. "And some of them quite pretty and well dressed. No need to do such things. We must never let your father know we went. Why ever did you let me get into that wagonette?"

"I thought we had to," said Ann Veronica, who had also been a little under the compulsion of the marshals of the occasion. "It was very tiring."

"We will have some tea in the drawing-room as soon as ever we can--and I will take my things off. I don't think I shall ever care for this bonnet again. We'll have some buttered toast. Your poor cheeks are quite sunken and hollow. . . ."

Part 3

When Ann Veronica found herself in her father's study that evening it seemed to her for a moment as though all the events of

the past six months had been a dream. The big gray spaces of London, the shop-lit, greasy, shining streets, had become very remote; the biological laboratory with its work and emotions, the meetings and discussions, the rides in hansoms with Ramage, were like things in a book read and closed. The study seemed absolutely unaltered, there was still the same lamp with a little chip out of the shade, still the same gas fire, still the same bundle of blue and white papers, it seemed, with the same pink tape about them, at the elbow of the arm-chair, still the same father. He sat in much the same attitude, and she stood just as she had stood when he told her she could not go to the Fadden Dance. Both had dropped the rather elaborate politeness of the dining-room, and in their faces an impartial observer would have discovered little lines of obstinate wilfulness in common; a certain hardness--sharp, indeed, in the father and softly rounded in the daughter --but hardness nevertheless, that made every compromise a bargain and every charity a discount.

"And so you have been thinking?" her father began, quoting her letter and looking over his slanting glasses at her. "Well, my girl, I wish you had thought about all these things before these bothers began."

Ann Veronica perceived that she must not forget to remain eminently reasonable.

"One has to live and learn," she remarked, with a passable imitation of her father's manner.

"So long as you learn," said Mr. Stanley.

Their conversation hung.

"I suppose, daddy, you've no objection to my going on with my work at the Imperial College?" she asked.

"If it will keep you busy," he said, with a faintly ironical smile.

"The fees are paid to the end of the session."

He nodded twice, with his eyes on the fire, as though that was a formal statement.

"You may go on with that work," he said, "so long as you keep in harmony with things at home. I'm convinced that much of Russell's investigations are on wrong lines, unsound lines. Still--you must learn for yourself. You're of age--you're of age."

"The work's almost essential for the B.Sc. exam."

"It's scandalous, but I suppose it is."

Their agreement so far seemed remarkable, and yet as a home-coming the thing was a little lacking in warmth. But Ann Veronica had still to get to her chief topic. They were silent for a time. "It's a period of crude views and crude work," said Mr. Stanley. "Still, these Mendelian fellows seem likely to give Mr. Russell trouble, a good lot of trouble. Some of their specimens--wonderfully selected, wonderfully got up."

"Daddy," said Ann Veronica, "these affairs--being away from home has--cost money."

"I thought you would find that out."

"As a matter of fact, I happen to have got a little into debt."

"NEVER!"

Her heart sank at the change in his expression.

"Well, lodgings and things! And I paid my fees at the College."

"Yes. But how could you get--Who gave you credit?"

"You see," said Ann Veronica, "my landlady kept on my room while I was in Holloway, and the fees for the College mounted up pretty considerably." She spoke rather quickly, because she found her father's question the most awkward she had ever had to answer in her life.

"Molly and you settled about the rooms. She said you HAD some money."

"I borrowed it," said Ann Veronica in a casual tone, with white despair in her heart.

"But who could have lent you money?"

"I pawned my pearl necklace. I got three pounds, and there's three on my watch."

"Six pounds. H'm. Got the tickets? Yes, but then--you said you borrowed?"

"I did, too," said Ann Veronica.

"Who from?"

She met his eye for a second and her heart failed her. The truth was impossible, indecent. If she mentioned Ramage he might have a fit--anything might happen. She lied. "The Widgetts," she said.

"Tut, tut!" he said. "Really, Vee, you seem to have advertised our relations pretty generally!"

"They--they knew, of course. Because of the Dance."

"How much do you owe them?"

She knew forty pounds was a quite impossible sum for their neighbors. She knew, too, she must not hesitate. "Eight pounds," she plunged, and added foolishly, "fifteen pounds will see me clear of everything." She muttered some unlady-like comment upon herself under her breath and engaged in secret additions.

Mr. Stanley determined to improve the occasion. He seemed to deliberate. "Well," he said at last slowly, "I'll pay it. I'll pay it. But I do hope, Vee, I do hope --this is the end of these adventures. I hope you have learned your lesson now and come to see--come to realize --how things are. People, nobody, can do as they like in this world. Everywhere there are limitations."

"I know," said Ann Veronica (fifteen pounds!). "I have learned that. I mean--I mean to do what I can." (Fifteen pounds. Fifteen from forty is twenty-five.)

He hesitated. She could think of nothing more to say.

"Well," she achieved at last. "Here goes for the new life!"

"Here goes for the new life," he echoed and stood up. Father and daughter regarded each other warily, each more than a little insecure with the other. He made a movement toward her, and then recalled the circumstances of their last conversation in that study. She saw his purpose and his doubt hesitated also, and

then went to him, took his coat lapels, and kissed him on the cheek.

"Ah, Vee," he said, "that's better! and kissed her back rather clumsily. "We're going to be sensible."

She disengaged herself from him and went out of the room with a grave, preoccupied expression. (Fifteen pounds! And she wanted forty!)

Part 4

It was, perhaps, the natural consequence of a long and tiring and exciting day that Ann Veronica should pass a broken and distressful night, a night in which the noble and self-subduing resolutions of Canongate displayed themselves for the first time in an atmosphere of almost lurid dismay. Her father's peculiar stiffness of soul presented itself now as something altogether left out of the calculations upon which her plans were based, and, in particular, she had not anticipated the difficulty she would find in borrowing the forty pounds she needed for Ramage. That had taken her by surprise, and her tired wits had failed her. She was to have fifteen pounds, and no more. She knew that to expect more now was like anticipating a gold-mine in the garden. The chance had gone. It became suddenly glaringly apparent to her that it was impossible to return fifteen pounds or any sum less than twenty pounds to Ramage --absolutely impossible. She realized that with a pang of disgust and horror.

Already she had sent him twenty pounds, and never written to explain to him why it was she had not sent it back sharply directly he returned it. She ought to have written at once and

told him exactly what had happened. Now if she sent fifteen pounds the suggestion that she had spent a five-pound note in the meanwhile would be irresistible. No! That was impossible. She would have just to keep the fifteen pounds until she could make it twenty. That might happen on her birthday--in August.

She turned about, and was persecuted by visions, half memories, half dreams, of Ramage. He became ugly and monstrous, dunning her, threatening her, assailing her.

"Confound sex from first to last!" said Ann Veronica. "Why can't we propagate by sexless spores, as the ferns do? We restrict each other, we badger each other, friendship is poisoned and buried under it! . . . I MUST pay off that forty pounds. I MUST."

For a time there seemed no comfort for her even in Capes. She was to see Capes to-morrow, but now, in this state of misery she had achieved, she felt assured he would turn his back upon her, take no notice of her at all. And if he didn't, what was the good of seeing him?

"I wish he was a woman," she said, "then I could make him my friend. I want him as my friend. I want to talk to him and go about with him. Just go about with him."

She was silent for a time, with her nose on the pillow, and that brought her to: "What's the good of pretending?"

"I love him," she said aloud to the dim forms of her room, and repeated it, and went on to imagine herself doing acts of tragically dog-like devotion to the biologist, who, for the purposes of the drama, remained entirely unconscious of and indifferent to her proceedings.

At last some anodyne formed itself from these exercises, and, with eyelashes wet with such feeble tears as only three-o'clock-in-the-morning pathos can distil, she fell asleep.

Part 5

Pursuant to some altogether private calculations she did not go up to the Imperial College until after mid-day, and she found the laboratory deserted, even as she desired. She went to the table under the end window at which she had been accustomed to work, and found it swept and garnished with full bottles of re-agents. Everything was very neat; it had evidently been straightened up and kept for her. She put down the sketch-books and apparatus she had brought with her, pulled out her stool, and sat down. As she did so the preparation-room door opened behind her. She heard it open, but as she felt unable to look round in a careless manner she pretended not to hear it. Then Capes' footsteps approached. She turned with an effort.

"I expected you this morning," he said. "I saw--they knocked off your fetters yesterday."

"I think it is very good of me to come this afternoon."

"I began to be afraid you might not come at all."

"Afraid!"

"Yes. I'm glad you're back for all sorts of reasons." He spoke a little nervously. "Among other things, you know, I didn't understand quite--I didn't understand that you were so keenly interested in this suffrage question. I have it on my conscience

that I offended you--"

"Offended me when?"

"I've been haunted by the memory of you. I was rude and stupid. We were talking about the suffrage--and I rather scoffed."

"You weren't rude," she said.

"I didn't know you were so keen on this suffrage business."

"Nor I. You haven't had it on your mind all this time?"

"I have rather. I felt somehow I'd hurt you."

"You didn't. I--I hurt myself."

"I mean--"

"I behaved like an idiot, that's all. My nerves were in rags. I was worried. We're the hysterical animal, Mr. Capes. I got myself locked up to cool off. By a sort of instinct. As a dog eats grass. I'm right again now."

"Because your nerves were exposed, that was no excuse for my touching them. I ought to have seen--"

"It doesn't matter a rap--if you're not disposed to resent the--the way I behaved."

"_I_ resent!"

"I was only sorry I'd been so stupid."

"Well, I take it we're straight again," said Capes with a note of

relief, and assumed an easier position on the edge of her table. "But if you weren't keen on the suffrage business, why on earth did you go to prison?"

Ann Veronica reflected. "It was a phase," she said.

He smiled. "It's a new phase in the life history," he remarked. "Everybody seems to have it now. Everybody who's going to develop into a woman."

"There's Miss Garvice."

"She's coming on," said Capes. "And, you know, you're altering us all. I'M shaken. The campaign's a success." He met her questioning eye, and repeated, "Oh! it IS a success. A man is so apt to--to take women a little too lightly. Unless they remind him now and then not to. . . . YOU did."

"Then I didn't waste my time in prison altogether?"

"It wasn't the prison impressed me. But I liked the things you said here. I felt suddenly I understood you--as an intelligent person. If you'll forgive my saying that, and implying what goes with it. There's something--puppyish in a man's usual attitude to women. That is what I've had on my conscience. . . . I don't think we're altogether to blame if we don't take some of your lot seriously. Some of your sex, I mean. But we smirk a little, I'm afraid, habitually when we talk to you. We smirk, and we're a bit--furtive."

He paused, with his eyes studying her gravely. "You, anyhow, don't deserve it," he said.

Their colloquy was ended abruptly by the apparition of Miss Klegg at the further door. When she saw Ann Veronica she stood for a

moment as if entranced, and then advanced with outstretched hands. "Veronique!" she cried with a rising intonation, though never before had she called Ann Veronica anything but Miss Stanley, and seized her and squeezed her and kissed her with profound emotion. "To think that you were going to do it--and never said a word! You are a little thin, but except for that you look--you look better than ever. Was it VERY horrible? I tried to get into the police-court, but the crowd was ever so much too big, push as I would. . . .

"I mean to go to prison directly the session is over," said Miss Klegg. "Wild horses--not if they have all the mounted police in London--shan't keep me out."

Part 6

Capes lit things wonderfully for Ann Veronica all that afternoon, he was so friendly, so palpably interested in her, and glad to have her back with him. Tea in the laboratory was a sort of suffragette reception. Miss Garvice assumed a quality of neutrality, professed herself almost won over by Ann Veronica's example, and the Scotchman decided that if women had a distinctive sphere it was, at any rate, an enlarging sphere, and no one who believed in the doctrine of evolution could logically deny the vote to women "ultimately," however much they might be disposed to doubt the advisability of its immediate concession. It was a refusal of expediency, he said, and not an absolute refusal. The youth with his hair like Russell cleared his throat and said rather irrelevantly that he knew a man who knew Thomas Bayard Simmons, who had rioted in the Strangers' Gallery, and then Capes, finding them all distinctly pro-Ann Veronica, if not pro-feminist, ventured to be perverse, and started a vein of

speculation upon the Scotchman's idea--that there were still hopes of women evolving into something higher.

He was unusually absurd and ready, and all the time it seemed to Ann Veronica as a delightful possibility, as a thing not indeed to be entertained seriously, but to be half furtively felt, that he was being so agreeable because she had come back again. She returned home through a world that was as roseate as it had been gray overnight.

But as she got out of the train at Morningside Park Station she had a shock. She saw, twenty yards down the platform, the shiny hat and broad back and inimitable swagger of Ramage. She dived at once behind the cover of the lamp-room and affected serious trouble with her shoe-lace until he was out of the station, and then she followed slowly and with extreme discretion until the bifurcation of the Avenue from the field way insured her escape. Ramage went up the Avenue, and she hurried along the path with a beating heart and a disagreeable sense of unsolved problems in her mind.

"That thing's going on," she told herself. "Everything goes on, confound it! One doesn't change anything one has set going by making good resolutions."

And then ahead of her she saw the radiant and welcoming figure of Manning. He came as an agreeable diversion from an insoluble perplexity. She smiled at the sight of him, and thereat his radiation increased.

"I missed the hour of your release," he said, "but I was at the Vindicator Restaurant. You did not see me, I know. I was among the common herd in the place below, but I took good care to see you."

"Of course you're converted?" she said.

"To the view that all those Splendid Women in the movement ought to have votes. Rather! Who could help it?"

He towered up over her and smiled down at her in his fatherly way.

"To the view that all women ought to have votes whether they like it or not."

He shook his head, and his eyes and the mouth under the black mustache wrinkled with his smile. And as he walked by her side they began a wrangle that was none the less pleasant to Ann Veronica because it served to banish a disagreeable preoccupation. It seemed to her in her restored geniality that she liked Manning extremely. The brightness Capes had diffused over the world glorified even his rival.

Part 7

The steps by which Ann Veronica determined to engage herself to marry Manning were never very clear to her. A medley of motives warred in her, and it was certainly not one of the least of these that she knew herself to be passionately in love with Capes; at moments she had a giddy intimation that he was beginning to feel keenly interested in her. She realized more and more the quality of the brink upon which she stood--the dreadful readiness with which in certain moods she might plunge, the unmitigated wrongness and recklessness of such a self-abandonment. "He must never know," she would whisper to herself, "he must never know. Or else--Else it will be impossible that I can be his friend."

That simple statement of the case was by no means all that went on in Ann Veronica's mind. But it was the form of her ruling determination; it was the only form that she ever allowed to see daylight. What else was there lurked in shadows and deep places; if in some mood of reverie it came out into the light, it was presently overwhelmed and hustled back again into hiding. She would never look squarely at these dream forms that mocked the social order in which she lived, never admit she listened to the soft whisperings in her ear. But Manning seemed more and more clearly indicated as a refuge, as security. Certain simple purposes emerged from the disingenuous muddle of her feelings and desires. Seeing Capes from day to day made a bright eventfulness that hampered her in the course she had resolved to follow. She vanished from the laboratory for a week, a week of oddly interesting days. . . .

When she renewed her attendance at the Imperial College the third finger of her left hand was adorned with a very fine old ring with dark blue sapphires that had once belonged to a great-aunt of Manning's.

That ring manifestly occupied her thoughts a great deal. She kept pausing in her work and regarding it, and when Capes came round to her, she first put her hand in her lap and then rather awkwardly in front of him. But men are often blind to rings. He seemed to be.

In the afternoon she had considered certain doubts very carefully, and decided on a more emphatic course of action. "Are these ordinary sapphires?" she said. He bent to her hand, and she slipped off the ring and gave it to him to examine.

"Very good," he said. "Rather darker than most of them. But I'm generously ignorant of gems. Is it an old ring?" he asked,

returning it.

"I believe it is. It's an engagement ring. . . ." She slipped it on her finger, and added, in a voice she tried to make matter-of-fact: "It was given to me last week."

"Oh!" he said, in a colorless tone, and with his eyes on her face.

"Yes. Last week."

She glanced at him, and it was suddenly apparent for one instant of illumination that this ring upon her finger was the crowning blunder of her life. It was apparent, and then it faded into the quality of an inevitable necessity.

"Odd!" he remarked, rather surprisingly, after a little interval.

There was a brief pause, a crowded pause, between them.

She sat very still, and his eyes rested on that ornament for a moment, and then travelled slowly to her wrist and the soft lines of her forearm.

"I suppose I ought to congratulate you," he said. Their eyes met, and his expressed perplexity and curiosity. "The fact is--I don't know why--this takes me by surprise. Somehow I haven't connected the idea with you. You seemed complete--without that."

"Did I?" she said.

"I don't know why. But this is like--like walking round a house that looks square and complete and finding an unexpected long wing running out behind."

She looked up at him, and found he was watching her closely. For some seconds of voluminous thinking they looked at the ring between them, and neither spoke. Then Capes shifted his eyes to her microscope and the little trays of unmounted sections beside it. "How is that carmine working?" he asked, with a forced interest.

"Better," said Ann Veronica, with an unreal alacrity. "But it still misses the nucleolus."

CHAPTER THE THIRTEENTH

THE SAPPHIRE RING

Part 1

For a time that ring set with sapphires seemed to be, after all, the satisfactory solution of Ann Veronica's difficulties. It was like pouring a strong acid over dulled metal. A tarnish of constraint that had recently spread over her intercourse with Capes vanished again. They embarked upon an open and declared friendship. They even talked about friendship. They went to the Zoological Gardens together one Saturday to see for themselves a point of morphological interest about the toucan's bill--that friendly and entertaining bird--and they spent the rest of the afternoon walking about and elaborating in general terms this theme and the superiority of intellectual fellowship to all merely passionate relationships. Upon this topic Capes was heavy and conscientious, but that seemed to her to be just exactly what he ought to be. He was also, had she known it, more than a little insincere. "We are only in the dawn of the Age of

Friendship," he said, "when interest, I suppose, will take the place of passions. Either you have had to love people or hate them--which is a sort of love, too, in its way--to get anything out of them. Now, more and more, we're going to be interested in them, to be curious about them and--quite mildly-experimental with them." He seemed to be elaborating ideas as he talked. They watched the chimpanzees in the new apes' house, and admired the gentle humanity of their eyes--"so much more human than human beings" --and they watched the Agile Gibbon in the next apartment doing wonderful leaps and aerial somersaults.

"I wonder which of us enjoys that most," said Capes--"does he, or do we?"

"He seems to get a zest--"

"He does it and forgets it. We remember it. These joyful bounds just lace into the stuff of my memories and stay there forever. Living's just material."

"It's very good to be alive."

"It's better to know life than be life."

"One may do both," said Ann Veronica.

She was in a very uncritical state that afternoon. When he said, "Let's go and see the wart-hog," she thought no one ever had had so quick a flow of good ideas as he; and when he explained that sugar and not buns was the talisman of popularity among the animals, she marvelled at his practical omniscience.

Finally, at the exit into Regent's Park, they ran against Miss Klegg. It was the expression of Miss Klegg's face that put the idea into Ann Veronica's head of showing Manning at the College

one day, an idea which she didn't for some reason or other carry out for a fortnight.

Part 2

When at last she did so, the sapphire ring took on a new quality in the imagination of Capes. It ceased to be the symbol of liberty and a remote and quite abstracted person, and became suddenly and very disagreeably the token of a large and portentous body visible and tangible.

Manning appeared just at the end of the afternoon's work, and the biologist was going through some perplexities the Scotchman had created by a metaphysical treatment of the skulls of Hyrax and a young African elephant. He was clearing up these difficulties by tracing a partially obliterated suture the Scotchman had overlooked when the door from the passage opened, and Manning came into his universe.

Seen down the length of the laboratory, Manning looked a very handsome and shapely gentleman indeed, and, at the sight of his eager advance to his fiancée, Miss Klegg replaced one long-cherished romance about Ann Veronica by one more normal and simple. He carried a cane and a silk hat with a mourning-band in one gray-gloved hand; his frock-coat and trousers were admirable; his handsome face, his black mustache, his prominent brow conveyed an eager solicitude.

"I want," he said, with a white hand outstretched, "to take you out to tea."

"I've been clearing up," said Ann Veronica, brightly.

"All your dreadful scientific things?" he said, with a smile that Miss Klegg thought extraordinarily kindly.

"All my dreadful scientific things," said Ann Veronica.

He stood back, smiling with an air of proprietorship, and looking about him at the business-like equipment of the room. The low ceiling made him seem abnormally tall. Ann Veronica wiped a scalpel, put a card over a watch-glass containing thin shreds of embryonic guinea-pig swimming in mauve stain, and dismantled her microscope.

"I wish I understood more of biology," said Manning.

"I'm ready," said Ann Veronica, closing her microscope-box with a click, and looking for one brief instant up the laboratory. "We have no airs and graces here, and my hat hangs from a peg in the passage."

She led the way to the door, and Manning passed behind her and round her and opened the door for her. When Capes glanced up at them for a moment, Manning seemed to be holding his arms all about her, and there was nothing but quiet acquiescence in her bearing.

After Capes had finished the Scotchman's troubles he went back into the preparation-room. He sat down on the sill of the open window, folded his arms, and stared straight before him for a long time over the wilderness of tiles and chimney-pots into a sky that was blue and empty. He was not addicted to monologue, and the only audible comment he permitted himself at first upon a universe that was evidently anything but satisfactory to him that afternoon, was one compact and entirely unassigned "Damn!"

The word must have had some gratifying quality, because he repeated it. Then he stood up and repeated it again. "The fool I have been!" he cried; and now speech was coming to him. He tried this sentence with expletives. "Ass!" he went on, still warming. "Muck-headed moral ass! I ought to have done anything.

I ought to have done anything!

"What's a man for?"

"Friendship!"

He doubled up his fist, and seemed to contemplate thrusting it through the window. He turned his back on that temptation. Then suddenly he seized a new preparation bottle that stood upon his table and contained the better part of a week's work--a displayed dissection of a snail, beautifully done--and hurled it across the room, to smash resoundingly upon the cemented floor under the bookcase; then, without either haste or pause, he swept his arm along a shelf of re-agents and sent them to mingle with the debris on the floor. They fell in a diapason of smashes. "H'm!" he said, regarding the wreckage with a calmer visage. "Silly!" he remarked after a pause. "One hardly knows--all the time."

He put his hands in his pockets, his mouth puckered to a whistle, and he went to the door of the outer preparation-room and stood there, looking, save for the faintest intensification of his natural ruddiness, the embodiment of blond serenity.

"Gellett," he called, "just come and clear up a mess, will you? I've smashed some things."

Part 3

There was one serious flaw in Ann Veronica's arrangements for self-rehabilitation, and that was Ramage. He hung over her--he and his loan to her and his connection with her and that terrible evening--a vague, disconcerting possibility of annoyance and exposure. She could not see any relief from this anxiety except repayment, and repayment seemed impossible. The raising of twenty-five pounds was a task altogether beyond her powers. Her birthday was four months away, and that, at its extremist point, might give her another five pounds.

The thing rankled in her mind night and day. She would wake in the night to repeat her bitter cry: "Oh, why did I burn those notes?"

It added greatly to the annoyance of the situation that she had twice seen Ramage in the Avenue since her return to the shelter of her father's roof. He had saluted her with elaborate civility, his eyes distended with indecipherable meanings.

She felt she was bound in honor to tell the whole affair to Manning sooner or later. Indeed, it seemed inevitable that she must clear it up with his assistance, or not at all. And when Manning was not about the thing seemed simple enough. She would compose extremely lucid and honorable explanations. But when it came to broaching them, it proved to be much more difficult than she had supposed.

They went down the great staircase of the building, and, while she sought in her mind for a beginning, he broke into appreciation of her simple dress and self-congratulations upon their engagement.

"It makes me feel," he said, "that nothing is impossible--to have

you here beside me. I said, that day at Surbiton, 'There's many good things in life, but there's only one best, and that's the wild-haired girl who's pulling away at that oar. I will make her my Grail, and some day, perhaps, if God wills, she shall become my wife!' "

He looked very hard before him as he said this, and his voice was full of deep feeling.

"Grail!" said Ann Veronica, and then: "Oh, yes--of course! Anything but a holy one, I'm afraid."

"Altogether holy, Ann Veronica. Ah! but you can't imagine what you are to me and what you mean to me! I suppose there is something mystical and wonderful about all women."

"There is something mystical and wonderful about all human beings. I don't see that men need bank it with the women."

"A man does," said Manning--"a true man, anyhow. And for me there is only one treasure-house. By Jove! When I think of it I want to leap and shout!"

"It would astonish that man with the barrow."

"It astonishes me that I don't," said Manning, in a tone of intense self-enjoyment.

"I think," began Ann Veronica, "that you don't realize--"

He disregarded her entirely. He waved an arm and spoke with a peculiar resonance. "I feel like a giant! I believe now I shall do great things. Gods! what it must be to pour out strong, splendid verse--mighty lines! mighty lines! If I do, Ann Veronica, it will be you. It will be altogether you. I will

dedicate my books to you. I will lay them all at your feet."

He beamed upon her.

"I don't think you realize," Ann Veronica began again, "that I am rather a defective human being."

"I don't want to," said Manning. "They say there are spots on the sun. Not for me. It warms me, and lights me, and fills my world with flowers. Why should I peep at it through smoked glass to see things that don't affect me?" He smiled his delight at his companion.

"I've got bad faults."

He shook his head slowly, smiling mysteriously.

"But perhaps I want to confess them."

"I grant you absolution."

"I don't want absolution. I want to make myself visible to you."

"I wish I could make you visible to yourself. I don't believe in the faults. They're just a joyous softening of the outline--more beautiful than perfection. Like the flaws of an old marble. If you talk of your faults, I shall talk of your splendors."

"I do want to tell you things, nevertheless."

"We'll have, thank God! ten myriad days to tell each other things. When I think of it--"

"But these are things I want to tell you now!"

"I made a little song of it. Let me say it to you. I've no name for it yet. Epithalamy might do.

"Like him who stood on Darien
I view uncharted sea
Ten thousand days, ten thousand nights
Before my Queen and me.

"And that only brings me up to about sixty-five!

"A glittering wilderness of time
That to the sunset reaches
No keel as yet its waves has ploughed
Or gritted on its beaches.

"And we will sail that splendor wide,
From day to day together,
From isle to isle of happiness
Through year's of God's own weather."

"Yes," said his prospective fellow-sailor, "that's very pretty."
She stopped short, full of things un-said. Pretty! Ten thousand days, ten thousand nights!

"You shall tell me your faults," said Manning. "If they matter to you, they matter."

"It isn't precisely faults," said Ann Veronica. "It's something that bothers me." Ten thousand! Put that way it seemed so different.

"Then assuredly!" said Manning.

She found a little difficulty in beginning. She was glad when he went on: "I want to be your city of refuge from every sort of bother. I want to stand between you and all the force and vileness of the world. I want to make you feel that here is a place where the crowd does not clamor nor ill-winds blow."

"That is all very well," said Ann Veronica, unheeded.

"That is my dream of you," said Manning, warming. "I want my life to be beaten gold just in order to make it a fitting setting for yours. There you will be, in an inner temple. I want to enrich it with hangings and gladden it with verses. I want to fill it with fine and precious things. And by degrees, perhaps, that maiden distrust of yours that makes you shrink from my kisses, will vanish. . . . Forgive me if a certain warmth creeps into my words! The Park is green and gray to-day, but I am glowing pink and gold. . . . It is difficult to express these things."

Part 4

They sat with tea and strawberries and cream before them at a little table in front of the pavilion in Regent's Park. Her confession was still unmade. Manning leaned forward on the table, talking discursively on the probable brilliance of their married life. Ann Veronica sat back in an attitude of inattention, her eyes on a distant game of cricket, her mind perplexed and busy. She was recalling the circumstances under which she had engaged herself to Manning, and trying to understand a curious development of the quality of this relationship.

The particulars of her engagement were very clear in her memory.

She had taken care he should have this momentous talk with her on a garden-seat commanded by the windows of the house. They had been playing tennis, with his manifest intention looming over her.

"Let us sit down for a moment," he had said. He made his speech a little elaborately. She plucked at the knots of her racket and heard him to the end, then spoke in a restrained undertone.

"You ask me to be engaged to you, Mr. Manning," she began.

"I want to lay all my life at your feet."

"Mr. Manning, I do not think I love you. . . . I want to be very plain with you. I have nothing, nothing that can possibly be passion for you. I am sure. Nothing at all."

He was silent for some moments.

"Perhaps that is only sleeping," he said. "How can you know?"

"I think--perhaps I am rather a cold-blooded person."

She stopped. He remained listening attentively.

"You have been very kind to me," she said.

"I would give my life for you."

Her heart had warmed toward him. It had seemed to her that life might be very good indeed with his kindness and sacrifice about her. She thought of him as always courteous and helpful, as realizing, indeed, his ideal of protection and service, as chivalrously leaving her free to live her own life, rejoicing with an infinite generosity in every detail of her irresponsible

being. She twanged the catgut under her fingers.

"It seems so unfair," she said, "to take all you offer me and give so little in return."

"It is all the world to me. And we are not traders looking at equivalents."

"You know, Mr. Manning, I do not really want to marry."

"No."

"It seems so--so unworthy"--she picked among her phrases "of the noble love you give--"

She stopped, through the difficulty she found in expressing herself.

"But I am judge of that," said Manning.

"Would you wait for me?"

Manning was silent for a space. "As my lady wills."

"Would you let me go on studying for a time?"

"If you order patience."

"I think, Mr. Manning . . . I do not know. It is so difficult. When I think of the love you give me--One ought to give you back love."

"You like me?"

"Yes. And I am grateful to you. . . ."

Manning tapped with his racket on the turf through some moments of silence. "You are the most perfect, the most glorious of created things--tender, frank intellectual, brave, beautiful. I am your servitor. I am ready to wait for you, to wait your pleasure, to give all my life to winning it. Let me only wear your livery. Give me but leave to try. You want to think for a time, to be free for a time. That is so like you, Diana--Pallas Athene! (Pallas Athene is better.) You are all the slender goddesses. I understand. Let me engage myself. That is all I ask."

She looked at him; his face, downcast and in profile, was handsome and strong. Her gratitude swelled within her.

"You are too good for me," she said in a low voice.

"Then you--you will?"

A long pause.

"It isn't fair. . . ."

"But will you?"

"YES."

For some seconds he had remained quite still.

"If I sit here," he said, standing up before her abruptly, "I shall have to shout. Let us walk about. Tum, tum, turray, tum, tum, tum, te-tum--that thing of Mendelssohn's! If making one human being absolutely happy is any satisfaction to you--"

He held out his hands, and she also stood up.

He drew her close up to him with a strong, steady pull. Then suddenly, in front of all those windows, he folded her in his arms and pressed her to him, and kissed her unresisting face.

"Don't!" cried Ann Veronica, struggling faintly, and he released her.

"Forgive me," he said. "But I am at singing-pitch."

She had a moment of sheer panic at the thing she had done. "Mr. Manning," she said, "for a time--Will you tell no one? Will you keep this--our secret? I'm doubtful-- Will you please not even tell my aunt?"

"As you will," he said. "But if my manner tells! I cannot help it if that shows. You only mean a secret for a little time?"

"Just for a little time," she said; "yes. . . ."

But the ring, and her aunt's triumphant eye, and a note of approval in her father's manner, and a novel disposition in him to praise Manning in a just, impartial voice had soon placed very definite qualifications upon that covenanted secrecy.

Part 5

At first the quality of her relationship to Manning seemed moving and beautiful to Ann Veronica. She admired and rather pitied him, and she was unfeignedly grateful to him. She even thought that perhaps she might come to love him, in spite of that faint indefinable flavor of absurdity that pervaded his courtly

bearing. She would never love him as she loved Capes, of course, but there are grades and qualities of love. For Manning it would be a more temperate love altogether. Much more temperate; the discreet and joyless love of a virtuous, reluctant, condescending wife. She had been quite convinced that an engagement with him and at last a marriage had exactly that quality of compromise which distinguishes the ways of the wise. It would be the wrapped world almost at its best. She saw herself building up a life upon that--a life restrained, kindly, beautiful, a little pathetic and altogether dignified; a life of great disciplines and suppressions and extensive reserves. . . .

But the Ramage affair needed clearing up, of course; it was a flaw upon that project. She had to explain about and pay off that forty pounds. . . .

Then, quite insensibly, her queenliness had declined. She was never able to trace the changes her attitude had undergone, from the time when she believed herself to be the pampered Queen of Fortune, the crown of a good man's love (and secretly, but nobly, worshipping some one else), to the time when she realized she was in fact just a mannequin for her lover's imagination, and that he cared no more for the realities of her being, for the things she felt and desired, for the passions and dreams that might move her, than a child cares for the sawdust in its doll. She was the actress his whim had chosen to play a passive part. . . .

It was one of the most educational disillusionments in Ann Veronica's career.

But did many women get anything better?

This afternoon, when she was urgent to explain her hampering and tainting complication with Ramage, the realization of this alien quality in her relationship with Manning became acute. Hitherto

it had been qualified by her conception of all life as a compromise, by her new effort to be unexacting of life. But she perceived that to tell Manning of her Ramage adventures as they had happened would be like tarring figures upon a water-color. They were in different key, they had a different timbre. How could she tell him what indeed already began to puzzle herself, why she had borrowed that money at all? The plain fact was that she had grabbed a bait. She had grabbed! She became less and less attentive to his meditative, self-complacent fragments of talk as she told herself this. Her secret thoughts made some hasty, half-hearted excursions into the possibility of telling the thing in romantic tones--Ramage was as a black villain, she as a white, fantastically white, maiden. . . . She doubted if Manning would even listen to that. He would refuse to listen and absolve her unshriven.

Then it came to her with a shock, as an extraordinary oversight, that she could never tell Manning about Ramage--never.

She dismissed the idea of doing so. But that still left the forty pounds! . . .

Her mind went on generalizing. So it would always be between herself and Manning. She saw her life before her robbed of all generous illusions, the wrapped life unwrapped forever, vistas of dull responses, crises of make-believe, years of exacting mutual disregard in a misty garden of fine sentiments.

But did any woman get anything better from a man? Perhaps every woman conceals herself from a man perforce! . . .

She thought of Capes. She could not help thinking of Capes. Surely Capes was different. Capes looked at one and not over one, spoke to one, treated one as a visible concrete fact. Capes saw her, felt for her, cared for her greatly, even if he did not

love her. Anyhow, he did not sentimentalize her. And she had been doubting since that walk in the Zoological Gardens whether, indeed, he did simply care for her. Little things, almost impalpable, had happened to justify that doubt; something in his manner had belied his words. Did he not look for her in the morning when she entered--come very quickly to her? She thought of him as she had last seen him looking down the length of the laboratory to see her go. Why had he glanced up--quite in that way? . . .

The thought of Capes flooded her being like long-veiled sunlight breaking again through clouds. It came to her like a dear thing rediscovered, that she loved Capes. It came to her that to marry any one but Capes was impossible. If she could not marry him, she would not marry any one. She would end this sham with Manning. It ought never to have begun. It was cheating, pitiful cheating. And then if some day Capes wanted her--saw fit to alter his views upon friendship. . . .

Dim possibilities that she would not seem to look at even to herself gesticulated in the twilight background of her mind.

She leaped suddenly at a desperate resolution, and in one moment had made it into a new self. She flung aside every plan she had in life, every discretion. Of course, why not? She would be honest, anyhow!

She turned her eyes to Manning.

He was sitting back from the table now, with one arm over the back of his green chair and the other resting on the little table. He was smiling under his heavy mustache, and his head was a little on one side as he looked at her.

"And what was that dreadful confession you had to make?" he was

saying. His quiet, kindly smile implied his serene disbelief in any confessible thing. Ann Veronica pushed aside a tea-cup and the vestiges of her strawberries and cream, and put her elbows before her on the table. "Mr. Manning," she said, "I HAVE a confession to make."

"I wish you would use my Christian name," he said.

She attended to that, and then dismissed it as unimportant.

Something in her voice and manner conveyed an effect of unwonted gravity to him. For the first time he seemed to wonder what it might be that she had to confess. His smile faded.

"I don't think our engagement can go on," she plunged, and felt exactly that loss of breath that comes with a dive into icy water.

"But, how," he said, sitting up astonished beyond measure, "not go on?"

"I have been thinking while you have been talking. You see--I didn't understand."

She stared hard at her finger-nails. "It is hard to express one's self, but I do want to be honest with you. When I promised to marry you I thought I could; I thought it was a possible arrangement. I did think it could be done. I admired your chivalry. I was grateful."

She paused.

"Go on," he said.

She moved her elbow nearer to him and spoke in a still lower

tone. "I told you I did not love you."

"I know," said Manning, nodding gravely. "It was fine and brave of you."

"But there is something more."

She paused again.

"I--I am sorry-- I didn't explain. These things are difficult. It wasn't clear to me that I had to explain. . . . I love some one else."

They remained looking at each other for three or four seconds. Then Manning flopped back in his chair and dropped his chin like a man shot. There was a long silence between them.

"My God!" he said at last, with tremendous feeling, and then again, "My God!"

Now that this thing was said her mind was clear and calm. She heard this standard expression of a strong soul wrung with a critical coldness that astonished herself. She realized dimly that there was no personal thing behind his cry, that countless myriads of Mannings had "My God!"-ed with an equal gusto at situations as flatly apprehended. This mitigated her remorse enormously. He rested his brow on his hand and conveyed magnificent tragedy by his pose.

"But why," he said in the gasping voice of one subduing an agony, and looked at her from under a pain-wrinkled brow, "why did you not tell me this before?"

"I didn't know-- I thought I might be able to control myself."

"And you can't?"

"I don't think I ought to control myself."

"And I have been dreaming and thinking--"

"I am frightfully sorry. . . ."

"But-- This bolt from the blue! My God! Ann Veronica, you don't understand. This--this shatters a world!"

She tried to feel sorry, but her sense of his immense egotism was strong and clear.

He went on with intense urgency.

"Why did you ever let me love you? Why did you ever let me peep through the gates of Paradise? Oh! my God! I don't begin to feel and realize this yet. It seems to me just talk; it seems to me like the fancy of a dream. Tell me I haven't heard. This is a joke of yours." He made his voice very low and full, and looked closely into her face.

She twisted her fingers tightly. "It isn't a joke," she said. "I feel shabby and disgraced. . . . I ought never to have thought of it. Of you, I mean. . . ."

He fell back in his chair with an expression of tremendous desolation. "My God!" he said again. . . .

They became aware of the waitress standing over them with book and pencil ready for their bill. "Never mind the bill," said Manning tragically, standing up and thrusting a four-shilling piece into her hand, and turning a broad back on her astonishment. "Let us walk across the Park at least," he said to

Ann Veronica. "Just at present my mind simply won't take hold of this at all. . . . I tell you--never mind the bill. Keep it! Keep it!"

Part 6

They walked a long way that afternoon. They crossed the Park to the westward, and then turned back and walked round the circle about the Royal Botanical Gardens and then southwardly toward Waterloo. They trudged and talked, and Manning struggled, as he said, to "get the hang of it all."

It was a long, meandering talk, stupid, shameful, and unavoidable. Ann Veronica was apologetic to the bottom of her soul. At the same time she was wildly exultant at the resolution she had taken, the end she had made to her blunder. She had only to get through this, to solace Manning as much as she could, to put such clumsy plasterings on his wounds as were possible, and then, anyhow, she would be free--free to put her fate to the test. She made a few protests, a few excuses for her action in accepting him, a few lame explanations, but he did not heed them or care for them. Then she realized that it was her business to let Manning talk and impose his own interpretations upon the situation so far as he was concerned. She did her best to do this. But about his unknown rival he was acutely curious.

He made her tell him the core of the difficulty.

"I cannot say who he is," said Ann Veronica, "but he is a married man. . . . No! I do not even know that he cares for me. It is no good going into that. Only I just want him. I just want him, and no one else will do. It is no good arguing about a thing

like that."

"But you thought you could forget him."

"I suppose I must have thought so. I didn't understand. Now I do."

"By God!" said Manning, making the most of the word, "I suppose it's fate. Fate! You are so frank so splendid!"

"I'm taking this calmly now," he said, almost as if he apologized, "because I'm a little stunned."

Then he asked, "Tell me! has this man, has he DARED to make love to you?"

Ann Veronica had a vicious moment. "I wish he had," she said.

"But--"

The long inconsecutive conversation by that time was getting on her nerves. "When one wants a thing more than anything else in the world," she said with outrageous frankness, "one naturally wishes one had it."

She shocked him by that. She shattered the edifice he was building up of himself as a devoted lover, waiting only his chance to win her from a hopeless and consuming passion.

"Mr. Manning," she said, "I warned you not to idealize me. Men ought not to idealize any woman. We aren't worth it. We've done nothing to deserve it. And it hampers us. You don't know the thoughts we have; the things we can do and say. You are a sisterless man; you have never heard the ordinary talk that goes on at a girls' boarding-school."

"Oh! but you ARE splendid and open and fearless! As if I couldn't allow! What are all these little things? Nothing! Nothing! You can't sully yourself. You can't! I tell you frankly you may break off your engagement to me--I shall hold myself still engaged to you, yours just the same. As for this infatuation--it's like some obsession, some magic thing laid upon you. It's not you--not a bit. It's a thing that's happened to you. It is like some accident. I don't care. In a sense I don't care. It makes no difference. . . . All the same, I wish I had that fellow by the throat! Just the virile, unregenerate man in me wishes that. . . .

"I suppose I should let go if I had.

"You know," he went on, "this doesn't seem to me to end anything.

I'm rather a persistent person. I'm the sort of dog, if you turn it out of the room it lies down on the mat at the door. I'm not a lovesick boy. I'm a man, and I know what I mean. It's a tremendous blow, of course--but it doesn't kill me. And the situation it makes!--the situation!"

Thus Manning, egotistical, inconsecutive, unreal. And Ann Veronica walked beside him, trying in vain to soften her heart to him by the thought of how she had ill-used him, and all the time, as her feet and mind grew weary together, rejoicing more and more that at the cost of this one interminable walk she escaped the prospect of--what was it?--"Ten thousand days, ten thousand nights" in his company. Whatever happened she need never return to that possibility.

"For me," Manning went on, "this isn't final. In a sense it alters nothing. I shall still wear your favor--even if it is a stolen and forbidden favor--in my casque. . . . I shall still

believe in you. Trust you."

He repeated several times that he would trust her, though it remained obscure just exactly where the trust came in.

"Look here," he cried out of a silence, with a sudden flash of understanding, "did you mean to throw me over when you came out with me this afternoon?"

Ann Veronica hesitated, and with a startled mind realized the truth. "No," she answered, reluctantly.

"Very well," said Manning. "Then I don't take this as final. That's all. I've bored you or something. . . . You think you love this other man! No doubt you do love him. Before you have lived--"

He became darkly prophetic. He thrust out a rhetorical hand.

"I will MAKE you love me! Until he has faded--faded into a memory. . ."

He saw her into the train at Waterloo, and stood, a tall, grave figure, with hat upraised, as the carriage moved forward slowly and hid him. Ann Veronica sat back with a sigh of relief. Manning might go on now idealizing her as much as he liked. She was no longer a confederate in that. He might go on as the devoted lover until he tired. She had done forever with the Age of Chivalry, and her own base adaptations of its traditions to the compromising life. She was honest again.

But when she turned her thoughts to Morningside Park she perceived the tangled skein of life was now to be further complicated by his romantic importunity.

CHAPTER THE FOURTEENTH

THE COLLAPSE OF THE PENITENT

Part 1

Spring had held back that year until the dawn of May, and then spring and summer came with a rush together. Two days after this conversation between Manning and Ann Veronica, Capes came into the laboratory at lunch-time and found her alone there standing by the open window, and not even pretending to be doing anything.

He came in with his hands in his trousers pockets and a general air of depression in his bearing. He was engaged in detesting Manning and himself in almost equal measure. His face brightened at the sight of her, and he came toward her.

"What are you doing?" he asked.

"Nothing," said Ann Veronica, and stared over her shoulder out of the window.

"So am I. . . . Lassitude?"

"I suppose so."

"_I_ can't work."

"Nor I," said Ann Veronica.

Pause.

"It's the spring," he said. "It's the warming up of the year, the coming of the light mornings, the way in which everything begins to run about and begin new things. Work becomes distasteful; one thinks of holidays. This year--I've got it badly. I want to get away. I've never wanted to get away so much."

"Where do you go?"

"Oh!--Alps."

"Climbing?"

"Yes."

"That's rather a fine sort of holiday!"

He made no answer for three or four seconds.

"Yes," he said, "I want to get away. I feel at moments as though I could bolt for it. . . . Silly, isn't it? Undisciplined."

He went to the window and fidgeted with the blind, looking out to where the tree-tops of Regent's Park showed distantly over the houses. He turned round toward her and found her looking at him and standing very still.

"It's the stir of spring," he said.

"I believe it is."

She glanced out of the window, and the distant trees were a froth of hard spring green and almond blossom. She formed a wild resolution, and, lest she should waver from it, she set about at

once to realize it. "I've broken off my engagement," she said, in a matter-of-fact tone, and found her heart thumping in her neck. He moved slightly, and she went on, with a slight catching of her breath: "It's a bother and disturbance, but you see--" She had to go through with it now, because she could think of nothing but her preconceived words. Her voice was weak and flat.

"I've fallen in love."

He never helped her by a sound.

"I--I didn't love the man I was engaged to," she said. She met his eyes for a moment, and could not interpret their expression. They struck her as cold and indifferent.

Her heart failed her and her resolution became water. She remained standing stiffly, unable even to move. She could not look at him through an interval that seemed to her a vast gulf of time. But she felt his lax figure become rigid.

At last his voice came to release her tension.

"I thought you weren't keeping up to the mark. You-- It's jolly of you to confide in me. Still--" Then, with incredible and obviously deliberate stupidity, and a voice as flat as her own, he asked, "Who is the man?"

Her spirit raged within her at the dumbness, the paralysis that had fallen upon her. Grace, confidence, the power of movement even, seemed gone from her. A fever of shame ran through her being. Horrible doubts assailed her. She sat down awkwardly and helplessly on one of the little stools by her table and covered her face with her hands.

"Can't you SEE how things are?" she said.

Part 2

Before Capes could answer her in any way the door at the end of the laboratory opened noisily and Miss Klegg appeared. She went to her own table and sat down. At the sound of the door Ann Veronica uncovered a tearless face, and with one swift movement assumed a conversational attitude. Things hung for a moment in an awkward silence.

"You see," said Ann Veronica, staring before her at the window-sash, "that's the form my question takes at the present time."

Capes had not quite the same power of recovery. He stood with his hands in his pockets looking at Miss Klegg's back. His face was white. "It's--it's a difficult question." He appeared to be paralyzed by abstruse acoustic calculations. Then, very awkwardly, he took a stool and placed it at the end of Ann Veronica's table, and sat down. He glanced at Miss Klegg again, and spoke quickly and furtively, with eager eyes on Ann Veronica's face.

"I had a faint idea once that things were as you say they are, but the affair of the ring--of the unexpected ring--puzzled me. Wish SHE"--he indicated Miss Klegg's back with a nod--"was at the bottom of the sea. . . . I would like to talk to you about this--soon. If you don't think it would be a social outrage, perhaps I might walk with you to your railway station."

"I will wait," said Ann Veronica, still not looking at him, "and we will go into Regent's Park. No--you shall come with me to

Waterloo."

"Right!" he said, and hesitated, and then got up and went into the preparation-room.

Part 3

For a time they walked in silence through the back streets that lead southward from the College. Capes bore a face of infinite perplexity.

"The thing I feel most disposed to say, Miss Stanley," he began at last, "is that this is very sudden."

"It's been coming on since first I came into the laboratory."

"What do you want?" he asked, bluntly.

"You!" said Ann Veronica.

The sense of publicity, of people coming and going about them, kept them both unemotional. And neither had any of that theatricality which demands gestures and facial expression.

"I suppose you know I like you tremendously?" he pursued.

"You told me that in the Zoological Gardens."

She found her muscles a-tremble. But there was nothing in her bearing that a passer-by would have noted, to tell of the excitement that possessed her.

"I"--he seemed to have a difficulty with the word--"I love you. I've told you that practically already. But I can give it its name now. You needn't be in any doubt about it. I tell you that because it puts us on a footing. . . ."

They went on for a time without another word.

"But don't you know about me?" he said at last.

"Something. Not much."

"I'm a married man. And my wife won't live with me for reasons that I think most women would consider sound. . . . Or I should have made love to you long ago."

There came a silence again.

"I don't care," said Ann Veronica.

"But if you knew anything of that--"

"I did. It doesn't matter."

"Why did you tell me? I thought--I thought we were going to be friends."

He was suddenly resentful. He seemed to charge her with the ruin of their situation. "Why on earth did you TELL me?" he cried.

"I couldn't help it. It was an impulse. I HAD to."

"But it changes things. I thought you understood."

"I had to," she repeated. "I was sick of the make-believe. I don't care! I'm glad I did. I'm glad I did."

"Look here!" said Capes, "what on earth do you want? What do you think we can do? Don't you know what men are, and what life is?--to come to me and talk to me like this!"

"I know--something, anyhow. But I don't care; I haven't a spark of shame. I don't see any good in life if it hasn't got you in it. I wanted you to know. And now you know. And the fences are down for good. You can't look me in the eyes and say you don't care for me."

"I've told you," he said.

"Very well," said Ann Veronica, with an air of concluding the discussion.

They walked side by side for a time.

"In that laboratory one gets to disregard these passions," began Capes. "Men are curious animals, with a trick of falling in love readily with girls about your age. One has to train one's self not to. I've accustomed myself to think of you--as if you were like every other girl who works at the schools--as something quite outside these possibilities. If only out of loyalty to co-education one has to do that. Apart from everything else, this meeting of ours is a breach of a good rule."

"Rules are for every day," said Ann Veronica. "This is not every day. This is something above all rules."

"For you."

"Not for you?"

"No. No; I'm going to stick to the rules. . . . It's odd, but

nothing but cliché seems to meet this case. You've placed me in a very exceptional position, Miss Stanley." The note of his own voice exasperated him. "Oh, damn!" he said.

She made no answer, and for a time he debated some problems with himself.

"No!" he said aloud at last.

"The plain common-sense of the case," he said, "is that we can't possibly be lovers in the ordinary sense. That, I think, is manifest. You know, I've done no work at all this afternoon. I've been smoking cigarettes in the preparation-room and thinking this out. We can't be lovers in the ordinary sense, but we can be great and intimate friends."

"We are," said Ann Veronica.

"You've interested me enormously. . . ."

He paused with a sense of ineptitude. "I want to be your friend," he said. "I said that at the Zoo, and I mean it. Let us be friends--as near and close as friends can be."

Ann Veronica gave him a pallid profile.

"What is the good of pretending?" she said.

"We don't pretend."

"We do. Love is one thing and friendship quite another. Because I'm younger than you. . . . I've got imagination. . . . I know what I am talking about. Mr. Capes, do you think . . . do you think I don't know the meaning of love?"

Part 4

Capes made no answer for a time.

"My mind is full of confused stuff," he said at length. "I've been thinking--all the afternoon. Oh, and weeks and months of thought and feeling there are bottled up too. . . . I feel a mixture of beast and uncle. I feel like a fraudulent trustee. Every rule is against me-- Why did I let you begin this? I might have told--"

"I don't see that you could help--"

"I might have helped--"

"You couldn't."

"I ought to have--all the same.

"I wonder," he said, and went off at a tangent. "You know about my scandalous past?"

"Very little. It doesn't seem to matter. Does it?"

"I think it does. Profoundly."

"How?"

"It prevents our marrying. It forbids--all sorts of things."

"It can't prevent our loving."

"I'm afraid it can't. But, by Jove! it's going to make our loving a fiercely abstract thing."

"You are separated from your wife?"

"Yes, but do you know how?"

"Not exactly."

"Why on earth--? A man ought to be labelled. You see, I'm separated from my wife. But she doesn't and won't divorce me. You don't understand the fix I am in. And you don't know what led to our separation. And, in fact, all round the problem you don't know and I don't see how I could possibly have told you before. I wanted to, that day in the Zoo. But I trusted to that ring of yours."

"Poor old ring!" said Ann Veronica.

"I ought never have gone to the Zoo, I suppose. I asked you to go. But a man is a mixed creature. . . . I wanted the time with you. I wanted it badly."

"Tell me about yourself," said Ann Veronica.

"To begin with, I was--I was in the divorce court. I was--I was a co-respondent. You understand that term?"

Ann Veronica smiled faintly. "A modern girl does understand these terms. She reads novels--and history --and all sorts of things. Did you really doubt if I knew?"

"No. But I don't suppose you can understand."

"I don't see why I shouldn't."

"To know things by name is one thing; to know them by seeing them and feeling them and being them quite another. That is where life takes advantage of youth. You don't understand."

"Perhaps I don't."

"You don't. That's the difficulty. If I told you the facts, I expect, since you are in love with me, you'd explain the whole business as being very fine and honorable for me--the Higher Morality, or something of that sort. . . . It wasn't."

"I don't deal very much," said Ann Veronica, "in the Higher Morality, or the Higher Truth, or any of those things."

"Perhaps you don't. But a human being who is young and clean, as you are, is apt to ennoble--or explain away."

"I've had a biological training. I'm a hard young woman."

"Nice clean hardness, anyhow. I think you are hard. There's something--something ADULT about you. I'm talking to you now as though you had all the wisdom and charity in the world. I'm going to tell you things plainly. Plainly. It's best. And then you can go home and think things over before we talk again. I want you to be clear what you're really and truly up to, anyhow."

"I don't mind knowing," said Ann Veronica.

"It's precious unromantic."

"Well, tell me."

"I married pretty young," said Capes. "I've got--I have to tell you this to make myself clear--a streak of ardent animal in my

composition. I married--I married a woman whom I still think one of the most beautiful persons in the world. She is a year or so older than I am, and she is, well, of a very serene and proud and dignified temperament. If you met her you would, I am certain, think her as fine as I do. She has never done a really ignoble thing that I know of--never. I met her when we were both very young, as young as you are. I loved her and made love to her, and I don't think she quite loved me back in the same way."

He paused for a time. Ann Veronica said nothing.

"These are the sort of things that aren't supposed to happen. They leave them out of novels--these incompatibilities. Young people ignore them until they find themselves up against them. My wife doesn't understand, doesn't understand now. She despises me, I suppose. . . . We married, and for a time we were happy. She was fine and tender. I worshipped her and subdued myself."

He left off abruptly. "Do you understand what I am talking about? It's no good if you don't."

"I think so," said Ann Veronica, and colored. "In fact, yes, I do."

"Do you think of these things--these matters--as belonging to our Higher Nature or our Lower?"

"I don't deal in Higher Things, I tell you," said Ann Veronica, "or Lower, for the matter of that. I don't classify." She hesitated. "Flesh and flowers are all alike to me."

"That's the comfort of you. Well, after a time there came a fever in my blood. Don't think it was anything better than fever--or a bit beautiful. It wasn't. Quite soon, after we were married--it was just within a year--I formed a friendship with

the wife of a friend, a woman eight years older than myself. . . . It wasn't anything splendid, you know. It was just a shabby, stupid, furtive business that began between us. Like stealing. We dressed it in a little music. . . . I want you to understand clearly that I was indebted to the man in many small ways. I was mean to him. . . . It was the gratification of an immense necessity. We were two people with a craving. We felt like thieves. We WERE thieves. . . . We LIKED each other well enough. Well, my friend found us out, and would give no quarter. He divorced her. How do you like the story?"

"Go on," said Ann Veronica, a little hoarsely, "tell me all of it."

"My wife was astounded--wounded beyond measure. She thought me--filthy. All her pride raged at me. One particularly humiliating thing came out--humiliating for me. There was a second co-respondent. I hadn't heard of him before the trial. I don't know why that should be so acutely humiliating. There's no logic in these things. It was."

"Poor you!" said Ann Veronica.

"My wife refused absolutely to have anything more to do with me. She could hardly speak to me; she insisted relentlessly upon a separation. She had money of her own--much more than I have--and there was no need to squabble about that. She has given herself up to social work."

"Well--"

"That's all. Practically all. And yet-- Wait a little, you'd better have every bit of it. One doesn't go about with these passions allayed simply because they have made wreckage and a scandal. There one is! The same stuff still! One has a craving

in one's blood, a craving roused, cut off from its redeeming and guiding emotional side. A man has more freedom to do evil than a woman. Irregularly, in a quite inglorious and unromantic way, you know, I am a vicious man. That's --that's my private life. Until the last few months. It isn't what I have been but what I am. I haven't taken much account of it until now. My honor has been in my scientific work and public discussion and the things I write. Lots of us are like that. But, you see, I'm smirched. For the sort of love-making you think about. I've muddled all this business. I've had my time and lost my chances. I'm damaged goods. And you're as clean as fire. You come with those clear eyes of yours, as valiant as an angel. . . ."

He stopped abruptly.

"Well?" she said.

"That's all."

"It's so strange to think of you--troubled by such things. I didn't think-- I don't know what I thought. Suddenly all this makes you human. Makes you real."

"But don't you see how I must stand to you? Don't you see how it bars us from being lovers-- You can't --at first. You must think it over. It's all outside the world of your experience."

"I don't think it makes a rap of difference, except for one thing. I love you more. I've wanted you--always. I didn't dream, not even in my wildest dreaming, that--you might have any need of me."

He made a little noise in his throat as if something had cried out within him, and for a time they were both too full for speech.

They were going up the slope into Waterloo Station.

"You go home and think of all this," he said, "and talk about it to-morrow. Don't, don't say anything now, not anything. As for loving you, I do. I do--with all my heart. It's no good hiding it any more. I could never have talked to you like this, forgetting everything that parts us, forgetting even your age, if I did not love you utterly. If I were a clean, free man--We'll have to talk of all these things. Thank goodness there's plenty of opportunity! And we two can talk. Anyhow, now you've begun it, there's nothing to keep us in all this from being the best friends in the world. And talking of every conceivable thing. Is there?"

"Nothing," said Ann Veronica, with a radiant face.

"Before this there was a sort of restraint--a make-believe. It's gone."

"It's gone."

"Friendship and love being separate things. And that confounded engagement!"

"Gone!"

They came upon a platform, and stood before her compartment.

He took her hand and looked into her eyes and spoke, divided against himself, in a voice that was forced and insincere.

"I shall be very glad to have you for a friend," he said, "loving friend. I had never dreamed of such a friend as you."

She smiled, sure of herself beyond any pretending, into his troubled eyes. Hadn't they settled that already?

"I want you as a friend," he persisted, almost as if he disputed something.

Part 5

The next morning she waited in the laboratory at the lunch-hour in the reasonable certainty that he would come to her.

"Well, you have thought it over?" he said, sitting down beside her.

"I've been thinking of you all night," she answered.

"Well?"

"I don't care a rap for all these things."

He said nothing for a space.

"I don't see there's any getting away from the fact that you and I love each other," he said, slowly. "So far you've got me and I you. . . . You've got me. I'm like a creature just wakened up. My eyes are open to you. I keep on thinking of you. I keep on thinking of little details and aspects of your voice, your eyes, the way you walk, the way your hair goes back from the side of your forehead. I believe I have always been in love with you. Always. Before ever I knew you."

She sat motionless, with her hand tightening over the edge of the table, and he, too, said no more. She began to tremble violently.

He stood up abruptly and went to the window.

"We have," he said, "to be the utmost friends."

She stood up and held her arms toward him. "I want you to kiss me," she said.

He gripped the window-sill behind him.

"If I do," he said. . . . "No! I want to do without that. I want to do without that for a time. I want to give you time to think. I am a man--of a sort of experience. You are a girl with very little. Just sit down on that stool again and let's talk of this in cold blood. People of your sort-- I don't want the instincts to--to rush our situation. Are you sure what it is you want of me?"

"I want you. I want you to be my lover. I want to give myself to you. I want to be whatever I can to you." She paused for a moment. "Is that plain?" she asked.

"If I didn't love you better than myself," said Capes, "I wouldn't fence like this with you.

"I am convinced you haven't thought this out," he went on. "You do not know what such a relation means. We are in love. Our heads swim with the thought of being together. But what can we do? Here am I, fixed to respectability and this laboratory; you're living at home. It means . . . just furtive meetings."

"I don't care how we meet," she said.

"It will spoil your life."

"It will make it. I want you. I am clear I want you. You are different from all the world for me. You can think all round me. You are the one person I can understand and feel--feel right with. I don't idealize you. Don't imagine that. It isn't because you're good, but because I may be rotten bad; and there's something--something living and understanding in you. Something that is born anew each time we meet, and pines when we are separated. You see, I'm selfish. I'm rather scornful. I think too much about myself. You're the only person I've really given good, straight, unselfish thought to. I'm making a mess of my life--unless you come in and take it. I am. In you--if you can love me--there is salvation. Salvation. I know what I am doing better than you do. Think--think of that engagement!"

Their talk had come to eloquent silences that contradicted all he had to say.

She stood up before him, smiling faintly.

"I think we've exhausted this discussion," she said.

"I think we have," he answered, gravely, and took her in his arms, and smoothed her hair from her forehead, and very tenderly kissed her lips.

Part 6

They spent the next Sunday in Richmond Park, and mingled the happy sensation of being together uninterrupted through the long sunshine of a summer's day with the ample discussion of their position. "This has all the clean freshness of spring and youth," said Capes; "it is love with the down on; it is like the

glitter of dew in the sunlight to be lovers such as we are, with no more than one warm kiss between us. I love everything to-day, and all of you, but I love this, this--this innocence upon us most of all.

"You can't imagine," he said, "what a beastly thing a furtive love affair can be.

"This isn't furtive," said Ann Veronica.

"Not a bit of it. And we won't make it so. . . . We mustn't make it so."

They loitered under trees, they sat on mossy banks they gossiped on friendly benches, they came back to lunch at the "Star and Garter," and talked their afternoon away in the garden that looks out upon the crescent of the river. They had a universe to talk about--two universes.

"What are we going to do?" said Capes, with his eyes on the broad distances beyond the ribbon of the river.

"I will do whatever you want," said Ann Veronica.

"My first love was all blundering," said Capes.

He thought for a moment, and went on: "Love is something that has to be taken care of. One has to be so careful. . . . It's a beautiful plant, but a tender one. . . . I didn't know. I've a dread of love dropping its petals, becoming mean and ugly. How can I tell you all I feel? I love you beyond measure. And I'm afraid. . . . I'm anxious, joyfully anxious, like a man when he has found a treasure."

"YOU know," said Ann Veronica. "I just came to you and put

myself in your hands."

"That's why, in a way, I'm prudish. I've--dreads. I don't want to tear at you with hot, rough hands."

"As you will, dear lover. But for me it doesn't matter. Nothing is wrong that you do. Nothing. I am quite clear about this. I know exactly what I am doing. I give myself to you."

"God send you may never repent it!" cried Capes.

She put her hand in his to be squeezed.

"You see," he said, "it is doubtful if we can ever marry. Very doubtful. I have been thinking-- I will go to my wife again. I will do my utmost. But for a long time, anyhow, we lovers have to be as if we were no more than friends."

He paused. She answered slowly. "That is as you will," she said.

"Why should it matter?" he said.

And then, as she answered nothing, "Seeing that we are lovers."

Part 7

It was rather less than a week after that walk that Capes came and sat down beside Ann Veronica for their customary talk in the lunch hour. He took a handful of almonds and raisins that she held out to him--for both these young people had given up the practice of going out for luncheon--and kept her hand for a

moment to kiss her finger-tips. He did not speak for a moment.

"Well?" she said.

"I say!" he said, without any movement. "Let's go."

"Go!" She did not understand him at first, and then her heart began to beat very rapidly.

"Stop this--this humbugging," he explained. "It's like the Picture and the Bust. I can't stand it. Let's go. Go off and live together--until we can marry. Dare you?"

"Do you mean NOW?"

"At the end of the session. It's the only clean way for us. Are you prepared to do it?"

Her hands clenched. "Yes," she said, very faintly. And then: "Of course! Always. It is what I have wanted, what I have meant all along."

She stared before her, trying to keep back a rush of tears.

Capes kept obstinately stiff, and spoke between his teeth.

"There's endless reasons, no doubt, why we shouldn't," he said. "Endless. It's wrong in the eyes of most people. For many of them it will smirch us forever. . . . You DO understand?"

"Who cares for most people?" she said, not looking at him.

"I do. It means social isolation--struggle."

"If you dare--I dare," said Ann Veronica. "I was never so clear

in all my life as I have been in this business." She lifted steadfast eyes to him. "Dare!" she said. The tears were welling over now, but her voice was steady. "You're not a man for me--not one of a sex, I mean. You're just a particular being with nothing else in the world to class with you. You are just necessary to life for me. I've never met any one like you. To have you is all important. Nothing else weighs against it. Morals only begin when that is settled. I sha'n't care a rap if we can never marry. I'm not a bit afraid of anything--scandal, difficulty, struggle. . . . I rather want them. I do want them."

"You'll get them," he said. "This means a plunge."

"Are you afraid?"

"Only for you! Most of my income will vanish. Even unbelieving biological demonstrators must respect decorum; and besides, you see--you were a student. We shall have--hardly any money."

"I don't care."

"Hardship and danger."

"With you!"

"And as for your people?"

"They don't count. That is the dreadful truth. This--all this swamps them. They don't count, and I don't care."

Capes suddenly abandoned his attitude of meditative restraint. "By Jove!" he broke out, "one tries to take a serious, sober view. I don't quite know why. But this is a great lark, Ann Veronica! This turns life into a glorious adventure!"

"Ah!" she cried in triumph.

"I shall have to give up biology, anyhow. I've always had a sneaking desire for the writing-trade. That is what I must do. I can."

"Of course you can."

"And biology was beginning to bore me a bit. One research is very like another. . . . Latterly I've been doing things. . . . Creative work appeals to me wonderfully. Things seem to come rather easily. . . . But that, and that sort of thing, is just a day-dream. For a time I must do journalism and work hard. . . . What isn't a day-dream is this: that you and I are going to put an end to flummery--and go!"

"Go!" said Ann Veronica, clenching her hands.

"For better or worse."

"For richer or poorer."

She could not go on, for she was laughing and crying at the same time. "We were bound to do this when you kissed me," she sobbed through her tears. "We have been all this time-- Only your queer code of honor-- Honor! Once you begin with love you have to see it through."

CHAPTER THE FIFTEENTH

THE LAST DAYS AT HOME

Part 1

They decided to go to Switzerland at the session's end. "We'll clean up everything tidy," said Capes. . . .

For her pride's sake, and to save herself from long day-dreams and an unappeasable longing for her lover, Ann Veronica worked hard at her biology during those closing weeks. She was, as Capes had said, a hard young woman. She was keenly resolved to do well in the school examination, and not to be drowned in the seas of emotion that threatened to submerge her intellectual being.

Nevertheless, she could not prevent a rising excitement as the dawn of the new life drew near to her--a thrilling of the nerves, a secret and delicious exaltation above the common circumstances of existence. Sometimes her straying mind would become astonishingly active--embroidering bright and decorative things that she could say to Capes; sometimes it passed into a state of passive acquiescence, into a radiant, formless, golden joy. She was aware of people--her aunt, her father, her fellow-students, friends, and neighbors--moving about outside this glowing secret, very much as an actor is aware of the dim audience beyond the barrier of the footlights. They might applaud, or object, or interfere, but the drama was her very own. She was going through with that, anyhow.

The feeling of last days grew stronger with her as their number diminished. She went about the familiar home with a clearer and clearer sense of inevitable conclusions. She became exceptionally considerate and affectionate with her father and aunt, and more and more concerned about the coming catastrophe that she was about to precipitate upon them. Her aunt had a once exasperating

habit of interrupting her work with demands for small household services, but now Ann Veronica rendered them with a queer readiness of anticipatory propitiation. She was greatly exercised by the problem of confiding in the Widgetts; they were dears, and she talked away two evenings with Constance without broaching the topic; she made some vague intimations in letters to Miss Miniver that Miss Miniver failed to mark. But she did not bother her head very much about her relations with these sympathizers.

And at length her penultimate day in Morningside Park dawned for her. She got up early, and walked about the garden in the dewy June sunshine and revived her childhood. She was saying good-bye to childhood and home, and her making; she was going out into the great, multitudinous world; this time there would be no returning. She was at the end of girlhood and on the eve of a woman's crowning experience. She visited the corner that had been her own little garden--her forget-me-nots and candytuft had long since been elbowed into insignificance by weeds; she visited the raspberry-canecan that had sheltered that first love affair with the little boy in velvet, and the greenhouse where she had been wont to read her secret letters. Here was the place behind the shed where she had used to hide from Roddy's persecutions, and here the border of herbaceous perennials under whose stems was fairyland. The back of the house had been the Alps for climbing, and the shrubs in front of it a Terai. The knots and broken pale that made the garden-fence scalable, and gave access to the fields behind, were still to be traced. And here against a wall were the plum-trees. In spite of God and wasps and her father, she had stolen plums; and once because of discovered misdeeds, and once because she had realized that her mother was dead, she had lain on her face in the unmown grass, beneath the elm-trees that came beyond the vegetables, and poured out her soul in weeping.

Remote little Ann Veronica! She would never know the heart of

that child again! That child had loved fairy princes with velvet suits and golden locks, and she was in love with a real man named Capes, with little gleams of gold on his cheek and a pleasant voice and firm and shapely hands. She was going to him soon and certainly, going to his strong, embracing arms. She was going through a new world with him side by side. She had been so busy with life that, for a vast gulf of time, as it seemed, she had given no thought to those ancient, imagined things of her childhood. Now, abruptly, they were real again, though very distant, and she had come to say farewell to them across one sundering year.

She was unusually helpful at breakfast, and unselfish about the eggs: and then she went off to catch the train before her father's. She did this to please him. He hated travelling second-class with her--indeed, he never did--but he also disliked travelling in the same train when his daughter was in an inferior class, because of the look of the thing. So he liked to go by a different train. And in the Avenue she had an encounter with Ramage.

It was an odd little encounter, that left vague and dubitable impressions in her mind. She was aware of him--a silk-hatted, shiny-black figure on the opposite side of the Avenue; and then, abruptly and startlingly, he crossed the road and saluted and spoke to her.

"I MUST speak to you," he said. "I can't keep away from you."

She made some inane response. She was struck by a change in his appearance. His eyes looked a little bloodshot to her; his face had lost something of its ruddy freshness.

He began a jerky, broken conversation that lasted until they reached the station, and left her puzzled at its drift and

meaning. She quickened her pace, and so did he, talking at her slightly averted ear. She made lumpish and inadequate interruptions rather than replies. At times he seemed to be claiming pity from her; at times he was threatening her with her check and exposure; at times he was boasting of his inflexible will, and how, in the end, he always got what he wanted. He said that his life was boring and stupid without her. Something or other--she did not catch what--he was damned if he could stand. He was evidently nervous, and very anxious to be impressive; his projecting eyes sought to dominate. The crowning aspect of the incident, for her mind, was the discovery that he and her indiscretion with him no longer mattered very much. Its importance had vanished with her abandonment of compromise. Even her debt to him was a triviality now.

And of course! She had a brilliant idea. It surprised her she hadn't thought of it before! She tried to explain that she was going to pay him forty pounds without fail next week. She said as much to him. She repeated this breathlessly.

"I was glad you did not send it back again," he said.

He touched a long-standing sore, and Ann Veronica found herself vainly trying to explain--the inexplicable. "It's because I mean to send it back altogether," she said.

He ignored her protests in order to pursue some impressive line of his own.

"Here we are, living in the same suburb," he began. "We have to be--modern."

Her heart leaped within her as she caught that phrase. That knot also would be cut. Modern, indeed! She was going to be as primordial as chipped flint.

Part 2

In the late afternoon, as Ann Veronica was gathering flowers for the dinner-table, her father came strolling across the lawn toward her with an affectation of great deliberation.

"I want to speak to you about a little thing, Vee," said Mr. Stanley.

Ann Veronica's tense nerves started, and she stood still with her eyes upon him, wondering what it might be that impended.

"You were talking to that fellow Ramage to-day--in the Avenue. Walking to the station with him."

So that was it!

"He came and talked to me."

"Ye--e--es. "Mr. Stanley considered. "Well, I don't want you to talk to him," he said, very firmly.

Ann Veronica paused before she answered. "Don't you think I ought to?" she asked, very submissively.

"No." Mr. Stanley coughed and faced toward the house. "He is not-- I don't like him. I think it inadvisable-- I don't want an intimacy to spring up between you and a man of that type."

Ann Veronica reflected. "I HAVE--had one or two talks with him, daddy."

"Don't let there be any more. I-- In fact, I dislike him extremely."

"Suppose he comes and talks to me?"

"A girl can always keep a man at a distance if she cares to do it. She-- She can snub him."

Ann Veronica picked a cornflower.

"I wouldn't make this objection," Mr. Stanley went on, "but there are things--there are stories about Ramage. He's--He lives in a world of possibilities outside your imagination. His treatment of his wife is most unsatisfactory. Most unsatisfactory. A bad man, in fact. A dissipated, loose-living man."

"I'll try not to see him again," said Ann Veronica. "I didn't know you objected to him, daddy."

"Strongly," said Mr. Stanley, "very strongly."

The conversation hung. Ann Veronica wondered what her father would do if she were to tell him the full story of her relations with Ramage.

"A man like that taints a girl by looking at her, by his mere conversation." He adjusted his glasses on his nose. There was another little thing he had to say. "One has to be so careful of one's friends and acquaintances," he remarked, by way of transition. "They mould one insensibly." His voice assumed an easy detached tone. "I suppose, Vee, you don't see much of those Widgetts now?"

"I go in and talk to Constance sometimes."

"Do you?"

"We were great friends at school."

"No doubt. . . . Still--I don't know whether I quite like--Something ramshackle about those people, Vee. While I am talking about your friends, I feel--I think you ought to know how I look at it." His voice conveyed studied moderation. "I don't mind, of course, your seeing her sometimes, still there are differences--differences in social atmospheres. One gets drawn into things. Before you know where you are you find yourself in a complication. I don't want to influence you unduly--But--They're artistic people, Vee. That's the fact about them. We're different."

"I suppose we are," said Vee, rearranging the flowers in her hand.

"Friendships that are all very well between school-girls don't always go on into later life. It's--it's a social difference."

"I like Constance very much."

"No doubt. Still, one has to be reasonable. As you admitted to me--one has to square one's self with the world. You don't know. With people of that sort all sorts of things may happen. We don't want things to happen."

Ann Veronica made no answer.

A vague desire to justify himself ruffled her father. "I may seem unduly--anxious. I can't forget about your sister. It's that has always made me--SHE, you know, was drawn into a set--didn't discriminate Private theatricals."

Ann Veronica remained anxious to hear more of her sister's story from her father's point of view, but he did not go on. Even so much allusion as this to that family shadow, she felt, was an immense recognition of her ripening years. She glanced at him. He stood a little anxious and fussy, bothered by the responsibility of her, entirely careless of what her life was or was likely to be, ignoring her thoughts and feelings, ignorant of every fact of importance in her life, explaining everything he could not understand in her as nonsense and perversity, concerned only with a terror of bothers and undesirable situations. "We don't want things to happen!" Never had he shown his daughter so clearly that the womenkind he was persuaded he had to protect and control could please him in one way, and in one way only, and that was by doing nothing except the punctual domestic duties and being nothing except restful appearances. He had quite enough to see to and worry about in the City without their doing things. He had no use for Ann Veronica; he had never had a use for her since she had been too old to sit upon his knee. Nothing but the constraint of social usage now linked him to her. And the less "anything" happened the better. The less she lived, in fact, the better. These realizations rushed into Ann Veronica's mind and hardened her heart against him. She spoke slowly. "I may not see the Widgetts for some little time, father," she said. "I don't think I shall."

"Some little tiff?"

"No; but I don't think I shall see them."

Suppose she were to add, "I am going away!"

"I'm glad to hear you say it," said Mr. Stanley, and was so evidently pleased that Ann Veronica's heart smote her.

"I am very glad to hear you say it," he repeated, and refrained from further inquiry. "I think we are growing sensible," he said. "I think you are getting to understand me better."

He hesitated, and walked away from her toward the house. Her eyes followed him. The curve of his shoulders, the very angle of his feet, expressed relief at her apparent obedience. "Thank goodness!" said that retreating aspect, "that's said and over. Vee's all right. There's nothing happened at all!" She didn't mean, he concluded, to give him any more trouble ever, and he was free to begin a fresh chromatic novel--he had just finished the Blue Lagoon, which he thought very beautiful and tender and absolutely irrelevant to Morningside Park--or work in peace at his microtome without bothering about her in the least.

The immense disillusionment that awaited him! The devastating disillusionment! She had a vague desire to run after him, to state her case to him, to wring some understanding from him of what life was to her. She felt a cheat and a sneak to his unsuspecting retreating back.

"But what can one do?" asked Ann Veronica.

Part 3

She dressed carefully for dinner in a black dress that her father liked, and that made her look serious and responsible. Dinner was quite uneventful. Her father read a draft prospectus warily, and her aunt dropped fragments of her projects for managing while the cook had a holiday. After dinner Ann Veronica went into the drawing-room with Miss Stanley, and her father went up to his den for his pipe and pensive petrography. Later in the evening she

heard him whistling, poor man!

She felt very restless and excited. She refused coffee, though she knew that anyhow she was doomed to a sleepless night. She took up one of her father's novels and put it down again, fretted up to her own room for some work, sat on her bed and meditated upon the room that she was now really abandoning forever, and returned at length with a stocking to darn. Her aunt was making herself cuffs out of little slips of insertion under the newly lit lamp.

Ann Veronica sat down in the other arm-chair and darned badly for a minute or so. Then she looked at her aunt, and traced with a curious eye the careful arrangement of her hair, her sharp nose, the little drooping lines of mouth and chin and cheek.

Her thought spoke aloud. "Were you ever in love, aunt?" she asked.

Her aunt glanced up startled, and then sat very still, with hands that had ceased to work. "What makes you ask such a question, Vee?" she said.

"I wondered."

Her aunt answered in a low voice: "I was engaged to him, dear, for seven years, and then he died."

Ann Veronica made a sympathetic little murmur.

"He was in holy orders, and we were to have been married when he got a living. He was a Wiltshire Edmondshaw, a very old family."

She sat very still.

Ann Veronica hesitated with a question that had leaped up in her mind, and that she felt was cruel. "Are you sorry you waited, aunt?" she said.

Her aunt was a long time before she answered. "His stipend forbade it," she said, and seemed to fall into a train of thought. "It would have been rash and unwise," she said at the end of a meditation. "What he had was altogether insufficient."

Ann Veronica looked at the mildly pensive gray eyes and the comfortable, rather refined face with a penetrating curiosity. Presently her aunt sighed deeply and looked at the clock. "Time for my Patience," she said. She got up, put the neat cuffs she had made into her work-basket, and went to the bureau for the little cards in the morocco case. Ann Veronica jumped up to get her the card-table. "I haven't seen the new Patience, dear," she said. "May I sit beside you?"

"It's a very difficult one," said her aunt. "Perhaps you will help me shuffle?"

Ann Veronica did, and also assisted nimbly with the arrangements of the rows of eight with which the struggle began. Then she sat watching the play, sometimes offering a helpful suggestion, sometimes letting her attention wander to the smoothly shining arms she had folded across her knees just below the edge of the table. She was feeling extraordinarily well that night, so that the sense of her body was a deep delight, a realization of a gentle warmth and strength and elastic firmness. Then she glanced at the cards again, over which her aunt's many-ringed hand played, and then at the rather weak, rather plump face that surveyed its operations.

It came to Ann Veronica that life was wonderful beyond measure. It seemed incredible that she and her aunt were, indeed,

creatures of the same blood, only by a birth or so different beings, and part of that same broad interlacing stream of human life that has invented the fauns and nymphs, Astarte, Aphrodite, Freya, and all the twining beauty of the gods. The love-songs of all the ages were singing in her blood, the scent of night stock from the garden filled the air, and the moths that beat upon the closed frames of the window next the lamp set her mind dreaming of kisses in the dusk. Yet her aunt, with a ringed hand flitting to her lips and a puzzled, worried look in her eyes, deaf to all this riot of warmth and flitting desire, was playing Patience--playing Patience, as if Dionysius and her curate had died together. A faint buzz above the ceiling witnessed that petrography, too, was active. Gray and tranquil world! Amazing, passionless world! A world in which days without meaning, days in which "we don't want things to happen" followed days without meaning--until the last thing happened, the ultimate, unavoidable, coarse, "disagreeable." It was her last evening in that wrapped life against which she had rebelled. Warm reality was now so near her she could hear it beating in her ears. Away in London even now Capes was packing and preparing; Capes, the magic man whose touch turned one to trembling fire. What was he doing? What was he thinking? It was less than a day now, less than twenty hours. Seventeen hours, sixteen hours. She glanced at the soft-ticking clock with the exposed brass pendulum upon the white marble mantel, and made a rapid calculation. To be exact, it was just sixteen hours and twenty minutes. The slow stars circled on to the moment of their meeting. The softly glittering summer stars! She saw them shining over mountains of snow, over valleys of haze and warm darkness. . . . There would be no moon.

"I believe after all it's coming out!" said Miss Stanley. "The aces made it easy."

Ann Veronica started from her reverie, sat up in her chair,

became attentive. "Look, dear," she said presently, "you can put the ten on the Jack."

CHAPTER THE SIXTEENTH

IN THE MOUNTAINS

Part 1

Next day Ann Veronica and Capes felt like newborn things. It seemed to them they could never have been really alive before, but only dimly anticipating existence. They sat face to face beneath an experienced-looking rucksack and a brand new portmanteau and a leather handbag, in the afternoon-boat train that goes from Charing Cross to Folkestone for Boulogne. They tried to read illustrated papers in an unconcerned manner and with forced attention, lest they should catch the leaping exultation in each other's eyes. And they admired Kent sedulously from the windows.

They crossed the Channel in sunshine and a breeze that just ruffled the sea to glittering scales of silver. Some of the people who watched them standing side by side thought they must be newly wedded because of their happy faces, and others that they were an old-established couple because of their easy confidence in each other.

At Boulogne they took train to Basle; next morning they breakfasted together in the buffet of that station, and thence they caught the Interlaken express, and so went by way of Spies to Frutigen. There was no railway beyond Frutigen in those

days; they sent their baggage by post to Kandersteg, and walked along the mule path to the left of the stream to that queer hollow among the precipices, Blau See, where the petrifying branches of trees lie in the blue deeps of an icy lake, and pine-trees clamber among gigantic boulders. A little inn flying a Swiss flag nestles under a great rock, and there they put aside their knapsacks and lunched and rested in the mid-day shadow of the gorge and the scent of resin. And later they paddled in a boat above the mysterious deeps of the See, and peered down into the green-blues and the blue-greens together. By that time it seemed to them they had lived together twenty years.

Except for one memorable school excursion to Paris, Ann Veronica had never yet been outside England. So that it seemed to her the whole world had changed--the very light of it had changed. Instead of English villas and cottages there were chalets and Italian-built houses shining white; there were lakes of emerald and sapphire and clustering castles, and such sweeps of hill and mountain, such shining uplands of snow, as she had never seen before. Everything was fresh and bright, from the kindly manners of the Frutigen cobbler, who hammered mountain nails into her boots, to the unfamiliar wild flowers that spangled the wayside. And Capes had changed into the easiest and jolliest companion in the world. The mere fact that he was there in the train alongside her, helping her, sitting opposite to her in the dining-car, presently sleeping on a seat within a yard of her, made her heart sing until she was afraid their fellow passengers would hear it. It was too good to be true. She would not sleep for fear of losing a moment of that sense of his proximity. To walk beside him, dressed akin to him, rucksacked and companionable, was bliss in itself; each step she took was like stepping once more across the threshold of heaven.

One trouble, however, shot its slanting bolts athwart the shining warmth of that opening day and marred its perfection, and that

was the thought of her father.

She had treated him badly; she had hurt him and her aunt; she had done wrong by their standards, and she would never persuade them that she had done right. She thought of her father in the garden, and of her aunt with her Patience, as she had seen them--how many ages was it ago? Just one day intervened. She felt as if she had struck them unawares. The thought of them distressed her without subtracting at all from the oceans of happiness in which she swam. But she wished she could put the thing she had done in some way to them so that it would not hurt them so much as the truth would certainly do. The thought of their faces, and particularly of her aunt's, as it would meet the fact--disconcerted, unfriendly, condemning, pained--occurred to her again and again.

"Oh! I wish," she said, "that people thought alike about these things."

Capes watched the limpid water dripping from his oar. "I wish they did," he said, "but they don't."

"I feel-- All this is the rightest of all conceivable things. I want to tell every one. I want to boast myself."

"I know."

"I told them a lie. I told them lies. I wrote three letters yesterday and tore them up. It was so hopeless to put it to them. At last--I told a story."

"You didn't tell them our position?"

"I implied we had married."

"They'll find out. They'll know."

"Not yet."

"Sooner or later."

"Possibly--bit by bit. . . . But it was hopelessly hard to put. I said I knew he disliked and distrusted you and your work--that you shared all Russell's opinions: he hates Russell beyond measure--and that we couldn't possibly face a conventional marriage. What else could one say? I left him to suppose--a registry perhaps. . . ."

Capes let his oar smack on the water.

"Do you mind very much?"

He shook his head.

"But it makes me feel inhuman," he added.

"And me. . . ."

"It's the perpetual trouble," he said, "of parent and child. They can't help seeing things in the way they do. Nor can we. WE don't think they're right, but they don't think we are. A deadlock. In a very definite sense we are in the wrong--hopelessly in the wrong. But--It's just this: who was to be hurt?"

"I wish no one had to be hurt," said Ann Veronica. "When one is happy--I don't like to think of them. Last time I left home I felt as hard as nails. But this is all different. It is different."

"There's a sort of instinct of rebellion," said Capes. "It isn't anything to do with our times particularly. People think it is, but they are wrong. It's to do with adolescence. Long before religion and Society heard of Doubt, girls were all for midnight coaches and Gretna Green. It's a sort of home-leaving instinct."

He followed up a line of thought.

"There's another instinct, too," he went on, "in a state of suppression, unless I'm very much mistaken; a child-expelling instinct. . . . I wonder. . . . There's no family uniting instinct, anyhow; it's habit and sentiment and material convenience hold families together after adolescence. There's always friction, conflict, unwilling concessions. Always! I don't believe there is any strong natural affection at all between parents and growing-up children. There wasn't, I know, between myself and my father. I didn't allow myself to see things as they were in those days; now I do. I bored him. I hated him. I suppose that shocks one's ideas. . . . It's true. . . . There are sentimental and traditional deferences and reverences, I know, between father and son; but that's just exactly what prevents the development of an easy friendship. Father-worshipping sons are abnormal--and they're no good. No good at all. One's got to be a better man than one's father, or what is the good of successive generations? Life is rebellion, or nothing."

He rowed a stroke and watched the swirl of water from his oar broaden and die away. At last he took up his thoughts again: "I wonder if, some day, one won't need to rebel against customs and laws? If this discord will have gone? Some day, perhaps--who knows?--the old won't coddle and hamper the young, and the young won't need to fly in the faces of the old. They'll face facts as facts, and understand. Oh, to face facts! Gods! what a world it might be if people faced facts! Understanding! Understanding!"

There is no other salvation. Some day older people, perhaps, will trouble to understand younger people, and there won't be these fierce disruptions; there won't be barriers one must defy or perish. . . . That's really our choice now, defy--or futility. . . . The world, perhaps, will be educated out of its idea of fixed standards. . . . I wonder, Ann Veronica, if, when our time comes, we shall be any wiser?"

Ann Veronica watched a water-beetle fussing across the green depths. "One can't tell. I'm a female thing at bottom. I like high tone for a flourish and stars and ideas; but I want my things."

Part 2

Capes thought.

"It's odd--I have no doubt in my mind that what we are doing is wrong," he said. "And yet I do it without compunction."

"I never felt so absolutely right," said Ann Veronica.

"You ARE a female thing at bottom," he admitted. "I'm not nearly so sure as you. As for me, I look twice at it. . . . Life is two things, that's how I see it; two things mixed and muddled up together. Life is morality--life is adventure. Squire and master. Adventure rules, and morality--looks up the trains in the Bradshaw. Morality tells you what is right, and adventure moves you. If morality means anything it means keeping bounds, respecting implications, respecting implicit bounds. If individuality means anything it means breaking bounds--adventure.

Will you be moral and your species, or immoral and yourself? We've decided to be immoral. We needn't try and give ourselves airs. We've deserted the posts in which we found ourselves, cut our duties, exposed ourselves to risks that may destroy any sort of social usefulness in us. . . . I don't know. One keeps rules in order to be one's self. One studies Nature in order not to be blindly ruled by her. There's no sense in morality, I suppose, unless you are fundamentally immoral."

She watched his face as he traced his way through these speculative thickets.

"Look at our affair," he went on, looking up at her. "No power on earth will persuade me we're not two rather disreputable persons. You desert your home; I throw up useful teaching, risk every hope in your career. Here we are absconding, pretending to be what we are not; shady, to say the least of it. It's not a bit of good pretending there's any Higher Truth or wonderful principle in this business. There isn't. We never started out in any high-browed manner to scandalize and Shelleyfy. When first you left your home you had no idea that I was the hidden impulse. I wasn't. You came out like an ant for your nuptial flight. It was just a chance that we in particular hit against each other--nothing predestined about it. We just hit against each other, and here we are flying off at a tangent, a little surprised at what we are doing, all our principles abandoned, and tremendously and quite unreasonably proud of ourselves. Out of all this we have struck a sort of harmony. . . . And it's gorgeous!"

"Glorious!" said Ann Veronica.

"Would YOU like us--if some one told you the bare outline of our story?--and what we are doing?"

"I shouldn't mind," said Ann Veronica.

"But if some one else asked your advice? If some one else said, 'Here is my teacher, a jaded married man on the verge of middle age, and he and I have a violent passion for one another. We propose to disregard all our ties, all our obligations, all the established prohibitions of society, and begin life together afresh.' What would you tell her?"

"If she asked advice, I should say she wasn't fit to do anything of the sort. I should say that having a doubt was enough to condemn it."

"But waive that point."

"It would be different all the same. It wouldn't be you."

"It wouldn't be you either. I suppose that's the gist of the whole thing." He stared at a little eddy. "The rule's all right, so long as there isn't a case. Rules are for established things, like the pieces and positions of a game. Men and women are not established things; they're experiments, all of them. Every human being is a new thing, exists to do new things. Find the thing you want to do most intensely, make sure that's it, and do it with all your might. If you live, well and good; if you die, well and good. Your purpose is done. . . . Well, this is OUR thing."

He woke the glassy water to swirling activity again, and made the deep-blue shapes below writhe and shiver.

"This is MY thing," said Ann Veronica, softly, with thoughtful eyes upon him.

Then she looked up the sweep of pine-trees to the towering

sunlit cliffs and the high heaven above and then back to his face. She drew in a deep breath of the sweet mountain air. Her eyes were soft and grave, and there was the faintest of smiles upon her resolute lips.

Part 3

Later they loitered along a winding path above the inn, and made love to one another. Their journey had made them indolent, the afternoon was warm, and it seemed impossible to breathe a sweeter air. The flowers and turf, a wild strawberry, a rare butterfly, and suchlike little intimate things had become more interesting than mountains. Their flitting hands were always touching. Deep silences came between them. . . .

"I had thought to go on to Kandersteg," said Capes, "but this is a pleasant place. There is not a soul in the inn but ourselves. Let us stay the night here. Then we can loiter and gossip to our heart's content."

"Agreed," said Ann Veronica.

"After all, it's our honeymoon."

"All we shall get," said Ann Veronica.

"This place is very beautiful."

"Any place would be beautiful," said Ann Veronica, in a low voice.

For a time they walked in silence.

"I wonder," she began, presently, "why I love you --and love you so much? . . . I know now what it is to be an abandoned female. I AM an abandoned female. I'm not ashamed--of the things I'm doing. I want to put myself into your hands. You know--I wish I could roll my little body up small and squeeze it into your hand and grip your fingers upon it. Tight. I want you to hold me and have me SO. . . . Everything. Everything. It's a pure joy of giving--giving to YOU. I have never spoken of these things to any human being. Just dreamed--and ran away even from my dreams. It is as if my lips had been sealed about them. And now I break the seals--for you. Only I wish--I wish to-day I was a thousand times, ten thousand times more beautiful."

Capes lifted her hand and kissed it.

"You are a thousand times more beautiful," he said, "than anything else could be. . . . You are you. You are all the beauty in the world. Beauty doesn't mean, never has meant, anything--anything at all but you. It heralded you, promised you. . . ."

Part 4

They lay side by side in a shallow nest of turf and mosses among boulders and stunted bushes on a high rock, and watched the day sky deepen to evening between the vast precipices overhead and looked over the tree-tops down the widening gorge. A distant suggestion of chalets and a glimpse of the road set them talking for a time of the world they had left behind.

Capes spoke casually of their plans for work. "It's a flabby,

loose-willed world we have to face. It won't even know whether to be scandalized at us or forgiving. It will hold aloof, a little undecided whether to pelt or not--"

"That depends whether we carry ourselves as though we expected pelting," said Ann Veronica.

"We won't."

"No fear!"

"Then, as we succeed, it will begin to sidle back to us. It will do its best to overlook things--"

"If we let it, poor dear."

"That's if we succeed. If we fail," said Capes, "then--"

"We aren't going to fail," said Ann Veronica.

Life seemed a very brave and glorious enterprise to Ann Veronica that day. She was quivering with the sense of Capes at her side and glowing with heroic love; it seemed to her that if they put their hands jointly against the Alps and pushed they would be able to push them aside. She lay and nibbled at a sprig of dwarf rhododendron.

"FAIL!" she said.

Part 5

Presently it occurred to Ann Veronica to ask about the journey he

had planned. He had his sections of the Siegfried map folded in his pocket, and he squatted up with his legs crossed like an Indian idol while she lay prone beside him and followed every movement of his indicatory finger.

"Here," he said, "is this Blau See, and here we rest until to-morrow. I think we rest here until to-morrow?"

There was a brief silence.

"It is a very pleasant place," said Ann Veronica, biting a rhododendron stalk through, and with that faint shadow of a smile returning to her lips. . . .

"And then?" said Ann Veronica.

"Then we go on to this place, the Oeschinensee. It's a lake among precipices, and there is a little inn where we can stay, and sit and eat our dinner at a pleasant table that looks upon the lake. For some days we shall be very idle there among the trees and rocks. There are boats on the lake and shady depths and wildernesses of pine-wood. After a day or so, perhaps, we will go on one or two little excursions and see how good your head is--a mild scramble or so; and then up to a hut on a pass just here, and out upon the Blumlis-alp glacier that spreads out so and so."

She roused herself from some dream at the word. "Glaciers?" she said.

"Under the Wilde Frau--which was named after you."

He bent and kissed her hair and paused, and then forced his attention back to the map. "One day," he resumed, "we will start off early and come down into Kandersteg and up these zigzags and

here and here, and so past this Daubensee to a tiny inn--it won't be busy yet, though; we may get it all to ourselves--on the brim of the steepest zigzag you can imagine, thousands of feet of zigzag; and you will sit and eat lunch with me and look out across the Rhone Valley and over blue distances beyond blue distances to the Matterhorn and Monte Rosa and a long regiment of sunny, snowy mountains. And when we see them we shall at once want to go to them--that's the way with beautiful things--and down we shall go, like flies down a wall, to Leukerbad, and so to Leuk Station, here, and then by train up the Rhone Valley and this little side valley to Stalden; and there, in the cool of the afternoon, we shall start off up a gorge, torrents and cliffs below us and above us, to sleep in a half-way inn, and go on next day to Saas Fee, Saas of the Magic, Saas of the Pagan People. And there, about Saas, are ice and snows again, and sometimes we will loiter among the rocks and trees about Saas or peep into Samuel Butler's chapels, and sometimes we will climb up out of the way of the other people on to the glaciers and snow. And, for one expedition at least, we will go up this desolate valley here to Mattmark, and so on to Monte Moro. There indeed you see Monte Rosa. Almost the best of all."

"Is it very beautiful?"

"When I saw it there it was very beautiful. It was wonderful. It was the crowned queen of mountains in her robes of shining white. It towered up high above the level of the pass, thousands of feet, still, shining, and white, and below, thousands of feet below, was a floor of little woolly clouds. And then presently these clouds began to wear thin and expose steep, deep slopes, going down and down, with grass and pine-trees, down and down, and at last, through a great rent in the clouds, bare roofs, shining like very minute pin-heads, and a road like a fibre of white silk-Macugnana, in Italy. That will be a fine day--it will have to be, when first you set eyes on Italy. . . . That's as

far as we go."

"Can't we go down into Italy?"

"No," he said; "it won't run to that now. We must wave our hands at the blue hills far away there and go back to London and work."

"But Italy--"

"Italy's for a good girl," he said, and laid his hand for a moment on her shoulder. "She must look forward to Italy."

"I say," she reflected, "you ARE rather the master, you know."

The idea struck him as novel. "Of course I'm manager for this expedition," he said, after an interval of self-examination.

She slid her cheek down the tweed sleeve of his coat. "Nice sleeve," she said, and came to his hand and kissed it.

"I say!" he cried. "Look here! Aren't you going a little too far? This--this is degradation--making a fuss with sleeves. You mustn't do things like that."

"Why not?"

"Free woman--and equal."

"I do it--of my own free will," said Ann Veronica, kissing his hand again. "It's nothing to what I WILL do."

"Oh, well!" he said, a little doubtfully, "it's just a phase," and bent down and rested his hand on her shoulder for a moment, with his heart beating and his nerves a-quiver. Then as she lay very still, with her hands clinched and her black hair tumbled

about her face, he came still closer and softly kissed the nape of her neck. . . .

Part 6

Most of the things that he had planned they did. But they climbed more than he had intended because Ann Veronica proved rather a good climber, steady-headed and plucky, rather daring, but quite willing to be cautious at his command.

One of the things that most surprised him in her was her capacity for blind obedience. She loved to be told to do things.

He knew the circle of mountains about Saas Fee fairly well: he had been there twice before, and it was fine to get away from the straggling pedestrians into the high, lonely places, and sit and munch sandwiches and talk together and do things together that were just a little difficult and dangerous. And they could talk, they found; and never once, it seemed, did their meaning and intention hitch. They were enormously pleased with one another; they found each other beyond measure better than they had expected, if only because of the want of substance in mere expectation. Their conversation degenerated again and again into a strain of self-congratulation that would have irked an eavesdropper.

"You're--I don't know," said Ann Veronica. "You're splendid."

"It isn't that you're splendid or I," said Capes. "But we satisfy one another. Heaven alone knows why. So completely! The oddest fitness! What is it made of? Texture of skin and texture of mind? Complexion and voice. I don't think I've got illusions,

nor you. . . . If I had never met anything of you at all but a scrap of your skin binding a book, Ann Veronica, I know I would have kept that somewhere near to me. . . . All your faults are just jolly modelling to make you real and solid."

"The faults are the best part of it," said Ann Veronica; "why, even our little vicious strains run the same way. Even our coarseness."

"Coarse?" said Capes, "We're not coarse."

"But if we were?" said Ann Veronica.

"I can talk to you and you to me without a scrap of effort," said Capes; "that's the essence of it. It's made up of things as small as the diameter of hairs and big as life and death. . . . One always dreamed of this and never believed it. It's the rarest luck, the wildest, most impossible accident. Most people, every one I know else, seem to have mated with foreigners and to talk uneasily in unfamiliar tongues, to be afraid of the knowledge the other one has, of the other one's perpetual misjudgment and misunderstandings.

"Why don't they wait?" he added.

Ann Veronica had one of her flashes of insight.

"One doesn't wait," said Ann Veronica.

She expanded that. "_I_ shouldn't have waited," she said. "I might have muddled for a time. But it's as you say. I've had the rarest luck and fallen on my feet."

"We've both fallen on our feet! We're the rarest of mortals! The real thing! There's not a compromise nor a sham nor a

concession between us. We aren't afraid; we don't bother. We don't consider each other; we needn't. That wrapped life, as you call it--we've burned the confounded rags! Danced out of it! We're stark!"

"Stark!" echoed Ann Veronica.

Part 7

As they came back from that day's climb--it was up the Mittaghorn--they had to cross a shining space of wet, steep rocks between two grass slopes that needed a little care. There were a few loose, broken fragments of rock to reckon with upon the ledges, and one place where hands did as much work as toes. They used the rope--not that a rope was at all necessary, but because Ann Veronica's exalted state of mind made the fact of the rope agreeably symbolical; and, anyhow, it did insure a joint death in the event of some remotely possibly mischance. Capes went first, finding footholds and, where the drops in the strata-edges came like long, awkward steps, placing Ann Veronica's feet. About half-way across this interval, when everything seemed going well, Capes had a shock.

"Heavens!" exclaimed Ann Veronica, with extraordinary passion. "My God!" and ceased to move.

Capes became rigid and adhesive. Nothing ensued. "All right?" he asked.

"I'll have to pay it."

"Eh?"

"I've forgotten something. Oh, cuss it!"

"Eh?"

"He said I would."

"What?"

"That's the devil of it!"

"Devil of what? . . . You DO use vile language!"

"Forget about it like this."

"Forget WHAT?"

"And I said I wouldn't. I said I'd do anything. I said I'd make shirts."

"Shirts?"

"Shirts at one--and--something a dozen. Oh, goodness! Bilking! Ann Veronica, you're a bilker!"

Pause.

"Will you tell me what all this is about?" said Capes.

"It's about forty pounds."

Capes waited patiently.

"G. I'm sorry. . . . But you've got to lend me forty pounds."

"It's some sort of delirium," said Capes. "The rarefied air? I thought you had a better head."

"No! I'll explain lower. It's all right. Let's go on climbing now. It's a thing I've unaccountably overlooked. All right really. It can wait a bit longer. I borrowed forty pounds from Mr. Ramage. Thank goodness you'll understand. That's why I chucked Manning. . . . All right, I'm coming. But all this business has driven it clean out of my head. . . . That's why he was so annoyed, you know."

"Who was annoyed?"

"Mr. Ramage--about the forty pounds." She took a step. "My dear," she added, by way of afterthought, "you DO obliterate things!"

Part 8

They found themselves next day talking love to one another high up on some rocks above a steep bank of snow that overhung a precipice on the eastern side of the Fee glacier. By this time Capes' hair had bleached nearly white, and his skin had become a skin of red copper shot with gold. They were now both in a state of unprecedented physical fitness. And such skirts as Ann Veronica had had when she entered the valley of Saas were safely packed away in the hotel, and she wore a leather belt and loose knickerbockers and puttees--a costume that suited the fine, long lines of her limbs far better than any feminine walking-dress could do. Her complexion had resisted the snow-glare wonderfully; her skin had only deepened its natural warmth a little under the Alpine sun. She had pushed aside her azure

veil, taken off her snow-glasses, and sat smiling under her hand at the shining glories--the lit cornices, the blue shadows, the softly rounded, enormous snow masses, the deep places full of quivering luminosity--of the Taschhorn and Dom. The sky was cloudless, effulgent blue.

Capes sat watching and admiring her, and then he fell praising the day and fortune and their love for each other.

"Here we are," he said, "shining through each other like light through a stained-glass window. With this air in our blood, this sunlight soaking us. . . . Life is so good. Can it ever be so good again?"

Ann Veronica put out a firm hand and squeezed his arm. "It's very good," she said. "It's glorious good!"

"Suppose now--look at this long snow-slope and then that blue deep beyond--do you see that round pool of color in the ice--a thousand feet or more below? Yes? Well, think--we've got to go but ten steps and lie down and put our arms about each other. See? Down we should rush in a foam--in a cloud of snow--to flight and a dream. All the rest of our lives would be together then, Ann Veronica. Every moment. And no ill-chances."

"If you tempt me too much," she said, after a silence, "I shall do it. I need only just jump up and throw myself upon you. I'm a desperate young woman. And then as we went down you'd try to explain. And that would spoil it. . . . You know you don't mean it."

"No, I don't. But I liked to say it."

"Rather! But I wonder why you don't mean it?"

"Because, I suppose, the other thing is better. What other reason could there be? It's more complex, but it's better. THIS, this glissade, would be damned scoundrelism. You know that, and I know that, though we might be put to it to find a reason why. It would be swindling. Drawing the pay of life and then not living. And besides--We're going to live, Ann Veronica! Oh, the things we'll do, the life we'll lead! There'll be trouble in it at times--you and I aren't going to run without friction. But we've got the brains to get over that, and tongues in our heads to talk to each other. We sha'n't hang up on any misunderstanding. Not us. And we're going to fight that old world down there. That old world that had shoved up that silly old hotel, and all the rest of it. . . . If we don't live it will think we are afraid of it. . . . Die, indeed! We're going to do work; we're going to unfold about each other; we're going to have children."

"Girls!" cried Ann Veronica.

"Boys!" said Capes.

"Both!" said Ann Veronica. "Lots of 'em!"

Capes chuckled. "You delicate female!"

"Who cares," said Ann Veronica, "seeing it's you? Warm, soft little wonders! Of course I want them."

Part 9

"All sorts of things we're going to do," said Capes; "all sorts of times we're going to have. Sooner or later we'll certainly do

something to clean those prisons you told me about--limewash the underside of life. You and I. We can love on a snow cornice, we can love over a pail of whitewash. Love anywhere. Anywhere! Moonlight and music--pleasing, you know, but quite unnecessary. We met dissecting dogfish. . . . Do you remember your first day with me? . . . Do you indeed remember? The smell of decay and cheap methylated spirit! . . . My dear! we've had so many moments! I used to go over the times we'd had together, the things we'd said--like a rosary of beads. But now it's beads by the cask--like the hold of a West African trader. It feels like too much gold-dust clutched in one's hand. One doesn't want to lose a grain. And one must--some of it must slip through one's fingers."

"I don't care if it does," said Ann Veronica. "I don't care a rap for remembering. I care for you. This moment couldn't be better until the next moment comes. That's how it takes me. Why should WE hoard? We aren't going out presently, like Japanese lanterns in a gale. It's the poor dears who do, who know they will, know they can't keep it up, who need to clutch at way-side flowers. And put 'em in little books for remembrance. Flattened flowers aren't for the likes of us. Moments, indeed! We like each other fresh and fresh. It isn't illusions--for us. We two just love each other --the real, identical other--all the time."

"The real, identical other," said Capes, and took and bit the tip of her little finger.

"There's no delusions, so far as I know," said Ann Veronica.

"I don't believe there is one. If there is, it's a mere wrapping--there's better underneath. It's only as if I'd begun to know you the day before yesterday or thereabouts. You keep on coming truer, after you have seemed to come altogether true. You. . . . brick!"

Part 10

"To think," he cried, "you are ten years younger than I! . . . There are times when you make me feel a little thing at your feet--a young, silly, protected thing. Do you know, Ann Veronica, it is all a lie about your birth certificate; a forgery--and fooling at that. You are one of the Immortals. Immortal! You were in the beginning, and all the men in the world who have known what love is have worshipped at your feet. You have converted me to--Lester Ward! You are my dear friend, you are a slip of a girl, but there are moments when my head has been on your breast, when your heart has been beating close to my ears, when I have known you for the goddess, when I have wished myself your slave, when I have wished that you could kill me for the joy of being killed by you. You are the High Priestess of Life. . . ."

"Your priestess," whispered Ann Veronica, softly. "A silly little priestess who knew nothing of life at all until she came to you."

Part 11

They sat for a time without speaking a word, in an enormous shining globe of mutual satisfaction.

"Well," said Capes, at length, "we've to go down, Ann Veronica. Life waits for us."

He stood up and waited for her to move.

"Gods!" cried Ann Veronica, and kept him standing. "And to think that it's not a full year ago since I was a black-hearted rebel school-girl, distressed, puzzled, perplexed, not understanding that this great force of love was bursting its way through me! All those nameless discontents--they were no more than love's birth-pangs. I felt--I felt living in a masked world. I felt as though I had bandaged eyes. I felt--wrapped in thick cobwebs. They blinded me. They got in my mouth. And now--Dear! Dear! The dayspring from on high hath visited me. I love. I am loved. I want to shout! I want to sing! I am glad! I am glad to be alive because you are alive! I am glad to be a woman because you are a man! I am glad! I am glad! I am glad! I thank God for life and you. I thank God for His sunlight on your face. I thank God for the beauty you love and the faults you love. I thank God for the very skin that is peeling from your nose, for all things great and small that make us what we are. This is grace I am saying! Oh! my dear! all the joy and weeping of life are mixed in me now and all the gratitude. Never a new-born dragon-fly that spread its wings in the morning has felt as glad as I!"

CHAPTER THE SEVENTEENTH

IN PERSPECTIVE

Part 1

About four years and a quarter later--to be exact, it was four years and four months--Mr. and Mrs. Capes stood side by side upon

an old Persian carpet that did duty as a hearthrug in the dining-room of their flat and surveyed a shining dinner-table set for four people, lit by skilfully-shaded electric lights, brightened by frequent gleams of silver, and carefully and simply adorned with sweet-pea blossom. Capes had altered scarcely at all during the interval, except for a new quality of smartness in the cut of his clothes, but Ann Veronica was nearly half an inch taller; her face was at once stronger and softer, her neck firmer and rounder, and her carriage definitely more womanly than it had been in the days of her rebellion. She was a woman now to the tips of her fingers; she had said good-bye to her girlhood in the old garden four years and a quarter ago. She was dressed in a simple evening gown of soft creamy silk, with a yoke of dark old embroidery that enhanced the gentle gravity of her style, and her black hair flowed off her open forehead to pass under the control of a simple ribbon of silver. A silver necklace enhanced the dusky beauty of her neck. Both husband and wife affected an unnatural ease of manner for the benefit of the efficient parlor-maid, who was putting the finishing touches to the sideboard arrangements.

"It looks all right," said Capes.

"I think everything's right," said Ann Veronica, with the roaming eye of a capable but not devoted house-mistress.

"I wonder if they will seem altered," she remarked for the third time.

"There I can't help," said Capes.

He walked through a wide open archway, curtained with deep-blue curtains, into the apartment that served as a reception-room. Ann Veronica, after a last survey of the dinner appointments, followed him, rustling, came to his side by the high brass

fender, and touched two or three ornaments on the mantel above the cheerful fireplace.

"It's still a marvel to me that we are to be forgiven," she said, turning.

"My charm of manner, I suppose. But, indeed, he's very human."

"Did you tell him of the registry office?"

"No--o--certainly not so emphatically as I did about the play."

"It was an inspiration--your speaking to him?"

"I felt impudent. I believe I am getting impudent. I had not been near the Royal Society since--since you disgraced me. What's that?"

They both stood listening. It was not the arrival of the guests, but merely the maid moving about in the hall.

"Wonderful man!" said Ann Veronica, reassured, and stroking his cheek with her finger.

Capes made a quick movement as if to bite that aggressive digit, but it withdrew to Ann Veronica's side.

"I was really interested in his stuff. I WAS talking to him before I saw his name on the card beside the row of microscopes. Then, naturally, I went on talking. He--he has rather a poor opinion of his contemporaries. Of course, he had no idea who I was."

"But how did you tell him? You've never told me. Wasn't it--a little bit of a scene?"

"Oh! let me see. I said I hadn't been at the Royal Society soiree for four years, and got him to tell me about some of the fresh Mendelian work. He loves the Mendelians because he hates all the big names of the eighties and nineties. Then I think I remarked that science was disgracefully under-endowed, and confessed I'd had to take to more profitable courses. 'The fact of it is,' I said, 'I'm the new playwright, Thomas More. Perhaps you've heard--?' Well, you know, he had."

"Fame!"

"Isn't it? 'I've not seen your play, Mr. More,' he said, 'but I'm told it's the most amusing thing in London at the present time. A friend of mine, Ogilvy'--I suppose that's Ogilvy & Ogilvy, who do so many divorces, Vee?--'was speaking very highly of it--very highly!' " He smiled into her eyes.

"You are developing far too retentive a memory for praises," said Ann Veronica.

"I'm still new to them. But after that it was easy. I told him instantly and shamelessly that the play was going to be worth ten thousand pounds. He agreed it was disgraceful. Then I assumed a rather portentous manner to prepare him."

"How? Show me."

"I can't be portentous, dear, when you're about. It's my other side of the moon. But I was portentous, I can assure you. 'My name's NOT More, Mr. Stanley,' I said. 'That's my pet name.' "

"Yes?"

"I think--yes, I went on in a pleasing blend of the casual and

sotto voce, 'The fact of it is, sir, I happen to be your son-in-law, Capes. I do wish you could come and dine with us some evening. It would make my wife very happy.' "

"What did he say?"

"What does any one say to an invitation to dinner point-blank? One tries to collect one's wits. 'She is constantly thinking of you,' I said."

"And he accepted meekly?"

"Practically. What else could he do? You can't kick up a scene on the spur of the moment in the face of such conflicting values as he had before him. With me behaving as if everything was infinitely matter-of-fact, what could he do? And just then Heaven sent old Manningtree--I didn't tell you before of the fortunate intervention of Manningtree, did I? He was looking quite infernally distinguished, with a wide crimson ribbon across him--what IS a wide crimson ribbon? Some sort of knight, I suppose. He is a knight. 'Well, young man,' he said, 'we haven't seen you lately,' and something about 'Bateson & Co.'--he's frightfully anti-Mendelian--having it all their own way. So I introduced him to my father-in-law like a shot. I think that WAS decision. Yes, it was Manningtree really secured your father. He--"

"Here they are!" said Ann Veronica as the bell sounded.

Part 2

They received the guests in their pretty little hall with genuine

effusion. Miss Stanley threw aside a black cloak to reveal a discreet and dignified arrangement of brown silk, and then embraced Ann Veronica with warmth. "So very clear and cold," she said. "I feared we might have a fog." The housemaid's presence acted as a useful restraint. Ann Veronica passed from her aunt to her father, and put her arms about him and kissed his cheek. "Dear old daddy!" she said, and was amazed to find herself shedding tears. She veiled her emotion by taking off his overcoat. "And this is Mr. Capes?" she heard her aunt saying.

All four people moved a little nervously into the drawing-room, maintaining a sort of fluttered amiability of sound and movement.

Mr. Stanley professed a great solicitude to warm his hands. "Quite unusually cold for the time of year," he said. "Everything very nice, I am sure," Miss Stanley murmured to Capes as he steered her to a place upon the little sofa before the fire. Also she made little pussy-like sounds of a reassuring nature.

"And let's have a look at you, Vee!" said Mr. Stanley, standing up with a sudden geniality and rubbing his hands together.

Ann Veronica, who knew her dress became her, dropped a curtsy to her father's regard.

Happily they had no one else to wait for, and it heartened her mightily to think that she had ordered the promptest possible service of the dinner. Capes stood beside Miss Stanley, who was beaming unnaturally, and Mr. Stanley, in his effort to seem at ease, took entire possession of the hearthrug.

"You found the flat easily?" said Capes in the pause. "The numbers are a little difficult to see in the archway. They ought to put a lamp."

Her father declared there had been no difficulty.

"Dinner is served, m'm," said the efficient parlor-maid in the archway, and the worst was over.

"Come, daddy," said Ann Veronica, following her husband and Miss Stanley; and in the fulness of her heart she gave a friendly squeeze to the parental arm.

"Excellent fellow!" he answered a little irrelevantly. "I didn't understand, Vee."

"Quite charming apartments," Miss Stanley admired; "charming! Everything is so pretty and convenient."

The dinner was admirable as a dinner; nothing went wrong, from the golden and excellent clear soup to the delightful iced marrons and cream; and Miss Stanley's praises died away to an appreciative acquiescence. A brisk talk sprang up between Capes and Mr. Stanley, to which the two ladies subordinated themselves intelligently. The burning topic of the Mendelian controversy was approached on one or two occasions, but avoided dexterously; and they talked chiefly of letters and art and the censorship of the English stage. Mr. Stanley was inclined to think the censorship should be extended to the supply of what he styled latter-day fiction; good wholesome stories were being ousted, he said, by "vicious, corrupting stuff" that "left a bad taste in the mouth." He declared that no book could be satisfactory that left a bad taste in the mouth, however much it seized and interested the reader at the time. He did not like it, he said, with a significant look, to be reminded of either his books or his dinners after he had done with them. Capes agreed with the utmost cordiality.

"Life is upsetting enough, without the novels taking a share," said Mr. Stanley.

For a time Ann Veronica's attention was diverted by her aunt's interest in the salted almonds.

"Quite particularly nice," said her aunt. "Exceptionally so."

When Ann Veronica could attend again she found the men were discussing the ethics of the depreciation of house property through the increasing tumult of traffic in the West End, and agreeing with each other to a devastating extent. It came into her head with real emotional force that this must be some particularly fantastic sort of dream. It seemed to her that her father was in some inexplicable way meaner-looking than she had supposed, and yet also, as unaccountably, appealing. His tie had demanded a struggle; he ought to have taken a clean one after his first failure. Why was she noting things like this? Capes seemed self-possessed and elaborately genial and commonplace, but she knew him to be nervous by a little occasional clumsiness, by the faintest shadow of vulgarity in the urgency of his hospitality. She wished he could smoke and dull his nerves a little. A gust of irrational impatience blew through her being. Well, they'd got to the pheasants, and in a little while he would smoke. What was it she had expected? Surely her moods were getting a little out of hand.

She wished her father and aunt would not enjoy their dinner with such quiet determination. Her father and her husband, who had both been a little pale at their first encounter, were growing now just faintly flushed. It was a pity people had to eat food.

"I suppose," said her father, "I have read at least half the novels that have been at all successful during the last twenty years. Three a week is my allowance, and, if I get short ones,

four. I change them in the morning at Cannon Street, and take my book as I come down."

It occurred to her that she had never seen her father dining out before, never watched him critically as an equal. To Capes he was almost deferential, and she had never seen him deferential in the old time, never. The dinner was stranger than she had ever anticipated. It was as if she had grown right past her father into something older and of infinitely wider outlook, as if he had always been unsuspectedly a flattened figure, and now she had discovered him from the other side.

It was a great relief to arrive at last at that pause when she could say to her aunt, "Now, dear?" and rise and hold back the curtain through the archway. Capes and her father stood up, and her father made a belated movement toward the curtain. She realized that he was the sort of man one does not think much about at dinners. And Capes was thinking that his wife was a supremely beautiful woman. He reached a silver cigar and cigarette box from the sideboard and put it before his father-in-law, and for a time the preliminaries of smoking occupied them both. Then Capes flittered to the hearthrug and poked the fire, stood up, and turned about. "Ann Veronica is looking very well, don't you think?" he said, a little awkwardly.

"Very," said Mr. Stanley. "Very," and cracked a walnut appreciatively.

"Life--things--I don't think her prospects now--Hopeful outlook."

"You were in a difficult position," Mr. Stanley pronounced, and seemed to hesitate whether he had not gone too far. He looked at his port wine as though that tawny ruby contained the solution of the matter. "All's well that ends well," he said; "and the less

one says about things the better."

"Of course," said Capes, and threw a newly lit cigar into the fire through sheer nervousness. "Have some more port wine, sir?"

"It's a very sound wine," said Mr. Stanley, consenting with dignity.

"Ann Veronica has never looked quite so well, I think," said Capes, clinging, because of a preconceived plan, to the suppressed topic.

Part 3

At last the evening was over, and Capes and his wife had gone down to see Mr. Stanley and his sister into a taxicab, and had waved an amiable farewell from the pavement steps.

"Great dears!" said Capes, as the vehicle passed out of sight.

"Yes, aren't they?" said Ann Veronica, after a thoughtful pause. And then, "They seem changed."

"Come in out of the cold," said Capes, and took her arm.

"They seem smaller, you know, even physically smaller," she said.

"You've grown out of them. . . . Your aunt liked the pheasant."

"She liked everything. Did you hear us through the archway, talking cookery?"

They went up by the lift in silence.

"It's odd," said Ann Veronica, re-entering the flat.

"What's odd?"

"Oh, everything!"

She shivered, and went to the fire and poked it. Capes sat down in the arm-chair beside her.

"Life's so queer," she said, kneeling and looking into the flames. "I wonder--I wonder if we shall ever get like that."

She turned a firelit face to her husband. "Did you tell him?"

Capes smiled faintly. "Yes."

"How?"

"Well--a little clumsily."

"But how?"

"I poured him out some port wine, and I said--let me see--oh, 'You are going to be a grandfather!' "

"Yes. Was he pleased?"

"Calmly! He said--you won't mind my telling you?"

"Not a bit."

"He said, 'Poor Alice has got no end!' "

"Alice's are different," said Ann Veronica, after an interval.

"Quite different. She didn't choose her man. . . . Well, I told aunt. . . . Husband of mine, I think we have rather overrated the emotional capacity of those--those dears."

"What did your aunt say?"

"She didn't even kiss me. She said"--Ann Veronica shivered again--" 'I hope it won't make you uncomfortable, my dear'--like that--'and whatever you do, do be careful of your hair!' I think--I judge from her manner--that she thought it was just a little indelicate of us--considering everything; but she tried to be practical and sympathetic and live down to our standards."

Capes looked at his wife's unsmiling face.

"Your father," he said, "remarked that all's well that ends well, and that he was disposed to let bygones be bygones. He then spoke with a certain fatherly kindness of the past. . . ."

"And my heart has ached for him!"

"Oh, no doubt it cut him at the time. It must have cut him."

"We might even have--given it up for them!"

"I wonder if we could."

"I suppose all IS well that ends well. Somehow to-night--I don't know."

"I suppose so. I'm glad the old sore is assuaged. Very glad. But if we had gone under--!"

They regarded one another silently, and Ann Veronica had one of her penetrating flashes.

"We are not the sort that goes under," said Ann Veronica, holding her hands so that the red reflections vanished from her eyes.

"We settled long ago--we're hard stuff. We're hard stuff!"

Then she went on: "To think that is my father! Oh, my dear! He stood over me like a cliff; the thought of him nearly turned me aside from everything we have done. He was the social order; he was law and wisdom. And they come here, and they look at our furniture to see if it is good; and they are not glad, it does not stir them, that at last, at last we can dare to have children."

She dropped back into a crouching attitude and began to weep.

"Oh, my dear!" she cried, and suddenly flung herself, kneeling, into her husband's arms.

"Do you remember the mountains? Do you remember how we loved one another? How intensely we loved one another! Do you remember the light on things and the glory of things? I'm greedy, I'm greedy! I want children like the mountains and life like the sky. Oh! and love--love! We've had so splendid a time, and fought our fight and won. And it's like the petals falling from a flower. Oh, I've loved love, dear! I've loved love and you, and the glory of you; and the great time is over, and I have to go carefully and bear children, and--take care of my hair--and when I am done with that I shall be an old woman. The petals have fallen --the red petals we loved so. We're hedged about with discretions--and all this furniture--and successes! We are successful at last! Successful! But the mountains, dear! We won't forget the mountains, dear, ever. That shining slope of snow, and how we talked of death! We might have died! Even when we are old, when we are rich as we may be, we won't forget the tune when we cared nothing for anything but the joy of one another, when we risked everything for one another, when all the

wrappings and coverings seemed to have fallen from life and left it light and fire. Stark and stark! Do you remember it all? . . . Say you will never forget! That these common things and secondary things sha'n't overwhelm us. These petals! I've been wanting to cry all the evening, cry here on your shoulder for my petals. Petals! . . . Silly woman! . . . I've never had these crying fits before. . . ."

"Blood of my heart!" whispered Capes, holding her close to him.
"I know. I understand."

THE DOOR IN THE WALL

I

One confidential evening, not three months ago, Lionel Wallace told me this story of the Door in the Wall. And at the time I thought that so far as he was concerned it was a true story.

He told it me with such a direct simplicity of conviction that I could not do otherwise than believe in him. But in the morning, in my own flat, I woke to a different atmosphere, and as I lay in bed and recalled the things he had told me, stripped of the glamour of his earnest slow voice, denuded of the focussed shaded table light, the shadowy atmosphere that wrapped about him and the pleasant bright things, the dessert and glasses and napery of the dinner we had shared, making them for the time a bright little world quite cut off from every-day realities, I saw it all as frankly incredible. "He was mystifying!" I said, and then: "How well he did it! It isn't quite the thing I should have expected him, of all people, to do well."

Afterwards, as I sat up in bed and sipped my morning tea, I found myself trying to account for the flavour of reality that perplexed me in his impossible reminiscences, by supposing they did in some way suggest, present, convey--I hardly know which word to use--experiences it was otherwise impossible to tell.

Well, I don't resort to that explanation now. I have got over my intervening doubts. I believe now, as I believed at the moment of telling, that Wallace did to the very best of his ability strip the truth of his secret for me. But whether he himself saw, or only thought he saw, whether he himself was the possessor of an

inestimable privilege, or the victim of a fantastic dream, I cannot pretend to guess. Even the facts of his death, which ended my doubts forever, throw no light on that. That much the reader must judge for himself.

I forget now what chance comment or criticism of mine moved so reticent a man to confide in me. He was, I think, defending himself against an imputation of slackness and unreliability I had made in relation to a great public movement in which he had disappointed me. But he plunged suddenly. "I have" he said, "a preoccupation--"

"I know," he went on, after a pause that he devoted to the study of his cigar ash, "I have been negligent. The fact is--it isn't a case of ghosts or apparitions--but--it's an odd thing to tell of, Redmond--I am haunted. I am haunted by something--that rather takes the light out of things, that fills me with longings"

He paused, checked by that English shyness that so often overcomes us when we would speak of moving or grave or beautiful things. "You were at Saint Athelstan's all through," he said, and for a moment that seemed to me quite irrelevant. "Well"--and he paused. Then very haltingly at first, but afterwards more easily, he began to tell of the thing that was hidden in his life, the haunting memory of a beauty and a happiness that filled his heart with insatiable longings that made all the interests and spectacle of worldly life seem dull and tedious and vain to him.

Now that I have the clue to it, the thing seems written visibly in his face. I have a photograph in which that look of detachment has been caught and intensified. It reminds me of what a woman once said of him--a woman who had loved him greatly. "Suddenly," she said, "the interest goes out of him. He forgets you. He doesn't care a rap for you--under his very nose"

Yet the interest was not always out of him, and when he was holding his attention to a thing Wallace could contrive to be an extremely successful man. His career, indeed, is set with successes. He left me behind him long ago; he soared up over my head, and cut a figure in the world that I couldn't cut--anyhow. He was still a year short of forty, and they say now that he would have been in office and very probably in the new Cabinet if he had lived. At school he always beat me without effort--as it were by nature. We were at school together at Saint Athelstan's College in West Kensington for almost all our school time. He came into the school as my co-equal, but he left far above me, in a blaze of scholarships and brilliant performance. Yet I think I made a fair average running. And it was at school I heard first of the Door in the Wall--that I was to hear of a second time only a month before his death.

To him at least the Door in the Wall was a real door leading through a real wall to immortal realities. Of that I am now quite assured.

And it came into his life early, when he was a little fellow between five and six. I remember how, as he sat making his confession to me with a slow gravity, he reasoned and reckoned the date of it. "There was," he said, "a crimson Virginia creeper in it--all one bright uniform crimson in a clear amber sunshine against a white wall. That came into the impression somehow, though I don't clearly remember how, and there were horse-chestnut leaves upon the clean pavement outside the green door. They were blotched yellow and green, you know, not brown nor dirty, so that they must have been new fallen. I take it that means October. I look out for horse-chestnut leaves every year, and I ought to know.

"If I'm right in that, I was about five years and four months old."

He was, he said, rather a precocious little boy--he learned to talk at an abnormally early age, and he was so sane and "old-fashioned," as people say, that he was permitted an amount of initiative that most children scarcely attain by seven or eight. His mother died when he was born, and he was under the less vigilant and authoritative care of a nursery governess. His father was a stern, preoccupied lawyer, who gave him little attention, and expected great things of him. For all his brightness he found life a little grey and dull I think. And one day he wandered.

He could not recall the particular neglect that enabled him to get away, nor the course he took among the West Kensington roads. All that had faded among the incurable blurs of memory. But the white wall and the green door stood out quite distinctly.

As his memory of that remote childish experience ran, he did at the very first sight of that door experience a peculiar emotion, an attraction, a desire to get to the door and open it and walk in.

And at the same time he had the clearest conviction that either it was unwise or it was wrong of him--he could not tell which--to yield to this attraction. He insisted upon it as a curious thing that he knew from the very beginning--unless memory has played him the queerest trick--that the door was unfastened, and that he could go in as he chose.

I seem to see the figure of that little boy, drawn and repelled. And it was very clear in his mind, too, though why it should be so was never explained, that his father would be very angry if he went through that door.

Wallace described all these moments of hesitation to me with the utmost particularity. He went right past the door, and then, with his hands in his pockets, and making an infantile attempt to whistle, strolled right along beyond the end of the wall. There he

recalls a number of mean, dirty shops, and particularly that of a plumber and decorator, with a dusty disorder of earthenware pipes, sheet lead ball taps, pattern books of wall paper, and tins of enamel. He stood pretending to examine these things, and coveting, passionately desiring the green door.

Then, he said, he had a gust of emotion. He made a run for it, lest hesitation should grip him again, he went plump with outstretched hand through the green door and let it slam behind him. And so, in a trice, he came into the garden that has haunted all his life.

It was very difficult for Wallace to give me his full sense of that garden into which he came.

There was something in the very air of it that exhilarated, that gave one a sense of lightness and good happening and well being; there was something in the sight of it that made all its colour clean and perfect and subtly luminous. In the instant of coming into it one was exquisitely glad--as only in rare moments and when one is young and joyful one can be glad in this world. And everything was beautiful there

Wallace mused before he went on telling me. "You see," he said, with the doubtful inflection of a man who pauses at incredible things, "there were two great panthers there . . . Yes, spotted panthers. And I was not afraid. There was a long wide path with marble-edged flower borders on either side, and these two huge velvety beasts were playing there with a ball. One looked up and came towards me, a little curious as it seemed. It came right up to me, rubbed its soft round ear very gently against the small hand I held out and purred. It was, I tell you, an enchanted garden. I know. And the size? Oh! it stretched far and wide, this way and that. I believe there were hills far away. Heaven knows where West Kensington had suddenly got to. And somehow it

was just like coming home.

"You know, in the very moment the door swung to behind me, I forgot the road with its fallen chestnut leaves, its cabs and tradesmen's carts, I forgot the sort of gravitational pull back to the discipline and obedience of home, I forgot all hesitations and fear, forgot discretion, forgot all the intimate realities of this life. I became in a moment a very glad and wonder-happy little boy--in another world. It was a world with a different quality, a warmer, more penetrating and mellower light, with a faint clear gladness in its air, and wisps of sun-touched cloud in the blueness of its sky. And before me ran this long wide path, invitingly, with weedless beds on either side, rich with untended flowers, and these two great panthers. I put my little hands fearlessly on their soft fur, and caressed their round ears and the sensitive corners under their ears, and played with them, and it was as though they welcomed me home. There was a keen sense of home-coming in my mind, and when presently a tall, fair girl appeared in the pathway and came to meet me, smiling, and said 'Well?' to me, and lifted me, and kissed me, and put me down, and led me by the hand, there was no amazement, but only an impression of delightful rightness, of being reminded of happy things that had in some strange way been overlooked. There were broad steps, I remember, that came into view between spikes of delphinium, and up these we went to a great avenue between very old and shady dark trees. All down this avenue, you know, between the red chapped stems, were marble seats of honour and statuary, and very tame and friendly white doves

"And along this avenue my girl-friend led me, looking down--I recall the pleasant lines, the finely-modelled chin of her sweet kind face--asking me questions in a soft, agreeable voice, and telling me things, pleasant things I know, though what they were I was never able to recall . . . And presently a little Capuchin monkey, very clean, with a fur of ruddy brown and kindly hazel

eyes, came down a tree to us and ran beside me, looking up at me and grinning, and presently leapt to my shoulder. So we went on our way in great happiness"

He paused.

"Go on," I said.

"I remember little things. We passed an old man musing among laurels, I remember, and a place gay with paroquets, and came through a broad shaded colonnade to a spacious cool palace, full of pleasant fountains, full of beautiful things, full of the quality and promise of heart's desire. And there were many things and many people, some that still seem to stand out clearly and some that are a little vague, but all these people were beautiful and kind. In some way--I don't know how--it was conveyed to me that they all were kind to me, glad to have me there, and filling me with gladness by their gestures, by the touch of their hands, by the welcome and love in their eyes. Yes--"

He mused for awhile. "Playmates I found there. That was very much to me, because I was a lonely little boy. They played delightful games in a grass-covered court where there was a sun-dial set about with flowers. And as one played one loved

"But--it's odd--there's a gap in my memory. I don't remember the games we played. I never remembered. Afterwards, as a child, I spent long hours trying, even with tears, to recall the form of that happiness. I wanted to play it all over again--in my nursery --by myself. No! All I remember is the happiness and two dear playfellows who were most with me Then presently came a sombre dark woman, with a grave, pale face and dreamy eyes, a sombre woman wearing a soft long robe of pale purple, who carried a book and beckoned and took me aside with her into a gallery above a hall--though my playmates were loth to have me go, and ceased

their game and stood watching as I was carried away. 'Come back to us!' they cried. 'Come back to us soon!' I looked up at her face, but she heeded them not at all. Her face was very gentle and grave. She took me to a seat in the gallery, and I stood beside her, ready to look at her book as she opened it upon her knee. The pages fell open. She pointed, and I looked, marvelling, for in the living pages of that book I saw myself; it was a story about myself, and in it were all the things that had happened to me since ever I was born

"It was wonderful to me, because the pages of that book were not pictures, you understand, but realities."

Wallace paused gravely--looked at me doubtfully.

"Go on," I said. "I understand."

"They were realities--yes, they must have been; people moved and things came and went in them; my dear mother, whom I had near forgotten; then my father, stern and upright, the servants, the nursery, all the familiar things of home. Then the front door and the busy streets, with traffic to and fro: I looked and marvelled, and looked half doubtfully again into the woman's face and turned the pages over, skipping this and that, to see more of this book, and more, and so at last I came to myself hovering and hesitating outside the green door in the long white wall, and felt again the conflict and the fear.

"And next?" I cried, and would have turned on, but the cool hand of the grave woman delayed me.

"Next?" I insisted, and struggled gently with her hand, pulling up her fingers with all my childish strength, and as she yielded and the page came over she bent down upon me like a shadow and kissed my brow.

"But the page did not show the enchanted garden, nor the panthers, nor the girl who had led me by the hand, nor the playfellows who had been so loth to let me go. It showed a long grey street in West Kensington, on that chill hour of afternoon before the lamps are lit, and I was there, a wretched little figure, weeping aloud, for all that I could do to restrain myself, and I was weeping because I could not return to my dear play-fellows who had called after me, 'Come back to us! Come back to us soon!' I was there. This was no page in a book, but harsh reality; that enchanted place and the restraining hand of the grave mother at whose knee I stood had gone--whither have they gone?"

He halted again, and remained for a time, staring into the fire.

"Oh! the wretchedness of that return!" he murmured.

"Well?" I said after a minute or so.

"Poor little wretch I was--brought back to this grey world again! As I realised the fulness of what had happened to me, I gave way to quite ungovernable grief. And the shame and humiliation of that public weeping and my disgraceful homecoming remain with me still. I see again the benevolent-looking old gentleman in gold spectacles who stopped and spoke to me--prodding me first with his umbrella. 'Poor little chap,' said he; 'and are you lost then?'--and me a London boy of five and more! And he must needs bring in a kindly young policeman and make a crowd of me, and so march me home. Sobbing, conspicuous and frightened, I came from the enchanted garden to the steps of my father's house.

"That is as well as I can remember my vision of that garden--the garden that haunts me still. Of course, I can convey nothing of that indescribable quality of translucent unreality, that difference from the common things of experience that hung

about it all; but that--that is what happened. If it was a dream, I am sure it was a day-time and altogether extraordinary dream H'm!--naturally there followed a terrible questioning, by my aunt, my father, the nurse, the governess--everyone

"I tried to tell them, and my father gave me my first thrashing for telling lies. When afterwards I tried to tell my aunt, she punished me again for my wicked persistence. Then, as I said, everyone was forbidden to listen to me, to hear a word about it. Even my fairy tale books were taken away from me for a time--because I was 'too imaginative.' Eh? Yes, they did that! My father belonged to the old school And my story was driven back upon myself. I whispered it to my pillow--my pillow that was often damp and salt to my whispering lips with childish tears. And I added always to my official and less fervent prayers this one heartfelt request: 'Please God I may dream of the garden. Oh! take me back to my garden! Take me back to my garden!'

"I dreamt often of the garden. I may have added to it, I may have changed it; I do not know All this you understand is an attempt to reconstruct from fragmentary memories a very early experience. Between that and the other consecutive memories of my boyhood there is a gulf. A time came when it seemed impossible I should ever speak of that wonder glimpse again."

I asked an obvious question.

"No," he said. "I don't remember that I ever attempted to find my way back to the garden in those early years. This seems odd to me now, but I think that very probably a closer watch was kept on my movements after this misadventure to prevent my going astray. No, it wasn't until you knew me that I tried for the garden again. And I believe there was a period --incredible as it seems now--when I forgot the garden altogether--when I was about eight or nine it may have been. Do you remember me as a kid at

Saint Athelstan's?"

"Rather!"

"I didn't show any signs did I in those days of having a secret dream?"

II

He looked up with a sudden smile.

"Did you ever play North-West Passage with me? No, of course you didn't come my way!"

"It was the sort of game," he went on, "that every imaginative child plays all day. The idea was the discovery of a North-West Passage to school. The way to school was plain enough; the game consisted in finding some way that wasn't plain, starting off ten minutes early in some almost hopeless direction, and working one's way round through unaccustomed streets to my goal. And one day I got entangled among some rather low-class streets on the other side of Campden Hill, and I began to think that for once the game would be against me and that I should get to school late. I tried rather desperately a street that seemed a cul de sac, and found a passage at the end. I hurried through that with renewed hope. 'I shall do it yet,' I said, and passed a row of frowsy little shops that were inexplicably familiar to me, and behold! there was my long white wall and the green door that led to the enchanted garden!

"The thing whacked upon me suddenly. Then, after all, that garden, that wonderful garden, wasn't a dream!"

He paused.

"I suppose my second experience with the green door marks the world of difference there is between the busy life of a schoolboy and the infinite leisure of a child. Anyhow, this second time I didn't for a moment think of going in straight away. You see . . . For one thing my mind was full of the idea of getting to school in time--set on not breaking my record for punctuality. I must surely have felt SOME little desire at least to try the door--yes, I must have felt that But I seem to remember the attraction of the door mainly as another obstacle to my overmastering determination to get to school. I was immediately interested by this discovery I had made, of course--I went on with my mind full of it--but I went on. It didn't check me. I ran past tugging out my watch, found I had ten minutes still to spare, and then I was going downhill into familiar surroundings. I got to school, breathless, it is true, and wet with perspiration, but in time. I can remember hanging up my coat and hat . . . Went right by it and left it behind me. Odd, eh?"

He looked at me thoughtfully. "Of course, I didn't know then that it wouldn't always be there. School boys have limited imaginations. I suppose I thought it was an awfully jolly thing to have it there, to know my way back to it, but there was the school tugging at me. I expect I was a good deal distraught and inattentive that morning, recalling what I could of the beautiful strange people I should presently see again. Oddly enough I had no doubt in my mind that they would be glad to see me . . . Yes, I must have thought of the garden that morning just as a jolly sort of place to which one might resort in the interludes of a strenuous scholastic career.

"I didn't go that day at all. The next day was a half holiday, and that may have weighed with me. Perhaps, too, my state of inattention brought down impositions upon me and docked the margin of time necessary for the detour. I don't know. What I do

know is that in the meantime the enchanted garden was so much upon my mind that I could not keep it to myself.

"I told--What was his name?--a ferrety-looking youngster we used to call Squiff."

"Young Hopkins," said I.

"Hopkins it was. I did not like telling him, I had a feeling that in some way it was against the rules to tell him, but I did. He was walking part of the way home with me; he was talkative, and if we had not talked about the enchanted garden we should have talked of something else, and it was intolerable to me to think about any other subject. So I blabbed.

"Well, he told my secret. The next day in the play interval I found myself surrounded by half a dozen bigger boys, half teasing and wholly curious to hear more of the enchanted garden. There was that big Fawcett--you remember him?--and Carnaby and Morley Reynolds. You weren't there by any chance? No, I think I should have remembered if you were

"A boy is a creature of odd feelings. I was, I really believe, in spite of my secret self-disgust, a little flattered to have the attention of these big fellows. I remember particularly a moment of pleasure caused by the praise of Crawshaw--you remember Crawshaw major, the son of Crawshaw the composer?--who said it was the best lie he had ever heard. But at the same time there was a really painful undertow of shame at telling what I felt was indeed a sacred secret. That beast Fawcett made a joke about the girl in green--."

Wallace's voice sank with the keen memory of that shame. "I pretended not to hear," he said. "Well, then Carnaby suddenly called me a young liar and disputed with me when I said the thing

was true. I said I knew where to find the green door, could lead them all there in ten minutes. Carnaby became outrageously virtuous, and said I'd have to--and bear out my words or suffer. Did you ever have Carnaby twist your arm? Then perhaps you'll understand how it went with me. I swore my story was true. There was nobody in the school then to save a chap from Carnaby though Crawshaw put in a word or so. Carnaby had got his game. I grew excited and red-eared, and a little frightened, I behaved altogether like a silly little chap, and the outcome of it all was that instead of starting alone for my enchanted garden, I led the way presently--cheeks flushed, ears hot, eyes smarting, and my soul one burning misery and shame--for a party of six mocking, curious and threatening school-fellows.

"We never found the white wall and the green door . . ."

"You mean?--"

"I mean I couldn't find it. I would have found it if I could.

"And afterwards when I could go alone I couldn't find it. I never found it. I seem now to have been always looking for it through my school-boy days, but I've never come upon it again."

"Did the fellows--make it disagreeable?"

"Beastly Carnaby held a council over me for wanton lying. I remember how I sneaked home and upstairs to hide the marks of my blubbering. But when I cried myself to sleep at last it wasn't for Carnaby, but for the garden, for the beautiful afternoon I had hoped for, for the sweet friendly women and the waiting playfellows and the game I had hoped to learn again, that beautiful forgotten game"

"I believed firmly that if I had not told-- I had

bad times after that--crying at night and woolgathering by day. For two terms I slackened and had bad reports. Do you remember? Of course you would! It was YOU--your beating me in mathematics that brought me back to the grind again."

III

For a time my friend stared silently into the red heart of the fire. Then he said: "I never saw it again until I was seventeen.

"It leapt upon me for the third time--as I was driving to Paddington on my way to Oxford and a scholarship. I had just one momentary glimpse. I was leaning over the apron of my hansom smoking a cigarette, and no doubt thinking myself no end of a man of the world, and suddenly there was the door, the wall, the dear sense of unforgettable and still attainable things.

"We clattered by--I too taken by surprise to stop my cab until we were well past and round a corner. Then I had a queer moment, a double and divergent movement of my will: I tapped the little door in the roof of the cab, and brought my arm down to pull out my watch. 'Yes, sir!' said the cabman, smartly. 'Er-- well--it's nothing,' I cried. 'MY mistake! We haven't much time! Go on!' and he went on . . .

"I got my scholarship. And the night after I was told of that I sat over my fire in my little upper room, my study, in my father's house, with his praise--his rare praise--and his sound counsels ringing in my ears, and I smoked my favourite pipe--the formidable bulldog of adolescence--and thought of that door in the long white wall. 'If I had stopped,' I thought, 'I should have missed my scholarship, I should have missed Oxford--muddled all the fine career before me! I begin to see things better!' I fell

musing deeply, but I did not doubt then this career of mine was a thing that merited sacrifice.

"Those dear friends and that clear atmosphere seemed very sweet to me, very fine, but remote. My grip was fixing now upon the world. I saw another door opening--the door of my career."

He stared again into the fire. Its red lights picked out a stubborn strength in his face for just one flickering moment, and then it vanished again.

"Well", he said and sighed, "I have served that career. I have done--much work, much hard work. But I have dreamt of the enchanted garden a thousand dreams, and seen its door, or at least glimpsed its door, four times since then. Yes--four times. For a while this world was so bright and interesting, seemed so full of meaning and opportunity that the half-effaced charm of the garden was by comparison gentle and remote. Who wants to pat panthers on the way to dinner with pretty women and distinguished men? I came down to London from Oxford, a man of bold promise that I have done something to redeem. Something--and yet there have been disappointments

"Twice I have been in love--I will not dwell on that--but once, as I went to someone who, I know, doubted whether I dared to come, I took a short cut at a venture through an unfrequented road near Earl's Court, and so happened on a white wall and a familiar green door. 'Odd!' said I to myself, 'but I thought this place was on Campden Hill. It's the place I never could find somehow--like counting Stonehenge--the place of that queer day dream of mine.' And I went by it intent upon my purpose. It had no appeal to me that afternoon.

"I had just a moment's impulse to try the door, three steps aside were needed at the most--though I was sure enough in my heart

that it would open to me--and then I thought that doing so might delay me on the way to that appointment in which I thought my honour was involved. Afterwards I was sorry for my punctuality--I might at least have peeped in I thought, and waved a hand to those panthers, but I knew enough by this time not to seek again belatedly that which is not found by seeking. Yes, that time made me very sorry

"Years of hard work after that and never a sight of the door. It's only recently it has come back to me. With it there has come a sense as though some thin tarnish had spread itself over my world. I began to think of it as a sorrowful and bitter thing that I should never see that door again. Perhaps I was suffering a little from overwork--perhaps it was what I've heard spoken of as the feeling of forty. I don't know. But certainly the keen brightness that makes effort easy has gone out of things recently, and that just at a time with all these new political developments --when I ought to be working. Odd, isn't it? But I do begin to find life toilsome, its rewards, as I come near them, cheap. I began a little while ago to want the garden quite badly. Yes--and I've seen it three times."

"The garden?"

"No--the door! And I haven't gone in!"

He leaned over the table to me, with an enormous sorrow in his voice as he spoke. "Thrice I have had my chance--THRICE! If ever that door offers itself to me again, I swore, I will go in out of this dust and heat, out of this dry glitter of vanity, out of these toilsome futilities. I will go and never return. This time I will stay I swore it and when the time came-- I DIDN'T GO.

"Three times in one year have I passed that door and failed to

enter. Three times in the last year.

"The first time was on the night of the snatch division on the Tenants' Redemption Bill, on which the Government was saved by a majority of three. You remember? No one on our side--perhaps very few on the opposite side--expected the end that night. Then the debate collapsed like eggshells. I and Hotchkiss were dining with his cousin at Brentford, we were both unpaired, and we were called up by telephone, and set off at once in his cousin's motor. We got in barely in time, and on the way we passed my wall and door--livid in the moonlight, blotched with hot yellow as the glare of our lamps lit it, but unmistakable. 'My God!' cried I. 'What?' said Hotchkiss. 'Nothing!' I answered, and the moment passed.

"I've made a great sacrifice,' I told the whip as I got in. 'They all have,' he said, and hurried by.

"I do not see how I could have done otherwise then. And the next occasion was as I rushed to my father's bedside to bid that stern old man farewell. Then, too, the claims of life were imperative. But the third time was different; it happened a week ago. It fills me with hot remorse to recall it. I was with Gurker and Ralphs--it's no secret now you know that I've had my talk with Gurker. We had been dining at Frobisher's, and the talk had become intimate between us. The question of my place in the reconstructed ministry lay always just over the boundary of the discussion. Yes--yes. That's all settled. It needn't be talked about yet, but there's no reason to keep a secret from you Yes--thanks! thanks! But let me tell you my story.

"Then, on that night things were very much in the air. My position was a very delicate one. I was keenly anxious to get some definite word from Gurker, but was hampered by Ralphs' presence. I was using the best power of my brain to keep that light and careless talk not too obviously directed to the point that concerns

me. I had to. Ralphs' behaviour since has more than justified my caution Ralphs, I knew, would leave us beyond the Kensington High Street, and then I could surprise Gurker by a sudden frankness. One has sometimes to resort to these little devices. . . . And then it was that in the margin of my field of vision I became aware once more of the white wall, the green door before us down the road.

"We passed it talking. I passed it. I can still see the shadow of Gurker's marked profile, his opera hat tilted forward over his prominent nose, the many folds of his neck wrap going before my shadow and Ralphs' as we sauntered past.

"I passed within twenty inches of the door. 'If I say good-night to them, and go in,' I asked myself, 'what will happen?' And I was all a-tingle for that word with Gurker.

"I could not answer that question in the tangle of my other problems. 'They will think me mad,' I thought. 'And suppose I vanish now!--Amazing disappearance of a prominent politician!' That weighed with me. A thousand inconceivably petty worldlinesses weighed with me in that crisis."

Then he turned on me with a sorrowful smile, and, speaking slowly; "Here I am!" he said.

"Here I am!" he repeated, "and my chance has gone from me. Three times in one year the door has been offered me--the door that goes into peace, into delight, into a beauty beyond dreaming, a kindness no man on earth can know. And I have rejected it, Redmond, and it has gone--"

"How do you know?"

"I know. I know. I am left now to work it out, to stick to

the tasks that held me so strongly when my moments came. You say, I have success--this vulgar, tawdry, irksome, envied thing. I have it." He had a walnut in his big hand. "If that was my success," he said, and crushed it, and held it out for me to see.

"Let me tell you something, Redmond. This loss is destroying me. For two months, for ten weeks nearly now, I have done no work at all, except the most necessary and urgent duties. My soul is full of inappeasable regrets. At nights--when it is less likely I shall be recognised--I go out. I wander. Yes. I wonder what people would think of that if they knew. A Cabinet Minister, the responsible head of that most vital of all departments, wandering alone--grieving--sometimes near audibly lamenting--for a door, for a garden!"

IV

I can see now his rather pallid face, and the unfamiliar sombre fire that had come into his eyes. I see him very vividly to-night. I sit recalling his words, his tones, and last evening's Westminster Gazette still lies on my sofa, containing the notice of his death. At lunch to-day the club was busy with him and the strange riddle of his fate.

They found his body very early yesterday morning in a deep excavation near East Kensington Station. It is one of two shafts that have been made in connection with an extension of the railway southward. It is protected from the intrusion of the public by a hoarding upon the high road, in which a small doorway has been cut for the convenience of some of the workmen who live in that direction. The doorway was left unfastened through a misunderstanding between two gangers, and through it he made his way

My mind is darkened with questions and riddles.

It would seem he walked all the way from the House that night--he has frequently walked home during the past Session--and so it is I figure his dark form coming along the late and empty streets, wrapped up, intent. And then did the pale electric lights near the station cheat the rough planking into a semblance of white? Did that fatal unfastened door awaken some memory?

Was there, after all, ever any green door in the wall at all?

I do not know. I have told his story as he told it to me.

There are times when I believe that Wallace was no more than the victim of the coincidence between a rare but not unprecedented type of hallucination and a careless trap, but that indeed is not my profoundest belief. You may think me superstitious if you will, and foolish; but, indeed, I am more than half convinced that he had in truth, an abnormal gift, and a sense, something--I know not what--that in the guise of wall and door offered him an outlet, a secret and peculiar passage of escape into another and altogether more beautiful world. At any rate, you will say, it betrayed him in the end. But did it betray him? There you touch the inmost mystery of these dreamers, these men of vision and the imagination.

We see our world fair and common, the hoarding and the pit. By our daylight standard he walked out of security into darkness, danger and death. But did he see like that?

THE STAR

It was on the first day of the New Year that the announcement was made, almost simultaneously from three observatories, that the motion of the planet Neptune, the outermost of all the planets that wheel about the sun, had become very erratic. Ogilvy had already called attention to a suspected retardation in its velocity in December. Such a piece of news was scarcely calculated to interest a world the greater portion of whose inhabitants were unaware of the existence of the planet Neptune, nor outside the astronomical profession did the subsequent discovery of a faint remote speck of light in the region of the perturbed planet cause any very great excitement. Scientific people, however, found the intelligence remarkable enough, even before it became known that the new body was rapidly growing larger and brighter, that its motion was quite different from the orderly progress of the planets, and that the deflection of Neptune and its satellite was becoming now of an unprecedented kind.

Few people without a training in science can realise the huge isolation of the solar system. The sun with its specks of planets, its dust of planetoids, and its impalpable comets, swims in a vacant immensity that almost defeats the imagination. Beyond the orbit of Neptune there is space, vacant so far as human observation has penetrated, without warmth or light or sound, blank emptiness, for twenty million times a million miles. That is the smallest estimate of the distance to be traversed before the very nearest of the stars is attained. And, saving a few comets more unsubstantial than the thinnest flame, no matter had ever to human knowledge crossed this gulf of space, until early in the twentieth century this strange wanderer appeared. A vast mass of matter it was, bulky, heavy, rushing without warning out of the black mystery of the sky into the radiance of the sun. By the second day it was

clearly visible to any decent instrument, as a speck with a barely sensible diameter, in the constellation Leo near Regulus. In a little while an opera glass could attain it.

On the third day of the new year the newspaper readers of two hemispheres were made aware for the first time of the real importance of this unusual apparition in the heavens. "A Planetary Collision," one London paper headed the news, and proclaimed Duchaine's opinion that this strange new planet would probably collide with Neptune. The leader writers enlarged upon the topic; so that in most of the capitals of the world, on January 3rd, there was an expectation, however vague of some imminent phenomenon in the sky; and as the night followed the sunset round the globe, thousands of men turned their eyes skyward to see--the old familiar stars just as they had always been.

Until it was dawn in London and Pollux setting and the stars overhead grown pale. The Winter's dawn it was, a sickly filtering accumulation of daylight, and the light of gas and candles shone yellow in the windows to show where people were astir. But the yawning policeman saw the thing, the busy crowds in the markets stopped agape, workmen going to their work betimes, milkmen, the drivers of news-carts, dissipation going home jaded and pale, homeless wanderers, sentinels on their beats, and in the country, labourers trudging afield, poachers slinking home, all over the dusky quickening country it could be seen--and out at sea by seamen watching for the day--a great white star, come suddenly into the westward sky!

Brighter it was than any star in our skies; brighter than the evening star at its brightest. It still glowed out white and large, no mere twinkling spot of light, but a small round clear shining disc, an hour after the day had come. And where science has not reached, men stared and feared, telling one another of the wars and pestilences that are foreshadowed by these fiery signs in

the Heavens. Sturdy Boers, dusky Hottentots, Gold Coast Negroes, Frenchmen, Spaniards, Portuguese, stood in the warmth of the sunrise watching the setting of this strange new star.

And in a hundred observatories there had been suppressed excitement, rising almost to shouting pitch, as the two remote bodies had rushed together; and a hurrying to and fro, to gather photographic apparatus and spectroscope, and this appliance and that, to record this novel astonishing sight, the destruction of a world. For it was a world, a sister planet of our earth, far greater than our earth indeed, that had so suddenly flashed into flaming death. Neptune it was, had been struck, fairly and squarely, by the strange planet from outer space and the heat of the concussion had incontinently turned two solid globes into one vast mass of incandescence. Round the world that day, two hours before the dawn, went the pallid great white star, fading only as it sank westward and the sun mounted above it. Everywhere men marvelled at it, but of all those who saw it none could have marvelled more than those sailors, habitual watchers of the stars, who far away at sea had heard nothing of its advent and saw it now rise like a pigmy moon and climb zenithward and hang overhead and sink westward with the passing of the night.

And when next it rose over Europe everywhere were crowds of watchers on hilly slopes, on house-roofs, in open spaces, staring eastward for the rising of the great new star. It rose with a white glow in front of it, like the glare of a white fire, and those who had seen it come into existence the night before cried out at the sight of it. "It is larger," they cried. "It is brighter!" And, indeed the moon a quarter full and sinking in the west was in its apparent size beyond comparison, but scarcely in all its breadth had it as much brightness now as the little circle of the strange new star.

"It is brighter!" cried the people clustering in the streets.

But in the dim observatories the watchers held their breath and peered at one another IT IS NEARER," they said. "NEARER!"

And voice after voice repeated, "It is nearer," and the clicking telegraph took that up, and it trembled along telephone wires, and in a thousand cities grimy compositors fingered the type. "It is nearer." Men writing in offices, struck with a strange realisation, flung down their pens, men talking in a thousand places suddenly came upon a grotesque possibility in those words, "It is nearer." It hurried along wakening streets, it was shouted down the frost-stilled ways of quiet villages; men who had read these things from the throbbing tape stood in yellow-lit doorways shouting the news to the passersby. "It is nearer." Pretty women, flushed and glittering, heard the news told jestingly between the dances, and feigned an intelligent interest they did not feel. "Nearer! Indeed. How curious! How very, very clever people must be to find out things like that!"

Lonely tramps faring through the wintry night murmured those words to comfort themselves--looking skyward. "It has need to be nearer, for the night's as cold as charity. Don't seem much warmth from it if it IS nearer, all the same."

"What is a new star to me?" cried the weeping woman kneeling beside her dead.

The schoolboy, rising early for his examination work, puzzled it out for himself--with the great white star shining broad and bright through the frost-flowers of his window. "Centrifugal, centripetal," he said, with his chin on his fist. "Stop a planet in its flight, rob it of its centrifugal force, what then? Centripetal has it, and down it falls into the sun! And this--!"

"Do WE come in the way? I wonder--"

The light of that day went the way of its brethren, and with the later watches of the frosty darkness rose the strange star again. And it was now so bright that the waxing moon seemed but a pale yellow ghost of itself, hanging huge in the sunset. In a South African City a great man had married, and the streets were alight to welcome his return with his bride. "Even the skies have illuminated," said the flatterer. Under Capricorn, two negro lovers, daring the wild beasts and evil spirits, for love of one another, crouched together in a cane brake where the fire-flies hovered. "That is our star," they whispered, and felt strangely comforted by the sweet brilliance of its light.

The master mathematician sat in his private room and pushed the papers from him. His calculations were already finished. In a small white phial there still remained a little of the drug that had kept him awake and active for four long nights. Each day, serene, explicit, patient as ever, he had given his lecture to his students, and then had come back at once to this momentous calculation. His face was grave, a little drawn and hectic from his drugged activity. For some time he seemed lost in thought. Then he went to the window, and the blind went up with a click. Half way up the sky, over the clustering roofs, chimneys and steeples of the city, hung the star.

He looked at it as one might look into the eyes of a brave enemy. "You may kill me," he said after a silence. "But I can hold you--and all the universe for that matter--in the grip of this little brain. I would not change. Even now."

He looked at the little phial. "There will be no need of sleep again," he said. The next day at noon--punctual to the minute, he entered his lecture theatre, put his hat on the end of the table as his habit was, and carefully selected a large piece of chalk. It was a joke among his students that he could not lecture without that piece of chalk to fumble in his fingers, and once he

had been stricken to impotence by their hiding his supply. He came and looked under his grey eyebrows at the rising tiers of young fresh faces, and spoke with his accustomed studied commonness of phrasing. "Circumstances have arisen--circumstances beyond my control," he said and paused, "which will debar me from completing the course I had designed. It would seem, gentlemen, if I may put the thing clearly and briefly, that--Man has lived in vain."

The students glanced at one another. Had they heard aright? Mad? Raised eyebrows and grinning lips there were, but one or two faces remained intent upon his calm grey-fringed face. "It will be interesting," he was saying, "to devote this morning to an exposition, so far as I can make it clear to you, of the calculations that have led me to this conclusion. Let us assume--"

He turned towards the blackboard, meditating a diagram in the way that was usual to him. "What was that about 'lived in vain?'" whispered one student to another. "Listen," said the other, nodding towards the lecturer.

And presently they began to understand.

That night the star rose later, for its proper eastward motion had carried it some way across Leo towards Virgo, and its brightness was so great that the sky became a luminous blue as it rose, and every star was hidden in its turn, save only Jupiter near the zenith, Capella, Aldebaran, Sirius and the pointers of the Bear. It was very white and beautiful. In many parts of the world that night a pallid halo encircled it about. It was perceptibly larger; in the clear refractive sky of the tropics it seemed as if it were nearly a quarter the size of the moon. The frost was still on the ground in England, but the world was as brightly lit as if it were midsummer moonlight. One could see to read quite ordinary print by that cold clear light, and in the cities the lamps burnt yellow and wan.

And everywhere the world was awake that night, and throughout Christendom a sombre murmur hung in the keen air over the country side like the belling of bees in the heather, and this murmurous tumult grew to a clangour in the cities. It was the tolling of the bells in a million belfry towers and steeples, summoning the people to sleep no more, to sin no more, but to gather in their churches and pray. And overhead, growing larger and brighter as the earth rolled on its way and the night passed, rose the dazzling star.

And the streets and houses were alight in all the cities, the shipyards glared, and whatever roads led to high country were lit and crowded all night long. And in all the seas about the civilised lands, ships with throbbing engines, and ships with bellying sails, crowded with men and living creatures, were standing out to ocean and the north. For already the warning of the master mathematician had been telegraphed all over the world, and translated into a hundred tongues. The new planet and Neptune, locked in a fiery embrace, were whirling headlong, ever faster and faster towards the sun. Already every second this blazing mass flew a hundred miles, and every second its terrific velocity increased. As it flew now, indeed, it must pass a hundred million of miles wide of the earth and scarcely affect it. But near its destined path, as yet only slightly perturbed, spun the mighty planet Jupiter and his moons sweeping splendid round the sun. Every moment now the attraction between the fiery star and the greatest of the planets grew stronger. And the result of that attraction? Inevitably Jupiter would be deflected from its orbit into an elliptical path, and the burning star, swung by his attraction wide of its sunward rush, would "describe a curved path" and perhaps collide with, and certainly pass very close to, our earth. "Earthquakes, volcanic outbreaks, cyclones, sea waves, floods, and a steady rise in temperature to I know not what limit"--so prophesied the master mathematician.

And overhead, to carry out his words, lonely and cold and livid, blazed the star of the coming doom.

To many who stared at it that night until their eyes ached, it seemed that it was visibly approaching. And that night, too, the weather changed, and the frost that had gripped all Central Europe and France and England softened towards a thaw.

But you must not imagine because I have spoken of people praying through the night and people going aboard ships and people fleeing toward mountainous country that the whole world was already in a terror because of the star. As a matter of fact, use and wont still ruled the world, and save for the talk of idle moments and the splendour of the night, nine human beings out of ten were still busy at their common occupations. In all the cities the shops, save one here and there, opened and closed at their proper hours, the doctor and the undertaker plied their trades, the workers gathered in the factories, soldiers drilled, scholars studied, lovers sought one another, thieves lurked and fled, politicians planned their schemes. The presses of the newspapers roared through the night, and many a priest of this church and that would not open his holy building to further what he considered a foolish panic. The newspapers insisted on the lesson of the year 1000--for then, too, people had anticipated the end. The star was no star--mere gas--a comet; and were it a star it could not possibly strike the earth. There was no precedent for such a thing. Common sense was sturdy everywhere, scornful, jesting, a little inclined to persecute the obdurate fearful. That night, at seven-fifteen by Greenwich time, the star would be at its nearest to Jupiter. Then the world would see the turn things would take. The master mathematician's grim warnings were treated by many as so much mere elaborate self-advertisement. Common sense at last, a little heated by argument, signified its unalterable convictions by going to bed. So, too, barbarism and savagery, already tired of the novelty, went

about their nightly business, and save for a howling dog here and there, the beast world left the star unheeded.

And yet, when at last the watchers in the European States saw the star rise, an hour later it is true, but no larger than it had been the night before, there were still plenty awake to laugh at the master mathematician--to take the danger as if it had passed.

But hereafter the laughter ceased. The star grew--it grew with a terrible steadiness hour after hour, a little larger each hour, a little nearer the midnight zenith, and brighter and brighter, until it had turned night into a second day. Had it come straight to the earth instead of in a curved path, had it lost no velocity to Jupiter, it must have leapt the intervening gulf in a day, but as it was it took five days altogether to come by our planet. The next night it had become a third the size of the moon before it set to English eyes, and the thaw was assured. It rose over America near the size of the moon, but blinding white to look at, and HOT; and a breath of hot wind blew now with its rising and gathering strength, and in Virginia, and Brazil, and down the St. Lawrence valley, it shone intermittently through a driving reek of thunder-clouds, flickering violet lightning, and hail unprecedented. In Manitoba was a thaw and devastating floods. And upon all the mountains of the earth the snow and ice began to melt that night, and all the rivers coming out of high country flowed thick and turbid, and soon--in their upper reaches --with swirling trees and the bodies of beasts and men. They rose steadily, steadily in the ghostly brilliance, and came trickling over their banks at last, behind the flying population of their valleys.

And along the coast of Argentina and up the South Atlantic the tides were higher than had ever been in the memory of man, and the storms drove the waters in many cases scores of miles inland, drowning whole cities. And so great grew the heat during the night

that the rising of the sun was like the coming of a shadow. The earthquakes began and grew until all down America from the Arctic Circle to Cape Horn, hillsides were sliding, fissures were opening, and houses and walls crumbling to destruction. The whole side of Cotopaxi slipped out in one vast convulsion, and a tumult of lava poured out so high and broad and swift and liquid that in one day it reached the sea.

So the star, with the wan moon in its wake, marched across the Pacific, trailed the thunderstorms like the hem of a robe, and the growing tidal wave that toiled behind it, frothing and eager, poured over island and island and swept them clear of men. Until that wave came at last--in a blinding light and with the breath of a furnace, swift and terrible it came--a wall of water, fifty feet high, roaring hungrily, upon the long coasts of Asia, and swept inland across the plains of China. For a space the star, hotter now and larger and brighter than the sun in its strength, showed with pitiless brilliance the wide and populous country; towns and villages with their pagodas and trees, roads, wide cultivated fields, millions of sleepless people staring in helpless terror at the incandescent sky; and then, low and growing, came the murmur of the flood. And thus it was with millions of men that night--a flight nowhither, with limbs heavy with heat and breath fierce and scant, and the flood like a wall swift and white behind. And then death.

China was lit glowing white, but over Japan and Java and all the islands of Eastern Asia the great star was a ball of dull red fire because of the steam and smoke and ashes the volcanoes were spouting forth to salute its coming. Above was the lava, hot gases and ash, and below the seething floods, and the whole earth swayed and rumbled with the earthquake shocks. Soon the immemorial snows of Thibet and the Himalaya were melting and pouring down by ten million deepening converging channels upon the plains of Burmah and Hindostan. The tangled summits of the Indian jungles were aflame

in a thousand places, and below the hurrying waters around the stems were dark objects that still struggled feebly and reflected the blood-red tongues of fire. And in a rudderless confusion a multitude of men and women fled down the broad river-ways to that one last hope of men--the open sea.

Larger grew the star, and larger, hotter, and brighter with a terrible swiftness now. The tropical ocean had lost its phosphorescence, and the whirling steam rose in ghostly wreaths from the black waves that plunged incessantly, speckled with storm-tossed ships.

And then came a wonder. It seemed to those who in Europe watched for the rising of the star that the world must have ceased its rotation. In a thousand open spaces of down and upland the people who had fled thither from the floods and the falling houses and sliding slopes of hill watched for that rising in vain. Hour followed hour through a terrible suspense, and the star rose not. Once again men set their eyes upon the old constellations they had counted lost to them forever. In England it was hot and clear overhead, though the ground quivered perpetually, but in the tropics, Sirius and Capella and Aldebaran showed through a veil of steam. And when at last the great star rose near ten hours late, the sun rose close upon it, and in the centre of its white heart was a disc of black.

Over Asia it was the star had begun to fall behind the movement of the sky, and then suddenly, as it hung over India, its light had been veiled. All the plain of India from the mouth of the Indus to the mouths of the Ganges was a shallow waste of shining water that night, out of which rose temples and palaces, mounds and hills, black with people. Every minaret was a clustering mass of people, who fell one by one into the turbid waters, as heat and terror overcame them. The whole land seemed a-wailing and suddenly there swept a shadow across that furnace of

despair, and a breath of cold wind, and a gathering of clouds, out of the cooling air. Men looking up, near blinded, at the star, saw that a black disc was creeping across the light. It was the moon, coming between the star and the earth. And even as men cried to God at this respite, out of the East with a strange inexplicable swiftness sprang the sun. And then star, sun and moon rushed together across the heavens.

So it was that presently, to the European watchers, star and sun rose close upon each other, drove headlong for a space and then slower, and at last came to rest, star and sun merged into one glare of flame at the zenith of the sky. The moon no longer eclipsed the star but was lost to sight in the brilliance of the sky. And though those who were still alive regarded it for the most part with that dull stupidity that hunger, fatigue, heat and despair engender, there were still men who could perceive the meaning of these signs. Star and earth had been at their nearest, had swung about one another, and the star had passed. Already it was receding, swifter and swifter, in the last stage of its headlong journey downward into the sun.

And then the clouds gathered, blotting out the vision of the sky, the thunder and lightning wove a garment round the world; all over the earth was such a downpour of rain as men had never before seen, and where the volcanoes flared red against the cloud canopy there descended torrents of mud. Everywhere the waters were pouring off the land, leaving mud-silted ruins, and the earth littered like a storm-worn beach with all that had floated, and the dead bodies of the men and brutes, its children. For days the water streamed off the land, sweeping away soil and trees and houses in the way, and piling huge dykes and scooping out Titanic gullies over the country side. Those were the days of darkness that followed the star and the heat. All through them, and for many weeks and

months, the earthquakes continued.

But the star had passed, and men, hunger-driven and gathering courage only slowly, might creep back to their ruined cities, buried granaries, and sodden fields. Such few ships as had escaped the storms of that time came stunned and shattered and sounding their way cautiously through the new marks and shoals of once familiar ports. And as the storms subsided men perceived that everywhere the days were hotter than of yore, and the sun larger, and the moon, shrunk to a third of its former size, took now fourscore days between its new and new.

But of the new brotherhood that grew presently among men, of the saving of laws and books and machines, of the strange change that had come over Iceland and Greenland and the shores of Baffin's Bay, so that the sailors coming there presently found them green and gracious, and could scarce believe their eyes, this story does not tell. Nor of the movement of mankind now that the earth was hotter, northward and southward towards the poles of the earth. It concerns itself only with the coming and the passing of the Star.

The Martian astronomers--for there are astronomers on Mars, although they are very different beings from men--were naturally profoundly interested by these things. They saw them from their own standpoint of course. "Considering the mass and temperature of the missile that was flung through our solar system into the sun," one wrote, "it is astonishing what a little damage the earth, which it missed so narrowly, has sustained. All the familiar continental markings and the masses of the seas remain intact, and indeed the only difference seems to be a shrinkage of the white discoloration (supposed to be frozen water) round either pole." Which only shows how small the vastest of human catastrophes may seem, at a distance of a few million miles.

A DREAM OF ARMAGEDDON

The man with the white face entered the carriage at Rugby. He moved slowly in spite of the urgency of his porter, and even while he was still on the platform I noted how ill he seemed. He dropped into the corner over against me with a sigh, made an incomplete attempt to arrange his travelling shawl, and became motionless, with his eyes staring vacantly. Presently he was moved by a sense of my observation, looked up at me, and put out a spiritless hand for his newspaper. Then he glanced again in my direction.

I feigned to read. I feared I had unwittingly embarrassed him, and in a moment I was surprised to find him speaking.

"I beg your pardon?" said I.

"That book," he repeated, pointing a lean finger, "is about dreams."

"Obviously," I answered, for it was Fortnum Roscoe's Dream States, and the title was on the cover.

He hung silent for a space as if he sought words. "Yes," he said at last, "but they tell you nothing."

I did not catch his meaning for a second.

"They don't know," he added.

I looked a little more attentively at his face.

"There are dreams," he said, "and dreams."

That sort of proposition I never dispute.

"I suppose--" he hesitated. "Do you ever dream? I mean vividly."

"I dream very little," I answered. "I doubt if I have three vivid dreams in a year."

"Ah!" he said, and seemed for a moment to collect his thoughts.

"Your dreams don't mix with your memories?" he asked abruptly.

"You don't find yourself in doubt; did this happen or did it not?"

"Hardly ever. Except just for a momentary hesitation now and then. I suppose few people do."

"Does he say--?" He indicated the book.

"Says it happens at times and gives the usual explanation about intensity of impression and the like to account for its not happening as a rule. I suppose you know something of these theories--"

"Very little--except that they are wrong."

His emaciated hand played with the strap of the window for a time. I prepared to resume reading, and that seemed to precipitate his next remark. He leant forward almost as though he would touch me.

"Isn't there something called consecutive dreaming--that goes on night after night?"

"I believe there is. There are cases given in most books on mental trouble."

"Mental trouble! Yes. I daresay there are. It's the right place for them. But what I mean--" He looked at his bony knuckles. "Is that sort of thing always dreaming? Is it dreaming?"

Or is it something else? Mightn't it be something else?"

I should have snubbed his persistent conversation but for the drawn anxiety of his face. I remember now the look of his faded eyes and the lids red stained--perhaps you know that look.

"I'm not just arguing about a matter of opinion," he said. "The thing's killing me."

"Dreams?"

"If you call them dreams. Night after night. Vivid!--so vivid this--" (he indicated the landscape that went streaming by the window) "seems unreal in comparison! I can scarcely remember who I am, what business I am on"

He paused. "Even now--"

"The dream is always the same--do you mean?" I asked.

"It's over."

"You mean?"

"I died."

"Died?"

"Smashed and killed, and now, so much of me as that dream was, is dead. Dead forever. I dreamt I was another man, you know, living in a different part of the world and in a different time. I dreamt that night after night. Night after night I woke into that other life. Fresh scenes and fresh happenings--until I came upon the last--"

"When you died?"

"When I died."

"And since then--"

"No," he said. "Thank God! That was the end of the dream . . ."

It was clear I was in for this dream. And after all, I had an hour before me, the light was fading fast, and Fortnum Roscoe has a dreary way with him. "Living in a different time," I said: "do you mean in some different age?"

"Yes."

"Past?"

"No, to come--to come."

"The year three thousand, for example?"

"I don't know what year it was. I did when I was asleep, when I was dreaming, that is, but not now--not now that I am awake. There's a lot of things I have forgotten since I woke out of these dreams, though I knew them at the time when I was--I suppose it was dreaming. They called the year differently from our way of calling the year . . . What did they call it?" He put his hand to his

forehead. "No," said he, "I forget."

He sat smiling weakly. For a moment I feared he did not mean to tell me his dream. As a rule I hate people who tell their dreams, but this struck me differently. I proffered assistance even. "It began--" I suggested.

"It was vivid from the first. I seemed to wake up in it suddenly. And it's curious that in these dreams I am speaking of I never remembered this life I am living now. It seemed as if the dream life was enough while it lasted. Perhaps--But I will tell you how I find myself when I do my best to recall it all. I don't remember anything clearly until I found myself sitting in a sort of loggia looking out over the sea. I had been dozing, and suddenly I woke up--fresh and vivid--not a bit dreamlike--because the girl had stopped fanning me."

"The girl?"

"Yes, the girl. You must not interrupt or you will put me out."

He stopped abruptly. "You won't think I'm mad?" he said.

"No," I answered. "You've been dreaming. Tell me your dream."

"I woke up, I say, because the girl had stopped fanning me. I was not surprised to find myself there or anything of that sort, you understand. I did not feel I had fallen into it suddenly. I simply took it up at that point. Whatever memory I had of this life, this nineteenth-century life, faded as I woke, vanished like a dream. I knew all about myself, knew that my name was no longer Cooper but Hedon, and all about my position in the world. I've forgotten a lot since I woke--there's a want of connection--but it

was all quite clear and matter of fact then."

He hesitated again, gripping the window strap, putting his face forward and looking up to me appealingly.

"This seems bosh to you?"

"No, no!" I cried. "Go on. Tell me what this loggia was like!"

"It was not really a loggia--I don't know what to call it. It faced south. It was small. It was all in shadow except the semicircle above the balcony that showed the sky and sea and the corner where the girl stood. I was on a couch--it was a metal couch with light striped cushions--and the girl was leaning over the balcony with her back to me. The light of the sunrise fell on her ear and cheek. Her pretty white neck and the little curls that nestled there, and her white shoulder were in the sun, and all the grace of her body was in the cool blue shadow. She was dressed--how can I describe it? It was easy and flowing. And altogether there she stood, so that it came to me how beautiful and desirable she was, as though I had never seen her before. And when at last I sighed and raised myself upon my arm she turned her face to me--"

He stopped.

"I have lived three-and-fifty years in this world. I have had mother, sisters, friends, wife and daughters--all their faces, the play of their faces, I know. But the face of this girl--it is much more real to me. I can bring it back into memory so that I see it again--I could draw it or paint it. And after all--"

He stopped--but I said nothing.

"The face of a dream--the face of a dream. She was beautiful.

Not that beauty which is terrible, cold, and worshipful, like the beauty of a saint; nor that beauty that stirs fierce passions; but a sort of radiation, sweet lips that softened into smiles, and grave gray eyes. And she moved gracefully, she seemed to have part with all pleasant and gracious things--"

He stopped, and his face was downcast and hidden. Then he looked up at me and went on, making no further attempt to disguise his absolute belief in the reality of his story.

"You see, I had thrown up my plans and ambitions, thrown up all I had ever worked for or desired for her sake. I had been a master man away there in the north, with influence and property and a great reputation, but none of it had seemed worth having beside her. I had come to the place, this city of sunny pleasures with her, and left all those things to wreck and ruin just to save a remnant at least of my life. While I had been in love with her before I knew that she had any care for me, before I had imagined that she would dare--that we should dare, all my life had seemed vain and hollow, dust and ashes. It was dust and ashes. Night after night and through the long days I had longed and desired--my soul had beaten against the thing forbidden!

"But it is impossible for one man to tell another just these things. It's emotion, it's a tint, a light that comes and goes. Only while it's there, everything changes, everything. The thing is I came away and left them in their Crisis to do what they could."

"Left whom?" I asked, puzzled.

"The people up in the north there. You see--in this dream, anyhow--I had been a big man, the sort of man men come to trust in, to group themselves about. Millions of men who had never seen me

were ready to do things and risk things because of their confidence in me. I had been playing that game for years, that big laborious game, that vague, monstrous political game amidst intrigues and betrayals, speech and agitation. It was a vast weltering world, and at last I had a sort of leadership against the Gang--you know it was called the Gang--a sort of compromise of scoundrelly projects and base ambitions and vast public emotional stupidities and catch-words--the Gang that kept the world noisy and blind year by year, and all the while that it was drifting, drifting towards infinite disaster. But I can't expect you to understand the shades and complications of the year--the year something or other ahead. I had it all--down to the smallest details--in my dream. I suppose I had been dreaming of it before I awoke, and the fading outline of some queer new development I had imagined still hung about me as I rubbed my eyes. It was some grubby affair that made me thank God for the sunlight. I sat up on the couch and remained looking at the woman and rejoicing--rejoicing that I had come away out of all that tumult and folly and violence before it was too late. After all, I thought, this is life--love and beauty, desire and delight, are they not worth all those dismal struggles for vague, gigantic ends? And I blamed myself for having ever sought to be a leader when I might have given my days to love. But then, thought I, if I had not spent my early days sternly and austere, I might have wasted myself upon vain and worthless women, and at the thought all my being went out in love and tenderness to my dear mistress, my dear lady, who had come at last and compelled me--compelled me by her invincible charm for me--to lay that life aside.

"'You are worth it,' I said, speaking without intending her to hear; 'you are worth it, my dearest one; worth pride and praise and all things. Love! to have you is worth them all together.'" And at the murmur of my voice she turned about.

"'Come and see,' she cried--'I can hear her now--'come and see the sunrise upon Monte Solaro.'

"I remember how I sprang to my feet and joined her at the balcony. She put a white hand upon my shoulder and pointed towards great masses of limestone, flushing, as it were, into life. I looked. But first I noted the sunlight on her face caressing the lines of her cheeks and neck. How can I describe to you the scene we had before us? We were at Capri--"

"I have been there," I said. "I have clambered up Monte Solaro and drunk vero Capri--muddy stuff like cider--at the summit."

"Ah!" said the man with the white face; "then perhaps you can tell me--you will know if this is indeed Capri. For in this life I have never been there. Let me describe it. We were in a little room, one of a vast multitude of little rooms, very cool and sunny, hollowed out of the limestone of a sort of cape, very high above the sea. The whole island, you know, was one enormous hotel, complex beyond explaining, and on the other side there were miles of floating hotels, and huge floating stages to which the flying machines came. They called it a pleasure city. Of course, there was none of that in your time--rather, I should say, is none of that now. Of course. Now!--yes.

"Well, this room of ours was at the extremity of the cape, so that one could see east and west. Eastward was a great cliff--a thousand feet high perhaps--coldly gray except for one bright edge of gold, and beyond it the Isle of the Sirens, and a falling coast that faded and passed into the hot sunrise. And when one turned to the west, distinct and near was a little bay, a little beach still in shadow. And out of that shadow rose Solaro straight and tall, flushed and golden crested, like a beauty throned, and the white moon was floating behind her in the sky. And before us from east to west stretched the many-tinted sea all dotted with little sailing boats.

"To the eastward, of course, these little boats were gray and very minute and clear, but to the westward they were little boats of gold--shining gold--almost like little flames. And just below us was a rock with an arch worn through it. The blue sea-water broke to green and foam all round the rock, and a galley came gliding out of the arch."

"I know that rock." I said. "I was nearly drowned there. It is called the Faraglioni."

"I Faraglioni? Yes, she called it that," answered the man with the white face. "There was some story--but that--"

He put his hand to his forehead again. "No," he said, "I forget that story."

"Well, that is the first thing I remember, the first dream I had, that little shaded room and the beautiful air and sky and that dear lady of mine, with her shining arms and her graceful robe, and how we sat and talked in half whispers to one another. We talked in whispers not because there was any one to hear, but because there was still such a freshness of mind between us that our thoughts were a little frightened, I think, to find themselves at last in words. And so they went softly.

"Presently we were hungry and we went from our apartment, going by a strange passage with a moving floor, until we came to the great breakfast room--there was a fountain and music. A pleasant and joyful place it was, with its sunlight and splashing, and the murmur of plucked strings. And we sat and ate and smiled at one another, and I would not heed a man who was watching me from a table near by.

"And afterwards we went on to the dancing-hall. But I cannot

describe that hall. The place was enormous--larger than any building you have ever seen--and in one place there was the old gate of Capri, caught into the wall of a gallery high overhead. Light girders, stems and threads of gold, burst from the pillars like fountains, streamed like an Aurora across the roof and interlaced, like--like conjuring tricks. All about the great circle for the dancers there were beautiful figures, strange dragons, and intricate and wonderful grotesques bearing lights. The place was inundated with artificial light that shamed the newborn day. And as we went through the throng the people turned about and looked at us, for all through the world my name and face were known, and how I had suddenly thrown up pride and struggle to come to this place. And they looked also at the lady beside me, though half the story of how at last she had come to me was unknown or mistold. And few of the men who were there, I know, but judged me a happy man, in spite of all the shame and dishonour that had come upon my name.

"The air was full of music, full of harmonious scents, full of the rhythm of beautiful motions. Thousands of beautiful people swarmed about the hall, crowded the galleries, sat in a myriad recesses; they were dressed in splendid colours and crowned with flowers; thousands danced about the great circle beneath the white images of the ancient gods, and glorious processions of youths and maidens came and went. We two danced, not the dreary monotones of your days--of this time, I mean--but dances that were beautiful, intoxicating. And even now I can see my lady dancing--dancing joyously. She danced, you know, with a serious face; she danced with a serious dignity, and yet she was smiling at me and caressing me--smiling and caressing with her eyes.

"The music was different," he murmured. "It went--I cannot describe it; but it was infinitely richer and more varied than any music that has ever come to me awake.

"And then--it was when we had done dancing--a man came to speak to me. He was a lean, resolute man, very soberly clad for that place, and already I had marked his face watching me in the breakfasting hall, and afterwards as we went along the passage I had avoided his eye. But now, as we sat in a little alcove, smiling at the pleasure of all the people who went to and fro across the shining floor, he came and touched me, and spoke to me so that I was forced to listen. And he asked that he might speak to me for a little time apart.

"'No,' I said. 'I have no secrets from this lady. What do you want to tell me?'

"He said it was a trivial matter, or at least a dry matter, for a lady to hear.

"'Perhaps for me to hear,' said I.

"He glanced at her, as though almost he would appeal to her. Then he asked me suddenly if I had heard of a great and avenging declaration that Evesham had made? Now, Evesham had always before been the man next to myself in the leadership of that great party in the north. He was a forcible, hard, and tactless man, and only I had been able to control and soften him. It was on his account even more than my own, I think, that the others had been so dismayed at my retreat. So this question about what he had done reawakened my old interest in the life I had put aside just for a moment.

"'I have taken no heed of any news for many days,' I said. 'What has Evesham been saying?'

"And with that the man began, nothing loth, and I must confess even I was struck by Evesham's reckless folly in the wild and threatening words he had used. And this messenger they had sent to

me not only told me of Evesham's speech, but went on to ask counsel and to point out what need they had of me. While he talked, my lady sat a little forward and watched his face and mine.

"My old habits of scheming and organising reasserted themselves. I could even see myself suddenly returning to the north, and all the dramatic effect of it. All that this man said witnessed to the disorder of the party indeed, but not to its damage. I should go back stronger than I had come. And then I thought of my lady. You see--how can I tell you? There were certain peculiarities of our relationship--as things are I need not tell you about that--which would render her presence with me impossible. I should have had to leave her; indeed, I should have had to renounce her clearly and openly, if I was to do all that I could do in the north. And the man knew that, even as he talked to her and me, knew it as well as she did, that my steps to duty were--first, separation, then abandonment. At the touch of that thought my dream of a return was shattered. I turned on the man suddenly, as he was imagining his eloquence was gaining ground with me.

"What have I to do with these things now?" I said. 'I have done with them. Do you think I am coquetting with your people in coming here?'

"No,' he said. 'But--'

"Why cannot you leave me alone. I have done with these things. I have ceased to be anything but a private man.'

"Yes,' he answered. 'But have you thought?--this talk of war, these reckless challenges, these wild aggressions--'

"I stood up.

"No,' I cried. 'I won't hear you. I took count of all those things, I weighed them--and I have come away.'

"He seemed to consider the possibility of persistence. He looked from me to where the lady sat regarding us.

"War,' he said, as if he were speaking to himself, and then turned slowly from me and walked away.

"I stood, caught in the whirl of thoughts his appeal had set going.

"I heard my lady's voice.

"Dear,' she said; 'but if they had need of you--'

"She did not finish her sentence, she let it rest there. I turned to her sweet face, and the balance of my mood swayed and reeled.

"They want me only to do the thing they dare not do themselves,' I said. 'If they distrust Evesham they must settle with him themselves.'

"She looked at me doubtfully.

"But war--' she said.

"I saw a doubt on her face that I had seen before, a doubt of herself and me, the first shadow of the discovery that, seen strongly and completely, must drive us apart for ever.

"Now, I was an older mind than hers, and I could sway her to this belief or that.

"My dear one,' I said, 'you must not trouble over these things. There will be no war. Certainly there will be no war. The age of wars is past. Trust me to know the justice of this case. They have no right upon me, dearest, and no one has a right upon me. I have been free to choose my life, and I have chosen this.'

"But war--,' she said.

"I sat down beside her. I put an arm behind her and took her hand in mine. I set myself to drive that doubt away--I set myself to fill her mind with pleasant things again. I lied to her, and in lying to her I lied also to myself. And she was only too ready to believe me, only too ready to forget.

"Very soon the shadow had gone again, and we were hastening to our bathing-place in the Grotta del Bovo Marino, where it was our custom to bathe every day. We swam and splashed one another, and in that buoyant water I seemed to become something lighter and stronger than a man. And at last we came out dripping and rejoicing and raced among the rocks. And then I put on a dry bathing-dress, and we sat to bask in the sun, and presently I nodded, resting my head against her knee, and she put her hand upon my hair and stroked it softly and I dozed. And behold! as it were with the snapping of the string of a violin, I was awakening, and I was in my own bed in Liverpool, in the life of to-day.

"Only for a time I could not believe that all these vivid moments had been no more than the substance of a dream.

"In truth, I could not believe it a dream for all the sobering reality of things about me. I bathed and dressed as it were by habit, and as I shaved I argued why I of all men should leave the woman I loved to go back to fantastic politics in the hard and strenuous north. Even if Evesham did force the world back to war,

what was that to me? I was a man with the heart of a man, and why should I feel the responsibility of a deity for the way the world might go?

"You know that is not quite the way I think about affairs, about my real affairs. I am a solicitor, you know, with a point of view.

"The vision was so real, you must understand, so utterly unlike a dream that I kept perpetually recalling little irrelevant details; even the ornament of the book-cover that lay on my wife's sewing-machine in the breakfast-room recalled with the utmost vividness the gilt line that ran about the seat in the alcove where I had talked with the messenger from my deserted party. Have you ever heard of a dream that had a quality like that?"

"Like--?"

"So that afterwards you remembered little details you had forgotten."

I thought. I had never noticed the point before, but he was right.

"Never," I said. "That is what you never seem to do with dreams."

"No," he answered. "But that is just what I did. I am a solicitor, you must understand, in Liverpool, and I could not help wondering what the clients and business people I found myself talking to in my office would think if I told them suddenly I was in love with a girl who would be born a couple of hundred years or so hence, and worried about the politics of my great-great-great-grandchildren. I was chiefly busy that day negotiating a ninety-nine-year building lease. It was a private builder in a

hurry, and we wanted to tie him in every possible way. I had an interview with him, and he showed a certain want of temper that sent me to bed still irritated. That night I had no dream. Nor did I dream the next night, at least, to remember.

"Something of that intense reality of conviction vanished. I began to feel sure it was a dream. And then it came again.

"When the dream came again, nearly four days later, it was very different. I think it certain that four days had also elapsed in the dream. Many things had happened in the north, and the shadow of them was back again between us, and this time it was not so easily dispelled. I began I know with moody musings. Why, in spite of all, should I go back, go back for all the rest of my days to toil and stress, insults and perpetual dissatisfaction, simply to save hundreds of millions of common people, whom I did not love, whom too often I could do no other than despise, from the stress and anguish of war and infinite misrule? And after all I might fail. They all sought their own narrow ends, and why should not I--why should not I also live as a man? And out of such thoughts her voice summoned me, and I lifted my eyes.

I found myself awake and walking. We had come out above the Pleasure City, we were near the summit of Monte Solaro and looking towards the bay. It was the late afternoon and very clear. Far away to the left Ischia hung in a golden haze between sea and sky, and Naples was coldly white against the hills, and before us was Vesuvius with a tall and slender streamer feathering at last towards the south, and the ruins of Torre dell' Annunziata and Castellammare glittering and near."

I interrupted suddenly: "You have been to Capri, of course?"

"Only in this dream," he said, "only in this dream. All across the bay beyond Sorrento were the floating palaces of the

Pleasure City moored and chained. And northward were the broad floating stages that received the aeroplanes. Aeroplanes fell out of the sky every afternoon, each bringing its thousands of pleasure-seekers from the uttermost parts of the earth to Capri and its delights. All these things, I say, stretched below.

"But we noticed them only incidentally because of an unusual sight that evening had to show. Five war aeroplanes that had long slumbered useless in the distant arsenals of the Rhinemouth were manoeuvring now in the eastward sky. Evesham had astonished the world by producing them and others, and sending them to circle here and there. It was the threat material in the great game of bluff he was playing, and it had taken even me by surprise. He was one of those incredibly stupid energetic people who seem sent by heaven to create disasters. His energy to the first glance seemed so wonderfully like capacity! But he had no imagination, no invention, only a stupid, vast, driving force of will, and a mad faith in his stupid idiot 'luck' to pull him through. I remember how we stood upon the headland watching the squadron circling far away, and how I weighed the full meaning of the sight, seeing clearly the way things must go. And then even it was not too late.

I might have gone back, I think, and saved the world. The people of the north would follow me, I knew, granted only that in one thing I respected their moral standards. The east and south would trust me as they would trust no other northern man. And I knew I had only to put it to her and she would have let me go
Not because she did not love me!

"Only I did not want to go; my will was all the other way about. I had so newly thrown off the incubus of responsibility: I was still so fresh a renegade from duty that the daylight clearness of what I ought to do had no power at all to touch my will. My will was to live, to gather pleasures and make my dear lady happy. But though this sense of vast neglected duties had no power to draw

me, it could make me silent and preoccupied, it robbed the days I had spent of half their brightness and roused me into dark meditations in the silence of the night. And as I stood and watched Evesham's aeroplanes sweep to and fro--those birds of infinite ill omen--she stood beside me watching me, perceiving the trouble indeed, but not perceiving it clearly--her eyes questioning my face, her expression shaded with perplexity. Her face was gray because the sunset was fading out of the sky. It was no fault of hers that she held me. She had asked me to go from her, and again in the night time and with tears she had asked me to go.

"At last it was the sense of her that roused me from my mood. I turned upon her suddenly and challenged her to race down the mountain slopes. 'No,' she said, as if I had jarred with her gravity, but I was resolved to end that gravity, and make her run--no one can be very gray and sad who is out of breath--and when she stumbled I ran with my hand beneath her arm. We ran down past a couple of men, who turned back staring in astonishment at my behaviour--they must have recognised my face. And half way down the slope came a tumult in the air, clang-clank, clang-clank, and we stopped, and presently over the hill-crest those war things came flying one behind the other."

The man seemed hesitating on the verge of a description.

"What were they like?" I asked.

"They had never fought," he said. "They were just like our ironclads are nowadays; they had never fought. No one knew what they might do, with excited men inside them; few even cared to speculate. They were great driving things shaped like spear-heads without a shaft, with a propeller in the place of the shaft."

"Steel?"

"Not steel."

"Aluminum?"

"No, no, nothing of that sort. An alloy that was very common--as common as brass, for example. It was called--let me see--" He squeezed his forehead with the fingers of one hand. "I am forgetting everything," he said.

"And they carried guns?"

"Little guns, firing high explosive shells. They fired the guns backwards, out of the base of the leaf, so to speak, and rammed with the beak. That was the theory, you know, but they had never been fought. No one could tell exactly what was going to happen. And meanwhile I suppose it was very fine to go whirling through the air like a flight of young swallows, swift and easy. I guess the captains tried not to think too clearly what the real thing would be like. And these flying war machines, you know, were only one sort of the endless war contrivances that had been invented and had fallen into abeyance during the long peace. There were all sorts of these things that people were routing out and refurbishing up; infernal things, silly things; things that had never been tried; big engines, terrible explosives, great guns. You know the silly way of these ingenious sort of men who make these things; they turn 'em out as beavers build dams, and with no more sense of the rivers they're going to divert and the lands they're going to flood!

"As we went down the winding stepway to our hotel again, in the twilight, I foresaw it all: I saw how clearly and inevitably things were driving for war in Evesham's silly, violent hands, and I had some inkling of what war was bound to be under these new conditions. And even then, though I knew it was drawing near the limit of my opportunity, I could find no will to go back."

He sighed.

"That was my last chance.

"We didn't go into the city until the sky was full of stars, so we walked out upon the high terrace, to and fro, and--she counselled me to go back.

"My dearest,' she said, and her sweet face looked up to me, 'this is Death. This life you lead is Death. Go back to them, go back to your duty--'

"She began to weep, saying, between her sobs, and clinging to my arm as she said it, 'Go back--Go back.'

"Then suddenly she fell mute, and, glancing down at her face, I read in an instant the thing she had thought to do. It was one of those moments when one sees.

"No!' I said.

"No?' she asked, in surprise and I think a little fearful at the answer to her thought.

"Nothing,' I said, 'shall send me back. Nothing! I have chosen. Love, I have chosen, and the world must go. Whatever happens I will live this life--I will live for you! It--nothing shall turn me aside; nothing, my dear one. Even if you died--even if you died--'

"Yes?' she murmured, softly.

"Then--I also would die.'

"And before she could speak again I began to talk, talking eloquently--as I could do in that life--talking to exalt love, to make the life we were living seem heroic and glorious; and the thing I was deserting something hard and enormously ignoble that it was a fine thing to set aside. I bent all my mind to throw that glamour upon it, seeking not only to convert her but myself to that. We talked, and she clung to me, torn too between all that she deemed noble and all that she knew was sweet. And at last I did make it heroic, made all the thickening disaster of the world only a sort of glorious setting to our unparalleled love, and we two poor foolish souls strutted there at last, clad in that splendid delusion, drunken rather with that glorious delusion, under the still stars.

"And so my moment passed.

"It was my last chance. Even as we went to and fro there, the leaders of the south and east were gathering their resolve, and the hot answer that shattered Evesham's bluffing for ever, took shape and waited. And, all over Asia, and the ocean, and the South, the air and the wires were throbbing with their warnings to prepare --prepare.

"No one living, you know, knew what war was; no one could imagine, with all these new inventions, what horror war might bring. I believe most people still believed it would be a matter of bright uniforms and shouting charges and triumphs and flags and bands--in a time when half the world drew its food supply from regions ten thousand miles away--"

The man with the white face paused. I glanced at him, and his face was intent on the floor of the carriage. A little railway station, a string of loaded trucks, a signal-box, and the back of a cottage, shot by the carriage window, and a bridge passed with a clap of noise, echoing the tumult of the train.

"After that," he said, "I dreamt often. For three weeks of nights that dream was my life. And the worst of it was there were nights when I could not dream, when I lay tossing on a bed in this accursed life; and there--somewhere lost to me--things were happening--momentous, terrible things . . . I lived at nights--my days, my waking days, this life I am living now, became a faded, far-away dream, a drab setting, the cover of the book."

He thought.

"I could tell you all, tell you every little thing in the dream, but as to what I did in the daytime--no. I could not tell--I do not remember. My memory--my memory has gone. The business of life slips from me--"

He leant forward, and pressed his hands upon his eyes. For a long time he said nothing.

"And then?" said I.

"The war burst like a hurricane."

He stared before him at unspeakable things.

"And then?" I urged again.

"One touch of unreality," he said, in the low tone of a man who speaks to himself," and they would have been nightmares. But they were not nightmares--they were not nightmares. No!"

He was silent for so long that it dawned upon me that there was a danger of losing the rest of the story. But he went on talking again in the same tone of questioning self-communion.

"What was there to do but flight? I had not thought the war would touch Capri--I had seemed to see Capri as being out of it all, as the contrast to it all; but two nights after the whole place was shouting and bawling, every woman almost and every other man wore a badge--Evesham's badge--and there was no music but a jangling war-song over and over again, and everywhere men enlisting, and in the dancing halls they were drilling. The whole island was awchirl with rumours; it was said, again and again, that fighting had begun. I had not expected this. I had seen so little of the life of pleasure that I had failed to reckon with this violence of the amateurs. And as for me, I was out of it. I was like the man who might have prevented the firing of a magazine. The time had gone. I was no one; the vainest stripling with a badge counted for more than I. The crowd jostled us and bawled in our ears; that accursed song deafened us; a woman shrieked at my lady because no badge was on her, and we two went back to our own place again, ruffled and insulted--my lady white and silent, and I aquiver with rage. So furious was I, I could have quarrelled with her if I could have found one shade of accusation in her eyes.

"All my magnificence had gone from me. I walked up and down our rock cell, and outside was the darkling sea and a light to the southward that flared and passed and came again.

"'We must get out of this place,' I said over and over. 'I have made my choice, and I will have no hand in these troubles. I will have nothing of this war. We have taken our lives out of all these things. This is no refuge for us. Let us go.'

"And the next day we were already in flight from the war that covered the world.

"And all the rest was Flight--all the rest was Flight."

He mused darkly.

"How much was there of it?"

He made no answer.

"How many days?"

His face was white and drawn and his hands were clenched. He took no heed of my curiosity.

I tried to draw him back to his story with questions.

"Where did you go?" I said.

"When?"

"When you left Capri."

"South-west," he said, and glanced at me for a second. "We went in a boat."

"But I should have thought an aeroplane?"

"They had been seized."

I questioned him no more. Presently I thought he was beginning again. He broke out in an argumentative monotone:

"But why should it be? If, indeed, this battle, this slaughter and stress is life, why have we this craving for pleasure and beauty? If there is no refuge, if there is no place of peace, and if all our dreams of quiet places are a folly and a snare, why have we such dreams? Surely it was no ignoble cravings, no base intentions, had brought us to this; it was Love had isolated us. Love had come to me with her eyes and robed in her beauty, more

glorious than all else in life, in the very shape and colour of life, and summoned me away. I had silenced all the voices, I had answered all the questions--I had come to her. And suddenly there was nothing but War and Death!"

I had an inspiration. "After all," I said, "it could have been only a dream."

"A dream!" he cried, flaming upon me, "a dream--when, even now--"

For the first time he became animated. A faint flush crept into his cheek. He raised his open hand and clenched it, and dropped it to his knee. He spoke, looking away from me, and for all the rest of the time he looked away. "We are but phantoms!" he said, "and the phantoms of phantoms, desires like cloud-shadows and wills of straw that eddy in the wind; the days pass, use and wont carry us through as a train carries the shadow of its lights--so be it! But one thing is real and certain, one thing is no dream-stuff, but eternal and enduring. It is the centre of my life, and all other things about it are subordinate or altogether vain. I loved her, that woman of a dream. And she and I are dead together!"

"A dream! How can it be a dream, when it drenched a living life with unappeasable sorrow, when it makes all that I have lived for and cared for, worthless and unmeaning?"

"Until that very moment when she was killed I believed we had still a chance of getting away," he said. "All through the night and morning that we sailed across the sea from Capri to Salerno, we talked of escape. We were full of hope, and it clung about us to the end, hope for the life together we should lead, out of it all, out of the battle and struggle, the wild and empty passions, the empty arbitrary 'thou shalt' and 'thou shalt not' of the world. We were uplifted, as though our quest was a holy thing, as though love

for another was a mission

"Even when from our boat we saw the fair face of that great rock Capri--already scarred and gashed by the gun emplacements and hiding-places that were to make it a fastness--we reckoned nothing of the imminent slaughter, though the fury of preparation hung about in the puffs and clouds of dust at a hundred points amidst the gray; but, indeed, I made a text of that and talked. There, you know, was the rock, still beautiful for all its scars, with its countless windows and arches and ways, tier upon tier, for a thousand feet, a vast carving of gray, broken by vine-clad terraces, and lemon and orange groves, and masses of agave and prickly pear, and puffs of almond blossom. And out under the archway that is built over the Piccola Marina other boats were coming; and as we came round the cape and within sight of the mainland, another little string of boats came into view, driving before the wind towards the south-west. In a little while a multitude had come out, the remoter just little specks of ultramarine in the shadow of the eastward cliff.

"It is love and reason,' I said, 'fleeing from all this madness of war.'

"And though we presently saw a squadron of aeroplanes flying across the southern sky we did not heed it. There it was--a line of little dots in the sky--and then more, dotting the south-eastern horizon, and then still more, until all that quarter of the sky was stippled with blue specks. Now they were all thin little strokes of blue, and now one and now a multitude would heel and catch the sun and become short flashes of light. They came, rising and falling and growing larger, like some huge flight of gulls or rooks or such-like birds, moving with a marvellous uniformity, and ever as they drew nearer they spread over a greater width of sky. The southward wind flung itself in an arrow-headed cloud athwart the sun. And then suddenly they swept round to the eastward and

streamed eastward, growing smaller and smaller and clearer and clearer again until they vanished from the sky. And after that we noted to the northward and very high Evesham's fighting machines hanging high over Naples like an evening swarm of gnats.

"It seemed to have no more to do with us than a flight of birds.

"Even the mutter of guns far away in the south-east seemed to us to signify nothing . . .

"Each day, each dream after that, we were still exalted, still seeking that refuge where we might live and love. Fatigue had come upon us, pain and many distresses. For though we were dusty and stained by our toilsome tramping, and half starved and with the horror of the dead men we had seen and the flight of the peasants--for very soon a gust of fighting swept up the peninsula--with these things haunting our minds it still resulted only in a deepening resolution to escape. Oh, but she was brave and patient! She who had never faced hardship and exposure had courage for herself and me. We went to and fro seeking an outlet, over a country all commandeered and ransacked by the gathering hosts of war. Always we went on foot. At first there were other fugitives, but we did not mingle with them. Some escaped northward, some were caught in the torrent of peasantry that swept along the main roads; many gave themselves into the hands of the soldiery and were sent northward. Many of the men were impressed. But we kept away from these things; we had brought no money to bribe a passage north, and I feared for my lady at the hands of these conscript crowds. We had landed at Salerno, and we had been turned back from Cava, and we had tried to cross towards Taranto by a pass over Mount Alburno, but we had been driven back for want of food, and so we had come down among the marshes by Paestum, where those great temples stand alone. I had some vague idea that by Paestum it might be possible to find a boat or something, and take

once more to sea. And there it was the battle overtook us.

"A sort of soul-blindness had me. Plainly I could see that we were being hemmed in; that the great net of that giant Warfare had us in its toils. Many times we had seen the levies that had come down from the north going to and fro, and had come upon them in the distance amidst the mountains making ways for the ammunition and preparing the mounting of the guns. Once we fancied they had fired at us, taking us for spies--at any rate a shot had gone shuddering over us. Several times we had hidden in woods from hovering aeroplanes.

"But all these things do not matter now, these nights of flight and pain . . . We were in an open place near those great temples at Paestum, at last, on a blank stony place dotted with spiky bushes, empty and desolate and so flat that a grove of eucalyptus far away showed to the feet of its stems. How I can see it! My lady was sitting down under a bush resting a little, for she was very weak and weary, and I was standing up watching to see if I could tell the distance of the firing that came and went. They were still, you know, fighting far from each other, with those terrible new weapons that had never before been used: guns that would carry beyond sight, and aeroplanes that would do--What they would do no man could foretell.

"I knew that we were between the two armies, and that they drew together. I knew we were in danger, and that we could not stop there and rest!

"Though all these things were in my mind, they were in the background. They seemed to be affairs beyond our concern. Chiefly, I was thinking of my lady. An aching distress filled me. For the first time she had owned herself beaten and had fallen a-weeping. Behind me I could hear her sobbing, but I would not turn round to her because I knew she had need of weeping, and had

held herself so far and so long for me. It was well, I thought, that she would weep and rest and then we would toil on again, for I had no inkling of the thing that hung so near. Even now I can see her as she sat there, her lovely hair upon her shoulder, can mark again the deepening hollow of her cheek.

"If we had parted,' she said, 'if I had let you go.'

"No,' said I.' Even now, I do not repent. I will not repent; I made my choice, and I will hold on to the end.'

"And then--

"Overhead in the sky flashed something and burst, and all about us I heard the bullets making a noise like a handful of peas suddenly thrown. They chipped the stones about us, and whirled fragments from the bricks and passed"

He put his hand to his mouth, and then moistened his lips.

"At the flash I had turned about . . .

"You know--she stood up--

"She stood up, you know, and moved a step towards me--as though she wanted to reach me--

"And she had been shot through the heart."

He stopped and stared at me. I felt all that foolish incapacity an Englishman feels on such occasions. I met his eyes for a moment, and then stared out of the window. For a long space we kept silence. When at last I looked at him he was sitting back in his corner, his arms folded, and his teeth gnawing at his knuckles.

He bit his nail suddenly, and stared at it.

"I carried her," he said, "towards the temples, in my arms--as though it mattered. I don't know why. They seemed a sort of sanctuary, you know, they had lasted so long, I suppose.

"She must have died almost instantly. Only--I talked to her all the way."

Silence again.

"I have seen those temples," I said abruptly, and indeed he had brought those still, sunlit arcades of worn sandstone very vividly before me.

"It was the brown one, the big brown one. I sat down on a fallen pillar and held her in my arms . . . Silent after the first babble was over. And after a little while the lizards came out and ran about again, as though nothing unusual was going on, as though nothing had changed . . . It was tremendously still there, the sun high and the shadows still; even the shadows of the weeds upon the entablature were still--in spite of the thudding and banging that went all about the sky.

"I seem to remember that the aeroplanes came up out of the south, and that the battle went away to the west. One aeroplane was struck, and overset and fell. I remember that--though it didn't interest me in the least. It didn't seem to signify. It was like a wounded gull, you know--flapping for a time in the water. I could see it down the aisle of the temple--a black thing in the bright blue water.

"Three or four times shells burst about the beach, and then that ceased. Each time that happened all the lizards scuttled in

and hid for a space. That was all the mischief done, except that once a stray bullet gashed the stone hard by--made just a fresh bright surface.

"As the shadows grew longer, the stillness seemed greater.

"The curious thing," he remarked, with the manner of a man who makes a trivial conversation, "is that I didn't THINK--at all. I sat with her in my arms amidst the stones--in a sort of lethargy--stagnant.

"And I don't remember waking up. I don't remember dressing that day. I know I found myself in my office, with my letters all slit open in front of me, and how I was struck by the absurdity of being there, seeing that in reality I was sitting, stunned, in that Paestum Temple with a dead woman in my arms. I read my letters like a machine. I have forgotten what they were about."

He stopped, and there was a long silence.

Suddenly I perceived that we were running down the incline from Chalk Farm to Euston. I started at this passing of time. I turned on him with a brutal question, with the tone of "Now or never."

"And did you dream again?"

"Yes."

He seemed to force himself to finish. His voice was very low.

"Once more, and as it were only for a few instants. I seemed to have suddenly awakened out of a great apathy, to have risen into a sitting position, and the body lay there on the stones beside me.

A gaunt body. Not her, you know. So soon--it was not her

"I may have heard voices. I do not know. Only I knew clearly that men were coming into the solitude and that that was a last outrage.

"I stood up and walked through the temple, and then there came into sight--first one man with a yellow face, dressed in a uniform of dirty white, trimmed with blue, and then several, climbing to the crest of the old wall of the vanished city, and crouching there. They were little bright figures in the sunlight, and there they hung, weapon in hand, peering cautiously before them.

"And further away I saw others and then more at another point in the wall. It was a long lax line of men in open order.

"Presently the man I had first seen stood up and shouted a command, and his men came tumbling down the wall and into the high weeds towards the temple. He scrambled down with them and led them. He came facing towards me, and when he saw me he stopped.

"At first I had watched these men with a mere curiosity, but when I had seen they meant to come to the temple I was moved to forbid them. I shouted to the officer.

"'You must not come here,' I cried, 'I am here. I am here with my dead.'

"He stared, and then shouted a question back to me in some unknown tongue.

"I repeated what I had said.

"He shouted again, and I folded my arms and stood still. Presently he spoke to his men and came forward. He carried a drawn

sword.

"I signed to him to keep away, but he continued to advance. I told him again very patiently and clearly: 'You must not come here. These are old temples and I am here with my dead.'

"Presently he was so close I could see his face clearly. It was a narrow face, with dull gray eyes, and a black moustache. He had a scar on his upper lip, and he was dirty and unshaven. He kept shouting unintelligible things, questions, perhaps, at me.

"I know now that he was afraid of me, but at the time that did not occur to me. As I tried to explain to him, he interrupted me in imperious tones, bidding me, I suppose, stand aside.

"He made to go past me, and I caught hold of him.

"I saw his face change at my grip.

"'You fool,' I cried. 'Don't you know? She is dead!'

"He started back. He looked at me with cruel eyes. I saw a sort of exultant resolve leap into them--delight. Then, suddenly, with a scowl, he swept his sword back--SO--and thrust."

He stopped abruptly.

I became aware of a change in the rhythm of the train. The brakes lifted their voices and the carriage jarred and jerked. This present world insisted upon itself, became clamorous. I saw through the steamy window huge electric lights glaring down from tall masts upon a fog, saw rows of stationary empty carriages passing by, and then a signal-box hoisting its constellation of green and red into the murky London twilight, marched after them. I looked again at his drawn features.

"He ran me through the heart. It was with a sort of astonishment--no fear, no pain--but just amazement, that I felt it pierce me, felt the sword drive home into my body. It didn't hurt, you know. It didn't hurt at all."

The yellow platform lights came into the field of view, passing first rapidly, then slowly, and at last stopping with a jerk. Dim shapes of men passed to and fro without.

"Euston!" cried a voice.

"Do you mean--?"

"There was no pain, no sting or smart. Amazement and then darkness sweeping over everything. The hot, brutal face before me, the face of the man who had killed me, seemed to recede. It swept out of existence--"

"Euston!" clamoured the voices outside; "Euston!"

The carriage door opened admitting a flood of sound, and a porter stood regarding us. The sounds of doors slamming, and the hoof-clatter of cab-horses, and behind these things the featureless remote roar of the London cobble-stones, came to my ears. A truckload of lighted lamps blazed along the platform.

"A darkness, a flood of darkness that opened and spread and blotted out all things."

"Any luggage, sir?" said the porter.

"And that was the end?" I asked.

He seemed to hesitate. Then, almost inaudibly, he answered, "NO."

"You mean?"

"I couldn't get to her. She was there on the other side of the temple--
And then--"

"Yes," I insisted. "Yes?"

"Nightmares," he cried; "nightmares indeed! My God! Great
birds that fought and tore."

THE CONE

The night was hot and overcast, the sky red, rimmed with the lingering sunset of mid-summer. They sat at the open window, trying to fancy the air was fresher there. The trees and shrubs of the garden stood stiff and dark; beyond in the roadway a gas-lamp burnt, bright orange against the hazy blue of the evening. Farther were the three lights of the railway signal against the lowering sky. The man and woman spoke to one another in low tones.

"He does not suspect?" said the man, a little nervously.

"Not he," she said peevishly, as though that too irritated her. "He thinks of nothing but the works and the prices of fuel. He has no imagination, no poetry."

"None of these men of iron have," he said sententiously.

"They have no hearts."

"HE has not," she said. She turned her discontented face towards the window. The distant sound of a roaring and rushing drew nearer and grew in volume; the house quivered; one heard the metallic rattle of the tender. As the train passed, there was a glare of light above the cutting and a driving tumult of smoke; one, two, three, four, five, six, seven, eight black oblongs--eight trucks--passed across the dim grey of the embankment, and were suddenly extinguished one by one in the throat of the tunnel, which, with the last, seemed to swallow down train, smoke, and sound in one abrupt gulp.

"This country was all fresh and beautiful once," he said; "and now--it is Gehenna. Down that way--nothing but pot-banks and chimneys belching fire and dust into the face of heaven But what does it matter? An end comes, an end to all this cruelty TO-MORROW." He spoke the last word in a whisper.

"TO-MORROW," she said, speaking in a whisper too, and still staring out of the window.

"Dear!" he said, putting his hand on hers.

She turned with a start, and their eyes searched one another's. Hers softened to his gaze. "My dear one!" she said, and then: "It seems so strange --that you should have come into my life like this--to open--" She paused.

"To open?" he said.

"All this wonderful world--" she hesitated, and spoke still more softly--"this world of LOVE to me."

Then suddenly the door clicked and closed. They turned their heads, and he started violently back. In the shadow of the room stood a great shadowy figure--silent. They saw the face dimly in the half-light, with unexpressive dark patches under the penthouse brows. Every muscle in Raut's body suddenly became tense. When could the door have opened? What had he heard? Had he heard all? What had he seen? A tumult of questions.

The new-comer's voice came at last, after a pause that seemed interminable. "Well?" he said.

"I was afraid I had missed you, Horrocks," said the man at the window, gripping the window-ledge with his hand. His voice was unsteady.

The clumsy figure of Horrocks came forward out of the shadow. He made no answer to Raut's remark. For a moment he stood above them.

The woman's heart was cold within her. "I told Mr. Raut it was just possible you might come back," she said, in a voice that never quivered.

Horrocks, still silent, sat down abruptly in the chair by her little work-table. His big hands were clenched; one saw now the fire of his eyes under the shadow of his brows. He was trying to get his breath. His eyes went from the woman he had trusted to the friend he had trusted, and then back to the woman.

By this time and for the moment all three half understood one another. Yet none dared say a word to ease the pent-up things that choked them.

It was the husband's voice that broke the silence at last.

"You wanted to see me?" he said to Raut.

Raut started as he spoke. "I came to see you," he said, resolved to lie to the last.

"Yes," said Horrocks.

"You promised," said Raut, "to show me some fine effects of moonlight and smoke."

"I promised to show you some fine effects of moonlight and smoke," repeated Horrocks in a colourless voice.

"And I thought I might catch you to-night before you went down to the works," proceeded Raut, "and come with you."

There was another pause. Did the man mean to take the thing coolly? Did he after all know? How long had he been in the room? Yet even at the moment when they heard the door, their attitudes .

. . . Horrocks glanced at the profile of the woman, shadowy pallid in the half-light. Then he glanced at Raut, and seemed to recover himself suddenly. "Of course," he said, "I promised to show you the works under their proper dramatic conditions. It's odd how I could have forgotten."

"If I am troubling you--" began Raut.

Horrocks started again. A new light had suddenly come into the sultry gloom of his eyes. "Not in the least," he said.

"Have you been telling Mr. Raut of all these contrasts of flame and shadow you think so splendid?" said the woman, turning now to her husband for the first time, her confidence creeping back again, her voice just one half-note too high. "That dreadful theory of yours that machinery is beautiful, and everything else in the world ugly. I thought he would not spare you, Mr. Raut. It's his great theory, his one discovery in art."

"I am slow to make discoveries," said Horrocks grimly, damping her suddenly. "But what I discover" He stopped.

"Well?" she said.

"Nothing;" and suddenly he rose to his feet.

"I promised to show you the works," he said to Raut, and put his big, clumsy hand on his friend's shoulder. "And you are ready to go?"

"Quite," said Raut, and stood up also.

There was another pause. Each of them peered through the indistinctness of the dusk at the other two. Horrocks' hand still rested on Raut's shoulder. Raut half fancied still that the

incident was trivial after all. But Mrs. Horrocks knew her husband better, knew that grim quiet in his voice, and the confusion in her mind took a vague shape of physical evil. "Very well", said Horrocks, and, dropping his hand, turned towards the door.

"My hat?" Raut looked round in the half-light.

"That's my work-basket," said Mrs. Horrocks, with a gust of hysterical laughter. Their hands came together on the back of the chair. "Here it is!" he said. She had an impulse to warn him in an undertone, but she could not frame a word. "Don't go!" and "Beware of him!" struggled in her mind, and the swift moment passed.

"Got it?" said Horrocks, standing with the door half open.

Raut stepped towards him. "Better say good-bye to Mrs. Horrocks," said the ironmaster, even more grimly quiet in his tone than before.

Raut started and turned. "Good-evening, Mrs. Horrocks," he said, and their hands touched.

Horrocks held the door open with a ceremonial politeness unusual in him towards men. Raut went out, and then, after a wordless look at her, her husband followed. She stood motionless while Raut's light footfall and her husband's heavy tread, like bass and treble, passed down the passage together. The front door slammed heavily. She went to the window, moving slowly, and stood watching--leaning forward. The two men appeared for a moment at the gateway in the road, passed under the street lamp, and were hidden by the black masses of the shrubbery. The lamp-light fell for a moment on their faces, showing only unmeaning pale patches, telling nothing of what she still feared, and doubted, and craved vainly to know. Then she sank down into a crouching attitude in

the big arm-chair, her eyes wide open and staring out at the red lights from the furnaces that flickered in the sky. An hour after she was still there, her attitude scarcely changed.

The oppressive stillness of the evening weighed heavily upon Raut. They went side by side down the road in silence, and in silence turned into the cinder-made by-way that presently opened out the prospect of the valley.

A blue haze, half dust, half mist, touched the long valley with mystery. Beyond were Hanley and Etruria, grey and dark masses, outlined thinly by the rare golden dots of the street lamps, and here and there a gaslit window, or the yellow glare of some late-working factory or crowded public-house. Out of the masses, clear and slender against the evening sky, rose a multitude of tall chimneys, many of them reeking, a few smokeless during a season of "play." Here and there a pallid patch and ghostly stunted beehive shapes showed the position of a pot-bank, or a wheel, black and sharp against the hot lower sky, marked some colliery where they raise the iridescent coal of the place. Nearer at hand was the broad stretch of railway, and half invisible trains shunted--a steady puffing and rumbling, with every run a ringing concussion and a rhythmic series of impacts, and a passage of intermittent puffs of white steam across the further view. And to the left, between the railway and the dark mass of the low hill beyond, dominating the whole view, colossal, inky-black, and crowned with smoke and fitful flames, stood the great cylinders of the Jeddah Company Blast Furnaces, the central edifices of the big ironworks of which Horrocks was the manager. They stood heavy and threatening, full of an incessant turmoil of flames and seething molten iron, and about the feet of them rattled the rolling-mills, and the steam hammer beat heavily and splashed the white iron sparks hither and thither. Even as they looked, a truckful of fuel was shot into one of the giants, and the red flames gleamed out, and a confusion of smoke and black dust came boiling upwards

towards the sky.

"Certainly you get some fine effects of colour with your furnaces," said Raut, breaking a silence that had become apprehensive.

Horrocks grunted. He stood with his hands in his pockets, frowning down at the dim steaming railway and the busy ironworks beyond, frowning as if he were thinking out some knotty problem.

Raut glanced at him and away again. "At present your moonlight effect is hardly ripe," he continued, looking upward. "The moon is still smothered by the vestiges of daylight."

Horrocks stared at him with the expression of a man who has suddenly awakened. "Vestiges of daylight? . . . Of course, of course." He too looked up at the moon, pale still in the midsummer sky. "Come along," he said suddenly, and, gripping Raut's arm in his hand, made a move towards the path that dropped from them to the railway.

Raut hung back. Their eyes met and saw a thousand things in a moment that their eyes came near to say. Horrocks' hand tightened and then relaxed. He let go, and before Raut was aware of it, they were arm in arm, and walking, one unwillingly enough, down the path.

"You see the fine effect of the railway signals towards Burslem," said Horrocks, suddenly breaking into loquacity, striding fast, and tightening the grip of his elbow the while. "Little green lights and red and white lights, all against the haze. You have an eye for effect, Raut. It's a fine effect. And look at those furnaces of mine, how they rise upon us as we come down the hill. That to the right is my pet--seventy feet of him. I packed him myself, and he's boiled away cheerfully with iron in his guts

for five long years. I've a particular fancy for HIM. That line of red there--a lovely bit of warm orange you'd call it, Raut--that's the puddlers' furnaces, and there, in the hot light, three black figures--did you see the white splash of the steam-hammer then?--that's the rolling mills. Come along! Clang, clatter, how it goes rattling across the floor! Sheet tin, Raut, --amazing stuff. Glass mirrors are not in it when that stuff comes from the mill. And, squelch!--there goes the hammer again. Come along!"

He had to stop talking to catch at his breath. His arm twisted into Raut's with benumbing tightness. He had come striding down the black path towards the railway as though he was possessed.

Raut had not spoken a word, had simply hung back against Horrocks' pull with all his strength.

"I say," he said now, laughing nervously, but with an undernote of snarl in his voice, "why on earth are you nipping my arm off, Horrocks, and dragging me along like this?"

At length Horrocks released him. His manner changed again. "Nipping your arm off?" he said. "Sorry. But it's you taught me the trick of walking in that friendly way."

"You haven't learnt the refinements of it yet then," said Raut, laughing artificially again. "By Jove! I'm black and blue."

Horrocks offered no apology. They stood now near the bottom of the hill, close to the fence that bordered the railway. The ironworks had grown larger and spread out with their approach. They looked up to the blast furnaces now instead of down; the further view of Etruria and Hanley had dropped out of sight with their descent. Before them, by the stile rose a notice-board, bearing still dimly

visible, the words, "BEWARE OF THE TRAINS," half hidden by splashes of coaly mud.

"Fine effects," said Horrocks, waving his arm. "Here comes a train. The puffs of smoke, the orange glare, the round eye of light in front of it, the melodious rattle. Fine effects! But these furnaces of mine used to be finer, before we shoved cones in their throats, and saved the gas."

"How?" said Raut. "Cones?"

"Cones, my man, cones. I'll show you one nearer. The flames used to flare out of the open throats, great--what is it?--pillars of cloud by day, red and black smoke, and pillars of fire by night.

Now we run it off in pipes, and burn it to heat the blast, and the top is shut by a cone. You'll be interested in that cone."

"But every now and then," said Raut, "you get a burst of fire and smoke up there."

"The cone's not fixed, it's hung by a chain from a lever, and balanced by an equipoise. You shall see it nearer. Else, of course, there'd be no way of getting fuel into the thing. Every now and then the cone dips, and out comes the flare."

"I see," said Raut. He looked over his shoulder. "The moon gets brighter," he said.

"Come along," said Horrocks abruptly, gripping his shoulder again, and moving him suddenly towards the railway crossing. And then came one of those swift incidents, vivid, but so rapid that they leave one doubtful and reeling. Halfway across, Horrocks' hand suddenly clenched upon him like a vice, and swung him backward

and through a half-turn, so that he looked up the line. And there a chain of lamp-lit carriage-windows telescoped swiftly as it came towards them, and the red and yellow lights of an engine grew larger and larger, rushing down upon them. As he grasped what this meant, he turned his face to Horrocks, and pushed with all his strength against the arm that held him back between the rails. The struggle did not last a moment. Just as certain as it was that Horrocks held him there, so certain was it that he had been violently lugged out of danger.

"Out of the way," said Horrocks, with a gasp, as the train came rattling by, and they stood panting by the gate into the ironworks.

"I did not see it coming," said Raut, still, even in spite of his own apprehensions, trying to keep up an appearance of ordinary intercourse.

Horrocks answered with a grunt. "The cone," he said, and then, as one who recovers himself, "I thought you did not hear."

"I didn't," said Raut.

"I wouldn't have had you run over then for the world," said Horrocks.

"For a moment I lost my nerve," said Raut.

Horrocks stood for half a minute, then turned abruptly towards the ironworks again. "See how fine these great mounds of mine, these clinker-heaps, look in the night! That truck yonder, up above there! Up it goes, and out-tilts the slag. See the palpitating red stuff go sliding down the slope. As we get nearer, the heap rises up and cuts the blast furnaces. See the quiver up above the big one. Not that way! This way, between the heaps.

That goes to the puddling furnaces, but I want to show you the canal first." He came and took Raut by the elbow, and so they went along side by side. Raut answered Horrocks vaguely. What, he asked himself, had really happened on the line? Was he deluding himself with his own fancies, or had Horrocks actually held him back in the way of the train? Had he just been within an ace of being murdered?

Suppose this slouching, scowling monster DID know anything? For a minute or two then Raut was really afraid for his life, but the mood passed as he reasoned with himself. After all, Horrocks might have heard nothing. At any rate, he had pulled him out of the way in time. His odd manner might be due to the mere vague jealousy he had shown once before. He was talking now of the ash-heaps and the canal. "Eigh?" said Horrocks.

"What?" said Raut. "Rather! The haze in the moonlight. Fine!"

"Our canal," said Horrocks, stopping suddenly. "Our canal by moonlight and firelight is an immense effect. You've never seen it? Fancy that! You've spent too many of your evenings philandering up in Newcastle there. I tell you, for real florid effects--But you shall see. Boiling water . . . "

As they came out of the labyrinth of clinker-heaps and mounds of coal and ore, the noises of the rolling-mill sprang upon them suddenly, loud, near, and distinct. Three shadowy workmen went by and touched their caps to Horrocks. Their faces were vague in the darkness. Raut felt a futile impulse to address them, and before he could frame his words, they passed into the shadows. Horrocks pointed to the canal close before them now: a weird-looking place it seemed, in the blood-red reflections of the furnaces. The hot water that cooled the tuyeres came into it, some fifty yards up--a tumultuous, almost boiling affluent, and the steam rose up from

the water in silent white wisps and streaks, wrapping damply about them, an incessant succession of ghosts coming up from the black and red eddies, a white uprising that made the head swim. The shining black tower of the larger blast-furnace rose overhead out of the mist, and its tumultuous riot filled their ears. Raut kept away from the edge of the water, and watched Horrocks.

"Here it is red," said Horrocks, "blood-red vapour as red and hot as sin; but yonder there, where the moonlight falls on it, and it drives across the clinker-heaps, it is as white as death."

Raut turned his head for a moment, and then came back hastily to his watch on Horrocks. "Come along to the rolling-mills," said Horrocks. The threatening hold was not so evident that time, and Raut felt a little reassured. But all the same, what on earth did Horrocks mean about "white as death" and "red as sin?"
Coincidence, perhaps?

They went and stood behind the puddlers for a little while, and then through the rolling-mills, where amidst an incessant din the deliberate steam-hammer beat the juice out of the succulent iron, and black, half-naked Titans rushed the plastic bars, like hot sealing-wax, between the wheels. "Come on," said Horrocks in Raut's ear, and they went and peeped through the little glass hole behind the tuyeres, and saw the tumbled fire writhing in the pit of the blast-furnace. It left one eye blinded for a while. Then, with green and blue patches dancing across the dark, they went to the lift by which the trucks of ore and fuel and lime were raised to the top of the big cylinder.

And out upon the narrow rail that overhung the furnace, Raut's doubts came upon him again. Was it wise to be here? If Horrocks did know--everything! Do what he would, he could not resist a violent trembling. Right under foot was a sheer depth of seventy feet. It was a dangerous place. They pushed by a truck of fuel to

get to the railing that crowned the place. The reek of the furnace, a sulphurous vapor streaked with pungent bitterness, seemed to make the distant hillside of Hanley quiver. The moon was riding out now from among a drift of clouds, halfway up the sky above the undulating wooded outlines of Newcastle. The steaming canal ran away from below them under an indistinct bridge, and vanished into the dim haze of the flat fields towards Burslem.

"That's the cone I've been telling you of," shouted Horrocks; "and, below that, sixty feet of fire and molten metal, with the air of the blast frothing through it like gas in soda-water."

Raut gripped the hand-rail tightly, and stared down at the cone. The heat was intense. The boiling of the iron and the tumult of the blast made a thunderous accompaniment to Horrocks' voice. But the thing had to be gone through now. Perhaps, after all . . .

"In the middle," bawled Horrocks, "temperature near a thousand degrees. If YOU were dropped into it . . . flash into flame like a pinch of gunpowder in a candle. Put your hand out and feel the heat of his breath. Why, even up here I've seen the rain-water boiling off the trucks. And that cone there. It's a damned sight too hot for roasting cakes. The top side of it's three hundred degrees."

"Three hundred degrees!" said Raut.

"Three hundred centigrade, mind!" said Horrocks. "It will boil the blood out of you in no time."

"Eigh?" said Raut, and turned.

"Boil the blood out of you in . . . No, you don't!"

"Let me go!" screamed Raut. "Let go my arm!"

With one hand he clutched at the hand-rail, then with both. For a moment the two men stood swaying. Then suddenly, with a violent jerk, Horrocks had twisted him from his hold. He clutched at Horrocks and missed, his foot went back into empty air; in mid-air he twisted himself, and then cheek and shoulder and knee struck the hot cone together.

He clutched the chain by which the cone hung, and the thing sank an infinitesimal amount as he struck it. A circle of glowing red appeared about him, and a tongue of flame, released from the chaos within, flickered up towards him. An intense pain assailed him at the knees, and he could smell the singeing of his hands. He raised himself to his feet, and tried to climb up the chain, and then something struck his head. Black and shining with the moonlight, the throat of the furnace rose about him.

Horrocks, he saw, stood above him by one of the trucks of fuel on the rail. The gesticulating figure was bright and white in the moonlight, and shouting, "Fizzle, you fool! Fizzle, you hunter of women! You hot-blooded hound! Boil! boil! boil!"

Suddenly he caught up a handful of coal out of the truck, and flung it deliberately, lump after lump, at Raut.

"Horrocks!" cried Raut. "Horrocks!"

He clung crying to the chain, pulling himself up from the burning of the cone. Each missile Horrocks flung hit him. His clothes charred and glowed, and as he struggled the cone dropped, and a rush of hot suffocating gas whooped out and burned round him in a swift breath of flame.

His human likeness departed from him. When the momentary red

had passed, Horrocks saw a charred, blackened figure, its head streaked with blood, still clutching and fumbling with the chain, and writhing in agony--a cindery animal, an inhuman, monstrous creature that began a sobbing intermittent shriek.

Abruptly, at the sight, the ironmaster's anger passed. A deadly sickness came upon him. The heavy odour of burning flesh came drifting up to his nostrils. His sanity returned to him.

"God have mercy upon me!" he cried. "O God! what have I done?"

He knew the thing below him, save that it still moved and felt, was already a dead man--that the blood of the poor wretch must be boiling in his veins. An intense realisation of that agony came to his mind, and overcame every other feeling. For a moment he stood irresolute, and then, turning to the truck, he hastily tilted its contents upon the struggling thing that had once been a man. The mass fell with a thud, and went radiating over the cone. With the thud the shriek ended, and a boiling confusion of smoke, dust, and flame came rushing up towards him. As it passed, he saw the cone clear again.

Then he staggered back, and stood trembling, clinging to the rail with both hands. His lips moved, but no words came to them.

Down below was the sound of voices and running steps. The clangour of rolling in the shed ceased abruptly.

A MOONLIGHT FABLE

There was once a little man whose mother made him a beautiful suit of clothes. It was green and gold and woven so that I cannot describe how delicate and fine it was, and there was a tie of orange fluffiness that tied up under his chin. And the buttons in their newness shone like stars. He was proud and pleased by his suit beyond measure, and stood before the long looking-glass when first he put it on, so astonished and delighted with it that he could hardly turn himself away.

He wanted to wear it everywhere and show it to all sorts of people. He thought over all the places he had ever visited and all the scenes he had ever heard described, and tried to imagine what the feel of it would be if he were to go now to those scenes and places wearing his shining suit, and he wanted to go out forthwith into the long grass and the hot sunshine of the meadow wearing it. Just to wear it! But his mother told him, "No." She told him he must take great care of his suit, for never would he have another nearly so fine; he must save it and save it and only wear it on rare and great occasions. It was his wedding suit, she said. And she took his buttons and twisted them up with tissue paper for fear their bright newness should be tarnished, and she tacked little guards over the cuffs and elbows and wherever the suit was most likely to come to harm. He hated and resisted these things, but what could he do? And at last her warnings and persuasions had effect and he consented to take off his beautiful suit and fold it into its proper creases and put it away. It was almost as though he gave it up again. But he was always thinking of wearing it and of the supreme occasion when some day it might be worn without the guards, without the tissue paper on the buttons, utterly and delightfully, never caring, beautiful beyond measure.

One night when he was dreaming of it, after his habit, he dreamed he took the tissue paper from one of the buttons and found its brightness a little faded, and that distressed him mightily in his dream. He polished the poor faded button and polished it, and if anything it grew duller. He woke up and lay awake thinking of the brightness a little dulled and wondering how he would feel if perhaps when the great occasion (whatever it might be) should arrive, one button should chance to be ever so little short of its first glittering freshness, and for days and days that thought remained with him, distressingly. And when next his mother let him wear his suit, he was tempted and nearly gave way to the temptation just to fumble off one little bit of tissue paper and see if indeed the buttons were keeping as bright as ever.

He went trimly along on his way to church full of this wild desire. For you must know his mother did, with repeated and careful warnings, let him wear his suit at times, on Sundays, for example, to and fro from church, when there was no threatening of rain, no dust nor anything to injure it, with its buttons covered and its protections tacked upon it and a sunshade in his hand to shadow it if there seemed too strong a sunlight for its colours. And always, after such occasions, he brushed it over and folded it exquisitely as she had taught him, and put it away again.

Now all these restrictions his mother set to the wearing of his suit he obeyed, always he obeyed them, until one strange night he woke up and saw the moonlight shining outside his window. It seemed to him the moonlight was not common moonlight, nor the night a common night, and for a while he lay quite drowsily with this odd persuasion in his mind. Thought joined on to thought like things that whisper warmly in the shadows. Then he sat up in his little bed suddenly, very alert, with his heart beating very fast and a quiver in his body from top to toe. He had made up his mind. He knew now that he was going to wear his suit as it should be worn. He had no doubt in the matter. He was afraid, terribly afraid, but

glad, glad.

He got out of his bed and stood a moment by the window looking at the moonshine-flooded garden and trembling at the thing he meant to do. The air was full of a minute clamor of crickets and murmurings, of the infinitesimal shouting of little living things. He went very gently across the creaking boards, for fear that he might wake the sleeping house, to the big dark clothes-press wherein his beautiful suit lay folded, and he took it out garment by garment and softly and very eagerly tore off its tissue-paper covering and its tacked protections, until there it was, perfect and delightful as he had seen it when first his mother had given it to him--a long time it seemed ago. Not a button had tarnished, not a thread had faded on this dear suit of his; he was glad enough for weeping as in a noiseless hurry he put it on. And then back he went, soft and quick, to the window and looked out upon the garden and stood there for a minute, shining in the moonlight, with his buttons twinkling like stars, before he got out on the sill and, making as little of a rustling as he could, clambered down to the garden path below. He stood before his mother's house, and it was white and nearly as plain as by day, with every window-blind but his own shut like an eye that sleeps. The trees cast still shadows like intricate black lace upon the wall.

The garden in the moonlight was very different from the garden by day; moonshine was tangled in the hedges and stretched in phantom cobwebs from spray to spray. Every flower was gleaming white or crimson black, and the air was aquiver with the thridding of small crickets and nightingales singing unseen in the depths of the trees.

There was no darkness in the world, but only warm, mysterious shadows; and all the leaves and spikes were edged and lined with iridescent jewels of dew. The night was warmer than any night had ever been, the heavens by some miracle at once vaster and nearer,

and spite of the great ivory-tinted moon that ruled the world, the sky was full of stars.

The little man did not shout nor sing for all his infinite gladness. He stood for a time like one awe-stricken, and then, with a queer small cry and holding out his arms, he ran out as if he would embrace at once the whole warm round immensity of the world. He did not follow the neat set paths that cut the garden squarely, but thrust across the beds and through the wet, tall, scented herbs, through the night stock and the nicotine and the clusters of phantom white mallow flowers and through the thickets of southern-wood and lavender, and knee-deep across a wide space of mignonette. He came to the great hedge and he thrust his way through it, and though the thorns of the brambles scored him deeply and tore threads from his wonderful suit, and though burs and goosegrass and havers caught and clung to him, he did not care. He did not care, for he knew it was all part of the wearing for which he had longed. "I am glad I put on my suit," he said; "I am glad I wore my suit."

Beyond the hedge he came to the duck-pond, or at least to what was the duck-pond by day. But by night it was a great bowl of silver moonshine all noisy with singing frogs, of wonderful silver moonshine twisted and clotted with strange patternings, and the little man ran down into its waters between the thin black rushes, knee-deep and waist-deep and to his shoulders, smiting the water to black and shining wavelets with either hand, swaying and shivering wavelets, amid which the stars were netted in the tangled reflections of the brooding trees upon the bank. He waded until he swam, and so he crossed the pond and came out upon the other side, trailing, as it seemed to him, not duckweed, but very silver in long, clinging, dripping masses. And up he went through the transfigured tangles of the willow-herb and the uncut seeding grass of the farther bank. And so he came glad and breathless into the highroad. "I am glad," he said, "beyond measure, that I had

clothes that fitted this occasion."

The highroad ran straight as an arrow flies, straight into the deep blue pit of sky beneath the moon, a white and shining road between the singing nightingales, and along it he went, running now and leaping, and now walking and rejoicing, in the clothes his mother had made for him with tireless, loving hands. The road was deep in dust, but that for him was only soft whiteness, and as he went a great dim moth came fluttering round his wet and shimmering and hastening figure. At first he did not heed the moth, and then he waved his hands at it and made a sort of dance with it as it circled round his head. "Soft moth!" he cried, "dear moth! And wonderful night, wonderful night of the world! Do you think my clothes are beautiful, dear moth? As beautiful as your scales and all this silver vesture of the earth and sky?"

And the moth circled closer and closer until at last its velvet wings just brushed his lips

And next morning they found him dead with his neck broken in the bottom of the stone pit, with his beautiful clothes a little bloody and foul and stained with the duckweed from the pond. But his face was a face of such happiness that, had you seen it, you would have understood indeed how that he had died happy, never knowing the cool and streaming silver for the duckweed in the pond.

THE DIAMOND MAKER

Some business had detained me in Chancery Lane nine in the evening, and thereafter, having some inkling of a headache, I was disinclined either for entertainment or further work. So much of the sky as the high cliffs of that narrow canon of traffic left visible spoke of a serene night, and I determined to make my way down to the Embankment, and rest my eyes and cool my head by watching the variegated lights upon the river. Beyond comparison the night is the best time for this place; a merciful darkness hides the dirt of the waters, and the lights of this transitional age, red glaring orange, gas-yellow, and electric white, are set in shadowy outlines of every possible shade between grey and deep purple. Through the arches of Waterloo Bridge a hundred points of light mark the sweep of the Embankment, and above its parapet rise the towers of Westminster, warm grey against the starlight. The black river goes by with only a rare ripple breaking its silence, and disturbing the reflections of the lights that swim upon its surface.

"A warm night," said a voice at my side.

I turned my head, and saw the profile of a man who was leaning over the parapet beside me. It was a refined face, not unhandsome, though pinched and pale enough, and the coat collar turned up and pinned round the throat marked his status in life as sharply as a uniform. I felt I was committed to the price of a bed and breakfast if I answered him.

I looked at him curiously. Would he have anything to tell me worth the money, or was he the common incapable--incapable even of telling his own story? There was a quality of intelligence in his forehead and eyes, and a certain tremulousness in his nether lip that decided me.

"Very warm," said I; "but not too warm for us here."

"No," he said, still looking across the water, "it is pleasant enough here just now."

"It is good," he continued after a pause, "to find anything so restful as this in London. After one has been fretting about business all day, about getting on, meeting obligations, and parrying dangers, I do not know what one would do if it were not for such pacific corners." He spoke with long pauses between the sentences. "You must know a little of the irksome labour of the world, or you would not be here. But I doubt if you can be so brain-weary and footsore as I am Bah! Sometimes I doubt if the game is worth the candle. I feel inclined to throw the whole thing over--name, wealth and position--and take to some modest trade. But I know if I abandoned my ambition--hardly as she uses me--I should have nothing but remorse left for the rest of my days."

He became silent. I looked at him in astonishment. If ever I saw a man hopelessly hard-up it was the man in front of me. He was ragged and he was dirty, unshaven and unkempt; he looked as though he had been left in a dust-bin for a week. And he was talking to ME of the irksome worries of a large business. I almost laughed outright. Either he was mad or playing a sorry jest on his own poverty.

"If high aims and high positions," said I, "have their drawbacks of hard work and anxiety, they have their compensations. Influence, the power of doing good, of assisting those weaker and poorer than ourselves; and there is even a certain gratification in display"

My banter under the circumstances was in very vile taste. I spoke on the spur of the contrast of his appearance and speech. I

was sorry even while I was speaking.

He turned a haggard but very composed face upon me. Said he: "I forgot myself. Of course you would not understand."

He measured me for a moment. "No doubt it is very absurd. You will not believe me even when I tell you, so that it is fairly safe to tell you. And it will be a comfort to tell someone. I really have a big business in hand, a very big business. But there are troubles just now. The fact is I make diamonds."

"I suppose," said I, "you are out of work just at present?"

"I am sick of being disbelieved," he said impatiently, and suddenly unbuttoning his wretched coat he pulled out a little canvas bag that was hanging by a cord round his neck. From this he produced a brown pebble. "I wonder if you know enough to know what that is?" He handed it to me.

Now, a year or so ago, I had occupied my leisure in taking a London science degree, so that I have a smattering of physics and mineralogy. The thing was not unlike an uncut diamond of the darker sort, though far too large, being almost as big as the top of my thumb. I took it, and saw it had the form of a regular octahedron, with the curved faces peculiar to the most precious of minerals. I took out my penknife and tried to scratch it--vainly. Leaning forward towards the gas-lamp, I tried the thing on my watch-glass, and scored a white line across that with the greatest ease.

I looked at my interlocutor with rising curiosity. "It certainly is rather like a diamond. But, if so, it is a Behemoth of diamonds. Where did you get it?"

"I tell you I made it," he said. "Give it back to me."

He replaced it hastily and buttoned his jacket. "I will sell it you for one hundred pounds," he suddenly whispered eagerly. With that my suspicions returned. The thing might, after all, be merely a lump of that almost equally hard substance, corundum, with an accidental resemblance in shape to the diamond. Or if it was a diamond, how came he by it, and why should he offer it at a hundred pounds?

We looked into one another's eyes. He seemed eager, but honestly eager. At that moment I believed it was a diamond he was trying to sell. Yet I am a poor man, a hundred pounds would leave a visible gap in my fortunes and no sane man would buy a diamond by gaslight from a ragged tramp on his personal warranty only. Still, a diamond that size conjured up a vision of many thousands of pounds. Then, thought I, such a stone could scarcely exist without being mentioned in every book on gems, and again I called to mind the stories of contraband and light-fingered Kaffirs at the Cape. I put the question of purchase on one side.

"How did you get it?" said I.

"I made it."

I had heard something of Moissan, but I knew his artificial diamonds were very small. I shook my head.

"You seem to know something of this kind of thing. I will tell you a little about myself. Perhaps then you may think better of the purchase." He turned round with his back to the river, and put his hands in his pockets. He sighed. "I know you will not believe me."

"Diamonds," he began--and as he spoke his voice lost its faint flavour of the tramp and assumed something of the easy tone of an

educated man--are to be made by throwing carbon out of combination in a suitable flux and under a suitable pressure; the carbon crystallises out, not as black-lead or charcoal-powder, but as small diamonds. So much has been known to chemists for years, but no one yet had hit upon exactly the right flux in which to melt up the carbon, or exactly the right pressure for the best results. Consequently the diamonds made by chemists are small and dark, and worthless as jewels. Now I, you know, have given up my life to this problem--given my life to it.

"I began to work at the conditions of diamond making when I was seventeen, and now I am thirty-two. It seemed to me that it might take all the thought and energies of a man for ten years, or twenty years, but, even if it did, the game was still worth the candle. Suppose one to have at last just hit the right trick before the secret got out and diamonds became as common as coal, one might realize millions. Millions!"

He paused and looked for my sympathy. His eyes shone hungrily. "To think," said he, "that I am on the verge of it all, and here!

"I had," he proceeded, "about a thousand pounds when I was twenty-one, and this, I thought, eked out by a little teaching, would keep my researches going. A year or two was spent in study, at Berlin chiefly, and then I continued on my own account. The trouble was the secrecy. You see, if once I had let out what I was doing, other men might have been spurred on by my belief in the practicability of the idea; and I do not pretend to be such a genius as to have been sure of coming in first, in the case of a race for the discovery. And you see it was important that if I really meant to make a pile, people should not know it was an artificial process and capable of turning out diamonds by the ton. So I had to work all alone. At first I had a little laboratory, but as my resources began to run out I had to conduct my

experiments in a wretched unfurnished room in Kentish Town, where I slept at last on a straw mattress on the floor among all my apparatus. The money simply flowed away. I grudged myself everything except scientific appliances. I tried to keep things going by a little teaching, but I am not a very good teacher, and I have no university degree, nor very much education except in chemistry, and I found I had to give a lot of time and labour for precious little money. But I got nearer and nearer the thing. Three years ago I settled the problem of the composition of the flux, and got near the pressure by putting this flux of mine and a certain carbon composition into a closed-up gun-barrel, filling up with water, sealing tightly, and heating."

He paused.

"Rather risky," said I.

"Yes. It burst, and smashed all my windows and a lot of my apparatus; but I got a kind of diamond powder nevertheless. Following out the problem of getting a big pressure upon the molten mixture from which the things were to crystallise, I hit upon some researches of Daubree's at the Paris Laboratoire des Poudres et Salpêtres. He exploded dynamite in a tightly screwed steel cylinder, too strong to burst, and I found he could crush rocks into a muck not unlike the South African bed in which diamonds are found. It was a tremendous strain on my resources, but I got a steel cylinder made for my purpose after his pattern. I put in all my stuff and my explosives, built up a fire in my furnace, put the whole concern in, and--went out for a walk."

I could not help laughing at his matter-of-fact manner. "Did you not think it would blow up the house? Were there other people in the place?"

"It was in the interest of science," he said, ultimately.

"There was a costermonger family on the floor below, a begging-letter writer in the room behind mine, and two flower-women were upstairs. Perhaps it was a bit thoughtless. But possibly some of them were out.

"When I came back the thing was just where I left it, among the white-hot coals. The explosive hadn't burst the case. And then I had a problem to face. You know time is an important element in crystallisation. If you hurry the process the crystals are small--it is only by prolonged standing that they grow to any size. I resolved to let this apparatus cool for two years, letting the temperature go down slowly during the time. And I was now quite out of money; and with a big fire and the rent of my room, as well as my hunger to satisfy, I had scarcely a penny in the world.

"I can hardly tell you all the shifts I was put to while I was making the diamonds. I have sold newspapers, held horses, opened cab-doors. For many weeks I addressed envelopes. I had a place as assistant to a man who owned a barrow, and used to call down one side of the road while he called down the other.

"Once for a week I had absolutely nothing to do, and I begged. What a week that was! One day the fire was going out and I had eaten nothing all day, and a little chap taking his girl out, gave me sixpence--to show off. Thank heaven for vanity! How the fish-shops smelt! But I went and spent it all on coals, and had the furnace bright red again, and then--Well, hunger makes a fool of a man.

"At last, three weeks ago, I let the fire out. I took my cylinder and unscrewed it while it was still so hot that it punished my hands, and I scraped out the crumbling lava-like mass with a chisel, and hammered it into a powder upon an iron plate. And I found three big diamonds and five small ones. As I sat on the floor hammering, my door opened, and my neighbour, the

begging-letter writer came in. He was drunk--as he usually is. "Nerchist," said he. 'You're drunk,' said I. "Structive scoundrel," said he. 'Go to your father,' said I, meaning the Father of Lies. 'Never you mind,' said he, and gave me a cunning wink, and hiccuped, and leaning up against the door, with his other eye against the door-post, began to babble of how he had been prying in my room, and how he had gone to the police that morning, and how they had taken down everything he had to say--"siffi was a ge'm," said he. Then I suddenly realised I was in a hole. Either I should have to tell these police my little secret, and get the whole thing blown upon, or be lagged as an Anarchist. So I went up to my neighbour and took him by the collar, and rolled him about a bit, and then I gathered up my diamonds and cleared out. The evening newspapers called my den the Kentish Town Bomb Factory. And now I cannot part with the things for love or money.

"If I go in to respectable jewellers they ask me to wait, and go and whisper to a clerk to fetch a policeman, and then I say I cannot wait. And I found out a receiver of stolen goods, and he simply stuck to the one I gave him and told me to prosecute if I wanted it back. I am going about now with several hundred thousand pounds-worth of diamonds round my neck, and without either food or shelter. You are the first person I have taken into my confidence. But I like your face and I am hard-driven."

He looked into my eyes.

"It would be madness," said I, "for me to buy a diamond under the circumstances. Besides, I do not carry hundreds of pounds about in my pocket. Yet I more than half believe your story. I will, if you like, do this: come to my office to-morrow"

"You think I am a thief!" said he keenly. "You will tell the police. I am not coming into a trap."

"Somehow I am assured you are no thief. Here is my card. Take that, anyhow. You need not come to any appointment. Come when you will."

He took the card, and an earnest of my good-will.

"Think better of it and come," said I.

He shook his head doubtfully. "I will pay back your half-crown with interest some day--such interest as will amaze you," said he. "Anyhow, you will keep the secret? . . . Don't follow me."

He crossed the road and went into the darkness towards the little steps under the archway leading into Essex Street, and I let him go. And that was the last I ever saw of him.

Afterwards I had two letters from him asking me to send bank-notes--not cheques--to certain addresses. I weighed the matter over and took what I conceived to be the wisest course. Once he called upon me when I was out. My urchin described him as a very thin, dirty, and ragged man, with a dreadful cough. He left no message. That was the finish of him so far as my story goes. I wonder sometimes what has become of him. Was he an ingenious monomaniac, or a fraudulent dealer in pebbles, or has he really made diamonds as he asserted? The latter is just sufficiently credible to make me think at times that I have missed the most brilliant opportunity of my life. He may of course be dead, and his diamonds carelessly thrown aside--one, I repeat, was almost as big as my thumb. Or he may be still wandering about trying to sell the things. It is just possible he may yet emerge upon society, and, passing athwart my heavens in the serene altitude sacred to the wealthy and the well-advertised, reproach me silently for my want of enterprise. I sometimes think I might at least have risked five pounds.

THE LORD OF THE DYNAMOS

The chief attendant of the three dynamos that buzzed and rattled at Camberwell, and kept the electric railway going, came out of Yorkshire, and his name was James Holroyd. He was a practical electrician, but fond of whisky, a heavy red-haired brute with irregular teeth. He doubted the existence of the deity, but accepted Carnot's cycle, and he had read Shakespeare and found him weak in chemistry. His helper came out of the mysterious East, and his name was Azuma-zi. But Holroyd called him Pooh-bah. Holroyd liked a nigger because he would stand kicking--a habit with Holroyd--and did not pry into the machinery and try to learn the ways of it. Certain odd possibilities of the negro mind brought into abrupt contact with the crown of our civilisation Holroyd never fully realised, though just at the end he got some inkling of them.

To define Azuma-zi was beyond ethnology. He was, perhaps, more negroid than anything else, though his hair was curly rather than frizzy, and his nose had a bridge. Moreover, his skin was brown rather than black, and the whites of his eyes were yellow. His broad cheekbones and narrow chin gave his face something of the viperine V. His head, too, was broad behind, and low and narrow at the forehead, as if his brain had been twisted round in the reverse way to a European's. He was short of stature and still shorter of English. In conversation he made numerous odd noises of no known marketable value, and his infrequent words were carved and wrought into heraldic grotesqueness. Holroyd tried to elucidate his religious beliefs, and--especially after whisky--lectured to him against superstition and missionaries. Azuma-zi, however, shirked the discussion of his gods, even though he was kicked for it.

Azuma-zi had come, clad in white but insufficient raiment, out of the stokehole of the Lord Clive, from the Straits Settlements, and beyond, into London. He had heard even in his

youth of the greatness and riches of London, where all the women are white and fair, and even the beggars in the streets are white, and he arrived, with newly earned gold coins in his pocket, to worship at the shrine of civilisation. The day of his landing was a dismal one; the sky was dun, and a wind-worried drizzle filtered down to the greasy streets, but he plunged boldly into the delights of Shadwell, and was presently cast up, shattered in health, civilised in costume, penniless and, except in matters of the direst necessity, practically a dumb animal, to toil for James Holroyd and to be bullied by him in the dynamo shed at Camberwell. And to James Holroyd bullying was a labour of love.

There were three dynamos with their engines at Camberwell. The two that had been there since the beginning were small machines; the larger one was new. The smaller machines made a reasonable noise; their straps hummed over the drums, every now and then the brushes buzzed and fizzled, and the air churned steadily, whoo! whoo! whoo! between their poles. One was loose in its foundations and kept the shed vibrating. But the big dynamo drowned these little noises altogether with the sustained drone of its iron core, which somehow set part of the ironwork humming. The place made the visitor's head reel with the throb, throb, throb of the engines, the rotation of the big wheels, the spinning ball-valves, the occasional spittings of the steam, and over all the deep, unceasing, surging note of the big dynamo. This last noise was from an engineering point of view a defect, but Azuma-zi accounted it unto the monster for mightiness and pride.

If it were possible we would have the noises of that shed always about the reader as he reads, we would tell all our story to such an accompaniment. It was a steady stream of din, from which the ear picked out first one thread and then another; there was the intermittent snorting, panting, and seething of the steam engines, the suck and thud of their pistons, the dull beat on the air as the spokes of the great driving-wheels came round, a note the leather

straps made as they ran tighter and looser, and a fretful tumult from the dynamos; and over all, sometimes inaudible, as the ear tired of it, and then creeping back upon the senses again, was this trombone note of the big machine. The floor never felt steady and quiet beneath one's feet, but quivered and jarred. It was a confusing, unsteady place, and enough to send anyone's thoughts jerking into odd zigzags. And for three months, while the big strike of the engineers was in progress, Holroyd, who was a blackleg, and Azuma-zi, who was a mere black, were never out of the stir and eddy of it, but slept and fed in the little wooden shanty between the shed and the gates.

Holroyd delivered a theological lecture on the text of his big machine soon after Azuma-zi came. He had to shout to be heard in the din. "Look at that," said Holroyd; "where's your 'eathen idol to match 'im?" And Azuma-zi looked. For a moment Holroyd was inaudible, and then Azuma-zi heard: "Kill a hundred men. Twelve per cent. on the ordinary shares," said Holroyd, "and that's something like a Gord!"

Holroyd was proud of his big dynamo, and expatiated upon its size and power to Azuma-zi until heaven knows what odd currents of thought that and the incessant whirling and shindy set up within the curly black cranium. He would explain in the most graphic manner the dozen or so ways in which a man might be killed by it, and once he gave Azuma-zi a shock as a sample of its quality. After that, in the breathing-times of his labour--it was heavy labour, being not only his own, but most of Holroyd's--Azuma-zi would sit and watch the big machine. Now and then the brushes would sparkle and spit blue flashes, at which Holroyd would swear, but all the rest was as smooth and rhythmic as breathing. The band ran shouting over the shaft, and ever behind one as one watched was the complacent thud of the piston. So it lived all day in this big airy shed, with him and Holroyd to wait upon it; not prisoned up and slaving to drive a ship as the other engines he knew--mere

captive devils of the British Solomon--had been, but a machine enthroned. Those two smaller dynamos, Azuma-zi by force of contrast despised; the large one he privately christened the Lord of the Dynamos. They were fretful and irregular, but the big dynamo was steady. How great it was! How serene and easy in its working! Greater and calmer even than the Buddhas he had seen at Rangoon, and yet not motionless, but living! The great black coils spun, spun, spun, the rings ran round under the brushes, and the deep note of its coil steadied the whole. It affected Azuma-zi queerly.

Azuma-zi was not fond of labour. He would sit about and watch the Lord of the Dynamos while Holroyd went away to persuade the yard porter to get whisky, although his proper place was not in the dynamo shed but behind the engines, and, moreover, if Holroyd caught him skulking he got hit for it with a rod of stout copper wire. He would go and stand close to the colossus and look up at the great leather band running overhead. There was a black patch on the band that came round, and it pleased him somehow among all the clatter to watch this return again and again. Odd thoughts spun with the whirl of it. Scientific people tell us that savages give souls to rocks and trees--and a machine is a thousand times more alive than a rock or a tree. And Azuma-zi was practically a savage still; the veneer of civilisation lay no deeper than his slop suit, his bruises, and the coal grime on his face and hands. His father before him had worshipped a meteoric stone, kindred blood it may be had splashed the broad wheels of Juggernaut.

He took every opportunity Holroyd gave him of touching and hand, ling the great dynamo that was fascinating him. He polished and cleaned it until the metal parts were blinding in the sun. He felt a mysterious sense of service in doing this. He would go up to it and touch its spinning coils gently. The gods he had worshipped were all far away. The people in London hid their gods.

At last his dim feelings grew more distinct, and took shape in thoughts and at last in acts. When he came into the roaring shed one morning he salaamed to the Lord of the Dynamos, and then when Holroyd was away, he went and whispered to the thundering machine that he was its servant, and prayed it to have pity on him and save him from Holroyd. As he did so a rare gleam of light came in through the open archway of the throbbing machine-shed, and the Lord of the Dynamos, as he whirled and roared, was radiant with pale gold. Then Azuma-zi knew that his service was acceptable to his Lord. After that he did not feel so lonely as he had done, and he had indeed been very much alone in London. And even when his work time was over, which was rare, he loitered about the shed.

Then, the next time Holroyd maltreated him, Azuma-zi went presently to the Lord of the Dynamos and whispered, "Thou seest, O my Lord!" and the angry whir of the machinery seemed to answer him. Thereafter it appeared to him that whenever Holroyd came into the shed a different note came into the sounds of the dynamo. "My Lord bides his time," said Azuma-zi to himself. "The iniquity of the fool is not yet ripe." And he waited and watched for the day of reckoning. One day there was evidence of short circuiting, and Holroyd, making an unwary examination--it was in the afternoon--got a rather severe shock. Azuma-zi from behind the engine saw him jump off and curse at the peccant coil.

"He is warned," said Azuma-zi to himself. "Surely my Lord is very patient."

Holroyd had at first initiated his "nigger" into such elementary conceptions of the dynamo's working as would enable him to take temporary charge of the shed in his absence. But when he noticed the manner in which Azuma-zi hung about the monster he became suspicious. He dimly perceived his assistant was "up to something," and connecting him with the anointing of the coils with oil that had rotted the varnish in one place, he issued an edict,

shouted above the confusion of the machinery, "Don't 'ee go nigh that big dynamo any more, Pooh-bah, or a'll take thy skin off!" Besides, if it pleased Azuma-zi to be near the big machine, it was plain sense and decency to keep him away from it.

Azuma-zi obeyed at the time, but later he was caught bowing before the Lord of the Dynamos. At which Holroyd twisted his arm and kicked him as he turned to go away. As Azuma-zi presently stood behind the engine and glared at the back of the hated Holroyd, the noises of the machinery took a new rhythm, and sounded like four words in his native tongue.

It is hard to say exactly what madness is. I fancy Azuma-zi was mad. The incessant din and whirl of the dynamo shed may have churned up his little store of knowledge and his big store of superstitious fancy, at last, into something akin to frenzy. At any rate, when the idea of making Holroyd a sacrifice to the Dynamo Fetich was thus suggested to him, it filled him with a strange tumult of exultant emotion.

That night the two men and their black shadows were alone in the shed together. The shed was lit with one big arc light that winked and flickered purple. The shadows lay black behind the dynamos, the ball governors of the engines whirled from light to darkness, and their pistons beat loud and steady. The world outside seen through the open end of the shed seemed incredibly dim and remote. It seemed absolutely silent, too, since the riot of the machinery drowned every external sound. Far away was the black fence of the yard with grey shadowy houses behind, and above was the deep blue sky and the pale little stars. Azuma-zi suddenly walked across the centre of the shed above which the leather bands were running, and went into the shadow by the big dynamo. Holroyd heard a click, and the spin of the armature changed.

"What are you dewin' with that switch?" he bawled in surprise.

"Han't I told you--"

Then he saw the set expression of Azuma-zi's eyes as the Asiatic came out of the shadow towards him.

In another moment the two men were grappling fiercely in front of the great dynamo.

"You coffee-headed fool!" gasped Holroyd, with a brown hand at his throat. "Keep off those contact rings." In another moment he was tripped and reeling back upon the Lord of the Dynamos. He instinctively loosened his grip upon his antagonist to save himself from the machine.

The messenger, sent in furious haste from the station to find out what had happened in the dynamo shed, met Azuma-zi at the porter's lodge by the gate. Azuma-zi tried to explain something, but the messenger could make nothing of the black's incoherent English, and hurried on to the shed. The machines were all noisily at work, and nothing seemed to be disarranged. There was, however, a queer smell of singed hair. Then he saw an odd-looking crumpled mass clinging to the front of the big dynamo, and, approaching, recognised the distorted remains of Holroyd.

The man stared and hesitated a moment. Then he saw the face, and shut his eyes convulsively. He turned on his heel before he opened them, so that he should not see Holroyd again, and went out of the shed to get advice and help.

When Azuma-zi saw Holroyd die in the grip of the Great Dynamo he had been a little scared about the consequences of his act. Yet he felt strangely elated, and knew that the favour of the Lord Dynamo was upon him. His plan was already settled when he met the man coming from the station, and the scientific manager who speedily arrived on the scene jumped at the obvious conclusion of

suicide. This expert scarcely noticed Azuma-zi, except to ask a few questions. Did he see Holroyd kill himself? Azuma-zi explained that he had been out of sight at the engine furnace until he heard a difference in the noise from the dynamo. It was not a difficult examination, being untinged by suspicion.

The distorted remains of Holroyd, which the electrician removed from the machine, were hastily covered by the porter with a coffee-stained tablecloth. Somebody, by a happy inspiration, fetched a medical man. The expert was chiefly anxious to get the machine at work again, for seven or eight trains had stopped midway in the stuffy tunnels of the electric railway. Azuma-zi, answering or misunderstanding the questions of the people who had by authority or impudence come into the shed, was presently sent back to the stoke-hole by the scientific manager. Of course a crowd collected outside the gates of the yard--a crowd, for no known reason, always hovers for a day or two near the scene of a sudden death in London; two or three reporters percolated somehow into the engine-shed, and one even got to Azuma-zi; but the scientific expert cleared them out again, being himself an amateur journalist.

Presently the body was carried away, and public interest departed with it. Azuma-zi remained very quietly at his furnace, seeing over and over again in the coals a figure that wriggled violently and became still. An hour after the murder, to anyone coming into the shed it would have looked exactly as if nothing had ever happened there. Peeping presently from his engine-room the black saw the Lord Dynamo spin and whirl beside his little brothers, and the driving wheels were beating round, and the steam in the pistons went thud, thud, exactly as it had been earlier in the evening. After all, from the mechanical point of view, it had been a most insignificant incident--the mere temporary deflection of a current. But now the slender form and slender shadow of the scientific manager replaced the sturdy outline of Holroyd travelling up and down the lane of light upon the vibrating floor

under the straps between the engines and the dynamos.

"Have I not served my Lord?" said Azuma-zi inaudibly, from his shadow, and the note of the great dynamo rang out full and clear. As he looked at the big whirling mechanism the strange fascination of it that had been a little in abeyance since Holroyd's death, resumed its sway.

Never had Azuma-zi seen a man killed so swiftly and pitilessly. The big humming machine had slain its victim without wavering for a second from its steady beating. It was indeed a mighty god.

The unconscious scientific manager stood with his back to him, scribbling on a piece of paper. His shadow lay at the foot of the monster.

"Was the Lord Dynamo still hungry? His servant was ready."

Azuma-zi made a stealthy step forward; then stopped. The scientific manager suddenly stopped writing, and walked down the shed to the endmost of the dynamos, and began to examine the brushes.

Azuma-zi hesitated, and then slipped across noiselessly into shadow by the switch. There he waited. Presently the manager's footsteps could be heard returning. He stopped in his old position, unconscious of the stoker crouching ten feet away from him. Then the big dynamo suddenly fizzled, and in another moment Azuma-zi had sprung out of the darkness upon him.

First, the scientific manager was gripped round the body and swung towards the big dynamo, then, kicking with his knee and forcing his antagonist's head down with his hands, he loosened the grip on his waist and swung round away from the machine. Then the

black grasped him again, putting a curly head against his chest, and they swayed and panted as it seemed for an age or so. Then the scientific manager was impelled to catch a black ear in his teeth and bite furiously. The black yelled hideously.

They rolled over on the floor, and the black, who had apparently slipped from the vice of the teeth or parted with some ear--the scientific manager wondered which at the time--tried to throttle him. The scientific manager was making some ineffectual attempts to claw something with his hands and to kick, when the welcome sound of quick footsteps sounded on the floor. The next moment Azuma-zi had left him and darted towards the big dynamo. There was a splutter amid the roar.

The officer of the company who had entered, stood staring as Azuma-zi caught the naked terminals in his hands, gave one horrible convulsion, and then hung motionless from the machine, his face violently distorted.

"I'm jolly glad you came in when you did," said the scientific manager, still sitting on the floor.

He looked at the still quivering figure.

"It's not a nice death to die, apparently--but it is quick."

The official was still staring at the body. He was a man of slow apprehension.

There was a pause.

The scientific manager got up on his feet rather awkwardly. He ran his fingers along his collar thoughtfully, and moved his head to and fro several times.

"Poor Holroyd! I see now." Then almost mechanically he went towards the switch in the shadow and turned the current into the railway circuit again. As he did so the singed body loosened its grip upon the machine and fell forward on its face. The core of the dynamo roared out loud and clear, and the armature beat the air.

So ended prematurely the Worship of the Dynamo Deity, perhaps the most short-lived of all religions. Yet withal it could at least boast a Martyrdom and a Human Sacrifice.

THE COUNTRY OF THE BLIND

Three hundred miles and more from Chimborazo, one hundred from the snows of Cotopaxi, in the wildest wastes of Ecuador's Andes, there lies that mysterious mountain valley, cut off from all the world of men, the Country of the Blind. Long years ago that valley lay so far open to the world that men might come at last through frightful gorges and over an icy pass into its equable meadows, and thither indeed men came, a family or so of Peruvian half-breeds fleeing from the lust and tyranny of an evil Spanish ruler. Then came the stupendous outbreak of Mindobamba, when it was night in Quito for seventeen days, and the water was boiling at Yaguachi and all the fish floating dying even as far as Guayaquil; everywhere along the Pacific slopes there were land-slips and swift thawings and sudden floods, and one whole side of the old Arauca crest slipped and came down in thunder, and cut off the Country of the Blind for ever from the exploring feet of men. But one of these early settlers had chanced to be on the hither side of the gorges when the world had so terribly shaken itself, and he perforce had to forget his wife and his child and all the friends and possessions he had left up there, and start life over again in the lower world. He started it again but ill, blindness overtook him, and he died of punishment in the mines; but the story he told begot a legend that lingers along the length of the Cordilleras of the Andes to this day.

He told of his reason for venturing back from that fastness, into which he had first been carried lashed to a llama, beside a vast bale of gear, when he was a child. The valley, he said, had in it all that the heart of man could desire--sweet water, pasture, an even climate, slopes of rich brown soil with tangles of a shrub that bore an excellent fruit, and on one side great hanging forests of pine that held the avalanches high. Far overhead, on three sides, vast cliffs of grey-green rock were capped by cliffs of ice; but the glacier stream came not to them, but flowed away by the farther slopes, and only now and then huge ice masses fell on the

valley side. In this valley it neither rained nor snowed, but the abundant springs gave a rich green pasture, that irrigation would spread over all the valley space. The settlers did well indeed there. Their beasts did well and multiplied, and but one thing marred their happiness. Yet it was enough to mar it greatly. A strange disease had come upon them and had made all the children born to them there--and, indeed, several older children also--blind. It was to seek some charm or antidote against this plague of blindness that he had with fatigue and danger and difficulty returned down the gorge. In those days, in such cases, men did not think of germs and infections, but of sins, and it seemed to him that the reason of this affliction must be in the negligence of these priestless immigrants to set up a shrine so soon as they entered the valley. He wanted a shrine--a handsome, cheap, effectual shrine--to be erected in the valley; he wanted relics and such-like potent things of faith, blessed objects and mysterious medals and prayers. In his wallet he had a bar of native silver for which he would not account; he insisted there was none in the valley with something of the insistence of an inexperienced liar. They had all clubbed their money and ornaments together, having little need for such treasure up there, he said, to buy them holy help against their ill. I figure this dim-eyed young mountaineer, sunburnt, gaunt, and anxious, hat brim clutched feverishly, a man all unused to the ways of the lower world, telling this story to some keen-eyed, attentive priest before the great convulsion; I can picture him presently seeking to return with pious and infallible remedies against that trouble, and the infinite dismay with which he must have faced the tumbled vastness where the gorge had once come out. But the rest of his story of mischances is lost to me, save that I know of his evil death after several years. Poor stray from that remoteness! The stream that had once made the gorge now bursts from the mouth of a rocky cave, and the legend his poor, ill-told story set going developed into the legend of a race of blind men somewhere "over there" one may still hear to-day.

And amidst the little population of that now isolated and forgotten valley the disease ran its course. The old became groping, the young saw but dimly, and the children that were born to them never saw at all. But life was very easy in that snow-rimmed basin, lost to all the world, with neither thorns nor briars, with no evil insects nor any beasts save the gentle breed of llamas they had lugged and thrust and followed up the beds of the shrunken rivers in the gorges up which they had come. The seeing had become purblind so gradually that they scarcely noticed their loss. They guided the sightless youngsters hither and thither until they knew the whole valley marvellously, and when at last sight died out among them the race lived on. They had even time to adapt themselves to the blind control of fire, which they made carefully in stoves of stone. They were a simple strain of people at the first, unlettered, only slightly touched with the Spanish civilisation, but with something of a tradition of the arts of old Peru and of its lost philosophy. Generation followed generation. They forgot many things; they devised many things. Their tradition of the greater world they came from became mythical in colour and uncertain. In all things save sight they were strong and able, and presently chance sent one who had an original mind and who could talk and persuade among them, and then afterwards another. These two passed, leaving their effects, and the little community grew in numbers and in understanding, and met and settled social and economic problems that arose. Generation followed generation. Generation followed generation. There came a time when a child was born who was fifteen generations from that ancestor who went out of the valley with a bar of silver to seek God's aid, and who never returned. Thereabout it chanced that a man came into this community from the outer world. And this is the story of that man.

He was a mountaineer from the country near Quito, a man who had been down to the sea and had seen the world, a reader of books

in an original way, an acute and enterprising man, and he was taken on by a party of Englishmen who had come out to Ecuador to climb mountains, to replace one of their three Swiss guides who had fallen ill. He climbed here and he climbed there, and then came the attempt on Parascotopetl, the Matterhorn of the Andes, in which he was lost to the outer world. The story of that accident has been written a dozen times. Pointer's narrative is the best. He tells how the little party worked their difficult and almost vertical way up to the very foot of the last and greatest precipice, and how they built a night shelter amidst the snow upon a little shelf of rock, and, with a touch of real dramatic power, how presently they found Nunez had gone from them. They shouted, and there was no reply; shouted and whistled, and for the rest of that night they slept no more.

As the morning broke they saw the traces of his fall. It seems impossible he could have uttered a sound. He had slipped eastward towards the unknown side of the mountain; far below he had struck a steep slope of snow, and ploughed his way down it in the midst of a snow avalanche. His track went straight to the edge of a frightful precipice, and beyond that everything was hidden. Far, far below, and hazy with distance, they could see trees rising out of a narrow, shut-in valley--the lost Country of the Blind. But they did not know it was the lost Country of the Blind, nor distinguish it in any way from any other narrow streak of upland valley. Unnerved by this disaster, they abandoned their attempt in the afternoon, and Pointer was called away to the war before he could make another attack. To this day Parascotopetl lifts an unconquered crest, and Pointer's shelter crumbles unvisited amidst the snows.

And the man who fell survived.

At the end of the slope he fell a thousand feet, and came down in the midst of a cloud of snow upon a snow-slope even steeper than

the one above. Down this he was whirled, stunned and insensible, but without a bone broken in his body; and then at last came to gentler slopes, and at last rolled out and lay still, buried amidst a softening heap of the white masses that had accompanied and saved him. He came to himself with a dim fancy that he was ill in bed; then realized his position with a mountaineer's intelligence and worked himself loose and, after a rest or so, out until he saw the stars. He rested flat upon his chest for a space, wondering where he was and what had happened to him. He explored his limbs, and discovered that several of his buttons were gone and his coat turned over his head. His knife had gone from his pocket and his hat was lost, though he had tied it under his chin. He recalled that he had been looking for loose stones to raise his piece of the shelter wall. His ice-axe had disappeared.

He decided he must have fallen, and looked up to see, exaggerated by the ghastly light of the rising moon, the tremendous flight he had taken. For a while he lay, gazing blankly at the vast, pale cliff towering above, rising moment by moment out of a subsiding tide of darkness. Its phantasmal, mysterious beauty held him for a space, and then he was seized with a paroxysm of sobbing laughter

After a great interval of time he became aware that he was near the lower edge of the snow. Below, down what was now a moon-lit and practicable slope, he saw the dark and broken appearance of rock-strewn turf. He struggled to his feet, aching in every joint and limb, got down painfully from the heaped loose snow about him, went downward until he was on the turf, and there dropped rather than lay beside a boulder, drank deep from the flask in his inner pocket, and instantly fell asleep

He was awakened by the singing of birds in the trees far below.

He sat up and perceived he was on a little alp at the foot of a vast precipice that sloped only a little in the gully down which he and his snow had come. Over against him another wall of rock reared itself against the sky. The gorge between these precipices ran east and west and was full of the morning sunlight, which lit to the westward the mass of fallen mountain that closed the descending gorge. Below him it seemed there was a precipice equally steep, but behind the snow in the gully he found a sort of chimney-cleft dripping with snow-water, down which a desperate man might venture. He found it easier than it seemed, and came at last to another desolate alp, and then after a rock climb of no particular difficulty, to a steep slope of trees. He took his bearings and turned his face up the gorge, for he saw it opened out above upon green meadows, among which he now glimpsed quite distinctly a cluster of stone huts of unfamiliar fashion. At times his progress was like clambering along the face of a wall, and after a time the rising sun ceased to strike along the gorge, the voices of the singing birds died away, and the air grew cold and dark about him. But the distant valley with its houses was all the brighter for that. He came presently to talus, and among the rocks he noted--for he was an observant man--an unfamiliar fern that seemed to clutch out of the crevices with intense green hands. He picked a frond or so and gnawed its stalk, and found it helpful.

About midday he came at last out of the throat of the gorge into the plain and the sunlight. He was stiff and weary; he sat down in the shadow of a rock, filled up his flask with water from a spring and drank it down, and remained for a time, resting before he went on to the houses.

They were very strange to his eyes, and indeed the whole aspect of that valley became, as he regarded it, queerer and more unfamiliar. The greater part of its surface was lush green meadow, starred with many beautiful flowers, irrigated with extraordinary care, and bearing evidence of systematic cropping piece by piece.

High up and ringing the valley about was a wall, and what appeared to be a circumferential water channel, from which the little trickles of water that fed the meadow plants came, and on the higher slopes above this flocks of llamas cropped the scanty herbage. Sheds, apparently shelters or feeding-places for the llamas, stood against the boundary wall here and there. The irrigation streams ran together into a main channel down the centre of the valley, and this was enclosed on either side by a wall breast high. This gave a singularly urban quality to this secluded place, a quality that was greatly enhanced by the fact that a number of paths paved with black and white stones, and each with a curious little kerb at the side, ran hither and thither in an orderly manner. The houses of the central village were quite unlike the casual and higgledy-piggledy agglomeration of the mountain villages he knew; they stood in a continuous row on either side of a central street of astonishing cleanness, here and there their parti-coloured facade was pierced by a door, and not a solitary window broke their even frontage. They were parti-coloured with extraordinary irregularity, smeared with a sort of plaster that was sometimes grey, sometimes drab, sometimes slate-coloured or dark brown; and it was the sight of this wild plastering first brought the word "blind" into the thoughts of the explorer. "The good man who did that," he thought, "must have been as blind as a bat."

He descended a steep place, and so came to the wall and channel that ran about the valley, near where the latter spouted out its surplus contents into the deeps of the gorge in a thin and wavering thread of cascade. He could now see a number of men and women resting on piled heaps of grass, as if taking a siesta, in the remoter part of the meadow, and nearer the village a number of recumbent children, and then nearer at hand three men carrying pails on yokes along a little path that ran from the encircling wall towards the houses. These latter were clad in garments of llama cloth and boots and belts of leather, and they wore caps of

cloth with back and ear flaps. They followed one another in single file, walking slowly and yawning as they walked, like men who have been up all night. There was something so reassuringly prosperous and respectable in their bearing that after a moment's hesitation Nunez stood forward as conspicuously as possible upon his rock, and gave vent to a mighty shout that echoed round the valley.

The three men stopped, and moved their heads as though they were looking about them. They turned their faces this way and that, and Nunez gesticulated with freedom. But they did not appear to see him for all his gestures, and after a time, directing themselves towards the mountains far away to the right, they shouted as if in answer. Nunez bawled again, and then once more, and as he gestured ineffectually the word "blind" came up to the top of his thoughts. "The fools must be blind," he said.

When at last, after much shouting and wrath, Nunez crossed the stream by a little bridge, came through a gate in the wall, and approached them, he was sure that they were blind. He was sure that this was the Country of the Blind of which the legends told. Conviction had sprung upon him, and a sense of great and rather enviable adventure. The three stood side by side, not looking at him, but with their ears directed towards him, judging him by his unfamiliar steps. They stood close together like men a little afraid, and he could see their eyelids closed and sunken, as though the very balls beneath had shrunk away. There was an expression near awe on their faces.

"A man," one said, in hardly recognisable Spanish. "A man it is--a man or a spirit--coming down from the rocks."

But Nunez advanced with the confident steps of a youth who enters upon life. All the old stories of the lost valley and the Country of the Blind had come back to his mind, and through his thoughts ran this old proverb, as if it were a refrain:--

"In the Country of the Blind the One-Eyed Man is King."

"In the Country of the Blind the One-Eyed Man is King."

And very civilly he gave them greeting. He talked to them and used his eyes.

"Where does he come from, brother Pedro?" asked one.

"Down out of the rocks."

"Over the mountains I come," said Nunez, "out of the country beyond there--where men can see. From near Bogota--where there are a hundred thousands of people, and where the city passes out of sight."

"Sight?" muttered Pedro. "Sight?"

"He comes," said the second blind man, "out of the rocks."

The cloth of their coats, Nunez saw was curious fashioned, each with a different sort of stitching.

They startled him by a simultaneous movement towards him, each with a hand outstretched. He stepped back from the advance of these spread fingers.

"Come hither," said the third blind man, following his motion and clutching him neatly.

And they held Nunez and felt him over, saying no word further until they had done so.

"Carefully," he cried, with a finger in his eye, and found

they thought that organ, with its fluttering lids, a queer thing in him. They went over it again.

"A strange creature, Correa," said the one called Pedro.
"Feel the coarseness of his hair. Like a llama's hair."

"Rough he is as the rocks that begot him," said Correa, investigating Nunez's unshaven chin with a soft and slightly moist hand. "Perhaps he will grow finer."

Nunez struggled a little under their examination, but they gripped him firm.

"Carefully," he said again.

"He speaks," said the third man. "Certainly he is a man."

"Ugh!" said Pedro, at the roughness of his coat.

"And you have come into the world?" asked Pedro.

"OUT of the world. Over mountains and glaciers; right over above there, half-way to the sun. Out of the great, big world that goes down, twelve days' journey to the sea."

They scarcely seemed to heed him. "Our fathers have told us men may be made by the forces of Nature," said Correa. "It is the warmth of things, and moisture, and rottenness--rottenness."

"Let us lead him to the elders," said Pedro.

"Shout first," said Correa, "lest the children be afraid. This is a marvellous occasion."

So they shouted, and Pedro went first and took Nunez by the

hand to lead him to the houses.

He drew his hand away. "I can see," he said.

"See?" said Correa.

"Yes; see," said Nunez, turning towards him, and stumbled against Pedro's pail.

"His senses are still imperfect," said the third blind man.
"He stumbles, and talks unmeaning words. Lead him by the hand."

"As you will," said Nunez, and was led along laughing.

It seemed they knew nothing of sight.

Well, all in good time he would teach them.

He heard people shouting, and saw a number of figures gathering together in the middle roadway of the village.

He found it tax his nerve and patience more than he had anticipated, that first encounter with the population of the Country of the Blind. The place seemed larger as he drew near to it, and the smeared plasterings queerer, and a crowd of children and men and women (the women and girls he was pleased to note had, some of them, quite sweet faces, for all that their eyes were shut and sunken) came about him, holding on to him, touching him with soft, sensitive hands, smelling at him, and listening at every word he spoke. Some of the maidens and children, however, kept aloof as if afraid, and indeed his voice seemed coarse and rude beside their softer notes. They mobbed him. His three guides kept close to him with an effect of proprietorship, and said again and again, "A wild man out of the rocks."

"Bogota," he said. "Bogota. Over the mountain crests."

"A wild man--using wild words," said Pedro. "Did you hear that--"BOGOTA? His mind has hardly formed yet. He has only the beginnings of speech."

A little boy nipped his hand. "Bogota!" he said mockingly.

"Aye! A city to your village. I come from the great world --where men have eyes and see."

"His name's Bogota," they said.

"He stumbled," said Correa--" stumbled twice as we came hither."

"Bring him in to the elders."

And they thrust him suddenly through a doorway into a room as black as pitch, save at the end there faintly glowed a fire. The crowd closed in behind him and shut out all but the faintest glimmer of day, and before he could arrest himself he had fallen headlong over the feet of a seated man. His arm, outflung, struck the face of someone else as he went down; he felt the soft impact of features and heard a cry of anger, and for a moment he struggled against a number of hands that clutched him. It was a one-sided fight. An inkling of the situation came to him and he lay quiet.

"I fell down," he said; I couldn't see in this pitchy darkness."

There was a pause as if the unseen persons about him tried to understand his words. Then the voice of Correa said: "He is but newly formed. He stumbles as he walks and mingles words that mean nothing with his speech."

Others also said things about him that he heard or understood imperfectly.

"May I sit up?" he asked, in a pause. "I will not struggle against you again."

They consulted and let him rise.

The voice of an older man began to question him, and Nunez found himself trying to explain the great world out of which he had fallen, and the sky and mountains and such-like marvels, to these elders who sat in darkness in the Country of the Blind. And they would believe and understand nothing whatever that he told them, a thing quite outside his expectation. They would not even understand many of his words. For fourteen generations these people had been blind and cut off from all the seeing world; the names for all the things of sight had faded and changed; the story of the outer world was faded and changed to a child's story; and they had ceased to concern themselves with anything beyond the rocky slopes above their circling wall. Blind men of genius had arisen among them and questioned the shreds of belief and tradition they had brought with them from their seeing days, and had dismissed all these things as idle fancies and replaced them with new and saner explanations. Much of their imagination had shrivelled with their eyes, and they had made for themselves new imaginations with their ever more sensitive ears and finger-tips. Slowly Nunez realised this: that his expectation of wonder and reverence at his origin and his gifts was not to be borne out; and after his poor attempt to explain sight to them had been set aside as the confused version of a new-made being describing the marvels of his incoherent sensations, he subsided, a little dashed, into listening to their instruction. And the eldest of the blind men explained to him life and philosophy and religion, how that the world (meaning their valley) had been first an empty hollow in the

rocks, and then had come first inanimate things without the gift of touch, and llamas and a few other creatures that had little sense, and then men, and at last angels, whom one could hear singing and making fluttering sounds, but whom no one could touch at all, which puzzled Nunez greatly until he thought of the birds.

He went on to tell Nunez how this time had been divided into the warm and the cold, which are the blind equivalents of day and night, and how it was good to sleep in the warm and work during the cold, so that now, but for his advent, the whole town of the blind would have been asleep. He said Nunez must have been specially created to learn and serve the wisdom they had acquired, and that for all his mental incoherency and stumbling behaviour he must have courage and do his best to learn, and at that all the people in the door-way murmured encouragingly. He said the night--for the blind call their day night--was now far gone, and it behooved everyone to go back to sleep. He asked Nunez if he knew how to sleep, and Nunez said he did, but that before sleep he wanted food. They brought him food, llama's milk in a bowl and rough salted bread, and led him into a lonely place to eat out of their hearing, and afterwards to slumber until the chill of the mountain evening roused them to begin their day again. But Nunez slumbered not at all.

Instead, he sat up in the place where they had left him, resting his limbs and turning the unanticipated circumstances of his arrival over and over in his mind.

Every now and then he laughed, sometimes with amusement and sometimes with indignation.

"Unformed mind!" he said. "Got no senses yet! They little know they've been insulting their Heaven-sent King and master . .

. . .

"I see I must bring them to reason.

"Let me think.

"Let me think."

He was still thinking when the sun set.

Nunez had an eye for all beautiful things, and it seemed to him that the glow upon the snow-fields and glaciers that rose about the valley on every side was the most beautiful thing he had ever seen. His eyes went from that inaccessible glory to the village and irrigated fields, fast sinking into the twilight, and suddenly a wave of emotion took him, and he thanked God from the bottom of his heart that the power of sight had been given him.

He heard a voice calling to him from out of the village.

"Yaho there, Bogota! Come hither!"

At that he stood up, smiling. He would show these people once and for all what sight would do for a man. They would seek him, but not find him.

"You move not, Bogota," said the voice.

He laughed noiselessly and made two stealthy steps aside from the path.

"Trample not on the grass, Bogota; that is not allowed."

Nunez had scarcely heard the sound he made himself. He stopped, amazed.

The owner of the voice came running up the piebald path

towards him.

He stepped back into the pathway. "Here I am," he said.

"Why did you not come when I called you?" said the blind man. "Must you be led like a child? Cannot you hear the path as you walk?"

Nunez laughed. "I can see it," he said.

"There is no such word as SEE," said the blind man, after a pause. "Cease this folly and follow the sound of my feet."

Nunez followed, a little annoyed.

"My time will come," he said.

"You'll learn," the blind man answered. "There is much to learn in the world."

"Has no one told you, 'In the Country of the Blind the One-Eyed Man is King?'"

"What is blind?" asked the blind man, carelessly, over his shoulder.

Four days passed and the fifth found the King of the Blind still incognito, as a clumsy and useless stranger among his subjects.

It was, he found, much more difficult to proclaim himself than he had supposed, and in the meantime, while he meditated his coup d'etat, he did what he was told and learnt the manners and customs of the Country of the Blind. He found working and going about at night a particularly irksome thing, and he decided

that that should be the first thing he would change.

They led a simple, laborious life, these people, with all the elements of virtue and happiness as these things can be understood by men. They toiled, but not oppressively; they had food and clothing sufficient for their needs; they had days and seasons of rest; they made much of music and singing, and there was love among them and little children. It was marvellous with what confidence and precision they went about their ordered world. Everything, you see, had been made to fit their needs; each of the radiating paths of the valley area had a constant angle to the others, and was distinguished by a special notch upon its kerbing; all obstacles and irregularities of path or meadow had long since been cleared away; all their methods and procedure arose naturally from their special needs. Their senses had become marvellously acute; they could hear and judge the slightest gesture of a man a dozen paces away--could hear the very beating of his heart. Intonation had long replaced expression with them, and touches gesture, and their work with hoe and spade and fork was as free and confident as garden work can be. Their sense of smell was extraordinarily fine; they could distinguish individual differences as readily as a dog can, and they went about the tending of llamas, who lived among the rocks above and came to the wall for food and shelter, with ease and confidence. It was only when at last Nunez sought to assert himself that he found how easy and confident their movements could be.

He rebelled only after he had tried persuasion.

He tried at first on several occasions to tell them of sight.

"Look you here, you people," he said. "There are things you do not understand in me."

Once or twice one or two of them attended to him; they sat with faces downcast and ears turned intelligently towards him, and

he did his best to tell them what it was to see. Among his hearers was a girl, with eyelids less red and sunken than the others, so that one could almost fancy she was hiding eyes, whom especially he hoped to persuade. He spoke of the beauties of sight, of watching the mountains, of the sky and the sunrise, and they heard him with amused incredulity that presently became condemnatory. They told him there were indeed no mountains at all, but that the end of the rocks where the llamas grazed was indeed the end of the world; thence sprang a cavernous roof of the universe, from which the dew and the avalanches fell; and when he maintained stoutly the world had neither end nor roof such as they supposed, they said his thoughts were wicked. So far as he could describe sky and clouds and stars to them it seemed to them a hideous void, a terrible blankness in the place of the smooth roof to things in which they believed--it was an article of faith with them that the cavern roof was exquisitely smooth to the touch. He saw that in some manner he shocked them, and gave up that aspect of the matter altogether, and tried to show them the practical value of sight. One morning he saw Pedro in the path called Seventeen and coming towards the central houses, but still too far off for hearing or scent, and he told them as much. "In a little while," he prophesied, "Pedro will be here." An old man remarked that Pedro had no business on path Seventeen, and then, as if in confirmation, that individual as he drew near turned and went transversely into path Ten, and so back with nimble paces towards the outer wall. They mocked Nunez when Pedro did not arrive, and afterwards, when he asked Pedro questions to clear his character, Pedro denied and outfaced him, and was afterwards hostile to him.

Then he induced them to let him go a long way up the sloping meadows towards the wall with one complaisant individual, and to him he promised to describe all that happened among the houses. He noted certain goings and comings, but the things that really seemed to signify to these people happened inside of or behind the windowless houses--the only things they took note of to test him

by--and of those he could see or tell nothing; and it was after the failure of this attempt, and the ridicule they could not repress, that he resorted to force. He thought of seizing a spade and suddenly smiting one or two of them to earth, and so in fair combat showing the advantage of eyes. He went so far with that resolution as to seize his spade, and then he discovered a new thing about himself, and that was that it was impossible for him to hit a blind man in cold blood.

He hesitated, and found them all aware that he had snatched up the spade. They stood all alert, with their heads on one side, and bent ears towards him for what he would do next.

"Put that spade down," said one, and he felt a sort of helpless horror. He came near obedience.

Then he had thrust one backwards against a house wall, and fled past him and out of the village.

He went athwart one of their meadows, leaving a track of trampled grass behind his feet, and presently sat down by the side of one of their ways. He felt something of the buoyancy that comes to all men in the beginning of a fight, but more perplexity. He began to realise that you cannot even fight happily with creatures who stand upon a different mental basis to yourself. Far away he saw a number of men carrying spades and sticks come out of the street of houses and advance in a spreading line along the several paths towards him. They advanced slowly, speaking frequently to one another, and ever and again the whole cordon would halt and sniff the air and listen.

The first time they did this Nunez laughed. But afterwards he did not laugh.

One struck his trail in the meadow grass and came stooping and

feeling his way along it.

For five minutes he watched the slow extension of the cordon, and then his vague disposition to do something forthwith became frantic. He stood up, went a pace or so towards the circumferential wall, turned, and went back a little way. There they all stood in a crescent, still and listening.

He also stood still, gripping his spade very tightly in both hands. Should he charge them?

The pulse in his ears ran into the rhythm of "In the Country of the Blind the One-Eyed Man is King."

Should he charge them?

He looked back at the high and unclimbable wall behind--unclimbable because of its smooth plastering, but withal pierced with many little doors and at the approaching line of seekers. Behind these others were now coming out of the street of houses.

Should he charge them?

"Bogota!" called one. "Bogota! where are you?"

He gripped his spade still tighter and advanced down the meadows towards the place of habitations, and directly he moved they converged upon him. "I'll hit them if they touch me," he swore; "by Heaven, I will. I'll hit." He called aloud, "Look here, I'm going to do what I like in this valley! Do you hear? I'm going to do what I like and go where I like."

They were moving in upon him quickly, groping, yet moving rapidly. It was like playing blind man's buff with everyone

blindfolded except one. "Get hold of him!" cried one. He found himself in the arc of a loose curve of pursuers. He felt suddenly he must be active and resolute.

"You don't understand," he cried, in a voice that was meant to be great and resolute, and which broke. "You are blind and I can see. Leave me alone!"

"Bogota! Put down that spade and come off the grass!"

The last order, grotesque in its urban familiarity, produced a gust of anger. "I'll hurt you," he said, sobbing with emotion. "By Heaven, I'll hurt you! Leave me alone!"

He began to run--not knowing clearly where to run. He ran from the nearest blind man, because it was a horror to hit him. He stopped, and then made a dash to escape from their closing ranks. He made for where a gap was wide, and the men on either side, with a quick perception of the approach of his paces, rushed in on one another. He sprang forward, and then saw he must be caught, and SWISH! the spade had struck. He felt the soft thud of hand and arm, and the man was down with a yell of pain, and he was through.

Through! And then he was close to the street of houses again, and blind men, whirling spades and stakes, were running with a reasoned swiftness hither and thither.

He heard steps behind him just in time, and found a tall man rushing forward and swiping at the sound of him. He lost his nerve, hurled his spade a yard wide of this antagonist, and whirled about and fled, fairly yelling as he dodged another.

He was panic-stricken. He ran furiously to and fro, dodging when there was no need to dodge, and, in his anxiety to see on

every side of him at once, stumbling. For a moment he was down and they heard his fall. Far away in the circumferential wall a little doorway looked like Heaven, and he set off in a wild rush for it. He did not even look round at his pursuers until it was gained, and he had stumbled across the bridge, clambered a little way among the rocks, to the surprise and dismay of a young llama, who went leaping out of sight, and lay down sobbing for breath.

And so his coup d'etat came to an end.

He stayed outside the wall of the valley of the blind for two nights and days without food or shelter, and meditated upon the Unexpected. During these meditations he repeated very frequently and always with a profounder note of derision the exploded proverb: "In the Country of the Blind the One-Eyed Man is King." He thought chiefly of ways of fighting and conquering these people, and it grew clear that for him no practicable way was possible. He had no weapons, and now it would be hard to get one.

The canker of civilisation had got to him even in Bogota, and he could not find it in himself to go down and assassinate a blind man. Of course, if he did that, he might then dictate terms on the threat of assassinating them all. But--Sooner or later he must sleep!

He tried also to find food among the pine trees, to be comfortable under pine boughs while the frost fell at night, and--with less confidence--to catch a llama by artifice in order to try to kill it--perhaps by hammering it with a stone--and so finally, perhaps, to eat some of it. But the llamas had a doubt of him and regarded him with distrustful brown eyes and spat when he drew near. Fear came on him the second day and fits of shivering. Finally he crawled down to the wall of the Country of the Blind and tried to make his terms. He crawled along by the stream, shouting, until two blind men came out to the gate and talked to him.

"I was mad," he said. "But I was only newly made."

They said that was better.

He told them he was wiser now, and repented of all he had done.

Then he wept without intention, for he was very weak and ill now, and they took that as a favourable sign.

They asked him if he still thought he could SEE."

"No," he said. "That was folly. The word means nothing. Less than nothing!"

They asked him what was overhead.

"About ten times ten the height of a man there is a roof above the world--of rock--and very, very smooth. So smooth--so beautifully smooth . . ."He burst again into hysterical tears. "Before you ask me any more, give me some food or I shall die!"

He expected dire punishments, but these blind people were capable of toleration. They regarded his rebellion as but one more proof of his general idiocy and inferiority, and after they had whipped him they appointed him to do the simplest and heaviest work they had for anyone to do, and he, seeing no other way of living, did submissively what he was told.

He was ill for some days and they nursed him kindly. That refined his submission. But they insisted on his lying in the dark, and that was a great misery. And blind philosophers came and talked to him of the wicked levity of his mind, and reproved him so

impressively for his doubts about the lid of rock that covered their cosmic casserole that he almost doubted whether indeed he was not the victim of hallucination in not seeing it overhead.

So Nunez became a citizen of the Country of the Blind, and these people ceased to be a generalised people and became individualities to him, and familiar to him, while the world beyond the mountains became more and more remote and unreal. There was Yacob, his master, a kindly man when not annoyed; there was Pedro, Yacob's nephew; and there was Medina-sarote, who was the youngest daughter of Yacob. She was little esteemed in the world of the blind, because she had a clear-cut face and lacked that satisfying, glossy smoothness that is the blind man's ideal of feminine beauty, but Nunez thought her beautiful at first, and presently the most beautiful thing in the whole creation. Her closed eyelids were not sunken and red after the common way of the valley, but lay as though they might open again at any moment; and she had long eyelashes, which were considered a grave disfigurement. And her voice was weak and did not satisfy the acute hearing of the valley swains. So that she had no lover.

There came a time when Nunez thought that, could he win her, he would be resigned to live in the valley for all the rest of his days.

He watched her; he sought opportunities of doing her little services and presently he found that she observed him. Once at a rest-day gathering they sat side by side in the dim starlight, and the music was sweet. His hand came upon hers and he dared to clasp it. Then very tenderly she returned his pressure. And one day, as they were at their meal in the darkness, he felt her hand very softly seeking him, and as it chanced the fire leapt then, and he saw the tenderness of her face.

He sought to speak to her.

He went to her one day when she was sitting in the summer moonlight spinning. The light made her a thing of silver and mystery. He sat down at her feet and told her he loved her, and told her how beautiful she seemed to him. He had a lover's voice, he spoke with a tender reverence that came near to awe, and she had never before been touched by adoration. She made him no definite answer, but it was clear his words pleased her.

After that he talked to her whenever he could take an opportunity. The valley became the world for him, and the world beyond the mountains where men lived by day seemed no more than a fairy tale he would some day pour into her ears. Very tentatively and timidly he spoke to her of sight.

Sight seemed to her the most poetical of fancies, and she listened to his description of the stars and the mountains and her own sweet white-lit beauty as though it was a guilty indulgence. She did not believe, she could only half understand, but she was mysteriously delighted, and it seemed to him that she completely understood.

His love lost its awe and took courage. Presently he was for demanding her of Yacob and the elders in marriage, but she became fearful and delayed. And it was one of her elder sisters who first told Yacob that Medina-sarote and Nunez were in love.

There was from the first very great opposition to the marriage of Nunez and Medina-sarote; not so much because they valued her as because they held him as a being apart, an idiot, incompetent thing below the permissible level of a man. Her sisters opposed it bitterly as bringing discredit on them all; and old Yacob, though he had formed a sort of liking for his clumsy, obedient serf, shook his head and said the thing could not be. The young men were all angry at the idea of corrupting the race, and one went so far as to

revile and strike Nunez. He struck back. Then for the first time he found an advantage in seeing, even by twilight, and after that fight was over no one was disposed to raise a hand against him. But they still found his marriage impossible.

Old Yacob had a tenderness for his last little daughter, and was grieved to have her weep upon his shoulder.

"You see, my dear, he's an idiot. He has delusions; he can't do anything right."

"I know," wept Medina-sarote. "But he's better than he was. He's getting better. And he's strong, dear father, and kind--stronger and kinder than any other man in the world. And he loves me--and, father, I love him."

Old Yacob was greatly distressed to find her inconsolable, and, besides--what made it more distressing--he liked Nunez for many things. So he went and sat in the windowless council-chamber with the other elders and watched the trend of the talk, and said, at the proper time, "He's better than he was. Very likely, some day, we shall find him as sane as ourselves."

Then afterwards one of the elders, who thought deeply, had an idea. He was a great doctor among these people, their medicine-man, and he had a very philosophical and inventive mind, and the idea of curing Nunez of his peculiarities appealed to him. One day when Yacob was present he returned to the topic of Nunez. "I have examined Nunez," he said, "and the case is clearer to me. I think very probably he might be cured."

"This is what I have always hoped," said old Yacob.

"His brain is affected," said the blind doctor.

The elders murmured assent.

"Now, WHAT affects it?"

"Ah!" said old Yacob.

THIS," said the doctor, answering his own question.

"Those queer things that are called the eyes, and which exist to make an agreeable depression in the face, are diseased, in the case of Nunez, in such a way as to affect his brain. They are greatly distended, he has eyelashes, and his eyelids move, and consequently his brain is in a state of constant irritation and distraction."

"Yes?" said old Yacob. "Yes?"

"And I think I may say with reasonable certainty that, in order to cure him complete, all that we need to do is a simple and easy surgical operation--namely, to remove these irritant bodies."

"And then he will be sane?"

"Then he will be perfectly sane, and a quite admirable citizen."

"Thank Heaven for science!" said old Yacob, and went forth at once to tell Nunez of his happy hopes.

But Nunez's manner of receiving the good news struck him as being cold and disappointing.

"One might think," he said, "from the tone you take that you did not care for my daughter."

It was Medina-sarote who persuaded Nunez to face the blind surgeons.

"YOU do not want me," he said, "to lose my gift of sight?"

She shook her head.

"My world is sight."

Her head drooped lower.

"There are the beautiful things, the beautiful little things--the flowers, the lichens amidst the rocks, the light and softness on a piece of fur, the far sky with its drifting dawn of clouds, the sunsets and the stars. And there is YOU. For you alone it is good to have sight, to see your sweet, serene face, your kindly lips, your dear, beautiful hands folded together. . . . It is these eyes of mine you won, these eyes that hold me to you, that these idiots seek. Instead, I must touch you, hear you, and never see you again. I must come under that roof of rock and stone and darkness, that horrible roof under which your imaginations stoop . . . NO; YOU would not have me do that?"

A disagreeable doubt had arisen in him. He stopped and left the thing a question.

"I wish," she said, "sometimes--" She paused.

"Yes?" he said, a little apprehensively.

"I wish sometimes--you would not talk like that."

"Like what?"

"I know it's pretty--it's your imagination. I love it, but NOW--"

He felt cold. "NOW?" he said, faintly.

She sat quite still.

"You mean--you think--I should be better, better perhaps--"

He was realising things very swiftly. He felt anger perhaps, anger at the dull course of fate, but also sympathy for her lack of understanding--a sympathy near akin to pity.

"DEAR," he said, and he could see by her whiteness how tensely her spirit pressed against the things she could not say. He put his arms about her, he kissed her ear, and they sat for a time in silence.

"If I were to consent to this?" he said at last, in a voice that was very gentle.

She flung her arms about him, weeping wildly. "Oh, if you would," she sobbed, "if only you would!"

For a week before the operation that was to raise him from his servitude and inferiority to the level of a blind citizen Nunez knew nothing of sleep, and all through the warm, sunlit hours, while the others slumbered happily, he sat brooding or wandered aimlessly, trying to bring his mind to bear on his dilemma. He had given his answer, he had given his consent, and still he was not sure. And at last work-time was over, the sun rose in splendour over the golden crests, and his last day of vision began for him. He had a few minutes with Medina-sarote before she went apart to sleep.

"To-morrow," he said, "I shall see no more."

"Dear heart!" she answered, and pressed his hands with all her

strength.

"They will hurt you but little," she said; "and you are going through this pain, you are going through it, dear lover, for ME Dear, if a woman's heart and life can do it, I will repay you. My dearest one, my dearest with the tender voice, I will repay."

He was drenched in pity for himself and her.

He held her in his arms, and pressed his lips to hers and looked on her sweet face for the last time. "Good-bye!" he whispered to that dear sight, "good-bye!"

And then in silence he turned away from her.

She could hear his slow retreating footsteps, and something in the rhythm of them threw her into a passion of weeping.

He walked away.

He had fully meant to go to a lonely place where the meadows were beautiful with white narcissus, and there remain until the hour of his sacrifice should come, but as he walked he lifted up his eyes and saw the morning, the morning like an angel in golden armour, marching down the steeps

It seemed to him that before this splendour he and this blind world in the valley, and his love and all, were no more than a pit of sin.

He did not turn aside as he had meant to do, but went on and passed through the wall of the circumference and out upon the rocks, and his eyes were always upon the sunlit ice and snow.

He saw their infinite beauty, and his imagination soared over them to the things beyond he was now to resign for ever!

He thought of that great free world that he was parted from, the world that was his own, and he had a vision of those further slopes, distance beyond distance, with Bogota, a place of multitudinous stirring beauty, a glory by day, a luminous mystery by night, a place of palaces and fountains and statues and white houses, lying beautifully in the middle distance. He thought how for a day or so one might come down through passes drawing ever nearer and nearer to its busy streets and ways. He thought of the river journey, day by day, from great Bogota to the still vaster world beyond, through towns and villages, forest and desert places, the rushing river day by day, until its banks receded, and the big steamers came splashing by and one had reached the sea--the limitless sea, with its thousand islands, its thousands of islands, and its ships seen dimly far away in their incessant journeyings round and about that greater world. And there, unpent by mountains, one saw the sky--the sky, not such a disc as one saw it here, but an arch of immeasurable blue, a deep of deeps in which the circling stars were floating

His eyes began to scrutinise the great curtain of the mountains with a keener inquiry.

For example; if one went so, up that gully and to that chimney there, then one might come out high among those stunted pines that ran round in a sort of shelf and rose still higher and higher as it passed above the gorge. And then? That talus might be managed. Thence perhaps a climb might be found to take him up to the precipice that came below the snow; and if that chimney failed, then another farther to the east might serve his purpose better. And then? Then one would be out upon the amber-lit snow there, and half-way up to the crest of those beautiful desolations. And suppose one had good fortune!

He glanced back at the village, then turned right round and regarded it with folded arms.

He thought of Medina-sarote, and she had become small and remote.

He turned again towards the mountain wall down which the day had come to him.

Then very circumspectly he began his climb.

When sunset came he was not longer climbing, but he was far and high. His clothes were torn, his limbs were bloodstained, he was bruised in many places, but he lay as if he were at his ease, and there was a smile on his face.

From where he rested the valley seemed as if it were in a pit and nearly a mile below. Already it was dim with haze and shadow, though the mountain summits around him were things of light and fire. The mountain summits around him were things of light and fire, and the little things in the rocks near at hand were drenched with light and beauty, a vein of green mineral piercing the grey, a flash of small crystal here and there, a minute, minutely-beautiful orange lichen close beside his face. There were deep, mysterious shadows in the gorge, blue deepening into purple, and purple into a luminous darkness, and overhead was the illimitable vastness of the sky. But he heeded these things no longer, but lay quite still there, smiling as if he were content now merely to have escaped from the valley of the Blind, in which he had thought to be King. And the glow of the sunset passed, and the night came, and still he lay there, under the cold, clear stars.

BOOK THE FIRST

THE MAKING OF A MAN

CHAPTER THE FIRST

CONCERNING A BOOK THAT WAS NEVER WRITTEN

1

Since I came to this place I have been very restless, wasting my energies in the futile beginning of ill-conceived books. One does not settle down very readily at two and forty to a new way of living, and I have found myself with the teeming interests of the life I have abandoned still buzzing like a swarm of homeless bees in my head. My mind has been full of confused protests and justifications. In any case I should have found difficulties enough in expressing the complex thing I have to tell, but it has added greatly to my trouble that I have a great analogue, that a certain Niccolo Machiavelli chanced to fall out of politics at very much the age I have reached, and wrote a book to engage the restlessness of his mind, very much as I have wanted to do. He wrote about the relation of the great constructive spirit in politics to individual character and weaknesses, and so far his achievement lies like a deep rut in the road of my intention. It has taken me far astray. It is a matter of many weeks now--diversified indeed by some long drives into the mountains behind us and a memorable sail to Genoa across the blue and purple waters that drowned Shelley--since I began a laboured and futile imitation of "The Prince." I sat up late last night with the jumbled accumulation; and at last made a little fire of olive twigs and burnt it all, sheet by sheet--to

begin again clear this morning.

But incidentally I have re-read most of Machiavelli, not excepting those scandalous letters of his to Vettori, and it seems to me, now that I have released myself altogether from his literary precedent, that he still has his use for me. In spite of his vast prestige I claim kindred with him and set his name upon my title-page, in partial intimation of the matter of my story. He takes me with sympathy not only by reason of the dream he pursued and the humanity of his politics, but by the mixture of his nature. His vices come in, essential to my issue. He is dead and gone, all his immediate correlations to party and faction have faded to insignificance, leaving only on the one hand his broad method and conceptions, and upon the other his intimate living personality, exposed down to its salacious corners as the soul of no contemporary can ever be exposed. Of those double strands it is I have to write, of the subtle protesting perplexing play of instinctive passion and desire against too abstract a dream of statesmanship. But things that seemed to lie very far apart in Machiavelli's time have come near to one another; it is no simple story of white passions struggling against the red that I have to tell.

The state-making dream is a very old dream indeed in the world's history. It plays too small a part in novels. Plato and Confucius are but the highest of a great host of minds that have had a kindred aspiration, have dreamt of a world of men better ordered, happier, finer, securer. They imagined cities grown more powerful and peoples made rich and multitudinous by their efforts, they thought in terms of harbours and shining navies, great roads engineered marvellously, jungles cleared and deserts conquered, the ending of muddle and diseases and dirt and misery; the ending of confusions that waste human possibilities; they thought of these things with passion and desire as other men think of the soft lines and tender beauty of women. Thousands of men there are to-day almost mastered by this white passion of statecraft, and in nearly every one who

reads and thinks you could find, I suspect, some sort of answering response. But in every one it presents itself extraordinarily entangled and mixed up with other, more intimate things.

It was so with Machiavelli. I picture him at San Casciano as he lived in retirement upon his property after the fall of the Republic, perhaps with a twinge of the torture that punished his conspiracy still lurking in his limbs. Such twinges could not stop his dreaming. Then it was "The Prince" was written. All day he went about his personal affairs, saw homely neighbours, dealt with his family, gave vent to everyday passions. He would sit in the shop of Donato del Corno gossiping curiously among vicious company, or pace the lonely woods of his estate, book in hand, full of bitter meditations. In the evening he returned home and went to his study. At the entrance, he says, he pulled off his peasant clothes covered with the dust and dirt of that immediate life, washed himself, put on his "noble court dress," closed the door on the world of toiling and getting, private loving, private hating and personal regrets, sat down with a sigh of contentment to those wider dreams.

I like to think of him so, with brown books before him lit by the light of candles in silver candlesticks, or heading some new chapter of "The Prince," with a grey quill in his clean fine hand.

So writing, he becomes a symbol for me, and the less none because of his animal humour, his queer indecent side, and because of such lapses into utter meanness as that which made him sound the note of the begging-letter writer even in his "Dedication," reminding His Magnificence very urgently, as if it were the gist of his matter, of the continued malignity of fortune in his affairs. These flaws complete him. They are my reason for preferring him as a symbol to Plato, of whose indelicate side we know nothing, and whose correspondence with Dionysius of Syracuse has perished; or to Confucius who travelled China in search of a Prince he might instruct, with lapses and indignities now lost in the mists of ages.

They have achieved the apotheosis of individual forgetfulness, and Plato has the added glory of that acquired beauty, that bust of the Indian Bacchus which is now indissolubly mingled with his tradition. They have passed into the world of the ideal, and every humbug takes his freedoms with their names. But Machiavelli, more recent and less popular, is still all human and earthly, a fallen brother--and at the same time that nobly dressed and nobly dreaming writer at the desk.

That vision of the strengthened and perfected state is protagonist in my story. But as I re-read "The Prince" and thought out the manner of my now abandoned project, I came to perceive how that stir and whirl of human thought one calls by way of embodiment the French Revolution, has altered absolutely the approach to such a question. Machiavelli, like Plato and Pythagoras and Confucius two hundred odd decades before him, saw only one method by which a thinking man, himself not powerful, might do the work of state building, and that was by seizing the imagination of a Prince. Directly these men turned their thoughts towards realisation, their attitudes became--what shall I call it?--secretarial. Machiavelli, it is true, had some little doubts about the particular Prince he wanted, whether it was Caesar Borgia of Giuliano or Lorenzo, but a Prince it had to be. Before I saw clearly the differences of our own time I searched my mind for the modern equivalent of a Prince. At various times I redrafted a parallel dedication to the Prince of Wales, to the Emperor William, to Mr. Evesham, to a certain newspaper proprietor who was once my schoolfellow at City Merchants', to Mr. J. D. Rockefeller--all of them men in their several ways and circumstances and possibilities, princely. Yet in every case my pen bent of its own accord towards irony because--because, although at first I did not realise it, I myself am just as free to be a prince. The appeal was unfair. The old sort of Prince, the old little principality has vanished from the world. The commonweal is one man's absolute estate and responsibility no more. In Machiavelli's time it was indeed to an extreme degree one man's affair. But the days of the

Prince who planned and directed and was the source and centre of all power are ended. We are in a condition of affairs infinitely more complex, in which every prince and statesman is something of a servant and every intelligent human being something of a Prince. No magnificent pensive Lorenzos remain any more in this world for secretarial hopes.

In a sense it is wonderful how power has vanished, in a sense wonderful how it has increased. I sit here, an unarmed discredited man, at a small writing-table in a little defenceless dwelling among the vines, and no human being can stop my pen except by the deliberate self-immolation of murdering me, nor destroy its fruits except by theft and crime. No King, no council, can seize and torture me; no Church, no nation silence me. Such powers of ruthless and complete suppression have vanished. But that is not because power has diminished, but because it has increased and become multitudinous, because it has dispersed itself and specialised. It is no longer a negative power we have, but positive; we cannot prevent, but we can do. This age, far beyond all previous ages, is full of powerful men, men who might, if they had the will for it, achieve stupendous things.

The things that might be done to-day! The things indeed that are being done! It is the latter that give one so vast a sense of the former. When I think of the progress of physical and mechanical science, of medicine and sanitation during the last century, when I measure the increase in general education and average efficiency, the power now available for human service, the merely physical increment, and compare it with anything that has ever been at man's disposal before, and when I think of what a little straggling, incidental, undisciplined and uncoordinated minority of inventors, experimenters, educators, writers and organisers has achieved this development of human possibilities, achieved it in spite of the disregard and aimlessness of the huge majority, and the passionate resistance of the active dull, my imagination grows giddy with

dazzling intimations of the human splendours the justly organised state may yet attain. I glimpse for a bewildering instant the heights that may be scaled, the splendid enterprises made possible.

But the appeal goes out now in other forms, in a book that catches at thousands of readers for the eye of a Prince diffused. It is the old appeal indeed for the unification of human effort, the ending of confusions, but instead of the Machiavellian deference to a flattered lord, a man cries out of his heart to the unseen fellowship about him. The last written dedication of all those I burnt last night, was to no single man, but to the socially constructive passion--in any man. . . .

There is, moreover, a second great difference in kind between my world and Machiavelli's. We are discovering women. It is as if they had come across a vast interval since his time, into the very chamber of the statesman.

2

In Machiavelli's outlook the interest of womanhood was in a region of life almost infinitely remote from his statecraft. They were the vehicle of children, but only Imperial Rome and the new world of to-day have ever had an inkling of the significance that might give them in the state. They did their work, he thought, as the ploughed earth bears its crops. Apart from their function of fertility they gave a humorous twist to life, stimulated worthy men to toil, and wasted the hours of Princes. He left the thought of women outside with his other dusty things when he went into his study to write, dismissed them from his mind. But our modern world is burthened with its sense of the immense, now half articulate, significance of women. They stand now, as it were, close beside the silver candlesticks, speaking as Machiavelli writes, until he stays his pen and turns to discuss his writing with them.

It is this gradual discovery of sex as a thing collectively portentous that I have to mingle with my statecraft if my picture is to be true which has turned me at length from a treatise to the telling of my own story. In my life I have paralleled very closely the slow realisations that are going on in the world about me. I began life ignoring women, they came to me at first perplexing and dishonouring; only very slowly and very late in my life and after misadventure, did I gauge the power and beauty of the love of man and woman and learnt how it must needs frame a justifiable vision of the ordered world. Love has brought me to disaster, because my career had been planned regardless of its possibility and value. But Machiavelli, it seems to me, when he went into his study, left not only the earth of life outside but its unsuspected soul.

3

Like Machiavelli at San Casciano, if I may take this analogy one step further, I too am an exile. Office and leading are closed to me. The political career that promised so much for me is shattered and ended for ever.

I look out from this vine-wreathed veranda under the branches of a stone pine; I see wide and far across a purple valley whose sides are terraced and set with houses of pine and ivory, the Gulf of Liguria gleaming sapphire blue, and cloud-like baseless mountains hanging in the sky, and I think of lank and coaly steamships heaving on the grey rollers of the English Channel and darkling streets wet with rain, I recall as if I were back there the busy exit from Charing Cross, the cross and the money-changers' offices, the splendid grime of giant London and the crowds going perpetually to and fro, the lights by night and the urgency and eventfulness of that great rain-swept heart of the modern world.

It is difficult to think we have left that--for many years if not for ever. In thought I walk once more in Palace Yard and hear the clink and clatter of hansoms and the quick quiet whirr of motors; I go in vivid recent memories through the stir in the lobbies, I sit again at eventful dinners in those old dining-rooms like cellars below the House--dinners that ended with shrill division bells, I think of huge clubs swarming and excited by the bulletins of that electoral battle that was for me the opening opportunity. I see the stencilled names and numbers go up on the green baize, constituency after constituency, amidst murmurs or loud shouting. . . .

It is over for me now and vanished. That opportunity will come no more. Very probably you have heard already some crude inaccurate version of our story and why I did not take office, and have formed your partial judgement on me. And so it is I sit now at my stone table, half out of life already, in a warm, large, shadowy leisure, splashed with sunlight and hung with vine tendrils, with paper before me to distil such wisdom as I can, as Machiavelli in his exile sought to do, from the things I have learnt and felt during the career that has ended now in my divorce.

I climbed high and fast from small beginnings. I had the mind of my party. I do not know where I might not have ended, but for this red blaze that came out of my unguarded nature and closed my career for ever.

CHAPTER THE SECOND

BROMSTEAD AND MY FATHER

1

I dreamt first of states and cities and political things when I was a little boy in knickerbockers.

When I think of how such things began in my mind, there comes back to me the memory of an enormous bleak room with its ceiling going up to heaven and its floor covered irregularly with patched and defective oilcloth and a dingy mat or so and a "surround" as they call it, of dark stained wood. Here and there against the wall are trunks and boxes. There are cupboards on either side of the fireplace and bookshelves with books above them, and on the wall and rather tattered is a large yellow-varnished geological map of the South of England. Over the mantel is a huge lump of white coral rock and several big fossil bones, and above that hangs the portrait of a brainy gentleman, sliced in half and displaying an interior of intricate detail and much vigour of coloring. It is the floor I think of chiefly; over the oilcloth of which, assumed to be land, spread towns and villages and forts of wooden bricks; there are steep square hills (geologically, volumes of Orr's *CYCLOPAEDIA OF THE SCIENCES*) and the cracks and spaces of the floor and the bare brown surround were the water channels and open sea of that continent of mine.

I still remember with infinite gratitude the great-uncle to whom I owe my bricks. He must have been one of those rare adults who have not forgotten the chagrins and dreams of childhood. He was a prosperous west of England builder; including my father he had three nephews, and for each of them he caused a box of bricks to be made by an out-of-work carpenter, not the insufficient supply of the toyshop, you understand, but a really adequate quantity of bricks

made out of oak and shaped and smoothed, bricks about five inches by two and a half by one, and half-bricks and quarter-bricks to correspond. There were hundreds of them, many hundreds. I could build six towers as high as myself with them, and there seemed quite enough for every engineering project I could undertake. I could build whole towns with streets and houses and churches and citadels; I could bridge every gap in the oilcloth and make causeways over crumpled spaces (which I feigned to be morasses), and on a keel of whole bricks it was possible to construct ships to push over the high seas to the remotest port in the room. And a disciplined population, that rose at last by sedulous begging on birthdays and all convenient occasions to well over two hundred, of lead sailors and soldiers, horse, foot and artillery, inhabited this world.

Justice has never been done to bricks and soldiers by those who write about toys. The praises of the toy theatre have been a common theme for essayists, the planning of the scenes, the painting and cutting out of the caste, penny plain twopence coloured, the stink and glory of the performance and the final conflagration. I had such a theatre once, but I never loved it nor hoped for much from it; my bricks and soldiers were my perpetual drama. I recall an incessant variety of interests. There was the mystery and charm of the complicated buildings one could make, with long passages and steps and windows through which one peeped into their intricacies, and by means of slips of card one could make slanting ways in them, and send marbles rolling from top to base and thence out into the hold of a waiting ship. Then there were the fortresses and gun emplacements and covered ways in which one's soldiers went. And there was commerce; the shops and markets and store-rooms full of nasturtium seed, thrift seed, lupin beans and suchlike provender from the garden; such stuff one stored in match-boxes and pill-boxes, or packed in sacks of old glove fingers tied up with thread and sent off by waggon along the great military road to the beleaguered fortress on the Indian frontier beyond the worn places that were dismal swamps. And there were battles on the way.

That great road is still clear in my memory. I was given, I forget by what benefactor, certain particularly fierce red Indians of lead-- I have never seen such soldiers since--and for these my father helped me to make tepees of brown paper, and I settled them in a hitherto desolate country under the frowning nail-studded cliffs of an ancient trunk. Then I conquered them and garrisoned their land. (Alas! they died, no doubt through contact with civilisation--one my mother trod on--and their land became a wilderness again and was ravaged for a time by a clockwork crocodile of vast proportions.) And out towards the coal-scuttle was a region near the impassable thickets of the ragged hearthrug where lived certain china Zulus brandishing spears, and a mountain country of rudely piled bricks concealing the most devious and enchanting caves and several mines of gold and silver paper. Among these rocks a number of survivors from a Noah's Ark made a various, dangerous, albeit frequently invalid and crippled fauna, and I was wont to increase the uncultivated wildness of this region further by trees of privet-twigs from the garden hedge and box from the garden borders. By these territories went my Imperial Road carrying produce to and fro, bridging gaps in the oilcloth, tunnelling through Encyclopaedic hills--one tunnel was three volumes long--defended as occasion required by camps of paper tents or brick blockhouses, and ending at last in a magnificently engineered ascent to a fortress on the cliffs commanding the Indian reservation.

My games upon the floor must have spread over several years and developed from small beginnings, incorporating now this suggestion and now that. They stretch, I suppose, from seven to eleven or twelve. I played them intermittently, and they bulk now in the retrospect far more significantly than they did at the time. I played them in bursts, and then forgot them for long periods; through the spring and summer I was mostly out of doors, and school and classes caught me early. And in the retrospect I see them all not only magnified and transfigured, but fore-shortened and confused

together. A clockwork railway, I seem to remember, came and went; one or two clockwork boats, toy sailing ships that, being keeled, would do nothing but lie on their beam ends on the floor; a detestable lot of cavalymen, undersized and gilt all over, given me by a maiden aunt, and very much what one might expect from an aunt, that I used as Nero used his Christians to ornament my public buildings; and I finally melted some into fratricidal bullets, and therewith blew the rest to flat splashes of lead by means of a brass cannon in the garden.

I find this empire of the floor much more vivid and detailed in my memory now than many of the owners of the skirts and legs and boots that went gingerly across its territories. Occasionally, alas! they stooped to scrub, abolishing in one universal destruction the slow growth of whole days of civilised development. I still remember the hatred and disgust of these catastrophes. Like Noah I was given warnings. Did I disregard them, coarse red hands would descend, plucking garrisons from fortresses and sailors from ships, jumbling them up in their wrong boxes, clumsily so that their rifles and swords were broken, sweeping the splendid curves of the Imperial Road into heaps of ruins, casting the jungle growth of Zululand into the fire.

Well, Master Dick," the voice of this cosmic calamity would say, "you ought to have put them away last night. No! I can't wait until you've sailed them all away in ships. I got my work to do, and do it I will."

And in no time all my continents and lands were swirling water and swiping strokes of house-flannel.

That was the worst of my giant visitants, but my mother too, dear lady, was something of a terror to this microcosm. She wore spring-sided boots, a kind of boot now vanished, I believe, from the world, with dull bodies and shiny toes, and a silk dress with flounces that

were very destructive to the more hazardous viaducts of the Imperial Road. She was always, I seem to remember, fetching me; fetching me for a meal, fetching me for a walk or, detestable absurdity! fetching me for a wash and brush up, and she never seemed to understand anything whatever of the political Systems across which she came to me. Also she forbade all toys on Sundays except the bricks for church-building and the soldiers for church parade, or a Scriptural use of the remains of the Noah's Ark mixed up with a wooden Swiss dairy farm. But she really did not know whether a thing was a church or not unless it positively bristled with cannon, and many a Sunday afternoon have I played Chicago (with the fear of God in my heart) under an infidel pretence that it was a new sort of ark rather elaborately done.

Chicago, I must explain, was based upon my father's description of the pig slaughterings in that city and certain pictures I had seen. You made your beasts--which were all the ark lot really, provisionally conceived as pigs--go up elaborate approaches to a central pen, from which they went down a cardboard slide four at a time, and dropped most satisfyingly down a brick shaft, and pitter-litter over some steep steps to where a head slaughterman (ne Noah) strung a cotton loop round their legs and sent them by pin hooks along a wire to a second slaughterman with a chipped foot (formerly Mrs. Noah) who, if I remember rightly, converted them into Army sausage by means of a portion of the inside of an old alarum clock.

My mother did not understand my games, but my father did. He wore bright-coloured socks and carpet slippers when he was indoors--my mother disliked boots in the house--and he would sit down on my little chair and survey the microcosm on the floor with admirable understanding and sympathy.

It was he gave me most of my toys and, I more than suspect, most of my ideas. "Here's some corrugated iron," he would say, "suitable for roofs and fencing," and hand me a lump of that stiff crinkled

paper that is used for packing medicine bottles. Or, "Dick, do you see the tiger loose near the Imperial Road?--won't do for your cattle ranch." And I would find a bright new lead tiger like a special creation at large in the world, and demanding a hunting expedition and much elaborate effort to get him safely housed in the city menagerie beside the captured dragon crocodile, tamed now, and his key lost and the heart and spring gone out of him.

And to the various irregular reading of my father I owe the inestimable blessing of never having a boy's book in my boyhood except those of Jules Verne. But my father used to get books for himself and me from the Bromstead Institute, Fenimore Cooper and Mayne Reid and illustrated histories; one of the Russo-Turkish war and one of Napier's expedition to Abyssinia I read from end to end; Stanley and Livingstone, lives of Wellington, Napoleon and Garibaldi, and back volumes of PUNCH, from which I derived conceptions of foreign and domestic politics it has taken years of adult reflection to correct. And at home permanently we had Wood's NATURAL HISTORY, a brand-new illustrated Green's HISTORY OF THE ENGLISH PEOPLE, Irving's COMPANIONS OF COLUMBUS, a great number of unbound parts of some geographical work, a VOYAGE ROUND THE WORLD I think it was called, with pictures of foreign places, and Clarke's NEW TESTAMENT with a map of Palestine, and a variety of other informing books bought at sales. There was a Sowerby's BOTANY also, with thousands of carefully tinted pictures of British plants, and one or two other important works in the sitting-room. I was allowed to turn these over and even lie on the floor with them on Sundays and other occasions of exceptional cleanliness.

And in the attic I found one day a very old forgotten map after the fashion of a bird's-eye view, representing the Crimea, that fascinated me and kept me for hours navigating its waters with a

pin.

2

My father was a lank-limbed man in easy shabby tweed clothes and with his hands in his trouser pockets. He was a science teacher, taking a number of classes at the Bromstead Institute in Kent under the old Science and Art Department, and "visiting" various schools; and our resources were eked out by my mother's income of nearly a hundred pounds a year, and by his inheritance of a terrace of three palatial but structurally unsound stucco houses near Bromstead Station.

They were big clumsy residences in the earliest Victorian style, interminably high and with deep damp basements and downstairs coal-cellars and kitchens that suggested an architect vindictively devoted to the discomfort of the servant class. If so, he had overreached himself and defeated his end, for no servant would stay in them unless for exceptional wages or exceptional tolerance of inefficiency or exceptional freedom in repartee. Every storey in the house was from twelve to fifteen feet high (which would have been cool and pleasant in a hot climate), and the stairs went steeply up, to end at last in attics too inaccessible for occupation. The ceilings had vast plaster cornices of classical design, fragments of which would sometimes fall unexpectedly, and the wall-papers were bold and gigantic in pattern and much variegated by damp and ill-mended rents.

As my father was quite unable to let more than one of these houses at a time, and that for the most part to eccentric and undesirable tenants, he thought it politic to live in one of the two others, and devote the rent he received from the let one, when it was let, to the incessant necessary repairing of all three. He also did some of the repairing himself and, smoking a bull-dog pipe the while, which

my mother would not allow him to do in the house, he cultivated vegetables in a sketchy, unpunctual and not always successful manner in the unoccupied gardens. The three houses faced north, and the back of the one we occupied was covered by a grape-vine that yielded, I remember, small green grapes for pies in the spring, and imperfectly ripe black grapes in favourable autumns for the purposes of dessert. The grape-vine played an important part in my life, for my father broke his neck while he was pruning it, when I was thirteen.

My father was what is called a man of ideas, but they were not always good ideas. My grandfather had been a private schoolmaster and one of the founders of the College of Preceptors, and my father had assisted him in his school until increasing competition and diminishing attendance had made it evident that the days of small private schools kept by unqualified persons were numbered. Thereupon my father had roused himself and had qualified as a science teacher under the Science and Art Department, which in these days had charge of the scientific and artistic education of the mass of the English population, and had thrown himself into science teaching and the earning of government grants therefor with great if transitory zeal and success.

I do not remember anything of my father's earlier and more energetic time. I was the child of my parents' middle years; they married when my father was thirty-five and my mother past forty, and I saw only the last decadent phase of his educational career.

The Science and Art Department has vanished altogether from the world, and people are forgetting it now with the utmost readiness and generosity. Part of its substance and staff and spirit survive, more or less completely digested into the Board of Education.

The world does move on, even in its government. It is wonderful how many of the clumsy and limited governing bodies of my youth and

early manhood have given place now to more scientific and efficient machinery. When I was a boy, Bromstead, which is now a borough, was ruled by a strange body called a Local Board--it was the Age of Boards--and I still remember indistinctly my father rejoicing at the breakfast-table over the liberation of London from the corrupt and devastating control of a Metropolitan Board of Works. Then there were also School Boards; I was already practically in politics before the London School Board was absorbed by the spreading tentacles of the London County Council.

It gives a measure of the newness of our modern ideas of the State to remember that the very beginnings of public education lie within my father's lifetime, and that many most intelligent and patriotic people were shocked beyond measure at the State doing anything of the sort. When he was born, totally illiterate people who could neither read a book nor write more than perhaps a clumsy signature, were to be found everywhere in England; and great masses of the population were getting no instruction at all. Only a few schools flourished upon the patronage of exceptional parents; all over the country the old endowed grammar schools were to be found sinking and dwindling; many of them had closed altogether. In the new great centres of population multitudes of children were sweated in the factories, darkly ignorant and wretched and the under-equipped and under-staffed National and British schools, supported by voluntary contributions and sectarian rivalries, made an ineffectual fight against this festering darkness. It was a condition of affairs clamouring for remedies, but there was an immense amount of indifference and prejudice to be overcome before any remedies were possible. Perhaps some day some industrious and lucid historian will disentangle all the muddle of impulses and antagonisms, the commercialism, utilitarianism, obstinate conservatism, humanitarian enthusiasm, out of which our present educational organisation arose. I have long since come to believe it necessary that all new social institutions should be born in confusion, and that at first they should present chiefly crude and ridiculous aspects. The distrust

of government in the Victorian days was far too great, and the general intelligence far too low, to permit the State to go about the new business it was taking up in a businesslike way, to train teachers, build and equip schools, endow pedagogic research, and provide properly written school-books. These things it was felt MUST be provided by individual and local effort, and since it was manifest that it was individual and local effort that were in default, it was reluctantly agreed to stimulate them by money payments. The State set up a machinery of examination both in Science and Art and for the elementary schools; and payments, known technically as grants, were made in accordance with the examination results attained, to such schools as Providence might see fit to send into the world. In this way it was felt the Demand would be established that would, according to the beliefs of that time, inevitably ensure the Supply. An industry of "Grant earning" was created, and this would give education as a necessary by-product.

In the end this belief was found to need qualification, but Grant-earning was still in full activity when I was a small boy. So far as the Science and Art Department and my father are concerned, the task of examination was entrusted to eminent scientific men, for the most part quite unaccustomed to teaching. You see, if they also were teaching similar classes to those they examined, it was feared that injustice might be done. Year after year these eminent persons set questions and employed subordinates to read and mark the increasing thousands of answers that ensued, and having no doubt the national ideal of fairness well developed in their minds, they were careful each year to re-read the preceding papers before composing the current one, in order to see what it was usual to ask. As a result of this, in the course of a few years the recurrence and permutation of questions became almost calculable, and since the practical object of the teaching was to teach people not science, but how to write answers to these questions, the industry of Grant-earning assumed a form easily distinguished from any kind of genuine education whatever.

Other remarkable compromises had also to be made with the spirit of the age. The unfortunate conflict between Religion and Science prevalent at this time was mitigated, if I remember rightly, by making graduates in arts and priests in the established church Science Teachers EX OFFICIO, and leaving local and private enterprise to provide schools, diagrams, books, material, according to the conceptions of efficiency prevalent in the district. Private enterprise made a particularly good thing of the books. A number of competing firms of publishers sprang into existence specialising in Science and Art Department work; they set themselves to produce text-books that should supply exactly the quantity and quality of knowledge necessary for every stage of each of five and twenty subjects into which desirable science was divided, and copies and models and instructions that should give precisely the method and gestures esteemed as proficiency in art. Every section of each book was written in the idiom found to be most satisfactory to the examiners, and test questions extracted from papers set in former years were appended to every chapter. By means of these last the teacher was able to train his class to the very highest level of grant-earning efficiency, and very naturally he cast all other methods of exposition aside. First he posed his pupils with questions and then dictated model replies.

That was my father's method of instruction. I attended his classes as an elementary grant-earner from the age of ten until his death, and it is so I remember him, sitting on the edge of a table, smothering a yawn occasionally and giving out the infallible formulae to the industriously scribbling class sitting in rows of desks before him. Occasionally he would slide to his feet and go to a blackboard on an easel and draw on that very slowly and deliberately in coloured chalks a diagram for the class to copy in coloured pencils, and sometimes he would display a specimen or arrange an experiment for them to see. The room in the Institute in which he taught was equipped with a certain amount of apparatus

prescribed as necessary for subject this and subject that by the Science and Art Department, and this my father would supplement with maps and diagrams and drawings of his own.

But he never really did experiments, except that in the class in systematic botany he sometimes made us tease common flowers to pieces. He did not do experiments if he could possibly help it, because in the first place they used up time and gas for the Bunsen burner and good material in a ruinous fashion, and in the second they were, in his rather careless and sketchy hands, apt to endanger the apparatus of the Institute and even the lives of his students. Then thirdly, real experiments involved washing up. And moreover they always turned out wrong, and sometimes misled the too observant learner very seriously and opened demoralising controversies. Quite early in life I acquired an almost ineradicable sense of the unscientific perversity of Nature and the impassable gulf that is fixed between systematic science and elusive fact. I knew, for example, that in science, whether it be subject XII., Organic Chemistry, or subject XVII., Animal Physiology, when you blow into a glass of lime water it instantly becomes cloudy, and if you continue to blow it clears again, whereas in truth you may blow into the stuff from the lime-water bottle until you are crimson in the face and painful under the ears, and it never becomes cloudy at all. And I knew, too, that in science if you put potassium chlorate into a retort and heat it over a Bunsen burner, oxygen is disengaged and may be collected over water, whereas in real life if you do anything of the sort the vessel cracks with a loud report, the potassium chlorate descends sizzling upon the flame, the experimenter says "Oh! Damn!" with astonishing heartiness and distinctness, and a lady student in the back seats gets up and leaves the room.

Science is the organised conquest of Nature, and I can quite understand that ancient libertine refusing to cooperate in her own undoing. And I can quite understand, too, my father's preference for what he called an illustrative experiment, which was simply an

arrangement of the apparatus in front of the class with nothing whatever by way of material, and the Bunsen burner clean and cool, and then a slow luminous description of just what you did put in it when you were so ill-advised as to carry the affair beyond illustration, and just exactly what ought anyhow to happen when you did. He had considerable powers of vivid expression, so that in this way he could make us see all he described. The class, freed from any unpleasant nervous tension, could draw this still life without flinching, and if any part was too difficult to draw, then my father would produce a simplified version on the blackboard to be copied instead. And he would also write on the blackboard any exceptionally difficult but grant-earning words, such as "emphyreumatic" or "botryoidal."

Some words in constant use he rarely explained. I remember once sticking up my hand and asking him in the full flow of description, "Please, sir, what is flocculent?"

"The precipitate is."

"Yes, sir, but what does it mean?"

"Oh! flocculent! " said my father, "flocculent! Why--" he extended his hand and arm and twiddled his fingers for a second in the air. "Like that," he said.

I thought the explanation sufficient, but he paused for a moment after giving it. "As in a flock bed, you know," he added and resumed his discourse.

3

My father, I am afraid, carried a natural incompetence in practical affairs to an exceptionally high level. He combined practical

incompetence, practical enterprise and a thoroughly sanguine temperament, in a manner that I have never seen paralleled in any human being. He was always trying to do new things in the briskest manner, under the suggestion of books or papers or his own spontaneous imagination, and as he had never been trained to do anything whatever in his life properly, his futilities were extensive and thorough. At one time he nearly gave up his classes for intensive culture, so enamoured was he of its possibilities; the peculiar pungency of the manure he got, in pursuit of a chemical theory of his own, has scarred my olfactory memories for a lifetime. The intensive culture phase is very clear in my memory; it came near the end of his career and when I was between eleven and twelve. I was mobilised to gather caterpillars on several occasions, and assisted in nocturnal raids upon the slugs by lantern-light that wrecked my preparation work for school next day. My father dug up both lawns, and trenched and manured in spasms of immense vigour alternating with periods of paralysing distaste for the garden. And for weeks he talked about eight hundred pounds an acre at every meal.

A garden, even when it is not exasperated by intensive methods, is a thing as exacting as a baby, its moods have to be watched; it does not wait upon the cultivator's convenience, but has times of its own. Intensive culture greatly increases this disposition to trouble mankind; it makes a garden touchy and hysterical, a drugged and demoralised and over-irritated garden. My father got at cross purposes with our two patches at an early stage. Everything grew wrong from the first to last, and if my father's manures intensified nothing else, they certainly intensified the Primordial Curse. The peas were eaten in the night before they were three inches high, the beans bore nothing but blight, the only apparent result of a spraying of the potatoes was to develop a PENCHANT in the cat for being ill indoors, the cucumber frames were damaged by the catapulting of boys going down the lane at the back, and all your cucumbers were mysteriously embittered. That lane with its

occasional passers-by did much to wreck the intensive scheme, because my father always stopped work and went indoors if any one watched him. His special manure was apt to arouse a troublesome spirit of inquiry in hardy natures.

In digging his rows and shaping his patches he neglected the guiding string and trusted to his eye altogether too much, and the consequent obliquity and the various wind-breaks and scare-crows he erected, and particularly an irrigation contrivance he began and never finished by which everything was to be watered at once by means of pieces of gutter from the roof and outhouses of Number 2, and a large and particularly obstinate clump of elder-bushes in the abolished hedge that he had failed to destroy entirely either by axe or by fire, combined to give the gardens under intensive culture a singularly desolate and disorderly appearance. He took steps towards the diversion of our house drain under the influence of the Sewage Utilisation Society; but happily he stopped in time. He hardly completed any of the operations he began; something else became more urgent or simply he tired; a considerable area of the Number 2 territory was never even dug up.

In the end the affair irritated him beyond endurance. Never was a man less horticulturally-minded. The clamour of these vegetables he had launched into the world for his service and assistance, wore out his patience. He would walk into the garden the happiest of men after a day or so of disregard, talking to me of history perhaps or social organisation, or summarising some book he had read. He talked to me of anything that interested him, regardless of my limitations. Then he would begin to note the growth of the weeds. "This won't do," he would say and pull up a handful.

More weeding would follow and the talk would become fragmentary. His hands would become earthy, his nails black, weeds would snap off in his careless grip, leaving the roots behind. The world would darken. He would look at his fingers with disgusted astonishment.

"CURSE these weeds!" he would say from his heart. His discourse was at an end.

I have memories, too, of his sudden unexpected charges into the tranquillity of the house, his hands and clothes intensively enriched. He would come in like a whirlwind. "This damned stuff all over me and the Agricultural Chemistry Class at six! Bah! AAAAAAH!"

My mother would never learn not to attempt to break him of swearing on such occasions. She would remain standing a little stiffly in the scullery refusing to assist him to the adjectival towel he sought.

"If you say such things--"

He would dance with rage and hurl the soap about. "The towel!" he would cry, flicking suds from big fingers in every direction; "the towel! I'll let the blithering class slide if you don't give me the towel! I'll give up everything, I tell you--everything!" . . .

At last with the failure of the lettuces came the breaking point. I was in the little arbour learning Latin irregular verbs when it happened. I can see him still, his peculiar tenor voice still echoes in my brain, shouting his opinion of intensive culture for all the world to hear, and slashing away at that abominable mockery of a crop with a hoe. We had tied them up with bast only a week or so before, and now half were rotten and half had shot up into tall slender growths. He had the hoe in both hands and slogged. Great wipes he made, and at each stroke he said, "Take that!"

The air was thick with flying fragments of abortive salad. It was a fantastic massacre. It was the French Revolution of that cold tyranny, the vindictive overthrow of the pampered vegetable aristocrats. After he had assuaged his passion upon them, he turned

for other prey; he kicked holes in two of our noblest marrows, flicked off the heads of half a row of artichokes, and shied the hoe with a splendid smash into the cucumber frame. Something of the awe of that moment returns to me as I write of it.

Well, my boy," he said, approaching with an expression of beneficent happiness, "I've done with gardening. Let's go for a walk like reasonable beings. I've had enough of this"--his face was convulsed for an instant with bitter resentment--"Pandering to cabbages."

4

That afternoon's walk sticks in my memory for many reasons. One is that we went further than I had ever been before; far beyond Keston and nearly to Seven-oaks, coming back by train from Dunton Green, and the other is that my father as he went along talked about himself, not so much to me as to himself, and about life and what he had done with it. He monologued so that at times he produced an effect of weird world-forgetfulness. I listened puzzled, and at that time not understanding many things that afterwards became plain to me. It is only in recent years that I have discovered the pathos of that monologue; how friendless my father was and unaccompanied in his thoughts and feelings, and what a hunger he may have felt for the sympathy of the undeveloped youngster who trotted by his side.

"I'm no gardener," he said, "I'm no anything. Why the devil did I start gardening?"

"I suppose man was created to mind a garden. . . But the Fall let us out of that! What was I created for? God! what was I created for? . . ."

"Slaves to matter! Minding inanimate things! It doesn't suit me, you know. I've got no hands and no patience. I've mucked about

with life. Mucked about with life." He suddenly addressed himself to me, and for an instant I started like an eavesdropper discovered. "Whatever you do, boy, whatever you do, make a Plan. Make a good Plan and stick to it. Find out what life is about--I never have-- and set yourself to do whatever you ought to do. I admit it's a puzzle. . . .

"Those damned houses have been the curse of my life. Stucco white elephants! Beastly cracked stucco with stains of green--black and green. Conferva and soot. . . . Property, they are! . . . Beware of Things, Dick, beware of Things! Before you know where you are you are waiting on them and minding them. They'll eat your life up. Eat up your hours and your blood and energy! When those houses came to me, I ought to have sold them--or fled the country. I ought to have cleared out. Sarcophagi--eaters of men! Oh! the hours and days of work, the nights of anxiety those vile houses have cost me! The painting! It worked up my arms; it got all over me. I stank of it. It made me ill. It isn't living--it's minding. . . .

"Property's the curse of life. Property! Ugh! Look at this country all cut up into silly little parallelograms, look at all those villas we passed just now and those potato patches and that tarred shanty and the hedge! Somebody's minding every bit of it like a dog tied to a cart's tail. Patching it and bothering about it. Bothering! Yapping at every passer-by. Look at that notice-board! One rotten worried little beast wants to keep us other rotten little beasts off HIS patch,--God knows why! Look at the weeds in it. Look at the mended fence! . . . There's no property worth having, Dick, but money. That's only good to spend. All these things. Human souls buried under a cartload of blithering rubbish. . . .

"I'm not a fool, Dick. I have qualities, imagination, a sort of go. I ought to have made a better thing of life.

"I'm sure I could have done things. Only the old people pulled my leg. They started me wrong. They never started me at all. I only began to find out what life was like when I was nearly forty.

"If I'd gone to a university; if I'd had any sort of sound training, if I hadn't slipped into the haphazard places that came easiest. . . .

"Nobody warned me. Nobody. It isn't a world we live in, Dick; it's a cascade of accidents; it's a chaos exasperated by policemen! YOU be warned in time, Dick. You stick to a plan. Don't wait for any one to show you the way. Nobody will. There isn't a way till you make one. Get education, get a good education. Fight your way to the top. It's your only chance. I've watched you. You'll do no good at digging and property minding. There isn't a neighbour in Bromstead won't be able to skin you at suchlike games. You and I are the brainy unstable kind, topside or nothing. And if ever those blithering houses come to you--don't have 'em. Give them away! Dynamite 'em--and off! LIVE, Dick! I'll get rid of them for you if I can, Dick, but remember what I say." . . .

So it was my father discoursed, if not in those particular words, yet exactly in that manner, as he slouched along the southward road, with resentful eyes becoming less resentful as he talked, and flinging out clumsy illustrative motions at the outskirts of Bromstead as we passed along them. That afternoon he hated Bromstead, from its foot-tiring pebbles up. He had no illusions about Bromstead or himself. I have the clearest impression of him in his garden-stained tweeds with a deer-stalker hat on the back of his head and presently a pipe sometimes between his teeth and sometimes in his gesticulating hand, as he became diverted by his talk from his original exasperation. . . .

This particular afternoon is no doubt mixed up in my memory with many other afternoons; all sorts of things my father said and did at different times have got themselves referred to it; it filled me at

the time with a great unprecedented sense of fellowship and it has become the symbol now for all our intercourse together. If I didn't understand the things he said, I did the mood he was in. He gave me two very broad ideas in that talk and the talks I have mingled with it; he gave them to me very clearly and they have remained fundamental in my mind; one a sense of the extraordinary confusion and waste and planlessness of the human life that went on all about us; and the other of a great ideal of order and economy which he called variously Science and Civilisation, and which, though I do not remember that he ever used that word, I suppose many people nowadays would identify with Socialism,--as the Fabians expound it.

He was not very definite about this Science, you must understand, but he seemed always to be waving his hand towards it,--just as his contemporary Tennyson seems always to be doing--he belonged to his age and mostly his talk was destructive of the limited beliefs of his time, he led me to infer rather than actually told me that this Science was coming, a spirit of light and order, to the rescue of a world groaning and travailing in muddle for the want of it. . . .

5

When I think of Bromstead nowadays I find it inseparably bound up with the disorders of my father's gardening, and the odd patchings and paintings that disfigured his houses. It was all of a piece with that.

Let me try and give something of the quality of Bromstead and something of its history. It is the quality and history of a thousand places round and about London, and round and about the other great centres of population in the world. Indeed it is in a measure the quality of the whole of this modern world from which we who have the statesman's passion struggle to evolve, and dream still of evolving order.

First, then, you must think of Bromstead a hundred and fifty years ago, as a narrow irregular little street of thatched houses strung out on the London and Dover Road, a little mellow sample unit of a social order that had a kind of completeness, at its level, of its own. At that time its population numbered a little under two thousand people, mostly engaged in agricultural work or in trades serving agriculture. There was a blacksmith, a saddler, a chemist, a doctor, a barber, a linen-draper (who brewed his own beer); a veterinary surgeon, a hardware shop, and two capacious inns. Round and about it were a number of pleasant gentlemen's seats, whose owners went frequently to London town in their coaches along the very tolerable high-road. The church was big enough to hold the whole population, were people minded to go to church, and indeed a large proportion did go, and all who married were married in it, and everybody, to begin with, was christened at its font and buried at last in its yew-shaded graveyard. Everybody knew everybody in the place. It was, in fact, a definite place and a real human community in those days. There was a pleasant old market-house in the middle of the town with a weekly market, and an annual fair at which much cheerful merry making and homely intoxication occurred; there was a pack of hounds which hunted within five miles of London Bridge, and the local gentry would occasionally enliven the place with valiant cricket matches for a hundred guineas a side, to the vast excitement of the entire population. It was very much the same sort of place that it had been for three or four centuries. A Bromstead Rip van Winkle from 1550 returning in 1750 would have found most of the old houses still as he had known them, the same trades a little improved and differentiated one from the other, the same roads rather more carefully tended, the Inns not very much altered, the ancient familiar market-house. The occasional wheeled traffic would have struck him as the most remarkable difference, next perhaps to the swaggering painted stone monuments instead of brasses and the protestant severity of the communion-table in the parish church,-- both from the material point of view very little things. A Rip van

Winkle from 1350, again, would have noticed scarcely greater changes; fewer clergy, more people, and particularly more people of the middling sort; the glass in the windows of many of the houses, the stylish chimneys springing up everywhere would have impressed him, and suchlike details. The place would have had the same boundaries, the same broad essential features, would have been still itself in the way that a man is still himself after he has "filled out" a little and grown a longer beard and changed his clothes.

But after 1750 something got hold of the world, something that was destined to alter the scale of every human affair.

That something was machinery and a vague energetic disposition to improve material things. In another part of England ingenious people were beginning to use coal in smelting iron, and were producing metal in abundance and metal castings in sizes that had hitherto been unattainable. Without warning or preparation, increment involving countless possibilities of further increment was coming to the strength of horses and men. "Power," all unsuspected, was flowing like a drug into the veins of the social body.

Nobody seems to have perceived this coming of power, and nobody had calculated its probable consequences. Suddenly, almost inadvertently, people found themselves doing things that would have amazed their ancestors. They began to construct wheeled vehicles much more easily and cheaply than they had ever done before, to make up roads and move things about that had formerly been esteemed too heavy for locomotion, to join woodwork with iron nails instead of wooden pegs, to achieve all sorts of mechanical possibilities, to trade more freely and manufacture on a larger scale, to send goods abroad in a wholesale and systematic way, to bring back commodities from overseas, not simply spices and fine commodities, but goods in bulk. The new influence spread to agriculture, iron appliances replaced wooden, breeding of stock became systematic, paper-making

and printing increased and cheapened. Roofs of slate and tile appeared amidst and presently prevailed over the original Bromstead thatch, the huge space of Common to the south was extensively enclosed, and what had been an ill-defined horse-track to Dover, only passable by adventurous coaches in dry weather, became the Dover Road, and was presently the route first of one and then of several daily coaches. The High Street was discovered to be too tortuous for these awakening energies, and a new road cut off its worst contortions. Residential villas appeared occupied by retired tradesmen and widows, who esteemed the place healthy, and by others of a strange new unoccupied class of people who had money invested in joint-stock enterprises. First one and then several boys' boarding-schools came, drawing their pupils from London,--my grandfather's was one of these. London, twelve miles to the north-west, was making itself felt more and more.

But this was only the beginning of the growth period, the first trickle of the coming flood of mechanical power. Away in the north they were casting iron in bigger and bigger forms, working their way to the production of steel on a large scale, applying power in factories. Bromstead had almost doubled in size again long before the railway came; there was hardly any thatch left in the High Street, but instead were houses with handsome brass-knocked front doors and several windows, and shops with shop-fronts all of square glass panes, and the place was lighted publicly now by oil lamps--previously only one flickering lamp outside each of the coaching inns had broken the nocturnal darkness. And there was talk, it long remained talk,--of gas. The gasworks came in 1834, and about that date my father's three houses must have been built convenient for the London Road. They mark nearly the beginning of the real suburban quality; they were let at first to City people still engaged in business.

And then hard on the gasworks had come the railway and cheap coal; there was a wild outbreak of brickfields upon the claylands to the

east, and the Great Growth had begun in earnest. The agricultural placidities that had formerly come to the very borders of the High Street were broken up north, west and south, by new roads. This enterprising person and then that began to "run up" houses, irrespective of every other enterprising person who was doing the same thing. A Local Board came into existence, and with much hesitation and penny-wise economy inaugurated drainage works. Rates became a common topic, a fact of accumulating importance. Several chapels of zinc and iron appeared, and also a white new church in commercial Gothic upon the common, and another of red brick in the residential district out beyond the brickfields towards Chessington.

The population doubled again and doubled again, and became particularly teeming in the prolific "working-class" district about the deep-rutted, muddy, coal-blackened roads between the gasworks, Blodgett's laundries, and the railway goods-yard. Weekly properties, that is to say small houses built by small property owners and let by the week, sprang up also in the Cage Fields, and presently extended right up the London Road. A single national school in an inconvenient situation set itself inadequately to collect subscriptions and teach the swarming, sniffing, grimy offspring of this dingy new population to read. The villages of Beckington, which used to be three miles to the west, and Blamely four miles to the east of Bromstead, were experiencing similar distensions and proliferations, and grew out to meet us. All effect of locality or community had gone from these places long before I was born; hardly any one knew any one; there was no general meeting place any more, the old fairs were just common nuisances haunted by gypsies, van showmen, Cheap Jacks and London roughs, the churches were incapable of a quarter of the population. One or two local papers of shameless veniality reported the proceedings of the local Bench and the local Board, compelled tradesmen who were interested in these affairs to advertise, used the epithet "Bromstedian" as one expressing peculiar virtues, and so maintained in the general mind a weak tradition of some local quality that embraced us all. Then the

parish graveyard filled up and became a scandal, and an ambitious area with an air of appetite was walled in by a Bromstead Cemetery Company, and planted with suitably high-minded and sorrowful varieties of conifer. A stonemason took one of the earlier villas with a front garden at the end of the High Street, and displayed a supply of urns on pillars and headstones and crosses in stone, marble, and granite, that would have sufficed to commemorate in elaborate detail the entire population of Bromstead as one found it in 1750.

The cemetery was made when I was a little boy of five or six; I was in the full tide of building and growth from the first; the second railway with its station at Bromstead North and the drainage followed when I was ten or eleven, and all my childish memories are of digging and wheeling, of woods invaded by building, roads gashed open and littered with iron pipes amidst a fearful smell of gas, of men peeped at and seen toiling away deep down in excavations, of hedges broken down and replaced by planks, of wheelbarrows and builders' sheds, of rivulets overtaken and swallowed up by drain-pipes. Big trees, and especially elms, cleared of undergrowth and left standing amid such things, acquired a peculiar tattered dinginess rather in the quality of needy widow women who have seen happier days.

The Ravensbrook of my earlier memories was a beautiful stream. It came into my world out of a mysterious Beyond, out of a garden, splashing brightly down a weir which had once been the weir of a mill. (Above the weir and inaccessible there were bulrushes growing in splendid clumps, and beyond that, pampas grass, yellow and crimson spikes of hollyhock, and blue suggestions of wonderland.) From the pool at the foot of this initial cascade it flowed in a leisurely fashion beside a footpath,--there were two pretty thatched cottages on the left, and here were ducks, and there were willows on the right,--and so came to where great trees grew on high banks on either hand and bowed closer, and at last met overhead. This part

was difficult to reach because of an old fence, but a little boy might glimpse that long cavern of greenery by wading. Either I have actually seen kingfishers there, or my father has described them so accurately to me that he inserted them into my memory. I remember them there anyhow. Most of that overhung part I never penetrated at all, but followed the field path with my mother and met the stream again, where beyond there were flat meadows, Roper's meadows. The Ravensbrook went meandering across the middle of these, now between steep banks, and now with wide shallows at the bends where the cattle waded and drank. Yellow and purple loose-strife and ordinary rushes grew in clumps along the bank, and now and then a willow. On rare occasions of rapture one might see a rat cleaning his whiskers at the water's edge. The deep places were rich with tangled weeds, and in them fishes lurked--to me they were big fishes--water-boatmen and water-beetles traversed the calm surface of these still deeps; in one pool were yellow lilies and water-soldiers, and in the shoaly places hovering fleets of small fry basked in the sunshine--to vanish in a flash at one's shadow. In one place, too, were Rapids, where the stream woke with a start from a dreamless brooding into foaming panic and babbled and hastened. Well do I remember that half-mile of rivulet; all other rivers and cascades have their reference to it for me. And after I was eleven, and before we left Bromstead, all the delight and beauty of it was destroyed.

The volume of its water decreased abruptly--I suppose the new drainage works that linked us up with Beckington, and made me first acquainted with the geological quality of the London clay, had to do with that--until only a weak unclesing trickle remained. That at first did not strike me as a misfortune. An adventurous small boy might walk dryshod in places hitherto inaccessible. But hard upon that came the pegs, the planks and carts and devastation. Roper's meadows, being no longer in fear of floods, were now to be slashed out into parallelograms of untidy road, and built upon with rows of working-class cottages. The roads came,--horribly; the houses followed. They seemed to rise in the night. People moved into them

as soon as the roofs were on, mostly workmen and their young wives, and already in a year some of these raw houses stood empty again from defaulting tenants, with windows broken and wood-work warping and rotting. The Ravensbrook became a dump for old iron, rusty cans, abandoned boots and the like, and was a river only when unusual rains filled it for a day or so with an inky flood of surface water. . . .

That indeed was my most striking perception in the growth of Bromstead. The Ravensbrook had been important to my imaginative life; that way had always been my first choice in all my walks with my mother, and its rapid swamping by the new urban growth made it indicative of all the other things that had happened just before my time, or were still, at a less dramatic pace, happening. I realised that building was the enemy. I began to understand why in every direction out of Bromstead one walked past scaffold-poles into litter, why fragments of broken brick and cinder mingled in every path, and the significance of the universal notice-boards, either white and new or a year old and torn and battered, promising sites, proffering houses to be sold or let, abusing and intimidating passers-by for fancied trespass, and protecting rights of way.

It is difficult to disentangle now what I understood at this time and what I have since come to understand, but it seems to me that even in those childish days I was acutely aware of an invading and growing disorder. The serene rhythms of the old established agriculture, I see now, were everywhere being replaced by cultivation under notice and snatch crops; hedges ceased to be repaired, and were replaced by cheap iron railings or chunks of corrugated iron; more and more hoardings sprang up, and contributed more and more to the nomad tribes of filthy paper scraps that flew before the wind and overspread the country. The outskirts of Bromstead were a maze of exploitation roads that led nowhere, that ended in tarred fences studded with nails (I don't remember barbed wire in those days; I think the Zeitgeist did not produce that until

later), and in trespass boards that used vehement language. Broken glass, tin cans, and ashes and paper abounded. Cheap glass, cheap tin, abundant fuel, and a free untaxed Press had rushed upon a world quite unprepared to dispose of these blessings when the fulness of enjoyment was past.

I suppose one might have persuaded oneself that all this was but the replacement of an ancient tranquillity, or at least an ancient balance, by a new order. Only to my eyes, quickened by my father's intimations, it was manifestly no order at all. It was a multitude of incoordinated fresh starts, each more sweeping and destructive than the last, and none of them ever really worked out to a ripe and satisfactory completion. Each left a legacy of products, houses, humanity, or what not, in its wake. It was a sort of progress that had bolted; it was change out of hand, and going at an unprecedented pace nowhere in particular.

No, the Victorian epoch was not the dawn of a new era; it was a hasty, trial experiment, a gigantic experiment of the most slovenly and wasteful kind. I suppose it was necessary; I suppose all things are necessary. I suppose that before men will discipline themselves to learn and plan, they must first see in a hundred convincing forms the folly and muddle that come from headlong, aimless and haphazard methods. The nineteenth century was an age of demonstrations, some of them very impressive demonstrations, of the powers that have come to mankind, but of permanent achievement, what will our descendants cherish? It is hard to estimate what grains of precious metal may not be found in a mud torrent of human production on so large a scale, but will any one, a hundred years from now, consent to live in the houses the Victorians built, travel by their roads or railways, value the furnishings they made to live among or esteem, except for curious or historical reasons, their prevalent art and the clipped and limited literature that satisfied their souls?

That age which bore me was indeed a world full of restricted and

undisciplined people, overtaken by power, by possessions and great new freedoms, and unable to make any civilised use of them whatever; stricken now by this idea and now by that, tempted first by one possession and then another to ill-considered attempts; it was my father's exploitation of his villa gardens on the wholesale level. The whole of Bromstead as I remember it, and as I saw it last--it is a year ago now--is a dull useless boiling-up of human activities, an immense clustering of futilities. It is as unfinished as ever; the builders' roads still run out and end in mid-field in their old fashion; the various enterprises jumble in the same hopeless contradiction, if anything intensified. Pretentious villas jostle slums, and public-house and tin tabernacle glower at one another across the cat-haunted lot that intervenes. Roper's meadows are now quite frankly a slum; back doors and sculleries gape towards the railway, their yards are hung with tattered washing unashamed; and there seem to be more boards by the railway every time I pass, advertising pills and pickles, tonics and condiments, and suchlike solitudes of a people with no natural health nor appetite left in them. . . .

Well, we have to do better. Failure is not failure nor waste wasted if it sweeps away illusion and lights the road to a plan.

6

Chaotic indiscipline, ill-adjusted effort, spasmodic aims, these give the quality of all my Bromstead memories. The crowning one of them all rises to desolating tragedy. I remember now the wan spring sunshine of that Sunday morning, the stiff feeling of best clothes and aggressive cleanliness and formality, when I and my mother returned from church to find my father dead. He had been pruning the grape vine. He had never had a ladder long enough to reach the sill of the third-floor windows--at house-painting times he had borrowed one from the plumber who mixed his paint--and he had in his

own happy-go-lucky way contrived a combination of the garden fruit ladder with a battered kitchen table that served all sorts of odd purposes in an outhouse. He had stayed up this arrangement by means of the garden roller, and the roller had at the critical moment--rolled. He was lying close by the garden door with his head queerly bent back against a broken and twisted rainwater pipe, an expression of pacific contentment on his face, a bamboo curtain rod with a tableknife tied to end of it, still gripped in his hand. We had been rapping for some time at the front door unable to make him hear, and then we came round by the door in the side trellis into the garden and so discovered him.

"Arthur!" I remember my mother crying with the strangest break in her voice, "What are you doing there? Arthur! And--SUNDAY!"

I was coming behind her, musing remotely, when the quality of her voice roused me. She stood as if she could not go near him. He had always puzzled her so, he and his ways, and this seemed only another enigma. Then the truth dawned on her, she shrieked as if afraid of him, ran a dozen steps back towards the trellis door and stopped and clasped her ineffectual gloved hands, leaving me staring blankly, too astonished for feeling, at the carelessly flung limbs.

The same idea came to me also. I ran to her. "Mother!" I cried, pale to the depths of my spirit, "IS HE DEAD?"

I had been thinking two minutes before of the cold fruit pie that glorified our Sunday dinner-table, and how I might perhaps get into the tree at the end of the garden to read in the afternoon. Now an immense fact had come down like a curtain and blotted out all my childish world. My father was lying dead before my eyes. . . . I perceived that my mother was helpless and that things must be done.

"Mother!" I said, "we must get Doctor Beaseley,--and carry him indoors."

CHAPTER THE THIRD

SCHOLASTIC

1

My formal education began in a small preparatory school in Bromstead. I went there as a day boy. The charge for my instruction was mainly set off by the periodic visits of my father with a large bag of battered fossils to lecture to us upon geology. I was one of those fortunate youngsters who take readily to school work, I had a good memory, versatile interests and a considerable appetite for commendation, and when I was barely twelve I got a scholarship at the City Merchants School and was entrusted with a scholar's railway season ticket to Victoria. After my father's death a large and very animated and solidly built uncle in tweeds from Staffordshire, Uncle Minter, my mother's sister's husband, with a remarkable accent and remarkable vowel sounds, who had plunged into the Bromstead home once or twice for the night but who was otherwise unknown to me, came on the scene, sold off the three gaunt houses with the utmost gusto, invested the proceeds and my father's life insurance money, and got us into a small villa at Penge within sight of that immense facade of glass and iron, the Crystal Palace. Then he retired in a mood of good-natured contempt to his native habitat again. We stayed at Penge until my mother's death.

School became a large part of the world to me, absorbing my time and interest, and I never acquired that detailed and intimate knowledge of Penge and the hilly villadom round about, that I have of the town and outskirts of Bromstead.

It was a district of very much the same character, but it was more completely urbanised and nearer to the centre of things; there were the same unfinished roads, the same occasional disconcerted hedges

and trees, the same butcher's horse grazing under a builder's notice-board, the same incidental lapses into slum. The Crystal Palace grounds cut off a large part of my walking radius to the west with impassable fences and forbiddingly expensive turnstiles, but it added to the ordinary spectacle of meteorology a great variety of gratuitous fireworks which banged and flared away of a night after supper and drew me abroad to see them better. Such walks as I took, to Croydon, Wembleton, West Wickham and Greenwich, impressed upon me

the interminable extent of London's residential suburbs; mile after mile one went, between houses, villas, rows of cottages, streets of shops, under railway arches, over railway bridges. I have forgotten the detailed local characteristics--if there were any--of much of that region altogether. I was only there two years, and half my perambulations occurred at dusk or after dark. But with Penge I associate my first realisations of the wonder and beauty of twilight and night, the effect of dark walls reflecting lamplight, and the mystery of blue haze-veiled hillsides of houses, the glare of shops by night, the glowing steam and streaming sparks of railway trains and railway signals lit up in the darkness. My first rambles in the evening occurred at Penge--I was becoming a big and independent-spirited boy--and I began my experience of smoking during these twilight prowls with the threepenny packets of American cigarettes then just appearing in the world.

My life centred upon the City Merchants School. Usually I caught the eight-eighteen for Victoria, I had a midday meal and tea; four nights a week I stayed for preparation, and often I was not back home again until within an hour of my bedtime. I spent my half holidays at school in order to play cricket and football. This, and a pretty voracious appetite for miscellaneous reading which was fostered by the Penge Middleton Library, did not leave me much leisure for local topography. On Sundays also I sang in the choir at St. Martin's Church, and my mother did not like me to walk out alone on the Sabbath afternoon, she herself slumbered, so that I

wrote or read at home. I must confess I was at home as little as I could contrive.

Home, after my father's death, had become a very quiet and uneventful place indeed. My mother had either an unimaginative temperament or her mind was greatly occupied with private religious solitudes, and I remember her talking to me but little, and that usually upon topics I was anxious to evade. I had developed my own view about low-Church theology long before my father's death, and my meditation upon that event had finished my secret estrangement from my mother's faith. My reason would not permit even a remote chance of his being in hell, he was so manifestly not evil, and this religion would not permit him a remote chance of being out yet. When I was a little boy my mother had taught me to read and write and pray and had done many things for me, indeed she persisted in washing me and even in making my clothes until I rebelled against these things as indignities. But our minds parted very soon. She never began to understand the mental processes of my play, she never interested herself in my school life and work, she could not understand things I said; and she came, I think, quite insensibly to regard me with something of the same hopeless perplexity she had felt towards my father.

Him she must have wedded under considerable delusions. I do not think he deceived her, indeed, nor do I suspect him of mercenariness in their union; but no doubt he played up to her requirements in the half ingenuous way that was and still is the quality of most wooing, and presented himself as a very brisk and orthodox young man. I wonder why nearly all lovemaking has to be fraudulent. Afterwards he must have disappointed her cruelly by letting one aspect after another of his careless, sceptical, experimental temperament appear. Her mind was fixed and definite, she embodied all that confidence in church and decorum and the assurances of the pulpit which was characteristic of the large mass of the English people--for after all, the rather low-Church section WAS the largest single mass--in

early Victorian times. She had dreams, I suspect, of going to church with him side by side; she in a little poke bonnet and a large flounced crinoline, all mauve and magenta and starched under a little lace-trimmed parasol, and he in a tall silk hat and peg-top trousers and a roll-collar coat, and looking rather like the Prince Consort,--white angels almost visibly raining benedictions on their amiable progress. Perhaps she dreamt gently of much-belaced babies and an interestingly pious (but not too dissenting or fanatical) little girl or boy or so, also angel-haunted. And I think, too, she must have seen herself ruling a seemingly "home of taste," with a vivarium in the conservatory that opened out of the drawing-room, or again, making preserves in the kitchen. My father's science-teaching, his diagrams of disembowelled humanity, his pictures of prehistoric beasts that contradicted the Flood, his disposition towards soft shirts and loose tweed suits, his inability to use a clothes brush, his spasmodic reading fits and his bulldog pipes, must have jarred cruelly with her rather unintelligent anticipations. His wild moments of violent temper when he would swear and smash things, absurd almost lovable storms that passed like summer thunder, must have been starkly dreadful to her. She was constitutionally inadaptable, and certainly made no attempt to understand or tolerate these outbreaks. She tried them by her standards, and by her standards they were wrong. Her standards hid him from her. The blazing things he said rankled in her mind unforgettably.

As I remember them together they chafed constantly. Her attitude to nearly all his moods and all his enterprises was a sceptical disapproval. She treated him as something that belonged to me and not to her. "YOUR father," she used to call him, as though I had got him for her.

She had married late and she had, I think, become mentally self-subsisting before her marriage. Even in those Herne Hill days I used to wonder what was going on in her mind, and I find that old

speculative curiosity return as I write this. She took a considerable interest in the housework that our generally servantless condition put upon her--she used to have a charwoman in two or three times a week--but she did not do it with any great skill. She covered most of our furniture with flouncey ill-fitting covers, and she cooked plainly and without very much judgment. The Penge house, as it contained nearly all our Bromstead things, was crowded with furniture, and is chiefly associated in my mind with the smell of turpentine, a condiment she used very freely upon the veneered mahogany pieces. My mother had an equal dread of "blacks" by day and the "night air," so that our brightly clean windows were rarely open.

She took a morning paper, and she would open it and glance at the headlines, but she did not read it until the afternoon and then, I think, she was interested only in the more violent crimes, and in railway and mine disasters and in the minutest domesticities of the Royal Family. Most of the books at home were my father's, and I do not think she opened any of them. She had one or two volumes that dated from her own youth, and she tried in vain to interest me in them; there was Miss Strickland's QUEENS OF ENGLAND, a book I remember with particular animosity, and QUEECHY and the WIDE WIDE WORLD. She made these books of hers into a class apart by sewing outer covers upon them of calico and figured muslin. To me in these habiliments they seemed not so much books as confederated old ladies.

My mother was also very punctual with her religious duties, and rejoiced to watch me in the choir.

On winter evenings she occupied an armchair on the other side of the table at which I sat, head on hand reading, and she would be darning stockings or socks or the like. We achieved an effect of rather stuffy comfortableness that was soporific, and in a passive way I

think she found these among her happy times. On such occasions she was wont to put her work down on her knees and fall into a sort of thoughtless musing that would last for long intervals and rouse my curiosity. For like most young people I could not imagine mental states without definite forms.

She carried on a correspondence with a number of cousins and friends, writing letters in a slanting Italian hand and dealing mainly with births, marriages and deaths, business starts (in the vaguest terms) and the distresses of bankruptcy.

And yet, you know, she did have a curious intimate life of her own that I suspected nothing of at the time, that only now becomes credible to me. She kept a diary that is still in my possession, a diary of fragmentary entries in a miscellaneous collection of pocket books. She put down the texts of the sermons she heard, and queer stiff little comments on casual visitors,--" Miss G. and much noisy shrieking talk about games and such frivolities and CROQUAY. A. delighted and VERY ATTENTIVE." Such little human entries abound. She had an odd way of never writing a name, only an initial; my father is always "A.," and I am always "D." It is manifest she followed the domestic events in the life of the Princess of Wales, who is now Queen Mother, with peculiar interest and sympathy. "Pray G. all may be well," she writes in one such crisis.

But there are things about myself that I still find too poignant to tell easily, certain painful and clumsy circumstances of my birth in very great detail, the distresses of my infantile ailments. Then later I find such things as this: "Heard D. s----." The "s" is evidently "swear "--" G. bless and keep my boy from evil." And again, with the thin handwriting shaken by distress: "D. would not go to church, and hardened his heart and said wicked infidel things, much disrespect of the clergy. The anthem is tiresome!!! That men should set up to be wiser than their maker!!!" Then trebly underlined: "I FEAR HIS FATHER'S TEACHING." Dreadful little tangle

of misapprehensions and false judgments! More comforting for me to read, "D. very kind and good. He grows more thoughtful every day." I suspect myself of forgotten hypocrisies.

At just one point my mother's papers seem to dip deeper. I think the death of my father must have stirred her for the first time for many years to think for herself. Even she could not go on living in any peace at all, believing that he had indeed been flung headlong into hell. Of this gnawing solicitude she never spoke to me, never, and for her diary also she could find no phrases. But on a loose half-sheet of notepaper between its pages I find this passage that follows, written very carefully. I do not know whose lines they are nor how she came upon them. They run:--

"And if there be no meeting past the grave;
If all is darkness, silence, yet 'tis rest.
Be not afraid ye waiting hearts that weep,
For God still giveth His beloved sleep,
And if an endless sleep He wills, so best."

That scrap of verse amazed me when I read it. I could even wonder if my mother really grasped the import of what she had copied out. It affected me as if a stone-deaf person had suddenly turned and joined in a whispered conversation. It set me thinking how far a mind in its general effect quite hopelessly limited, might range. After that I went through all her diaries, trying to find something more than a conventional term of tenderness for my father. But I found nothing. And yet somehow there grew upon me the realisation that there had been love. . . . Her love for me, on the other hand, was abundantly expressed.

I knew nothing of that secret life of feeling at the time; such expression as it found was all beyond my schoolboy range. I did not know when I pleased her and I did not know when I distressed her. Chiefly I was aware of my mother as rather dull company, as a mind

thorny with irrational conclusions and incapable of explication, as one believing quite wilfully and irritatingly in impossible things. So I suppose it had to be; life was coming to me in new forms and with new requirements. It was essential to our situation that we should fail to understand. After this space of years I have come to realisations and attitudes that dissolve my estrangement from her, I can pierce these barriers, I can see her and feel her as a loving and feeling and desiring and muddle-headed person. There are times when I would have her alive again, if only that I might be kind to her for a little while and give her some return for the narrow intense affection, the tender desires, she evidently lavished so abundantly on me. But then again I ask how I could make that return? And I realise the futility of such dreaming. Her demand was rigid, and to meet it I should need to act and lie.

So she whose blood fed me, whose body made me, lies in my memory as I saw her last, fixed, still, infinitely intimate, infinitely remote. . . .

My own case with my mother, however, does not awaken the same regret I feel when I think of how she misjudged and irked my father, and turned his weaknesses into thorns for her own tormenting. I wish I could look back without that little twinge to two people who were both in their different quality so good. But goodness that is narrow is a pedestrian and ineffectual goodness. Her attitude to my father seems to me one of the essentially tragic things that have come to me personally, one of those things that nothing can transfigure, that REMAIN sorrowful, that I cannot soothe with any explanation, for as I remember him he was indeed the most lovable of weak spasmodic men. But my mother had been trained in a hard and narrow system that made evil out of many things not in the least evil, and inculcated neither kindness nor charity. All their estrangement followed from that.

These cramping cults do indeed take an enormous toll of human love

and happiness, and not only that but what we Machiavellians must needs consider, they make frightful breaches in human solidarity. I suppose I am a deeply religious man, as men of my quality go, but I hate more and more, as I grow older, the shadow of intolerance cast by religious organisations. All my life has been darkened by irrational intolerance, by arbitrary irrational prohibitions and exclusions. Mahometanism with its fierce proselytism, has, I suppose, the blackest record of uncharitableness, but most of the Christian sects are tainted, tainted to a degree beyond any of the anterior paganisms, with this same hateful quality. It is their exclusive claim that sends them wrong, the vain ambition that inspires them all to teach a uniform one-sided God and be the one and only gateway to salvation. Deprecation of all outside the household of faith, an organised undervaluation of heretical goodness and loveliness, follows, necessarily. Every petty difference is exaggerated to the quality of a saving grace or a damning defect. Elaborate precautions are taken to shield the believer's mind against broad or amiable suggestions; the faithful are deterred by dark allusions, by sinister warnings, from books, from theatres, from worldly conversation, from all the kindly instruments that mingle human sympathy. For only by isolating its flock can the organisation survive.

Every month there came to my mother a little magazine called, if I remember rightly, the HOME CHURCHMAN, with the combined authority of print and clerical commendation. It was the most evil thing that ever came into the house, a very devil, a thin little pamphlet with one woodcut illustration on the front page of each number; now the uninviting visage of some exponent of the real and only doctrine and attitudes, now some coral strand in act of welcoming the missionaries of God's mysterious preferences, now a new church in the Victorian Gothic. The vile rag it was! A score of vices that shun the policeman have nothing of its subtle wickedness. It was an outrage upon the natural kindness of men. The contents were all

admirably adjusted to keep a spirit in prison. Their force of sustained suggestion was tremendous. There would be dreadful intimations of the swift retribution that fell upon individuals for Sabbath-breaking, and upon nations for weakening towards Ritualism, or treating Roman Catholics as tolerable human beings; there would be great rejoicings over the conversion of alleged Jews, and terrible descriptions of the death-beds of prominent infidels with boldly invented last words,--the most unscrupulous lying; there would be the appallingly edifying careers of "early piety" lusciously described, or stories of condemned criminals who traced their final ruin unerringly to early laxities of the kind that leads people to give up subscribing to the HOME CHURCHMAN.

Every month that evil spirit brought about a slump in our mutual love. My mother used to read the thing and become depressed and anxious for my spiritual welfare, used to be stirred to unintelligent pestering. . . .

2

A few years ago I met the editor of this same HOME CHURCHMAN. It was at one of the weekly dinners of that Fleet Street dining club, the Blackfriars.

I heard the paper's name with a queer little shock and surveyed the man with interest. No doubt he was only a successor of the purveyor of discords who darkened my boyhood. It was amazing to find an influence so terrible embodied in a creature so palpably petty. He was seated some way down a table at right angles to the one at which I sat, a man of mean appearance with a greyish complexion, thin, with a square nose, a heavy wiry moustache and a big Adam's apple sticking out between the wings of his collar. He ate with considerable appetite and unconcealed relish, and as his jaw was underhung, he chummed and made the moustache wave like reeds in the

swell of a steamer. It gave him a conscientious look. After dinner he a little forced himself upon me. At that time, though the shadow of my scandal was already upon me, I still seemed to be shaping for great successes, and he was glad to be in conversation with me and anxious to intimate political sympathy and support. I tried to make him talk of the HOME CHURCHMAN and the kindred publications he ran, but he was manifestly ashamed of his job so far as I was concerned.

"One wants," he said, pitching himself as he supposed in my key, "to put constructive ideas into our readers, but they are narrow, you know, very narrow. Very." He made his moustache and lips express judicious regret. "One has to consider them carefully, one has to respect their attitudes. One dare not go too far with them. One has to feel one's way."

He chummed and the moustache bristled.

A hireling, beyond question, catering for a demand. I gathered there was a home in Tufnell Park, and three boys to be fed and clothed and educated. . . .

I had the curiosity to buy a copy of his magazine afterwards, and it seemed much the same sort of thing that had worried my mother in my boyhood. There was the usual Christian hero, this time with mutton-chop whiskers and a long bare upper lip. The Jesuits, it seemed, were still hard at it, and Heaven frightfully upset about the Sunday opening of museums and the falling birth-rate, and as touchy and vindictive as ever. There were two vigorous paragraphs upon the utter damnableness of the Rev. R. J. Campbell, a contagious damnableness I gathered, one wasn't safe within a mile of Holborn Viaduct, and a foul-mouthed attack on poor little Wilkins the novelist--who was being baited by the moralists at that time for making one of his big women characters, not being in holy wedlock, desire a baby and say so. . . .

The broadening of human thought is a slow and complex process. We do go on, we do get on. But when one thinks that people are living and dying now, quarrelling and sulking, misled and misunderstanding, vaguely fearful, condemning and thwarting one another in the close darkneses of these narrow cults--Oh, God! one wants a gale out of Heaven, one wants a great wind from the sea!

3

While I lived at Penge two little things happened to me, trivial in themselves and yet in their quality profoundly significant. They had this in common, that they pierced the texture of the life I was quietly taking for granted and let me see through it into realities--realities I had indeed known about before but never realised. Each of these experiences left me with a sense of shock, with all the values in my life perplexingly altered, attempting readjustment. One of these disturbing and illuminating events was that I was robbed of a new pocket-knife and the other that I fell in love. It was altogether surprising to me to be robbed. You see, as an only child I had always been fairly well looked after and protected, and the result was an amazing confidence in the practical goodness of the people one met in the world. I knew there were robbers in the world, just as I knew there were tigers; that I was ever likely to meet robber or tiger face to face seemed equally impossible.

The knife as I remember it was a particularly jolly one with all sorts of instruments in it, tweezers and a thing for getting a stone out of the hoof of a horse, and a corkscrew; it had cost me a carefully accumulated half-crown, and amounted indeed to a new experience in knives. I had had it for two or three days, and then one afternoon I dropped it through a hole in my pocket on a footpath crossing a field between Penge and Anerley. I heard it fall in the way one does without at the time appreciating what had happened,

then, later, before I got home, when my hand wandered into my pocket to embrace the still dear new possession I found it gone, and instantly that memory of something hitting the ground sprang up into consciousness. I went back and commenced a search. Almost immediately I was accosted by the leader of a little gang of four or five extremely dirty and ragged boys of assorted sizes and slouching carriage who were coming from the Anerley direction.

"Lost anythink, Matey?" said he.

I explained.

"'E's dropped 'is knife," said my interlocutor, and joined in the search.

"What sort of 'andle was it, Matey?" said a small white-faced sniffing boy in a big bowler hat.

I supplied the information. His sharp little face scrutinised the ground about us.

"GOT it," he said, and pounced.

"Give it 'ere," said the big boy hoarsely, and secured it.

I walked towards him serenely confident that he would hand it over to me, and that all was for the best in the best of all possible worlds.

"No bloomin' fear!" he said, regarding me obliquely. "Oo said it was your knife?"

Remarkable doubts assailed me. "Of course it's my knife," I said. The other boys gathered round me.

"This ain't your knife," said the big boy, and spat casually.

"I dropped it just now."

"Findin's keepin's, I believe," said the big boy.

"Nonsense," I said. "Give me my knife."

"Ow many blades it got?"

"Three."

"And what sort of 'andle?"

"Bone."

"Got a corkscrew like?"

"Yes."

"Ah! This ain't your knife no'ow. See?"

He made no offer to show it to me. My breath went.

"Look here!" I said. "I saw that kid pick it up. It IS my knife."

"Rot!" said the big boy, and slowly, deliberately put my knife into his trouser pocket.

I braced my soul for battle. All civilisation was behind me, but I doubt if it kept the colour in my face. I buttoned my jacket and clenched my fists and advanced on my antagonist--he had, I suppose, the advantage of two years of age and three inches of height. "Hand over that knife," I said.

Then one of the smallest of the band assailed me with extraordinary vigour and swiftness from behind, had an arm round my neck and a knee in my back before I had the slightest intimation of attack, and so got me down. "I got 'im, Bill," squeaked this amazing little ruffian. My nose was flattened by a dirty hand, and as I struck out and hit something like sacking, some one kicked my elbow. Two or three seemed to be at me at the same time. Then I rolled over and sat up to discover them all making off, a ragged flight, footballing my cap, my City Merchants' cap, amongst them. I leapt to my feet in a passion of indignation and pursued them.

But I did not overtake them. We are beings of mixed composition, and I doubt if mine was a single-minded pursuit. I knew that honour required me to pursue, and I had a vivid impression of having just been down in the dust with a very wiry and active and dirty little antagonist of disagreeable odour and incredible and incalculable unscrupulousness, kneeling on me and gripping my arm and neck. I wanted of course to be even with him, but also I doubted if catching him would necessarily involve that. They kicked my cap into the ditch at the end of the field, and made off compactly along a cinder lane while I turned aside to recover my dishonoured headdress. As I knocked the dust out of that and out of my jacket, and brushed my knees and readjusted my very crumpled collar, I tried to focus this startling occurrence in my mind.

I had vague ideas of going to a policeman or of complaining at a police station, but some boyish instinct against informing prevented that. No doubt I entertained ideas of vindictive pursuit and murderous reprisals. And I was acutely enraged whenever I thought of my knife. The thing indeed rankled in my mind for weeks and weeks, and altered all the flavour of my world for me. It was the first time I glimpsed the simple brute violence that lurks and peeps beneath our civilisation. A certain kindly complacency of attitude towards the palpably lower classes was qualified for ever

But the other experience was still more cardinal. It was the first clear intimation of a new motif in life, the sex motif, that was to rise and increase and accumulate power and enrichment and interweave with and at last dominate all my life.

It was when I was nearly fifteen this happened. It is inseparably connected in my mind with the dusk of warm September evenings. I never met the girl I loved by daylight, and I have forgotten her name. It was some insignificant name.

Yet the peculiar quality of the adventure keeps it shining darkly like some deep coloured gem in the common setting of my memories. It came as something new and strange, something that did not join on to anything else in my life or connect with any of my thoughts or beliefs or habits; it was a wonder, a mystery, a discovery about myself, a discovery about the whole world. Only in after years did sexual feeling lose that isolation and spread itself out to illuminate and pervade and at last possess the whole broad vision of life.

It was in that phase of an urban youth's development, the phase of the cheap cigarette, that this thing happened. One evening I came by chance on a number of young people promenading by the light of a row of shops towards Beckington, and, with all the glory of a glowing cigarette between my lips, I joined their strolling number. These twilight parades of young people, youngsters chiefly of the lower middle-class, are one of the odd social developments of the great suburban growths--unkindly critics, blind to the inner meanings of things, call them, I believe, Monkeys' Parades--the shop apprentices, the young work girls, the boy clerks and so forth, stirred by mysterious intimations, spend their first-earned money upon collars and ties, chiffon hats, smart lace collars, walking-

sticks, sunshades or cigarettes, and come valiantly into the vague transfiguring mingling of gaslight and evening, to walk up and down, to eye meaningly, even to accost and make friends. It is a queer instinctive revolt from the narrow limited friendless homes in which so many find themselves, a going out towards something, romance if you will, beauty, that has suddenly become a need--a need that hitherto has lain dormant and unsuspected. They promenade.

Vulgar!--it is as vulgar as the spirit that calls the moth abroad in the evening and lights the body of the glow-worm in the night. I made my way through the throng, a little contemptuously as became a public schoolboy, my hands in my pockets--none of your cheap canes for me!--and very careful of the lie of my cigarette upon my lips. And two girls passed me, one a little taller than the other, with dim warm-tinted faces under clouds of dark hair and with dark eyes like pools reflecting stars.

I half turned, and the shorter one glanced back at me over her shoulder--I could draw you now the pose of her cheek and neck and shoulder--and instantly I was as passionately in love with the girl as I have ever been before or since, as any man ever was with any woman. I turned about and followed them, I flung away my cigarette ostentatiously and lifted my school cap and spoke to them.

The girl answered shyly with her dark eyes on my face. What I said and what she said I cannot remember, but I have little doubt it was something absolutely vapid. It really did not matter; the thing was we had met. I felt as I think a new-hatched moth must feel when suddenly its urgent headlong searching brings it in tremulous amazement upon its mate.

We met, covered from each other, with all the nets of civilisation keeping us apart. We walked side by side.

It led to scarcely more than that. I think we met four or five

times altogether, and always with her nearly silent elder sister on the other side of her. We walked on the last two occasions arm in arm, furtively caressing each other's hands, we went away from the glare of the shops into the quiet roads of villadom, and there we whispered instead of talking and looked closely into one another's warm and shaded face. "Dear," I whispered very daringly, and she answered, "Dear!" We had a vague sense that we wanted more of that quality of intimacy and more. We wanted each other as one wants beautiful music again or to breathe again the scent of flowers.

And that is all there was between us. The events are nothing, the thing that matters is the way in which this experience stabbed through the common stuff of life and left it pierced, with a light, with a huge new interest shining through the rent.

When I think of it I can recall even now the warm mystery of her face, her lips a little apart, lips that I never kissed, her soft shadowed throat, and I feel again the sensuous stir of her proximity. . . .

Those two girls never told me their surname nor let me approach their house. They made me leave them at the corner of a road of small houses near Penge Station. And quite abruptly, without any intimation, they vanished and came to the meeting place no more, they vanished as a moth goes out of a window into the night, and left me possessed of an intolerable want. . . .

The affair pervaded my existence for many weeks. I could not do my work and I could not rest at home. Night after night I promenaded up and down that Monkeys' Parade full of an unappeasable desire, with a thwarted sense of something just begun that ought to have gone on. I went backwards and forwards on the way to the vanishing place, and at last explored the forbidden road that had swallowed them up. But I never saw her again, except that later she came to me, my symbol of womanhood, in dreams. How my blood was stirred! I

lay awake of nights whispering in the darkness for her. I prayed for her.

Indeed that girl, who probably forgot the last vestiges of me when her first real kiss came to her, ruled and haunted me, gave a Queen to my imagination and a texture to all my desires until I became a man.

I generalised her at last. I suddenly discovered that poetry was about her and that she was the key to all that had hitherto seemed nonsense about love. I took to reading novels, and if the heroine could not possibly be like her, dusky and warm and starlike, I put the book aside. . . .

I hesitate and add here one other confession. I want to tell this thing because it seems to me we are altogether too restrained and secretive about such matters. The cardinal thing in life sneaks in to us darkly and shamefully like a thief in the night.

One day during my Cambridge days--it must have been in my first year before I knew Hatherleigh--I saw in a print-shop window near the Strand an engraving of a girl that reminded me sharply of Penge and its dusky encounter. It was just a half length of a bare-shouldered, bare-breasted Oriental with arms akimbo, smiling faintly. I looked at it, went my way, then turned back and bought it. I felt I must have it. The odd thing is that I was more than a little shamefaced about it. I did not have it framed and hung in my room open to the criticism of my friends, but I kept it in the drawer of my writing-table. And I kept that drawer locked for a year. It speedily merged with and became identified with the dark girl of Penge. That engraving became in a way my mistress. Often when I had sported my oak and was supposed to be reading, I was sitting with it before me.

Obeying some instinct I kept the thing very secret indeed. For a

time nobody suspected what was locked in my drawer nor what was locked in me. I seemed as sexless as my world required.

5

These things stabbed through my life, intimations of things above and below and before me. They had an air of being no more than incidents, interruptions.

The broad substance of my existence at this time was the City Merchants School. Home was a place where I slept and read, and the mooning explorations of the south-eastern postal district which occupied the restless evenings and spare days of my vacations mere interstices, giving glimpses of enigmatical lights and distant spaces between the woven threads of a school-boy's career. School life began for me every morning at Herne Hill, for there I was joined by three or four other boys and the rest of the way we went together. Most of the streets and roads we traversed in our morning's walk from Victoria are still intact, the storms of rebuilding that have submerged so much of my boyhood's London have passed and left them, and I have revived the impression of them again and again in recent years as I have clattered dinnerward in a hansom or hummed along in a motor cab to some engagement. The main gate still looks out with the same expression of ancient well-proportioned kindness upon St. Margaret's Close. There are imposing new science laboratories in Chambers Street indeed, but the old playing fields are unaltered except for the big electric trams that go droning and spitting blue flashes along the western boundary. I know Ratten, the new Head, very well, but I have not been inside the school to see if it has changed at all since I went up to Cambridge.

I took all they put before us very readily as a boy, for I had a mind of vigorous appetite, but since I have grown mentally to man's

estate and developed a more and more comprehensive view of our national process and our national needs, I am more and more struck by the oddity of the educational methods pursued, their aimless disconnectedness from the constructive forces in the community. I suppose if we are to view the public school as anything more than an institution that has just chanced to happen, we must treat it as having a definite function towards the general scheme of the nation, as being in a sense designed to take the crude young male of the more or less responsible class, to correct his harsh egotisms, broaden his outlook, give him a grasp of the contemporary developments he will presently be called upon to influence and control, and send him on to the university to be made a leading and ruling social man. It is easy enough to carp at schoolmasters and set up for an Educational Reformer, I know, but still it is impossible not to feel how infinitely more effectually--given certain impossibilities perhaps--the job might be done.

My memory of school has indeed no hint whatever of that quality of elucidation it seems reasonable to demand from it. Here all about me was London, a vast inexplicable being, a vortex of gigantic forces, that filled and overwhelmed me with impressions, that stirred my imagination to a perpetual vague enquiry; and my school not only offered no key to it, but had practically no comment to make upon it at all. We were within three miles of Westminster and Charing Cross, the government offices of a fifth of mankind were all within an hour's stroll, great economic changes were going on under our eyes, now the hoardings flamed with election placards, now the Salvation Army and now the unemployed came trailing in procession through the winter-grey streets, now the newspaper placards outside news-shops told of battles in strange places, now of amazing discoveries, now of sinister crimes, abject squalor and poverty, imperial splendour and luxury, Buckingham Palace, Rotten Row, Mayfair, the slums of Pimlico, garbage-littered streets of bawling costermongers, the inky silver of the barge-laden Thames--such was the background of our days. We went across St. Margaret's Close and

through the school gate into a quiet puerile world apart from all these things. We joined in the earnest acquirement of all that was necessary for Greek epigrams and Latin verse, and for the rest played games. We dipped down into something clear and elegantly proportioned and time-worn and for all its high resolve of stalwart virility a little feeble, like our blackened and decayed portals by Inigo Jones.

Within, we were taught as the chief subjects of instruction, Latin and Greek. We were taught very badly because the men who taught us did not habitually use either of these languages, nobody uses them any more now except perhaps for the Latin of a few Levantine monasteries. At the utmost our men read them. We were taught these languages because long ago Latin had been the language of civilisation; the one way of escape from the narrow and localised life had lain in those days through Latin, and afterwards Greek had come in as the vehicle of a flood of new and amazing ideas. Once these two languages had been the sole means of initiation to the detached criticism and partial comprehension of the world. I can imagine the fierce zeal of our first Heads, Gardener and Roper, teaching Greek like passionate missionaries, as a progressive Chinaman might teach English to the boys of Peking, clumsily, impatiently, with rod and harsh urgency, but sincerely, patriotically, because they felt that behind it lay revelations, the irresistible stimulus to a new phase of history. That was long ago. A new great world, a vaster Imperialism had arisen about the school, had assimilated all these amazing and incredible ideas, had gone on to new and yet more amazing developments of its own. But the City Merchants School still made the substance of its teaching Latin and Greek, still, with no thought of rotating crops, sowed in a dream amidst the harvesting.

There is no fierceness left in the teaching now. Just after I went up to Trinity, Gates, our Head, wrote a review article in defence of our curriculum. In this, among other indiscretions, he asserted

that it was impossible to write good English without an illuminating knowledge of the classic tongues, and he split an infinitive and failed to button up a sentence in saying so. His main argument conceded every objection a reasonable person could make to the City Merchants' curriculum. He admitted that translation had now placed all the wisdom of the past at a common man's disposal, that scarcely a field of endeavour remained in which modern work had not long since passed beyond the ancient achievement. He disclaimed any utility. But there was, he said, a peculiar magic in these grammatical exercises no other subjects of instruction possessed. Nothing else provided the same strengthening and orderly discipline for the mind.

He said that, knowing the Senior Classics he did, himself a Senior Classic!

Yet in a dim confused way I think he was making out a case. In schools as we knew them, and with the sort of assistant available, the sort of assistant who has been trained entirely on the old lines, he could see no other teaching so effectual in developing attention, restraint, sustained constructive effort and various yet systematic adjustment. And that was as far as his imagination could go.

It is infinitely easier to begin organised human affairs than end them; the curriculum and the social organisation of the English public school are the crowning instances of that. They go on because they have begun. Schools are not only immortal institutions but reproductive ones. Our founder, Jabez Arvon, knew nothing, I am sure, of Gates' pedagogic values and would, I feel certain, have dealt with them disrespectfully. But public schools and university colleges sprang into existence correlated, the scholars went on to the universities and came back to teach the schools, to teach as they themselves had been taught, before they had ever made any real use of the teaching; the crowd of boys herded together, a crowd

perpetually renewed and unbrokenly the same, adjusted itself by means of spontaneously developed institutions. In a century, by its very success, this revolutionary innovation of Renaissance public schools had become an immense tradition woven closely into the fabric of the national life. Intelligent and powerful people ceased to talk Latin or read Greek, they had got what was wanted, but that only left the schoolmaster the freer to elaborate his point. Since most men of any importance or influence in the country had been through the mill, it was naturally a little difficult to persuade them that it was not quite the best and most ennobling mill the wit of man could devise. And, moreover, they did not want their children made strange to them. There was all the machinery and all the men needed to teach the old subjects, and none to teach whatever new the critic might propose. Such science instruction as my father gave seemed indeed the uninviting alternative to the classical grind. It was certainly an altogether inferior instrument at that time.

So it was I occupied my mind with the exact study of dead languages for seven long years. It was the strangest of detachments. We would sit under the desk of such a master as Topham like creatures who had fallen into an enchanted pit, and he would do his considerable best to work us up to enthusiasm for, let us say, a Greek play. If we flagged he would lash himself to revive us. He would walk about the class-room mouthing great lines in a rich roar, and asking us with a flushed face and shining eyes if it was not "GLORIOUS." The very sight of Greek letters brings back to me the dingy, faded, ink-splashed quality of our class-room, the banging of books, Topham's disordered hair, the sheen of his alpaca gown, his deep unmusical intonations and the wide striding of his creaking boots. Glorious! And being plastic human beings we would consent that it was glorious, and some of us even achieved an answering reverberation and a sympathetic flush. I at times responded freely. We all accepted from him unquestioningly that these melodies, these strange sounds, exceeded any possibility of beauty that lay in the

Gothic intricacy, the splash and glitter, the jar and recovery, the stabbing lights, the heights and broad distances of our English tongue. That indeed was the chief sin of him. It was not that he was for Greek and Latin, but that he was fiercely against every beauty that was neither classic nor deferred to classical canons.

And what exactly did we make of it, we seniors who understood it best? We visualised dimly through that dust and the grammatical difficulties, the spectacle of the chorus chanting grotesquely, helping out protagonist and antagonist, masked and buskined, with the telling of incomprehensible parricides, of inexplicable incest, of gods faded beyond symbolism, of that Relentless Law we did not believe in for a moment, that no modern western European can believe in. We thought of the characters in the unconvincing wigs and costumes of our school performance. No Gilbert Murray had come as yet to touch these things to life again. It was like the ghost of an antiquarian's toy theatre, a ghost that crumbled and condensed into a gritty dust of construing as one looked at it.

Marks, shindies, prayers and punishments, all flavoured with the leathery stuffiness of time-worn Big Hall. . . .

And then out one would come through our grey old gate into the evening light and the spectacle of London hurrying like a cataract, London in black and brown and blue and gleaming silver, roaring like the very loom of Time. We came out into the new world no teacher has yet had the power and courage to grasp and expound. Life and death sang all about one, joys and fears on such a scale, in such an intricacy as never Greek nor Roman knew. The interminable procession of horse omnibuses went lumbering past, bearing countless people we knew not whence, we knew not whither. Hansoms clattered, foot passengers jostled one, a thousand appeals of shop and boarding caught the eye. The multi-coloured lights of window and street mingled with the warm glow of the declining day under the softly flushing London skies; the ever-changing placards, the shouting

news-vendors, told of a kaleidoscopic drama all about the globe. One did not realise what had happened to us, but the voice of Topham was suddenly drowned and lost, he and his minute, remote gesticulations. . . .

That submerged and isolated curriculum did not even join on to living interests where it might have done so. We were left absolutely to the hints of the newspapers, to casual political speeches, to the cartoons of the comic papers or a chance reading of some Socialist pamphlet for any general ideas whatever about the huge swirling world process in which we found ourselves. I always look back with particular exasperation to the cessation of our modern history at the year 1815. There it pulled up abruptly, as though it had come upon something indelicate. . . .

But, after all, what would Topham or Flack have made of the huge adjustments of the nineteenth century? Flack was the chief cricketer on the staff; he belonged to that great cult which pretends that the place of this or that county in the struggle for the championship is a matter of supreme importance to boys. He obliged us to affect a passionate interest in the progress of county matches, to work up unnatural enthusiasms. What a fuss there would be when some well-trained boy, panting as if from Marathon, appeared with an evening paper! "I say, you chaps, Middlesex all out for a hundred and five!"

Under Flack's pressure I became, I confess, a cricket humbug of the first class. I applied myself industriously year by year to mastering scores and averages; I pretended that Lords or the Oval were the places nearest Paradise for me. (I never went to either.) Through a slight mistake about the county boundary I adopted Surrey for my loyalty, though as a matter of fact we were by some five hundred yards or so in Kent. It did quite as well for my purposes. I bowled rather straight and fast, and spent endless hours acquiring the skill to bowl Flack out. He was a bat in the Corinthian style,

rich and voluminous, and succumbed very easily to a low shooter or an unexpected Yorker, but usually he was caught early by long leg. The difficulty was to bowl him before he got caught. He loved to lift a ball to leg. After one had clean bowled him at the practice nets one deliberately gave him a ball to leg just to make him feel nice again.

Flack went about a world of marvels dreaming of leg hits. He has been observed, going across the Park on his way to his highly respectable club in Piccadilly, to break from profound musings into a strange brief dance that ended with an imaginary swipe with his umbrella, a roofer, over the trees towards Buckingham Palace. The hit accomplished, Flack resumed his way.

Inadequately instructed foreigners would pass him in terror, needlessly alert.

6

These schoolmasters move through my memory as always a little distant and more than a little incomprehensible. Except when they wore flannels, I saw them almost always in old college caps and gowns, a uniform which greatly increased their detachment from the world of actual men. Gates, the head, was a lean loose-limbed man, rather stupid I discovered when I reached the Sixth and came into contact with him, but honest, simple and very eager to be liberal-minded. He was bald, with an almost conical baldness, with a grizzled pointed beard, small featured and, under the stresses of a *Zeitgeist* that demanded liberality, with an expression of puzzled but resolute resistance to his own unalterable opinions. He made a tall dignified figure in his gown. In my junior days he spoke to me only three or four times, and then he annoyed me by giving me a wrong surname; it was a sore point because I was an outsider and not one of the old school families, the Shoemiths, the Naylor, the

Marklows, the Tophams, the Pevises and suchlike, who came generation after generation. I recall him most vividly against the background of faded brown book-backs in the old library in which we less destructive seniors were trusted to work, with the light from the stained-glass window falling in coloured patches on his face. It gave him the appearance of having no colour of his own. He had a habit of scratching the beard on his cheek as he talked, and he used to come and consult us about things and invariably do as we said. That, in his phraseology, was "maintaining the traditions of the school."

He had indeed an effect not of a man directing a school, but of a man captured and directed by a school. Dead and gone Elizabethans had begotten a monster that could carry him about in its mouth.

Yet being a man, as I say, with his hair a little stirred by a Zeitgeist that made for change, Gates did at times display a disposition towards developments. City Merchants had no modern side, and utilitarian spirits were carping in the PALL MALL GAZETTE and elsewhere at the omissions from our curriculum, and particularly at our want of German. Moreover, four classes still worked together with much clashing and uproar in the old Big Hall that had once held in a common tumult the entire school. Gates used to come and talk to us older fellows about these things.

"I don't wish to innovate unduly," he used to say. But we ought to get in some German, you know,--for those who like it. The army men will be wanting it some of these days."

He referred to the organisation of regular evening preparation for the lower boys in Big Hall as a "revolutionary change," but he achieved it, and he declared he began the replacement of the hacked wooden tables, at which the boys had worked since Tudor days, by sloping desks with safety inkpots and scientifically adjustable seats, "with grave misgivings." And though he never birched a boy

in his life, and was, I am convinced, morally incapable of such a scuffle, he retained the block and birch in the school through all his term of office, and spoke at the Headmasters' Conference in temperate approval of corporal chastisement, comparing it, dear soul! to the power of the sword. . . .

I wish I could, in some measure and without tediousness, convey the effect of his discourses to General Assembly in Big Hall. But that is like trying to draw the obverse and reverse of a sixpence worn to complete illegibility. His tall fine figure stood high on the days, his thoughtful tenor filled the air as he steered his hazardous way through sentences that dragged inconclusive tails and dropped redundant prepositions. And he pleaded ever so urgently, ever so finely, that what we all knew for Sin was sinful, and on the whole best avoided altogether, and so went on with deepening notes and even with short arresting gestures of the right arm and hand, to stir and exhort us towards goodness, towards that modern, unsectarian goodness, goodness in general and nothing in particular, which the *Zeitgeist* seemed to indicate in those transitional years.

7

The school never quite got hold of me. Partly I think that was because I was a day-boy and so freer than most of the boys, partly because of a temperamental disposition to see things in my own way and have my private dreams, partly because I was a little antagonised by the family traditions that ran through the school. I was made to feel at first that I was a rank outsider, and I never quite forgot it. I suffered very little bullying, and I never had a fight--in all my time there were only three fights--but I followed my own curiosities. I was already a very keen theologian and politician before I was fifteen. I was also intensely interested in modern warfare. I read the morning papers in the Reading Room during the midday recess, never missed the illustrated weeklies, and

often when I could afford it I bought a PALL MALL GAZETTE on my way home.

I do not think that I was very exceptional in that; most intelligent boys, I believe, want naturally to be men, and are keenly interested in men's affairs. There is not the universal passion for a magnified puerility among them it is customary to assume. I was indeed a voracious reader of everything but boys' books--which I detested--and fiction. I read histories, travel, popular science and controversy with particular zest, and I loved maps. School work and school games were quite subordinate affairs for me. I worked well and made a passable figure at games, and I do not think I was abnormally insensitive to the fine quality of our school, to the charm of its mediaeval nucleus, its Gothic cloisters, its scraps of Palladian and its dignified Georgian extensions; the contrast of the old quiet, that in spite of our presence pervaded it everywhere, with the rushing and impending London all about it, was indeed a continual pleasure to me. But these things were certainly not the living and central interests of my life.

I had to conceal my wider outlook to a certain extent--from the masters even more than from the boys. Indeed I only let myself go freely with one boy, Britten, my especial chum, the son of the Agent-General for East Australia. We two discovered in a chance conversation A PROPOS of a map in the library that we were both of us curious why there were Malays in Madagascar, and how the Mecca pilgrims came from the East Indies before steamships were available. Neither of us had suspected that there was any one at all in the school who knew or cared a rap about the Indian Ocean, except as water on the way to India. But Britten had come up through the Suez Canal, and his ship had spoken a pilgrim ship on the way. It gave him a startling quality of living knowledge. From these pilgrims we got to a comparative treatment of religions, and from that, by a sudden plunge, to entirely sceptical and disrespectful confessions

concerning Gates' last outbreak of simple piety in School Assembly. We became congenial intimates from that hour.

The discovery of Britten happened to me when we were both in the Lower Fifth. Previously there had been a watertight compartment between the books I read and the thoughts they begot on the one hand and human intercourse on the other. Now I really began my higher education, and aired and examined and developed in conversation the doubts, the ideas, the interpretations that had been forming in my mind. As we were both day-boys with a good deal of control over our time we organised walks and expeditions together, and my habit of solitary and rather vague prowling gave way to much more definite joint enterprises. I went several times to his house, he was the youngest of several brothers, one of whom was a medical student and let us assist at the dissection of a cat, and once or twice in vacation time he came to Penge, and we went with parcels of provisions to do a thorough day in the grounds and galleries of the Crystal Palace, ending with the fireworks at close quarters. We went in a river steamboat down to Greenwich, and fired by that made an excursion to Margate and back; we explored London docks and Bethnal Green Museum, Petticoat Lane and all sorts of out-of-the-way places together.

We confessed shyly to one another a common secret vice, "Phantom warfare." When we walked alone, especially in the country, we had both developed the same practice of fighting an imaginary battle about us as we walked. As we went along we were generals, and our attacks pushed along on either side, crouching and gathering behind hedges, cresting ridges, occupying copses, rushing open spaces, fighting from house to house. The hillsides about Penge were honeycombed in my imagination with the pits and trenches I had created to cheek a victorious invader coming out of Surrey. For him West Kensington was chiefly important as the scene of a desperate and successful last stand of insurrectionary troops (who had seized the Navy, the Bank and other advantages) against a royalist army--

reinforced by Germans--advancing for reasons best known to themselves by way of Harrow and Ealing. It is a secret and solitary game, as we found when we tried to play it together. We made a success of that only once. All the way down to Margate we schemed defences and assailed and fought them as we came back against the sunset. Afterwards we recapitulated all that conflict by means of a large scale map of the Thames and little paper ironclads in plan cut out of paper.

A subsequent revival of these imaginings was brought about by Britten's luck in getting, through a friend of his father's, admission for us both to the spectacle of volunteer officers fighting the war game in Caxton Hall. We developed a war game of our own at Britten's home with nearly a couple of hundred lead soldiers, some excellent spring cannons that shot hard and true at six yards, hills of books and a constantly elaborated set of rules. For some months that occupied an immense proportion of our leisure. Some of our battles lasted several days. We kept the game a profound secret from the other fellows. They would not have understood.

And we also began, it was certainly before we were sixteen, to write, for the sake of writing. We liked writing. We had discovered Lamb and the best of the middle articles in such weeklies as the SATURDAY GAZETTE, and we imitated them. Our minds were full

of dim uncertain things we wanted to drag out into the light of expression. Britten had got hold of IN MEMORIAM, and I had disinterred Pope's ESSAY ON MAN and RABBI BEN EZRA, and these things

had set our theological and cosmic solitudes talking. I was somewhere between sixteen and eighteen, I know, when he and I walked along the Thames Embankment confessing shamefully to one another that we had never read Lucretius. We thought every one who mattered had read Lucretius.

When I was nearly sixteen my mother was taken ill very suddenly, and died of some perplexing complaint that involved a post-mortem examination; it was, I think, the trouble that has since those days been recognised as appendicitis. This led to a considerable change in my circumstances; the house at Penge was given up, and my Staffordshire uncle arranged for me to lodge during school terms with a needy solicitor and his wife in Vicars Street, S. W., about a mile and a half from the school. So it was I came right into London; I had almost two years of London before I went to Cambridge.

These were our great days together. Afterwards we were torn apart; Britten went to Oxford, and our circumstances never afterwards threw us continuously together until the days of the BLUE WEEKLY.

As boys, we walked together, read and discussed the same books, pursued the same enquiries. We got a reputation as inseparables and the nickname of the Rose and the Lily, for Britten was short and thick-set with dark close curling hair and a ruddy Irish type of face; I was lean and fair-haired and some inches taller than he. Our talk ranged widely and yet had certain very definite limitations. We were amazingly free with politics and religion, we went to that little meeting-house of William Morris's at Hammersmith and worked out the principles of Socialism pretty thoroughly, and we got up the Darwinian theory with the help of Britten's medical-student brother and the galleries of the Natural History Museum in Cromwell Road. Those wonderful cases on the ground floor illustrating mimicry, dimorphism and so forth, were new in our times, and we went through them with earnest industry and tried over our Darwinism in the light of that. Such topics we did exhaustively. But on the other hand I do not remember any discussion whatever of human sex or sexual relationships. There, in spite of intense secret curiosities, our lips were sealed by a peculiar shyness. And I do not believe we ever had occasion either of us to use the word "love." It was not only that we were

instinctively shy of the subject, but that we were mightily ashamed of the extent of our ignorance and uncertainty in these matters. We evaded them elaborately with an assumption of exhaustive knowledge.

We certainly had no shyness about theology. We marked the emancipation of our spirits from the frightful teachings that had oppressed our boyhood, by much indulgence in blasphemous wit. We had a secret literature of irreverent rhymes, and a secret art of theological caricature. Britten's father had delighted his family by reading aloud from Dr. Richard Garnett's TWILIGHT OF THE GODS, and Britten conveyed the precious volume to me. That and the BAB BALLADS were the inspiration of some of our earliest lucubrations.

For an imaginative boy the first experience of writing is like a tiger's first taste of blood, and our literary flowerings led very directly to the revival of the school magazine, which had been comatose for some years. But there we came upon a disappointment.

8

In that revival we associated certain other of the Sixth Form boys, and notably one for whom our enterprise was to lay the foundations of a career that has ended in the House of Lords, Arthur Cossington, now Lord Paddockhurst. Cossington was at that time a rather heavy, rather good-looking boy who was chiefly eminent in cricket, an outsider even as we were and preoccupied no doubt, had we been sufficiently detached to observe him, with private imaginings very much of the same quality and spirit as our own. He was, we were inclined to think, rather a sentimentalist, rather a poseur, he affected a concise emphatic styl, played chess very well, betrayed a belief in will-power, and earned Britten's secret hostility, Britten being a sloven, by the invariable neatness of his collars and ties. He came into our magazine with a vigour that we found extremely surprising and unwelcome.

Britten and I had wanted to write. We had indeed figured our project modestly as a manuscript magazine of satirical, liberal and brilliant literature by which in some rather inexplicable way the vague tumult of ideas that teemed within us was to find form and expression; Cossington, it was manifest from the outset, wanted neither to write nor writing, but a magazine. I remember the inaugural meeting in Shoemith major's study--we had had great trouble in getting it together--and how effectually Cossington bolted with the proposal.

"I think we fellows ought to run a magazine," said Cossington. "The school used to have one. A school like this ought to have a magazine."

"The last one died in '84," said Shoemith from the hearthrug. "Called the OBSERVER. Rot rather."

"Bad title," said Cossington.

"There was a TATLER before that," said Britten, sitting on the writing table at the window that was closed to deaden the cries of the Lower School at play, and clashing his boots together.

"We want something suggestive of City Merchants."

"CITY MERCHANDIZE," said Britten.

"Too fanciful. What of ARVONIAN? Richard Arvon was our founder, and it seems almost a duty--"

"They call them all -usians or -onians," said Britten.

"I like CITY MERCHANDIZE," I said. "We could probably find a quotation to suggest--oh! mixed good things."

Cossington regarded me abstractedly.

Don't want to put the accent on the City, do we?" said Shoemith, who had a feeling for county families, and Naylor supported him by a murmur of approval.

"We ought to call it the ARVONIAN," decided Cossington, "and we might very well have underneath, 'With which is incorporated the OBSERVER.' That picks up the old traditions, makes an appeal to old boys and all that, and it gives us something to print under the title."

I still held out for CITY MERCHANDIZE, which had taken my fancy. "Some of the chaps' people won't like it," said Naylor, "certain not to. And it sounds Rum."

"Sounds Weird," said a boy who had not hitherto spoken.

"We aren't going to do anything Queer," said Shoemith, pointedly not looking at Britten.

The question of the title had manifestly gone against us. "Oh! HAVE it ARVONIAN," I said.

"And next, what size shall we have?" said Cossington.

"Something like MACMILLAN'S MAGAZINE--or LONGMANS'; LONGMANS' is better because it has a whole page, not columns. It makes no end of difference to one's effects."

"What effects?" asked Shoemith abruptly.

"Oh! a pause or a white line or anything. You've got to write

closer for a double column. It's nuggetty. You can't get a swing on your prose." I had discussed this thoroughly with Britten.

"If the fellows are going to write--" began Britten.

"We ought to keep off fine writing," said Shoesmith. "It's cheek. I vote we don't have any."

"We sha'n't get any," said Cossington, and then as an olive branch to me, "unless Remington does a bit. Or Britten. But it's no good making too much space for it."

"We ought to be very careful about the writing," said Shoesmith. "We don't want to give ourselves away."

"I vote we ask old Topham to see us through," said Naylor.

Britten groaned aloud and every one regarded him. "Greek epigrams on the fellows' names," he said. "Small beer in ancient bottles. Let's get a stuffed broody hen to SIT on the magazine."

"We might do worse than a Greek epigram," said Cossington. "One in each number. It--it impresses parents and keeps up our classieal tradition. And the masters CAN help. We don't want to antagonise them. Of course--we've got to dcpartmentalise. Writing is only one section of the thing. The ARVONIAN has to stand for the school. There's questions of space and questions of expense. We can't turn out a great chunk of printed prose like--like wet cold toast and call it a magazine."

Britten writhed, appreciating the image.

"There's to be a section of sports. YOU must do that."

"I'm not going to do any fine writing," said Shoesmith.

"What you've got to do is just to list all the chaps and put a note to their play:--'Naylor minor must pass more. Football isn't the place for extreme individualism.' 'Ammersham shapes well as half-back.' Things like that."

"I could do that all right," said Shoesmith, brightening and manifestly becoming pregnant with judgments.

"One great thing about a magazine of this sort," said Cossington, "is to mention just as many names as you can in each number. It keeps the interest alive. Chaps will turn it over looking for their own little bit. Then it all lights up for them."

"Do you want any reports of matches?" Shoesmith broke from his meditation.

"Rather. With comments."

"Naylor surpassed himself and negotiated the lemon safely home," said Shoesmith.

"Shut it," said Naylor modestly.

"Exactly," said Cossington. "That gives us three features," touching them off on his fingers, "Epigram, Literary Section, Sports. Then we want a section to shove anything into, a joke, a notice of anything that's going on. So on. Our Note Book."

"Oh, Hell!" said Britten, and clashed his boots, to the silent disapproval of every one.

"Then we want an editorial."

"A WHAT?" cried Britten, with a note of real terror in his voice.

"Well, don't we? Unless we have our Note Book to begin on the front page. It gives a scrappy effect to do that. We want something manly and straightforward and a bit thoughtful, about Patriotism, say, or ESPRIT DE CORPS, or After-Life."

I looked at Britten. Hitherto we had not considered Cossington mattered very much in the world.

He went over us as a motor-car goes over a dog. There was a sort of energy about him, a new sort of energy to us; we had never realised that anything of the sort existed in the world. We were hopelessly at a disadvantage. Almost instantly we had developed a clear and detailed vision of a magazine made up of everything that was most acceptable in the magazines that flourished in the adult world about us, and had determined to make it a success. He had by a kind of instinct, as it were, synthetically plagiarised every successful magazine and breathed into this dusty mixture the breath of life. He was elected at his own suggestion managing director, with the earnest support of Shoesmith and Naylor, and conducted the magazine so successfully and brilliantly that he even got a whole back page of advertisements from the big sports shop in Holborn, and made the printers pay at the same rate for a notice of certain books of their own which they said they had inserted by inadvertency to fill up space. The only literary contribution in the first number was a column by Topham in faultless stereotyped English in depreciation of some fancied evil called Utilitarian Studies and ending with that noble old quotation:--

"To the glory that was Greece and the grandeur that was Rome."

And Flack crowded us out of number two with a bright little paper on the "Humours of Cricket," and the Head himself was profusely

thoughtful all over the editorial under the heading of "The School Chapel; and How it Seems to an Old Boy."

Britten and I found it difficult to express to each other with any grace or precision what we felt about that magazine.

CHAPTER THE FOURTH

ADOLESCENCE

1

I find it very difficult to trace how form was added to form and interpretation followed interpretation in my ever-spreading, ever-deepening, ever-multiplying and enriching vision of this world into which I had been born. Every day added its impressions, its hints, its subtle explications to the growing understanding. Day after day the living interlacing threads of a mind weave together. Every morning now for three weeks and more (for to-day is Thursday and I started on a Tuesday) I have been trying to convey some idea of the factors and early influences by which my particular scrap of subjective tapestry was shaped, to show the child playing on the nursery floor, the son perplexed by his mother, gazing aghast at his dead father, exploring interminable suburbs, touched by first intimations of the sexual mystery, coming in with a sort of confused avidity towards the centres of the life of London. It is only by such an effort to write it down that one realises how marvellously crowded, how marvellously analytical and synthetic those ears must be. One begins with the little child to whom the sky is a roof of blue, the world a screen of opaque and disconnected facts, the home a thing eternal, and "being good" just simple obedience to unquestioned authority; and one comes at last to the vast world of one's adult perception, pierced deep by flaring searchlights of partial understanding, here masked by mists, here refracted and distorted through half translucent veils, here showing broad prospects and limitless vistas and here impenetrably dark.

I recall phases of deep speculation, doubts and even prayers by night, and strange occasions when by a sort of hypnotic contemplation of nothingness I sought to pierce the web of

appearances about me. It is hard to measure these things in receding perspective, and now I cannot trace, so closely has mood succeeded and overlaid and obliterated mood, the phases by which an utter horror of death was replaced by the growing realisation of its necessity and dignity. Difficulty of the imagination with infinite space, infinite time, entangled my mind; and moral distress for the pain and suffering of bygone ages that made all thought of reformation in the future seem but the grimmest irony upon now irreparable wrongs. Many an intricate perplexity of these broadening years did not so much get settled as cease to matter. Life crowded me away from it.

I have confessed myself a temerarious theologian, and in that passage from boyhood to manhood I ranged widely in my search for some permanently satisfying Truth. That, too, ceased after a time to be urgently interesting. I came at last into a phase that endures to this day, of absolute tranquillity, of absolute confidence in whatever that Incomprehensible Comprehensive which must needs be the substratum of all things, may be. Feeling OF IT, feeling BY IT, I cannot feel afraid of it. I think I had got quite clearly and finally to that adjustment long before my Cambridge days were done. I am sure that the evil in life is transitory and finite like an accident or distress in the nursery; that God is my Father and that I may trust Him, even though life hurts so that one must needs cry out at it, even though it shows no consequence but failure, no promise but pain. . . .

But while I was fearless of theology I must confess it was comparatively late before I faced and dared to probe the secrecies of sex. I was afraid of sex. I had an instinctive perception that it would be a large and difficult thing in my life, but my early training was all in the direction of regarding it as an irrelevant thing, as something disconnected from all the broad significances of life, as hostile and disgraceful in its quality. The world was never so emasculated in thought, I suppose, as it was in the

Victorian time. . . .

I was afraid to think either of sex or (what I have always found inseparable from a kind of sexual emotion) beauty. Even as a boy I knew the thing as a haunting and alluring mystery that I tried to keep away from. Its dim presence obsessed me none the less for all the extravagant decency, the stimulating silences of my upbringing. . . .

The plaster Venuses and Apollos that used to adorn the vast aisle and huge grey terraces of the Crystal Palace were the first intimations of the beauty of the body that ever came into my life. As I write of it I feel again the shameful attraction of those gracious forms. I used to look at them not simply, but curiously and askance. Once at least in my later days at Penge, I spent a shilling in admission chiefly for the sake of them. . . .

The strangest thing of all my odd and solitary upbringing seems to me now that swathing up of all the splendours of the flesh, that strange combination of fanatical terrorism and shyness that fenced me about with prohibitions. It caused me to grow up, I will not say blankly ignorant, but with an ignorance blurred and dishonoured by shame, by enigmatical warnings, by cultivated aversions, an ignorance in which a fascinated curiosity and desire struggled like a thing in a net. I knew so little and I felt so much. There was indeed no Aphrodite at all in my youthful Pantheon, but instead there was a mysterious and minatory gap. I have told how at last a new Venus was born in my imagination out of gas lamps and the twilight, a Venus with a cockney accent and dark eyes shining out of the dusk, a Venus who was a warm, passion-stirring atmosphere rather than incarnate in a body. And I have told, too, how I bought a picture.

All this was a thing apart from the rest of my life, a locked avoided chamber. . . .

It was not until my last year at Trinity that I really broke down the barriers of this unwholesome silence and brought my secret broodings to the light of day. Then a little set of us plunged suddenly into what we called at first sociological discussion. I can still recall even the physical feeling of those first tentative talks. I remember them mostly as occurring in the rooms of Ted Hatherleigh, who kept at the corner by the Trinity great gate, but we also used to talk a good deal at a man's in King's, a man named, if I remember rightly, Redmayne. The atmosphere of Hatherleigh's rooms was a haze of tobacco smoke against a background brown and deep. He professed himself a socialist with anarchistic leanings--he had suffered the martyrdom of ducking for it--and a huge French May-day poster displaying a splendid proletarian in red and black on a barricade against a flaring orange sky, dominated his decorations. Hatherleigh affected a fine untidiness, and all the place, even the floor, was littered with books, for the most part open and face downward; deeper darknesses were supplied by a discarded gown and our caps, all conscientiously battered, Hatherleigh's flopped like an elephant's ear and inserted quill pens supported the corners of mine; the highlights of the picture came chiefly as reflections from his chequered blue mugs full of audit ale. We sat on oak chairs, except the four or five who crowded on a capacious settle, we drank a lot of beer and were often fuddled, and occasionally quite drunk, and we all smoked reckless-looking pipes,--there was a transient fashion among us for corn cobs for which Mark Twain, I think, was responsible. Our little excesses with liquor were due far more to conscience than appetite, indicated chiefly a resolve to break away from restraints that we suspected were keeping us off the instructive knife-edges of life. Hatherleigh was a good Englishman of the premature type with a red face, a lot of hair, a deep voice and an explosive plunging manner, and it was he who said one evening--Heaven knows how we got to it--" Look here, you know, it's all Rot, this Shutting Up about Women. We OUGHT to talk about them. What are we going to do about them? It's got to come. We're all

festering inside about it. Let's out with it. There's too much Decency altogether about this Infernal University!"

We rose to his challenge a little awkwardly and our first talk was clumsy, there were flushed faces and red ears, and I remember Hatherleigh broke out into a monologue on decency. "Modesty and Decency," said Hatherleigh, "are Oriental vices. The Jews brought them to Europe. They're Semitic, just like our monasticism here and the seclusion of women and mutilating the dead on a battlefield. And all that sort of thing."

Hatherleigh's mind progressed by huge leaps, leaps that were usually wildly inaccurate, and for a time we engaged hotly upon the topic of those alleged mutilations and the Semitic responsibility for decency. Hatherleigh tried hard to saddle the Semitic race with the less elegant war customs of the Soudan and the northwest frontier of India, and quoted Doughty, at that time a little-known author, and Cunninghame Graham to show that the Arab was worse than a county-town spinster in his regard for respectability. But his case was too preposterous, and Esmeer, with his shrill penetrating voice and his way of pointing with all four long fingers flat together, carried the point against him. He quoted Cato and Roman law and the monasteries of Thibet.

"Well, anyway," said Hatherleigh, escaping from our hands like an intellectual frog, "Semitic or not, I've got no use for decency."

We argued points and Hatherleigh professed an unusually balanced and tolerating attitude. "I don't mind a certain refinement and dignity," he admitted generously. "What I object to is this spreading out of decency until it darkens the whole sky, until it makes a man's father afraid to speak of the most important things, until it makes a man afraid to look a frank book in the face or think--even think! until it leads to our coming to--to the business at last with nothing but a few prohibitions, a few hints, a lot of

dirty jokes and, and "--he waved a hand and seemed to seek and catch his image in the air--" oh, a confounded buttered slide of sentiment, to guide us. I tell you I'm going to think about it and talk about it until I see a little more daylight than I do at present. I'm twenty-two. Things might happen to me anywhen. You men can go out into the world if you like, to sin like fools and marry like fools, not knowing what you are doing and ashamed to ask. You'll take the consequences, too, I expect, pretty meekly, sniggering a bit, sentimentalising a bit, like--like Cambridge humorists. . . . I mean to know what I'm doing."

He paused to drink, and I think I cut in with ideas of my own. But one is apt to forget one's own share in a talk, I find, more than one does the clear-cut objectivity of other people's, and I do not know how far I contributed to this discussion that followed. I am, however, pretty certain that it was then that ideal that we were pleased to call aristocracy and which soon became the common property of our set was developed. It was Esmeer, I know, who laid down and maintained the proposition that so far as minds went there were really only two sorts of man in the world, the aristocrat and the man who subdues his mind to other people's.

"I couldn't THINK of it, Sir," said Esmeer in his elucidatory tones; "that's what a servant says. His mind even is broken in to run between fences, and he admits it. WE'VE got to be able to think of anything. And 'such things aren't for the Likes of Us!' That's another servant's saying. Well, everything IS for the Likes of Us. If we see fit, that is."

A small fresh-coloured man in grey objected.

"Well," exploded Hatherleigh, "if that isn't so what the deuce are we up here for? Instead of working in mines? If some things aren't to be thought about ever! We've got the privilege of all these extra years for getting things straight in our heads, and then we

won't use 'em. Good God! what do you think a university's for?" . . .

Esmeer's idea came with an effect of real emancipation to several of us. We were not going to be afraid of ideas any longer, we were going to throw down every barrier of prohibition and take them in and see what came of it. We became for a time even intemperately experimental, and one of us, at the bare suggestion of an eminent psychic investigator, took hashish and very nearly died of it within a fortnight of our great elucidation.

The chief matter of our interchanges was of course the discussion of sex. Once the theme had been opened it became a sore place in our intercourse; none of us seemed able to keep away from it. Our imaginations got astir with it. We made up for lost time and went round it and through it and over it exhaustively. I recall prolonged discussion of polygamy on the way to Royston, muddy November tramps to Madingley, when amidst much profanity from Hatherleigh at the serious treatment of so obsolete a matter, we weighed the reasons, if any, for the institution of marriage. The fine dim night-time spaces of the Great Court are bound up with the inconclusive finales of mighty hot-eared wrangles; the narrows of Trinity Street and Petty Cury and Market Hill have their particular associations for me with that spate of confession and free speech, that almost painful goal delivery of long pent and crapped and sometimes crippled ideas.

And we went on a reading party that Easter to a place called Pulborough in Sussex, where there is a fishing inn and a river that goes under a bridge. It was a late Easter and a blazing one, and we boated and bathed and talked of being Hellenic and the beauty of the body until at moments it seemed to us that we were destined to restore the Golden Age, by the simple abolition of tailors and outfitters.

Those undergraduate talks! how rich and glorious they seemed, how

splendidly new the ideas that grew and multiplied in our seething minds! We made long afternoon and evening raids over the Downs towards Arundel, and would come tramping back through the still keen moonlight singing and shouting. We formed romantic friendships with one another, and grieved more or less convincingly that there were no splendid women fit to be our companions in the world. But Hatherleigh, it seemed, had once known a girl whose hair was gloriously red. "My God!" said Hatherleigh to convey the quality of her; just simply and with projectile violence: "My God!

Benton had heard of a woman who lived with a man refusing to be married to him--we thought that splendid beyond measure,--I cannot now imagine why. She was "like a tender goddess," Benton said. A sort of shame came upon us in the dark in spite of our liberal intentions when Benton committed himself to that. And after such talk we would fall upon great pauses of emotional dreaming, and if by chance we passed a girl in a governess cart, or some farmer's daughter walking to the station, we became alertly silent or obstreperously indifferent to her. For might she not be just that one exception to the banal decency, the sickly pointless conventionality, the sham modesty of the times in which we lived?

We felt we stood for a new movement, not realising how perennially this same emancipation returns to those ancient courts beside the Cam. We were the anti-decency party, we discovered a catch phrase that we flourished about in the Union and made our watchword, namely, "stark fact." We hung nude pictures in our rooms much as if they had been flags, to the earnest concern of our bedders, and I disinterred my long-kept engraving and had it framed in fumed oak, and found for it a completer and less restrained companion, a companion I never cared for in the slightest degree. . . .

This efflorescence did not prevent, I think indeed it rather helped, our more formal university work, for most of us took firsts, and three of us got Fellowships in one year or another. There was

Benton who had a Research Fellowship and went to Tübingen, there was Esmeer and myself who both became Residential Fellows. I had taken the Mental and Moral Science Tripos (as it was then), and three years later I got a lectureship in political science. In those days it was disguised in the cloak of Political Economy.

2

It was our affectation to be a little detached from the main stream of undergraduate life. We worked pretty hard, but by virtue of our beer, our socialism and suchlike heterodoxy, held ourselves to be differentiated from the swatting reading man. None of us, except Baxter, who was a rowing blue, a rather abnormal blue with an appetite for ideas, took games seriously enough to train, and on the other hand we intimated contempt for the rather mediocre, deliberately humorous, consciously gentlemanly and consciously wild undergraduate men who made up the mass of Cambridge life. After the manner of youth we were altogether too hard on our contemporaries. We battered our caps and tore our gowns lest they should seem new, and we despised these others extremely for doing exactly the same things; we had an idea of ourselves and resented beyond measure a similar weakness in these our brothers.

There was a type, or at least there seemed to us to be a type--I'm a little doubtful at times now whether after all we didn't create it--for which Hatherleigh invented the nickname the "Pinky Dinkys," intending thereby both contempt and abhorrence in almost equal measure. The Pinky Dinky summarised all that we particularly did not want to be, and also, I now perceive, much of what we were and all that we secretly dreaded becoming.

But it is hard to convey the Pinky Dinky idea, for all that it meant

so much to us. We spent one evening at least during that reading party upon the Pinky Dinky; we sat about our one fire after a walk in the rain--it was our only wet day--smoked our excessively virile pipes, and elaborated the natural history of the Pinky Dinky. We improvised a sort of Pinky Dinky litany, and Hatherleigh supplied deep notes for the responses.

"The Pinky Dinky extracts a good deal of amusement from life," said some one.

"Damned prig! " said Hatherleigh.

"The Pinky Dinky arises in the Union and treats the question with a light gay touch. He makes the weird ones mad. But sometimes he cannot go on because of the amusement he extracts."

"I want to shy books at the giggling swine," said Hatherleigh.

"The Pinky Dinky says suddenly while he is making the tea, 'We're all being frightfully funny. It's time for you to say something now.'"

"The Pinky Dinky shakes his head and says: 'I'm afraid I shall never be a responsible being.' And he really IS frivolous."

"Frivolous but not vulgar," said Esmeer.

"Pinky Dinkys are chaps who've had their buds nipped," said Hatherleigh. "They're Plebs and they know it. They haven't the Guts to get hold of things. And so they worry up all those silly little jokes of theirs to carry it off." . . .

We tried bad ones for a time, viciously flavoured.

Pinky Dinkys are due to over-production of the type that ought to

keep outfitters' shops. Pinky Dinkys would like to keep outfitters' shops with whimsy 'scriptions on the boxes and make your bill out funny, and not be snobs to customers, no!--not even if they had titles."

"Every Pinky Dinky's people are rather good people, and better than most Pinky Dinky's people. But he does not put on side."

"Pinky Dinkys become playful at the sight of women."

"'Croquet's my game,' said the Pinky Dinky, and felt a man condescended."

"But what the devil do they think they're up to, anyhow?" roared old Hatherleigh suddenly, dropping plump into bottomless despair.

We felt we had still failed to get at the core of the mystery of the Pinky Dinky.

We tried over things about his religion. "The Pinky Dinky goes to King's Chapel, and sits and feels in the dusk. Solemn things! Oh HUSH! He wouldn't tell you--"

"He COULDN'T tell you."

"Religion is so sacred to him he never talks about it, never reads about it, never thinks about it. Just feels!"

"But in his heart of hearts, oh! ever so deep, the Pinky Dinky has a doubt--"

Some one protested.

"Not a vulgar doubt," Esmeer went on, "but a kind of hesitation whether the Ancient of Days is really exactly what one would call

good form. . . . There's a lot of horrid coarseness got into the world somehow. **SOMEBODY** put it there. . . . And anyhow there's no particular reason why a man should be seen about with Him. He's jolly Awful of course and all that--"

"The Pinky Dinky for all his fun and levity has a clean mind."

"A thoroughly clean mind. Not like Esmeer's--the Pig!"

"If once he began to think about sex, how could he be comfortable at croquet?"

"It's their Damned Modesty," said Hatherleigh suddenly, "that's what's the matter with the Pinky Dinky. It's Mental Cowardice dressed up as a virtue and taking the poor dears in. Cambridge is soaked with it; it's some confounded local bacillus. Like the thing that gives a flavour to Havana cigars. He comes up here to be made into a man and a ruler of the people, and he thinks it shows a nice disposition not to take on the job! How the Devil is a great Empire to be run with men like him?"

"All his little jokes and things," said Esmeer regarding his feet on the fender, "it's just a nervous sniggering--because he's afraid. . . . Oxford's no better."

"What's he afraid of?" said I.

"God knows!" exploded Hatherleigh and stared at the fire.

"LIFE!" said Esmeer. "And so in a way are we," he added, and made a thoughtful silence for a time.

"I say," began Carter, who was doing the Natural Science Tripos, "what is the adult form of the Pinky Dinky?"

But there we were checked by our ignorance of the world.

"What is the adult form of any of us?" asked Benton, voicing the thought that had arrested our flow.

3

I do not remember that we ever lifted our criticism to the dons and the organisation of the University. I think we took them for granted. When I look back at my youth I am always astonished by the multitude of things that we took for granted. It seemed to us that Cambridge was in the order of things, for all the world like having eyebrows or a vermiform appendix. Now with the larger scepticism of middle age I can entertain very fundamental doubts about these old universities. Indeed I had a scheme--

I do not see what harm I can do now by laying bare the purpose of the political combinations I was trying to effect.

My educational scheme was indeed the starting-point of all the big project of conscious public reconstruction at which I aimed. I wanted to build up a new educational machine altogether for the governing class out of a consolidated system of special public service schools. I meant to get to work upon this whatever office I was given in the new government. I could have begun my plan from the Admiralty or the War Office quite as easily as from the Education Office. I am firmly convinced it is hopeless to think of reforming the old public schools and universities to meet the needs of a modern state, they send their roots too deep and far, the cost would exceed any good that could possibly be effected, and so I have sought a way round this invincible obstacle. I do think it would be quite practicable to side-track, as the Americans say, the whole

system by creating hardworking, hard-living, modern and scientific boys' schools, first for the Royal Navy and then for the public service generally, and as they grew, opening them to the public without any absolute obligation to subsequent service.

Simultaneously with this it would not be impossible to develop a new college system with strong faculties in modern philosophy, modern history, European literature and criticism, physical and biological science, education and sociology.

We could in fact create a new liberal education in this way, and cut the umbilicus of the classical languages for good and all. I should have set this going, and trusted it to correct or kill the old public schools and the Oxford and Cambridge tradition altogether. I had men in my mind to begin the work, and I should have found others. I should have aimed at making a hard-trained, capable, intellectually active, proud type of man. Everything else would have been made subservient to that. I should have kept my grip on the men through their vacation, and somehow or other I would have contrived a young woman to match them. I think I could have seen to it effectually enough that they didn't get at croquet and tennis with the vicarage daughters and discover sex in the Peeping Tom fashion I did, and that they realised quite early in life that it isn't really virile to reek of tobacco. I should have had military manoeuvres, training ships, aeroplane work, mountaineering and so forth, in the place of the solemn trivialities of games, and I should have fed and housed my men clean and very hard--where there wasn't any audit ale, no credit tradesmen, and plenty of high pressure douches. . . .

I have revisited Cambridge and Oxford time after time since I came down, and so far as the Empire goes, I want to get clear of those two places. . . .

Always I renew my old feelings, a physical oppression, a sense of lowness and dampness almost exactly like the feeling of an

underground room where paper moulders and leaves the wall, a feeling of ineradicable contagion in the Gothic buildings, in the narrow ditch-like rivers, in those roads and roads of stuffy little villas. Those little villas have destroyed all the good of the old monastic system and none of its evil. . . .

Some of the most charming people in the world live in them, but their collective effect is below the quality of any individual among them. Cambridge is a world of subdued tones, of excessively subtle humours, of prim conduct and free thinking; it fears the Parent, but it has no fear of God; it offers amidst surroundings that vary between disguises and antiquarian charm the inflammation of literature's purple draught; one hears there a peculiar thin scandal like no other scandal in the world--a covetous scandal--so that I am always reminded of Ibsen in Cambridge. In Cambridge and the plays of Ibsen alone does it seem appropriate for the heroine before the great crisis of life to "enter, take off her overshoes, and put her wet umbrella upon the writing desk." . . .

We have to make a new Academic mind for modern needs, and the last thing to make it out of, I am convinced, is the old Academic mind. One might as soon try to fake the old VICTORY at Portsmouth into a line of battleship again. Besides which the old Academic mind, like those old bathless, damp Gothic colleges, is much too delightful in its peculiar and distinctive way to damage by futile patching.

My heart warms to a sense of affectionate absurdity as I recall dear old Codger, surely the most "unleaderly" of men. No more than from the old Schoolmen, his kindred, could one get from him a School for Princes. Yet apart from his teaching he was as curious and adorable as a good Netsuke. Until quite recently he was a power in Cambridge, he could make and bar and destroy, and in a way he has become the quintessence of Cambridge in my thoughts.

I see him on his way to the morning's lecture, with his plump

childish face, his round innocent eyes, his absurdly non-prehensile fat hand carrying his cap, his grey trousers braced up much too high, his feet a trifle inturned, and going across the great court with a queer tripping pace that seemed cultivated even to my naive undergraduate eye. Or I see him lecturing. He lectured walking up and down between the desks, talking in a fluting rapid voice, and with the utmost lucidity. If he could not walk up and down he could not lecture. His mind and voice had precisely the fluid quality of some clear subtle liquid; one felt it could flow round anything and overcome nothing. And its nimble eddies were wonderful! Or again I recall him drinking port with little muscular movements in his neck and cheek and chin and his brows knit--very judicial, very concentrated, preparing to say the apt just thing; it was the last thing he would have told a lie about.

When I think of Codger I am reminded of an inscription I saw on some occasion in Regent's Park above two eyes scarcely more limpidly innocent than his--"Born in the Menagerie." Never once since Codger began to display the early promise of scholarship at the age of eight or more, had he been outside the bars. His utmost travel had been to lecture here and lecture there. His student phase had culminated in papers of quite exceptional brilliance, and he had gone on to lecture with a cheerful combination of wit and mannerism that had made him a success from the beginning. He has lectured ever since. He lectures still. Year by year he has become plumper, more rubicund and more and more of an item for the intelligent visitor to see. Even in my time he was pointed out to people as part of our innumerable enrichments, and obviously he knew it. He has become now almost the leading Character in a little donnish world of much too intensely appreciated Characters.

He boasted he took no exercise, and also of his knowledge of port wine. Of other wines he confessed quite frankly he had no "special knowledge." Beyond these things he had little pride except that he claimed to have read every novel by a woman writer that had ever

entered the Union Library. This, however, he held to be remarkable rather than ennobling, and such boasts as he made of it were tinged with playfulness. Certainly he had a scholar's knowledge of the works of Miss Marie Corelli, Miss Braddon, Miss Elizabeth Glyn and Madame Sarah Grand that would have astonished and flattered those ladies enormously, and he loved nothing so much in his hours of relaxation as to propound and answer difficult questions upon their books. Tusher of King's was his ineffectual rival in this field, their bouts were memorable and rarely other than glorious for Codger; but then Tusher spread himself too much, he also undertook to rehearse whole pages out of Bradshaw, and tell you with all the changes how to get from any station to any station in Great Britain by the nearest and cheapest routes. . . .

Codger lodged with a little deaf innocent old lady, Mrs. Araminta Mergle, who was understood to be herself a very redoubtable Character in the Gyp-Bedder class; about her he related quietly absurd anecdotes. He displayed a marvellous invention in ascribing to her plausible expressions of opinion entirely identical in import with those of the Oxford and Harvard Pragmatists, against whom he waged a fierce obscure war. . . .

It was Codger's function to teach me philosophy, philosophy! the intimate wisdom of things. He dealt in a variety of Hegelian stuff like nothing else in the world, but marvellously consistent with itself. It was a wonderful web he spun out of that queer big active childish brain that had never lusted nor hated nor grieved nor feared nor passionately loved,--a web of iridescent threads. He had luminous final theories about Love and Death and Immortality, odd matters they seemed for him to think about! and all his woven thoughts lay across my perception of the realities of things, as flimsy and irrelevant and clever and beautiful, oh!--as a dew-wet spider's web slung in the morning sunshine across the black mouth of a gun. . . .

All through those years of development I perceive now there must have been growing in me, slowly, irregularly, assimilating to itself all the phrases and forms of patriotism, diverting my religious impulses, utilising my esthetic tendencies, my dominating idea, the statesman's idea, that idea of social service which is the protagonist of my story, that real though complex passion for Making, making widely and greatly, cities, national order, civilisation, whose interplay with all those other factors in life I have set out to present. It was growing in me--as one's bones grow, no man intending it.

I have tried to show how, quite early in my life, the fact of disorderliness, the conception of social life as being a multitudinous confusion out of hand, came to me. One always of course simplifies these things in the telling, but I do not think I ever saw the world at large in any other terms. I never at any stage entertained the idea which sustained my mother, and which sustains so many people in the world,--the idea that the universe, whatever superficial discords it may present, is as a matter of fact "all right," is being steered to definite ends by a serene and unquestionable God. My mother thought that Order prevailed, and that disorder was just incidental and foredoomed rebellion; I feel and have always felt that order rebels against and struggles against disorder, that order has an up-hill job, in gardens, experiments, suburbs, everything alike; from the very beginnings of my experience I discovered hostility to order, a constant escaping from control.

The current of living and contemporary ideas in which my mind was presently swimming made all in the same direction; in place of my mother's attentive, meticulous but occasionally extremely irascible

Providence, the talk was all of the Struggle for Existence and the survival not of the Best--that was nonsense, but of the fittest to survive.

The attempts to rehabilitate Faith in the form of the Individualist's LAISSEZ FAIRE never won upon me. I disliked Herbert Spencer all my life until I read his autobiography, and then I laughed a little and loved him. I remember as early as the City Merchants' days how Britten and I scoffed at that pompous question-begging word "Evolution," having, so to speak, found it out. Evolution, some illuminating talker had remarked at the Britten lunch table, had led not only to man, but to the liver-fluke and skunk, obviously it might lead anywhere; order came into things only through the struggling mind of man. That lit things wonderfully for us. When I went up to Cambridge I was perfectly clear that life was a various and splendid disorder of forces that the spirit of man sets itself to tame. I have never since fallen away from that persuasion.

I do not think I was exceptionally precocious in reaching these conclusions and a sort of religious finality for myself by eighteen or nineteen. I know men and women vary very much in these matters, just as children do in learning to talk. Some will chatter at eighteen months and some will hardly speak until three, and the thing has very little to do with their subsequent mental quality. So it is with young people; some will begin their religious, their social, their sexual interests at fourteen, some not until far on in the twenties. Britten and I belonged to one of the precocious types, and Cossington very probably to another. It wasn't that there was anything priggish about any of us; we should have been prigs to have concealed our spontaneous interests and ape the theoretical boy.

The world of man centred for my imagination in London, it still centres there; the real and present world, that is to say, as

distinguished from the wonder-lands of atomic and microscopic science and the stars and future time. I had travelled scarcely at all, I had never crossed the Channel, but I had read copiously and I had formed a very good working idea of this round globe with its mountains and wildernesses and forests and all the sorts and conditions of human life that were scattered over its surface. It was all alive, I felt, and changing every day; how it was changing, and the changes men might bring about, fascinated my mind beyond measure.

I used to find a charm in old maps that showed The World as Known to the Ancients, and I wish I could now without any suspicion of self-deception write down compactly the world as it was known to me at nineteen. So far as extension went it was, I fancy, very like the world I know now at forty-two; I had practically all the mountains and seas, boundaries and races, products and possibilities that I have now. But its intension was very different. All the interval has been increasing and deepening my social knowledge, replacing crude and second-hand impressions by felt and realised distinctions.

In 1895--that was my last year with Britten, for I went up to Cambridge in September--my vision of the world had much the same relation to the vision I have to-day that an ill-drawn daub of a mask has to the direct vision of a human face. Britten and I looked at our world and saw--what did we see? Forms and colours side by side that we had no suspicion were interdependent. We had no conception of the roots of things nor of the reaction of things. It did not seem to us, for example, that business had anything to do with government, or that money and means affected the heroic issues of war. There were no wagons in our war game, and where there were guns, there it was assumed the ammunition was gathered together. Finance again was a sealed book to us; we did not so much connect it with the broad aspects of human affairs as regard it as a sort of intrusive nuisance to be earnestly ignored by all right-minded men. We had no conception of the quality of politics, nor how "interests"

came into such affairs; we believed men were swayed by purely intellectual convictions and were either right or wrong, honest or dishonest (in which ease they deserved to be shot), good or bad. We knew nothing of mental inertia, and could imagine the opinion of a whole nation changed by one lucid and convincing exposition. We were capable of the most incongruous transfers from the scroll of history to our own times, we could suppose Brixton ravaged and Hampstead burnt in civil wars for the succession to the throne, or Cheapside a lane of death and the front of the Mansion House set about with guillotines in the course of an accurately transposed French Revolution. We rebuilt London by Act of Parliament, and once in a mood of hygienic enterprise we transferred its population EN MASSE to the North Downs by an order of the Local Government Board. We thought nothing of throwing religious organisations out of employment or superseding all the newspapers by freely distributed bulletins. We could contemplate the possibility of laws abolishing whole classes; we were equal to such a dream as the peaceful and orderly proclamation of Communism from the steps of St. Paul's Cathedral, after the passing of a simply worded bill,--a close and not unnaturally an exciting division carrying the third reading. I remember quite distinctly evolving that vision. We were then fully fifteen and we were perfectly serious about it. We were not fools; it was simply that as yet we had gathered no experience at all of the limits and powers of legislation and conscious collective intention. . . .

I think this statement does my boyhood justice, and yet I have my doubts. It is so hard now to say what one understood and what one did not understand. It isn't only that every day changed one's general outlook, but also that a boy fluctuates between phases of quite adult understanding and phases of tawdrily magnificent puerility. Sometimes I myself was in those tumbrils that went along Cheapside to the Mansion House, a Sydney Cartonesque figure, a white defeated Mirabeau; sometimes it was I who sat judging and condemning and ruling (sleeping in my clothes and feeding very simply) the soul

and autocrat of the Provisional Government, which occupied, of all inconvenient places! the General Post Office at St. Martin's-le-Grand! . . .

I cannot trace the development of my ideas at Cambridge, but I believe the mere physical fact of going two hours' journey away from London gave that place for the first time an effect of unity in my imagination. I got outside London. It became tangible instead of being a frame almost as universal as sea and sky.

At Cambridge my ideas ceased to live in a duologue; in exchange for Britten, with whom, however, I corresponded lengthily, stylishly and self-consciously for some years, I had now a set of congenial friends. I got talk with some of the younger dons, I learnt to speak in the Union, and in my little set we were all pretty busily sharpening each other's wits and correcting each other's interpretations. Cambridge made politics personal and actual. At City Merchants' we had had no sense of effective contact; we boasted, it is true, an under secretary and a colonial governor among our old boys, but they were never real to us; such distinguished sons as returned to visit the old school were allusive and pleasant in the best Pinky Dinky style, and pretended to be in earnest about nothing but our football and cricket, to mourn the abolition of "water," and find a shuddering personal interest in the ancient swishing block. At Cambridge I felt for the first time that I touched the thing that was going on. Real living statesmen came down to debate in the Union, the older dons had been their college intimates, their sons and nephews expounded them to us and made them real to us. They invited us to entertain ideas; I found myself for the first time in my life expected to read and think and discuss, my secret vice had become a virtue.

That combination-room world is at last larger and more populous and various than the world of schoolmasters. The Shoemiths and Naylor's who had been the aristocracy of City Merchants' fell into their

place in my mind; they became an undistinguished mass on the more athletic side of Pinky Dinkyism, and their hostility to ideas and to the expression of ideas ceased to limit and trouble me. The brighter men of each generation stay up; these others go down to propagate their tradition, as the fathers of families, as mediocre professional men, as assistant masters in schools. Cambridge which perfects them is by the nature of things least oppressed by them,--except when it comes to a vote in Convocation.

We were still in those days under the shadow of the great Victorians. I never saw Gladstone (as I never set eyes on the old Queen), but he had resigned office only a year before I went up to Trinity, and the Combination Rooms were full of personal gossip about him and Disraeli and the other big figures of the gladiatorial stage of Parliamentary history, talk that leaked copiously into such sets as mine. The ceiling of our guest chamber at Trinity was glorious with the arms of Sir William Harcourt, whose Death Duties had seemed at first like a socialist dawn. Mr. Evesham we asked to come to the Union every year, Masters, Chamberlain and the old Duke of Devonshire; they did not come indeed, but their polite refusals brought us all, as it were, within personal touch of them. One heard of cabinet councils and meetings at country houses. Some of us, pursuing such interests, went so far as to read political memoirs and the novels of Disraeli and Mrs. Humphry Ward. From gossip, example and the illustrated newspapers one learnt something of the way in which parties were split, coalitions formed, how permanent officials worked and controlled their ministers, how measures were brought forward and projects modified.

And while I was getting the great leading figures on the political stage, who had been presented to me in my schooldays not so much as men as the pantomimic monsters of political caricature, while I was getting them reduced in my imagination to the stature of humanity, and their motives to the quality of impulses like my own, I was also acquiring in my Tripos work a constantly developing and enriching

conception of the world of men as a complex of economic, intellectual and moral processes. . . .

5

Socialism is an intellectual Proteus, but to the men of my generation it came as the revolt of the workers. Rodbertus we never heard of and the Fabian Society we did not understand; Marx and Morris, the Chicago Anarchists, JUSTICE and Social Democratic Federation (as it was then) presented socialism to our minds. Hatherleigh was the leading exponent of the new doctrines in Trinity, and the figure upon his wall of a huge-muscled, black-haired toiler swaggering sledgehammer in hand across a revolutionary barricade, seemed the quintessence of what he had to expound. Landlord and capitalist had robbed and enslaved the workers, and were driving them quite automatically to inevitable insurrection. They would arise and the capitalist system would flee and vanish like the mists before the morning, like the dews before the sunrise, giving place in the most simple and obvious manner to an era of Right and Justice and Virtue and Well Being, and in short a Perfectly Splendid Time.

I had already discussed this sort of socialism under the guidance of Britten, before I went up to Cambridge. It was all mixed up with ideas about freedom and natural virtue and a great scorn for kings, titles, wealth and officials, and it was symbolised by the red ties we wore. Our simple verdict on existing arrangements was that they were "all wrong." The rich were robbers and knew it, kings and princes were usurpers and knew it, religious teachers were impostors in league with power, the economic system was an elaborate plot on the part of the few to expropriate the many. We went about feeling scornful of all the current forms of life, forms that esteemed

themselves solid, that were, we knew, no more than shapes painted on a curtain that was presently to be torn aside. . . .

It was Hatherleigh's poster and his capacity for overstating things, I think, that first qualified my simple revolutionary enthusiasm. Perhaps also I had met with Fabian publications, but if I did I forget the circumstances. And no doubt my innate constructiveness with its practical corollary of an analytical treatment of the material supplied, was bound to push me on beyond this melodramatic interpretation of human affairs.

I compared that Working Man of the poster with any sort of working man I knew. I perceived that the latter was not going to change, and indeed could not under any stimulus whatever be expected to change, into the former. It crept into my mind as slowly and surely as the dawn creeps into a room that the former was not, as I had at first rather glibly assumed, an "ideal," but a complete misrepresentation of the quality and possibilities of things.

I do not know now whether it was during my school-days or at Cambridge that I first began not merely to see the world as a great contrast of rich and poor, but to feel the massive effect of that multitudinous majority of people who toil continually, who are for ever anxious about ways and means, who are restricted, ill clothed, ill fed and ill housed, who have limited outlooks and continually suffer misadventures, hardships and distresses through the want of money. My lot had fallen upon the fringe of the possessing minority; if I did not know the want of necessities I knew shabbiness, and the world that let me go on to a university education intimated very plainly that there was not a thing beyond the primary needs that my stimulated imagination might demand that it would not be an effort for me to secure. A certain aggressive radicalism against the ruling and propertied classes followed almost naturally from my circumstances. It did not at first connect itself at all with the perception of a planless disorder in human affairs

that had been forced upon me by the atmosphere of my upbringing, nor did it link me in sympathy with any of the profounder realities of poverty. It was a personal independent thing. The dingier people one saw in the back streets and lower quarters of Bromstead and Penge, the drift of dirty children, ragged old women, street loafers, grimy workers that made the social background of London, the stories one heard of privation and sweating, only joined up very slowly with the general propositions I was making about life. We could become splendidly eloquent about the social revolution and the triumph of the Proletariat after the Class war, and it was only by a sort of inspiration that it came to me that my bedder, a garrulous old thing with a dusty black bonnet over one eye and an ostentatiously clean apron outside the dark mysteries that clothed her, or the cheeky little ruffians who yelled papers about the streets, were really material to such questions.

Directly any of us young socialists of Trinity found ourselves in immediate contact with servants or cadgers or gyps or bedders or plumbers or navvies or cabmen or railway porters we became unconsciously and unthinkingly aristocrats. Our voices altered, our gestures altered. We behaved just as all the other men, rich or poor, swatters or sportsmen or Pinky Dinkys, behaved, and exactly as we were expected to behave. On the whole it is a population of poor quality round about Cambridge, rather stunted and spiritless and very difficult to idealise. That theoretical Working Man of ours!-- if we felt the clash at all we explained it, I suppose, by assuming that he came from another part of the country; Esmeer, I remember, who lived somewhere in the Fens, was very eloquent about the Cornish fishermen, and Hatherleigh, who was a Hampshire man, assured us we ought to know the Scottish miner. My private fancy was for the Lancashire operative because of his co-operative societies, and because what Lancashire thinks to-day England thinks to-morrow. . . . And also I had never been in Lancashire.

By little increments of realisation it was that the profounder

verities of the problem of socialism came to me. It helped me very much that I had to go down to the Potteries several times to discuss my future with my uncle and guardian; I walked about and saw Bursley Wakes and much of the human aspects of organised industrialism at close quarters for the first time. The picture of a splendid Working Man cheated out of his innate glorious possibilities, and presently to arise and dash this scoundrelly and scandalous system of private ownership to fragments, began to give place to a limitless spectacle of inefficiency, to a conception of millions of people not organised as they should be, not educated as they should be, not simply prevented from but incapable of nearly every sort of beauty, mostly kindly and well meaning, mostly incompetent, mostly obstinate, and easily humbugged and easily diverted. Even the tragic and inspiring idea of Marx, that the poor were nearing a limit of painful experience, and awakening to a sense of intolerable wrongs, began to develop into the more appalling conception that the poor were simply in a witless uncomfortable inconclusive way-- "muddling along"; that they wanted nothing very definitely nor very urgently, that mean fears enslaved them and mean satisfactions decoyed them, that they took the very gift of life itself with a spiritless lassitude, hoarding it, being rather anxious not to lose it than to use it in any way whatever.

The complete development of that realisation was the work of many years. I had only the first intimations at Cambridge. But I did have intimations. Most acutely do I remember the doubts that followed the visit of Chris Robinson. Chris Robinson was heralded by such heroic anticipations, and he was so entirely what we had not anticipated.

Hatherleigh got him to come, arranged a sort of meeting for him at Redmayne's rooms in King's, and was very proud and proprietorial. It failed to stir Cambridge at all profoundly. Beyond a futile attempt to screw up Hatherleigh made by some inexpert duffers who used nails instead of screws and gimlets, there was no attempt to

rag. Next day Chris Robinson went and spoke at Bennett Hall in Newnham College, and left Cambridge in the evening amidst the cheers of twenty men or so. Socialism was at such a low ebb politically in those days that it didn't even rouse men to opposition.

And there sat Chris under that flamboyant and heroic Worker of the poster, a little wrinkled grey-bearded apologetic man in ready-made clothes, with watchful innocent brown eyes and a persistent and invincible air of being out of his element. He sat with his stout boots tucked up under his chair, and clung to a teacup and saucer and looked away from us into the fire, and we all sat about on tables and chair-arms and windowsills and boxes and anywhere except upon chairs after the manner of young men. The only other chair whose seat was occupied was the one containing his knitted woollen comforter and his picturesque old beach-photographer's hat. We were all shy and didn't know how to take hold of him now we had got him, and, which was disconcertingly unanticipated, he was manifestly having the same difficulty with us. We had expected to be gripped.

"I'll not be knowing what to say to these Chaps," he repeated with a north-country quality in his speech.

We made reassuring noises.

The Ambassador of the Workers stirred his tea earnestly through an uncomfortable pause.

"I'd best tell 'em something of how things are in Lancashire, what with the new machines and all that," he speculated at last with red reflections in his thoughtful eyes.

We had an inexcusable dread that perhaps he would make a mess of the meeting.

But when he was no longer in the unaccustomed meshes of refined

conversation, but speaking with an audience before him, he became a different man. He declared he would explain to us just exactly what socialism was, and went on at once to an impassioned contrast of social conditions. "You young men," he said "come from homes of luxury; every need you feel is supplied--"

We sat and stood and sprawled about him, occupying every inch of Redmayne's floor space except the hearthrug-platform, and we listened to him and thought him over. He was the voice of wrongs that made us indignant and eager. We forgot for a time that he had been shy and seemed not a little incompetent, his provincial accent became a beauty of his earnest speech, we were carried away by his indignations. We looked with shining eyes at one another and at the various dons who had dropped in and were striving to maintain a front of judicious severity. We felt more and more that social injustice must cease, and cease forthwith. We felt we could not sleep upon it. At the end we clapped and murmured our applause and wanted badly to cheer.

Then like a lancet stuck into a bladder came the heckling. Denson, that indolent, liberal-minded sceptic, did most of the questioning. He lay contorted in a chair, with his ugly head very low, his legs crossed and his left boot very high, and he pointed his remarks with a long thin hand and occasionally adjusted the unstable glasses that hid his watery eyes. "I don't want to carp," he began. "The present system, I admit, stands condemned. Every present system always HAS stood condemned in the minds of intelligent men. But where it seems to me you get thin, is just where everybody has been thin, and that's when you come to the remedy."

"Socialism," said Chris Robinson, as if it answered everything, and Hatherleigh said "Hear! Hear!" very resolutely.

"I suppose I OUGHT to take that as an answer," said Denson, getting his shoulder-blades well down to the seat of his chair; "but I

don't. I don't, you know. It's rather a shame to cross-examine you after this fine address of yours"--Chris Robinson on the hearthrug made acquiescent and inviting noises--"but the real question remains how exactly are you going to end all these wrongs? There are the administrative questions. If you abolish the private owner, I admit you abolish a very complex and clumsy way of getting businesses run, land controlled and things in general administered, but you don't get rid of the need of administration, you know."

"Democracy," said Chris Robinson.

"Organised somehow," said Denson. "And it's just the How perplexes me. I can quite easily imagine a socialist state administered in a sort of scrambling tumult that would be worse than anything we have got now.

"Nothing could be worse than things are now," said Chris Robinson. "I have seen little children--"

"I submit life on an ill-provisioned raft, for example, could easily be worse--or life in a beleaguered town."

Murmurs.

They wrangled for some time, and it had the effect upon me of coming out from the glow of a good matinee performance into the cold daylight of late afternoon. Chris Robinson did not shine in conflict with Denson; he was an orator and not a dialectician, and he missed Denson's points and displayed a disposition to plunge into untimely pathos and indignation. And Denson hit me curiously hard with one of his shafts. "Suppose," he said, "you found yourself prime minister--"

I looked at Chris Robinson, bright-eyed and his hair a little ruffled and his whole being rhetorical, and measured him against the

huge machine of government muddled and mysterious. Oh! but I was perplexed!

And then we took him back to Hatherleigh's rooms and drank beer and smoked about him while he nursed his knee with hairy wristed hands that protruded from his flannel shirt, and drank lemonade under the cartoon of that emancipated Worker, and we had a great discursive talk with him.

"Eh! you should see our big meetings up north?" he said.

Denson had ruffled him and worried him a good deal, and ever and again he came back to that discussion. "It's all very easy for your learned men to sit and pick holes," he said, "while the children suffer and die. They don't pick holes up north. They mean business."

He talked, and that was the most interesting part of it all, of his going to work in a factory when he was twelve--" when you Chaps were all with your mammies "--and how he had educated himself of nights until he would fall asleep at his reading.

"It's made many of us keen for all our lives," he remarked, "all that clemming for education. Why! I longed all through one winter to read a bit of Darwin. I must know about this Darwin if I die for it, I said. And I couldno' get the book."

Hatherleigh made an enthusiastic noise and drank beer at him with round eyes over the mug.

"Well, anyhow I wasted no time on Greek and Latin," said Chris Robinson. "And one learns to go straight at a thing without splitting straws. One gets hold of the Elementals."

(Well, did they? That was the gist of my perplexity.)

"One doesn't quibble," he said, returning to his rankling memory of Denson, "while men decay and starve."

"But suppose," I said, suddenly dropping into opposition, "the alternative is to risk a worse disaster--or do something patently futile."

"I don't follow that," said Chris Robinson. "We don't propose anything futile, so far as I can see."

6

The prevailing force in my undergraduate days was not Socialism but Kiplingism. Our set was quite exceptional in its socialistic professions. And we were all, you must understand, very distinctly Imperialists also, and professed a vivid sense of the "White Man's Burden."

It is a little difficult now to get back to the feelings of that period; Kipling has since been so mercilessly and exhaustively mocked, criticised and torn to shreds;--never was a man so violently exalted and then, himself assisting, so relentlessly called down. But in the middle nineties this spectacled and moustached little figure with its heavy chin and its general effect of vehement gesticulation, its wild shouts of boyish enthusiasm for effective force, its lyric delight in the sounds and colours, in the very odours of empire, its wonderful discovery of machinery and cotton waste and the under officer and the engineer, and "shop" as a poetic dialect, became almost a national symbol. He got hold of us wonderfully, he filled us with tinkling and haunting quotations, he stirred Britten and myself to futile imitations, he coloured the very idiom of our conversation. He rose to his climax with his

"Recessional," while I was still an undergraduate.

What did he give me exactly?

He helped to broaden my geographical sense immensely, and he provided phrases for just that desire for discipline and devotion and organised effort the Socialism of our time failed to express, that the current socialist movement still fails, I think, to express. The sort of thing that follows, for example, tore something out of my inmost nature and gave it a shape, and I took it back from him shaped and let much of the rest of him, the tumult and the bullying, the hysteria and the impatience, the incoherence and inconsistency, go uncriticised for the sake of it:--

"Keep ye the Law--be swift in all obedience--
Clear the land of evil, drive the road and bridge the ford,
Make ye sure to each his own
That he reap where he hath sown;
By the peace among Our peoples let men know we serve the Lord!"

And then again, and for all our later criticism, this sticks in my mind, sticks there now as quintessential wisdom:

The 'eathen in 'is blindness bows down to wood an' stone;
'E don't obey no orders unless they is 'is own;
'E keeps 'is side-arms awful: 'e leaves 'em all about
An' then comes up the regiment an' pokes the 'eathen out.
All along o' dirtiness, all along o' mess,
All along o' doin' things rather-more-or-less,
All along of abby-nay, kul, an' hazar-ho,
Mind you keep your rifle an' yourself jus' so!"

It is after all a secondary matter that Kipling, not having been born and brought up in Bromstead and Penge, and the war in South Africa being yet in the womb of time, could quite honestly entertain the now remarkable delusion that England had her side-arms at that time kept anything but "awful." He learnt better, and we all learnt with him in the dark years of exasperating and humiliating struggle that followed, and I do not see that we fellow learners are justified in turning resentfully upon him for a common ignorance and assumption. . . .

South Africa seems always painted on the back cloth of my Cambridge memories. How immense those disasters seemed at the time, disasters our facile English world has long since contrived in any edifying or profitable sense to forget! How we thrilled to the shouting newspaper sellers as the first false flush of victory gave place to the realisation of defeat. Far away there our army showed itself human, mortal and human in the sight of all the world, the pleasant officers we had imagined would change to wonderful heroes at the first crackling of rifles, remained the pleasant, rather incompetent men they had always been, failing to imagine, failing to plan and co-operate, failing to grip. And the common soldiers, too, they were just what our streets and country-side had made them, no sudden magic came out of the war bugles for them. Neither splendid nor disgraceful were they,--just ill-trained and fairly plucky and wonderfully good-tempered men--paying for it. And how it lowered our vitality all that first winter to hear of Nicholson's Nek, and then presently close upon one another, to realise the bloody waste of Magersfontein, the shattering retreat from Stormberg, Colenso--Colenso, that blundering battle, with White, as it seemed, in Ladysmith near the point of surrender! and so through the long unfolding catalogue of bleak disillusionments, of aching, unconcealed anxiety lest worse should follow. To advance upon your enemy singing about his lack of cleanliness and method went out of fashion altogether! The dirty retrogressive Boer vanished from our

scheme of illusion.

All through my middle Cambridge period, the guns boomed and the rifles crackled away there on the veldt, and the horsemen rode and the tale of accidents and blundering went on. Men, mules, horses, stores and money poured into South Africa, and the convalescent wounded streamed home. I see it in my memory as if I had looked at it through a window instead of through the pages of the illustrated papers; I recall as if I had been there the wide open spaces, the ragged hillsides, the open order attacks of helmeted men in khaki, the scarce visible smoke of the guns, the wrecked trains in great lonely places, the burnt isolated farms, and at last the blockhouses and the fences of barbed wire uncoiling and spreading for endless miles across the desert, netting the elusive enemy until at last, though he broke the meshes again and again, we had him in the toils. If one's attention strayed in the lecture-room it wandered to those battle-fields.

And that imagined panorama of war unfolds to an accompaniment of yelling newsboys in the narrow old Cambridge streets, of the flicker of papers hastily bought and torn open in the twilight, of the doubtful reception of doubtful victories, and the insensate rejoicings at last that seemed to some of us more shameful than defeats. . . .

7

A book that stands out among these memories, that stimulated me immensely so that I forced it upon my companions, half in the spirit of propaganda and half to test it by their comments, was Meredith's **ONE OF OUR CONQUERORS**. It is one of the books that have made me.

In that I got a supplement and corrective of Kipling. It was the first detached and adverse criticism of the Englishman I had ever encountered. It must have been published already nine or ten years when I read it. The country had paid no heed to it, had gone on to the expensive lessons of the War because of the dull aversion our people feel for all such intimations, and so I could read it as a book justified. The war endorsed its every word for me, underlined each warning indication of the gigantic dangers that gathered against our system across the narrow seas. It discovered Europe to me, as watching and critical.

But while I could respond to all its criticisms of my country's intellectual indolence, of my country's want of training and discipline and moral courage, I remember that the idea that on the continent there were other peoples going ahead of us, mentally alert while we fumbled, disciplined while we slouched, aggressive and preparing to bring our Imperial pride to a reckoning, was extremely novel and distasteful to me. It set me worrying of nights. It put all my projects for social and political reconstruction upon a new uncomfortable footing. It made them no longer merely desirable but urgent. Instead of pride and the love of making one might own to a baser motive. Under Kipling's sway I had a little forgotten the continent of Europe, treated it as a mere envious echo to our own world-wide display. I began now to have a disturbing sense as it were of busy searchlights over the horizon. . . .

One consequence of the patriotic chagrin Meredith produced in me was an attempt to belittle his merit. "It isn't a good novel, anyhow," I said.

The charge I brought against it was, I remember, a lack of unity. It professed to be a study of the English situation in the early nineties, but it was all deflected, I said, and all the interest was confused by the story of Victor Radnor's fight with society to vindicate the woman he had loved and never married. Now in the

retrospect and with a mind full of bitter enlightenment, I can do Meredith justice, and admit the conflict was not only essential but cardinal in his picture, that the terrible inflexibility of the rich aunts and the still more terrible claim of Mrs. Burman Radnor, the "infernal punctilio," and Dudley Sowerby's limitations, were the central substance of that inalertness the book set itself to assail. So many things have been brought together in my mind that were once remotely separated. A people that will not valiantly face and understand and admit love and passion can understand nothing whatever. But in those days what is now just obvious truth to me was altogether outside my range of comprehension. . . .

8

As I seek to recapitulate the interlacing growth of my apprehension of the world, as I flounder among the half-remembered developments that found me a crude schoolboy and left me a man, there comes out, as if it stood for all the rest, my first holiday abroad. That did not happen until I was twenty-two. I was a fellow of Trinity, and the Peace of Vereeniging had just been signed.

I went with a man named Willersley, a man some years senior to myself, who had just missed a fellowship and the higher division of the Civil Service, and who had become an enthusiastic member of the London School Board, upon which the cumulative vote and the support of the "advanced" people had placed him. He had, like myself, a small independent income that relieved him of any necessity to earn a living, and he had a kindred craving for social theorising and some form of social service. He had sought my acquaintance after reading a paper of mine (begotten by the visit of Chris Robinson) on the limits of pure democracy. It had marched with some thoughts of his own.

We went by train to Spiez on the Lake of Thun, then up the Gemmi, and thence with one or two halts and digressions and a little modest climbing we crossed over by the Antrona pass (on which we were benighted) into Italy, and by way of Domo D'ossola and the Santa Maria Maggiore valley to Cannobio, and thence up the lake to Locarno (where, as I shall tell, we stayed some eventful days) and so up the Val Maggia and over to Airolo and home.

As I write of that long tramp of ours, something of its freshness and enlargement returns to me. I feel again the faint pleasant excitement of the boat train, the trampling procession of people with hand baggage and laden porters along the platform of the Folkestone pier, the scarcely perceptible swaying of the moored boat beneath our feet. Then, very obvious and simple, the little emotion of standing out from the homeland and seeing the long white Kentish cliffs recede. One walked about the boat doing one's best not to feel absurdly adventurous, and presently a movement of people directed one's attention to a white lighthouse on a cliff to the east of us, coming up suddenly; and then one turned to scan the little different French coast villages, and then, sliding by in a pale sunshine came a long wooden pier with oddly dressed children upon it, and the clustering town of Boulogne.

One took it all with the outward calm that became a young man of nearly three and twenty, but one was alive to one's finger-tips with pleasing little stimulations. The custom house examination excited one, the strangeness of a babble in a foreign tongue; one found the French of City Merchants' and Cambridge a shy and viscous flow, and then one was standing in the train as it went slowly through the rail-laid street to Boulogne Ville, and one looked out at the world in French, porters in blouses, workmen in enormous purple trousers, police officers in peaked caps instead of helmets and romantically cloaked, big carts, all on two wheels instead of four, green shuttered casements instead of sash windows, and great numbers of

neatly dressed women in economical mourning.

"Oh! there's a priest!" one said, and was betrayed into suchlike artless cries.

It was a real other world, with different government and different methods, and in the night one was roused from uneasy slumbers and sat blinking and surly, wrapped up in one's couverture and with one's oreiller all awry, to encounter a new social phenomenon, the German official, so different in manner from the British; and when one woke again after that one had come to Bale, and out one tumbled to get coffee in Switzerland. . . .

I have been over that route dozens of times since, but it still revives a certain lingering youthfulness, a certain sense of cheerful release in me.

I remember that I and Willersley became very sociological as we ran on to Spiez, and made all sorts of generalisations from the steeply sloping fields on the hillsides, and from the people we saw on platforms and from little differences in the way things were done.

The clean prosperity of Bale and Switzerland, the big clean stations, filled me with patriotic misgivings, as I thought of the vast dirtiness of London, the mean dirtiness of Cambridgeshire. It came to me that perhaps my scheme of international values was all wrong, that quite stupendous possibilities and challenges for us and our empire might be developing here--and I recalled Meredith's Skepsey in France with a new understanding.

Willersley had dressed himself in a world-worn Norfolk suit of greenish grey tweeds that ended unfamiliarly at his rather impending, spectacled, intellectual visage. I didn't, I remember, like the contrast of him with the drilled Swiss and Germans about us. Convict coloured stockings and vast hobnail boots finished him

below, and all his luggage was a borrowed rucksac that he had tied askew. He did not want to shave in the train, but I made him at one of the Swiss stations--I dislike these Oxford slovenlinesses--and then confound him! he cut himself and bled. . . .

Next morning we were breathing a thin exhilarating air that seemed to have washed our very veins to an incredible cleanliness, and eating hard-boiled eggs in a vast clear space of rime-edged rocks, snow-mottled, above a blue-gashed glacier. All about us the monstrous rock surfaces rose towards the shining peaks above, and there were winding moraines from which the ice had receded, and then dark clustering fir trees far below.

I had an extraordinary feeling of having come out of things, of being outside.

"But this is the round world!" I said, with a sense of never having perceived it before; "this is the round world!"

9

That holiday was full of big comprehensive effects; the first view of the Rhone valley and the distant Valaisian Alps, for example, which we saw from the shoulder of the mountain above the Gemmi, and the early summer dawn breaking over Italy as we moved from our night's crouching and munched bread and chocolate and stretched our stiff limbs among the tumbled and precipitous rocks that hung over Lake Cingolo, and surveyed the winding tiring rocky track going down and down to Antronapiano.

And our thoughts were as comprehensive as our impressions. Willersley's mind abounded in historical matter; he had an

inaccurate abundant habit of topographical reference; he made me see and trace and see again the Roman Empire sweep up these winding valleys, and the coming of the first great Peace among the warring tribes of men. . . .

In the retrospect each of us seems to have been talking about our outlook almost continually. Each of us, you see, was full of the same question, very near and altogether predominant to us, the question: "What am I going to do with my life?" He saw it almost as importantly as I, but from a different angle, because his choice was largely made and mine still hung in the balance.

"I feel we might do so many things," I said, "and everything that calls one, calls one away from something else."

Willersley agreed without any modest disavowals.

"We have got to think out," he said, "just what we are and what we are up to. We've got to do that now. And then--it's one of those questions it is inadvisable to reopen subsequently."

He beamed at me through his glasses. The sententious use of long words was a playful habit with him, that and a slight deliberate humour, habits occasional Extension Lecturing was doing very much to intensify.

"You've made your decision?"

He nodded with a peculiar forward movement of his head.

"How would you put it?"

"Social Service--education. Whatever else matters or doesn't matter, it seems to me there is one thing we **MUST** have and increase, and that is the number of people who can think a little--and have "--

he beamed again--" an adequate sense of causation."

"You're sure it's worth while."

"For me--certainly. I don't discuss that any more."

"I don't limit myself too narrowly," he added. "After all, the work is all one. We who know, we who feel, are building the great modern state, joining wall to wall and way to way, the new great England rising out of the decaying old . . . we are the real statesmen--I like that use of 'statesmen.' . . ."

"Yes," I said with many doubts. "Yes, of course. . . ."

Willersley is middle-aged now, with silver in his hair and a deepening benevolence in his always amiable face, and he has very fairly kept his word. He has lived for social service and to do vast masses of useful, undistinguished, fertilising work. Think of the days of arid administrative plodding and of contention still more arid and unrewarded, that he must have spent! His little affectations of gesture and manner, imitative affectations for the most part, have increased, and the humorous beam and the humorous intonations have become a thing he puts on every morning like an old coat. His devotion is mingled with a considerable whimsicality, and they say he is easily flattered by subordinates and easily offended into opposition by colleagues; he has made mistakes at times and followed wrong courses, still there he is, a flat contradiction to all the ordinary doctrine of motives, a man who has foregone any chances of wealth and profit, foregone any easier paths to distinction, foregone marriage and parentage, in order to serve the community. He does it without any fee or reward except his personal self-satisfaction in doing this work, and he does it without any hope of future joys and punishments, for he is an implacable Rationalist. No doubt he idealises himself a little, and dreams of recognition. No doubt he gets his pleasure from a sense of power,

from the spending and husbanding of large sums of public money, and from the inevitable proprietorship he must feel in the fair, fine, well-ordered schools he has done so much to develop. "But for me," he can say, "there would have been a Job about those diagrams, and that subject or this would have been less ably taught." . . .

The fact remains that for him the rewards have been adequate, if not to content at any rate to keep him working. Of course he covets the notice of the world he has served, as a lover covets the notice of his mistress. Of course he thinks somewhere, somewhen, he will get credit. Only last year I heard some men talking of him, and they were noting, with little mean smiles, how he had shown himself self-conscious while there was talk of some honorary degree-giving or other; it would, I have no doubt, please him greatly if his work were to flower into a crimson gown in some Academic parterre. Why shouldn't it? But that is incidental vanity at the worst; he goes on anyhow. Most men don't.

But we had our walk twenty years and more ago now. He was oldish even then as a young man, just as he is oldish still in middle age. Long may his industrious elderliness flourish for the good of the world! He lectured a little in conversation then; he lectures more now and listens less, toilsomely disentangling what you already understand, giving you in detail the data you know; these are things like callosities that come from a man's work.

Our long three weeks' talk comes back to me as a memory of ideas and determinations slowly growing, all mixed up with a smell of wood smoke and pine woods and huge precipices and remote gleams of snow-fields and the sound of cascading torrents rushing through deep gorges far below. It is mixed, too, with gossips with waitresses and fellow travellers, with my first essays in colloquial German and Italian, with disputes about the way to take, and other things that I will tell of in another section. But the white passion of human service was our dominant theme. Not simply perhaps nor altogether

unselfishly, but quite honestly, and with at least a frequent self-forgetfulness, did we want to do fine and noble things, to help in their developing, to lessen misery, to broaden and exalt life. It is very hard--perhaps it is impossible--to present in a page or two the substance and quality of nearly a month's conversation, conversation that is casual and discursive in form, that ranges carelessly from triviality to immensity, and yet is constantly resuming a constructive process, as workmen on a wall loiter and jest and go and come back, and all the while build.

We got it more and more definite that the core of our purpose beneath all its varied aspects must needs be order and discipline. "Muddle," said I, "is the enemy." That remains my belief to this day. Clearness and order, light and foresight, these things I know for Good. It was muddle had just given us all the still freshly painful disasters and humiliations of the war, muddle that gives us the visibly sprawling disorder of our cities and industrial countryside, muddle that gives us the waste of life, the limitations, wretchedness and unemployment of the poor. Muddle! I remember myself quoting Kipling--

"All along o' dirtiness, all along o' mess,
All along o' doin' things rather-more-or-less."

"We build the state," we said over and over again. "That is what we are for--servants of the new reorganisation!"

We planned half in earnest and half Utopianising, a League of Social Service.

We talked of the splendid world of men that might grow out of such unpaid and ill-paid work as we were setting our faces to do. We spoke of the intricate difficulties, the monstrous passive

resistances, the hostilities to such a development as we conceived our work subserved, and we spoke with that underlying confidence in the invincibility of the causes we adopted that is natural to young and scarcely tried men.

We talked much of the detailed life of politics so far as it was known to us, and there Willersley was more experienced and far better informed than I; we discussed possible combinations and possible developments, and the chances of some great constructive movement coming from the heart-searchings the Boer war had occasioned. We would sink to gossip--even at the Suetonius level. Willersley would decline towards illuminating anecdotes that I capped more or less loosely from my private reading. We were particularly wise, I remember, upon the management of newspapers, because about that we knew nothing whatever. We perceived that great things were to be done through newspapers. We talked of swaying opinion and moving great classes to massive action.

Men are egotistical even in devotion. All our splendid projects were thickset with the first personal pronoun. We both could write, and all that we said in general terms was reflected in the particular in our minds; it was ourselves we saw, and no others, writing and speaking that moving word. We had already produced manuscript and passed the initiations of proof reading; I had been a frequent speaker in the Union, and Willersley was an active man on the School Board. Our feet were already on the lower rungs that led up and up. He was six and twenty, and I twenty-two. We intimated our individual careers in terms of bold expectation. I had prophetic glimpses of walls and hoardings clamorous with "Vote for Remington," and Willersley no doubt saw himself chairman of this committee and that, saying a few slightly ironical words after the declaration of the poll, and then sitting friendly beside me on the government benches. There was nothing impossible in such dreams. Why not the Board of Education for him? My preference at that time wavered between the Local Government Board--I had great ideas about

town-planning, about revisions of municipal areas and re-organised internal transit--and the War Office. I swayed strongly towards the latter as the journey progressed. My educational bias came later.

The swelling ambitions that have tramped over Alpine passes! How many of them, like mine, have come almost within sight of realisation before they failed?

There were times when we posed like young gods (of unassuming exterior), and times when we were full of the absurdest little solitudes about our prospects. There were times when one surveyed the whole world of men as if it was a little thing at one's feet, and by way of contrast I remember once lying in bed--it must have been during this holiday, though I cannot for the life of me fix where--and speculating whether perhaps some day I might not be a K. C. B., Sir Richard Remington, K. C. B., M. P.

But the big style prevailed. . . .

We could not tell from minute to minute whether we were planning for a world of solid reality, or telling ourselves fairy tales about this prospect of life. So much seemed possible, and everything we could think of so improbable. There were lapses when it seemed to me I could never be anything but just the entirely unimportant and undistinguished young man I was for ever and ever. I couldn't even think of myself as five and thirty.

Once I remember Willersley going over a list of failures, and why they had failed--but young men in the twenties do not know much about failures.

Willersley and I professed ourselves Socialists, but by this time I knew my Rodbertus as well as my Marx, and there was much in our socialism that would have shocked Chris Robinson as much as anything in life could have shocked him. Socialism as a simple democratic cry we had done with for ever. We were socialists because Individualism for us meant muddle, meant a crowd of separated, undisciplined little people all obstinately and ignorantly doing things jarringly, each one in his own way. "Each," I said quoting words of my father's that rose apt in my memory, "snarling from his own little bit of property, like a dog tied to a cart's tail."

"Essentially," said Willersley, "essentially we're for conscription, in peace and war alike. The man who owns property is a public official and has to behave as such. That's the gist of socialism as I understand it."

"Or be dismissed from his post," I said, "and replaced by some better sort of official. A man's none the less an official because he's irresponsible. What he does with his property affects people just the same. Private! No one is really private but an outlaw. . . ."

Order and devotion were the very essence of our socialism, and a splendid collective vigour and happiness its end. We projected an ideal state, an organised state as confident and powerful as modern science, as balanced and beautiful as a body, as beneficent as sunshine, the organised state that should end muddle for ever; it ruled all our ideals and gave form to all our ambitions.

Every man was to be definitely related to that, to have his predominant duty to that. Such was the England renewed we had in mind, and how to serve that end, to subdue undisciplined worker and undisciplined wealth to it, and make the Scientific Commonweal, King, was the continuing substance of our intercourse.

Every day the wine of the mountains was stronger in our blood, and the flush of our youth deeper. We would go in the morning sunlight along some narrow Alpine mule-path shouting large suggestions for national re-organisation, and weighing considerations as lightly as though the world was wax in our hands. "Great England," we said in effect, over and over again, "and we will be among the makers! England renewed! The country has been warned; it has learnt its lesson. The disasters and anxieties of the war have sunk in. England has become serious. . . . Oh! there are big things before us to do; big enduring things!"

One evening we walked up to the loggia of a little pilgrimage church, I forget its name, that stands out on a conical hill at the head of a winding stair above the town of Locarno. Down below the houses clustered amidst a confusion of heat-bitten greenery. I had been sitting silently on the parapet, looking across to the purple mountain masses where Switzerland passes into Italy, and the drift of our talk seemed suddenly to gather to a head.

I broke into speech, giving form to the thoughts that had been accumulating. My words have long since passed out of my memory, the phrases of familiar expression have altered for me, but the substance remains as clear as ever. I said how we were in our measure emperors and kings, men undriven, free to do as we pleased with life; we classed among the happy ones, our bread and common necessities were given us for nothing, we had abilities,--it wasn't modesty but cowardice to behave as if we hadn't--and Fortune watched us to see what we might do with opportunity and the world.

"There are so many things to do, you see," began Willersley, in his

judicial lecturer's voice.

"So many things we may do," I interrupted, "with all these years before us. . . . We're exceptional men. It's our place, our duty, to do things."

"Here anyhow," I said, answering the faint amusement of his face; "I've got no modesty. Everything conspires to set me up. Why should I run about like all those grubby little beasts down there, seeking nothing but mean little vanities and indulgencies--and then take credit for modesty? I KNOW I am capable. I KNOW I have imagination. Modesty! I know if I don't attempt the very biggest things in life I am a damned shirk. The very biggest! Somebody has to attempt them. I feel like a loaded gun that is only a little perplexed because it has to find out just where to aim itself. . . ."

The lake and the frontier villages, a white puff of steam on the distant railway to Luino, the busy boats and steamers trailing triangular wakes of foam, the long vista eastward towards battlemented Bellinzona, the vast mountain distances, now tinged with sunset light, behind this nearer landscape, and the southward waters with remote coast towns shining dimly, waters that merged at last in a luminous golden haze, made a broad panoramic spectacle. It was as if one surveyed the world,--and it was like the games I used to set out upon my nursery floor. I was exalted by it; I felt larger than men. So kings should feel.

That sense of largeness came to me then, and it has come to me since, again and again, a splendid intimation or a splendid vanity. Once, I remember, when I looked at Genoa from the mountain crest behind the town and saw that multitudinous place in all its beauty of width and abundance and clustering human effort, and once as I was steaming past the brown low hills of Staten Island towards the towering vigour and clamorous vitality of New York City, that mood rose to its quintessence. And once it came to me, as I shall tell,

on Dover cliffs. And a hundred times when I have thought of England as our country might be, with no wretched poor, no wretched rich, a nation armed and ordered, trained and purposeful amidst its vales and rivers, that emotion of collective ends and collective purposes has returned to me. I felt as great as humanity. For a brief moment I was humanity, looking at the world I had made and had still to make. . . .

12

And mingled with these dreams of power and patriotic service there was another series of a different quality and a different colour, like the antagonistic colour of a shot silk. The white life and the red life, contrasted and interchanged, passing swiftly at a turn from one to another, and refusing ever to mingle peacefully one with the other. I was asking myself openly and distinctly: what are you going to do for the world? What are you going to do with yourself? and with an increasing strength and persistence Nature in spite of my averted attention was asking me in penetrating undertones: what are you going to do about this other fundamental matter, the beauty of girls and women and your desire for them?

I have told of my sisterless youth and the narrow circumstances of my upbringing. It made all women-kind mysterious to me. If it had not been for my Staffordshire cousins I do not think I should have known any girls at all until I was twenty. Of Staffordshire I will tell a little later. But I can remember still how through all those ripening years, the thought of women's beauty, their magic presence in the world beside me and the unknown, untried reactions of their intercourse, grew upon me and grew, as a strange presence grows in a room when one is occupied by other things. I busied myself and pretended to be wholly occupied, and there the woman stood, full

half of life neglected, and it seemed to my averted mind sometimes that she was there clad and dignified and divine, and sometimes Aphrodite shining and commanding, and sometimes that Venus who stoops and allures.

This travel abroad seemed to have released a multitude of things in my mind; the clear air, the beauty of the sunshine, the very blue of the glaciers made me feel my body and quickened all those disregarded dreams. I saw the sheathed beauty of women's forms all about me, in the cheerful waitresses at the inns, in the pedestrians one encountered in the tracks, in the chance fellow travellers at the hotel tables. "Confound it!" said I, and talked all the more zealously of that greater England that was calling us.

I remember that we passed two Germans, an old man and a tall fair girl, father and daughter, who were walking down from Saas. She came swinging and shining towards us, easy and strong. I worshipped her as she approached.

"Gut Tag!" said Willersley, removing his hat.

"Morgen!" said the old man, saluting.

I stared stockishly at the girl, who passed with an indifferent face.

That sticks in my mind as a picture remains in a room, it has kept there bright and fresh as a thing seen yesterday, for twenty years. . . .

I flirted hesitatingly once or twice with comely serving girls, and was a little ashamed lest Willersley should detect the keen interest I took in them, and then as we came over the pass from Santa Maria Maggiore to Cannobio, my secret preoccupation took me by surprise and flooded me and broke down my pretences.

The women in that valley are very beautiful--women vary from valley to valley in the Alps and are plain and squat here and divinities five miles away--and as we came down we passed a group of five or six of them resting by the wayside. Their burthens were beside them, and one like Ceres held a reaping hook in her brown hand. She watched us approaching and smiled faintly, her eyes at mine.

There was some greeting, and two of them laughed together.

We passed.

"Glorious girls they were," said Willersley, and suddenly an immense sense of boredom enveloped me. I saw myself striding on down that winding road, talking of politics and parties and bills of parliament and all sorts of dessicated things. That road seemed to me to wind on for ever down to dust and infinite dreariness. I knew it for a way of death. Reality was behind us.

Willersley set himself to draw a sociological moral. "I'm not so sure," he said in a voice of intense discriminations, "after all, that agricultural work isn't good for women."

"Damn agricultural work!" I said, and broke out into a vigorous cursing of all I held dear. "Fettered things we are!" I cried. "I wonder why I stand it!"

"Stand what?"

"Why don't I go back and make love to those girls and let the world and you and everything go hang? Deep breasts and rounded limbs--and we poor emasculated devils go tramping by with the blood of youth in us! . . ."

"I'm not quite sure, Remington," said Willersley, looking at me with

a deliberately quaint expression over his glasses, "that picturesque scenery is altogether good for your morals."

That fever was still in my blood when we came to Locarno.

13

Along the hot and dusty lower road between the Orrido of Traffiume and Cannobio Willersley had developed his first blister. And partly because of that and partly because there was a bag at the station that gave us the refreshment of clean linen and partly because of the lazy lower air into which we had come, we decided upon three or four days' sojourn in the Empress Hotel.

We dined that night at a table-d'hote, and I found myself next to an Englishwoman who began a conversation that was resumed presently in the hotel lounge. She was a woman of perhaps thirty-three or thirty-four, slenderly built, with a warm reddish skin and very abundant fair golden hair, the wife of a petulant-looking heavy-faced man of perhaps fifty-three, who smoked a cigar and dozed over his coffee and presently went to bed. "He always goes to bed like that," she confided startlingly. "He sleeps after all his meals. I never knew such a man to sleep."

Then she returned to our talk, whatever it was.

We had begun at the dinner table with itineraries and the usual topographical talk, and she had envied our pedestrian travel. "My husband doesn't walk," she said. "His heart is weak and he cannot manage the hills."

There was something friendly and adventurous in her manner; she

conveyed she liked me, and when presently Willersley drifted off to write letters our talk sank at once to easy confidential undertones. I felt enterprising, and indeed it is easy to be daring with people one has never seen before and may never see again. I said I loved beautiful scenery and all beautiful things, and the pointing note in my voice made her laugh. She told me I had bold eyes, and so far as I can remember I said she made them bold. "Blue they are," she remarked, smiling archly. "I like blue eyes." Then I think we compared ages, and she said she was the Woman of Thirty, "George Moore's Woman of Thirty."

I had not read George Moore at the time, but I pretended to understand.

That, I think, was our limit that evening. She went to bed, smiling good-night quite prettily down the big staircase, and I and Willersley went out to smoke in the garden. My head was full of her, and I found it necessary to talk about her. So I made her a problem in sociology. "Who the deuce are these people?" I said, and how do they get a living? They seem to have plenty of money. He strikes me as being--Willersley, what is a drysalter? I think he's a retired drysalter."

Willersley theorised while I thought of the woman and that provocative quality of dash she had displayed. The next day at lunch she and I met like old friends. A huge mass of private thinking during the interval had been added to our effect upon one another. We talked for a time of insignificant things.

"What do you do," she asked rather quickly, "after lunch? Take a siesta?"

"Sometimes," I said, and hung for a moment eye to eye.

We hadn't a doubt of each other, but my heart was beating like a

steamer propeller when it lifts out of the water.

"Do you get a view from your room?" she asked after a pause.

"It's on the third floor, Number seventeen, near the staircase. My friend's next door."

She began to talk of books. She was interested in Christian Science, she said, and spoke of a book. I forget altogether what that book was called, though I remember to this day with the utmost exactness the purplish magenta of its cover. She said she would lend it to me and hesitated.

Willersley wanted to go for an expedition across the lake that afternoon, but I refused. He made some other proposals that I rejected abruptly. "I shall write in my room," I said.

"Why not write down here?"

"I shall write in my room," I snarled like a thwarted animal, and he looked at me curiously. "Very well," he said; "then I'll make some notes and think about that order of ours out under the magnolias."

I hovered about the lounge for a time buying postcards and feverishly restless, watching the movements of the other people. Finally I went up to my room and sat down by the windows, staring out. There came a little tap at the unlocked door and in an instant, like the go of a taut bowstring, I was up and had it open.

"Here is that book," she said, and we hesitated.

"COME IN!" I whispered, trembling from head to foot.

"You're just a boy," she said in a low tone.

I did not feel a bit like a lover, I felt like a burglar with the safe-door nearly opened. "Come in," I said almost impatiently, for anyone might be in the passage, and I gripped her wrist and drew her towards me.

"What do you mean?" she answered with a faint smile on her lips, and awkward and yielding.

I shut the door behind her, still holding her with one hand, then turned upon her--she was laughing nervously--and without a word drew her to me and kissed her. And I remember that as I kissed her she made a little noise almost like the purring miaow with which a cat will greet one and her face, close to mine, became solemn and tender.

She was suddenly a different being from the discontented wife who had tapped a moment since on my door, a woman transfigured. . . .

That evening I came down to dinner a monster of pride, for behold! I was a man. I felt myself the most wonderful and unprecedented of adventurers. It was hard to believe that any one in the world before had done as much. My mistress and I met smiling, we carried things off admirably, and it seemed to me that Willersley was the dullest old dog in the world. I wanted to give him advice. I wanted to give him derisive pokes. After dinner and coffee in the lounge I was too excited and hilarious to go to bed, I made him come with me down to the cafe under the arches by the pier, and there drank beer and talked extravagant nonsense about everything under the sun, in order not to talk about the happenings of the afternoon. All the time something shouted within me: "I am a man! I am a man!" . . .

"What shall we do to-morrow?" said he.

"I'm for loafing," I said. "Let's row in the morning and spend to-

morrow afternoon just as we did to-day."

"They say the church behind the town is worth seeing."

"We'll go up about sunset; that's the best time for it. We can start about five."

We heard music, and went further along the arcade to discover a place where girls in operatic Swiss peasant costume were singing and dancing on a creaking, protesting little stage. I eyed their generous display of pink neck and arm with the seasoned eye of a man who has lived in the world. Life was perfectly simple and easy, I felt, if one took it the right way.

Next day Willersley wanted to go on, but I delayed. Altogether I kept him back four days. Then abruptly my mood changed, and we decided to start early the following morning. I remember, though a little indistinctly, the feeling of my last talk with that woman whose surname, odd as it may seem, either I never learnt or I have forgotten. (Her christian name was Milly.) She was tired and rather low-spirited, and disposed to be sentimental, and for the first time in our intercourse I found myself liking her for the sake of her own personality. There was something kindly and generous appearing behind the veil of naive and uncontrolled sensuality she had worn. There was a curious quality of motherliness in her attitude to me that something in my nature answered and approved. She didn't pretend to keep it up that she had yielded to my initiative. "I've done you no harm," she said a little doubtfully, an odd note for a man's victim! And, "we've had a good time. You have liked me, haven't you?"

She interested me in her lonely dissatisfied life; she was childless and had no hope of children, and her husband was the only son of a rich meat salesman, very mean, a mighty smoker--"he reeks of it," she said, "always"--and interested in nothing but golf, billiards

(which he played very badly), pigeon shooting, convivial Free Masonry and Stock Exchange punting. Mostly they drifted about the Riviera. Her mother had contrived her marriage when she was eighteen. They were the first samples I ever encountered of the great multitude of functionless property owners which encumbers modern civilisation--but at the time I didn't think much of that aspect of them. . . .

I tell all this business as it happened without comment, because I have no comment to make. It was all strange to me, strange rather than wonderful, and, it may be, some dream of beauty died for ever in those furtive meetings; it happened to me, and I could scarcely have been more irresponsible in the matter or controlled events less if I had been suddenly pushed over a cliff into water. I swam, of course--finding myself in it. Things tested me, and I reacted, as I have told. The bloom of my innocence, if ever there had been such a thing, was gone. And here is the remarkable thing about it; at the time and for some days I was over-weeningly proud; I have never been so proud before or since; I felt I had been promoted to virility; I was unable to conceal my exultation from Willersley. It was a mood of shining shameless ungracious self-approval. As he and I went along in the cool morning sunshine by the rice fields in the throat of the Val Maggia a silence fell between us.

"You know?" I said abruptly,--"about that woman?"

Willersley did not answer for a moment. He looked at me over the corner of his spectacles.

"Things went pretty far?" he asked.

"Oh! all the way!" and I had a twinge of fatuous pride in my unpremeditated achievement.

"She came to your room?"

I nodded.

"I heard her. I heard her whispering. . . . The whispering and rustling and so on. I was in my room yesterday. . . . Any one might have heard you."

I went on with my head in the air.

"You might have been caught, and that would have meant endless trouble. You might have incurred all sorts of consequences. What did you know about her? . . . We have wasted four days in that hot close place. When we found that League of Social Service we were talking about," he said with a determined eye upon me, "chastity will be first among the virtues prescribed."

"I shall form a rival league," I said a little damped. "I'm hanged if I give up a single desire in me until I know why."

He lifted his chin and stared before him through his glasses at nothing. "There are some things," he said, "that a man who means to work--to do great public services--MUST turn his back upon. I'm not discussing the rights or wrongs of this sort of thing. It happens to be the conditions we work under. It will probably always be so. If you want to experiment in that way, if you want even to discuss it,--out you go from political life. You must know that's so. . . . You're a strange man, Remington, with a kind of kink in you. You've a sort of force. You might happen to do immense things. . . . Only--"

He stopped. He had said all that he had forced himself to say.

"I mean to take myself as I am," I said. "I'm going to get experience for humanity out of all my talents--and bury nothing."

Willersley twisted his face to its humorous expression. "I doubt if sexual proclivities," he said drily, come within the scope of the parable."

I let that go for a little while. Then I broke out. "Sex!" said I, "is a fundamental thing in life. We went through all this at Trinity. I'm going to look at it, experience it, think about it-- and get it square with the rest of life. Career and Politics must take their chances of that. It's part of the general English slackness that they won't look this in the face. Gods! what a muffled time we're coming out of! Sex means breeding, and breeding is a necessary function in a nation. The Romans broke up upon that. The Americans fade out amidst their successes. Eugenics--"

"THAT wasn't Eugenics," said Willersley.

"It was a woman," I said after a little interval, feeling oddly that I had failed altogether to answer him, and yet had a strong dumb case against him.

BOOK THE SECOND

MARGARET

CHAPTER THE FIRST

MARGARET IN STAFFORDSHIRE

1

I must go back a little way with my story. In the previous book I have described the kind of education that happens to a man of my class nowadays, and it has been convenient to leap a phase in my experience that I must now set out at length. I want to tell in this second hook how I came to marry, and to do that I must give something of the atmosphere in which I first met my wife and some intimations of the forces that went to her making. I met her in Staffordshire while I was staying with that uncle of whom I have already spoken, the uncle who sold my father's houses and settled my mother in Penge. Margaret was twenty then and I was twenty-two.

It was just before the walking tour in Switzerland that opened up so much of the world to me. I saw her once, for an afternoon, and circumstances so threw her up in relief that I formed a very vivid memory of her. She was in the sharpest contrast with the industrial world about her; she impressed me as a dainty blue flower might do, come upon suddenly on a clinker heap. She remained in my mind at once a perplexing interrogation and a symbol. . . .

But first I must tell of my Staffordshire cousins and the world that served as a foil for her.

I first went to stay with my cousins when I was an awkward youth of sixteen, wearing deep mourning for my mother. My uncle wanted to talk things over with me, he said, and if he could, to persuade me to go into business instead of going up to Cambridge.

I remember that visit on account of all sorts of novel things, but chiefly, I think, because it was the first time I encountered anything that deserves to be spoken of as wealth. For the first time in my life I had to do with people who seemed to have endless supplies of money, unlimited good clothes, numerous servants; whose daily life was made up of things that I had hitherto considered to be treats or exceptional extravagances. My cousins of eighteen and nineteen took cabs, for instance, with the utmost freedom, and travelled first-class in the local trains that run up and down the district of the Five Towns with an entire unconsciousness of the magnificence, as it seemed to me, of such a proceeding.

The family occupied a large villa in Newcastle, with big lawns before it and behind, a shrubbery with quite a lot of shrubs, a coach house and stable, and subordinate dwelling-places for the gardener and the coachman. Every bedroom contained a gas heater and a canopied brass bedstead, and had a little bathroom attached equipped with the porcelain baths and fittings my uncle manufactured, bright and sanitary and stamped with his name, and the house was furnished throughout with chairs and tables in bright shining wood, soft and prevalently red Turkish carpets, cosy corners, curtained archways, gold-framed landscapes, overmantels, a dining-room sideboard like a palace with a large Tantalus, and electric light fittings of a gay and expensive quality. There was a fine billiard-room on the ground floor with three comfortable sofas

and a rotating bookcase containing an excellent collection of the English and American humorists from THREE MEN IN A BOAT to the penultimate Mark Twain. There was also a conservatory opening out of the dining-room, to which the gardener brought potted flowers in their season. . . .

My aunt was a little woman with a scared look and a cap that would get over one eye, not very like my mother, and nearly eight years her junior; she was very much concerned with keeping everything nice, and unmercifully bullied by my two cousins, who took after their father and followed the imaginations of their own hearts. They were tall, dark, warmly flushed girls handsome rather than pretty. Gertrude, the eldest and tallest, had eyes that were almost black; Sibyl was of a stouter build, and her eyes, of which she was shamelessly proud, were dark blue. Sibyl's hair waved, and Gertrude's was severely straight. They treated me on my first visit with all the contempt of the adolescent girl for a boy a little younger and infinitely less expert in the business of life than herself. They were very busy with the writings of notes and certain mysterious goings and comings of their own, and left me very much to my own devices. Their speech in my presence was full of unfathomable allusions. They were the sort of girls who will talk over and through an uninitiated stranger with the pleasantest sense of superiority.

I met them at breakfast and at lunch and at the half-past six o'clock high tea that formed the third chief meal of the day. I heard them rattling off the compositions of Chaminade and Moskowski, with great decision and effect, and hovered on the edge of tennis foursomes where it was manifest to the dullest intelligence that my presence was unnecessary. Then I went off to find some readable book in the place, but apart from miscellaneous popular novels, some veterinary works, a number of comic books, old bound volumes of THE ILLUSTRATED LONDON NEWS and a large, popular illustrated History of

England, there was very little to be found. My aunt talked to me in a casual feeble way, chiefly about my mother's last illness. The two had seen very little of each other for many years; she made no secret of it that the ineligible qualities of my father were the cause of the estrangement. The only other society in the house during the day was an old and rather decayed Skye terrier in constant conflict with what were no doubt imaginary fleas. I took myself off for a series of walks, and acquired a considerable knowledge of the scenery and topography of the Potteries.

It puzzled my aunt that I did not go westward, where it was countryside and often quite pretty, with hedgerows and fields and copses and flowers. But always I went eastward, where in a long valley industrialism smokes and sprawls. That was the stuff to which I turned by nature, to the human effort, and the accumulation and jar of men's activities. And in such a country as that valley social and economic relations were simple and manifest. Instead of the limitless confusion of London's population, in which no man can trace any but the most slender correlation between rich and poor, in which everyone seems disconnected and adrift from everyone, you can see here the works, the potbank or the ironworks or what not, and here close at hand the congested, meanly-housed workers, and at a little distance a small middle-class quarter, and again remoter, the big house of the employer. It was like a very simplified diagram--after the untraceable confusion of London.

I prowled alone, curious and interested, through shabby back streets of mean little homes; I followed canals, sometimes canals of mysteriously heated waters with ghostly wisps of steam rising against blackened walls or a distant prospect of dustbin-fed vegetable gardens, I saw the women pouring out from the potbanks, heard the hooters summoning the toilers to work, lost my way upon slag heaps as big as the hills of the south country, dodged trains at manifestly dangerous level crossings, and surveyed across dark intervening spaces, the flaming uproar, the gnome-like activities of

iron foundries. I heard talk of strikes and rumours of strikes, and learnt from the columns of some obscure labour paper I bought one day, of the horrors of the lead poisoning that was in those days one of the normal risks of certain sorts of pottery workers. Then back I came, by the ugly groaning and clanging steam tram of that period, to my uncle's house and lavish abundance of money and more or less furtive flirtations and the tinkle of Moskowski and Chaminade. It was, I say, diagrammatic. One saw the expropriator and the expropriated--as if Marx had arranged the picture. It was as jumbled and far more dingy and disastrous than any of the confusions of building and development that had surrounded my youth at Bromstead and Penge, but it had a novel quality of being explicable. I found great virtue in the word "exploitation."

There stuck in my mind as if it was symbolical of the whole thing the twisted figure of a man, whose face had been horribly scalded--I can't describe how, except that one eye was just expressionless white--and he ground at an organ bearing a card which told in weak and bitterly satirical phrasing that he had been scalded by the hot water from the tuyeres of the blast furnace of Lord Pandram's works. He had been scalded and quite inadequately compensated and dismissed. And Lord Pandram was worth half a million.

That upturned sightless white eye of his took possession of my imagination. I don't think that even then I was swayed by any crude melodramatic conception of injustice. I was quite prepared to believe the card wasn't a punctiliously accurate statement of fact, and that a case could be made out for Lord Pandram. Still there in the muddy gutter, painfully and dreadfully, was the man, and he was smashed and scalded and wretched, and he ground his dismal hurdygurdy with a weary arm, calling upon Heaven and the passer-by for help, for help and some sort of righting--one could not imagine quite what. There he was as a fact, as a by-product of the system that heaped my cousins with trinkets and provided the comic novels and the abundant cigars and spacious billiard-room of my uncle's

house. I couldn't disconnect him and them.

My uncle on his part did nothing to conceal the state of war that existed between himself and his workers, and the mingled contempt and animosity he felt from them.

3

Prosperity had overtaken my uncle. So quite naturally he believed that every man who was not as prosperous as he was had only himself to blame. He was rich and he had left school and gone into his father's business at fifteen, and that seemed to him the proper age at which everyone's education should terminate. He was very anxious to dissuade me from going up to Cambridge, and we argued intermittently through all my visit.

I had remembered him as a big and buoyant man, striding destructively about the nursery floor of my childhood, and saluting my existence by slaps, loud laughter, and questions about half herrings and half eggs subtly framed to puzzle and confuse my mind. I didn't see him for some years until my father's death, and then he seemed rather smaller, though still a fair size, yellow instead of red and much less radiantly aggressive. This altered effect was due not so much to my own changed perspectives, I fancy, as to the facts that he was suffering for continuous cigar smoking, and being taken in hand by his adolescent daughters who had just returned from school.

During my first visit there was a perpetual series of--the only word is rows, between them and him. Up to the age of fifteen or thereabouts, he had maintained his ascendancy over them by simple old-fashioned physical chastisement. Then after an interlude of a

year it had dawned upon them that power had mysteriously departed from him. He had tried stopping their pocket money, but they found their mother financially amenable; besides which it was fundamental to my uncle's attitude that he should give them money freely. Not to do so would seem like admitting a difficulty in making it. So that after he had stopped their allowances for the fourth time Sybil and Gertrude were prepared to face beggary without a qualm. It had been his pride to give them the largest allowance of any girls at the school, not even excepting the granddaughter of Fladden the Borax King, and his soul recoiled from this discipline as it had never recoiled from the ruder method of the earlier phase. Both girls had developed to a high pitch in their mutual recriminations a gift for damaging retort, and he found it an altogether deadlier thing than the power of the raised voice that had always cowed my aunt. Whenever he became heated with them, they frowned as if involuntarily, drew in their breath sharply, said: "Daddy, you really must not say --" and corrected his pronunciation. Then, at a great advantage, they resumed the discussion. . . .

My uncle's views about Cambridge, however, were perfectly clear and definite. It was waste of time and money. It was all damned foolery. Did they make a man a better business man? Not a bit of it. He gave instances. It spoilt a man for business by giving him "false ideas." Some men said that at college a man formed useful friendships. What use were friendships to a business man? He might get to know lords, but, as my uncle pointed out, a lord's requirements in his line of faience were little greater than a common man's. If college introduced him to hotel proprietors there might be something in it. Perhaps it helped a man into Parliament, Parliament still being a confused retrogressive corner in the world where lawyers and suchlike sheltered themselves from the onslaughts of common-sense behind a fog of Latin and Greek and twaddle and tosh; but I wasn't the sort to go into Parliament, unless I meant to be a lawyer. Did I mean to be a lawyer? It cost no end of money, and was full of uncertainties, and there were no judges nor great

solicitors among my relations. "Young chaps think they get on by themselves," said my uncle. It isn't so. Not unless they take their coats off. I took mine off before I was your age by nigh a year."

We were at cross purposes from the outset, because I did not think men lived to make money; and I was obtuse to the hints he was throwing out at the possibilities of his own potbank, not willfully obtuse, but just failing to penetrate his meaning. Whatever City Merchants had or had not done for me, Flack, Topham and old Gates had certainly barred my mistaking the profitable production and sale of lavatory basins and bathroom fittings for the highest good. It was only upon reflection that it dawned upon me that the splendid chance for a young fellow with my uncle, "me, having no son of my own," was anything but an illustration for comparison with my own chosen career.

I still remember very distinctly my uncle's talk,--he loved to speak "reet Staffordshire"--his rather flabby face with the mottled complexion that told of crude ill-regulated appetites, his clumsy gestures--he kept emphasising his points by prodding at me with his finger--the ill-worn, costly, grey tweed clothes, the watch chain of plain solid gold, and soft felt hat thrust back from his head. He tackled me first in the garden after lunch, and then tried to raise me to enthusiasm by taking me to his potbank and showing me its organisation, from the dusty grinding mills in which whitened men worked and coughed, through the highly ventilated glazing room in which strangely masked girls looked ashamed of themselves,--"They'll risk death, the fools, to show their faces to a man," said my uncle, quite audibly--to the firing kilns and the glazing kilns, and so round the whole place to the railway siding and the gratifying spectacle of three trucks laden with executed orders.

Then we went up a creaking outside staircase to his little office, and he showed off before me for a while, with one or two

subordinates and the telephone.

"None of your Gas," he said, "all this. It's Real every bit of it. Hard cash and hard glaze."

"Yes," I said, with memories of a carelessly read pamphlet in my mind, and without any satirical intention, "I suppose you MUST use lead in your glazes?"

Whereupon I found I had tapped the ruling grievance of my uncle's life. He hated leadless glazes more than he hated anything, except the benevolent people who had organised the agitation for their use. "Leadless glazes ain't only fit for buns," he said. "Let me tell you, my boy--"

He began in a voice of bland persuasiveness that presently warmed to anger, to explain the whole matter. I hadn't the rights of the matter at all. Firstly, there was practically no such thing as lead poisoning. Secondly, not everyone was liable to lead poisoning, and it would be quite easy to pick out the susceptible types--as soon as they had it--and put them to other work. Thirdly, the evil effects of lead poisoning were much exaggerated. Fourthly, and this was in a particularly confidential undertone, many of the people liked to get lead poisoning, especially the women, because it caused abortion. I might not believe it, but he knew it for a fact.

Fifthly, the work-people simply would not learn the gravity of the danger, and would eat with unwashed hands, and incur all sorts of risks, so that as my uncle put it: "the fools deserve what they get." Sixthly, he and several associated firms had organised a simple and generous insurance scheme against lead-poisoning risks. Seventhly, he never wearied in rational (as distinguished from excessive, futile and expensive) precautions against the disease. Eighthly, in the ill-equipped shops of his minor competitors lead poisoning was a frequent and virulent evil, and people had generalised from these exceptional cases. The small shops, he

hazarded, looking out of the cracked and dirty window at distant chimneys, might be advantageously closed. . . .

"But what's the good of talking?" said my uncle, getting off the table on which he had been sitting. "Seems to me there'll come a time when a master will get fined if he don't run round the works blowing his girls noses for them. That's about what it'll come to."

He walked to the black mantelpiece and stood on the threadbare rug, and urged me not to be misled by the stories of prejudiced and interested enemies of our national industries.

"They'll get a strike one of these days, of employers, and then we'll see a bit," he said. "They'll drive Capital abroad and then they'll whistle to get it back again." . . .

He led the way down the shaky wooden steps and cheered up to tell me of his way of checking his coal consumption. He exchanged a ferocious greeting with one or two workpeople, and so we came out of the factory gates into the ugly narrow streets, paved with a peculiarly hard diapered brick of an unpleasing inky-blue colour, and bordered with the mean and squalid homes of his workers. Doors stood open and showed grimy interiors, and dirty ill-clad children played in the kennel.

We passed a sickly-looking girl with a sallow face, who dragged her limbs and peered at us dimly with painful eyes. She stood back, as partly blinded people will do, to allow us to pass, although there was plenty of room for us.

I glanced back at her.

"THAT'S ploombism " said my uncle casually.

"What?" said I.

"Ploombism. And the other day I saw a fool of a girl, and what d'you think? She'd got a basin that hadn't been fired, a cracked piece of biscuit it was, up on the shelf over her head, just all over glaze, killing glaze, man, and she was putting up her hand if you please, and eating her dinner out of it. Got her dinner in it!

"Eating her dinner out of it," he repeated in loud and bitter tones, and punched me hard in the ribs.

"And then they comes to THAT--and grumbles. And the fools up in Westminster want you to put in fans here and fans there--the Longton fools have. . . . And then eating their dinners out of it all the time!" . . .

At high tea that night--my uncle was still holding out against evening dinner--Sibyl and Gertrude made what was evidently a concerted demand for a motorcar.

"You've got your mother's brougham," he said, that's good enough for you." But he seemed shaken by the fact that some Burslem rival was launching out with the new invention. "He spoils his girls," he remarked. "He's a fool," and became thoughtful.

Afterwards he asked me to come to him into his study; it was a room with a writing-desk and full of pieces of earthenware and suchlike litter, and we had our great row about Cambridge.

"Have you thought things over, Dick?" he said.

"I think I'll go to Trinity, Uncle," I said firmly. "I want to go to Trinity. It is a great college."

He was manifestly chagrined. "You're a fool," he said.

I made no answer.

"You're a damned fool," he said. "But I suppose you've got to do it. You could have come here--That don't matter, though, now. . . . You'll have your time and spend your money, and be a poor half-starved clergyman, mucking about with the women all the day and afraid to have one of your own ever, or you'll be a schoolmaster or some such fool for the rest of your life. Or some newspaper chap. That's what you'll get from Cambridge. I'm half a mind not to let you. Eh? More than half a mind. . . ."

"You've got to do the thing you can," he said, after a pause, "and likely it's what you're fitted for."

4

I paid several short visits to Staffordshire during my Cambridge days, and always these relations of mine produced the same effect of hardness. My uncle's thoughts had neither atmosphere nor mystery. He lived in a different universe from the dreams of scientific construction that filled my mind. He could as easily have understood Chinese poetry. His motives were made up of intense rivalries with other men of his class and kind, a few vindictive hates springing from real and fancied slights, a habit of acquisition that had become a second nature, a keen love both of efficiency and display in his own affairs. He seemed to me to have no sense of the state, no sense and much less any love of beauty, no charity and no sort of religious feeling whatever. He had strong bodily appetites, he ate and drank freely, smoked a great deal, and occasionally was carried off by his passions for a "bit of a spree" to Birmingham or Liverpool or Manchester. The indulgences of these occasions were usually followed by a period of reaction, when he was

urgent for the suppression of nudity in the local Art Gallery and a harsh and forcible elevation of the superficial morals of the valley. And he spoke of the ladies who ministered to the delights of his jolly-dog period, when he spoke of them at all, by the unprintable feminine equivalent. My aunt he treated with a kindly contempt and considerable financial generosity, but his daughters tore his heart; he was so proud of them, so glad to find them money to spend, so resolved to own them, so instinctively jealous of every man who came near them.

My uncle has been the clue to a great number of men for me. He was an illuminating extreme. I have learnt what not to expect from them through him, and to comprehend resentments and dangerous sudden antagonisms I should have found incomprehensible in their more complex forms, if I had not first seen them in him in their feral state.

With his soft felt hat at the back of his head, his rather heavy, rather mottled face, his rationally thick boots and slouching tweed-clad form, a little round-shouldered and very obstinate looking, he strolls through all my speculations sucking his teeth audibly, and occasionally throwing out a shrewd aphorism, the intractable unavoidable ore of the new civilisation.

Essentially he was simple. Generally speaking, he hated and despised in equal measure whatever seemed to suggest that he personally was not the most perfect human being conceivable. He hated all education after fifteen because he had had no education after fifteen, he hated all people who did not have high tea until he himself under duress gave up high tea, he hated every game except football, which he had played and could judge, he hated all people who spoke foreign languages because he knew no language but Staffordshire, he hated all foreigners because he was English, and all foreign ways because they were not his ways. Also he hated particularly, and in this order, Londoner's, Yorkshiremen, Scotch,

Welch and Irish, because they were not "reet Staffordshire," and he hated all other Staffordshire men as insufficiently "reet." He wanted to have all his own women inviolate, and to fancy he had a call upon every other woman in the world. He wanted to have the best cigars and the best brandy in the world to consume or give away magnificently, and every one else to have inferior ones. (His billiard table was an extra large size, specially made and very inconvenient.) And he hated Trade Unions because they interfered with his autocratic direction of his works, and his workpeople because they were not obedient and untiring mechanisms to do his bidding. He was, in fact, a very naive, vigorous human being. He was about as much civilised, about as much tamed to the ideas of collective action and mutual consideration as a Central African negro.

There are hordes of such men as he throughout all the modern industrial world. You will find the same type with the slightest modifications in the Pas de Calais or Rhenish Prussia or New Jersey or North Italy. No doubt you would find it in New Japan. These men have raised themselves up from the general mass of untrained, uncultured, poorish people in a hard industrious selfish struggle. To drive others they have had first to drive themselves. They have never yet had occasion nor leisure to think of the state or social life as a whole, and as for dreams or beauty, it was a condition of survival that they should ignore such cravings. All the distinctive qualities of my uncle can be thought of as dictated by his conditions; his success and harshness, the extravagances that expressed his pride in making money, the uncongenial luxury that sprang from rivalry, and his self-reliance, his contempt for broad views, his contempt for everything that he could not understand.

His daughters were the inevitable children of his life. Queer girls they were! Curiously "spirited" as people phrase it, and curiously limited. During my Cambridge days I went down to Staffordshire several times. My uncle, though he still resented my refusal to go

into his business, was also in his odd way proud of me. I was his nephew and poor relation, and yet there I was, a young gentleman learning all sorts of unremunerative things in the grandest manner, "Latin and mook," while the sons of his neighbours, not nephews merely, but sons, stayed unpolished in their native town. Every time I went down I found extensive changes and altered relations, and before I had settled down to them off I went again. I don't think I was one person to them; I was a series of visitors. There is a gulf of ages between a gaunt schoolboy of sixteen in unbecoming mourning and two vividly self-conscious girls of eighteen and nineteen, but a Cambridge "man" of two and twenty with a first and good tennis and a growing social experience, is a fair contemporary for two girls of twenty-three and twenty-four.

A motor-car appeared, I think in my second visit, a bottle-green affair that opened behind, had dark purple cushions, and was controlled mysteriously by a man in shiny black costume and a flat cap. The high tea had been shifted to seven and rechristened dinner, but my uncle would not dress nor consent to have wine; and after one painful experiment, I gathered, and a scene, he put his foot down and prohibited any but high-necked dresses.

"Daddy's perfectly impossible," Sybil told me.

The foot had descended vehemently! "My own daughters!" he had said, "dressed up like --" --and had arrested himself and fumbled and decided to say--"actresses, and showin' their fat arms for every fool to stare at!" Nor would he have any people invited to dinner. He didn't, he had explained, want strangers poking about in his house when he came home tired. So such calling as occurred went on during his absence in the afternoon.

One of the peculiarities of the life of these ascendant families of the industrial class to which wealth has come, is its tremendous insulations. There were no customs of intercourse in the Five

Towns. All the isolated prosperities of the district sprang from economising, hard driven homes, in which there was neither time nor means for hospitality. Social intercourse centred very largely upon the church or chapel, and the chapels were better at bringing people together than the Establishment to which my cousins belonged. Their chief outlet to the wider world lay therefore through the acquaintances they had formed at school, and through two much less prosperous families of relations who lived at Longton and Hanley. A number of gossiping friendships with old school mates were "kept up," and my cousins would "spend the afternoon" or even spend the day with these; such occasions led to other encounters and interlaced with the furtive correspondences and snatched meetings that formed the emotional thread of their lives. When the billiard table had been new, my uncle had taken to asking in a few approved friends for an occasional game, but mostly the billiard-room was for glory and the girls. Both of them played very well. They never, so far as I know, dined out, and when at last after bitter domestic conflicts they began to go to dances, they went with the quavering connivance of my aunt, and changed into ball frocks at friends' houses on the way. There was a tennis club that formed a convenient afternoon rendezvous, and I recall that in the period of my earlier visits the young bloods of the district found much satisfaction in taking girls for drives in dog-carts and suchlike high-wheeled vehicles, a disposition that died in tangled tandems at the apparition of motor-car's.

My aunt and uncle had conceived no plans in life for their daughters at all. In the undifferentiated industrial community from which they had sprung, girls got married somehow, and it did not occur to them that the concentration of property that had made them wealthy, had cut their children off from the general social sea in which their own awkward meeting had occurred, without necessarily opening any other world in exchange. My uncle was too much occupied with the works and his business affairs and his private vices to philosophise about his girls; he wanted them just to keep girls,

preferably about sixteen, and to be a sort of animated flowers and make home bright and be given things. He was irritated that they would not remain at this, and still more irritated that they failed to suppress altogether their natural interest in young men. The tandems would be steered by weird and devious routes to evade the bare chance of his bloodshot eye. My aunt seemed to have no ideas whatever about what was likely to happen to her children. She had indeed no ideas about anything; she took her husband and the days as they came.

I can see now the pathetic difficulty of my cousins' position in life; the absence of any guidance or instruction or provision for their development. They supplemented the silences of home by the conversation of schoolfellows and the suggestions of popular fiction. They had to make what they could out of life with such hints as these. The church was far too modest to offer them any advice. It was obtruded upon my mind upon my first visit that they were both carrying on correspondences and having little furtive passings and seeings and meetings with the mysterious owners of certain initials, S. and L. K., and, if I remember rightly, "the R. N." brothers and cousins, I suppose, of their friends. The same thing was going on, with a certain intensification, at my next visit, excepting only that the initials were different. But when I came again their methods were maturer or I was no longer a negligible quantity, and the notes and the initials were no longer flaunted quite so openly in my face.

My cousins had worked it out from the indications of their universe that the end of life is to have a "good time." They used the phrase. That and the drives in dog-carts were only the first of endless points of resemblance between them and the commoner sort of American girl. When some years ago I paid my first and only visit to America I seemed to recover my cousins' atmosphere as soon as I entered the train at Euston. There were three girls in my compartment supplied with huge decorated cases of sweets, and being

seen off by a company of friends, noisily arch and eager about the "steamer letters" they would get at Liverpool; they were the very soul-sisters of my cousins. The chief elements of a good time, as my cousins judged it, as these countless thousands of rich young women judge it, are a petty eventfulness, laughter, and to feel that you are looking well and attracting attention. Shopping is one of its leading joys. You buy things, clothes and trinkets for yourself and presents for your friends. Presents always seemed to be flying about in that circle; flowers and boxes of sweets were common currency. My cousins were always getting and giving, my uncle caressed them with parcels and cheques. They kissed him and he exuded sovereigns as a stroked APHIS exudes honey. It was like the new language of the Academy of Lagado to me, and I never learnt how to express myself in it, for nature and training make me feel encumbered to receive presents and embarrassed in giving them. But then, like my father, I hate and distrust possessions.

Of the quality of their private imagination I never learnt anything; I suppose it followed the lines of the fiction they read and was romantic and sentimental. So far as marriage went, the married state seemed at once very attractive and dreadfully serious to them, composed in equal measure of becoming important and becoming old. I don't know what they thought about children. I doubt if they thought about them at all. It was very secret if they did.

As for the poor and dingy people all about them, my cousins were always ready to take part in a Charitable Bazaar. They were unaware of any economic correlation of their own prosperity and that circumambient poverty, and they knew of Trade Unions simply as disagreeable external things that upset my uncle's temper. They knew of nothing wrong in social life at all except that there were "Agitators." It surprised them a little, I think, that Agitators were not more drastically put down. But they had a sort of instinctive dread of social discussion as of something that might breach the happiness of their ignorance. . . .

My cousins did more than illustrate Marx for me; they also undertook a stage of my emotional education. Their method in that as in everything else was extremely simple, but it took my inexperience by surprise.

It must have been on my third visit that Sybil took me in hand. Hitherto I seemed to have seen her only in profile, but now she became almost completely full face, manifestly regarded me with those violet eyes of hers. She passed me things I needed at breakfast--it was the first morning of my visit--before I asked for them.

When young men are looked at by pretty cousins, they become intensely aware of those cousins. It seemed to me that I had always admired Sybil's eyes very greatly, and that there was something in her temperament congenial to mine. It was odd I had not noted it on my previous visits.

We walked round the garden somewhen that morning, and talked about Cambridge. She asked quite a lot of questions about my work and my ambitions. She said she had always felt sure I was clever.

The conversation languished a little, and we picked some flowers for the house. Then she asked if I could run. I conceded her various starts and we raced up and down the middle garden path. Then, a little breathless, we went into the new twenty-five guinea summer-house at the end of the herbaceous border.

We sat side by side, pleasantly hidden from the house, and she

became anxious about her hair, which was slightly and prettily disarranged, and asked me to help her with the adjustment of a hairpin. I had never in my life been so near the soft curly hair and the dainty eyebrow and eyelid and warm soft cheek of a girl, and I was stirred--

It stirs me now to recall it.

I became a battleground of impulses and inhibitions.

"Thank you," said my cousin, and moved a little away from me.

She began to talk about friendship, and lost her thread and forgot the little electric stress between us in a rather meandering analysis of her principal girl friends.

But afterwards she resumed her purpose.

I went to bed that night with one proposition overshadowing everything else in my mind, namely, that kissing my cousin Sybil was a difficult, but not impossible, achievement. I do not recall any shadow of a doubt whether on the whole it was worth doing. The thing had come into my existence, disturbing and interrupting its flow exactly as a fever does. Sybil had infected me with herself.

The next day matters came to a crisis in the little upstairs sitting-room which had been assigned me as a study during my visit. I was working up there, or rather trying to work in spite of the outrageous capering of some very primitive elements in my brain, when she came up to me, under a transparent pretext of looking for a book.

I turned round and then got up at the sight of her. I quite forget what our conversation was about, but I know she led me to believe I might kiss her. Then when I attempted to do so she averted her

face.

"How COULD you?" she said; "I didn't mean that!"

That remained the state of our relations for two days. I developed a growing irritation with and resentment against cousin Sybil, combined with an intense desire to get that kiss for which I hungered and thirsted. Cousin Sybil went about in the happy persuasion that I was madly in love with her, and her game, so far as she was concerned, was played and won. It wasn't until I had fretted for two days that I realised that I was being used for the commonest form of excitement possible to a commonplace girl; that dozens perhaps of young men had played the part of Tantalus at cousin Sybil's lips. I walked about my room at nights, damning her and calling her by terms which on the whole she rather deserved, while Sybil went to sleep pitying "poor old Dick!"

"Damn it!" I said, "I WILL be equal with you."

But I never did equalise the disadvantage, and perhaps it's as well, for I fancy that sort of revenge cuts both people too much for a rational man to seek it. . . .

"Why are men so silly?" said cousin Sybil next morning, wriggling back with down-bent head to release herself from what should have been a compelling embrace.

"Confound it!" I said with a flash of clear vision. "You STARTED this game."

"Oh!"

She stood back against a hedge of roses, a little flushed and excited and interested, and ready for the delightful defensive if I should renew my attack.

"Beastly hot for scuffling," I said, white with anger. "I don't know whether I'm so keen on kissing you, Sybil, after all. I just thought you wanted me to."

I could have whipped her, and my voice stung more than my words.

Our eyes met; a real hatred in hers leaping up to meet mine.

"Let's play tennis," I said, after a moment's pause.

"No," she answered shortly, "I'm going indoors."

"Very well."

And that ended the affair with Sybil.

I was still in the full glare of this disillusionment when Gertrude awoke from some preoccupation to an interest in my existence. She developed a disposition to touch my hand by accident, and let her fingers rest in contact with it for a moment,--she had pleasant soft hands;--she began to drift into summer houses with me, to let her arm rest trustfully against mine, to ask questions about Cambridge. They were much the same questions that Sybil had asked. But I controlled myself and maintained a profile of intelligent and entirely civil indifference to her blandishments.

What Gertrude made of it came out one evening in some talk--I forget about what--with Sybil.

"Oh, Dick!" said Gertrude a little impatiently, "Dick's Pi."

And I never disillusioned her by any subsequent levity from this theory of my innate and virginal piety.

It was against this harsh and crude Staffordshire background that I think I must have seen Margaret for the first time. I say I think because it is quite possible that we had passed each other in the streets of Cambridge, no doubt with that affectation of mutual disregard which was once customary between undergraduates and Newnham girls. But if that was so I had noted nothing of the slender graciousness that shone out so pleasingly against the bleaker midland surroundings.

She was a younger schoolfellow of my cousins', and the step-daughter of Seddon, a prominent solicitor of Burslem. She was not only not in my cousins' generation but not in their set, she was one of a small hardworking group who kept immaculate note-books, and did as much as is humanly possible of that insensate pile of written work that the Girls' Public School movement has inflicted upon school-girls. She really learnt French and German admirably and thoroughly, she got as far in mathematics as an unflinching industry can carry any one with no great natural aptitude, and she went up to Bennett Hall, Newnham, after the usual conflict with her family, to work for the History Tripos.

There in her third year she made herself thoroughly ill through overwork, so ill that she had to give up Newnham altogether and go abroad with her stepmother. She made herself ill, as so many girls do in those university colleges, through the badness of her home and school training. She thought study must needs be a hard straining of the mind. She worried her work, she gave herself no leisure to see it as a whole, she felt herself not making headway and she cut her games and exercise in order to increase her hours of toil, and worked into the night. She carried a knack of laborious

thoroughness into the blind alleys and inessentials of her subject. It didn't need the badness of the food for which Bennett Hall is celebrated and the remarkable dietary of nocturnal cocoa, cakes and soft biscuits with which the girls have supplemented it, to ensure her collapse. Her mother brought her home, fretting and distressed, and then finding her hopelessly unhappy at home, took her and her half-brother, a rather ailing youngster of ten who died three years later, for a journey to Italy.

Italy did much to assuage Margaret's chagrin. I think all three of them had a very good time there. At home Mr. Seddon, her step-father, played the part of a well-meaning blight by reason of the moods that arose from nervous dyspepsia. They went to Florence, equipped with various introductions and much sound advice from sympathetic Cambridge friends, and having acquired an ease in Italy there, went on to Siena, Orvieto, and at last Rome. They returned, if I remember rightly, by Pisa, Genoa, Milan and Paris. Six months or more they had had abroad, and now Margaret was back in Burslem, in health again and consciously a very civilised person.

New ideas were abroad, it was Maytime and a spring of abundant flowers--daffodils were particularly good that year--and Mrs. Seddon celebrated her return by giving an afternoon reception at short notice, with the clear intention of letting every one out into the garden if the weather held.

The Seddons had a big old farmhouse modified to modern ideas of comfort on the road out towards Misterton, with an orchard that had been rather pleasantly subdued from use to ornament. It had rich blossoming cherry and apple trees. Large patches of grass full of nodding yellow trumpets had been left amidst the not too precisely mown grass, which was as it were grass path with an occasional lapse into lawn or glade. And Margaret, hatless, with the fair hair above her thin, delicately pink face very simply done, came to meet our rather too consciously dressed party,--we had come in the motor four

strong, with my aunt in grey silk. Margaret wore a soft flowing flowered blue dress of diaphanous material, all unconnected with the fashion and tied with pretty ribbons, like a slenderer, unbountiful Primavera.

It was one of those May days that ape the light and heat of summer, and I remember disconnectedly quite a number of brightly lit figures and groups walking about, and a white gate between orchard and garden and a large lawn with an oak tree and a red Georgian house with a verandah and open French windows, through which the tea drinking had come out upon the moss-edged flagstones even as Mrs. Seddon had planned.

The party was almost entirely feminine except for a little curate with a large head, a good voice and a radiant manner, who was obviously attracted by Margaret, and two or three young husbands still sufficiently addicted to their wives to accompany them. One of them I recall as a quite romantic figure with abundant blond curly hair on which was poised a grey felt hat encircled by a refined black band. He wore, moreover, a loose rich shot silk tie of red and purple, a long frock coat, grey trousers and brown shoes, and presently he removed his hat and carried it in one hand. There were two tennis-playing youths besides myself. There was also one father with three daughters in anxious control, a father of the old school scarcely half broken in, reluctant, rebellious and consciously and conscientiously "reet Staffordshire." The daughters were all alert to suppress the possible plungings, the undesirable humorous impulses of this almost feral guest. They nipped his very gestures in the bud. The rest of the people were mainly mothers with daughters--daughters of all ages, and a scattering of aunts, and there was a tendency to clotting, parties kept together and regarded parties suspiciously. Mr. Seddon was in hiding, I think, all the time, though not formally absent.

Matters centred upon the tea in the long room of the French windows,

where four trim maids went to and fro busily between the house and the clumps of people seated or standing before it; and tennis and croquet were intermittently visible and audible beyond a bank of rockwork rich with the spikes and cups and bells of high spring.

Mrs. Seddon presided at the tea urn, and Margaret partly assisted and partly talked to me and my cousin Sibyl--Gertrude had found a disused and faded initial and was partnering him at tennis in a state of gentle revival--while their mother exercised a divided chaperonage from a seat near Mrs. Seddon. The little curate, stirring a partially empty cup of tea, mingled with our party, and preluded, I remember, every observation he made by a vigorous resumption of stirring.

We talked of Cambridge, and Margaret kept us to it. The curate was a Selwyn man and had taken a pass degree in theology, but Margaret had come to Gaylord's lecturers in Trinity for a term before her breakdown, and understood these differences. She had the eagerness of an exile to hear the old familiar names of places and personalities. We capped familiar anecdotes and were enthusiastic about Kings' Chapel and the Backs, and the curate, addressing himself more particularly to Sibyl, told a long confused story illustrative of his disposition to reckless devilry (of a pure-minded kindly sort) about upsetting two canoes quite needlessly on the way to Grantchester.

I can still see Margaret as I saw her that afternoon, see her fresh fair face, with the little obliquity of the upper lip, and her brow always slightly knitted, and her manner as of one breathlessly shy but determined. She had rather open blue eyes, and she spoke in an even musical voice with the gentlest of stresses and the ghost of a lisp. And it was true, she gathered, that Cambridge still existed. "I went to Grantchester," she said, "last year, and had tea under the apple-blossom. I didn't think then I should have to come down." (It was that started the curate upon his anecdote.)

"I've seen a lot of pictures, and learnt a lot about them--at the Pitti and the Brera,--the Brera is wonderful--wonderful places,--but it isn't like real study," she was saying presently. . . . "We bought bales of photographs," she said.

I thought the bales a little out of keeping.

But fair-haired and quite simply and yet graciously and fancifully dressed, talking of art and beautiful things and a beautiful land, and with so much manifest regret for learning denied, she seemed a different kind of being altogether from my smart, hard, high-coloured, black-haired and resolutely hatted cousin; she seemed translucent beside Gertrude. Even the little twist and droop of her slender body was a grace to me.

I liked her from the moment I saw her, and set myself to interest and please her as well as I knew how.

We recalled a case of ragging that had rustled the shrubs of Newnham, and then Chris Robinson's visit--he had given a talk to Bennett Hall also--and our impression of him.

"He disappointed me, too," said Margaret.

I was moved to tell Margaret something of my own views in the matter of social progress, and she listened--oh! with a kind of urged attention, and her brow a little more knitted, very earnestly. The little curate desisted from the appendices and refuse heaps and general debris of his story, and made himself look very alert and intelligent.

"We did a lot of that when I was up in the eighties," he said. "I'm glad Imperialism hasn't swamped you fellows altogether."

Gertrude, looking bright and confident, came to join our talk from the shrubbery; the initial, a little flushed and evidently in a state of refreshed relationship, came with her, and a cheerful lady in pink and more particularly distinguished by a pink bonnet joined our little group. Gertrude had been sipping admiration and was not disposed to play a passive part in the talk.

"Socialism!" she cried, catching the word. "It's well Pa isn't here. He has Fits when people talk of socialism. Fits!"

The initial laughed in a general kind of way.

The curate said there was socialism AND socialism, and looked at Margaret to gauge whether he had been too bold in this utterance. But she was all, he perceived, for broad-mindedness, and he stirred himself (and incidentally his tea) to still more liberality of expression. He said the state of the poor was appalling, simply appalling; that there were times when he wanted to shatter the whole system, "only," he said, turning to me appealingly, "What have we got to put in its place?"

"The thing that exists is always the more evident alternative," I said.

The little curate looked at it for a moment. "Precisely," he said explosively, and turned stirring and with his head a little on one side, to hear what Margaret was saying.

Margaret was saying, with a swift blush and an effect of daring, that she had no doubt she was a socialist.

"And wearing a gold chain!" said Gertrude, "And drinking out of eggshell! I like that!"

I came to Margaret's rescue. "It doesn't follow that because one's

a socialist one ought to dress in sackcloth and ashes."

The initial coloured deeply, and having secured my attention by prodding me slightly with the wrist of the hand that held his teacup, cleared his throat and suggested that "one ought to be consistent."

I perceived we were embarked upon a discussion of the elements. We began an interesting little wrangle one of those crude discussions of general ideas that are dear to the heart of youth. I and Margaret supported one another as socialists, Gertrude and Sybil and the initial maintained an anti-socialist position, the curate attempted a cross-bench position with an air of intending to come down upon us presently with a casting vote. He reminded us of a number of useful principles too often overlooked in argument, that in a big question like this there was much to be said on both sides, that if every one did his or her duty to every one about them there would be no difficulty with social problems at all, that over and above all enactments we needed moral changes in people themselves. My cousin Gertrude was a difficult controversialist to manage, being unconscious of inconsistency in statement and absolutely impervious to reply. Her standpoint was essentially materialistic; she didn't see why she shouldn't have a good time because other people didn't; they would have a good time, she was sure, if she didn't. She said that if we did give up everything we had to other people, they wouldn't very likely know what to do with it. She asked if we were so fond of work-people, why we didn't go and live among them, and expressed the inflexible persuasion that if we HAD socialism, everything would be just the same again in ten years' time. She also threw upon us the imputation of ingratitude for a beautiful world by saying that so far as she was concerned she didn't want to upset everything. She was contented with things as they were, thank you.

The discussion led in some way that I don't in the least recall now,

and possibly by abrupt transitions, to a croquet foursome in which Margaret involved the curate without involving herself, and then stood beside me on the edge of the lawn while the others played. We watched silently for a moment.

"I HATE that sort of view," she said suddenly in a confidential undertone, with her delicate pink flush returning.

"It's want of imagination," I said.

"To think we are just to enjoy ourselves," she went on; "just to go on dressing and playing and having meals and spending money!" She seemed to be referring not simply to my cousins, but to the whole world of industry and property about us. "But what is one to do?" she asked. "I do wish I had not had to come down. It's all so pointless here. There seems to be nothing going forward, no ideas, no dreams. No one here seems to feel quite what I feel, the sort of need there is for MEANING in things. I hate things without meaning."

"Don't you do--local work?"

"I suppose I shall. I suppose I must find something. Do you think--if one were to attempt some sort of propaganda?"

"Could you--?" I began a little doubtfully.

"I suppose I couldn't," she answered, after a thoughtful moment. "I suppose it would come to nothing. And yet I feel there is so much to be done for the world, so much one ought to be doing. . . . I want to do something for the world."

I can see her now as she stood there with her brows nearly frowning, her blue eyes looking before her, her mouth almost petulant. "One feels that there are so many things going on--out of one's reach,"

she said.

I went back in the motor-car with my mind full of her, the quality of delicate discontent, the suggestion of exile. Even a kind of weakness in her was sympathetic. She told tremendously against her background. She was, I say, like a protesting blue flower upon a cinder heap. It is curious, too, how she connects and mingles with the furious quarrel I had with my uncle that very evening. That came absurdly. Indirectly Margaret was responsible. My mind was running on ideas she had revived and questions she had set clamouring, and quite inadvertently in my attempt to find solutions I talked so as to outrage his profoundest feelings. . . .

7

What a preposterous shindy that was!

I sat with him in the smoking-room, propounding what I considered to be the most indisputable and non-contentious propositions conceivable--until, to my infinite amazement, he exploded and called me a "damned young puppy."

It was seismic.

"Tremendously interesting time," I said, "just in the beginning of making a civilisation."

"Ah!" he said, with an averted face, and nodded, leaning forward over his cigar.

I had not the remotest thought of annoying him.

"Monstrous muddle of things we have got," I said, "jumbled streets, ugly population, ugly factories--"

"You'd do a sight better if you had to do with it," said my uncle, regarding me askance.

"Not me. But a world that had a collective plan and knew where it meant to be going would do a sight better, anyhow. We're all swimming in a flood of ill-calculated chances--"

"You'll be making out I organised that business down there--by chance--next," said my uncle, his voice thick with challenge.

I went on as though I was back in Trinity.

"There's a lot of chance in the making of all great businesses," I said.

My uncle remarked that that showed how much I knew about businesses. If chance made businesses, why was it that he always succeeded and grew while those fools Ackroyd and Sons always took second place? He showed a disposition to tell the glorious history of how once Ackroyd's overshadowed him, and how now he could buy up Ackroyd's three times over. But I wanted to get out what was in my mind.

"Oh!" I said, "as between man and man and business and business, some of course get the pull by this quality or that--but it's forces quite outside the individual case that make the big part of any success under modern conditions. YOU never invented pottery, nor any process in pottery that matters a rap in your works; it wasn't YOUR foresight that joined all England up with railways and made it possible to organise production on an altogether different scale. You really at the utmost can't take credit for much more than being the sort of man who happened to fit what happened to be the requirements of the time, and who happened to be in a position to

take advantage of them--"

It was then my uncle cried out and called me a damned young puppy, and became involved in some unexpected trouble of his own.

I woke up as it were from my analysis of the situation to discover him bent over a splendid spittoon, cursing incoherently, retching a little, and spitting out the end of his cigar which he had bitten off in his last attempt at self-control, and withal fully prepared as soon as he had cleared for action to give me just all that he considered to be the contents of his mind upon the condition of mine.

Well, why shouldn't I talk my mind to him? He'd never had an outside view of himself for years, and I resolved to stand up to him. We went at it hammer and tongs! It became clear that he supposed me to be a Socialist, a zealous, embittered hater of all ownership--and also an educated man of the vilest, most pretentiously superior description. His principal grievance was that I thought I knew everything; so that he recurred again and again. . . .

We had been maintaining an armed truce with each other since my resolve to go up to Cambridge, and now we had out all that had accumulated between us. There had been stupendous accumulations. . . .

The particular things we said and did in that bawling encounter matter nothing at all in this story. I can't now estimate how near we came to fisticuffs. It ended with my saying, after a pungent reminder of benefits conferred and remembered, that I didn't want to stay another hour in his house. I went upstairs, in a state of puerile fury, to pack and go off to the Railway Hotel, while he, with ironical civility, telephoned for a cab.

"Good riddance!" shouted my uncle, seeing me off into the night.

On the face of it our row was preposterous, but the underlying reality of our quarrel was the essential antagonism, it seemed to me, in all human affairs, the antagonism between ideas and the established method, that is to say, between ideas and the rule of thumb. The world I hate is the rule-of-thumb world, the thing I and my kind of people exist for primarily is to battle with that, to annoy it, disarrange it, reconstruct it. We question everything, disturb anything that cannot give a clear justification to our questioning, because we believe inherently that our sense of disorder implies the possibility of a better order. Of course we are detestable. My uncle was of that other vaster mass who accept everything for the thing it seems to be, hate enquiry and analysis as a tramp hates washing, dread and resist change, oppose experiment, despise science. The world is our battleground; and all history, all literature that matters, all science, deals with this conflict of the thing that is and the speculative "if" that will destroy it.

But that is why I did not see Margaret Seddon again for five years.

CHAPTER THE SECOND

MARGARET IN LONDON

1

I was twenty-seven when I met Margaret again, and the intervening five years had been years of vigorous activity for me, if not of very remarkable growth. When I saw her again, I could count myself a grown man. I think, indeed, I counted myself more completely grown than I was. At any rate, by all ordinary standards, I had "got on" very well, and my ideas, if they had not changed very greatly, had become much more definite and my ambitions clearer and bolder.

I had long since abandoned my fellowship and come to London. I had published two books that had been talked about, written several articles, and established a regular relationship with the WEEKLY REVIEW and the EVENING GAZETTE. I was a member of the Eighty Club

and learning to adapt the style of the Cambridge Union to larger uses. The London world had opened out to me very readily. I had developed a pleasant variety of social connections. I had made the acquaintance of Mr. Evesham, who had been attracted by my NEW RULER,

and who talked about it and me, and so did a very great deal to make a way for me into the company of prominent and amusing people. I dined out quite frequently. The glitter and interest of good London dinner parties became a common experience. I liked the sort of conversation one got at them extremely, the little glow of duologues burning up into more general discussions, the closing-in of the men after the going of the women, the sage, substantial masculine

gossiping, the later resumption of effective talk with some pleasant woman, graciously at her best. I had a wide range of houses; Cambridge had linked me to one or two correlated sets of artistic and literary people, and my books and Mr. Evesham and opened to me the big vague world of "society." I wasn't aggressive nor particularly snobbish nor troublesome, sometimes I talked well, and if I had nothing interesting to say I said as little as possible, and I had a youthful gravity of manner that was liked by hostesses. And the other side of my nature that first flared through the cover of restraints at Locarno, that too had had opportunity to develop along the line London renders practicable. I had had my experiences and secrets and adventures among that fringe of ill-mated or erratic or discredited women the London world possesses. The thing had long ago ceased to be a matter of magic or mystery, and had become a question of appetites and excitement, and among other things the excitement of not being found out.

I write rather doubtfully of my growing during this period. Indeed I find it hard to judge whether I can say that I grew at all in any real sense of the word, between three and twenty and twenty-seven. It seems to me now to have been rather a phase of realisation and clarification. All the broad lines of my thought were laid down, I am sure, by the date of my Locarno adventure, but in those five years I discussed things over and over again with myself and others, filled out with concrete fact forms I had at first apprehended sketchily and conversationally, measured my powers against my ideals and the forces in the world about me. It was evident that many men no better than myself and with no greater advantages than mine had raised themselves to influential and even decisive positions in the worlds of politics and thought. I was gathering the confidence and knowledge necessary to attack the world in the large manner; I found I could write, and that people would let me write if I chose, as one having authority and not as the scribes. Socially and politically and intellectually I knew myself for an honest man, and that quite without any deliberation on my part this showed and made things easy

for me. People trusted my good faith from the beginning--for all that I came from nowhere and had no better position than any adventurer.

But the growth process was arrested, I was nothing bigger at twenty-seven than at twenty-two, however much saner and stronger, and any one looking closely into my mind during that period might well have imagined growth finished altogether. It is particularly evident to me now that I came no nearer to any understanding of women during that time. That Locarno affair was infinitely more to me than I had supposed. It ended something--nipped something in the bud perhaps--took me at a stride from a vague, fine, ignorant, closed world of emotion to intrigue and a perfectly definite and limited sensuality. It ended my youth, and for a time it prevented my manhood. I had never yet even peeped at the sweetest, profoundest thing in the world, the heart and meaning of a girl, or dreamt with any quality of reality of a wife or any such thing as a friend among womanhood. My vague anticipation of such things in life had vanished altogether. I turned away from their possibility. It seemed to me I knew what had to be known about womankind. I wanted to work hard, to get on to a position in which I could develop and forward my constructive projects. Women, I thought, had nothing to do with that. It seemed clear I could not marry for some years; I was attractive to certain types of women, I had vanity enough to give me an agreeable confidence in love-making, and I went about seeking a convenient mistress quite deliberately, some one who should serve my purpose and say in the end, like that kindly first mistress of mine, "I've done you no harm," and so release me. It seemed the only wise way of disposing of urgencies that might otherwise entangle and wreck the career I was intent upon.

I don't apologise for, or defend my mental and moral phases. So it was I appraised life and prepared to take it, and so it is a thousand ambitious men see it to-day. . . .

For the rest these five years were a period of definition. My political conceptions were perfectly plain and honest. I had one constant desire ruling my thoughts. I meant to leave England and the empire better ordered than I found it, to organise and discipline, to build up a constructive and controlling State out of my world's confusions. We had, I saw, to suffuse education with public intention, to develop a new better-living generation with a collectivist habit of thought, to link now chaotic activities in every human affair, and particularly to catch that escaped, world-making, world-ruining, dangerous thing, industrial and financial enterprise, and bring it back to the service of the general good. I had then the precise image that still serves me as a symbol for all I wish to bring about, the image of an engineer building a lock in a swelling torrent--with water pressure as his only source of power. My thoughts and acts were habitually turned to that enterprise; it gave shape and direction to all my life. The problem that most engaged my mind during those years was the practical and personal problem of just where to apply myself to serve this almost innate purpose. How was I, a child of this confusion, struggling upward through the confusion, to take hold of things? Somewhere between politics and literature my grip must needs be found, but where? Always I seem to have been looking for that in those opening years, and disregarding everything else to discover it.

2

The Baileys, under whose auspices I met Margaret again, were in the sharpest contrast with the narrow industrialism of the Staffordshire world. They were indeed at the other extreme of the scale, two active self-centred people, excessively devoted to the public service. It was natural I should gravitate to them, for they seemed to stand for the maturer, more disciplined, better informed

expression of all I was then urgent to attempt to do. The bulk of their friends were politicians or public officials, they described themselves as publicists--a vague yet sufficiently significant term. They lived and worked in a hard little house in Chambers Street, Westminster, and made a centre for quite an astonishing amount of political and social activity.

Willersley took me there one evening. The place was almost pretentiously matter-of-fact and unassuming. The narrow passage-hall, papered with some ancient yellowish paper, grained to imitate wood, was choked with hats and cloaks and an occasional feminine wrap. Motioned rather than announced by a tall Scotch servant woman, the only domestic I ever remember seeing there, we made our way up a narrow staircase past the open door of a small study packed with blue-books, to discover Altiora Bailey receiving before the fireplace in her drawing-room. She was a tall commanding figure, splendid but a little untidy in black silk and red beads, with dark eyes that had no depths, with a clear hard voice that had an almost visible prominence, aquiline features and straight black hair that was apt to get astray, that was now astray like the head feathers of an eagle in a gale. She stood with her hands behind her back, and talked in a high tenor of a projected Town Planning Bill with Blupp, who was practically in those days the secretary of the local Government Board. A very short broad man with thick ears and fat white hands writhing intertwined behind him, stood with his back to us, eager to bark interruptions into Altiora's discourse. A slender girl in pale blue, manifestly a young political wife, stood with one foot on the fender listening with an expression of entirely puzzled propitiation. A tall sandy-bearded bishop with the expression of a man in a trance completed this central group.

The room was one of those long apartments once divided by folding doors, and reaching from back to front, that are common upon the first floors of London houses. Its walls were hung with two or three indifferent water colours, there was scarcely any furniture

but a sofa or so and a chair, and the floor, severely carpeted with matting, was crowded with a curious medley of people, men predominating. Several were in evening dress, but most had the morning garb of the politician; the women were either severely rational or radiantly magnificent. Willersley pointed out to me the wife of the Secretary of State for War, and I recognised the Duchess of Clynes, who at that time cultivated intellectuality. I looked round, identifying a face here or there, and stepping back trod on some one's toe, and turned to find it belonged to the Right Hon. G. B. Mottisham, dear to the PUNCH caricaturists. He received my apology with that intentional charm that is one of his most delightful traits, and resumed his discussion. Beside him was Esmeer of Trinity, whom I had not seen since my Cambridge days. . . .

Willersley found an ex-member of the School Board for whom he had affinities, and left me to exchange experiences and comments upon the company with Esmeer. Esmeer was still a don; but he was nibbling, he said, at certain negotiations with the TIMES that might bring him down to London. He wanted to come to London. "We peep at things from Cambridge," he said.

"This sort of thing," I said, "makes London necessary. It's the oddest gathering."

"Every one comes here," said Esmeer. "Mostly we hate them like poison--jealousy--and little irritations--Altiora can be a horror at times--but we HAVE to come."

"Things are being done?"

"Oh!--no doubt of it. It's one of the parts of the British machinery--that doesn't show. . . . But nobody else could do it.

"Two people," said Esmeer, "who've planned to be a power--in an original way. And by Jove! they've done it!"

I did not for some time pick out Oscar Bailey, and then Esmeer showed him to me in elaborately confidential talk in a corner with a distinguished-looking stranger wearing a ribbon. Oscar had none of the fine appearance of his wife; he was a short sturdy figure with a rounded protruding abdomen and a curious broad, flattened, clean-shaven face that seemed nearly all forehead. He was of Anglo-Hungarian extraction, and I have always fancied something Mongolian in his type. He peered up with reddish swollen-looking eyes over gilt-edged glasses that were divided horizontally into portions of different refractive power, and he talked in an ingratiating undertone, with busy thin lips, an eager lisp and nervous movements of the hand.

People say that thirty years before at Oxford he was almost exactly the same eager, clever little man he was when I first met him. He had come up to Balliol bristling with extraordinary degrees and prizes captured in provincial and Irish and Scotch universities--and had made a name for himself as the most formidable dealer in exact fact the rhetoricians of the Union had ever had to encounter. From Oxford he had gone on to a position in the Higher Division of the Civil Service, I think in the War Office, and had speedily made a place for himself as a political journalist. He was a particularly neat controversialist, and very full of political and sociological ideas. He had a quite astounding memory for facts and a mastery of detailed analysis, and the time afforded scope for these gifts. The later eighties were full of politico-social discussion, and he became a prominent name upon the contents list of the NINETEENTH CENTURY, the FORTNIGHTLY and CONTEMPORARY chiefly as a half sympathetic but frequently very damaging critic of the socialism of that period. He won the immense respect of every one specially interested in social and political questions, he soon achieved the limited distinction that is awarded such capacity, and at that I think he would have remained for the rest of his life if

he had not encountered Altiora.

But Altiora Macvitie was an altogether exceptional woman, an extraordinary mixture of qualities, the one woman in the world who could make something more out of Bailey than that. She had much of the vigour and handsomeness of a slender impudent young man, and an unscrupulousness altogether feminine. She was one of those women who are waiting in--what is the word?--muliebrity. She had courage and initiative and a philosophical way of handling questions, and she could be bored by regular work like a man. She was entirely unfitted for her sex's sphere. She was neither uncertain, coy nor hard to please, and altogether too stimulating and aggressive for any gentleman's hours of ease. Her cookery would have been about as sketchy as her handwriting, which was generally quite illegible, and she would have made, I feel sure, a shocking bad nurse. Yet you mustn't imagine she was an inelegant or unbeautiful woman, and she is inconceivable to me in high collars or any sort of masculine garment. But her soul was bony, and at the base of her was a vanity gaunt and greedy! When she wasn't in a state of personal untidiness that was partly a protest against the waste of hours exacted by the toilet and partly a natural disinclination, she had a gypsy splendour of black and red and silver all her own. And somewhen in the early nineties she met and married Bailey.

I know very little about her early years. She was the only daughter of Sir Deighton Macvitie, who applied the iodoform process to cotton, and only his subsequent unfortunate attempts to become a Cotton King prevented her being a very rich woman. As it was she had a tolerable independence. She came into prominence as one of the more able of the little shoal of young women who were led into politico-philanthropic activities by the influence of the earlier novels of Mrs. Humphry Ward--the Marcella crop. She went "slumming" with distinguished vigour, which was quite usual in those days--and returned from her experiences as an amateur flower girl with clear and original views about the problem--which is and always

had been unusual. She had not married, I suppose because her standards were high, and men are cowards and with an instinctive appetite for muliebrity. She had kept house for her father by speaking occasionally to the housekeeper, butler and cook her mother had left her, and gathering the most interesting dinner parties she could, and had married off four orphan nieces in a harsh and successful manner. After her father's smash and death she came out as a writer upon social questions and a scathing critic of the Charity Organisation Society, and she was three and thirty and a little at loose ends when she met Oscar Bailey, so to speak, in the CONTEMPORARY REVIEW. The lurking woman in her nature was fascinated

by the ease and precision with which the little man rolled over all sorts of important and authoritative people, she was the first to discover a sort of imaginative bigness in his still growing mind, the forehead perhaps carried him off physically, and she took occasion to meet and subjugate him, and, so soon as he had sufficiently recovered from his abject humility and a certain panic at her attentions, marry him.

This had opened a new phase in the lives of Bailey and herself. The two supplemented each other to an extraordinary extent. Their subsequent career was, I think, almost entirely her invention. She was aggressive, imaginative, and had a great capacity for ideas, while he was almost destitute of initiative, and could do nothing with ideas except remember and discuss them. She was, if not exact, at least indolent, with a strong disposition to save energy by sketching--even her handwriting showed that--while he was inexhaustibly industrious with a relentless invariable caligraphy that grew larger and clearer as the years passed by. She had a considerable power of charming; she could be just as nice to people--and incidentally just as nasty--as she wanted to be. He was always just the same, a little confidential and SOTTO VOCE, artlessly rude and egoistic in an undignified way. She had considerable social experience, good social connections, and considerable social

ambition, while he had none of these things. She saw in a flash her opportunity to redeem his defects, use his powers, and do large, novel, rather startling things. She ran him. Her marriage, which shocked her friends and relations beyond measure--for a time they would only speak of Bailey as "that gnome"--was a stroke of genius, and forthwith they proceeded to make themselves the most formidable and distinguished couple conceivable. P. B. P., she boasted, was engraved inside their wedding rings, Pro Bono Publico, and she meant it to be no idle threat. She had discovered very early that the last thing influential people will do is to work. Everything in their lives tends to make them dependent upon a supply of confidently administered detail. Their business is with the window and not the stock behind, and in the end they are dependent upon the stock behind for what goes into the window. She linked with that the fact that Bailey had a mind as orderly as a museum, and an invincible power over detail. She saw that if two people took the necessary pains to know the facts of government and administration with precision, to gather together knowledge that was dispersed and confused, to be able to say precisely what had to be done and what avoided in this eventuality or that, they would necessarily become a centre of reference for all sorts of legislative proposals and political expedients, and she went unhesitatingly upon that.

Bailey, under her vigorous direction, threw up his post in the Civil Service and abandoned sporadic controversies, and they devoted themselves to the elaboration and realisation of this centre of public information she had conceived as their role. They set out to study the methods and organisation and realities of government in the most elaborate manner. They did the work as no one had ever hitherto dreamt of doing it. They planned the research on a thoroughly satisfying scale, and arranged their lives almost entirely for it. They took that house in Chambers Street and furnished it with severe economy, they discovered that Scotch domestic who is destined to be the guardian and tyrant of their declining years, and they set to work. Their first book, "The

Permanent Official," fills three plump volumes, and took them and their two secretaries upwards of four years to do. It is an amazingly good book, an enduring achievement. In a hundred directions the history and the administrative treatment of the public service was clarified for all time. . . .

They worked regularly every morning from nine to twelve, they lunched lightly but severely, in the afternoon they "took exercise" or Bailey attended meetings of the London School Board, on which he served, he said, for the purposes of study--he also became a railway director for the same end. In the late afternoon Altiora was at home to various callers, and in the evening came dinner or a reception or both.

Her dinners and gatherings were a very important feature in their scheme. She got together all sorts of interesting people in or about the public service, she mixed the obscurely efficient with the ill-instructed famous and the rudderless rich, got together in one room more of the factors in our strange jumble of a public life than had ever met easily before. She fed them with a shameless austerity that kept the conversation brilliant, on a soup, a plain fish, and mutton or boiled fowl and milk pudding, with nothing to drink but whisky and soda, and hot and cold water, and milk and lemonade. Everybody was soon very glad indeed to come to that. She boasted how little her housekeeping cost her, and sought constantly for fresh economies that would enable her, she said, to sustain an additional private secretary. Secretaries were the Baileys' one extravagance, they loved to think of searches going on in the British Museum, and letters being cleared up and precis made overhead, while they sat in the little study and worked together, Bailey with a clockwork industry, and Altiora in splendid flashes between intervals of cigarettes and meditation. "All efficient public careers," said Altiora, "consist in the proper direction of secretaries."

"If everything goes well I shall have another secretary next year," Altiora told me. "I wish I could refuse people dinner napkins. Imagine what it means in washing! I dare most things. . . . But as it is, they stand a lot of hardship here."

"There's something of the miser in both these people," said Esmeer, and the thing was perfectly true. For, after all, the miser is nothing more than a man who either through want of imagination or want of suggestion misapplies to a base use a natural power of concentration upon one end. The concentration itself is neither good nor evil, but a power that can be used in either way. And the Baileys gathered and reinvested usuriously not money, but knowledge of the utmost value in human affairs. They produced an effect of having found themselves--completely. One envied them at times extraordinarily. I was attracted, I was dazzled--and at the same time there was something about Bailey's big wrinkled forehead, his lipping broad mouth, the gestures of his hands and an uncivil preoccupation I could not endure. . . .

3

Their effect upon me was from the outset very considerable.

Both of them found occasion on that first visit of mine to talk to me about my published writings and particularly about my then just published book THE NEW RULER, which had interested them very much.

It fell in indeed so closely with their own way of thinking that I doubt if they ever understood how independently I had arrived at my conclusions. It was their weakness to claim excessively. That irritation, however, came later. We discovered each other immensely; for a time it produced a tremendous sense of kindred and

cooperation.

Altiora, I remember, maintained that there existed a great army of such constructive-minded people as ourselves--as yet undiscovered by one another.

"It's like boring a tunnel through a mountain," said Oscar, "and presently hearing the tapping of the workers from the other end."

"If you didn't know of them beforehand," I said, "it might be a rather badly joined tunnel."

"Exactly," said Altiora with a high note, "and that's why we all want to find out each other. . . ."

They didn't talk like that on our first encounter, but they urged me to lunch with them next day, and then it was we went into things. A woman Factory Inspector and the Educational Minister for New Banksland and his wife were also there, but I don't remember they made any contribution to the conversation. The Baileys saw to that. They kept on at me in an urgent litigious way.

"We have read your book," each began--as though it had been a joint function. "And we consider--"

"Yes," I protested, "I think--"

That was a secondary matter.

"They did not consider," said Altiora, raising her voice and going right over me, that I had allowed sufficiently for the inevitable development of an official administrative class in the modern state."

"Nor of its importance," echoed Oscar.

That, they explained in a sort of chorus, was the cardinal idea of their lives, what they were up to, what they stood for. "We want to suggest to you," they said--and I found this was a stock opening of theirs--"that from the mere necessities of convenience elected bodies MUST avail themselves more and more of the services of expert officials. We have that very much in mind. The more complicated and technical affairs become, the less confidence will the elected official have in himself. We want to suggest that these expert officials must necessarily develop into a new class and a very powerful class in the community. We want to organise that. It may be THE power of the future. They will necessarily have to have very much of a common training. We consider ourselves as amateur unpaid precursors of such a class." . . .

The vision they displayed for my consideration as the aim of public-spirited endeavour, seemed like a harder, narrower, more specialised version of the idea of a trained and disciplined state that Willersley and I had worked out in the Alps. They wanted things more organised, more correlated with government and a collective purpose, just as we did, but they saw it not in terms of a growing collective understanding, but in terms of functionaries, legislative change, and methods of administration. . . .

It wasn't clear at first how we differed. The Baileys were very anxious to win me to co-operation, and I was quite prepared at first to identify their distinctive expressions with phrases of my own, and so we came very readily into an alliance that was to last some years, and break at last very painfully. Altiora manifestly liked me, I was soon discussing with her the perplexity I found in placing myself efficiently in the world, the problem of how to take hold of things that occupied my thoughts, and she was sketching out careers for my consideration, very much as an architect on his first visit sketches houses, considers requirements, and puts before you this example and that of the more or less similar thing already done. . . .

It is easy to see how much in common there was between the Baileys and me, and how natural it was that I should become a constant visitor at their house and an ally of theirs in many enterprises. It is not nearly so easy to define the profound antagonism of spirit that also held between us. There was a difference in texture, a difference in quality. How can I express it? The shapes of our thoughts were the same, but the substance quite different. It was as if they had made in china or cast iron what I had made in transparent living matter. (The comparison is manifestly from my point of view.) Certain things never seemed to show through their ideas that were visible, refracted perhaps and distorted, but visible always through mine.

I thought for a time the essential difference lay in our relation to beauty. With me beauty is quite primary in life; I like truth, order and goodness, wholly because they are beautiful or lead straight to beautiful consequences. The Baileys either hadn't got that or they didn't see it. They seemed at times to prefer things harsh and ugly. That puzzled me extremely. The esthetic quality of many of their proposals, the "manners" of their work, so to speak, were at times as dreadful as--well, War Office barrack architecture. A caricature by its exaggerated statements will sometimes serve to point a truth by antagonising falsity and falsity. I remember talking to a prominent museum official in need of more public funds for the work he had in hand. I mentioned the possibility of enlisting Bailey's influence.

"Oh, we don't want Philistines like that infernal Bottle-Imp running us," he said hastily, and would hear of no concerted action for the

end he had in view. "I'd rather not have the extension.

"You see," he went on to explain, "Bailey's wanting in the essentials."

"What essentials?" said I.

"Oh! he'd be like a nasty oily efficient little machine for some merely subordinate necessity among all my delicate stuff. He'd do all we wanted no doubt in the way of money and powers--and he'd do it wrong and mess the place for ever. Hands all black, you know. He's just a means. Just a very aggressive and unmanageable means. This isn't a plumber's job. . . ."

I stuck to my argument.

"I don't LIKE him," said the official conclusively, and it seemed to me at the time he was just blind prejudice speaking. . . .

I came nearer the truth of the matter as I came to realise that our philosophies differed profoundly. That isn't a very curable difference,--once people have grown up. Theirs was a philosophy devoid of FINESSE. Temperamentally the Baileys were specialised, concentrated, accurate, while I am urged either by some Inner force or some entirely assimilated influence in my training, always to round off and shadow my outlines. I hate them hard. I would sacrifice detail to modelling always, and the Baileys, it seemed to me, loved a world as flat and metallic as Sidney Cooper's cows. If they had the universe in hand I know they would take down all the trees and put up stamped tin green shades and sunlight accumulators. Altiora thought trees hopelessly irregular and sea cliffs a great mistake. . . . I got things clearer as time went on. Though it was an Hegelian mess of which I had partaken at Codger's table by way of a philosophical training, my sympathies have always been Pragmatist. I belong almost by nature to that school of Pragmatism

that, following the medieval Nominalists, bases itself upon a denial of the reality of classes, and of the validity of general laws. The Baileys classified everything. They were, in the scholastic sense-- which so oddly contradicts the modern use of the word—"Realists." They believed classes were REAL and independent of their individuals. This is the common habit of all so-called educated people who have no metaphysical aptitude and no metaphysical training. It leads them to a progressive misunderstanding of the world. It was a favourite trick of Altiora's to speak of everybody as a "type"; she saw men as samples moving; her dining-room became a chamber of representatives. It gave a tremendously scientific air to many of their generalisations, using "scientific" in its nineteenth-century uncritical Herbert Spencer sense, an air that only began to disappear when you thought them over again in terms of actuality and the people one knew. . . .

At the Baileys' one always seemed to be getting one's hands on the very strings that guided the world. You heard legislation projected to affect this "type" and that; statistics marched by you with sin and shame and injustice and misery reduced to quite manageable percentages, you found men who were to frame or amend bills in grave and intimate exchange with Bailey's omniscience, you heard Altiora canvassing approaching resignations and possible appointments that might make or mar a revolution in administrative methods, and doing it with a vigorous directness that manifestly swayed the decision; and you felt you were in a sort of signal box with levers all about you, and the world outside there, albeit a little dark and mysterious beyond the window, running on its lines in ready obedience to these unhesitating lights, true and steady to trim termini.

And then with all this administrative fizzle, this pseudo-scientific administrative chatter, dying away in your head, out you went into the limitless grimy chaos of London streets and squares, roads and avenues lined with teeming houses, each larger than the Chambers

Street house and at least equally alive, you saw the chaotic clamour of hoardings, the jumble of traffic, the coming and going of mysterious myriads, you heard the rumble of traffic like the noise of a torrent; a vague incessant murmur of cries and voices, wanton crimes and accidents bawled at you from the placards; imperative unaccountable fashions swaggered triumphant in dazzling windows of the shops; and you found yourself swaying back to the opposite conviction that the huge formless spirit of the world it was that held the strings and danced the puppets on the Bailey stage. . . .

Under the lamps you were jostled by people like my Staffordshire uncle out for a spree, you saw shy youths conversing with prostitutes, you passed young lovers pairing with an entire disregard of the social suitability of the "types" they might blend or create, you saw men leaning drunken against lamp-posts whom you knew for the "type" that will charge with fixed bayonets into the face of death, and you found yourself unable to imagine little Bailey achieving either drunkenness or the careless defiance of annihilation. You realised that quite a lot of types were underrepresented in Chambers Street, that feral and obscure and altogether monstrous forces must be at work, as yet altogether unassimilated by those neat administrative reorganisations.

5

Altiora, I remember, preluded Margaret's reappearance by announcing her as a "new type."

I was accustomed to go early to the Baileys' dinners in those days, for a preliminary gossip with Altiora in front of her drawing-room fire. One got her alone, and that early arrival was a little sign of appreciation she valued. She had every woman's need of followers

and servants.

"I'm going to send you down to-night," she said, "with a very interesting type indeed--one of the new generation of serious gals. Middle-class origin--and quite well off. Rich in fact. Her step-father was a solicitor and something of an ENTREPRENEUR towards the end, I fancy--in the Black Country. There was a little brother died, and she's lost her mother quite recently. Quite on her own, so to speak. She's never been out into society very much, and doesn't seem really very anxious to go. . . . Not exactly an intellectual person, you know, but quiet, and great force of character. Came up to London on her own and came to us--someone had told her we were the sort of people to advise her--to ask what to do. I'm sure she'll interest you."

"What CAN people of that sort do?" I asked. "Is she capable of investigation?"

Altiora compressed her lips and shook her head. She always did shake her head when you asked that of anyone.

"Of course what she ought to do," said Altiora, with her silk dress pulled back from her knee before the fire, and with a lift of her voice towards a chuckle at her daring way of putting things, "is to marry a member of Parliament and see he does his work. . . . Perhaps she will. It's a very exceptional gal who can do anything by herself--quite exceptional. The more serious they are--without being exceptional--the more we want them to marry."

Her exposition was truncated by the entry of the type in question.

"Well!" cried Altiora turning, and with a high note of welcome, "HERE you are!"

Margaret had gained in dignity and prettiness by the lapse of five

years, and she was now very beautifully and richly and simply dressed. Her fair hair had been done in some way that made it seem softer and more abundant than it was in my memory, and a gleam of purple velvet-set diamonds showed amidst its mist of little golden and brown lines. Her dress was of white and violet, the last trace of mourning for her mother, and confessed the gracious droop of her tall and slender body. She did not suggest Staffordshire at all, and I was puzzled for a moment to think where I had met her. Her sweetly shaped mouth with the slight obliquity of the lip and the little kink in her brow were extraordinarily familiar to me. But she had either been prepared by Altiora or she remembered my name. "We met," she said, "while my step-father was alive--at Misterton. You came to see us"; and instantly I recalled the sunshine between the apple blossom and a slender pale blue girlish shape among the daffodils, like something that had sprung from a bulb itself. I recalled at once that I had found her very interesting, though I did not clearly remember how it was she had interested me.

Other guests arrived--it was one of Altiora's boldly blended mixtures of people with ideas and people with influence or money who might perhaps be expected to resonate to them. Bailey came down late with an air of hurry, and was introduced to Margaret and said absolutely nothing to her--there being no information either to receive or impart and nothing to do--but stood snatching his left cheek until I rescued him and her, and left him free to congratulate the new Lady Snape on her husband's K. C. B.

I took Margaret down. We achieved no feats of mutual expression, except that it was abundantly clear we were both very pleased and interested to meet again, and that we had both kept memories of each other. We made that Misterton tea-party and the subsequent marriages of my cousins and the world of Burslem generally, matter for quite an agreeable conversation until at last Altiora, following her invariable custom, called me by name imperatively out of our duologue. "Mr. Remington," she said, "we want your opinion--" in

her entirely characteristic effort to get all the threads of conversation into her own hands for the climax that always wound up her dinners. How the other women used to hate those concluding raids of hers! I forget most of the other people at that dinner, nor can I recall what the crowning rally was about. It didn't in any way join on to my impression of Margaret.

In the drawing-room of the matting floor I rejoined her, with Altiora's manifest connivance, and in the interval I had been thinking of our former meeting.

"Do you find London," I asked, "give you more opportunity for doing things and learning things than Burslem?"

She showed at once she appreciated my allusion to her former confidences. "I was very discontented then," she said and paused. "I've really only been in London for a few months. It's so different. In Burslem, life seems all business and getting--without any reason. One went on and it didn't seem to mean anything. At least anything that mattered. . . . London seems to be so full of meanings--all mixed up together."

She knitted her brows over her words and smiled appealingly at the end as if for consideration for her inadequate expression, appealingly and almost humorously.

I looked understandingly at her. "We have all," I agreed, "to come to London."

"One sees so much distress," she added, as if she felt she had completely omitted something, and needed a codicil.

"What are you doing in London?"

"I'm thinking of studying. Some social question. I thought perhaps

I might go and study social conditions as Mrs. Bailey did, go perhaps as a work-girl or see the reality of living in, but Mrs. Bailey thought perhaps it wasn't quite my work."

"Are you studying?"

"I'm going to a good many lectures, and perhaps I shall take up a regular course at the Westminster School of Politics and Sociology. But Mrs. Bailey doesn't seem to believe very much in that either."

Her faintly whimsical smile returned. "I seem rather indefinite," she apologised, "but one does not want to get entangled in things one can't do. One--one has so many advantages, one's life seems to be such a trust and such a responsibility--"

She stopped.

"A man gets driven into work," I said.

"It must be splendid to be Mrs. Bailey," she replied with a glance of envious admiration across the room.

"SHE has no doubts, anyhow," I remarked.

"She HAD," said Margaret with the pride of one who has received great confidences.

6

"You've met before?" said Altiora, a day or so later.

I explained when.

"You find her interesting?"

I saw in a flash that Altiora meant to marry me to Margaret.

Her intention became much clearer as the year developed. Altiora was systematic even in matters that evade system. I was to marry Margaret, and freed from the need of making an income I was to come into politics--as an exponent of Baileyism. She put it down with the other excellent and advantageous things that should occupy her summer holiday. It was her pride and glory to put things down and plan them out in detail beforehand, and I'm not quite sure that she did not even mark off the day upon which the engagement was to be declared. If she did, I disappointed her. We didn't come to an engagement, in spite of the broadest hints and the glaring obviousness of everything, that summer.

Every summer the Baileys went out of London to some house they hired or borrowed, leaving their secretaries toiling behind, and they went on working hard in the mornings and evenings and taking exercise in the open air in the afternoon. They cycled assiduously and went for long walks at a trot, and raided and studied (and incidentally explained themselves to) any social "types" that lived in the neighbourhood. One invaded type, resentful under research, described them with a dreadful aptness as Donna Quixote and Sancho Panza--and himself as a harmless windmill, hurting no one and signifying nothing. She did rather tilt at things. This particular summer they were at a pleasant farmhouse in level country near Pangbourne, belonging to the Hon. Wilfrid Winchester, and they asked me to come down to rooms in the neighbourhood--Altiora took them for a month for me in August--and board with them upon extremely reasonable terms; and when I got there I found Margaret sitting in a hammock at Altiora's feet. Lots of people, I gathered, were coming and going in the neighbourhood, the Ponts were in a villa on the river, and the Rickhams' houseboat was to moor for some days; but

these irruptions did not impede a great deal of dialogue between Margaret and myself.

Altiora was efficient rather than artistic in her match-making. She sent us off for long walks together--Margaret was a fairly good walker--she exhumed some defective croquet things and incited us to croquet, not understanding that detestable game is the worst stimulant for lovers in the world. And Margaret and I were always getting left about, and finding ourselves for odd half-hours in the kitchen-garden with nothing to do except talk, or we were told with a wave of the hand to run away and amuse each other.

Altiora even tried a picnic in canoes, knowing from fiction rather than imagination or experience the conclusive nature of such excursions. But there she fumbled at the last moment, and elected at the river's brink to share a canoe with me. Bailey showed so much zeal and so little skill--his hat fell off and he became miraculously nothing but paddle-clutching hands and a vast wrinkled brow--that at last he had to be paddled ignominiously by Margaret, while Altiora, after a phase of rigid discretion, as nearly as possible drowned herself--and me no doubt into the bargain--with a sudden lateral gesture of the arm to emphasise the high note with which she dismissed the efficiency of the Charity Organisation Society. We shipped about an inch of water and sat in it for the rest of the time, an inconvenience she disregarded heroically. We had difficulties in landing Oscar from his frail craft upon the ait of our feasting,--he didn't balance sideways and was much alarmed, and afterwards, as Margaret had a pain in her back, I took him in my canoe, let him hide his shame with an ineffectual but not positively harmful paddle, and towed the other by means of the joined painters. Still it was the fault of the inadequate information supplied in the books and not of Altiora that that was not the date of my betrothal.

I find it not a little difficult to state what kept me back from proposing marriage to Margaret that summer, and what urged me

forward at last to marry her. It is so much easier to remember one's resolutions than to remember the moods and suggestions that produced them.

Marrying and getting married was, I think, a pretty simple affair to Altiora; it was something that happened to the adolescent and unmarried when you threw them together under the circumstances of health, warmth and leisure. It happened with the kindly and approving smiles of the more experienced elders who had organised these proximities. The young people married, settled down, children ensued, and father and mother turned their minds, now decently and properly disillusioned, to other things. That to Altiora was the normal sexual life, and she believed it to be the quality of the great bulk of the life about her.

One of the great barriers to human understanding is the wide temperamental difference one finds in the values of things relating to sex. It is the issue upon which people most need training in charity and imaginative sympathy. Here are no universal standards at all, and indeed for no single man nor woman does there seem to be any fixed standard, so much do the accidents of circumstances and one's physical phases affect one's interpretations. There is nothing in the whole range of sexual fact that may not seem supremely beautiful or humanly jolly or magnificently wicked or disgusting or trivial or utterly insignificant, according to the eye that sees or the mood that colours. Here is something that may fill the skies and every waking hour or be almost completely banished from a life. It may be everything on Monday and less than nothing on Saturday. And we make our laws and rules as though in these matters all men and women were commensurable one with another, with an equal steadfast passion and an equal constant duty. . . .

I don't know what dreams Altiora may have had in her schoolroom days, I always suspected her of suppressed and forgotten phases, but certainly her general effect now was of an entirely passionless

worldliness in these matters. Indeed so far as I could get at her, she regarded sexual passion as being hardly more legitimate in a civilised person than--let us say--homicidal mania. She must have forgotten--and Bailey too. I suspect she forgot before she married him. I don't suppose either of them had the slightest intimation of the dimensions sexual love can take in the thoughts of the great majority of people with whom they come in contact. They loved in their way--an intellectual way it was and a fond way--but it had no relation to beauty and physical sensation--except that there seemed a decree of exile against these things. They got their glow in high moments of altruistic ambition--and in moments of vivid worldly success. They sat at opposite ends of their dinner table with so and so "captured," and so and so, flushed with a mutual approval. They saw people in love forgetful and distraught about them, and just put it down to forgetfulness and distraction. At any rate Altiora manifestly viewed my situation and Margaret's with an abnormal and entirely misleading simplicity. There was the girl, rich, with an acceptable claim to be beautiful, shingly virtuous, quite capable of political interests, and there was I, talented, ambitious and full of political and social passion, in need of just the money, devotion and regularisation Margaret could provide. We were both unmarried--white sheets of unscribed paper. Was there ever a simpler situation? What more could we possibly want?

She was even a little offended at the inconclusiveness that did not settle things at Pangbourne. I seemed to her, I suspect, to reflect upon her judgment and good intentions.

7

I didn't see things with Altiora's simplicity.

I admired Margaret very much, I was fully aware of all that she and I might give each other; indeed so far as Altiora went we were quite in agreement. But what seemed solid ground to Altiora and the ultimate footing of her emasculated world, was to me just the superficial covering of a gulf--oh! abysses of vague and dim, and yet stupendously significant things.

I couldn't dismiss the interests and the passion of sex as Altiora did. Work, I agreed, was important; career and success; but deep unanalysable instincts told me this preoccupation was a thing quite as important; dangerous, interfering, destructive indeed, but none the less a dominating interest in life. I have told how flittingly and uninvited it came like a moth from the outer twilight into my life, how it grew in me with my manhood, how it found its way to speech and grew daring, and led me at last to experience. After that adventure at Locarno sex and the interests and desires of sex never left me for long at peace. I went on with my work and my career, and all the time it was like--like someone talking ever and again in a room while one tries to write.

There were times when I could have wished the world a world all of men, so greatly did this unassimilated series of motives and curiosities hamper me; and times when I could have wished the world all of women. I seemed always to be seeking something in women, in girls, and I was never clear what it was I was seeking. But never--even at my coarsest--was I moved by physical desire alone. Was I seeking help and fellowship? Was I seeking some intimacy with beauty? It was a thing too formless to state, that I seemed always desiring to attain and never attaining. Waves of gross sensuousness arose out of this preoccupation, carried me to a crisis of gratification or disappointment that was clearly not the needed thing; they passed and left my mind free again for a time to get on with the permanent pursuits of my life. And then presently this solicitude would have me again, an irrelevance as it seemed, and yet a constantly recurring demand.

I don't want particularly to dwell upon things that are disagreeable for others to read, but I cannot leave them out of my story and get the right proportions of the forces I am balancing. I was no abnormal man, and that world of order we desire to make must be built of such stuff as I was and am and can beget. You cannot have a world of Baileys; it would end in one orderly generation. Humanity is begotten in Desire, lives by Desire.

"Love which is lust, is the Lamp in the Tomb;
Love which is lust, is the Call from the Gloom."

I echo Henley.

I suppose the life of celibacy which the active, well-fed, well-exercised and imaginatively stirred young man of the educated classes is supposed to lead from the age of nineteen or twenty, when Nature certainly meant him to marry, to thirty or more, when civilisation permits him to do so, is the most impossible thing in the world. We deal here with facts that are kept secret and obscure, but I doubt for my own part if more than one man out of five in our class satisfies that ideal demand. The rest are even as I was, and Hatherleigh and Esmear and all the men I knew. I draw no lessons and offer no panacea; I have to tell the quality of life, and this is how it is. This is how it will remain until men and women have the courage to face the facts of life.

I was no systematic libertine, you must understand; things happened to me and desire drove me. Any young man would have served for that Locarno adventure, and after that what had been a mystic and wonderful thing passed rapidly into a gross, manifestly misdirected and complicating one. I can count a meagre tale of five illicit loves in the days of my youth, to include that first experience, and

of them all only two were sustained relationships. Besides these five "affairs," on one or two occasions I dipped so low as the inky dismal sensuality of the streets, and made one of those pairs of correlated figures, the woman in her squalid finery sailing homeward, the man modestly aloof and behind, that every night in the London year flit by the score of thousands across the sight of the observant. . . .

How ugly it is to recall; ugly and shameful now without qualification! Yet at the time there was surely something not altogether ugly in it--something that has vanished, some fine thing mortally ailing.

One such occasion I recall as if it were a vision deep down in a pit, as if it had happened in another state of existence to someone else. And yet it is the sort of thing that has happened, once or twice at least, to half the men in London who have been in a position to make it possible. Let me try and give you its peculiar effect. Man or woman, you ought to know of it.

Figure to yourself a dingy room, somewhere in that network of streets that lies about Tottenham Court Road, a dingy bedroom lit by a solitary candle and carpeted with scraps and patches, with curtains of cretonne closing the window, and a tawdry ornament of paper in the grate. I sit on a bed beside a weary-eyed, fair-haired, sturdy young woman, half undressed, who is telling me in broken German something that my knowledge of German is at first inadequate to understand. . . .

I thought she was boasting about her family, and then slowly the meaning came to me. She was a Lett from near Libau in Courland, and she was telling me--just as one tells something too strange for comment or emotion--how her father had been shot and her sister outraged and murdered before her eyes.

It was as if one had dipped into something primordial and stupendous beneath the smooth and trivial surfaces of life. There was I, you know, the promising young don from Cambridge, who wrote quite brilliantly about politics and might presently get into Parliament, with my collar and tie in my hand, and a certain sense of shameful adventure fading out of my mind.

"Ach Gott!" she sighed by way of comment, and mused deeply for a moment before she turned her face to me, as to something forgotten and remembered, and assumed the half-hearted meretricious smile.

"Bin ich eine hubsche?" she asked like one who repeats a lesson.

I was moved to crave her pardon and come away.

"Bin ich eine hubsche?" she asked a little anxiously, laying a detaining hand upon me, and evidently not understanding a word of what I was striving to say.

8

I find it extraordinarily difficult to recall the phases by which I passed from my first admiration of Margaret's earnestness and unconscious daintiness to an intimate acquaintance. The earlier encounters stand out clear and hard, but then the impressions become crowded and mingle not only with each other but with all the subsequent developments of relationship, the enormous evolutions of interpretation and comprehension between husband and wife. Dipping into my memories is like dipping into a ragbag, one brings out this memory or that, with no intimation of how they came in time or what led to them and joined them together. And they are all mixed up with subsequent associations, with sympathies and discords, habits

of intercourse, surprises and disappointments and discovered misunderstandings. I know only that always my feelings for Margaret were complicated feelings, woven of many and various strands.

It is one of the curious neglected aspects of life how at the same time and in relation to the same reality we can have in our minds streams of thought at quite different levels. We can be at the same time idealising a person and seeing and criticising that person quite coldly and clearly, and we slip unconsciously from level to level and produce all sorts of inconsistent acts. In a sense I had no illusions about Margaret; in a sense my conception of Margaret was entirely poetic illusion. I don't think I was ever blind to certain defects of hers, and quite as certainly they didn't seem to matter in the slightest degree. Her mind had a curious want of vigour, "flatness" is the only word; she never seemed to escape from her phrase; her way of thinking, her way of doing was indecisive; she remained in her attitude, it did not flow out to easy, confirmatory action.

I saw this quite clearly, and when we walked and talked together I seemed always trying for animation in her and never finding it. I would state my ideas. "I know," she would say, "I know."

I talked about myself and she listened wonderfully, but she made no answering revelations. I talked politics, and she remarked with her blue eyes wide and earnest: "Every WORD you say seems so just."

I admired her appearance tremendously but--I can only express it by saying I didn't want to touch her. Her fair hair was always delectably done. It flowed beautifully over her pretty small ears, and she would tie its fair coilings with fillets of black or blue velvet that carried pretty buckles of silver and paste. The light, the faint down on her brow and cheek was delightful. And it was clear to me that I made her happy.

My sense of her deficiencies didn't stand in the way of my falling at last very deeply in love with her. Her very shortcomings seemed to offer me something. . . .

She stood in my mind for goodness--and for things from which it seemed to me my hold was slipping.

She seemed to promise a way of escape from the deepening opposition in me between physical passions and the constructive career, the career of wide aims and human service, upon which I had embarked. All the time that I was seeing her as a beautiful, fragile, rather ineffective girl, I was also seeing her just as consciously as a shining slender figure, a radiant reconciliation, coming into my darkling disorders of lust and impulse. I could understand clearly that she was incapable of the most necessary subtleties of political thought, and yet I could contemplate praying to her and putting all the intricate troubles of my life at her feet.

Before the reappearance of Margaret in my world at all an unwonted disgust with the consequences and quality of my passions had arisen in my mind. Among other things that moment with the Lettish girl haunted me persistently. I would see myself again and again sitting amidst those sluttish surroundings, collar and tie in hand, while her heavy German words grouped themselves to a slowly apprehended meaning. I would feel again with a fresh stab of remorse, that this was not a flash of adventure, this was not seeing life in any permissible sense, but a dip into tragedy, dishonour, hideous degradation, and the pitiless cruelty of a world as yet uncontrolled by any ordered will.

"Good God!" I put it to myself, "that I should finish the work those Cossacks had begun! I who want order and justice before everything! There's no way out of it, no decent excuse! If I didn't think, I ought to have thought!" . . .

How did I get to it?" . . . I would ransack the phases of my development from the first shy unveiling of a hidden wonder to the last extremity as a man will go through muddled account books to find some disorganising error. . . .

I was also involved at that time--I find it hard to place these things in the exact order of their dates because they were so disconnected with the regular progress of my work and life--in an intrigue, a clumsy, sensuous, pretentious, artificially stimulated intrigue, with a Mrs. Larrimer, a woman living separated from her husband. I will not go into particulars of that episode, nor how we quarrelled and chafed one another. She was at once unfaithful and jealous and full of whims about our meetings; she was careless of our secret, and vulgarised our relationship by intolerable interpretations; except for some glowing moments of gratification, except for the recurrent and essentially vicious desire that drew us back to each other again, we both fretted at a vexatious and unexpectedly binding intimacy. The interim was full of the quality of work delayed, of time and energy wasted, of insecure precautions against scandal and exposure. Disappointment is almost inherent in illicit love. I had, and perhaps it was part of her recurrent irritation also, a feeling as though one had followed something fine and beautiful into a net--into bird lime! These furtive scuffles, this sneaking into shabby houses of assignation, was what we had made out of the suggestion of pagan beauty; this was the reality of our vision of nymphs and satyrs dancing for the joy of life amidst incessant sunshine. We had laid hands upon the wonder and glory of bodily love and wasted them. . . .

It was the sense of waste, of finely beautiful possibilities getting entangled and marred for ever that oppressed me. I had missed, I had lost. I did not turn from these things after the fashion of the Baileys, as one turns from something low and embarrassing. I felt that these great organic forces were still to be wrought into a harmony with my constructive passion. I felt too that I was not

doing it. I had not understood the forces in this struggle nor its nature, and as I learnt I failed. I had been started wrong, I had gone on wrong, in a world that was muddled and confused, full of false counsel and erratic shames and twisted temptations. I learnt to see it so by failures that were perhaps destroying any chance of profit in my lessons. Moods of clear keen industry alternated with moods of relapse and indulgence and moods of dubiety and remorse. I was not going on as the Baileys thought I was going on. There were times when the blindness of the Baileys irritated me intensely. Beneath the ostensible success of those years, between twenty-three and twenty-eight, this rottenness, known to scarcely any one but myself, grew and spread. My sense of the probability of a collapse intensified. I knew indeed now, even as Willersley had prophesied five years before, that I was entangling myself in something that might smother all my uses in the world. Down there among those incommunicable difficulties, I was puzzled and blundering. I was losing my hold upon things; the chaotic and adventurous element in life was spreading upward and getting the better of me, overmastering me and all my will to rule and make. . . . And the strength, the drugging urgency of the passion!

Margaret shone at times in my imagination like a radiant angel in a world of mire and disorder, in a world of cravings, hot and dull red like scars inflamed. . . .

I suppose it was because I had so great a need of such help as her whiteness proffered, that I could ascribe impossible perfections to her, a power of intellect, a moral power and patience to which she, poor fellow mortal, had indeed no claim. If only a few of us WERE angels and freed from the tangle of effort, how easy life might be! I wanted her so badly, so very badly, to be what I needed. I wanted a woman to save me. I forced myself to see her as I wished to see her. Her tepidities became infinite delicacies, her mental vagueness an atmospheric realism. The harsh precisions of the Baileys and Altiora's blunt directness threw up her fineness into

relief and made a grace of every weakness.

Mixed up with the memory of times when I talked with Margaret as one talks politely to those who are hopelessly inferior in mental quality, explaining with a false lucidity, welcoming and encouraging the feeblest response, when possible moulding and directing, are times when I did indeed, as the old phrase goes, worship the ground she trod on. I was equally honest and unconscious of inconsistency at each extreme. But in neither phase could I find it easy to make love to Margaret. For in the first I did not want to, though I talked abundantly to her of marriage and so forth, and was a little puzzled at myself for not going on to some personal application, and in the second she seemed inaccessible, I felt I must make confessions and put things before her that would be the grossest outrage upon the noble purity I attributed to her.

9

I went to Margaret at last to ask her to marry me, wrought up to the mood of one who stakes his life on a cast. Separated from her, and with the resonance of an evening of angry recriminations with Mrs. Larrimer echoing in my mind, I discovered myself to be quite passionately in love with Margaret. Last shreds of doubt vanished. It has always been a feature of our relationship that Margaret absent means more to me than Margaret present; her memory distils from its dross and purifies in me. All my criticisms and qualifications of her vanished into some dark corner of my mind. She was the lady of my salvation; I must win my way to her or perish.

I went to her at last, for all that I knew she loved me, in passionate self-abasement, white and a-tremble. She was staying

with the Rockleys at Woking, for Shena Rockley had been at Bennett Hall with her and they had resumed a close intimacy; and I went down to her on an impulse, unheralded. I was kept waiting for some minutes, I remember, in a little room upon which a conservatory opened, a conservatory full of pots of large mauve-edged, white cyclamens in flower. And there was a big lacquer cabinet, a Chinese thing, I suppose, of black and gold against the red-toned wall. To this day the thought of Margaret is inseparably bound up with the sight of a cyclamen's back-turned petals.

She came in, looking pale and drooping rather more than usual. I suddenly realised that Altiora's hint of a disappointment leading to positive illness was something more than a vindictive comment. She closed the door and came across to me and took and dropped my hand and stood still. "What is it you want with me?" she asked.

The speech I had been turning over and over in my mind on the way vanished at the sight of her.

"I want to talk to you," I answered lamely.

For some seconds neither of us said a word.

"I want to tell you things about my life," I began.

She answered with a scarcely audible "yes."

"I almost asked you to marry me at Pangbourne," I plunged. "I didn't. I didn't because--because you had too much to give me."

"Too much!" she echoed, "to give you!" She had lifted her eyes to my face and the colour was coming into her cheeks.

"Don't misunderstand me," I said hastily. "I want to tell you things, things you don't know. Don't answer me. I want to tell

you."

She stood before the fireplace with her ultimate answer shining through the quiet of her face. "Go on," she said, very softly. It was so pitilessly manifest she was resolved to idealise the situation whatever I might say. I began walking up and down the room between those cyclamens and the cabinet. There were little gold fishermen on the cabinet fishing from little islands that each had a pagoda and a tree, and there were also men in boats or something, I couldn't determine what, and some obscure sub-office in my mind concerned itself with that quite intently. Yet I seem to have been striving with all my being to get words for the truth of things. "You see," I emerged, "you make everything possible to me. You can give me help and sympathy, support, understanding. You know my political ambitions. You know all that I might do in the world. I do so intensely want to do constructive things, big things perhaps, in this wild jumble. . . . Only you don't know a bit what I am. I want to tell you what I am. I'm complex. . . . I'm streaked."

I glanced at her, and she was regarding me with an expression of blissful disregard for any meaning I was seeking to convey.

"You see," I said, "I'm a bad man."

She sounded a note of valiant incredulity.

Everything seemed to be slipping away from me. I pushed on to the ugly facts that remained over from the wreck of my interpretation. "What has held me back," I said, "is the thought that you could not possibly understand certain things in my life. Men are not pure as women are. I have had love affairs. I mean I have had affairs. Passion--desire. You see, I have had a mistress, I have been entangled--"

She seemed about to speak, but I interrupted. "I'm not telling you," I said, "what I meant to tell you. I want you to know clearly that there is another side to my life, a dirty side. Deliberately I say, dirty. It didn't seem so at first--"

I stopped blankly. "Dirty," I thought, was the most idiotic choice of words to have made.

I had never in any tolerable sense of the word been dirty.

"I drifted into this--as men do," I said after a little pause and stopped again.

She was looking at me with her wide blue eyes.

"Did you imagine," she began, "that I thought you--that I expected--"

"But how can you know?"

"I know. I do know."

"But--" I began.

"I know," she persisted, dropping her eyelids. "Of course I know," and nothing could have convinced me more completely that she did not know.

"All men--" she generalised. "A woman does not understand these temptations."

I was astonished beyond measure at her way of taking my confession.

...

"Of course," she said, hesitating a little over a transparent difficulty, "it is all over and past."

"It's all over and past," I answered.

There was a little pause.

"I don't want to know," she said. "None of that seems to matter now in the slightest degree."

She looked up and smiled as though we had exchanged some acceptable commonplaces. "Poor dear!" she said, dismissing everything, and put out her arms, and it seemed to me that I could hear the Lettish girl in the background--doomed safety valve of purity in this intolerable world--telling something in indistinguishable German--I know not what nor why. . . .

I took Margaret in my arms and kissed her. Her eyes were wet with tears. She clung to me and was near, I felt, to sobbing.

"I have loved you," she whispered presently, "Oh! ever since we met in Misterton--six years and more ago."

CHAPTER THE THIRD

MARGARET IN VENICE

1

There comes into my mind a confused memory of conversations with Margaret; we must have had dozens altogether, and they mix in now for the most part inextricably not only with one another, but with later talks and with things we discussed at Pangbourne. We had the immensest anticipations of the years and opportunities that lay before us. I was now very deeply in love with her indeed. I felt not that I had cleaned up my life but that she had. We called each other "confederate" I remember, and made during our brief engagement a series of visits to the various legislative bodies in London, the County Council, the House of Commons, where we dined with Villiers, and the St. Pancras Vestry, where we heard Shaw speaking. I was full of plans and so was she of the way in which we were to live and work. We were to pay back in public service whatever excess of wealth beyond his merits old Seddon's economic advantage had won for him from the toiling people in the potteries. The end of the Boer War was so recent that that blessed word "efficiency" echoed still in people's minds and thoughts. Lord Roseberry in a memorable oration had put it into the heads of the big outer public, but the Baileys with a certain show of justice claimed to have set it going in the channels that took it to him--if as a matter of fact it was taken to him. But then it was their habit to make claims of that sort. They certainly did their share to keep "efficient" going. Altiora's highest praise was "thoroughly efficient." We were to be a "thoroughly efficient" political couple of the "new type." She explained us to herself and Oscar, she explained us to ourselves, she explained us to the people who came to her dinners and

afternoons until the world was highly charged with explanation and expectation, and the proposal that I should be the Liberal candidate for the Kinghamstead Division seemed the most natural development in the world.

I was full of the ideal of hard restrained living and relentless activity, and throughout a beautiful November at Venice, where chiefly we spent our honeymoon, we turned over and over again and discussed in every aspect our conception of a life tremendously focussed upon the ideal of social service.

Most clearly there stands out a picture of ourselves talking in a gondola on our way to Torcella. Far away behind us the smoke of Murano forms a black stain upon an immense shining prospect of smooth water, water as unruffled and luminous as the sky above, a mirror on which rows of posts and distant black high-stemmed, swan-necked boats with their minutely clear swinging gondoliers, float aerially. Remote and low before us rises the little tower of our destination. Our men swing together and their oars swirl leisurely through the water, hump back in the rowlocks, splash sharply and go swishing back again. Margaret lies back on cushions, with her face shaded by a holland parasol, and I sit up beside her.

"You see," I say, and in spite of Margaret's note of perfect acquiescence I feel myself reasoning against an indefinable antagonism, "it is so easy to fall into a slack way with life. There may seem to be something priggish in a meticulous discipline, but otherwise it is so easy to slip into indolent habits--and to be distracted from one's purpose. The country, the world, wants men to serve its constructive needs, to work out and carry out plans. For a man who has to make a living the enemy is immediate necessity; for people like ourselves it's--it's the constant small opportunity of agreeable things."

"Frittering away," she says, "time and strength."

"That is what I feel. It's so pleasant to pretend one is simply modest, it looks so foolish at times to take one's self too seriously. We've GOT to take ourselves seriously."

She endorses my words with her eyes.

"I feel I can do great things with life."

"I KNOW you can."

"But that's only to be done by concentrating one's life upon one main end. We have to plan our days, to make everything subserve our scheme."

"I feel," she answers softly, "we ought to give--every hour."

Her face becomes dreamy. "I WANT to give every hour," she adds.

2

That holiday in Venice is set in my memory like a little artificial lake in uneven confused country, as something very bright and skylike, and discontinuous with all about it. The faded quality of the very sunshine of that season, the mellow discoloured palaces and places, the huge, time-ripened paintings of departed splendours, the whispering, nearly noiseless passage of hearse-black gondolas, for the horrible steam launch had not yet ruined Venice, the stilled magnificences of the depopulated lagoons, the universal autumn, made me feel altogether in recess from the teeming uproars of reality. There was not a dozen people all told, no Americans and scarcely any English, to dine in the big cavern of a dining-room, with its vistas

of separate tables, its distempered walls and its swathed chandeliers. We went about seeing beautiful things, accepting beauty on every hand, and taking it for granted that all was well with ourselves and the world. It was ten days or a fortnight before I became fretful and anxious for action; a long tranquillity for such a temperament as mine.

Our pleasures were curiously impersonal, a succession of shared aesthetic appreciation threads all that time. Our honeymoon was no exultant coming together, no mutual shout of "YOU!" We were almost shy with one another, and felt the relief of even a picture to help us out. It was entirely in my conception of things that I should be very watchful not to shock or distress Margaret or press the sensuous note. Our love-making had much of the tepid smoothness of the lagoons. We talked in delicate innuendo of what should be glorious freedoms. Margaret had missed Verona and Venice in her previous Italian journey--fear of the mosquito had driven her mother across Italy to the westward route--and now she could fill up her gaps and see the Titians and Paul Veroneses she already knew in colourless photographs, the Carpaccios, (the St. George series delighted her beyond measure,) the Basaitis and that great statue of Bartolomeo Colleoni that Ruskin praised.

But since I am not a man to look at pictures and architectural effects day after day, I did watch Margaret very closely and store a thousand memories of her. I can see her now, her long body drooping a little forward, her sweet face upraised to some discovered familiar masterpiece and shining with a delicate enthusiasm. I can hear again the soft cadences of her voice murmuring commonplace comments, for she had no gift of expressing the shapeless satisfaction these things gave her.

Margaret, I perceived, was a cultivated person, the first cultivated person with whom I had ever come into close contact. She was cultivated and moral, and I, I now realise, was never either of

these things. She was passive, and I am active. She did not simply and naturally look for beauty but she had been incited to look for it at school, and took perhaps a keener interest in books and lectures and all the organisation of beautiful things than she did in beauty itself; she found much of her delight in being guided to it. Now a thing ceases to be beautiful to me when some finger points me out its merits. Beauty is the salt of life, but I take my beauty as a wild beast gets its salt, as a constituent of the meal. . . .

And besides, there was that between us that should have seemed more beautiful than any picture. . . .

So we went about Venice tracking down pictures and spiral staircases and such-like things, and my brains were busy all the time with such things as a comparison of Venice and its nearest modern equivalent, New York, with the elaboration of schemes of action when we returned to London, with the development of a theory of Margaret.

Our marriage had done this much at least, that it had fused and destroyed those two independent ways of thinking about her that had gone on in my mind hitherto. Suddenly she had become very near to me, and a very big thing, a sort of comprehensive generalisation behind a thousand questions, like the sky or England. The judgments and understandings that had worked when she was, so to speak, miles away from my life, had now to be altogether revised. Trifling things began to matter enormously, that she had a weak and easily fatigued back, for example, or that when she knitted her brows and stammered a little in talking, it didn't really mean that an exquisite significance struggled for utterance.

We visited pictures in the mornings chiefly. In the afternoon, unless we were making a day-long excursion in a gondola, Margaret would rest for an hour while I prowled about in search of English newspapers, and then we would go to tea in the Piazza San Marco and watch the drift of people feeding the pigeons and going into the

little doors beneath the sunlit arches and domes of Saint Mark's. Then perhaps we would stroll on the Piazzetta, or go out into the sunset in a gondola. Margaret became very interested in the shops that abound under the colonnades and decided at last to make an extensive purchase of table glass. "These things," she said, are quite beautiful, and far cheaper than anything but the most ordinary looking English ware." I was interested in her idea, and a good deal charmed by the delightful qualities of tinted shape, slender handle and twisted stem. I suggested we should get not simply tumblers and wineglasses but bedroom waterbottles, fruit- and sweet-dishes, water-jugs, and in the end we made quite a business-like afternoon of it.

I was beginning now to long quite definitely for events. Energy was accumulating in me, and worrying me for an outlet. I found the **TIMES** and the **DAILY TELEGRAPH** and the other papers I managed to get hold of, more and more stimulating. I nearly wrote to the former paper one day in answer to a letter by Lord Grimthorpe--I forget now upon what point. I chafed secretly against this life of tranquil appreciations more and more. I found my attitudes of restrained and delicate affection for Margaret increasingly difficult to sustain. I surprised myself and her by little gusts of irritability, gusts like the catspaws before a gale. I was alarmed at these symptoms.

One night when Margaret had gone up to her room, I put on a light overcoat, went out into the night and prowled for a long time through the narrow streets, smoking and thinking. I returned and went and sat on the edge of her bed to talk to her.

"Look here, Margaret," I said; "this is all very well, but I'm restless."

"Restless! " she said with a faint surprise in her voice.

"Yes. I think I want exercise. I've got a sort of feeling--I've never had it before--as though I was getting fat."

"My dear!" she cried.

"I want to do things;--ride horses, climb mountains, take the devil out of myself."

She watched me thoughtfully.

"Couldn't we DO something?" she said.

Do what?

"I don't know. Couldn't we perhaps go away from here soon--and walk in the mountains--on our way home."

I thought. "There seems to be no exercise at all in this place."

"Isn't there some walk?"

"I wonder," I answered. "We might walk to Chioggia perhaps, along the Lido." And we tried that, but the long stretch of beach fatigued Margaret's back, and gave her blisters, and we never got beyond Malamocco. . . .

A day or so after we went out to those pleasant black-robed, bearded Armenians in their monastery at Saint Lazzaro, and returned towards sundown. We fell into silence. "PIU LENTO," said Margaret to the gondolier, and released my accumulated resolution.

"Let us go back to London," I said abruptly.

Margaret looked at me with surprised blue eyes.

"This is beautiful beyond measure, you know," I said, sticking to my point, "but I have work to do."

She was silent for some seconds. "I had forgotten," she said.

"So had I," I sympathised, and took her hand. "Suddenly I have remembered."

She remained quite still. "There is so much to be done," I said, almost apologetically.

She looked long away from me across the lagoon and at last sighed, like one who has drunk deeply, and turned to me.

"I suppose one ought not to be so happy," she said. "Everything has been so beautiful and so simple and splendid. And clean. It has been just With You--the time of my life. It's a pity such things must end. But the world is calling you, dear. . . . I ought not to have forgotten it. I thought you were resting--and thinking. But if you are rested.--Would you like us to start to-morrow?"

She looked at once so fragile and so devoted that on the spur of the moment I relented, and we stayed in Venice four more days.

CHAPTER THE FOURTH

THE HOUSE IN WESTMINSTER

1

Margaret had already taken a little house in Radnor Square, Westminster, before our marriage, a house that seemed particularly adaptable to our needs as public-spirited efficient; it had been very pleasantly painted and papered under Margaret's instructions, white paint and clean open purples and green predominating, and now we set to work at once upon the interesting business of arranging and--with our Venetian glass as a beginning--furnishing it. We had been fairly fortunate with our wedding presents, and for the most part it was open to us to choose just exactly what we would have and just precisely where we would put it.

Margaret had a sense of form and colour altogether superior to mine, and so quite apart from the fact that it was her money equipped us, I stood aside from all these matters and obeyed her summons to a consultation only to endorse her judgment very readily. Until everything was settled I went every day to my old rooms in Vincent Square and worked at a series of papers that were originally intended for the FORTNIGHTLY REVIEW, the papers that afterwards became my fourth book, "New Aspects of Liberalism."

I still remember as delightful most of the circumstances of getting into 79, Radnor Square. The thin flavour of indecision about Margaret disappeared altogether in a shop; she had the precisest ideas of what she wanted, and the devices of the salesman did not sway her. It was very pleasant to find her taking things out of my hands with a certain masterfulness, and showing the distinctest

determination to make a house in which I should be able to work in that great project of "doing something for the world."

"And I do want to make things pretty about us," she said. "You don't think it wrong to have things pretty?"

"I want them so."

"Altiora has things hard."

"Altiora," I answered, "takes a pride in standing ugly and uncomfortable things. But I don't see that they help her. Anyhow they won't help me."

So Margaret went to the best shops and got everything very simple and very good. She bought some pictures very well indeed; there was a little Sussex landscape, full of wind and sunshine, by Nicholson, for my study, that hit my taste far better than if I had gone out to get some such expression for myself.

"We will buy a picture just now and then," she said, "sometimes--when we see one."

I would come back through the January mire or fog from Vincent Square to the door of 79, and reach it at last with a quite childish appreciation of the fact that its solid Georgian proportions and its fine brass furnishings belonged to MY home; I would use my latchkey and discover Margaret in the warm-lit, spacious hall with a partially opened packing-case, fatigued but happy, or go up to have tea with her out of the right tea things, "come at last," or be told to notice what was fresh there. It wasn't simply that I had never had a house before, but I had really never been, except in the most transitory way, in any house that was nearly so delightful as mine promised to be. Everything was fresh and bright, and softly and harmoniously toned. Downstairs we had a green dining-room with

gleaming silver, dark oak, and English colour-prints; above was a large drawing-room that could be made still larger by throwing open folding doors, and it was all carefully done in greys and blues, for the most part with real Sheraton supplemented by Sheraton so skilfully imitated by an expert Margaret had discovered as to be indistinguishable except to a minute scrutiny. And for me, above this and next to my bedroom, there was a roomy study, with specially thick stair-carpet outside and thick carpets in the bedroom overhead and a big old desk for me to sit at and work between fire and window, and another desk specially made for me by that expert if I chose to stand and write, and open bookshelves and bookcases and every sort of convenient fitting. There were electric heaters beside the open fire, and everything was put for me to make tea at any time--electric kettle, infuser, biscuits and fresh butter, so that I could get up and work at any hour of the day or night. I could do no work in this apartment for a long time, I was so interested in the perfection of its arrangements. And when I brought in my books and papers from Vincent Square, Margaret seized upon all the really shabby volumes and had them re-bound in a fine official-looking leather.

I can remember sitting down at that desk and looking round me and feeling with a queer effect of surprise that after all even a place in the Cabinet, though infinitely remote, was nevertheless in the same large world with these fine and quietly expensive things.

On the same floor Margaret had a "den," a very neat and pretty den with good colour-prints of Botticellis and Carpaccios, and there was a third apartment for sectarian purposes should the necessity for them arise, with a severe-looking desk equipped with patent files. And Margaret would come flitting into the room to me, or appear noiselessly standing, a tall gracefully drooping form, in the wide open doorway. "Is everything right, dear?" she would ask.

"Come in," I would say, "I'm sorting out papers."

She would come to the hearthrug.

"I mustn't disturb you," she would remark.

"I'm not busy yet."

"Things are getting into order. Then we must make out a time-table as the Baileys do, and BEGIN!"

Altiora came in to see us once or twice, and a number of serious young wives known to Altiora called and were shown over the house, and discussed its arrangements with Margaret. They were all tremendously keen on efficient arrangements.

"A little pretty," said Altiora, with the faintest disapproval, "still--"

It was clear she thought we should grow out of that. From the day of our return we found other people's houses open to us and eager for us. We went out of London for week-ends and dined out, and began discussing our projects for reciprocating these hospitalities. As a single man unattached, I had had a wide and miscellaneous social range, but now I found myself falling into place in a set. For a time I acquiesced in this. I went very little to my clubs, the Climax and the National Liberal, and participated in no bachelor dinners at all. For a time, too, I dropped out of the garrulous literary and journalistic circles I had frequented. I put up for the Reform, not so much for the use of the club as a sign of serious and substantial political standing. I didn't go up to Cambridge, I remember, for nearly a year, so occupied was I with my new adjustments.

The people we found ourselves among at this time were people, to put it roughly, of the Parliamentary candidate class, or people already

actually placed in the political world. They ranged between very considerable wealth and such a hard, bare independence as old Willersley and the sister who kept house for him possessed. There were quite a number of young couples like ourselves, a little younger and more artless, or a little older and more established. Among the younger men I had a sort of distinction because of my Cambridge reputation and my writing, and because, unlike them, I was an adventurer and had won and married my way into their circles instead of being naturally there. They couldn't quite reckon upon what I should do; they felt I had reserves of experience and incalculable traditions. Close to us were the Cramptons, Willie Crampton, who has since been Postmaster-General, rich and very important in Rockshire, and his younger brother Edward, who has specialised in history and become one of those unimaginative men of letters who are the glory of latter-day England. Then there was Lewis, further towards Kensington, where his cousins the Solomons and the Hartsteins lived, a brilliant representative of his race, able, industrious and invariably uninspired, with a wife a little in revolt against the racial tradition of feminine servitude and inclined to the suffragette point of view, and Bunting Harblow, an old blue, and with an erratic disposition well under the control of the able little cousin he had married. I had known all these men, but now (with *Altiora* floating angelically in benediction) they opened their hearts to me and took me into their order. They were all like myself, prospective Liberal candidates, with a feeling that the period of wandering in the wilderness of opposition was drawing near its close. They were all tremendously keen upon social and political service, and all greatly under the sway of the ideal of a simple, strenuous life, a life finding its satisfactions in political achievements and distinctions. The young wives were as keen about it as the young husbands, Margaret most of all, and I-- whatever elements in me didn't march with the attitudes and habits of this set were very much in the background during that time.

We would give little dinners and have evening gatherings at which

everything was very simple and very good, with a slight but perceptible austerity, and there was more good fruit and flowers and less perhaps in the way of savouries, patties and entrees than was customary. Sherry we banished, and Marsala and liqueurs, and there was always good home-made lemonade available. No men waited, but very expert parlourmaids. Our meat was usually Welsh mutton--I don't know why, unless that mountains have ever been the last refuge of the severer virtues. And we talked politics and books and ideas and Bernard Shaw (who was a department by himself and supposed in those days to be ethically sound at bottom), and mingled with the intellectuals--I myself was, as it were, a promoted intellectual.

The Cramptons had a tendency to read good things aloud on their less frequented receptions, but I have never been able to participate submissively in this hyper-digestion of written matter, and generally managed to provoke a disruptive debate. We were all very earnest to make the most of ourselves and to be and do, and I wonder still at times, with an unassuaged perplexity, how it is that in that phase of utmost earnestness I have always seemed to myself to be most remote from reality.

2

I look back now across the detaching intervention of sixteen crowded years, critically and I fancy almost impartially, to those beginnings of my married life. I try to recall something near to their proper order the developing phases of relationship. I am struck most of all by the immense unpremeditated, generous-spirited insincerities upon which Margaret and I were building.

It seems to me that here I have to tell perhaps the commonest experience of all among married educated people, the deliberate,

shy, complex effort to fill the yawning gaps in temperament as they appear, the sustained, failing attempt to bridge abysses, level barriers, evade violent pressures. I have come these latter years of my life to believe that it is possible for a man and woman to be absolutely real with one another, to stand naked souled to each other, unashamed and unafraid, because of the natural all-glorifying love between them. It is possible to love and be loved untroubling, as a bird flies through the air. But it is a rare and intricate chance that brings two people within sight of that essential union, and for the majority marriage must adjust itself on other terms. Most coupled people never really look at one another. They look a little away to preconceived ideas. And each from the first days of love-making HIDES from the other, is afraid of disappointing, afraid of offending, afraid of discoveries in either sense. They build not solidly upon the rock of truth, but upon arches and pillars and queer provisional supports that are needed to make a common foundation, and below in the imprisoned darkneses, below the fine fabric they sustain together begins for each of them a cavernous hidden life. Down there things may be prowling that scarce ever peep out to consciousness except in the grey half-light of sleepless nights, passions that flash out for an instant in an angry glance and are seen no more, starved victims and beautiful dreams bricked up to die. For the most of us there is no jail delivery of those inner depths, and the life above goes on to its honourable end.

I have told how I loved Margaret and how I came to marry her. Perhaps already unintentionally I have indicated the quality of the injustice our marriage did us both. There was no kindred between us and no understanding. We were drawn to one another by the unlikeness of our quality, by the things we misunderstood in each other. I know a score of couples who have married in that fashion.

Modern conditions and modern ideas, and in particular the intenser and subtler perceptions of modern life, press more and more heavily upon a marriage tie whose fashion comes from an earlier and less

discriminating time. When the wife was her husband's subordinate, meeting him simply and uncritically for simple ends, when marriage was a purely domestic relationship, leaving thought and the vivid things of life almost entirely to the unencumbered man, mental and temperamental incompatibilities mattered comparatively little. But now the wife, and particularly the loving childless wife, unpremeditatedly makes a relentless demand for a complete association, and the husband exacts unthought of delicacies of understanding and co-operation. These are stupendous demands. People not only think more fully and elaborately about life than they ever did before, but marriage obliges us to make that ever more accidented progress a three-legged race of carelessly assorted couples. . . .

Our very mental texture was different. I was rough-minded, to use the phrase of William James, primary and intuitive and illogical; she was tender-minded, logical, refined and secondary. She was loyal to pledge and persons, sentimental and faithful; I am loyal to ideas and instincts, emotional and scheming. My imagination moves in broad gestures; her's was delicate with a real dread of extravagance. My quality is sensuous and ruled by warm impulses; hers was discriminating and essentially inhibitory. I like the facts of the case and to mention everything; I like naked bodies and the jolly smells of things. She abounded in reservations, in circumlocutions and evasions, in keenly appreciated secondary points. Perhaps the reader knows that Tintoretto in the National Gallery, the Origin of the Milky Way. It is an admirable test of tempera-mental quality. In spite of my early training I have come to regard that picture as altogether delightful; to Margaret it has always been "needlessly offensive." In that you have our fundamental breach. She had a habit, by no means rare, of damning what she did not like or find sympathetic in me on the score that it was not my "true self," and she did not so much accept the universe as select from it and do her best to ignore the rest. And also I had far more initiative than had she. This is no catalogue of

rights and wrongs, or superiorities and inferiorities; it is a catalogue of differences between two people linked in a relationship that constantly becomes more intolerant of differences.

This is how we stood to each other, and none of it was clear to either of us at the outset. To begin with, I found myself reserving myself from her, then slowly apprehending a jarring between our minds and what seemed to me at first a queer little habit of misunderstanding in her. . . .

It did not hinder my being very fond of her. . . .

Where our system of reservation became at once most usual and most astounding was in our personal relations. It is not too much to say that in that regard we never for a moment achieved sincerity with one another during the first six years of our life together. It goes even deeper than that, for in my effort to realise the ideal of my marriage I ceased even to attempt to be sincere with myself. I would not admit my own perceptions and interpretations. I tried to fit myself to her thinner and finer determinations. There are people who will say with a note of approval that I was learning to conquer myself. I record that much without any note of approval. . . .

For some years I never deceived Margaret about any concrete fact nor, except for the silence about my earlier life that she had almost forced upon me, did I hide any concrete fact that seemed to affect her, but from the outset I was guilty of immense spiritual concealments, my very marriage was based, I see now, on a spiritual subterfuge; I hid moods from her, pretended feelings. . . .

The interest and excitement of setting-up a house, of walking about it from room to room and from floor to floor, or sitting at one's own dinner table and watching one's wife control conversation with a pretty, timid resolution, of taking a place among the secure and free people of our world, passed almost insensibly into the interest and excitement of my Parliamentary candidature for the Kinghamstead Division, that shapeless chunk of agricultural midland between the Great Western and the North Western railways. I was going to "take hold" at last, the Kinghamstead Division was my appointed handle. I was to find my place in the rather indistinctly sketched constructions that were implicit in the minds of all our circle. The precise place I had to fill and the precise functions I had to discharge were not as yet very clear, but all that, we felt sure, would become plain as things developed.

A few brief months of vague activities of "nursing" gave place to the excitements of the contest that followed the return of Mr. Campbell-Bannerman to power in 1905. So far as the Kinghamstead Division was concerned it was a depressed and tepid battle. I went about the constituency making three speeches that were soon threadbare, and an odd little collection of people worked for me; two solicitors, a cheap photographer, a democratic parson, a number of dissenting ministers, the Mayor of Kinghamstead, a Mrs. Bulger, the widow of an old Chartist who had grown rich through electric traction patents, Sir Roderick Newton, a Jew who had bought Calersham Castle, and old Sir Graham Rivers, that sturdy old soldier, were among my chief supporters. We had headquarters in each town and village, mostly there were empty shops we leased temporarily, and there at least a sort of fuss and a coming and going were maintained. The rest of the population stared in a state of suspended judgment as we went about the business. The country was supposed to be in a state of intellectual conflict and deliberate decision, in history it will no doubt figure as a momentous conflict. Yet except for an occasional flare of bill-sticking or a bill in a window or a placard-plastered motor-car or

an argumentative group of people outside a public-house or a sluggish movement towards the schoolroom or village hall, there was scarcely a sign that a great empire was revising its destinies. Now and then one saw a canvasser on a doorstep. For the most part people went about their business with an entirely irresponsible confidence in the stability of the universe. At times one felt a little absurd with one's flutter of colours and one's air of saving the country.

My opponent was a quite undistinguished Major-General who relied upon his advocacy of Protection, and was particularly anxious we should avoid "personalities" and fight the constituency in a gentlemanly spirit. He was always writing me notes, apologising for excesses on the part of his supporters, or pointing out the undesirability of some course taken by mine.

My speeches had been planned upon broad lines, but they lost touch with these as the polling approached. To begin with I made a real attempt to put what was in my mind before the people I was to supply with a political voice. I spoke of the greatness of our empire and its destinies, of the splendid projects and possibilities of life and order that lay before the world, of all that a resolute and constructive effort might do at the present time. "We are building a state," I said, "secure and splendid, we are in the dawn of the great age of mankind." Sometimes that would get a solitary "'Ear! 'ear!" Then having created, as I imagined, a fine atmosphere, I turned upon the history of the last Conservative administration and brought it into contrast with the wide occasions of the age; discussed its failure to control the grasping financiers in South Africa, its failure to release public education from sectarian squabbles, its misconduct of the Boer War, its waste of the world's resources. . . .

It soon became manifest that my opening and my general spaciousness of method bored my audiences a good deal. The richer and wider my

phrases the thinner sounded my voice in these non-resonating gatherings. Even the platform supporters grew restive unconsciously, and stirred and coughed. They did not recognise themselves as mankind. Building an empire, preparing a fresh stage in the history of humanity, had no appeal for them. They were mostly everyday, toiling people, full of small personal solitudes, and they came to my meetings, I think, very largely as a relaxation. This stuff was not relaxing. They did not think politics was a great constructive process, they thought it was a kind of dog-fight. They wanted fun, they wanted spice, they wanted hits, they wanted also a chance to say "'Ear', 'ear!'" in an intelligent and honourable manner and clap their hands and drum with their feet. The great constructive process in history gives so little scope for clapping and drumming and saying "'Ear, 'ear!'" One might as well think of hounding on the solar system.

So after one or two attempts to lift my audiences to the level of the issues involved, I began to adapt myself to them. I cut down my review of our imperial outlook and destinies more and more, and developed a series of hits and anecdotes and--what shall I call them?--"crudifications" of the issue. My helper's congratulated me on the rapid improvement of my platform style. I ceased to speak of the late Prime Minister with the respect I bore him, and began to fall in with the popular caricature of him as an artful rabbit-witted person intent only on keeping his leadership, in spite of the vigorous attempts of Mr. Joseph Chamberlain to oust him therefrom. I ceased to qualify my statement that Protection would make food dearer for the agricultural labourer. I began to speak of Mr. Alfred Lyttelton as an influence at once insane and diabolical, as a man inspired by a passionate desire to substitute manacled but still criminal Chinese for honest British labourers throughout the world. And when it came to the mention of our own kindly leader, of Mr. John Burns or any one else of any prominence at all on our side I fell more and more into the intonation of one who mentions the high gods. And I had my reward in brighter meetings and readier and

readier applause.

One goes on from phase to phase in these things.

"After all," I told myself, "if one wants to get to Westminster one must follow the road that leads there," but I found the road nevertheless rather unexpectedly distasteful. "When one gets there," I said, "then it is one begins."

But I would lie awake at nights with that sore throat and headache and fatigue which come from speaking in ill-ventilated rooms, and wondering how far it was possible to educate a whole people to great political ideals. Why should political work always rot down to personalities and personal appeals in this way? Life is, I suppose, to begin with and end with a matter of personalities, from personalities all our broader interests arise and to personalities they return. All our social and political effort, all of it, is like trying to make a crowd of people fall into formation. The broader lines appear, but then come a rush and excitement and irrelevancy, and forthwith the incipient order has vanished and the marshals must begin the work over again!

My memory of all that time is essentially confusion. There was a frightful lot of tiresome locomotion in it; for the Kinghamstead Division is extensive, abounding in ill-graded and badly metalled cross-roads and vicious little hills, and singularly unpleasing to the eye in a muddy winter. It is sufficiently near to London to have undergone the same process of ill-regulated expansion that made Bromstead the place it is. Several of its overgrown villages have developed strings of factories and sidings along the railway lines, and there is an abundance of petty villas. There seemed to be no place at which one could take hold of more than this or that element of the population. Now we met in a meeting-house, now in a Masonic Hall or Drill Hall; I also did a certain amount of open-air speaking in the dinner hour outside gas-works and groups of factories. Some

special sort of people was, as it were, secreted in response to each special appeal. One said things carefully adjusted to the distinctive limitations of each gathering. Jokes of an incredible silliness and shallowness drifted about us. Our advisers made us declare that if we were elected we would live in the district, and one hasty agent had bills printed, "If Mr. Remington is elected he will live here." The enemy obtained a number of these bills and stuck them on outhouses, pigstyes, dog-kennels; you cannot imagine how irksome the repetition of that jest became. The vast drifting indifference in between my meetings impressed me more and more. I realised the vagueness of my own plans as I had never done before I brought them to the test of this experience. I was perplexed by the riddle of just how far I was, in any sense of the word, taking hold at all, how far I wasn't myself flowing into an accepted groove.

Margaret was troubled by no such doubts. She was clear I had to go into Parliament on the side of Liberalism and the light, as against the late Government and darkness. Essential to the memory of my first contest, is the memory of her clear bright face, very resolute and grave, helping me consciously, steadfastly, with all her strength. Her quiet confidence, while I was so dissatisfied, worked curiously towards the alienation of my sympathies. I felt she had no business to be so sure of me. I had moments of vivid resentment at being thus marched towards Parliament.

I seemed now always to be discovering alien forces of character in her. Her way of taking life diverged from me more and more. She sounded amazing, independent notes. She bought some particularly costly furs for the campaign that roused enthusiasm whenever she appeared. She also made me a birthday present in November of a heavily fur-trimmed coat and this she would make me remove as I went on to the platform, and hold over her arm until I was ready to resume it. It was fearfully heavy for her and she liked it to be heavy for her. That act of servitude was in essence a towering self-assertion. I would glance sideways while some chairman

floundered through his introduction and see the clear blue eye with which she regarded the audience, which existed so far as she was concerned merely to return me to Parliament. It was a friendly eye, provided they were not silly or troublesome. But it kindled a little at the hint of a hostile question. After we had come so far and taken so much trouble!

She constituted herself the dragoman of our political travels. In hotels she was serenely resolute for the quietest and the best, she rejected all their proposals for meals and substituted a severely nourishing dietary of her own, and even in private houses she astonished me by her tranquil insistence upon special comforts and sustenance. I can see her face now as it would confront a hostess, a little intent, but sweetly resolute and assured.

Since our marriage she had read a number of political memoirs, and she had been particularly impressed by the career of Mrs. Gladstone. I don't think it occurred to her to compare and contrast my quality with that of Mrs. Gladstone's husband. I suspect her of a deliberate intention of achieving parallel results by parallel methods. I was to be Gladstonised. Gladstone it appeared used to lubricate his speeches with a mixture--if my memory serves me right--of egg beaten up in sherry, and Margaret was very anxious I should take a leaf from that celebrated book. She wanted, I know, to hold the glass in her hand while I was speaking.

But here I was firm. "No," I said, very decisively, "simply I won't stand that. It's a matter of conscience. I shouldn't feel--democratic. I'll take my chance of the common water in the carafe on the chairman's table."

"I DO wish you wouldn't," she said, distressed.

It was absurd to feel irritated; it was so admirable of her, a little childish, infinitely womanly and devoted and fine--and I see

now how pathetic. But I could not afford to succumb to her. I wanted to follow my own leading, to see things clearly, and this reassuring pose of a high destiny, of an almost terribly efficient pursuit of a fixed end when as a matter of fact I had a very doubtful end and an aim as yet by no means fixed, was all too seductive for dalliance. . . .

4

And into all these things with the manner of a trifling and casual incident comes the figure of Isabel Rivers. My first impressions of her were of a rather ugly and ungainly, extraordinarily interesting schoolgirl with a beautiful quick flush under her warm brown skin, who said and did amusing and surprising things. When first I saw her she was riding a very old bicycle downhill with her feet on the fork of the frame--it seemed to me to the public danger, but afterwards I came to understand the quality of her nerve better--and on the third occasion she was for her own private satisfaction climbing a tree. On the intervening occasion we had what seems now to have been a long sustained conversation about the political situation and the books and papers I had written.

I wonder if it was.

What a delightful mixture of child and grave woman she was at that time, and how little I reckoned on the part she would play in my life! And since she has played that part, how impossible it is to tell now of those early days! Since I wrote that opening paragraph to this section my idle pen has been, as it were, playing by itself and sketching faces on the blotting pad--one impish wizened visage is oddly like little Bailey--and I have been thinking cheek on fist amidst a limitless wealth of memories. She sits below me on the low

wall under the olive trees with our little child in her arms. She is now the central fact in my life. It still seems a little incredible that that should be so. She has destroyed me as a politician, brought me to this belated rebeginning of life. When I sit down and try to make her a girl again, I feel like the Arabian fisherman who tried to put the genius back into the pot from which it had spread gigantic across the skies. . . .

I have a very clear vision of her rush downhill past our labouring ascendant car--my colours fluttered from handle-bar and shoulder-knot--and her waving hand and the sharp note of her voice. She cried out something, I don't know what, some greeting.

"What a pretty girl!" said Margaret.

Parvill, the cheap photographer, that industrious organiser for whom by way of repayment I got those magic letters, that knighthood of the underlings, "J. P." was in the car with us and explained her to us. "One of the best workers you have," he said. . . .

And then after a toilsome troubled morning we came, rather cross from the strain of sustained amiability, to Sir Graham Rivers' house. It seemed all softness and quiet--I recall dead white panelling and oval mirrors horizontally set and a marble fireplace between white marble-blind Homer and marble-blind Virgil, very grave and fine--and how Isabel came in to lunch in a shapeless thing like a blue smock that made her bright quick-changing face seem yellow under her cloud of black hair. Her step-sister was there, Miss Gamer, to whom the house was to descend, a well-dressed lady of thirty, amiably disavowing responsibility for Isabel in every phrase and gesture. And there was a very pleasant doctor, an Oxford man, who seemed on excellent terms with every one. It was manifest that he was in the habit of sparring with the girl, but on this occasion she wasn't sparring and refused to be teased into a display in spite of the taunts of either him or her father. She was, they discovered

with rising eyebrows, shy. It seemed an opportunity too rare for them to miss. They proclaimed her enthusiasm for me in a way that brought a flush to her cheek and a look into her eye between appeal and defiance. They declared she had read my books, which I thought at the time was exaggeration, their dry political quality was so distinctly not what one was accustomed to regard as schoolgirl reading. Miss Gamer protested to protect her, "When once in a blue moon Isabel is well-behaved. . . .!"

Except for these attacks I do not remember much of the conversation at table; it was, I know, discursive and concerned with the sort of topographical and social and electioneering fact natural to such a visit. Old Rivers struck me as a delightful person, modestly unconscious of his doubly-earned V. C. and the plucky defence of Kardin-Bergat that won his baronetcy. He was that excellent type, the soldier radical, and we began that day a friendship that was only ended by his death in the hunting-field three years later. He interested Margaret into a disregard of my plate and the fact that I had secured the illegal indulgence of Moselle. After lunch we went for coffee into another low room, this time brown panelled and looking through French windows on a red-walled garden, graceful even in its winter desolation. And there the conversation suddenly picked up and became good. It had fallen to a pause, and the doctor, with an air of definitely throwing off a mask and wrecking an established tranquillity, remarked: "Very probably you Liberals will come in, though I'm not sure you'll come in so mightily as you think, but what you do when you do come in passes my comprehension."

"There's good work sometimes," said Sir Graham, "in undoing."

"You can't govern a great empire by amending and repealing the Acts of your predecessors," said the doctor.

There came that kind of pause that happens when a subject is broached too big and difficult for the gathering. Margaret's blue

eyes regarded the speaker with quiet disapproval for a moment, and then came to me in the not too confident hope that I would snub him out of existence with some prompt rhetorical stroke. A voice spoke out of the big arm-chair.

"We'll do things," said Isabel.

The doctor's eye lit with the joy of the fisherman who strikes his fish at last. "What will you do?" he asked her.

"Every one knows we're a mixed lot," said Isabel.

"Poor old chaps like me!" interjected the general.

"But that's not a programme," said the doctor.

"But Mr. Remington has published a programme," said Isabel.

The doctor cocked half an eye at me.

"In some review," the girl went on. "After all, we're not going to elect the whole Liberal party in the Kinghamstead Division. I'm a Remington-ite!"

"But the programme," said the doctor, "the programme--"

"In front of Mr. Remington!"

"Scandal always comes home at last," said the doctor. "Let him hear the worst."

"I'd like to hear," I said. "Electioneering shatters convictions and enfeebles the mind."

"Not mine," said Isabel stoutly. "I mean--Well, anyhow I take it

Mr. Remington stands for constructing a civilised state out of this muddle."

"THIS muddle," protested the doctor with an appeal of the eye to the beautiful long room and the ordered garden outside the bright clean windows.

"Well, THAT muddle, if you like! There's a slum within a mile of us already. The dust and blacks get worse and worse, Sissie?"

"They do," agreed Miss Gamer.

"Mr. Remington stands for construction, order, education, discipline."

"And you?" said the doctor.

"I'm a good Remington-ite."

"Discipline!" said the doctor.

"Oh!" said Isabel. "At times one has to be--Napoleonic. They want to libel me, Mr. Remington. A political worker can't always be in time for meals, can she? At times one has to make--splendid cuts."

Miss Gamer said something indistinctly.

"Order, education, discipline," said Sir Graham. "Excellent things! But I've a sort of memory--in my young days--we talked about something called liberty."

"Liberty under the law," I said, with an unexpected approving murmur from Margaret, and took up the defence. "The old Liberal definition of liberty was a trifle uncritical. Privilege and legal restrictions are not the only enemies of liberty. An uneducated, underbred, and underfed propertyless man is a man who has lost the

possibility of liberty. There's no liberty worth a rap for him. A man who is swimming hopelessly for life wants nothing but the liberty to get out of the water; he'll give every other liberty for it--until he gets out."

Sir Graham took me up and we fell into a discussion of the changing qualities of Liberalism. It was a good give-and-take talk, extraordinarily refreshing after the nonsense and crowding secondary issues of the electioneering outside. We all contributed more or less except Miss Gamer; Margaret followed with knitted brows and occasional interjections. "People won't SEE that," for example, and "It all seems so plain to me." The doctor showed himself clever but unsubstantial and inconsistent. Isabel sat back with her black mop of hair buried deep in the chair looking quickly from face to face. Her colour came and went with her vivid intellectual excitement; occasionally she would dart a word, usually a very apt word, like a lizard's tongue into the discussion. I remember chiefly that a chance illustration betrayed that she had read Bishop Burnet. . . .

After that it was not surprising that Isabel should ask for a lift in our car as far as the Lurky Committee Room, and that she should offer me quite sound advice EN ROUTE upon the intellectual temperament of the Lurky gasworkers.

On the third occasion that I saw Isabel she was, as I have said, climbing a tree--and a very creditable tree--for her own private satisfaction. It was a lapse from the high seriousness of politics, and I perceived she felt that I might regard it as such and attach too much importance to it. I had some difficulty in reassuring her. And it's odd to note now--it has never occurred to me before--that from that day to this I do not think I have ever reminded Isabel of that encounter.

And after that memory she seems to be flickering about always in the election, an inextinguishable flame; now she flew by on her bicycle,

now she dashed into committee rooms, now she appeared on doorsteps in animated conversation with dubious voters; I took every chance I could to talk to her--I had never met anything like her before in the world, and she interested me immensely--and before the polling day she and I had become, in the frankest simplicity, fast friends. . . .

That, I think, sets out very fairly the facts of our early relationship. But it is hard to get it true, either in form or texture, because of the bright, translucent, coloured, and refracting memories that come between. One forgets not only the tint and quality of thoughts and impressions through that intervening haze, one forgets them altogether. I don't remember now that I ever thought in those days of passionate love or the possibility of such love between us. I may have done so again and again. But I doubt it very strongly. I don't think I ever thought of such aspects. I had no more sense of any danger between us, seeing the years and things that separated us, than I could have had if she had been an intelligent bright-eyed bird. Isabel came into my life as a new sort of thing; she didn't join on at all to my previous experiences of womanhood. They were not, as I have laboured to explain, either very wide or very penetrating experiences, on the whole, "strangled dinginess" expresses them, but I do not believe they were narrower or shallower than those of many other men of my class. I thought of women as pretty things and beautiful things, pretty rather than beautiful, attractive and at times disconcertingly attractive, often bright and witty, but, because of the vast reservations that hid them from me, wanting, subtly and inevitably wanting, in understanding. My idealisation of Margaret had evaporated insensibly after our marriage. The shrine I had made for her in my private thoughts stood at last undisguisedly empty. But Isabel did not for a moment admit of either idealisation or interested contempt. She opened a new sphere of womanhood to me. With her steady amber-brown eyes, her unaffected interest in impersonal things, her upstanding waistless blue body, her energy,

decision and courage, she seemed rather some new and infinitely finer form of boyhood than a feminine creature, as I had come to measure femininity. She was my perfect friend. Could I have foreseen, had my world been more wisely planned, to this day we might have been such friends.

She seemed at that time unconscious of sex, though she has told me since how full she was of protesting curiosities and restrained emotions. She spoke, as indeed she has always spoken, simply, clearly, and vividly; schoolgirl slang mingled with words that marked ample voracious reading, and she moved quickly with the free directness of some graceful young animal. She took many of the easy freedoms a man or a sister might have done with me. She would touch my arm, lay a hand on my shoulder as I sat, adjust the lapel of a breast-pocket as she talked to me. She says now she loved me always from the beginning. I doubt if there was a suspicion of that in her mind those days. I used to find her regarding me with the clearest, steadiest gaze in the world, exactly like the gaze of some nice healthy innocent animal in a forest, interested, inquiring, speculative, but singularly untroubled. . . .

5

Polling day came after a last hoarse and dingy crescendo. The excitement was not of the sort that makes one forget one is tired out. The waiting for the end of the count has left a long blank mark on my memory, and then everyone was shaking my hand and repeating: "Nine hundred and seventy-six."

My success had been a foregone conclusion since the afternoon, but we all behaved as though we had not been anticipating this result for hours, as though any other figures but nine hundred and seventy-

six would have meant something entirely different. "Nine hundred and seventy-six!" said Margaret. "They didn't expect three hundred."

"Nine hundred and seventy-six," said a little short man with a paper. "It means a big turnover. Two dozen short of a thousand, you know."

A tremendous hullaboo began outside, and a lot of fresh people came into the room.

Isabel, flushed but not out of breath, Heaven knows where she had sprung from at that time of night! was running her hand down my sleeve almost caressingly, with the innocent bold affection of a girl. "Got you in!" she said. "It's been no end of a lark."

"And now," said I, "I must go and be constructive."

"Now you must go and be constructive," she said.

"You've got to live here," she added.

"By Jove! yes," I said. "We'll have to house hunt."

"I shall read all your speeches."

She hesitated.

"I wish I was you," she said, and said it as though it was not exactly the thing she was meaning to say.

"They want you to speak," said Margaret, with something unsaid in her face.

"You must come out with me," I answered, putting my arm through

hers, and felt someone urging me to the French windows that gave on the balcony.

"If you think--" she said, yielding gladly

"Oh, RATHER!" said I.

The Mayor of Kinghamstead, a managing little man with no great belief in my oratorical powers, was sticking his face up to mine.

"It's all over," he said, " and you've won. Say all the nice things you can and say them plainly."

I turned and handed Margaret out through the window and stood looking over the Market-place, which was more than half filled with swaying people. The crowd set up a roar of approval at the sight of us, tempered by a little booing. Down in one corner of the square a fight was going on for a flag, a fight that even the prospect of a speech could not instantly check. "Speech!" cried voices, "Speech!" and then a brief "boo-oo-oo" that was drowned in a cascade of shouts and cheers. The conflict round the flag culminated in the smashing of a pane of glass in the chemist's window and instantly sank to peace.

"Gentlemen voters of the Kinghamstead Division," I began.

"Votes for Women!" yelled a voice, amidst laughter--the first time I remember hearing that memorable war-cry.

"Three cheers for Mrs. Remington!"

"Mrs. Remington asks me to thank you," I said, amidst further uproar and reiterated cries of "Speech!"

Then silence came with a startling swiftness.

Isabel was still in my mind, I suppose. "I shall go to Westminster," I began. I sought for some compelling phrase and could not find one. "To do my share," I went on, "in building up a great and splendid civilisation."

I paused, and there was a weak gust of cheering, and then a renewal of booing.

"This election," I said, "has been the end and the beginning of much. New ideas are abroad--"

"Chinese labour," yelled a voice, and across the square swept a wildfire of booting and bawling.

It is one of the few occasions when I quite lost my hold on a speech. I glanced sideways and saw the Mayor of Kinghamstead speaking behind his hand to Parvill. By a happy chance Parvill caught my eye.

"What do they want?" I asked.

"Eh?"

"What do they want?"

"Say something about general fairness--the other side," prompted Parvill, flattered but a little surprised by my appeal. I pulled myself hastily into a more popular strain with a gross eulogy of my opponent's good taste.

"Chinese labour!" cried the voice again.

"You've given that notice to quit," I answered.

The Market-place roared delight, but whether that delight expressed hostility to Chinamen or hostility to their practical enslavement no student of the General Election of 1906 has ever been able to determine. Certainly one of the most effective posters on our side displayed a hideous yellow face, just that and nothing more. There was not even a legend to it. How it impressed the electorate we did not know, but that it impressed the electorate profoundly there can be no disputing.

6

Kinghamstead was one of the earliest constituencies fought, and we came back--it must have been Saturday--triumphant but very tired, to our house in Radnor Square. In the train we read the first intimations that the victory of our party was likely to be a sweeping one.

Then came a period when one was going about receiving and giving congratulations and watching the other men arrive, very like a boy who has returned to school with the first batch after the holidays. The London world reeked with the General Election; it had invaded the nurseries. All the children of one's friends had got big maps of England cut up into squares to represent constituencies and were busy sticking gummed blue labels over the conquered red of Unionism that had hitherto submerged the country. And there were also orange labels, if I remember rightly, to represent the new Labour party, and green for the Irish. I engaged myself to speak at one or two London meetings, and lunched at the Reform, which was fairly tepid, and dined and spent one or two tumultuous evenings at the National Liberal Club, which was in active eruption. The National Liberal became feverishly congested towards midnight as the results of the counting came dropping in. A big green-baize screen had been fixed

up at one end of the large smoking-room with the names of the constituencies that were voting that day, and directly the figures came to hand, up they went, amidst cheers that at last lost their energy through sheer repetition, whenever there was record of a Liberal gain. I don't remember what happened when there was a Liberal loss; I don't think that any were announced while I was there.

How packed and noisy the place was, and what a reek of tobacco and whisky fumes we made! Everybody was excited and talking, making waves of harsh confused sound that beat upon one's ears, and every now and then hoarse voices would shout for someone to speak. Our little set was much in evidence. Both the Cramptons were in, Lewis, Bunting Harblow. We gave brief addresses attuned to this excitement and the late hour, amidst much enthusiasm.

Now we can DO things!" I said amidst a rapture of applause. Men I did not know from Adam held up glasses and nodded to me in solemn fuddled approval as I came down past them into the crowd again.

Men were betting whether the Unionists would lose more or less than two hundred seats.

"I wonder just what we shall do with it all," I heard one sceptic speculating. . . .

After these orgies I would get home very tired and excited, and find it difficult to get to sleep. I would lie and speculate about what it was we WERE going to do. One hadn't anticipated quite such a tremendous accession to power for one's party. Liberalism was swirling in like a flood. . . .

I found the next few weeks very unsatisfactory and distressing. I don't clearly remember what it was I had expected; I suppose the fuss and strain of the General Election had built up a feeling that

my return would in some way put power into my hands, and instead I found myself a mere undistinguished unit in a vast but rather vague majority. There were moments when I felt very distinctly that a majority could be too big a crowd altogether. I had all my work still before me, I had achieved nothing as yet but opportunity, and a very crowded opportunity it was at that. Everyone about me was chatting Parliament and appointments; one breathed distracting and irritating speculations as to what would be done and who would be asked to do it. I was chiefly impressed by what was unlikely to be done and by the absence of any general plan of legislation to hold us all together. I found the talk about Parliamentary procedure and etiquette particularly trying. We dined with the elder Cramptons one evening, and old Sir Edward was lengthily sage about what the House liked, what it didn't like, what made a good impression and what a bad one. "A man shouldn't speak more than twice in his first session, and not at first on too contentious a topic," said Sir Edward. "No."

"Very much depends on manner. The House hates a lecturer. There's a sort of airy earnestness--"

He waved his cigar to eke out his words.

"Little peculiarities of costume count for a great deal. I could name one man who spent three years living down a pair of spatterdashers. On the other hand--a thing like that--if it catches the eye of the PUNCH man, for example, may be your making."

He went off into a lengthy speculation of why the House had come to like an originally unpopular Irishman named Biggar. . . .

The opening of Parliament gave me some peculiar moods. I began to feel more and more like a branded sheep. We were sworn in in batches, dozens and scores of fresh men, trying not to look too fresh under the inspection of policemen and messengers, all of us

carrying new silk hats and wearing magisterial coats. It is one of my vivid memories from this period, the sudden outbreak of silk hats in the smoking-room of the National Liberal Club. At first I thought there must have been a funeral. Familiar faces that one had grown to know under soft felt hats, under bowlers, under liberal-minded wide brims, and above artistic ties and tweed jackets, suddenly met one, staring with the stern gaze of self-consciousness, from under silk hats of incredible glossiness. There was a disposition to wear the hat much too forward, I thought, for a good Parliamentary style.

There was much play with the hats all through; a tremendous competition to get in first and put hats on coveted seats. A memory hangs about me of the House in the early afternoon, an inhumane desolation inhabited almost entirely by silk hats. The current use of cards to secure seats came later. There were yards and yards of empty green benches with hats and hats and hats distributed along them, resolute-looking top hats, lax top hats with a kind of shadowy grin under them, sensible top hats brim upward, and one scandalous incontinent that had rolled from the front Opposition bench right to the middle of the floor. A headless hat is surely the most soulless thing in the world, far worse even than a skull. . . .

At last, in a leisurely muddled manner we got to the Address; and I found myself packed in a dense elbowing crowd to the right of the Speaker's chair; while the attenuated Opposition, nearly leaderless after the massacre, tilted its brim to its nose and sprawled at its ease amidst its empty benches.

There was a tremendous hullaboo about something, and I craned to see over the shoulder of the man in front. "Order, order, order!"

"What's it about?" I asked.

The man in front of me was clearly no better informed, and then I

gathered from a slightly contemptuous Scotchman beside me that it was Chris Robinson had walked between the honourable member in possession of the house and the Speaker. I caught a glimpse of him blushing and whispering about his misadventure to a colleague. He was just that same little figure I had once assisted to entertain at Cambridge, but grey-haired now, and still it seemed with the same knitted muffler he had discarded for a reckless half-hour while he talked to us in Hatherleigh's rooms.

It dawned upon me that I wasn't particularly wanted in the House, and that I should get all I needed of the opening speeches next day from the TIMES.

I made my way out and was presently walking rather aimlessly through the outer lobby.

I caught myself regarding the shadow that spread itself out before me, multiplied itself in blue tints of various intensity, shuffled itself like a pack of cards under the many lights, the square shoulders, the silk hat, already worn with a parliamentary tilt backward; I found I was surveying this statesmanlike outline with a weak approval. "A MEMBER!" I felt the little cluster of people that were scattered about the lobby must be saying.

"Good God!" I said in hot reaction, "what am I doing here?"

It was one of those moments infinitely trivial in themselves, that yet are cardinal in a man's life. It came to me with extreme vividness that it wasn't so much that I had got hold of something as that something had got hold of me. I distinctly recall the rebound of my mind. Whatever happened in this Parliament, I at least would attempt something. "By God!" I said, "I won't be overwhelmed. I am here to do something, and do something I will!"

But I felt that for the moment I could not remain in the House.

I went out by myself with my thoughts into the night. It was a chilling night, and rare spots of rain were falling. I glanced over my shoulder at the lit windows of the Lords. I walked, I remember, westward, and presently came to the Grosvenar Embankment and followed it, watching the glittering black rush of the river and the dark, dimly lit barges round which the water swirled. Across the river was the hunched sky-line of Doulton's potteries, and a kiln flared redly. Dimly luminous trams were gliding amidst a dotted line of lamps, and two little trains crawled into Waterloo station. Mysterious black figures came by me and were suddenly changed to the commonplace at the touch of the nearer lamps. It was a big confused world, I felt, for a man to lay his hands upon.

I remember I crossed Vauxhall Bridge and stood for a time watching the huge black shapes in the darkness under the gas-works. A shoal of coal barges lay indistinctly on the darkly shining mud and water below, and a colossal crane was perpetually hauling up coal into mysterious blacknesses above, and dropping the empty clutch back to the barges. Just one or two minute black featureless figures of men toiled amidst these monster shapes. They did not seem to be controlling them but only moving about among them. These gas-works have a big chimney that belches a lurid flame into the night, a livid shivering bluish flame, shot with strange crimson streaks. . . .

On the other side of Lambeth Bridge broad stairs go down to the lapping water of the river; the lower steps are luminous under the lamps and one treads unwarned into thick soft Thames mud. They seem to be purely architectural steps, they lead nowhere, they have an air of absolute indifference to mortal ends.

Those shapes and large inhuman places--for all of mankind that one sees at night about Lambeth is minute and pitiful beside the industrial monsters that snort and toil there--mix up inextricably with my memories of my first days as a legislator. Black figures

drift by me, heavy vans clatter, a newspaper rough tears by on a motor bicycle, and presently, on the Albert Embankment, every seat has its one or two outcasts huddled together and slumbering.

"These things come, these things go," a whispering voice urged upon me, "as once those vast unmeaning Saurians whose bones encumber museums came and went rejoicing noisily in fruitless lives." . . .

Fruitless lives!--was that the truth of it all? . . .

Later I stood within sight of the Houses of Parliament in front of the colonnades of St Thomas's Hospital. I leant on the parapet close by a lamp-stand of twisted dolphins--and I prayed!

I remember the swirl of the tide upon the water, and how a string of barges presently came swinging and bumping round as high-water turned to ebb. That sudden change of position and my brief perplexity at it, sticks like a paper pin through the substance of my thoughts. It was then I was moved to prayer. I prayed that night that life might not be in vain, that in particular I might not live in vain. I prayed for strength and faith, that the monstrous blundering forces in life might not overwhelm me, might not beat me back to futility and a meaningless acquiescence in existent things. I knew myself for the weakling I was, I knew that nevertheless it was set for me to make such order as I could out of these disorders, and my task cowed me, gave me at the thought of it a sense of yielding feebleness.

"Break me, O God," I prayed at last, "disgrace me, torment me, destroy me as you will, but save me from self-complacency and little interests and little successes and the life that passes like the shadow of a dream."

BOOK THE THIRD

THE HEART OF POLITICS

CHAPTER THE FIRST

THE RIDDLE FOR THE STATESMAN

1

I have been planning and replanning, writing and rewriting, this next portion of my book for many days. I perceive I must leave it raw edged and ill joined. I have learnt something of the impossibility of History. For all I have had to tell is the story of one man's convictions and aims and how they reacted upon his life; and I find it too subtle and involved and intricate for the doing. I find it taxes all my powers to convey even the main forms and forces in that development. It is like looking through moving media of changing hue and variable refraction at something vitally unstable. Broad theories and generalisations are mingled with personal influences, with prevalent prejudices; and not only coloured but altered by phases of hopefulness and moods of depression. The web is made up of the most diverse elements, beyond treatment multitudinous. . . . For a week or so I desisted altogether, and walked over the mountains and returned to sit through the warm soft mornings among the shaded rocks above this little perched-up house of ours, discussing my difficulties with Isabel and I think on the whole complicating them further in the effort to simplify them to manageable and stateable elements.

Let me, nevertheless, attempt a rough preliminary analysis of this confused process. A main strand is quite easily traceable. This main strand is the story of my obvious life, my life as it must have looked to most of my acquaintances. It presents you with a young couple, bright, hopeful, and energetic, starting out under Altiora's auspices to make a career. You figure us well dressed and active, running about in motor-cars, visiting in great people's houses, dining amidst brilliant companies, going to the theatre, meeting in the lobby. Margaret wore hundreds of beautiful dresses. We must have had an air of succeeding meritoriously during that time.

We did very continually and faithfully serve our joint career. I thought about it a great deal, and did and refrained from doing ten thousand things for the sake of it. I kept up a solicitude for it, as it were by inertia, long after things had happened and changes occurred in me that rendered its completion impossible. Under certain very artless pretences, we wanted steadfastly to make a handsome position in the world, achieve respect, SUCCEED. Enormous unseen changes had been in progress for years in my mind and the realities of my life, before our general circle could have had any inkling of their existence, or suspected the appearances of our life. Then suddenly our proceedings began to be deflected, our outward unanimity visibly strained and marred by the insurgence of these so long-hidden developments.

That career had its own hidden side, of course; but when I write of these unseen factors I do not mean that but something altogether broader. I do not mean the everyday pettinesses which gave the cynical observer scope and told of a narrower, baser aspect of the fair but limited ambitions of my ostensible self. This "sub-careerist" element noted little things that affected the career, made me suspicious of the rivalry of so-and-so, propitiatory to so-and-so, whom, as a matter of fact, I didn't respect or feel in the least sympathetic towards; guarded with that man, who for all his charm and interest wasn't helpful, and a little touchy at the

appearance of neglect from that. No, I mean something greater and not something smaller when I write of a hidden life.

In the ostensible self who glowed under the approbation of Altiora Bailey, and was envied and discussed, praised and depreciated, in the House and in smoking-room gossip, you really have as much of a man as usually figures in a novel or an obituary notice. But I am tremendously impressed now in the retrospect by the realisation of how little that frontage represented me, and just how little such frontages do represent the complexities of the intelligent contemporary. Behind it, yet struggling to disorganise and alter it, altogether, was a far more essential reality, a self less personal, less individualised, and broader in its references. Its aims were never simply to get on; it had an altogether different system of demands and satisfactions. It was critical, curious, more than a little unfeeling--and relentlessly illuminating.

It is just the existence and development of this more generalised self-behind-the-frontage that is making modern life so much more subtle and intricate to render, and so much more hopeful in its relations to the perplexities of the universe. I see this mental and spiritual hinterland vary enormously in the people about me, from a type which seems to keep, as people say, all its goods in the window, to others who, like myself, come to regard the ostensible existence more and more as a mere experimental feeder and agent for that greater personality behind. And this back-self has its history of phases, its crises and happy accidents and irrevocable conclusions, more or less distinct from the adventures and achievements of the ostensible self. It meets persons and phrases, it assimilates the spirit of a book, it is startled into new realisations by some accident that seems altogether irrelevant to the general tenor of one's life. Its increasing independence of the ostensible career makes it the organ of corrective criticism; it accumulates disturbing energy. Then it breaks our overt promises and repudiates our pledges, coming down at last like an overbearing

mentor upon the small engagements of the pupil.

In the life of the individual it takes the role that the growth of philosophy, science, and creative literature may play in the development of mankind.

2

It is curious to recall how Britten helped shatter that obvious, lucidly explicable presentation of myself upon which I had embarked with Margaret. He returned to revive a memory of adolescent dreams and a habit of adolescent frankness; he reached through my shallow frontage as no one else seemed capable of doing, and dragged that back-self into relation with it.

I remember very distinctly a dinner and a subsequent walk with him which presents itself now as altogether typical of the quality of his influence.

I had come upon him one day while lunching with Somers and Sutton at the Playwrights' Club, and had asked him to dinner on the spur of the moment. He was oddly the same curly-headed, red-faced ventriloquist, and oddly different, rather seedy as well as untidy, and at first a little inclined to make comparisons with my sleek successfulness. But that disposition presently evaporated, and his talk was good and fresh and provocative. And something that had long been straining at its checks in my mind flapped over, and he and I found ourselves of one accord.

Altiora wasn't at this dinner. When she came matters were apt to become confusedly strenuous. There was always a slight and ineffectual struggle at the end on the part of Margaret to

anticipate Altiora's overpowering tendency to a rally and the establishment of some entirely unjustifiable conclusion by a COUP-DE-MAIN. When, however, Altiora was absent, the quieter influence of the Cramptons prevailed; temperance and information for its own sake prevailed excessively over dinner and the play of thought. . . . Good Lord! what bores the Cramptons were! I wonder I endured them as I did. They had all of them the trick of lying in wait conversationally; they had no sense of the self-exposures, the gallant experiments in statement that are necessary for good conversation. They would watch one talking with an expression exactly like peeping through bushes. Then they would, as it were, dash out, dissent succinctly, contradict some secondary fact, and back to cover. They gave one twilight nerves. Their wives were easier but still difficult at a stretch; they talked a good deal about children and servants, but with an air caught from Altiora of making observations upon sociological types. Lewis gossiped about the House in an entirely finite manner. He never raised a discussion; nobody ever raised a discussion. He would ask what we thought of Evesham's question that afternoon, and Edward would say it was good, and Mrs. Willie, who had been behind the grille, would think it was very good, and then Willie, parting the branches, would say rather conclusively that he didn't think it was very much good, and I would deny hearing the question in order to evade a profitless statement of views in that vacuum, and then we would cast about in our minds for some other topic of equal interest. . . .

On this occasion Altiora was absent, and to qualify our Young Liberal bleakness we had Mrs. Millingham, with her white hair and her fresh mind and complexion, and Esmeer. Willie Crampton was with us, but not his wife, who was having her third baby on principle; his brother Edward was present, and the Lewises, and of course the Bunting Harblows. There was also some other lady. I remember her as pale blue, but for the life of me I cannot remember her name.

Quite early there was a little breeze between Edward Crampton and

Esmeer, who had ventured an opinion about the partition of Poland. Edward was at work then upon the seventh volume of his monumental Life of Kosciusko, and a little impatient with views perhaps not altogether false but betraying a lamentable ignorance of accessible literature. At any rate, his correction of Esmeer was magisterial. After that there was a distinct and not altogether delightful pause, and then some one, it may have been the pale-blue lady, asked Mrs. Lewis whether her aunt Lady Carmixter had returned from her rest-and-sun-cure in Italy. That led to a rather anxiously sustained talk about regimen, and Willie told us how he had profited by the no-breakfast system. It had increased his power of work enormously. He could get through ten hours a day now without inconvenience.

"What do you do?" said Esmeer abruptly.

"Oh! no end of work. There's all the estate and looking after things."

"But publicly?"

"I asked three questions yesterday. And for one of them I had to consult nine books!"

We were drifting, I could see, towards Doctor Haig's system of dietary, and whether the exclusion or inclusion of fish and chicken were most conducive to high efficiency, when Britten, who had refused lemonade and claret and demanded Burgundy, broke out, and was discovered to be demanding in his throat just what we Young Liberals thought we were up to?

"I want," said Britten, repeating his challenge a little louder, "to hear just exactly what you think you are doing in Parliament?"

Lewis laughed nervously, and thought we were "Seeking the Good of the Community."

"HOW?"

"Beneficent Legislation," said Lewis.

"Beneficent in what direction?" insisted Britten. "I want to know where you think you are going."

"Amelioration of Social Conditions," said Lewis.

"That's only a phrase!"

"You wouldn't have me sketch bills at dinner?"

"I'd like you to indicate directions," said Britten, and waited.

"Upward and On," said Lewis with conscious neatness, and turned to ask Mrs. Bunting Harblow about her little boy's French.

For a time talk frothed over Britten's head, but the natural mischief in Mrs. Millingham had been stirred, and she was presently echoing his demand in lispings, quasi-confidential undertones. "What ARE we Liberals doing?" Then Esmeer fell in with the revolutionaries.

To begin with, I was a little shocked by this clamour for fundamentals--and a little disconcerted. I had the experience that I suppose comes to every one at times of discovering oneself together with two different sets of people with whom one has maintained two different sets of attitudes. It had always been, I perceived, an instinctive suppression in our circle that we shouldn't be more than vague about our political ideals. It had almost become part of my morality to respect this convention. It was understood we were all working hard, and keeping ourselves fit, tremendously fit, under Altiora's inspiration, Pro Bono Publico.

Bunting Harblow had his under-secretaryship, and Lewis was on the verge of the Cabinet, and these things we considered to be in the nature of confirmations. . . . It added to the discomfort of the situation that these plunging enquiries were being made in the presence of our wives.

The rebel section of our party forced the talk.

Edward Crampton was presently declaring--I forget in what relation: "The country is with us."

My long-controlled hatred of the Cramptons' stereotyped phrases about the Country and the House got the better of me. I showed my cloven hoof to my friends for the first time.

"We don't respect the Country as we used to do," I said. "We haven't the same belief we used to have in the will of the people. It's no good, Crampton, trying to keep that up. We Liberals know as a matter of fact--nowadays every one knows--that the monster that brought us into power has, among other deficiencies, no head. We've got to give it one--if possible with brains and a will. That lies in the future. For the present if the country is with us, it means merely that we happen to have hold of its tether."

Lewis was shocked. A "mandate" from the Country was sacred to his system of pretences.

Britten wasn't subdued by his first rebuff; presently he was at us again. There were several attempts to check his outbreak of interrogation; I remember the Cramptons asked questions about the welfare of various cousins of Lewis who were unknown to the rest of us, and Margaret tried to engage Britten in a sympathetic discussion of the Arts and Crafts exhibition. But Britten and Esmeer were persistent, Mrs. Millingham was mischievous, and in the end our rising hopes of Young Liberalism took to their thickets for good,

while we talked all over them of the prevalent vacuity of political intentions. Margaret was perplexed by me. It is only now I perceive just how perplexing I must have been. "Of course, she said with that faint stress of apprehension in her eyes, one must have aims." And, "it isn't always easy to put everything into phrases." "Don't be long," said Mrs. Edward Crampton to her husband as the wives trooped out. And afterwards when we went upstairs I had an indefinable persuasion that the ladies had been criticising Britten's share in our talk in an altogether unfavourable spirit. Mrs. Edward evidently thought him aggressive and impertinent, and Margaret with a quiet firmness that brooked no resistance, took him at once into a corner and showed him Italian photographs by Coburn. We dispersed early.

I walked with Britten along the Chelsea back streets towards Battersea Bridge--he lodged on the south side.

"Mrs. Millingham's a dear," he began.

"She's a dear."

"I liked her demand for a hansom because a four-wheeler was too safe."

"She was worked up," I said. "She's a woman of faultless character, but her instincts, as Altiora would say, are anarchistic--when she gives them a chance."

"So she takes it out in hansom cabs."

"Hansom cabs."

"She's wise," said Britten. . . .

"I hope, Remington," he went on after a pause, "I didn't rag your

other guests too much. I've a sort of feeling at moments-- Remington, those chaps are so infernally not--not bloody. It's part of a man's duty sometimes at least to eat red beef and get drunk. How is he to understand government if he doesn't? It scares me to think of your lot--by a sort of misapprehension--being in power. A kind of neuralgia in the head, by way of government. I don't understand where YOU come in. Those others--they've no lusts. Their ideal is anaemia. You and I, we had at least a lust to take hold of life and make something of it. They--they want to take hold of life and make nothing of it. They want to cut out all the stimulants. Just as though life was anything else but a reaction to stimulation!" . . .

He began to talk of his own life. He had had ill-fortune through most of it. He was poor and unsuccessful, and a girl he had been very fond of had been attacked and killed by a horse in a field in a very horrible manner. These things had wounded and tortured him, but they hadn't broken him. They had, it seemed to me, made a kind of crippled and ugly demigod of him. He was, I began to perceive, so much better than I had any right to expect. At first I had been rather struck by his unkempt look, and it made my reaction all the stronger. There was about him something, a kind of raw and bleeding faith in the deep things of life, that stirred me profoundly as he showed it. My set of people had irritated him and disappointed him. I discovered at his touch how they irritated him. He reproached me boldly. He made me feel ashamed of my easy acquiescences as I walked in my sleek tall neatness beside his rather old coat, his rather battered hat, his sturdier shorter shape, and listened to his denunciations of our self-satisfied New Liberalism and Progressivism.

"It has the same relation to progress--the reality of progress--that the things they paint on door panels in the suburbs have to art and beauty. There's a sort of filiation. . . . Your Altiora's just the political equivalent of the ladies who sell traced cloth for

embroidery; she's a dealer in Refined Social Reform for the Parlour. The real progress, Remington, is a graver thing and a painfuller thing and a slower thing altogether. Look! THAT"--and he pointed to where under a boarding in the light of a gas lamp a dingy prostitute stood lurking--" was in Babylon and Nineveh. Your little lot make believe there won't be anything of the sort after this Parliament! They're going to vanish at a few top notes from Altiora Bailey! Remington!--it's foolery. It's prigs at play. It's make-believe, make-believe! Your people there haven't got hold of things, aren't beginning to get hold of things, don't know anything of life at all, shirk life, avoid life, get in little bright clean rooms and talk big over your bumpers of lemonade while the Night goes by outside--untouched. Those Crampton fools slink by all this,"--he waved at the woman again--"pretend it doesn't exist, or is going to be banished root and branch by an Act to keep children in the wet outside public-houses. Do you think they really care, Remington? I don't. It's make-believe. What they want to do, what Lewis wants to do, what Mrs. Bunting Harblow wants her husband to do, is to sit and feel very grave and necessary and respected on the Government benches. They think of putting their feet out like statesmen, and tilting shiny hats with becoming brims down over their successful noses. Presentation portrait to a club at fifty. That's their Reality. That's their scope. They don't, it's manifest, WANT to think beyond that. The things there ARE, Remington, they'll never face! the wonder and the depth of life,--lust, and the night-sky,--pain."

"But the good intention," I pleaded, "the Good Will!"

"Sentimentality," said Britten. "No Good Will is anything but dishonesty unless it frets and burns and hurts and destroys a man. That lot of yours have nothing but a good will to think they have good will. Do you think they lie awake of nights searching their hearts as we do? Lewis? Crampton? Or those neat, admiring, satisfied little wives? See how they shrank from the probe!"

"We all," I said, "shrink from the probe."

"God help us!" said Britten. . . .

"We are but vermin at the best, Remington," he broke out, "and the greatest saint only a worm that has lifted its head for a moment from the dust. We are damned, we are meant to be damned, coral animalculae building upward, upward in a sea of damnation. But of all the damned things that ever were damned, your damned shirking, temperate, sham-efficient, self-satisfied, respectable, make-believe, Fabian-spirited Young Liberal is the utterly damnedest." He paused for a moment, and resumed in an entirely different note: "Which is why I was so surprised, Remington, to find YOU in this set!"

"You're just the old plunger you used to be, Britten," I said. " You're going too far with all your might for the sake of the damns. Like a donkey that drags its cart up a bank to get thistles. There's depths in Liberalism--"

"We were talking about Liberals."

"Liberty!"

"Liberty! What do YOOR little lot know of liberty?"

"What does any little lot know of liberty?"

"It waits outside, too big for our understanding. Like the night and the stars. And lust, Remington! lust and bitterness! Don't I know them? with all the sweetness and hope of life bitten and trampled, the dear eyes and the brain that loved and understood--and my poor mumble of a life going on! I'm within sight of being a drunkard, Remington! I'm a failure by most standards! Life has cut

me to the bone. But I'm not afraid of it any more. I've paid something of the price, I've seen something of the meaning."

He flew off at a tangent. "I'd rather die in Delirium Tremens," he cried, "than be a Crampton or a Lewis. . . ."

"Make-believe. Make-believe." The phrase and Britten's squat gestures haunted me as I walked homeward alone. I went to my room and stood before my desk and surveyed papers and files and Margaret's admirable equipment of me.

I perceived in the lurid light of Britten's suggestions that so it was Mr. George Alexander would have mounted a statesman's private room. . . .

3

I was never at any stage a loyal party man. I doubt if party will ever again be the force it was during the eighteenth and nineteenth centuries. Men are becoming increasingly constructive and selective, less patient under tradition and the bondage of initial circumstances. As education becomes more universal and liberating, men will sort themselves more and more by their intellectual temperaments and less and less by their accidental associations. The past will rule them less; the future more. It is not simply party but school and college and county and country that lose their glamour. One does not hear nearly as much as our forefathers did of the "old Harrovian," "old Arvonian," "old Etonian" claim to this or that unfair advantage or unearned sympathy. Even the Scotch and the Devonians weaken a little in their clannishness. A widening sense of fair play destroys such things. They follow freemasonry down--freemasonry of which one is chiefly reminded nowadays in England by

propitiatory symbols outside shady public-houses. . . .

There is, of course, a type of man which clings very obstinately to party ties. These are the men with strong reproductive imaginations and no imaginative initiative, such men as Cladingbowl, for example, or Dayton. They are the scholars-at-large in life. For them the fact that the party system has been essential in the history of England for two hundred years gives it an overwhelming glamour. They have read histories and memoirs, they see the great grey pile of Westminster not so much for what it is as for what it was, rich with dramatic memories, populous with glorious ghosts, phrasing itself inevitably in anecdotes and quotations. It seems almost scandalous that new things should continue to happen, swamping with strange qualities the savour of these old associations.

That Mr. Ramsay Macdonald should walk through Westminster Hall, thrust himself, it may be, through the very piece of space that once held Charles the Martyr pleading for his life, seems horrible profanation to Dayton, a last posthumous outrage; and he would, I think, like to have the front benches left empty now for ever, or at most adorned with laureated ivory tablets: "Here Dizzy sat," and "On this Spot William Ewart Gladstone made his First Budget Speech." Failing this, he demands, if only as signs of modesty and respect on the part of the survivors, meticulous imitation. "Mr. G.," he murmurs, "would not have done that," and laments a vanished subtlety even while Mr. Evesham is speaking. He is always gloomily disposed to lapse into wonderings about what things are coming to, wonderings that have no grain of curiosity. His conception of perfect conduct is industrious persistence along the worn-down, well-marked grooves of the great recorded days. So infinitely more important to him is the documented, respected thing than the elusive present.

Cladingbowl and Dayton do not shine in the House, though Cladingbowl is a sound man on a committee, and Dayton keeps the OLD COUNTRY GAZETTE, the most gentlemanly paper in London. They prevail,

however, in their clubs at lunch time. There, with the pleasant consciousness of a morning's work free from either zeal or shirking, they mingle with permanent officials, prominent lawyers, even a few of the soberer type of business men, and relax their minds in the discussion of the morning paper, of the architecture of the West End, and of the latest public appointments, of golf, of holiday resorts, of the last judicial witticisms and forensic "crushers." The New Year and Birthday honours lists are always very sagely and exhaustively considered, and anecdotes are popular and keenly judged. They do not talk of the things that are really active in their minds, but in the formal and habitual manner they suppose to be proper to intelligent but still honourable men. Socialism, individual money matters, and religion are forbidden topics, and sex and women only in so far as they appear in the law courts. It is to me the strangest of conventions, this assumption of unreal loyalties and traditional respects, this repudiation and concealment of passionate interests. It is like wearing gloves in summer fields, or bathing in a gown, or falling in love with the heroine of a novel, or writing under a pseudonym, or becoming a masked Tuareg. . . .

It is not, I think, that men of my species are insensitive to the great past that is embodied in Westminster and its traditions; we are not so much wanting in the historical sense as alive to the greatness of our present opportunities and the still vaster future that is possible to us. London is the most interesting, beautiful, and wonderful city in the world to me, delicate in her incidental and multitudinous littleness, and stupendous in her pregnant totality; I cannot bring myself to use her as a museum or an old bookshop. When I think of Whitehall that little affair on the scaffold outside the Banqueting Hall seems trivial and remote in comparison with the possibilities that offer themselves to my imagination within the great grey Government buildings close at hand.

It gives me a qualm of nostalgia even to name those places now. I

think of St. Stephen's tower streaming upwards into the misty London night and the great wet quadrangle of New Palace Yard, from which the hansom cabs of my first experiences were ousted more and more by taxicabs as the second Parliament of King Edward the Seventh aged; I think of the Admiralty and War office with their tall Marconi masts sending out invisible threads of direction to the armies in the camps, to great fleets about the world. The crowded, darkly shining river goes flooding through my memory once again, on to those narrow seas that part us from our rival nations; I see quadrangles and corridors of spacious grey-toned offices in which undistinguished little men and little files of papers link us to islands in the tropics, to frozen wildernesses gashed for gold, to vast temple-studded plains, to forest worlds and mountain worlds, to ports and fortresses and lighthouses and watch-towers and grazing lands and corn lands all about the globe. Once more I traverse Victoria Street, grimy and dark, where the Agents of the Empire jostle one another, pass the big embassies in the West End with their flags and scutcheons, follow the broad avenue that leads to Buckingham Palace, witness the coming and going of troops and officials and guests along it from every land on earth. . . . Interwoven in the texture of it all, mocking, perplexing, stimulating beyond measure, is the gleaming consciousness, the challenging knowledge: "You and your kind might still, if you could but grasp it here, mould all the destiny of Man!"

4

My first three years in Parliament were years of active discontent. The little group of younger Liberals to which I belonged was very ignorant of the traditions and qualities of our older leaders, and quite out of touch with the mass of the party. For a time Parliament was enormously taken up with moribund issues and old

quarrels. The early Educational legislation was sectarian and unenterprising, and the Licensing Bill went little further than the attempted rectification of a Conservative mistake. I was altogether for the nationalisation of the public-houses, and of this end the Bill gave no intimations. It was just beer-baiting. I was recalcitrant almost from the beginning, and spoke against the Government so early as the second reading of the first Education Bill, the one the Lords rejected in 1906. I went a little beyond my intention in the heat of speaking,--it is a way with inexperienced man. I called the Bill timid, narrow, a mere sop to the jealousies of sects and little-minded people. I contrasted its aim and methods with the manifest needs of the time.

I am not a particularly good speaker; after the manner of a writer I worry to find my meaning too much; but this was one of my successes. I spoke after dinner and to a fairly full House, for people were already a little curious about me because of my writings. Several of the Conservative leaders were present and stayed, and Mr. Evesham, I remember, came ostentatiously to hear me, with that engaging friendliness of his, and gave me at the first chance an approving "Hear, Hear!" I can still recall quite distinctly my two futile attempts to catch the Speaker's eye before I was able to begin, the nervous quiver of my rather too prepared opening, the effect of hearing my own voice and my subconscious wonder as to what I could possibly be talking about, the realisation that I was getting on fairly well, the immense satisfaction afterwards of having on the whole brought it off, and the absurd gratitude I felt for that encouraging cheer.

Addressing the House of Commons is like no other public speaking in the world. Its semi-colloquial methods give it an air of being easy, but its shifting audience, the comings and goings and hesitations of members behind the chair--not mere audience units, but men who matter--the desolating emptiness that spreads itself round the man who fails to interest, the little compact, disciplined

crowd in the strangers' gallery, the light, elusive, flickering movements high up behind the grill, the wigged, attentive, weary Speaker, the table and the mace and the chapel-like Gothic background with its sombre shadows, conspire together, produce a confused, uncertain feeling in me, as though I was walking upon a pavement full of trap-doors and patches of uncovered morass. A misplaced, well-meant "Hear, Hear!" is apt to be extraordinarily disconcerting, and under no other circumstances have I had to speak with quite the same sideways twist that the arrangement of the House imposes. One does not recognise one's own voice threading out into the stirring brown. Unless I was excited or speaking to the mind of some particular person in the house, I was apt to lose my feeling of an auditor. I had no sense of whither my sentences were going, such as one has with a public meeting well under one's eye. And to lose one's sense of an auditor is for a man of my temperament to lose one's sense of the immediate, and to become prolix and vague with qualifications.

5

My discontents with the Liberal party and my mental exploration of the quality of party generally is curiously mixed up with certain impressions of things and people in the National Liberal Club. The National Liberal Club is Liberalism made visible in the flesh--and Doultonware. It is an extraordinary big club done in a bold, wholesale, shiny, marbled style, richly furnished with numerous paintings, steel engravings, busts, and full-length statues of the late Mr. Gladstone; and its spacious dining-rooms, its long, hazy, crowded smoking-room with innumerable little tables and groups of men in armchairs, its magazine room and library upstairs, have just that undistinguished and unconcentrated diversity which is for me the Liberal note. The pensive member sits and hears perplexing

dialects and even fragments of foreign speech, and among the clustering masses of less insistent whites his roving eye catches profiles and complexions that send his mind afield to Calcutta or Rangoon or the West Indies or Sierra Leone or the Cape. . . .

I was not infrequently that pensive member. I used to go to the Club to doubt about Liberalism.

About two o'clock in the day the great smoking-room is crowded with countless little groups. They sit about small round tables, or in circles of chairs, and the haze of tobacco seems to prolong the great narrow place, with its pillars and bays, to infinity. Some of the groups are big, as many as a dozen men talk in loud tones; some are duologues, and there is always a sprinkling of lonely, dissociated men. At first one gets an impression of men going from group to group and as it were linking them, but as one watches closely one finds that these men just visit three or four groups at the outside, and know nothing of the others. One begins to perceive more and more distinctly that one is dealing with a sort of human mosaic; that each patch in that great place is of a different quality and colour from the next and never to be mixed with it. Most clubs have a common link, a lowest common denominator in the Club Bore, who spares no one, but even the National Liberal bores are specialised and sectional. As one looks round one sees here a clump of men from the North Country or the Potteries, here an island of South London politicians, here a couple of young Jews ascendant from Whitechapel, here a circle of journalists and writers, here a group of Irish politicians, here two East Indians, here a priest or so, here a clump of old-fashioned Protestants, here a little knot of eminent Rationalists indulging in a blasphemous story SOTTO VOCE. Next them are a group of anglicised Germans and highly specialised chess-players, and then two of the oddest-looking persons--bulging with documents and intent upon extraordinary business transactions over long cigars. . . .

I would listen to a stormy sea of babblement, and try to extract some constructive intimations. Every now and then I got a whiff of politics. It was clear they were against the Lords--against plutocrats--against Cossington's newspapers--against the brewers. . . . It was tremendously clear what they were against. The trouble was to find out what on earth they were for! . . .

As I sat and thought, the streaked and mottled pillars and wall, the various views, aspects, and portraits of Mr. and Mrs. Gladstone, the partitions of polished mahogany, the yellow-vested waiters, would dissolve and vanish, and I would have a vision of this sample of miscellaneous men of limited, diverse interests and a universal littleness of imagination enlarged, unlimited, no longer a sample but a community, spreading, stretching out to infinity--all in little groups and duologues and circles, all with their special and narrow concerns, all with their backs to most of the others.

What but a common antagonism would ever keep these multitudes together? I understood why modern electioneering is more than half of it denunciation. Let us condemn, if possible, let us obstruct and deprive, but not let us do. There is no real appeal to the commonplace mind in "Let us do." That calls for the creative imagination, and few have been accustomed to respond to that call. The other merely needs jealousy and bate, of which there are great and easily accessible reservoirs in every human heart. . . .

I remember that vision of endless, narrow, jealous individuality very vividly. A seething limitlessness it became at last, like a waste place covered by crawling locusts that men sweep up by the sackload and drown by the million in ditches. . . .

Grotesquely against it came the lean features, the sidelong shy movements of Edward Crampton, seated in a circle of talkers close at hand. I had a whiff of his strained, unmusical voice, and behold! he was saying something about the "Will of the People. . . ."

The immense and wonderful disconnectednesses of human life! I forgot the smoke and jabber of the club altogether; I became a lonely spirit flung aloft by some queer accident, a stone upon a ledge in some high and rocky wilderness, and below as far as the eye could reach stretched the swarming infinitesimals of humanity, like grass upon the field, like pebbles upon unbounded beaches. Was there ever to be in human life more than that endless struggling individualism? Was there indeed some giantry, some immense valiant synthesis, still to come--or present it might be and still unseen by me, or was this the beginning and withal the last phase of mankind? . . .

I glimpsed for a while the stupendous impudence of our ambitions, the tremendous enterprise to which the modern statesman is implicitly addressed. I was as it were one of a little swarm of would-be reef builders looking back at the teeming slime upon the ocean floor. All the history of mankind, all the history of life, has been and will be the story of something struggling out of the indiscriminated abyss, struggling to exist and prevail over and comprehend individual lives--an effort of insidious attraction, an idea of invincible appeal. That something greater than ourselves, which does not so much exist as seek existence, palpitating between being and not-being, how marvellous it is! It has worn the form and visage of ten thousand different gods, sought a shape for itself in stone and ivory and music and wonderful words, spoken more and more clearly of a mystery of love, a mystery of unity, dabbling meanwhile in blood and cruelty beyond the common impulses of men. It is something that comes and goes, like a light that shines and is withdrawn, withdrawn so completely that one doubts if it has ever been. . . .

I would mark with a curious interest the stray country member of the club up in town for a night or so. My mind would be busy with speculations about him, about his home, his family, his reading, his horizons, his innumerable fellows who didn't belong and never came up. I would fill in the outline of him with memories of my uncle and his Staffordshire neighbours. He was perhaps Alderman This or Councillor That down there, a great man in his ward, J. P. within seven miles of the boundary of the borough, and a God in his home. Here he was nobody, and very shy, and either a little too arrogant or a little too meek towards our very democratic mannered but still livened waiters. Was he perhaps the backbone of England? He overate himself lest he should appear mean, went through our Special Dinner conscientiously, drank, unless he was teetotal, of unfamiliar wines, and did his best, in spite of the rules, to tip. Afterwards, in a state of flushed repletion, he would have old brandy, black coffee, and a banded cigar, or in the name of temperance omit the brandy and have rather more coffee, in the smoking-room. I would sit and watch that stiff dignity of self-indulgence, and wonder, wonder. . . .

An infernal clairvoyance would come to me. I would have visions of him in relation to his wife, checking always, sometimes bullying, sometimes being ostentatiously "kind"; I would see him glance furtively at his domestic servants upon his staircase, or stiffen his upper lip against the reluctant, protesting business employee. We imaginative people are base enough, heaven knows, but it is only in rare moods of bitter penetration that we pierce down to the baser lusts, the viler shames, the everlasting lying and muddle-headed self-justification of the dull.

I would turn my eyes down the crowded room and see others of him and others. What did he think he was up to? Did he for a moment realise that his presence under that ceramic glory of a ceiling with

me meant, if it had any rational meaning at all, that we were jointly doing something with the nation and the empire and mankind? . . . How on earth could any one get hold of him, make any noble use of him? He didn't read beyond his newspaper. He never thought, but only followed imaginings in his heart. He never discussed. At the first hint of discussion his temper gave way. He was, I knew, a deep, thinly-covered tank of resentments and quite irrational moral rages. Yet withal I would have to resist an impulse to go over to him and nudge him and say to him, "Look here! What indeed do you think we are doing with the nation and the empire and mankind? You know--MANKIND!"

I wonder what reply I should have got.

So far as any average could be struck and so far as any backbone could be located, it seemed to me that this silent, shy, replete, sub-angry, middle-class sentimentalist was in his endless species and varieties and dialects the backbone of our party. So far as I could be considered as representing anything in the House, I pretended to sit for the elements of HIM. . . .

7

For a time I turned towards the Socialists. They at least had an air of coherent intentions. At that time Socialism had come into politics again after a period of depression and obscurity, with a tremendous ECLAT. There was visibly a following of Socialist members to Chris Robinson; mysteriously uncommunicative gentlemen in soft felt hats and short coats and square-toed boots who replied to casual advances a little surprisingly in rich North Country dialects. Members became aware of a "seagreen incorruptible," as Colonel Marlow put it to me, speaking on the Address, a slender

twisted figure supporting itself on a stick and speaking with a fire that was altogether revolutionary. This was Philip Snowden, the member for Blackburn. They had come in nearly forty strong altogether, and with an air of presently meaning to come in much stronger. They were only one aspect of what seemed at that time a big national movement. Socialist societies, we gathered, were springing up all over the country, and every one was inquiring about Socialism and discussing Socialism. It had taken the Universities with particular force, and any youngster with the slightest intellectual pretension was either actively for or brilliantly against. For a time our Young Liberal group was ostentatiously sympathetic. . . .

When I think of the Socialists there comes a vivid memory of certain evening gatherings at our house. . . .

These gatherings had been organised by Margaret as the outcome of a discussion at the Baileys'. Altiora had been very emphatic and uncharitable upon the futility of the Socialist movement. It seemed that even the leaders fought shy of dinner-parties.

"They never meet each other," said Altiora, "much less people on the other side. How can they begin to understand politics until they do that?"

"Most of them have totally unpresentable wives," said Altiora, "totally!" and quoted instances, "and they WILL bring them. Or they won't come! Some of the poor creatures have scarcely learnt their table manners. They just make holes in the talk. . . ."

I thought there was a great deal of truth beneath Altiora's outburst. The presentation of the Socialist case seemed very greatly crippled by the want of a common intimacy in its leaders; the want of intimacy didn't at first appear to be more than an accident, and our talk led to Margaret's attempt to get acquaintance

and easy intercourse afoot among them and between them and the Young Liberals of our group. She gave a series of weekly dinners, planned, I think, a little too accurately upon Altiora's model, and after each we had as catholic a reception as we could contrive.

Our receptions were indeed, I should think, about as catholic as receptions could be. Margaret found herself with a weekly houseful of insoluble problems in intercourse. One did one's best, but one got a nightmare feeling as the evening wore on.

It was one of the few unanimities of these parties that every one should be a little odd in appearance, funny about the hair or the tie or the shoes or more generally, and that bursts of violent aggression should alternate with an attitude entirely defensive. A number of our guests had an air of waiting for a clue that never came, and stood and sat about silently, mildly amused but not a bit surprised that we did not discover their distinctive Open-Sesames. There was a sprinkling of manifest seers and prophetesses in shapeless garments, far too many, I thought, for really easy social intercourse, and any conversation at any moment was liable to become oracular. One was in a state of tension from first to last; the most innocent remark seemed capable of exploding resentment, and replies came out at the most unexpected angles. We Young Liberals went about puzzled but polite to the gathering we had evoked. The Young Liberals' tradition is on the whole wonderfully discreet, superfluous steam is let out far away from home in the Balkans or Africa, and the neat, stiff figures of the Cramptons, Bunting Harblow, and Lewis, either in extremely well-cut morning coats indicative of the House, or in what is sometimes written of as "faultless evening dress," stood about on those evenings, they and their very quietly and simply and expensively dressed little wives, like a datum line amidst lakes and mountains.

I didn't at first see the connection between systematic social reorganisation and arbitrary novelties in dietary and costume, just

as I didn't realise why the most comprehensive constructive projects should appear to be supported solely by odd and exceptional personalities. On one of these evenings a little group of rather jolly-looking pretty young people seated themselves for no particular reason in a large circle on the floor of my study, and engaged, so far as I could judge, in the game of Hunt the Meaning, the intellectual equivalent of Hunt the Slipper. It must have been that same evening I came upon an unbleached young gentleman before the oval mirror on the landing engaged in removing the remains of an anchovy sandwich from his protruded tongue--visible ends of cress having misled him into the belief that he was dealing with doctrinally permissible food. It was not unusual to be given hand-bills and printed matter by our guests, but there I had the advantage over Lewis, who was too tactful to refuse the stuff, too neatly dressed to pocket it, and had no writing-desk available upon which he could relieve himself in a manner flattering to the giver. So that his hands got fuller and fuller. A relentless, compact little woman in what Margaret declared to be an extremely expensive black dress has also printed herself on my memory; she had set her heart upon my contributing to a weekly periodical in the lentil interest with which she was associated, and I spent much time and care in evading her.

Mingling with the more hygienic types were a number of Anti-Puritan Socialists, bulging with bias against temperance, and breaking out against austere methods of living all over their faces. Their manner was packed with heartiness. They were apt to choke the approaches to the little buffet Margaret had set up downstairs, and there engage in discussions of Determinism--it always seemed to be Determinism--which became heartier and noisier, but never acrimonious even in the small hours. It seemed impossible to settle about this Determinism of theirs--ever. And there were worldly Socialists also. I particularly recall a large, active, buoyant, lady-killing individual with an eyeglass borne upon a broad black ribbon, who swam about us one evening. He might have been a

slightly frayed actor, in his large frock-coat, his white waistcoat, and the sort of black and white check trousers that twinkle. He had a high-pitched voice with aristocratic intonations, and he seemed to be in a perpetual state of interrogation. "What are we all he-a for?" he would ask only too audibly. "What are we doing he-a? What's the connection?"

What WAS the connection?

We made a special effort with our last assembly in June, 1907. We tried to get something like a representative collection of the parliamentary leaders of Socialism, the various exponents of Socialist thought and a number of Young Liberal thinkers into one room. Dorvil came, and Horatio Bulch; Featherstonehaugh appeared for ten minutes and talked charmingly to Margaret and then vanished again; there was Wilkins the novelist and Toomer and Dr. Tumpany. Chris Robinson stood about for a time in a new comforter, and Magdeberg and Will Pipes and five or six Labour members. And on our side we had our particular little group, Bunting Harblow, Crampton, Lewis, all looking as broad-minded and open to conviction as they possibly could, and even occasionally talking out from their bushes almost boldly. But the gathering as a whole refused either to mingle or dispute, and as an experiment in intercourse the evening was a failure. Unexpected dissociations appeared between Socialists one had supposed friendly. I could not have imagined it was possible for half so many people to turn their backs on everybody else in such small rooms as ours. But the unsaid things those backs expressed broke out, I remarked, with refreshed virulence in the various organs of the various sections of the party next week.

I talked, I remember, with Dr. Tumpany, a large young man in a still larger professional frock-coat, and with a great shock of very fair hair, who was candidate for some North Country constituency. We discussed the political outlook, and, like so many Socialists at that time, he was full of vague threatenings against the Liberal

party. I was struck by a thing in him that I had already observed less vividly in many others of these Socialist leaders, and which gave me at last a clue to the whole business. He behaved exactly like a man in possession of valuable patent rights, who wants to be dealt with. He had an air of having a corner in ideas. Then it flashed into my head that the whole Socialist movement was an attempted corner in ideas. . . .

8

Late that night I found myself alone with Margaret amid the debris of the gathering.

I sat before the fire, hands in pockets, and Margaret, looking white and weary, came and leant upon the mantel.

"Oh, Lord!" said Margaret.

I agreed. Then I resumed my meditation.

"Ideas," I said, "count for more than I thought in the world."

Margaret regarded me with that neutral expression behind which she was accustomed to wait for clues.

"When you think of the height and depth and importance and wisdom of the Socialist ideas, and see the men who are running them," I explained. . . . "A big system of ideas like Socialism grows up out of the obvious common sense of our present conditions. It's as impersonal as science. All these men--They've given nothing to it. They're just people who have pegged out claims upon a big intellectual No-Man's-Land--and don't feel quite sure of the law.

There's a sort of quarrelsome uneasiness. . . . If we professed Socialism do you think they'd welcome us? Not a man of them! They'd feel it was burglary. . . ."

"Yes," said Margaret, looking into the fire. "That is just what I felt about them all the evening. . . . Particularly Dr. Tumpany."

"We mustn't confuse Socialism with the Socialists, I said; "that's the moral of it. I suppose if God were to find He had made a mistake in dates or something, and went back and annihilated everybody from Owen onwards who was in any way known as a Socialist leader or teacher, Socialism would be exactly where it is and what it is to-day--a growing realisation of constructive needs in every man's mind, and a little corner in party politics. So, I suppose, it will always be. . . . But they WERE a damned lot, Margaret!"

I looked up at the little noise she made. "TWICE!" she said, smiling indulgently, "to-day!" (Even the smile was Altiora's.)

I returned to my thoughts. They WERE a damned human lot. It was an excellent word in that connection. . . .

But the ideas marched on, the ideas marched on, just as though men's brains were no more than stepping-stones, just as though some great brain in which we are all little cells and corpuscles was thinking them! . . .

"I don't think there is a man among them who makes me feel he is trustworthy," said Margaret; "unless it is Featherstonehaugh."

I sat taking in this proposition.

"They'll never help us, I feel," said Margaret.

"Us?"

"The Liberals."

"Oh, damn the Liberals!" I said. "They'll never even help themselves."

"I don't think I could possibly get on with any of those people," said Margaret, after a pause.

She remained for a time looking down at me and, I could feel, perplexed by me, but I wanted to go on with my thinking, and so I did not look up, and presently she stooped to my forehead and kissed me and went rustling softly to her room.

I remained in my study for a long time with my thoughts crystallising out. . . .

It was then, I think, that I first apprehended clearly how that opposition to which I have already alluded of the immediate life and the mental hinterland of a man, can be applied to public and social affairs. The ideas go on--and no person or party succeeds in embodying them. The reality of human progress never comes to the surface, it is a power in the deeps, an undertow. It goes on in silence while men think, in studies where they write self-forgetfully, in laboratories under the urgency of an impersonal curiosity, in the rare illumination of honest talk, in moments of emotional insight, in thoughtful reading, but not in everyday affairs. Everyday affairs and whatever is made an everyday affair, are transactions of the ostensible self, the being of habits, interests, usage. Temper, vanity, hasty reaction to imitation, personal feeling, are their substance. No man can abolish his immediate self and specialise in the depths; if he attempt that, he simply turns himself into something a little less than the common man. He may have an immense hinterland, but that does not absolve him from a frontage. That is the essential error of the specialist

philosopher, the specialist teacher, the specialist publicist. They repudiate frontage; claim to be pure hinterland. That is what bothered me about Codger, about those various schoolmasters who had prepared me for life, about the Baileys and their dream of an official ruling class. A human being who is a philosopher in the first place, a teacher in the first place, or a statesman in the first place, is thereby and inevitably, though he bring God-like gifts to the pretence--a quack. These are attempts to live deep-side shallow, inside out. They produce merely a new pettiness. To understand Socialism, again, is to gain a new breadth of outlook; to join a Socialist organisation is to join a narrow cult which is not even tolerably serviceable in presenting or spreading the ideas for which it stands. . . .

I perceived I had got something quite fundamental here. It had taken me some years to realise the true relation of the great constructive ideas that swayed me not only to political parties, but to myself. I had been disposed to identify the formulae of some one party with social construction, and to regard the other as necessarily anti-constructive, just as I had been inclined to follow the Baileys in the self-righteousness of supposing myself to be wholly constructive. But I saw now that every man of intellectual freedom and vigour is necessarily constructive-minded nowadays, and that no man is disinterestedly so. Each one of us repeats in himself the conflict of the race between the splendour of its possibilities and its immediate associations. We may be shaping immortal things, but we must sleep and answer the dinner gong, and have our salt of flattery and self-approval. In politics a man counts not for what he is in moments of imaginative expansion, but for his common workaday, selfish self; and political parties are held together not by a community of ultimate aims, but by the stabler bond of an accustomed life. Everybody almost is for progress in general, and nearly everybody is opposed to any change, except in so far as gross increments are change, in his particular method of living and behaviour. Every party stands essentially for

the interests and mental usages of some definite class or group of classes in the exciting community, and every party has its scientific-minded and constructive leading section, with well-defined hinterlands formulating its social functions in a public-spirited form, and its superficial-minded following confessing its meannesses and vanities and prejudices. No class will abolish itself, materially alter its way of life, or drastically reconstruct itself, albeit no class is indisposed to co-operate in the unlimited socialisation of any other class. In that capacity for aggression upon other classes lies the essential driving force of modern affairs. The instincts, the persons, the parties, and vanities sway and struggle. The ideas and understandings march on and achieve themselves for all--in spite of every one. . . .

The methods and traditions of British politics maintain the form of two great parties, with rider groups seeking to gain specific ends in the event of a small Government majority. These two main parties are more or less heterogeneous in composition. Each, however, has certain necessary characteristics. The Conservative Party has always stood quite definitely for the established propertied interests. The land-owner, the big lawyer, the Established Church, and latterly the huge private monopoly of the liquor trade which has been created by temperance legislation, are the essential Conservatives. Interwoven now with the native wealthy are the families of the great international usurers, and a vast miscellaneous mass of financial enterprise. Outside the range of resistance implied by these interests, the Conservative Party has always shown itself just as constructive and collectivist as any other party. The great landowners have been as well-disposed towards the endowment of higher education, and as willing to co-operate with the Church in protective and mildly educational legislation for children and the working class, as any political section. The financiers, too, are adventurous-spirited and eager for mechanical progress and technical efficiency. They are prepared to spend public money upon research, upon ports and harbours and

public communications, upon sanitation and hygienic organisation. A certain rude benevolence of public intention is equally characteristic of the liquor trade. Provided his comfort leads to no excesses of temperance, the liquor trade is quite eager to see the common man prosperous, happy, and with money to spend in a bar. All sections of the party are aggressively patriotic and favourably inclined to the idea of an upstanding, well-fed, and well-exercised population in uniform. Of course there are reactionary landowners and old-fashioned country clergy, full of localised self-importance, jealous even of the cottager who can read, but they have neither the power nor the ability to retard the constructive forces in the party as a whole. On the other hand, when matters point to any definitely confiscatory proposal, to the public ownership and collective control of land, for example, or state mining and manufactures, or the nationalisation of the so-called public-house or extended municipal enterprise, or even to an increase of the taxation of property, then the Conservative Party presents a nearly adamant bar. It does not stand for, it IS, the existing arrangement in these affairs.

Even more definitely a class party is the Labour Party, whose immediate interest is to raise wages, shorten hours of labor, increase employment, and make better terms for the working-man tenant and working-man purchaser. Its leaders are no doubt constructive minded, but the mass of the following is naturally suspicious of education and discipline, hostile to the higher education, and--except for an obvious antagonism to employers and property owners--almost destitute of ideas. What else can it be? It stands for the expropriated multitude, whose whole situation and difficulty arise from its individual lack of initiative and organising power. It favours the nationalisation of land and capital with no sense of the difficulties involved in the process; but, on the other hand, the equally reasonable socialisation of individuals which is implied by military service is steadily and quite naturally and quite illogically opposed by it. It is only in

recent years that Labour has emerged as a separate party from the huge hospitable caravanserai of Liberalism, and there is still a very marked tendency to step back again into that multitudinous assemblage.

For multitudinousness has always been the Liberal characteristic. Liberalism never has been nor ever can be anything but a diversified crowd. Liberalism has to voice everything that is left out by these other parties. It is the party against the predominating interests. It is at once the party of the failing and of the untried; it is the party of decadence and hope. From its nature it must be a vague and planless association in comparison with its antagonist, neither so constructive on the one hand, nor on the other so competent to hinder the inevitable constructions of the civilised state. Essentially it is the party of criticism, the "Anti" party. It is a system of hostilities and objections that somehow achieves at times an elusive common soul. It is a gathering together of all the smaller interests which find themselves at a disadvantage against the big established classes, the leasehold tenant as against the landowner, the retail tradesman as against the merchant and the moneylender, the Nonconformist as against the Churchman, the small employer as against the demoralising hospitable publican, the man without introductions and broad connections against the man who has these things. It is the party of the many small men against the fewer prevailing men. It has no more essential reason for loving the Collectivist state than the Conservatives; the small dealer is doomed to absorption in that just as much as the large owner; but it resorts to the state against its antagonists as in the middle ages common men pitted themselves against the barons by siding with the king. The Liberal Party is the party against "class privilege" because it represents no class advantages, but it is also the party that is on the whole most set against Collective control because it represents no established responsibility. It is constructive only so far as its antagonism to the great owner is more powerful than its jealousy of the state. It organises only because organisation

is forced upon it by the organisation of its adversaries. It lapses in and out of alliance with Labour as it sways between hostility to wealth and hostility to public expenditure. . . .

Every modern European state will have in some form or other these three parties: the resistent, militant, authoritative, dull, and unsympathetic party of establishment and success, the rich party; the confused, sentimental, spasmodic, numerous party of the small, struggling, various, undisciplined men, the poor man's party; and a third party sometimes detaching itself from the second and sometimes reuniting with it, the party of the altogether expropriated masses, the proletarians, Labour. Change Conservative and Liberal to Republican and Democrat, for example, and you have the conditions in the United States. The Crown or a dethroned dynasty, the Established Church or a dispossessed church, nationalist secessions, the personalities of party leaders, may break up, complicate, and confuse the self-expression of these three necessary divisions in the modern social drama, the analyst will make them out none the less for that. . . .

And then I came back as if I came back to a refrain;--the ideas go on--as though we are all no more than little cells and corpuscles in some great brain beyond our understanding. . . .

So it was I sat and thought my problem out. . . . I still remember my satisfaction at seeing things plainly at last. It was like clouds dispersing to show the sky. Constructive ideas, of course, couldn't hold a party together alone, "interests and habits, not ideas," I had that now, and so the great constructive scheme of Socialism, invading and inspiring all parties, was necessarily claimed only by this collection of odds and ends, this residuum of disconnected and exceptional people. This was true not only of the Socialist idea, but of the scientific idea, the idea of veracity--of human confidence in humanity--of all that mattered in human life outside the life of individuals. . . . The only real party that

would ever profess Socialism was the Labour Party, and that in the entirely one-sided form of an irresponsible and non-constructive attack on property. Socialism in that mutilated form, the teeth and claws without the eyes and brain, I wanted as little as I wanted anything in the world.

Perfectly clear it was, perfectly clear, and why hadn't I seen it before? . . . I looked at my watch, and it was half-past two.

I yawned, stretched, got up and went to bed.

9

My ideas about statecraft have passed through three main phases to the final convictions that remain. There was the first immediacy of my dream of ports and harbours and cities, railways, roads, and administered territories--the vision I had seen in the haze from that little church above Locarno. Slowly that had passed into a more elaborate legislative constructiveness, which had led to my uneasy association with the Baileys and the professedly constructive Young Liberals. To get that ordered life I had realised the need of organisation, knowledge, expertness, a wide movement of co-ordinated methods. On the individual side I thought that a life of urgent industry, temperance, and close attention was indicated by my perception of these ends. I married Margaret and set to work. But something in my mind refused from the outset to accept these determinations as final. There was always a doubt lurking below, always a faint resentment, a protesting criticism, a feeling of vitally important omissions.

I arrived at last at the clear realisation that my political associates, and I in my association with them, were oddly narrow,

priggish, and unreal, that the Socialists with whom we were attempting co-operation were preposterously irrelevant to their own theories, that my political life didn't in some way comprehend more than itself, that rather perplexingly I was missing the thing I was seeking. Britten's footnotes to Altiora's self-assertions, her fits of energetic planning, her quarrels and rallies and vanities, his illuminating attacks on Cramptonism and the heavy-spirited triviality of such Liberalism as the Children's Charter, served to point my way to my present conclusions. I had been trying to deal all along with human progress as something immediate in life, something to be immediately attacked by political parties and groups pointing primarily to that end. I now began to see that just as in my own being there was the rather shallow, rather vulgar, self-seeking careerist, who wore an admirable silk hat and bustled self-consciously through the lobby, and a much greater and indefinitely growing unpublished personality behind him--my hinterland, I have called it--so in human affairs generally the permanent reality is also a hinterland, which is never really immediate, which draws continually upon human experience and influences human action more and more, but which is itself never the actual player upon the stage. It is the unseen dramatist who never takes a call. Now it was just through the fact that our group about the Baileys didn't understand this, that with a sort of frantic energy they were trying to develop that sham expert officialdom of theirs to plan, regulate, and direct the affairs of humanity, that the perplexing note of silliness and shallowness that I had always felt and felt now most acutely under Britten's gibes, came in. They were neglecting human life altogether in social organisation.

In the development of intellectual modesty lies the growth of statesmanship. It has been the chronic mistake of statecraft and all organising spirits to attempt immediately to scheme and arrange and achieve. Priests, schools of thought, political schemers, leaders of men, have always slipped into the error of assuming that they can think out the whole--or at any rate completely think out

definite parts--of the purpose and future of man, clearly and finally; they have set themselves to legislate and construct on that assumption, and, experiencing the perplexing obduracy and evasions of reality, they have taken to dogma, persecution, training, pruning, secretive education; and all the stupidities of self-sufficient energy. In the passion of their good intentions they have not hesitated to conceal fact, suppress thought, crush disturbing initiatives and apparently detrimental desires. And so it is blunderingly and wastefully, destroying with the making, that any extension of social organisation is at present achieved.

Directly, however, this idea of an emancipation from immediacy is grasped, directly the dominating importance of this critical, less personal, mental hinterland in the individual and of the collective mind in the race is understood, the whole problem of the statesman and his attitude towards politics gain a new significance, and becomes accessible to a new series of solutions. He wants no longer to "fix up," as people say, human affairs, but to devote his forces to the development of that needed intellectual life without which all his shallow attempts at fixing up are futile. He ceases to build on the sands, and sets himself to gather foundations.

You see, I began in my teens by wanting to plan and build cities and harbours for mankind; I ended in the middle thirties by desiring only to serve and increase a general process of thought, a process fearless, critical, real-spirited, that would in its own time give cities, harbours, air, happiness, everything at a scale and quality and in a light altogether beyond the match-striking imaginations of a contemporary mind. I wanted freedom of speech and suggestion, vigour of thought, and the cultivation of that impulse of veracity that lurks more or less discouraged in every man. With that I felt there must go an emotion. I hit upon a phrase that became at last something of a refrain in my speech and writings, to convey the spirit that I felt was at the very heart of real human progress--love and fine thinking.

(I suppose that nowadays no newspaper in England gets through a week without the repetition of that phrase.)

My convictions crystallised more and more definitely upon this. The more of love and fine thinking the better for men, I said; the less, the worse. And upon this fresh basis I set myself to examine what I as a politician might do. I perceived I was at last finding an adequate expression for all that was in me, for those forces that had rebelled at the crude presentations of Bromstead, at the secrecies and suppressions of my youth, at the dull unrealities of City Merchants, at the conventions and timidities of the Pinky Dinkys, at the philosophical recluse of Trinity and the phrases and tradition-worship of my political associates. None of these things were half alive, and I wanted life to be intensely alive and awake. I wanted thought like an edge of steel and desire like a flame. The real work before mankind now, I realised once and for all, is the enlargement of human expression, the release and intensification of human thought, the vivider utilisation of experience and the invigoration of research--and whatever one does in human affairs has or lacks value as it helps or hinders that.

With that I had got my problem clear, and the solution, so far as I was concerned, lay in finding out the point in the ostensible life of politics at which I could most subserve these ends. I was still against the muddles of Bromstead, but I had hunted them down now to their essential form. The jerry-built slums, the roads that went nowhere, the tarred fences, litigious notice-boards and barbed wire fencing, the litter and the heaps of dump, were only the outward appearances whose ultimate realities were jerry-built conclusions, hasty purposes, aimless habits of thought, and imbecile bars and prohibitions in the thoughts and souls of men. How are we through politics to get at that confusion?

We want to invigorate and reinvigorate education. We want to create

a sustained counter effort to the perpetual tendency of all educational organisations towards classicalism, secondary issues, and the evasion of life.

We want to stimulate the expression of life through art and literature, and its exploration through research.

We want to make the best and finest thought accessible to every one, and more particularly to create and sustain an enormous free criticism, without which art, literature, and research alike degenerate into tradition or imposture.

Then all the other problems which are now so insoluble, destitution, disease, the difficulty of maintaining international peace, the scarcely faced possibility of making life generally and continually beautiful, become--EASY. . . .

It was clear to me that the most vital activities in which I could engage would be those which most directly affected the Church, public habits of thought, education, organised research, literature, and the channels of general discussion. I had to ask myself how my position as Liberal member for Kinghamstead squared with and conduced to this essential work.

CHAPTER THE SECOND

SEEKING ASSOCIATES

1

I have told of my gradual abandonment of the pretensions and habits of party Liberalism. In a sense I was moving towards aristocracy. Regarding the development of the social and individual mental hinterland as the essential thing in human progress, I passed on very naturally to the practical assumption that we wanted what I may call "hinterlanders." Of course I do not mean by aristocracy the changing unorganised medley of rich people and privileged people who dominate the civilised world of to-day, but as opposed to this, a possibility of co-ordinating the will of the finer individuals, by habit and literature, into a broad common aim. We must have an aristocracy--not of privilege, but of understanding and purpose--or mankind will fail. I find this dawning more and more clearly when I look through my various writings of the years between 1903 and 1910. I was already emerging to plain statements in 1908.

I reasoned after this fashion. The line of human improvement and the expansion of human life lies in the direction of education and finer initiatives. If humanity cannot develop an education far beyond anything that is now provided, if it cannot collectively invent devices and solve problems on a much richer, broader scale than it does at the present time, it cannot hope to achieve any very much finer order or any more general happiness than it now enjoys. We must believe, therefore, that it CAN develop such a training and education, or we must abandon secular constructive hope. And here my peculiar difficulty as against crude democracy comes in. If humanity at large is capable of that high education and those

creative freedoms our hope demands, much more must its better and more vigorous types be so capable. And if those who have power and leisure now, and freedom to respond to imaginative appeals, cannot be won to the idea of collective self-development, then the whole of humanity cannot be won to that. From that one passes to what has become my general conception in politics, the conception of the constructive imagination working upon the vast complex of powerful people, clever people, enterprising people, influential people, amidst whom power is diffused to-day, to produce that self-conscious, highly selective, open-minded, devoted aristocratic culture, which seems to me to be the necessary next phase in the development of human affairs. I see human progress, not as the spontaneous product of crowds of raw minds swayed by elementary needs, but as a natural but elaborate result of intricate human interdependencies, of human energy and curiosity liberated and acting at leisure, of human passions and motives, modified and redirected by literature and art. . . .

But now the reader will understand how it came about that, disappointed by the essential littleness of Liberalism, and disillusioned about the representative quality of the professed Socialists, I turned my mind more and more to a scrutiny of the big people, the wealthy and influential people, against whom Liberalism pits its forces. I was asking myself definitely whether, after all, it was not my particular job to work through them and not against them. Was I not altogether out of my element as an Anti-? Weren't there big bold qualities about these people that common men lack, and the possibility of far more splendid dreams? Were they really the obstacles, might they not be rather the vehicles of the possible new braveries of life?

The faults of the Imperialist movement were obvious enough. The conception of the Boer War had been clumsy and puerile, the costly errors of that struggle appalling, and the subsequent campaign of Mr. Chamberlain for Tariff Reform seemed calculated to combine the financial adventurers of the Empire in one vast conspiracy against the consumer. The cant of Imperialism was easy to learn and use; it was speedily adopted by all sorts of base enterprises and turned to all sorts of base ends. But a big child is permitted big mischief, and my mind was now continually returning to the persuasion that after all in some development of the idea of Imperial patriotism might be found that wide, rough, politically acceptable expression of a constructive dream capable of sustaining a great educational and philosophical movement such as no formula of Liberalism supplied. The fact that it readily took vulgar forms only witnessed to its strong popular appeal. Mixed in with the noisiness and humbug of the movement there appeared a real regard for social efficiency, a real spirit of animation and enterprise. There suddenly appeared in my world--I saw them first, I think, in 1908--a new sort of little boy, a most agreeable development of the slouching, cunning, cigarette-smoking, town-bred youngster, a small boy in a khaki hat, and with bare knees and athletic bearing, earnestly engaged in wholesome and invigorating games up to and occasionally a little beyond his strength--the Boy Scout. I liked the Boy Scout, and I find it difficult to express how much it mattered to me, with my growing bias in favour of deliberate national training, that Liberalism hadn't been able to produce, and had indeed never attempted to produce, anything of this kind.

3

In those days there existed a dining club called--there was some

lost allusion to the exorcism of party feeling in its title--the Pentagram Circle. It included Bailey and Dayton and myself, Sir Herbert Thorns, Lord Charles Kindling, Minns the poet, Gerbault the big railway man, Lord Gane, fresh from the settlement of Framboya, and Rumbold, who later became Home Secretary and left us. We were men of all parties and very various experiences, and our object was to discuss the welfare of the Empire in a disinterested spirit. We dined monthly at the Mermaid in Westminster, and for a couple of years we kept up an average attendance of ten out of fourteen. The dinner-time was given up to desultory conversation, and it is odd how warm and good the social atmosphere of that little gathering became as time went on; then over the dessert, so soon as the waiters had swept away the crumbs and ceased to fret us, one of us would open with perhaps fifteen or twenty minutes' exposition of some specially prepared question, and after him we would deliver ourselves in turn, each for three or four minutes. When every one present had spoken once talk became general again, and it was rare we emerged upon Hendon Street before midnight. Sometimes, as my house was conveniently near, a knot of men would come home with me and go on talking and smoking in my dining-room until two or three. We had Fred Neal, that wild Irish journalist, among us towards the end, and his stupendous flow of words materially prolonged our closing discussions and made our continuance impossible.

I learned very much and very many things at those dinners, but more particularly did I become familiarised with the habits of mind of such men as Neal, Crupp, Gane, and the one or two other New Imperialists who belonged to us. They were nearly all like Bailey Oxford men, though mostly of a younger generation, and they were all mysteriously and inexplicably advocates of Tariff Reform, as if it were the principal instead of at best a secondary aspect of constructive policy. They seemed obsessed by the idea that streams of trade could be diverted violently so as to link the parts of the Empire by common interests, and they were persuaded, I still think mistakenly, that Tariff Reform would have an immense popular appeal.

They were also very keen on military organisation, and with a curious little martinet twist in their minds that boded ill for that side of public liberty. So much against them. But they were disposed to spend money much more generously on education and research of all sorts than our formless host of Liberals seemed likely to do; and they were altogether more accessible than the Young Liberals to bold, constructive ideas affecting the universities and upper classes. The Liberals are abjectly afraid of the universities. I found myself constantly falling into line with these men in our discussions, and more and more hostile to Dayton's sentimentalising evasions of definite schemes and Minns' trust in such things as the "Spirit of our People" and the "General Trend of Progress." It wasn't that I thought them very much righter than their opponents; I believe all definite party "sides" at any time are bound to be about equally right and equally lop-sided; but that I thought I could get more out of them and what was more important to me, more out of myself if I co-operated with them. By 1908 I had already arrived at a point where I could be definitely considering a transfer of my political allegiance.

These abstract questions are inseparably interwoven with my memory of a shining long white table, and our hock bottles and burgundy bottles, and bottles of Perrier and St. Galmier and the disturbed central trophy of dessert, and scattered glasses and nut-shells and cigarette-ends and menu-cards used for memoranda. I see old Dayton sitting back and cocking his eye to the ceiling in a way he had while he threw warmth into the ancient platitudes of Liberalism, and Minns leaning forward, and a little like a cockatoo with a taste for confidences, telling us in a hushed voice of his faith in the Destiny of Mankind. Thorns lounges, rolling his round face and round eyes from speaker to speaker and sounding the visible depths of misery whenever Neal begins. Gerbault and Gane were given to conversation in undertones, and Bailey pursued mysterious purposes in lisping whispers. It was Crupp attracted me most. He had, as people say, his eye on me from the beginning. He used to speak at

me, and drifted into a custom of coming home with me very regularly for an after-talk.

He opened his heart to me.

"Neither of us," he said, "are dukes, and neither of us are horny-handed sons of toil. We want to get hold of the handles, and to do that, one must go where the power is, and give it just as constructive a twist as we can. That's MY Toryism."

"Is it Kindling's--or Gerbault's?"

"No. But theirs is soft, and mine's hard. Mine will wear theirs out. You and I and Bailey are all after the same thing, and why aren't we working together?"

"Are you a Confederate?" I asked suddenly.

"That's a secret nobody tells," he said.

"What are the Confederates after?"

"Making aristocracy work, I suppose. Just as, I gather, you want to do." . . .

The Confederates were being heard of at that time. They were at once attractive and repellent to me, an odd secret society whose membership nobody knew, pledged, it was said, to impose Tariff Reform and an ample constructive policy upon the Conservatives. In the press, at any rate, they had an air of deliberately organised power. I have no doubt the rumour of them greatly influenced my ideas. . . .

In the end I made some very rapid decisions, but for nearly two years I was hesitating. Hesitations were inevitable in such a

matter. I was not dealing with any simple question of principle, but with elusive and fluctuating estimates of the trend of diverse forces and of the nature of my own powers. All through that period I was asking over and over again: how far are these Confederates mere dreamers? How far--and this was more vital--are they rendering lip-service to social organisations? Is it true they desire war because it confirms the ascendancy of their class? How far can Conservatism be induced to plan and construct before it resists the thrust towards change. Is it really in bulk anything more than a mass of prejudice and conceit, cynical indulgence, and a hard suspicion of and hostility to the expropriated classes in the community?

That is a research which yields no statistics, an enquiry like asking what is the ruling colour of a chameleon. The shadowy answer varied with my health, varied with my mood and the conduct of the people I was watching. How fine can people be? How generous?--not incidentally, but all round? How far can you educate sons beyond the outlook of their fathers, and how far lift a rich, proud, self-indulgent class above the protests of its business agents and solicitors and its own habits and vanity? Is chivalry in a class possible?--was it ever, indeed, or will it ever indeed be possible? Is the progress that seems attainable in certain directions worth the retrogression that may be its price?

4

It was to the Pentagram Circle that I first broached the new conceptions that were developing in my mind. I count the evening of my paper the beginning of the movement that created the BLUE WEEKLY and our wing of the present New Tory party. I do that without any

excessive egotism, because my essay was no solitary man's production; it was my reaction to forces that had come to me very large through my fellow-members; its quick reception by them showed that I was, so to speak, merely the first of the chestnuts to pop. The atmospheric quality of the evening stands out very vividly in my memory. The night, I remember, was warmly foggy when after midnight we went to finish our talk at my house.

We had recently changed the rules of the club to admit visitors, and so it happened that I had brought Britten, and Crupp introduced Arnold Shoemith, my former schoolfellow at City Merchants, and now the wealthy successor of his father and elder brother. I remember his heavy, inexpressively handsome face lighting to his rare smile at the sight of me, and how little I dreamt of the tragic entanglement that was destined to involve us both. Gane was present, and Esmeer, a newly-added member, but I think Bailey was absent. Either he was absent, or he said something so entirely characteristic and undistinguished that it has left no impression on my mind.

I had broken a little from the traditions of the club even in my title, which was deliberately a challenge to the liberal idea: it was, "The World Exists for Exceptional People." It is not the title I should choose now--for since that time I have got my phrase of "mental hinterlander" into journalistic use. I should say now, "The World Exists for Mental Hinterland."

The notes I made of that opening have long since vanished with a thousand other papers, but some odd chance has preserved and brought with me to Italy the menu for the evening; its back black with the scrawled notes I made of the discussion for my reply. I found it the other day among some letters from Margaret and a copy of the 1909 Report of the Poor Law Commission, also rich with pencilled marginalia.

My opening was a criticism of the democratic idea and method, upon lines such as I have already sufficiently indicated in the preceding sections. I remember how old Dayton fretted in his chair, and tushed and pished at that, even as I gave it, and afterwards we were treated to one of his platitudinous harangues, he sitting back in his chair with that small obstinate eye of his fixed on the ceiling, and a sort of cadaverous glow upon his face, repeating--quite regardless of all my reasoning and all that had been said by others in the debate--the sacred empty phrases that were his soul's refuge from reality. "You may think it very clever," he said with a nod of his head to mark his sense of his point, "not to Trust in the People. I do." And so on. Nothing in his life or work had ever shown that he did trust in the people, but that was beside the mark. He was the party Liberal, and these were the party incantations.

After my preliminary attack on vague democracy I went on to show that all human life was virtually aristocratic; people must either recognise aristocracy in general or else follow leaders, which is aristocracy in particular, and so I came to my point that the reality of human progress lay necessarily through the establishment of freedoms for the human best and a collective receptivity and understanding. There was a disgusted grunt from Dayton, "Superman rubbish--Nietzsche. Shaw! Ugh!" I sailed on over him to my next propositions. The prime essential in a progressive civilisation was the establishment of a more effective selective process for the privilege of higher education, and the very highest educational opportunity for the educable. We were too apt to patronise scholarship winners, as though a scholarship was toffee given as a reward for virtue. It wasn't any reward at all; it was an invitation to capacity. We had no more right to drag in virtue, or any merit but quality, than we had to involve it in a search for the tallest man. We didn't want a mere process for the selection of good as distinguished from gifted and able boys--"No, you DON'T," from Dayton--we wanted all the brilliant stuff in the world concentrated upon the development of the world. Just to exasperate

Dayton further I put in a plea for gifts as against character in educational, artistic, and legislative work. "Good teaching," I said, "is better than good conduct. We are becoming idiotic about character."

Dayton was too moved to speak. He slewed round upon me an eye of agonised aversion.

I expatiated on the small proportion of the available ability that is really serving humanity to-day. "I suppose to-day all the thought, all the art, all the increments of knowledge that matter, are supplied so far as the English-speaking community is concerned by--how many?--by three or four thousand individuals. ('Less,' said Thorns.) To be more precise, by the mental hinterlands of three or four thousand individuals. We who know some of the band entertain no illusions as to their innate rarity. We know that they are just the few out of many, the few who got in our world of chance and confusion, the timely stimulus, the apt suggestion at the fortunate moment, the needed training, the leisure. The rest are lost in the crowd, fail through the defects of their qualities, become commonplace workmen and second-rate professional men, marry commonplace wives, are as much waste as the driftage of superfluous pollen in a pine forest is waste."

"Decent honest lives!" said Dayton to his bread-crumbs, with his chin in his necktie. "WASTE!"

"And the people who do get what we call opportunity get it usually in extremely limited and cramping forms. No man lives a life of intellectual productivity alone; he needs not only material and opportunity, but helpers, resonators. Round and about what I might call the REAL men, you want the sympathetic cooperators, who help by understanding. It isn't that our--SALT of three or four thousand is needlessly rare; it is sustained by far too small and undifferentiated a public. Most of the good men we know are not

really doing the very best work of their gifts; nearly all are a little adapted, most are shockingly adapted to some second-best use. Now, I take it, this is the very centre and origin of the muddle, futility, and unhappiness that distresses us; it's the cardinal problem of the state--to discover, develop, and use the exceptional gifts of men. And I see that best done--I drift more and more away from the common stuff of legislative and administrative activity--by a quite revolutionary development of the educational machinery, but by a still more unprecedented attempt to keep science going, to keep literature going, and to keep what is the necessary spur of all science and literature, an intelligent and appreciative criticism going. You know none of these things have ever been kept going hitherto; they've come unexpectedly and inexplicably."

"Hear, hear!" from Dayton, cough, nodding of the head, and an expression of mystical profundity.

"They've lit up a civilisation and vanished, to give place to darkness again. Now the modern state doesn't mean to go back to darkness again--and so it's got to keep its light burning." I went on to attack the present organisation of our schools and universities, which seemed elaborately designed to turn the well-behaved, uncritical, and uncreative men of each generation into the authoritative leaders of the next, and I suggested remedies upon lines that I have already indicated in the earlier chapters of this story. . . .

So far I had the substance of the club with me, but I opened new ground and set Crupp agog by confessing my doubt from which party or combination of groups these developments of science and literature and educational organisation could most reasonably be expected. I looked up to find Crupp's dark little eye intent upon me.

There I left it to them.

We had an astonishingly good discussion; Neal burst once, but we emerged from his flood after a time, and Dayton had his interlude. The rest was all close, keen examination of my problem.

I see Crupp now with his arm bent before him on the table in a way we had, as though it was jointed throughout its length like a lobster's antenna, his plump, short-fingered hand crushing up a walnut shell into smaller and smaller fragments. "Remington," he said, "has given us the data for a movement, a really possible movement. It's not only possible, but necessary--urgently necessary, I think, if the Empire is to go on."

"We're working altogether too much at the social basement in education and training," said Gane. "Remington is right about our neglect of the higher levels."

Britten made a good contribution with an analysis of what he called the spirit of a country and what made it. "The modern community needs its serious men to be artistic and its artists to be taken seriously," I remember his saying. "The day has gone by for either dull responsibility or merely witty art."

I remember very vividly how Shoesmith harped on an idea I had thrown out of using some sort of review or weekly to express and elaborate these conceptions of a new, severer, aristocratic culture.

"It would have to be done amazingly well," said Britten, and my mind went back to my school days and that ancient enterprise of ours, and how Cossington had rushed it. Well, Cossington had too many papers nowadays to interfere with us, and we perhaps had learnt some defensive devices.

"But this thing has to be linked to some political party," said Crupp, with his eye on me. "You can't get away from that. The Liberals," he added, "have never done anything for research or

literature."

"They had a Royal Commission on the Dramatic Censorship," said Thorns, with a note of minute fairness. "It shows what they were made of," he added.

"It's what I've told Remington again and again," said Crupp, "we've got to pick up the tradition of aristocracy, reorganise it, and make it work. But he's certainly suggested a method."

"There won't be much aristocracy to pick up," said Dayton, darkly to the ceiling, "if the House of Lords throws out the Budget."

"All the more reason for picking it up," said Neal. "For we can't do without it."

"Will they go to the bad, or will they rise from the ashes, aristocrats indeed--if the Liberals come in overwhelmingly?" said Britten.

"It's we who might decide that," said Crupp, insidiously.

"I agree," said Gane.

"No one can tell," said Thorns. "I doubt if they will get beaten."

It was an odd, fragmentary discussion that night. We were all with ideas in our minds at once fine and imperfect. We threw out suggestions that showed themselves at once far inadequate, and we tried to qualify them by minor self-contradictions. Britten, I think, got more said than any one. "You all seem to think you want to organise people, particular groups and classes of individuals," he insisted. "It isn't that. That's the standing error of politicians. You want to organise a culture. Civilisation isn't a matter of concrete groupings; it's a matter of prevailing ideas.

The problem is how to make bold, clear ideas prevail. The question for Remington and us is just what groups of people will most help this culture forward."

"Yes, but how are the Lords going to behave?" said Crupp. "You yourself were asking that a little while ago."

"If they win or if they lose," Gane maintained, "there will be a movement to reorganise aristocracy--Reform of the House of Lords, they'll call the political form of it."

"Bailey thinks that," said some one.

"The labour people want abolition," said some one. "Let 'em," said Thorns.

He became audible, sketching a possibility of action.

"Suppose all of us were able to work together. It's just one of those indeterminate, confused, eventful times ahead when a steady jet of ideas might produce enormous results."

"Leave me out of it," said Dayton, "IF you please."

"We should," said Thorns under his breath.

I took up Crupp's initiative, I remember, and expanded it.

"I believe we could do--extensive things," I insisted.

"Revivals and revisions of Toryism have been tried so often," said Thorns, "from the Young England movement onward."

"Not one but has produced its enduring effects," I said. "It's the peculiarity of English conservatism that it's persistently

progressive and rejuvenescent."

I think it must have been about that point that Dayton fled our presence, after some clumsy sentence that I decided upon reflection was intended to remind me of my duty to my party.

Then I remember Thorns firing doubts at me obliquely across the table. "You can't run a country through its spoilt children," he said. "What you call aristocrats are really spoilt children. They've had too much of everything, except bracing experience."

"Children can always be educated," said Crupp.

"I said SPOILT children," said Thorns.

"Look here, Thorns!" said I. "If this Budget row leads to a storm, and these big people get their power clipped, what's going to happen? Have you thought of that? When they go out lock, stock, and barrel, who comes in?"

"Nature abhors a Vacuum," said Crupp, supporting me.

"Bailey's trained officials," suggested Gane.

"Quacks with a certificate of approval from Altiora," said Thorns. "I admit the horrors of the alternative. There'd be a massacre in three years."

"One may go on trying possibilities for ever," I said. "One thing emerges. Whatever accidents happen, our civilisation needs, and almost consciously needs, a culture of fine creative minds, and all the necessary tolerances, opennesses, considerations, that march with that. For my own part, I think that is the Most Vital Thing. Build your ship of state as you will; get your men as you will; I concentrate on what is clearly the affair of my sort of man,--I want

to ensure the quality of the quarter deck."

"Hear, hear!" said Shoesmith, suddenly--his first remark for a long time. "A first-rate figure," said Shoesmith, gripping it.

"Our danger is in missing that," I went on. "Muddle isn't ended by transferring power from the muddle-headed few to the muddle-headed many, and then cheating the many out of it again in the interests of a bureaucracy of sham experts. But that seems the limit of the liberal imagination. There is no real progress in a country, except a rise in the level of its free intellectual activity. All other progress is secondary and dependant. If you take on Bailey's dreams of efficient machinery and a sort of fanatical discipline with no free-moving brains behind it, confused ugliness becomes rigid ugliness,--that's all. No doubt things are moving from looseness to discipline, and from irresponsible controls to organised controls--and also and rather contrariwise everything is becoming as people say, democratised; but all the more need in that, for an ark in which the living element may be saved."

"Hear, hear!" said Shoesmith, faint but pursuing.

It must have been in my house afterwards that Shoesmith became noticeable. He seemed trying to say something vague and difficult that he didn't get said at all on that occasion. "We could do immense things with a weekly," he repeated, echoing Neal, I think. And there he left off and became a mute expressiveness, and it was only afterwards, when I was in bed, that I saw we had our capitalist in our hands. . . .

We parted that night on my doorstep in a tremendous glow--but in that sort of glow one doesn't act upon without much reconsideration, and it was some months before I made my decision to follow up the indications of that opening talk.

I find my thoughts lingering about the Pentagram Circle. In my developments it played a large part, not so much by starting new trains of thought as by confirming the practicability of things I had already hesitatingly entertained. Discussion with these other men so prominently involved in current affairs endorsed views that otherwise would have seemed only a little less remote from actuality than the guardians of Plato or the labour laws of More. Among other questions that were never very distant from our discussions, that came apt to every topic, was the true significance of democracy, Tariff Reform as a method of international hostility, and the imminence of war. On the first issue I can still recall little Bailey, glib and winking, explaining that democracy was really just a dodge for getting assent to the ordinances of the expert official by means of the polling booth. "If they don't like things," said he, "they can vote for the opposition candidate and see what happens then--and that, you see, is why we don't want proportional representation to let in the wild men." I opened my eyes--the lids had dropped for a moment under the caress of those smooth sounds--to see if Bailey's artful forefinger wasn't at the side of his predominant nose.

The international situation exercised us greatly. Our meetings were pervaded by the feeling that all things moved towards a day of reckoning with Germany, and I was largely instrumental in keeping up the suggestion that India was in a state of unstable equilibrium, that sooner or later something must happen there--something very serious to our Empire. Dayton frankly detested these topics. He was full of that old Middle Victorian persuasion that whatever is inconvenient or disagreeable to the English mind could be annihilated by not thinking about it. He used to sit low in his

chair and look mulish. "Militarism," he would declare in a tone of the utmost moral fervour, is a curse. It's an unmitigated curse." Then he would cough shortly and twitch his head back and frown, and seem astonished beyond measure that after this conclusive statement we could still go on talking of war.

All our Imperialists were obsessed by the thought of international conflict, and their influence revived for a time those uneasinesses that had been aroused in me for the first time by my continental journey with Willersley and by Meredith's "One of Our Conquerors." That quite justifiable dread of a punishment for all the slackness, mental dishonesty, presumption, mercenary respectability and sentimentalised commercialism of the Victorian period, at the hands of the better organised, more vigorous, and now far more highly civilised peoples of Central Europe, seemed to me to have both a good and bad series of consequences. It seemed the only thing capable of bracing English minds to education, sustained constructive effort and research; but on the other hand it produced the quality of a panic, hasty preparation, impatience of thought, a wasteful and sometimes quite futile immediacy. In 1909, for example, there was a vast clamour for eight additional Dreadnoughts--

"We want eight
And we won't wait,"

but no clamour at all about our national waste of inventive talent, our mean standard of intellectual attainment, our disingenuous criticism, and the consequent failure to distinguish men of the quality needed to carry on the modern type of war. Almost universally we have the wrong men in our places of responsibility and the right men in no place at all, almost universally we have poorly qualified, hesitating, and resentful subordinates, because our criticism is worthless and, so habitually as to be now almost

unconsciously, dishonest. Germany is beating England in every matter upon which competition is possible, because she attended sedulously to her collective mind for sixty pregnant years, because in spite of tremendous defects she is still far more anxious for quality in achievement than we are. I remember saying that in my paper. From that, I remember, I went on to an image that had flashed into my mind. "The British Empire," I said, "is like some of those early vertebrated monsters, the Brontosaurus and the Atlantosaurus and such-like; it sacrifices intellect to character; its backbone, that is to say,--especially in the visceral region--is bigger than its cranium. It's no accident that things are so. We've worked for backbone. We brag about backbone, and if the joints are ankylosed so much the better. We're still but only half awake to our error. You can't change that suddenly."

"Turn it round and make it go backwards," interjected Thorns.

"It's trying to do that," I said, "in places."

And afterwards Crupp declared I had begotten a nightmare which haunted him of nights; he was trying desperately and belatedly to blow a brain as one blows soap-bubbles on such a mezozoic saurian as I had conjured up, while the clumsy monster's fate, all teeth and brains, crept nearer and nearer. . . .

I've grown, I think, since those days out of the urgency of that apprehension. I still think a European war, and conceivably a very humiliating war for England, may occur at no very distant date, but I do not think there is any such heroic quality in our governing class as will make that war catastrophic. The prevailing spirit in English life--it is one of the essential secrets of our imperial endurance--is one of underbred aggression in prosperity and diplomatic compromise in moments of danger; we bully haughtily where we can and assimilate where we must. It is not for nothing that our upper and middle-class youth is educated by teachers of the highest

character, scholars and gentlemen, men who can pretend quite honestly that Darwinism hasn't upset the historical fall of man, that cricket is moral training, and that Socialism is an outrage upon the teachings of Christ. A sort of dignified dexterity of evasion is the national reward. Germany, with a larger population, a vigorous and irreconcilable proletariat, a bolder intellectual training, a harsher spirit, can scarcely fail to drive us at last to a realisation of intolerable strain. So we may never fight at all. The war of preparations that has been going on for thirty years may end like a sham-fight at last in an umpire's decision. We shall proudly but very firmly take the second place. For my own part, since I love England as much as I detest her present lethargy of soul, I pray for a chastening war--I wouldn't mind her flag in the dirt if only her spirit would come out of it. So I was able to shake off that earlier fear of some final and irrevocable destruction truncating all my schemes. At the most, a European war would be a dramatic episode in the reconstruction I had in view.

In India, too, I no longer foresee, as once I was inclined to see, disaster. The English rule in India is surely one of the most extraordinary accidents that has ever happened in history. We are there like a man who has fallen off a ladder on to the neck of an elephant, and doesn't know what to do or how to get down. Until something happens he remains. Our functions in India are absurd. We English do not own that country, do not even rule it. We make nothing happen; at the most we prevent things happening. We suppress our own literature there. Most English people cannot even go to this land they possess; the authorities would prevent it. If Messrs. Perowne or Cook organised a cheap tour of Manchester operatives, it would be stopped. No one dare bring the average English voter face to face with the reality of India, or let the Indian native have a glimpse of the English voter. In my time I have talked to English statesmen, Indian officials and ex-officials, viceroys, soldiers, every one who might be supposed to know what India signifies, and I have prayed them to tell me what they thought

we were up to there. I am not writing without my book in these matters. And beyond a phrase or so about "even-handed justice"--and look at our sedition trials!--they told me nothing. Time after time I have heard of that apocryphal native ruler in the north-west, who, when asked what would happen if we left India, replied that in a week his men would be in the saddle, and in six months not a rupee nor a virgin would he left in Lower Bengal. That is always given as our conclusive justification. But is it our business to preserve the rupees and virgins of Lower Bengal in a sort of magic inconclusiveness? Better plunder than paralysis, better fire and sword than futility. Our flag is spread over the peninsula, without plans, without intentions--a vast preventive. The sum total of our policy is to arrest any discussion, any conferences that would enable the Indians to work out a tolerable scheme of the future for themselves. But that does not arrest the resentment of men held back from life. Consider what it must be for the educated Indian sitting at the feast of contemporary possibilities with his mouth gagged and his hands bound behind him! The spirit of insurrection breaks out in spite of espionage and seizures. Our conflict for inaction develops stupendous absurdities. The other day the British Empire was taking off and examining printed cotton stomach wraps for seditious emblems and inscriptions. . . .

In some manner we shall have to come out of India. We have had our chance, and we have demonstrated nothing but the appalling dulness of our national imagination. We are not good enough to do anything with India. Codger and Flack, and Gates and Dayton, Cladingbowl in the club, and the HOME CHURCHMAN in the home, cant about "character," worship of strenuous force and contempt of truth; for the sake of such men and things as these, we must abandon in fact, if not in appearance, that empty domination. Had we great schools and a powerful teaching, could we boast great men, had we the spirit of truth and creation in our lives, then indeed it might be different. But a race that bears a sceptre must carry gifts to justify it.

It does not follow that we shall be driven catastrophically from India. That was my earlier mistake. We are not proud enough in our bones to be ruined by India as Spain was by her empire. We may be able to abandon India with an air of still remaining there. It is our new method. We train our future rulers in the public schools to have a very wholesome respect for strength, and as soon as a power arises in India in spite of us, be it a man or a culture, or a native state, we shall be willing to deal with it. We may or may not have a war, but our governing class will be quick to learn when we are beaten. Then they will repeat our South African diplomacy, and arrange for some settlement that will abandon the reality, such as it is, and preserve the semblance of power. The conqueror DE FACTO will become the new "loyal Briton," and the democracy at home will be invited to celebrate our recession--triumphantly. I am no believer in the imminent dissolution of our Empire; I am less and less inclined to see in either India or Germany the probability of an abrupt truncation of those slow intellectual and moral constructions which are the essentials of statecraft.

6

I sit writing in this little loggia to the sound of dripping water--this morning we had rain, and the roof of our little casa is still not dry, there are pools in the rocks under the sweet chestnuts, and the torrent that crosses the salita is full and boastful,--and I try to recall the order of my impressions during that watching, dubious time, before I went over to the Conservative Party. I was trying--chaotic task--to gauge the possibilities inherent in the quality of the British aristocracy. There comes a broad spectacular effect of wide parks, diversified by woods and bracken valleys, and dappled with deer; of great smooth lawns shaded by ancient trees; of big

facades of sunlit buildings dominating the country side; of large fine rooms full of handsome, easy-mannered people. As a sort of representative picture to set off against those other pictures of Liberals and of Socialists I have given, I recall one of those huge assemblies the Duchess of Clynes inaugurated at Stamford House. The place itself is one of the vastest private houses in London, a huge clustering mass of white and gold saloons with polished floors and wonderful pictures, and staircases and galleries on a Gargantuan scale. And there she sought to gather all that was most representative of English activities, and did, in fact, in those brilliant nocturnal crowds, get samples of nearly every section of our social and intellectual life, with a marked predominance upon the political and social side.

I remember sitting in one of the recesses at the end of the big saloon with Mrs. Redmondson, one of those sharp-minded, beautiful rich women one meets so often in London, who seem to have done nothing and to be capable of everything, and we watched the crowd--uniforms and splendours were streaming in from a State ball--and exchanged information. I told her about the politicians and intellectuals, and she told me about the aristocrats, and we sharpened our wit on them and counted the percentage of beautiful people among the latter, and wondered if the general effect of tallness was or was not an illusion.

They were, we agreed, for the most part bigger than the average of people in London, and a handsome lot, even when they were not subtly individualised. "They look so well nurtured," I said, "well cared for. I like their quiet, well-trained movements, their pleasant consideration for each other."

"Kindly, good tempered, and at bottom utterly selfish," she said, "like big, rather carefully trained, rather pampered children. What else can you expect from them?"

"They are good tempered, anyhow," I witnessed, "and that's an achievement. I don't think I could ever be content under a bad-tempered, sentimentalism, strenuous Government. That's why I couldn't stand the Roosevelt REGIME in America. One's chief surprise when one comes across these big people for the first time is their admirable easiness and a real personal modesty. I confess I admire them. Oh! I like them. I wouldn't at all mind, I believe, giving over the country to this aristocracy--given SOMETHING--"

"Which they haven't got."

"Which they haven't got--or they'd be the finest sort of people in the world."

"That something?" she inquired.

"I don't know. I've been puzzling my wits to know. They've done all sorts of things--"

"That's Lord Wrassleton," she interrupted, "whose leg was broken--you remember?--at Spion Kop."

"It's healed very well. I like the gold lace and the white glove resting, with quite a nice awkwardness, on the sword. When I was a little boy I wanted to wear clothes like that. And the stars! He's got the V. C. Most of these people here have at any rate shown pluck, you know--brought something off."

"Not quite enough," she suggested.

"I think that's it," I said. "Not quite enough--not quite hard enough," I added.

She laughed and looked at me. "You'd like to make us," she said.

"What?"

"Hard."

"I don't think you'll go on if you don't get hard."

"We shan't be so pleasant if we do."

"Well, there my puzzled wits come in again. I don't see why an aristocracy shouldn't be rather hard trained, and yet kindly. I'm not convinced that the resources of education are exhausted. I want to better this, because it already looks so good."

"How are we to do it?" asked Mrs. Redmondson.

"Oh, there you have me! I've been spending my time lately in trying to answer that! It makes me quarrel with"--I held up my fingers and ticked the items off--"the public schools, the private tutors, the army exams, the Universities, the Church, the general attitude of the country towards science and literature--"

"We all do," said Mrs. Redmondson. "We can't begin again at the beginning," she added.

"Couldn't one," I nodded at the assembly in general, start a movement?

"There's the Confederates," she said, with a faint smile that masked a gleam of curiosity. . . . "You want," she said, "to say to the aristocracy, 'Be aristocrats. NOBLESSE OBLIGE.' Do you remember what happened to the monarch who was told to 'Be a King'?"

"Well," I said, "I want an aristocracy."

"This," she said, smiling, "is the pick of them. The backwoodsmen

are off the stage. These are the brilliant ones--the smart and the blues. . . . They cost a lot of money, you know."

So far Mrs. Redmondson, but the picture remained full of things not stated in our speech. They were on the whole handsome people, charitable minded, happy, and easy. They led spacious lives, and there was something free and fearless about their bearing that I liked extremely. The women particularly were wide-reading, fine-thinking. Mrs. Redmondson talked as fully and widely and boldly as a man, and with those flashes of intuition, those startling, sudden delicacies of perception few men display. I liked, too, the relations that held between women and men, their general tolerance, their antagonism to the harsh jealousies that are the essence of the middle-class order. . . .

After all, if one's aim resolved itself into the development of a type and culture of men, why shouldn't one begin at this end?

It is very easy indeed to generalise about a class or human beings, but much harder to produce a sample. Was old Lady Forthundred, for instance, fairly a sample? I remember her as a smiling, magnificent presence, a towering accumulation of figure and wonderful shimmering blue silk and black lace and black hair, and small fine features and chins and chins and chins, disposed in a big cane chair with wraps and cushions upon the great terrace of Champneys. Her eye was blue and hard, and her accent and intonation were exactly what you would expect from a rather commonplace dressmaker pretending to be aristocratic. I was, I am afraid, posing a little as the intelligent but respectful inquirer from below investigating the great world, and she was certainly posing as my informant. She affected a cynical coarseness. She developed a theory on the governance of England, beautifully frank and simple. "Give 'um all a peerage when they get twenty thousand a year," she maintained. "That's my remedy."

In my new role of theoretical aristocrat I felt a little abashed.

"Twenty thousand," she repeated with conviction.

It occurred to me that I was in the presence of the aristocratic theory currently working as distinguished from my as yet unformulated intentions.

"You'll get a lot of loafers and scamps among 'um," said Lady Forthundred. "You get loafers and scamps everywhere, but you'll get a lot of men who'll work hard to keep things together, and that's what we're all after, isn't ut?"

"It's not an ideal arrangement."

"Tell me anything better," said Lady Forthundred.

On the whole, and because she refused emphatically to believe in education, Lady Forthundred scored.

We had been discussing Cossington's recent peerage, for Cossington, my old schoolfellow at City Merchants', and my victor in the affair of the magazine, had clambered to an amazing wealth up a piled heap of energetically pushed penny and halfpenny magazines, and a group of daily newspapers. I had expected to find the great lady hostile to the new-comer, but she accepted him, she gloried in him.

"We're a peerage," she said, "but none of us have ever had any nonsense about nobility."

She turned and smiled down on me. "We English," she said, "are a practical people. We assimilate 'um."

"Then, I suppose, they don't give trouble?"

"Then they don't give trouble."

"They learn to shoot?"

"And all that," said Lady Forthundred. "Yes. And things go on. Sometimes better than others, but they go on--somehow. It depends very much on the sort of butler who pokes 'um about."

I suggested that it might be possible to get a secure twenty thousand a year by at least detrimental methods--socially speaking.

"We must take the bad and the good of 'um," said Lady Forthundred, courageously. . . .

Now, was she a sample? It happened she talked. What was there in the brains of the multitude of her first, second, third, fourth, and fifth cousins, who didn't talk, who shone tall, and bearing themselves finely, against a background of deft, attentive maids and valets, on every spacious social scene? How did things look to them?

7

Side by side with Lady Forthundred, it is curious to put Evesham with his tall, bent body, his little-featured almost elvish face, his unequal mild brown eyes, his gentle manner, his sweet, amazing oratory. He led all these people wonderfully. He was always curious and interested about life, wary beneath a pleasing frankness--and I tormented my brain to get to the bottom of him. For a long time he was the most powerful man in England under the throne; he had the Lords in his hand, and a great majority in the Commons, and the discontents and intrigues that are the concomitants

of an overwhelming party advantage broke against him as waves break against a cliff. He foresaw so far in these matters that it seemed he scarcely troubled to foresee. He brought political art to the last triumph of naturalness. Always for me he has been the typical aristocrat, so typical and above the mere forms of aristocracy, that he remained a commoner to the end of his days.

I had met him at the beginning of my career; he read some early papers of mine, and asked to see me, and I conceived a flattered liking for him that strengthened to a very strong feeling indeed. He seemed to me to stand alone without an equal, the greatest man in British political life. Some men one sees through and understands, some one cannot see into or round because they are of opaque clay, but about Evesham I had a sense of things hidden as it were by depth and mists, because he was so big and atmospheric a personality. No other contemporary has had that effect upon me. I've sat beside him at dinners, stayed in houses with him--he was in the big house party at Champneys--talked to him, sounded him, watching him as I sat beside him. I could talk to him with extraordinary freedom and a rare sense of being understood. Other men have to be treated in a special manner; approached through their own mental dialect, flattered by a minute regard for what they have said and done. Evesham was as widely and charitably receptive as any man I have ever met. The common politicians beside him seemed like rows of stuffy little rooms looking out upon the sea.

And what was he up to? What did HE think we were doing with Mankind? That I thought worth knowing.

I remember his talking on one occasion at the Hartsteins', at a dinner so tremendously floriferous and equipped that we were almost forced into duologues, about the possible common constructive purpose in politics.

"I feel so much," he said, "that the best people in every party

converge. We don't differ at Westminster as they do in the country towns. There's a sort of extending common policy that goes on under every government, because on the whole it's the right thing to do, and people know it. Things that used to be matters of opinion become matters of science--and cease to be party questions."

He instanced education.

"Apart," said I, "from the religious question."

"Apart from the religious question."

He dropped that aspect with an easy grace, and went on with his general theme that political conflict was the outcome of uncertainty. "Directly you get a thing established, so that people can say, 'Now this is Right,' with the same conviction that people can say water is a combination of oxygen and hydrogen, there's no more to be said. The thing has to be done. . . ."

And to put against this effect of Evesham, broad and humanely tolerant, posing as the minister of a steadily developing constructive conviction, there are other memories.

Have I not seen him in the House, persistent, persuasive, indefatigable, and by all my standards wickedly perverse, leaning over the table with those insistent movements of his hand upon it, or swaying forward with a grip upon his coat lapel, fighting with a diabolical skill to preserve what are in effect religious tests, tests he must have known would outrage and humiliate and injure the consciences of a quarter--and that perhaps the best quarter--of the youngsters who come to the work of elementary education?

In playing for points in the game of party advantage Evesham displayed at times a quite wicked unscrupulousness in the use of his subtle mind. I would sit on the Liberal benches and watch him, and

listen to his urbane voice, fascinated by him. Did he really care? Did anything matter to him? And if it really mattered nothing, why did he trouble to serve the narrowness and passion of his side? Or did he see far beyond my scope, so that this petty iniquity was justified by greater, remoter ends of which I had no intimation?

They accused him of nepotism. His friends and family were certainly well cared for. In private life he was full of an affectionate intimacy; he pleased by being charmed and pleased. One might think at times there was no more of him than a clever man happily circumstanced, and finding an interest and occupation in politics. And then came a glimpse of thought, of imagination, like the sight of a soaring eagle through a staircase skylight. Oh, beyond question he was great! No other contemporary politician had his quality. In no man have I perceived so sympathetically the great contrast between warm, personal things and the white dream of statecraft. Except that he had it seemed no hot passions, but only interests and fine affections and indolences, he paralleled the conflict of my life. He saw and thought widely and deeply; but at times it seemed to me his greatness stood over and behind the reality of his life, like some splendid servant, thinking his own thoughts, who waits behind a lesser master's chair. . . .

8

Of course, when Evesham talked of this ideal of the organised state becoming so finely true to practicability and so clearly stated as to have the compelling conviction of physical science, he spoke quite after my heart. Had he really embodied the attempt to realise that, I could have done no more than follow him blindly. But neither he nor I embodied that, and there lies the gist of my story. And when it came to a study of others among the leading Tories and

Imperialists the doubt increased, until with some at last it was possible to question whether they had any imaginative conception of constructive statecraft at all; whether they didn't opaquely accept the world for what it was, and set themselves single-mindedly to make a place for themselves and cut a figure in it.

There were some very fine personalities among them: there were the great peers who had administered Egypt, India, South Africa, Framboya--Cromer, Kitchener, Curzon, Milner, Gane, for example. So far as that easier task of holding sword and scales had gone, they had shown the finest qualities, but they had returned to the perplexing and exacting problem of the home country, a little glorious, a little too simply bold. They wanted to arm and they wanted to educate, but the habit of immediate necessity made them far more eager to arm than to educate, and their experience of heterogeneous controls made them overrate the need for obedience in a homogeneous country. They didn't understand raw men, ill-trained men, uncertain minds, and intelligent women; and these are the things that matter in England. . . . There were also the great business adventurers, from Cranber to Cossington (who was now Lord Paddockhurst). My mind remained unsettled, and went up and down the scale between a belief in their far-sighted purpose and the perception of crude vanities, coarse ambitions, vulgar competitiveness, and a mere habitual persistence in the pursuit of gain. For a time I saw a good deal of Cossington--I wish I had kept a diary of his talk and gestures, to mark how he could vary from day to day between a POSEUR, a smart tradesman, and a very bold and wide-thinking political schemer. He had a vanity of sweeping actions, motor car pounces, Napoleonic rushes, that led to violent ineffectual changes in the policy of his papers, and a haunting pursuit by parallel columns in the liberal press that never abashed him in the slightest degree. By an accident I plumbed the folly in him--but I feel I never plumbed his wisdom. I remember him one day after a lunch at the Barhams' saying suddenly, out of profound meditation over the end of a cigar, one of those sentences that seem

to light the whole interior being of a man. "Some day," he said softly, rather to himself than to me, and A PROPOS of nothing--"some day I will raise the country."

"Why not?" I said, after a pause, and leant across him for the little silver spirit-lamp, to light my cigarette. . . .

Then the Tories had for another section the ancient creations, and again there were the financial peers, men accustomed to reserve, and their big lawyers, accustomed to--well, qualified statement. And below the giant personalities of the party were the young bloods, young, adventurous men of the type of Lord Tarville, who had seen service in South Africa, who had travelled and hunted; explorers, keen motorists, interested in aviation, active in army organisation. Good, brown-faced stuff they were, but impervious to ideas outside the range of their activities, more ignorant of science than their chaffeurs, and of the quality of English people than welt-politicians; contemptuous of school and university by reason of the Gateses and Flacks and Codgers who had come their way, witty, light-hearted, patriotic at the Kipling level, with a certain aptitude for bullying. They varied in insensible gradations between the noble sportsmen on the one hand, and men like Gane and the Tories of our Pentagram club on the other. You perceive how a man might exercise his mind in the attempt to strike an average of public serviceability in this miscellany! And mixed up with these, mixed up sometimes in the same man, was the pure reactionary, whose predominant idea was that the village schools should confine themselves to teaching the catechism, hat-touching and courtesying, and be given a holiday whenever beaters were in request. . . .

I find now in my mind as a sort of counterpoise to Evesham the figure of old Lord Wardingham, asleep in the largest armchair in the library of Stamford Court after lunch. One foot rested on one of those things--I think they are called gout stools. He had been playing golf all the morning and wearied a weak instep; at lunch he

had sat at my table and talked in the overbearing manner permitted to irascible important men whose insteps are painful. Among other things he had flouted the idea that women would ever understand statecraft or be more than a nuisance in politics, denied flatly that Hindoos were capable of anything whatever except excesses in population, regretted he could not censor picture galleries and circulating libraries, and declared that dissenters were people who pretended to take theology seriously with the express purpose of upsetting the entirely satisfactory compromise of the Established Church. "No sensible people, with anything to gain or lose, argue about religion," he said. "They mean mischief." Having delivered his soul upon these points, and silenced the little conversation to the left of him from which they had arisen, he became, after an appreciative encounter with a sanguinary woodcock, more amiable, responded to some respectful initiatives of Crupp's, and related a number of classical anecdotes of those blighting snubs, vindictive retorts and scandalous miscarriages of justice that are so dear to the forensic mind. Now he reposed. He was breathing heavily with his mouth a little open and his head on one side. One whisker was turned back against the comfortable padding. His plump strong hands gripped the arms of his chair, and his frown was a little assuaged. How tremendously fed up he looked! Honours, wealth, influence, respect, he had them all. How scornful and hard it had made his unguarded expression!

I note without comment that it didn't even occur to me then to wake him up and ask him what HE was up to with mankind.

9

One countervailing influence to my drift to Toryism in those days was Margaret's quite religious faith in the Liberals. I realised

that slowly and with a mild astonishment. It set me, indeed, even then questioning my own change of opinion. We came at last incidentally, as our way was, to an exchange of views. It was as nearly a quarrel as we had before I came over to the Conservative side. It was at Champneys, and I think during the same visit that witnessed my exploration of Lady Forthundred. It arose indirectly, I think, out of some comments of mine upon our fellow-guests, but it is one of those memories of which the scene and quality remain more vivid than the things said, a memory without any very definite beginning or end. It was afternoon, in the pause between tea and the dressing bell, and we were in Margaret's big silver-adorned, chintz-bright room, looking out on the trim Italian garden. . . . Yes, the beginning of it has escaped me altogether, but I remember it as an odd exceptional little wrangle.

At first we seem to have split upon the moral quality of the aristocracy, and I had an odd sense that in some way too feminine for me to understand our hostess had aggrieved her. She said, I know, that Champneys distressed her; made her "eager for work and reality again."

"But aren't these people real?"

"They're so superficial, so extravagant!"

I said I was not shocked by their unreality. They seemed the least affected people I had ever met. "And are they really so extravagant?" I asked, and put it to her that her dresses cost quite as much as any other woman's in the house.

"It's not only their dresses," Margaret parried. "It's the scale and spirit of things."

I questioned that. "They're cynical," said Margaret, staring before her out of the window.

I challenged her, and she quoted the Brabants, about whom there had been an ancient scandal. She'd heard of it from Altiora, and it was also Altiora who'd given her a horror of Lord Carnaby, who was also with us. "You know his reputation," said Margaret. "That Normandy girl. Every one knows about it. I shiver when I look at him. He seems--oh! like something not of OUR civilisation. He WILL come and say little things to me."

"Offensive things?"

"No, politenesses and things. Of course his manners are--quite right. That only makes it worse, I think. It shows he might have helped--all that happened. I do all I can to make him see I don't like him. But none of the others make the slightest objection to him."

"Perhaps these people imagine something might be said for him."

"That's just it," said Margaret.

"Charity," I suggested.

"I don't like that sort of toleration."

I was oddly annoyed. "Like eating with publicans and sinners," I said. "No! . . .

But scandals, and the contempt for rigid standards their condonation displayed, weren't more than the sharp edge of the trouble. "It's their whole position, their selfish predominance, their class conspiracy against the mass of people," said Margaret. "When I sit at dinner in that splendid room, with its glitter and white reflections and candlelight, and its flowers and its wonderful service and its candelabra of solid gold, I seem to feel the slums

and the mines and the over-crowded cottages stuffed away under the table."

I reminded Margaret that she was not altogether innocent of unearned increment.

"But aren't we doing our best to give it back?" she said.

I was moved to question her. "Do you really think," I asked, "that the Tories and peers and rich people are to blame for social injustice as we have it to-day? Do you really see politics as a struggle of light on the Liberal side against darkness on the Tory?"

"They MUST know," said Margaret.

I found myself questioning that. I see now that to Margaret it must have seemed the perversest carping against manifest things, but at the time I was concentrated simply upon the elucidation of her view and my own; I wanted to get at her conception in the sharpest, hardest lines that were possible. It was perfectly clear that she saw Toryism as the diabolical element in affairs. The thing showed in its hopeless untruth all the clearer for the fine, clean emotion with which she gave it out to me. My sleeping peer in the library at Stamford Court and Evesham talking luminously behind the Hartstein flowers embodied the devil, and my replete citizen sucking at his cigar in the National Liberal Club, Willie Crampton discussing the care and management of the stomach over a specially hygienic lemonade, and Dr. Tumpany in his aggressive frock-coat pegging out a sort of copyright in Socialism, were the centre and wings of the angelic side. It was nonsense. But how was I to put the truth to her?

"I don't see things at all as you do," I said. "I don't see things in the same way."

"Think of the poor," said Margaret, going off at a tangent.

"Think of every one," I said. "We Liberals have done more mischief through well-intentioned benevolence than all the selfishness in the world could have done. We built up the liquor interest."

"WE!" cried Margaret. "How can you say that? It's against us."

"Naturally. But we made it a monopoly in our clumsy efforts to prevent people drinking what they liked, because it interfered with industrial regularity--"

"Oh!" cried Margaret, stung; and I could see she thought I was talking mere wickedness.

"That's it," I said.

"But would you have people drink whatever they pleased?"

"Certainly. What right have I to dictate to other men and women?"

"But think of the children!"

"Ah! there you have the folly of modern Liberalism, its half-cunning, half-silly way of getting at everything in a roundabout fashion. If neglecting children is an offence, and it IS an offence, then deal with it as such, but don't go badgering and restricting people who sell something that may possibly in some cases lead to a neglect of children. If drunkenness is an offence, punish it, but don't punish a man for selling honest drink that perhaps after all won't make any one drunk at all. Don't intensify the viciousness of the public-house by assuming the place isn't fit for women and children. That's either spite or folly. Make the public-house FIT for women and children. Make it a real public-house. If we Liberals go on as we are going, we shall presently

want to stop the sale of ink and paper because those things tempt men to forgery. We do already threaten the privacy of the post because of betting tout's letters. The drift of all that kind of thing is narrow, unimaginative, mischievous, stupid. . . ."

I stopped short and walked to the window and surveyed a pretty fountain, facsimile of one in Verona, amidst trim-cut borderings of yew. Beyond, and seen between the stems of ilex trees, was a great blaze of yellow flowers. . . .

"But prevention," I heard Margaret behind me, "is the essence of our work."

I turned. "There's no prevention but education. There's no antiseptics in life but love and fine thinking. Make people fine, make fine people. Don't be afraid. These Tory leaders are better people individually than the average; why cast them for the villains of the piece? The real villain in the piece--in the whole human drama--is the muddle-headedness, and it matters very little if it's virtuous-minded or wicked. I want to get at muddle-headedness. If I could do that I could let all that you call wickedness in the world run about and do what it jolly well pleased. It would matter about as much as a slightly neglected dog--in an otherwise well-managed home."

My thoughts had run away with me.

"I can't understand you," said Margaret, in the profoundest distress. "I can't understand how it is you are coming to see things like this."

10

The moods of a thinking man in politics are curiously evasive and

difficult to describe. Neither the public nor the historian will permit the statesman moods. He has from the first to assume he has an Aim, a definite Aim, and to pretend to an absolute consistency with that. Those subtle questionings about the very fundamentals of life which plague us all so relentlessly nowadays are supposed to be silenced. He lifts his chin and pursues his Aim explicitly in the sight of all men. Those who have no real political experience can scarcely imagine the immense mental and moral strain there is between one's everyday acts and utterances on the one hand and the "thinking-out" process on the other. It is perplexingly difficult to keep in your mind, fixed and firm, a scheme essentially complex, to keep balancing a swaying possibility while at the same time under jealous, hostile, and stupid observation you tread your part in the platitudinous, quarrelsome, ill-presented march of affairs. . . .

The most impossible of all autobiographies is an intellectual autobiography. I have thrown together in the crudest way the elements of the problem I struggled with, but I can give no record of the subtle details; I can tell nothing of the long vacillations between Protean values, the talks and re-talks, the meditations, the bleak lucidities of sleepless nights. . . .

And yet these things I have struggled with must be thought out, and, to begin with, they must be thought out in this muddled, experimenting way. To go into a study to think about statecraft is to turn your back on the realities you are constantly needing to feel and test and sound if your thinking is to remain vital; to choose an aim and pursue it in despite of all subsequent questionings is to bury the talent of your mind. It is no use dealing with the intricate as though it were simple, to leap haphazard at the first course of action that presents itself; the whole world of politicians is far too like a man who snatches a poker to a failing watch. It is easy to say he wants to "get something done," but the only sane thing to do for the moment is to put aside that poker and take thought and get a better implement. . . .

One of the results of these fundamental preoccupations of mine was a curious irritability towards Margaret that I found difficult to conceal. It was one of the incidental cruelties of our position that this should happen. I was in such doubt myself, that I had no power to phrase things for her in a form she could use. Hitherto I had stage-managed our "serious" conversations. Now I was too much in earnest and too uncertain to go on doing this. I avoided talk with her. Her serene, sustained confidence in vague formulae and sentimental aspirations exasperated me; her want of sympathetic apprehension made my few efforts to indicate my changing attitudes distressing and futile. It wasn't that I was always thinking right, and that she was always saying wrong. It was that I was struggling to get hold of a difficult thing that was, at any rate, half true, I could not gauge how true, and that Margaret's habitual phrasing ignored these elusive elements of truth, and without premeditation fitted into the weaknesses of my new intimations, as though they had nothing but weaknesses. It was, for example, obvious that these big people, who were the backbone of Imperialism and Conservatism, were temperamentally lax, much more indolent, much more sensuous, than our deliberately virtuous Young Liberals. I didn't want to be reminded of that, just when I was in full effort to realise the finer elements in their composition. Margaret classed them and disposed of them. It was our incurable differences in habits and gestures of thought coming between us again.

The desert of misunderstanding widened. I was forced back upon myself and my own secret councils. For a time I went my way alone; an unmixed evil for both of us. Except for that Pentagram evening, a series of talks with Isabel Rivers, who was now becoming more and more important in my intellectual life, and the arguments I maintained with Crupp, I never really opened my mind at all during that period of indecisions, slow abandonments, and slow acquisitions.

CHAPTER THE THIRD

SECESSION

1

At last, out of a vast accumulation of impressions, decision distilled quite suddenly. I succumbed to Evesham and that dream of the right thing triumphant through expression. I determined I would go over to the Conservatives, and use my every gift and power on the side of such forces on that side as made for educational reorganisation, scientific research, literature, criticism, and intellectual development. That was in 1909. I judged the Tories were driving straight at a conflict with the country, and I thought them bound to incur an electoral defeat. I under-estimated their strength in the counties. There would follow, I calculated, a period of profound reconstruction in method and policy alike. I was entirely at one with Crupp in perceiving in this an immense opportunity for the things we desired. An aristocracy quickened by conflict and on the defensive, and full of the idea of justification by reconstruction, might prove altogether more apt for thought and high professions than Mrs. Redmondson's spoilt children. Behind the now inevitable struggle for a reform of the House of Lords, there would be great heart searchings and educational endeavour. On that we reckoned. . . .

At last we talked it out to the practical pitch, and Crupp and Shoemith, and I and Gane, made our definite agreement together. . . .

I emerged from enormous silences upon Margaret one evening.

She was just back from the display of some new musicians at the

Hartsteins. I remember she wore a dress of golden satin, very rich-looking and splendid. About her slender neck there was a rope of gold-set amber beads. Her hair caught up and echoed and returned these golden notes. I, too, was in evening dress, but where I had been escapes me,--some forgotten dinner, I suppose. I went into her room. I remember I didn't speak for some moments. I went across to the window and pulled the blind aside, and looked out upon the railed garden of the square, with its shrubs and shadowed turf gleaming pallidly and irregularly in the light of the big electric standard in the corner.

"Margaret," I said, "I think I shall break with the party."

She made no answer. I turned presently, a movement of enquiry.

"I was afraid you meant to do that," she said.

"I'm out of touch," I explained. "Altogether."

"Oh! I know."

"It places me in a difficult position," I said.

Margaret stood at her dressing-table, looking steadfastly at herself in the glass, and with her fingers playing with a litter of stoppered bottles of tinted glass. "I was afraid it was coming to this," she said.

"In a way," I said, "we've been allies. I owe my seat to you. I couldn't have gone into Parliament. . . ."

"I don't want considerations like that to affect us," she interrupted.

There was a pause. She sat down in a chair by her dressing-table,

lifted an ivory hand-glass, and put it down again.

"I wish," she said, with something like a sob in her voice, "it were possible that you shouldn't do this." She stopped abruptly, and I did not look at her, because I could feel the effort she was making to control herself.

"I thought," she began again, "when you came into Parliament--"

There came another silence. "It's all gone so differently," she said. "Everything has gone so differently."

I had a sudden memory of her, shining triumphant after the Kinghamstead election, and for the first time I realised just how perplexing and disappointing my subsequent career must have been to her.

"I'm not doing this without consideration," I said.

"I know," she said, in a voice of despair, "I've seen it coming. But--I still don't understand it. I don't understand how you can go over."

"My ideas have changed and developed," I said.

I walked across to her bearskin hearthrug, and stood by the mantel.

"To think that you," she said; "you who might have been leader--" She could not finish it. "All the forces of reaction," she threw out.

"I don't think they are the forces of reaction," I said. "I think I can find work to do--better work on that side."

"Against us!" she said. "As if progress wasn't hard enough! As if

it didn't call upon every able man!"

"I don't think Liberalism has a monopoly of progress."

She did not answer that. She sat quite still looking in front of her. "WHY have you gone over?" she asked abruptly as though I had said nothing.

There came a silence that I was impelled to end. I began a stiff dissertation from the hearthrug. "I am going over, because I think I may join in an intellectual renaissance on the Conservative side. I think that in the coming struggle there will be a partial and altogether confused and demoralising victory for democracy, that will stir the classes which now dominate the Conservative party into an energetic revival. They will set out to win back, and win back. Even if my estimate of con-temporary forces is wrong and they win, they will still be forced to reconstruct their outlook. A war abroad will supply the chastening if home politics fail. The effort at renaissance is bound to come by either alternative. I believe I can do more in relation to that effort than in any other connexion in the world of politics at the present time. That's my case, Margaret."

She certainly did not grasp what I said. "And so you will throw aside all the beginnings, all the beliefs and pledges--" Again her sentence remained incomplete. "I doubt if even, once you have gone over, they will welcome you."

"That hardly matters."

I made an effort to resume my speech.

"I came into Parliament, Margaret," I said, "a little prematurely. Still--I suppose it was only by coming into Parliament that I could see things as I do now in terms of personality and imaginative

range. . . ." I stopped. Her stiff, unhappy, unlistening silence broke up my disquisition.

"After all," I remarked, "most of this has been implicit in my writings."

She made no sign of admission.

"What are you going to do?" she asked.

"Keep my seat for a time and make the reasons of my breach clear. Then either I must resign or--probably this new Budget will lead to a General Election. It's evidently meant to strain the Lords and provoke a quarrel."

"You might, I think, have stayed to fight for the Budget."

"I'm not," I said, "so keen against the Lords."

On that we halted.

"But what are you going to do?" she asked.

"I shall make my quarrel over some points in the Budget. I can't quite tell you yet where my chance will come. Then I shall either resign my seat--or if things drift to dissolution I shall stand again."

"It's political suicide."

"Not altogether."

"I can't imagine you out of Parliament again. It's just like--like undoing all we have done. What will you do?"

"Write. Make a new, more definite place for myself. You know, of course, there's already a sort of group about Crupp and Gane."

Margaret seemed lost for a time in painful thought.

"For me," she said at last, "our political work has been a religion--it has been more than a religion."

I heard in silence. I had no form of protest available against the implications of that.

"And then I find you turning against all we aimed to do--talking of going over, almost lightly--to those others." . . .

She was white-lipped as she spoke. In the most curious way she had captured the moral values of the situation. I found myself protesting ineffectually against her fixed conviction. "It's because I think my duty lies in this change that I make it," I said.

"I don't see how you can say that," she replied quietly.

There was another pause between us.

"Oh!" she said and clenched her hand upon the table. "That it should have come to this!"

She was extraordinarily dignified and extraordinarily absurd. She was hurt and thwarted beyond measure. She had no place in her ideas, I thought, for me. I could see how it appeared to her, but I could not make her see anything of the intricate process that had brought me to this divergence. The opposition of our intellectual temperaments was like a gag in my mouth. What was there for me to say? A flash of intuition told me that behind her white dignity was a passionate disappointment, a shattering of dreams that needed before everything else the relief of weeping.

"I've told you," I said awkwardly, "as soon as I could."

There was another long silence. "So that is how we stand," I said with an air of having things defined. I walked slowly to the door.

She had risen and stood now staring in front of her.

"Good-night," I said, making no movement towards our habitual kiss.

"Good-night," she answered in a tragic note. . . .

I closed the door softly. I remained for a moment or so on the big landing, hesitating between my bedroom and my study. As I did so I heard the soft rustle of her movement and the click of the key in her bedroom door. Then everything was still. . . .

She hid her tears from me. Something gripped my heart at the thought.

"Damnation!" I said wincing. "Why the devil can't people at least THINK in the same manner?"

2

And that insufficient colloquy was the beginning of a prolonged estrangement between us. It was characteristic of our relations that we never reopened the discussion. The thing had been in the air for some time; we had recognised it now; the widening breach between us was confessed. My own feelings were curiously divided. It is remarkable that my very real affection for Margaret only became evident to me with this quarrel. The changes of the heart

are very subtle changes. I am quite unaware how or when my early romantic love for her purity and beauty and high-principled devotion evaporated from my life; but I do know that quite early in my parliamentary days there had come a vague, unconfessed resentment at the tie that seemed to hold me in servitude to her standards of private living and public act. I felt I was caught, and none the less so because it had been my own act to rivet on my shackles. So long as I still held myself bound to her that resentment grew. Now, since I had broken my bonds and taken my line it withered again, and I could think of Margaret with a returning kindness.

But I still felt embarrassment with her. I felt myself dependent upon her for house room and food and social support, as it were under false pretences. I would have liked to have separated our financial affairs altogether. But I knew that to raise the issue would have seemed a last brutal indelicacy. So I tried almost furtively to keep my personal expenditure within the scope of the private income I made by writing, and we went out together in her motor brougham, dined and made appearances, met politely at breakfast--parted at night with a kiss upon her cheek. The locking of her door upon me, which at that time I quite understood, which I understand now, became for a time in my mind, through some obscure process of the soul, an offence. I never crossed the landing to her room again.

In all this matter, and, indeed, in all my relations with Margaret, I perceive now I behaved badly and foolishly. My manifest blunder is that I, who was several years older than she, much subtler and in many ways wiser, never in any measure sought to guide and control her. After our marriage I treated her always as an equal, and let her go her way; held her responsible for all the weak and ineffective and unfortunate things she said and did to me. She wasn't clever enough to justify that. It wasn't fair to expect her to sympathise, anticipate, and understand. I ought to have taken care of her, roped her to me when it came to crossing the difficult

places. If I had loved her more, and wiselier and more tenderly, if there had not been the consciousness of my financial dependence on her always stiffening my pride, I think she would have moved with me from the outset, and left the Liberals with me. But she did not get any inkling of the ends I sought in my change of sides. It must have seemed to her inexplicable perversity. She had, I knew--for surely I knew it then--an immense capacity for loyalty and devotion. There she was with these treasures untouched, neglected and perplexed. A woman who loves wants to give. It is the duty and business of the man she has married for love to help her to help and give. But I was stupid. My eyes had never been opened. I was stiff with her and difficult to her, because even on my wedding morning there had been, deep down in my soul, voiceless though present, something weakly protesting, a faint perception of wrongdoing, the infinitesimally small, slow-multiplying germs of shame.

3

I made my breach with the party on the Budget.

In many ways I was disposed to regard the 1909 Budget as a fine piece of statecraft. Its production was certainly a very unexpected display of vigour on the Liberal side. But, on the whole, this movement towards collectivist organisation on the part of the Liberals rather strengthened than weakened my resolve to cross the floor of the house. It made it more necessary, I thought, to leaven the purely obstructive and reactionary elements that were at once manifest in the opposition. I assailed the land taxation proposals in one main speech, and a series of minor speeches in committee. The line of attack I chose was that the land was a great public service that needed to be controlled on broad and far-sighted lines. I had no objection to its nationalisation, but I did object most

strenuously to the idea of leaving it in private hands, and attempting to produce beneficial social results through the pressure of taxation upon the land-owning class. That might break it up in an utterly disastrous way. The drift of the government proposals was all in the direction of sweating the landowner to get immediate values from his property, and such a course of action was bound to give us an irritated and vindictive land-owning class, the class upon which we had hitherto relied--not unjustifiably--for certain broad, patriotic services and an influence upon our collective judgments that no other class seemed prepared to exercise. Abolish landlordism if you will, I said, buy it out, but do not drive it to a defensive fight, and leave it still sufficiently strong and wealthy to become a malcontent element in your state. You have taxed and controlled the brewer and the publican until the outraged Liquor Interest has become a national danger. You now propose to do the same thing on a larger scale. You turn a class which has many fine and truly aristocratic traditions towards revolt, and there is nothing in these or any other of your proposals that shows any sense of the need for leadership to replace these traditional leaders you are ousting. This was the substance of my case, and I hammered at it not only in the House, but in the press. . . .

The Kinghampstead division remained for some time insensitive to my defection.

Then it woke up suddenly, and began, in the columns of the **KINGSHAMPSTEAD GUARDIAN**, an indignant, confused outcry. I was treated to an open letter, signed Junius Secundus," and I replied in provocative terms. There were two thinly attended public meetings at different ends of the constituency, and then I had a correspondence with my old friend Parvill, the photographer, which ended in my seeing a deputation.

My impression is that it consisted of about eighteen or twenty

people. They had had to come upstairs to me and they were manifestly full of indignation and a little short of breath. There was Parvill himself, J.P., dressed wholly in black--I think to mark his sense of the occasion--and curiously suggestive in his respect for my character and his concern for the honourableness of the KINGHAMSTEAD GUARDIAN editor, of Mark Antony at the funeral of

Cesar. There was Mrs. Bulger, also in mourning; she had never abandoned the widow's streamers since the death of her husband ten years ago, and her loyalty to Liberalism of the severest type was part as it were of her weeds. There was a nephew of Sir Roderick Newton, a bright young Hebrew of the graver type, and a couple of dissenting ministers in high collars and hats that stopped halfway between the bowler of this world and the shovel-hat of heaven. There was also a young solicitor from Lurky done in the horsey style, and there was a very little nervous man with a high brow and a face contracting below as though the jawbones and teeth had been taken out and the features compressed. The rest of the deputation, which included two other public-spirited ladies and several ministers of religion, might have been raked out of any omnibus going Strandward during the May meetings. They thrust Parvill forward as spokesman, and manifested a strong disposition to say "Hear, hear!" to his more strenuous protests provided my eye wasn't upon them at the time.

I regarded this appalling deputation as Parvill's apologetic but quite definite utterances drew to an end. I had a moment of vision. Behind them I saw the wonderful array of skeleton forces that stand for public opinion, that are as much public opinion as exists indeed at the present time. The whole process of politics which bulks so solidly in history seemed for that clairvoyant instant but a froth of petty motives above abysses of indifference. . . .

Some one had finished. I perceived I had to speak.

"Very well," I said, "I won't keep you long in replying. I'll resign if there isn't a dissolution before next February, and if there is I shan't stand again. You don't want the bother and expense of a bye-election (approving murmurs) if it can be avoided. But I may tell you plainly now that I don't think it will be necessary for me to resign, and the sooner you find my successor the better for the party. The Lords are in a corner; they've got to fight now or never, and I think they will throw out the Budget. Then they will go on fighting. It is a fight that will last for years. They have a sort of social discipline, and you haven't. You Liberals will find yourselves with a country behind you, vaguely indignant perhaps, but totally unprepared with any ideas whatever in the matter, face to face with the problem of bringing the British constitution up-to-date. Anything may happen, provided only that it is sufficiently absurd. If the King backs the Lords--and I don't see why he shouldn't--you have no Republican movement whatever to fall back upon. You lost it during the Era of Good Taste. The country, I say, is destitute of ideas, and you have no ideas to give it. I don't see what you will do. . . . For my own part, I mean to spend a year or so between a window and my writingdesk."

I paused. "I think, gentlemen," began Parvill, "that we hear all this with very great regret. . . ."

4

My estrangement from Margaret stands in my memory now as something that played itself out within the four walls of our house in Radnor Square, which was, indeed, confined to those limits. I went to and fro between my house and the House of Commons, and the dining-rooms and clubs and offices in which we were preparing our new developments, in a state of aggressive and energetic dissociation,

in the nascent state, as a chemist would say. I was free now, and greedy for fresh combination. I had a tremendous sense of released energies. I had got back to the sort of thing I could do, and to the work that had been shaping itself for so long in my imagination. Our purpose now was plain, bold, and extraordinarily congenial. We meant no less than to organise a new movement in English thought and life, to resuscitate a Public Opinion and prepare the ground for a revised and renovated ruling culture.

For a time I seemed quite wonderfully able to do whatever I wanted to do. Shoemith responded to my first advances. We decided to create a weekly paper as our nucleus, and Crupp and I set to work forthwith to collect a group of writers and speakers, including Esmeer, Britten, Lord Gane, Neal, and one or two younger men, which should constitute a more or less definite editorial council about me, and meet at a weekly lunch on Tuesday to sustain our general co-operations. We marked our claim upon Toryism even in the colour of our wrapper, and spoke of ourselves collectively as the Blue Weeklies. But our lunches were open to all sorts of guests, and our deliberations were never of a character to control me effectively in my editorial decisions. My only influential councillor at first was old Britten, who became my sub-editor. It was curious how we two had picked up our ancient intimacy again and resumed the easy give and take of our speculative dreaming schoolboy days.

For a time my life centred altogether upon this journalistic work. Britten was an experienced journalist, and I had most of the necessary instincts for the business. We meant to make the paper right and good down to the smallest detail, and we set ourselves at this with extraordinary zeal. It wasn't our intention to show our political motives too markedly at first, and through all the dust storm and tumult and stress of the political struggle of 1910, we made a little intellectual oasis of good art criticism and good writing. It was the firm belief of nearly all of us that the Lords were destined to be beaten badly in 1910, and our game was the

longer game of reconstruction that would begin when the shouting and tumult of that immediate conflict were over. Meanwhile we had to get into touch with just as many good minds as possible.

As we felt our feet, I developed slowly and carefully a broadly conceived and consistent political attitude. As I will explain later, we were feminist from the outset, though that caused Shoemith and Gane great searching of heart; we developed Esmeer's House of Lords reform scheme into a general cult of the aristocratic virtues, and we did much to humanise and liberalise the narrow excellencies of that Break-up of the Poor Law agitation, which had been organised originally by Beatrice and Sidney Webb. In addition, without any very definite explanation to any one but Esmeer and Isabel Rivers, and as if it was quite a small matter, I set myself to secure a uniform philosophical quality in our columns.

That, indeed, was the peculiar virtue and characteristic of the BLUE WEEKLY. I was now very definitely convinced that much of the confusion and futility of contemporary thought was due to the general need of metaphysical training. . . . The great mass of people--and not simply common people, but people active and influential in intellectual things--are still quite untrained in the methods of thought and absolutely innocent of any criticism of method; it is scarcely a caricature to call their thinking a crazy patchwork, discontinuous and chaotic. They arrive at conclusions by a kind of accident, and do not suspect any other way may be found to their attainment. A stage above this general condition stands that minority of people who have at some time or other discovered general terms and a certain use for generalisations. They are--to fall back on the ancient technicality--Realists of a crude sort. When I say Realist of course I mean Realist as opposed to Nominalist, and not Realist in the almost diametrically different sense of opposition to Idealist. Such are the Baileys; such, to take their great prototype, was Herbert Spencer (who couldn't read Kant); such are whole regiments of prominent and entirely self-satisfied

contemporaries. They go through queer little processes of definition and generalisation and deduction with the completest belief in the validity of the intellectual instrument they are using. They are Realists--Cocksurists--in matter of fact; sentimentalists in behaviour. The Baileys having got to this glorious stage in mental development--it is glorious because it has no doubts--were always talking about training "Experts" to apply the same simple process to all the affairs of mankind. Well, Realism isn't the last word of human wisdom. Modest-minded people, doubtful people, subtle people, and the like--the kind of people William James writes of as "tough-minded," go on beyond this methodical happiness, and are forever after critical of premises and terms. They are truer--and less confident. They have reached scepticism and the artistic method. They have emerged into the new Nominalism.

Both Isabel and I believe firmly that these differences of intellectual method matter profoundly in the affairs of mankind, that the collective mind of this intricate complex modern state can only function properly upon neo-Nominalist lines. This has always been her side of our mental co-operation rather than mine. Her mind has the light movement that goes so often with natural mental power; she has a wonderful art in illustration, and, as the reader probably knows already, she writes of metaphysical matters with a rare charm and vividness. So far there has been no collection of her papers published, but they are to be found not only in the BLUE WEEKLY columns but scattered about the monthlies; many people must be familiar with her style. It was an intention we did much to realise before our private downfall, that we would use the BLUE WEEKLY to maintain a stream of suggestion against crude thinking, and at last scarcely a week passed but some popular distinction, some large imposing generalisation, was touched to flaccidity by her pen or mine. . . .

I was at great pains to give my philosophical, political, and social matter the best literary and critical backing we could get in

London. I hunted sedulously for good descriptive writing and good criticism; I was indefatigable in my readiness to hear and consider, if not to accept advice; I watched every corner of the paper, and had a dozen men alert to get me special matter of the sort that draws in the unattached reader. The chief danger on the literary side of a weekly is that it should fall into the hands of some particular school, and this I watched for closely. It seems impossible to get vividness of apprehension and breadth of view together in the same critic. So it falls to the wise editor to secure the first and impose the second. Directly I detected the shrill partisan note in our criticism, the attempt to puff a poor thing because it was "in the right direction," or damn a vigorous piece of work because it wasn't, I tackled the man and had it out with him. Our pay was good enough for that to matter a good deal. . . .

Our distinctive little blue and white poster kept up its neat persistent appeal to the public eye, and before 1911 was out, the BLUE WEEKLY was printing twenty pages of publishers' advertisements, and went into all the clubs in London and three-quarters of the country houses where week-end parties gather together. Its sale by newsagents and bookstalls grew steadily. One got more and more the reassuring sense of being discussed, and influencing discussion.

5

Our office was at the very top of a big building near the end of Adelphi Terrace; the main window beside my desk, a big undivided window of plate glass, looked out upon Cleopatra's Needle, the corner of the Hotel Cecil, the fine arches of Waterloo Bridge, and the long sweep of south bank with its shot towers and chimneys, past Bankside to the dimly seen piers of the great bridge below the Tower. The dome of St. Paul's just floated into view on the left

against the hotel facade. By night and day, in every light and atmosphere, it was a beautiful and various view, alive as a throbbing heart; a perpetual flow of traffic ploughed and splashed the streaming silver of the river, and by night the shapes of things became velvet black and grey, and the water a shining mirror of steel, wearing coruscating gems of light. In the foreground the Embankment trams sailed glowing by, across the water advertisements flashed and flickered, trains went and came and a rolling drift of smoke reflected unseen fires. By day that spectacle was sometimes a marvel of shining wet and wind-cleared atmosphere, sometimes a mystery of drifting fog, sometimes a miracle of crowded details, minutely fine.

As I think of that view, so variously spacious in effect, I am back there, and this sunlit paper might be lamp-lit and lying on my old desk. I see it all again, feel it all again. In the foreground is a green shaded lamp and crumpled galley slips and paged proofs and letters, two or three papers in manuscript, and so forth. In the shadows are chairs and another table bearing papers and books, a rotating bookcase dimly seen, a long window seat black in the darkness, and then the cool unbroken spectacle of the window. How often I would watch some tram-car, some string of barges go from me slowly out of sight. The people were black animalculae by day, clustering, collecting, dispersing, by night, they were phantom face-specks coming, vanishing, stirring obscurely between light and shade.

I recall many hours at my desk in that room before the crisis came, hours full of the peculiar happiness of effective strenuous work. Once some piece of writing went on, holding me intent and forgetful of time until I looked up from the warm circle of my electric lamp to see the eastward sky above the pale silhouette of the Tower Bridge, flushed and banded brightly with the dawn.

CHAPTER THE FOURTH

THE BESETTING OF SEX

1

Art is selection and so is most autobiography. But I am concerned with a more tangled business than selection, I want to show a contemporary man in relation to the state and social usage, and the social organism in relation to that man. To tell my story at all I have to simplify. I have given now the broad lines of my political development, and how I passed from my initial liberal-socialism to the conception of a constructive aristocracy. I have tried to set that out in the form of a man discovering himself. Incidentally that self-development led to a profound breach with my wife. One has read stories before of husband and wife speaking severally two different languages and coming to an understanding. But Margaret and I began in her dialect, and, as I came more and more to use my own, diverged.

I had thought when I married that the matter of womankind had ended for me. I have tried to tell all that sex and women had been to me up to my married life with Margaret and our fatal entanglement, tried to show the queer, crippled, embarrassed and limited way in which these interests break upon the life of a young man under contemporary conditions. I do not think my lot was a very exceptional one. I missed the chance of sisters and girl playmates, but that is not an uncommon misadventure in an age of small families; I never came to know any woman at all intimately until I was married to Margaret. My earlier love affairs were encounters of sex, under conditions of furtiveness and adventure that made them

things in themselves, restricted and unilluminating. From a boyish disposition to be mystical and worshipping towards women I had passed into a disregardful attitude, as though women were things inferior or irrelevant, disturbers in great affairs. For a time Margaret had blotted out all other women; she was so different and so near; she was like a person who stands suddenly in front of a little window through which one has been surveying a crowd. She didn't become womankind for me so much as eliminate womankind from my world. . . . And then came this secret separation. . . .

Until this estrangement and the rapid and uncontrollable development of my relations with Isabel which chanced to follow it, I seemed to have solved the problem of women by marriage and disregard. I thought these things were over. I went about my career with Margaret beside me, her brow slightly knit, her manner faintly strenuous, helping, helping; and if we had not altogether abolished sex we had at least so circumscribed and isolated it that it would not have affected the general tenor of our lives in the slightest degree if we had.

And then, clothing itself more and more in the form of Isabel and her problems, this old, this fundamental obsession of my life returned. The thing stole upon my mind so that I was unaware of its invasion and how it was changing our long intimacy. I have already compared the lot of the modern publicist to Machiavelli writing in his study; in his day women and sex were as disregarded in these high affairs as, let us say, the chemistry of air or the will of the beasts in the fields; in ours the case has altogether changed, and woman has come now to stand beside the tall candles, half in the light, half in the mystery of the shadows, besetting, interrupting, demanding unrelentingly an altogether unprecedented attention. I feel that in these matters my life has been almost typical of my time. Woman insists upon her presence. She is no longer a mere physical need, an aesthetic bye-play, a sentimental background; she is a moral and intellectual necessity in a man's life. She comes to

the politician and demands, Is she a child or a citizen? Is she a thing or a soul? She comes to the individual man, as she came to me and asks, Is she a cherished weakling or an equal mate, an unavoidable helper? Is she to be tried and trusted or guarded and controlled, bond or free? For if she is a mate, one must at once trust more and exact more, exacting toil, courage, and the hardest, most necessary thing of all, the clearest, most shameless, explicitness of understanding. . . .

2

In all my earlier imaginings of statecraft I had tacitly assumed either that the relations of the sexes were all right or that anyhow they didn't concern the state. It was a matter they, whoever "they" were, had to settle among themselves. That sort of disregard was possible then. But even before 1906 there were endless intimations that the dams holding back great reservoirs of discussion were crumbling. We political schemers were ploughing wider than any one had ploughed before in the field of social reconstruction. We had also, we realised, to plough deeper. We had to plough down at last to the passionate elements of sexual relationship and examine and decide upon them.

The signs multiplied. In a year or so half the police of the metropolis were scarce sufficient to protect the House from one clamorous aspect of the new problem. The members went about Westminster with an odd, new sense of being beset. A good proportion of us kept up the pretence that the Vote for Women was an isolated fad, and the agitation an epidemic madness that would presently pass. But it was manifest to any one who sought more than comfort in the matter that the streams of women and sympathisers and money forthcoming marked far deeper and wider things than an idle

fancy for the franchise. The existing laws and conventions of relationship between Man and Woman were just as unsatisfactory a disorder as anything else in our tumbled confusion of a world, and that also was coming to bear upon statecraft.

My first parliament was the parliament of the Suffragettes. I don't propose to tell here of that amazing campaign, with its absurdities and follies, its courage and devotion. There were aspects of that unquenchable agitation that were absolutely heroic and aspects that were absolutely pitiful. It was unreasonable, unwise, and, except for its one central insistence, astonishingly incoherent. It was amazingly effective. The very incoherence of the demand witnessed, I think, to the forces that lay behind it. It wasn't a simple argument based on a simple assumption; it was the first crude expression of a great mass and mingling of convergent feelings, of a widespread, confused persuasion among modern educated women that the conditions of their relations with men were oppressive, ugly, dishonouring, and had to be altered. They had not merely adopted the Vote as a symbol of equality; it was fairly manifest to me that, given it, they meant to use it, and to use it perhaps even vindictively and blindly, as a weapon against many things they had every reason to hate. . . .

I remember, with exceptional vividness, that great night early in the session of 1909, when--I think it was--fifty or sixty women went to prison. I had been dining at the Barham's, and Lord Barham and I came down from the direction of St. James's Park into a crowd and a confusion outside the Caxton Hall. We found ourselves drifting with an immense multitude towards Parliament Square and parallel with a silent, close-packed column of girls and women, for the most part white-faced and intent. I still remember the effect of their faces upon me. It was quite different from the general effect of staring about and divided attention one gets in a political procession of men. There was an expression of heroic tension.

There had been a pretty deliberate appeal on the part of the women's organisers to the Unemployed, who had been demonstrating throughout that winter, to join forces with the movement, and the result was shown in the quality of the crowd upon the pavement. It was an ugly, dangerous-looking crowd, but as yet good-tempered and sympathetic. When at last we got within sight of the House the square was a seething seat of excited people, and the array of police on horse and on foot might have been assembled for a revolutionary outbreak. There were dense masses of people up Whitehall, and right on to Westminster Bridge. The scuffle that ended in the arrests was the poorest explosion to follow such stupendous preparations. . . .

3

Later on in that year the women began a new attack. Day and night, and all through the long nights of the Budget sittings, at all the piers of the gates of New Palace Yard and at St. Stephen's Porch, stood women pickets, and watched us silently and reproachfully as we went to and fro. They were women of all sorts, though, of course, the independent worker-class predominated. There were grey-headed old ladies standing there, sturdily charming in the rain; battered-looking, ambiguous women, with something of the desperate bitterness of battered women showing in their eyes; north-country factory girls; cheaply-dressed suburban women; trim, comfortable mothers of families; valiant-eyed girl graduates and undergraduates; lank, hungry-looking creatures, who stirred one's imagination; one very dainty little woman in deep mourning, I recall, grave and steadfast, with eyes fixed on distant things. Some of those women looked defiant, some timidly aggressive, some full of the stir of adventure, some drooping with cold and fatigue. The supply never ceased. I had a mortal fear that somehow the supply might halt or

cease. I found that continual siege of the legislature extraordinarily impressive--infinitely more impressive than the feeble-forcible "ragging" of the more militant section. I thought of the appeal that must be going through the country, summoning the women from countless scattered homes, rooms, colleges, to Westminster.

I remember too the petty little difficulty I felt whether I should ignore these pickets altogether, or lift a hat as I hurried past with averted eyes, or look them in the face as I did so. Towards the end the House evoked an etiquette of salutation.

4

There was a tendency, even on the part of its sympathisers, to treat the whole suffrage agitation as if it were a disconnected issue, irrelevant to all other broad developments of social and political life. We struggled, all of us, to ignore the indicating finger it thrust out before us. "Your schemes, for all their bigness," it insisted to our reluctant, averted minds, "still don't go down to the essential things. . . ."

We have to go deeper, or our inadequate children's insufficient children will starve amidst harvests of earless futility. That conservatism which works in every class to preserve in its essentials the habitual daily life is all against a profounder treatment of political issues. The politician, almost as absurdly as the philosopher, tends constantly, in spite of magnificent preludes, vast intimations, to specialise himself out of the reality he has so stupendously summoned--he bolts back to littleness. The world has to be moulded anew, he continues to admit, but without, he adds, any risk of upsetting his week-end visits, his morning cup of

tea. . . .

The discussion of the relations of men and women disturbs every one. It reacts upon the private life of every one who attempts it. And at any particular time only a small minority have a personal interest in changing the established state of affairs. Habit and interest are in a constantly recruited majority against conscious change and adjustment in these matters. Drift rules us. The great mass of people, and an overwhelming proportion of influential people, are people who have banished their dreams and made their compromise. Wonderful and beautiful possibilities are no longer to be thought about. They have given up any aspirations for intense love, their splendid offspring, for keen delights, have accepted a cultivated kindness and an uncritical sense of righteousness as their compensation. It's a settled affair with them, a settled, dangerous affair. Most of them fear, and many hate, the slightest reminder of those abandoned dreams. As Dayton once said to the Pentagram Circle, when we were discussing the problem of a universal marriage and divorce law throughout the Empire, "I am for leaving all these things alone." And then, with a groan in his voice, "Leave them alone! Leave them all alone!"

That was his whole speech for the evening, in a note of suppressed passion, and presently, against all our etiquette, he got up and went out.

For some years after my marriage, I too was for leaving them alone. I developed a dread and dislike for romance, for emotional music, for the human figure in art--turning my heart to landscape. I wanted to sneer at lovers and their ecstasies, and was uncomfortable until I found the effective sneer. In matters of private morals these were my most uncharitable years. I didn't want to think of these things any more for ever. I hated the people whose talk or practice showed they were not of my opinion. I wanted to believe that their views were immoral and objectionable and contemptible,

because I had decided to treat them as at that level. I was, in fact, falling into the attitude of the normal decent man.

And yet one cannot help thinking! The sensible moralised man finds it hard to escape the stream of suggestion that there are still dreams beyond these commonplace acquiescences,--the appeal of beauty suddenly shining upon one, the mothlike stirrings of serene summer nights, the sweetness of distant music. . . .

It is one of the paradoxical factors in our public life at the present time, which penalises abandonment to love so abundantly and so heavily, that power, influence and control fall largely to unencumbered people and sterile people and people who have married for passionless purposes, people whose very deficiency in feeling has left them free to follow ambition, people beautyblind, who don't understand what it is to fall in love, what it is to desire children or have them, what it is to feel in their blood and bodies the supreme claim of good births and selective births above all other affairs in life, people almost of necessity averse from this most fundamental aspect of existence. . . .

5

It wasn't, however, my deepening sympathy with and understanding of the position of women in general, or the change in my ideas about all these intimate things my fast friendship with Isabel was bringing about, that led me to the heretical views I have in the last five years dragged from the region of academic and timid discussion into the field of practical politics. Those influences, no doubt, have converged to the same end, and given me a powerful emotional push upon my road, but it was a broader and colder view of things that first determined me in my attempt to graft the Endowment

of Motherhood in some form or other upon British Imperialism. Now that I am exiled from the political world, it is possible to estimate just how effectually that grafting has been done.

I have explained how the ideas of a trained aristocracy and a universal education grew to paramount importance in my political scheme. It is but a short step from this to the question of the quantity and quality of births in the community, and from that again to these forbidden and fear-beset topics of marriage, divorce, and the family organisation. A sporadic discussion of these aspects had been going on for years, a Eugenic society existed, and articles on the Falling Birth Rate, and the Rapid Multiplication of the Unfit were staples of the monthly magazines. But beyond an intermittent scolding of prosperous childless people in general--one never addressed them in particular--nothing was done towards arresting those adverse processes. Almost against my natural inclination, I found myself forced to go into these things. I came to the conclusion that under modern conditions the isolated private family, based on the existing marriage contract, was failing in its work. It wasn't producing enough children, and children good enough and well trained enough for the demands of the developing civilised state. Our civilisation was growing outwardly, and decaying in its intimate substance, and unless it was presently to collapse, some very extensive and courageous reorganisation was needed. The old haphazard system of pairing, qualified more and more by worldly discretions, no longer secures a young population numerous enough or good enough for the growing needs and possibilities of our Empire. Statecraft sits weaving splendid garments, no doubt, but with a puny, ugly, insufficient baby in the cradle.

No one so far has dared to take up this problem as a present question for statecraft, but it comes unheralded, unadvocated, and sits at every legislative board. Every improvement is provisional except the improvement of the race, and it became more and more doubtful to me if we were improving the race at all! Splendid and

beautiful and courageous people must come together and have children, women with their fine senses and glorious devotion must be freed from the net that compels them to be celibate, compels them to be childless and useless, or to bear children ignobly to men whom need and ignorance and the treacherous pressure of circumstances have forced upon them. We all know that, and so few dare even to whisper it for fear that they should seem, in seeking to save the family, to threaten its existence. It is as if a party of pigmies in a not too capacious room had been joined by a carnivorous giant--and decided to go on living happily by cutting him dead. . . .

The problem the developing civilised state has to solve is how it can get the best possible increase under the best possible conditions. I became more and more convinced that the independent family unit of to-day, in which the man is master of the wife and owner of the children, in which all are dependent upon him, subordinated to his enterprises and liable to follow his fortunes up or down, does not supply anything like the best conceivable conditions. We want to modernise the family footing altogether. An enormous premium both in pleasure and competitive efficiency is put upon voluntary childlessness, and enormous inducements are held out to women to subordinate instinctive and selective preferences to social and material considerations.

The practical reaction of modern conditions upon the old tradition of the family is this: that beneath the pretence that nothing is changing, secretly and with all the unwholesomeness of secrecy everything is changed. Offspring fall away, the birth rate falls and falls most among just the most efficient and active and best adapted classes in the community. The species is recruited from among its failures and from among less civilised aliens. Contemporary civilisations are in effect burning the best of their possible babies in the furnaces that run the machinery. In the United States the native Anglo-American strain has scarcely increased at all since 1830, and in most Western European countries

the same is probably true of the ablest and most energetic elements in the community. The women of these classes still remain legally and practically dependent and protected, with the only natural excuse for their dependence gone. . . .

The modern world becomes an immense spectacle of unsatisfactory groupings; here childless couples bored to death in the hopeless effort to sustain an incessant honeymoon, here homes in which a solitary child grows unsocially, here small two or three-child homes that do no more than continue the culture of the parents at a great social cost, here numbers of unhappy educated but childless married women, here careless, decivilised fecund homes, here orphanages and asylums for the heedlessly begotten. It is just the disorderly proliferation of Bromstead over again, in lives instead of in houses.

What is the good, what is the common sense, of rectifying boundaries, pushing research and discovery, building cities, improving all the facilities of life, making great fleets, waging wars, while this aimless decadence remains the quality of the biological outlook? . . .

It is difficult now to trace how I changed from my early aversion until I faced this mass of problems. But so far back as 1910 I had it clear in my mind that I would rather fail utterly than participate in all the surrenders of mind and body that are implied in Dayton's snarl of "Leave it alone; leave it all alone!" Marriage and the begetting and care of children, is the very ground substance in the life of the community. In a world in which everything changes, in which fresh methods, fresh adjustments and fresh ideas perpetually renew the circumstances of life, it is preposterous that we should not even examine into these matters, should rest content to be ruled by the uncriticised traditions of a barbaric age.

Now, it seems to me that the solution of this problem is also the

solution of the woman's individual problem. The two go together, are right and left of one question. The only conceivable way out from our IMPASSE lies in the recognition of parentage, that is to say of adequate mothering, as no longer a chance product of individual passions but a service rendered to the State. Women must become less and less subordinated to individual men, since this works out in a more or less complete limitation, waste, and sterilisation of their essentially social function; they must become more and more subordinated as individually independent citizens to the collective purpose. Or, to express the thing by a familiar phrase, the highly organised, scientific state we desire must, if it is to exist at all, base itself not upon the irresponsible man-ruled family, but upon the matriarchal family, the citizen-ship and freedom of women and the public endowment of motherhood.

After two generations of confused and experimental revolt it grows clear to modern women that a conscious, deliberate motherhood and mothering is their special function in the State, and that a personal subordination to an individual man with an unlimited power of control over this intimate and supreme duty is a degradation. No contemporary woman of education put to the test is willing to recognise any claim a man can make upon her but the claim of her freely-given devotion to him. She wants the reality of her choice and she means "family" while a man too often means only possession. This alters the spirit of the family relationships fundamentally. Their form remains just what it was when woman was esteemed a pretty, desirable, and incidentally a child-producing, chattel. Against these time-honoured ideas the new spirit of womanhood struggles in shame, astonishment, bitterness, and tears. . . .

I confess myself altogether feminist. I have no doubts in the matter. I want this coddling and browbeating of women to cease. I want to see women come in, free and fearless, to a full participation in the collective purpose of mankind. Women, I am convinced, are as fine as men; they can be as wise as men; they are

capable of far greater devotion than men. I want to see them citizens, with a marriage law framed primarily for them and for their protection and the good of the race, and not for men's satisfactions. I want to see them bearing and rearing good children in the State as a generously rewarded public duty and service, choosing their husbands freely and discerningly, and in no way enslaved by or subordinated to the men they have chosen. The social consciousness of women seems to me an unworked, an almost untouched mine of wealth for the constructive purpose of the world. I want to change the respective values of the family group altogether, and make the home indeed the women's kingdom and the mother the owner and responsible guardian of her children.

It is no use pretending that this is not novel and revolutionary; it is. The Endowment of Motherhood implies a new method of social organization, a rearrangement of the social unit, untried in human experience--as untried as electric traction was or flying in 1800. Of course, it may work out to modify men's ideas of marriage profoundly. To me that is a secondary consideration. I do not believe that particular assertion myself, because I am convinced that a practical monogamy is a psychological necessity to the mass of civilised people. But even if I did believe it I should still keep to my present line, because it is the only line that will prevent a highly organised civilisation from ending in biological decay. The public Endowment of Motherhood is the only possible way which will ensure the permanently developing civilised state at which all constructive minds are aiming. A point is reached in the life-history of a civilisation when either this reconstruction must be effected or the quality and MORALE of the population prove insufficient for the needs of the developing organisation. It is not so much moral decadence that will destroy us as moral inadaptability. The old code fails under the new needs. The only alternative to this profound reconstruction is a decay in human quality and social collapse. Either this unprecedented rearrangement must be achieved by our civilisation, or it must

presently come upon a phase of disorder and crumble and perish, as Rome perished, as France declines, as the strain of the Pilgrim Fathers dwindles out of America. Whatever hope there may be in the attempt therefore, there is no alternative to the attempt.

6

I wanted political success now dearly enough, but not at the price of constructive realities. These questions were no doubt monstrously dangerous in the political world; there wasn't a politician alive who didn't look scared at the mention of "The Family," but if raising these issues were essential to the social reconstructions on which my life was set, that did not matter. It only implied that I should take them up with deliberate caution. There was no release because of risk or difficulty.

The question of whether I should commit myself to some open project in this direction was going on in my mind concurrently with my speculations about a change of party, like bass and treble in a complex piece of music. The two drew to a conclusion together. I would not only go over to Imperialism, but I would attempt to biologise Imperialism.

I thought at first that I was undertaking a monstrous uphill task. But as I came to look into the possibilities of the matter, a strong persuasion grew up in my mind that this panic fear of legislative proposals affecting the family basis was excessive, that things were much riper for development in this direction than old-experienced people out of touch with the younger generation imagined, that to phrase the thing in a parliamentary fashion, "something might be done in the constituencies" with the Endowment of Motherhood forthwith, provided only that it was made perfectly clear that

anything a sane person could possibly intend by "morality" was left untouched by these proposals.

I went to work very carefully. I got Roper of the DAILY TELEPHONE and Burkett of the DIAL to try over a silly-season discussion of State Help for Mothers, and I put a series of articles on eugenics, upon the fall in the birth-rate, and similar topics in the BLUE WEEKLY, leading up to a tentative and generalised advocacy of the public endowment of the nation's children. I was more and more struck by the acceptance won by a sober and restrained presentation of this suggestion.

And then, in the fourth year of the BLUE WEEKLY'S career, came the Handitch election, and I was forced by the clamour of my antagonist, and very willingly forced, to put my convictions to the test. I returned triumphantly to Westminster with the Public Endowment of Motherhood as part of my open profession and with the full approval of the party press. Applauding benches of Imperialists cheered me on my way to the table between the whips.

That second time I took the oath I was not one of a crowd of new members, but salient, an event, a symbol of profound changes and new purposes in the national life.

Here it is my political book comes to an end, and in a sense my book ends altogether. For the rest is but to tell how I was swept out of this great world of political possibilities. I close this Third Book as I opened it, with an admission of difficulties and complexities, but now with a pile of manuscript before me I have to confess them unsurmounted and still entangled.

Yet my aim was a final simplicity. I have sought to show my growing realisation that the essential quality of all political and social effort is the development of a great race mind behind the interplay of individual lives. That is the collective human reality, the

basis of morality, the purpose of devotion. To that our lives must be given, from that will come the perpetual fresh release and further ennoblement of individual lives. . . .

I have wanted to make that idea of a collective mind play in this book the part United Italy plays in Machiavelli's PRINCE. I have called it the hinterland of reality, shown it accumulating a dominating truth and rightness which must force men's now sporadic motives more and more into a disciplined and understanding relation to a plan. And I have tried to indicate how I sought to serve this great clarification of our confusions. . . .

Now I come back to personality and the story of my self-betrayal, and how it is I have had to leave all that far-reaching scheme of mine, a mere project and beginning for other men to take or leave as it pleases them.

BOOK THE FOURTH

ISABEL

CHAPTER THE FIRST

LOVE AND SUCCESS

1

I come to the most evasive and difficult part of my story, which is to tell how Isabel and I have made a common wreck of our joint lives.

It is not the telling of one simple disastrous accident. There was a vein in our natures that led to this collapse, gradually and at this point and that it crept to the surface. One may indeed see our destruction--for indeed politically we could not be more extinct if we had been shot dead--in the form of a catastrophe as disconnected and conclusive as a meteoric stone falling out of heaven upon two friends and crushing them both. But I do not think that is true to our situation or ourselves. We were not taken by surprise. The thing was in us and not from without, it was akin to our way of thinking and our habitual attitudes; it had, for all its impulsive effect, a certain necessity. We might have escaped no doubt, as two men at a hundred yards may shoot at each other with pistols for a considerable time and escape. But it isn't particularly reasonable to talk of the contrariety of fate if they both get hit.

Isabel and I were dangerous to each other for several years of

friendship, and not quite unwittingly so.

In writing this, moreover, there is a very great difficulty in steering my way between two equally undesirable tones in the telling. In the first place I do not want to seem to confess my sins with a penitence I am very doubtful if I feel. Now that I have got Isabel we can no doubt count the cost of it and feel unquenchable regrets, but I am not sure whether, if we could be put back now into such circumstances as we were in a year ago, or two years ago, whether with my eyes fully open I should not do over again very much as I did. And on the other hand I do not want to justify the things we have done. We are two bad people--if there is to be any classification of good and bad at all, we have acted badly, and quite apart from any other considerations we've largely wasted our own very great possibilities. But it is part of a queer humour that underlies all this, that I find myself slipping again and again into a sentimental treatment of our case that is as unpremeditated as it is insincere. When I am a little tired after a morning's writing I find the faint suggestion getting into every other sentence that our blunders and misdeeds embodied, after the fashion of the prophet Hosea, profound moral truths. Indeed, I feel so little confidence in my ability to keep this altogether out of my book that I warn the reader here that in spite of anything he may read elsewhere in the story, intimating however shyly an esoteric and exalted virtue in our proceedings, the plain truth of this business is that Isabel and I wanted each other with a want entirely formless, inconsiderate, and overwhelming. And though I could tell you countless delightful and beautiful things about Isabel, were this a book in her praise, I cannot either analyse that want or account for its extreme intensity.

I will confess that deep in my mind there is a belief in a sort of wild rightness about any love that is fraught with beauty, but that eludes me and vanishes again, and is not, I feel, to be put with the real veracities and righteousnesses and virtues in the paddocks and

menageries of human reason. . . .

We have already a child, and Margaret was childless, and I find myself prone to insist upon that, as if it was a justification. But, indeed, when we became lovers there was small thought of Eugenics between us. Ours was a mutual and not a philoprogenitive passion. Old Nature behind us may have had such purposes with us, but it is not for us to annex her intentions by a moralising afterthought. There isn't, in fact, any decent justification for us whatever--at that the story must stand.

But if there is no justification there is at least a very effective excuse in the mental confusedness of our time. The evasion of that passionately thorough exposition of belief and of the grounds of morality, which is the outcome of the mercenary religious compromises of the late Vatican period, the stupid suppression of anything but the most timid discussion of sexual morality in our literature and drama, the pervading cultivated and protected muddle-headedness, leaves mentally vigorous people with relatively enormous possibilities of destruction and little effective help. They find themselves confronted by the habits and prejudices of manifestly commonplace people, and by that extraordinary patched-up Christianity, the cult of a "Bromsteadised" deity, diffused, scattered, and aimless, which hides from examination and any possibility of faith behind the plea of good taste. A god about whom there is delicacy is far worse than no god at all. We are FORCED to be laws unto ourselves and to live experimentally. It is inevitable that a considerable fraction of just that bolder, more initiatory section of the intellectual community, the section that can least be spared from the collective life in a period of trial and change, will drift into such emotional crises and such disaster as overtook us. Most perhaps will escape, but many will go down, many more than the world can spare. It is the unwritten law of all our public life, and the same holds true of America, that an honest open scandal ends a career. England in the last quarter of a

century has wasted half a dozen statesmen on this score; she would, I believe, reject Nelson now if he sought to serve her. Is it wonderful that to us fretting here in exile this should seem the cruellest as well as the most foolish elimination of a necessary social element? It destroys no vice; for vice hides by nature. It not only rewards dullness as if it were positive virtue, but sets an enormous premium upon hypocrisy. That is my case, and that is why I am telling this side of my story with so much explicitness.

2

Ever since the Kinghamstead election I had maintained what seemed a desultory friendship with Isabel. At first it was rather Isabel kept it up than I. Whenever Margaret and I went down to that villa, with its three or four acres of garden and shrubbery about it, which fulfilled our election promise to live at Kinghamstead, Isabel would turn up in a state of frank cheerfulness, rejoicing at us, and talk all she was reading and thinking to me, and stay for all the rest of the day. In her shameless liking for me she was as natural as a savage. She would exercise me vigorously at tennis, while Margaret lay and rested her back in the afternoon, or guide me for some long ramble that dodged the suburban and congested patches of the constituency with amazing skill. She took possession of me in that unabashed, straight-minded way a girl will sometimes adopt with a man, chose my path or criticised my game with a motherly solicitude for my welfare that was absurd and delightful. And we talked. We discussed and criticised the stories of novels, scraps of history, pictures, social questions, socialism, the policy of the Government. She was young and most unevenly informed, but she was amazingly sharp and quick and good. Never before in my life had I known a girl of her age, or a woman of her quality. I had never dreamt there was such talk in the world. Kinghamstead became a lightless

place when she went to Oxford. Heaven knows how much that may not have precipitated my abandonment of the seat!

She went to Ridout College, Oxford, and that certainly weighed with me when presently after my breach with the Liberals various little undergraduate societies began to ask for lectures and discussions. I favoured Oxford. I declared openly I did so because of her. At that time I think we neither of us suspected the possibility of passion that lay like a coiled snake in the path before us. It seemed to us that we had the quaintest, most delightful friendship in the world; she was my pupil, and I was her guide, philosopher, and friend. People smiled indulgently--even Margaret smiled indulgently--at our attraction for one another.

Such friendships are not uncommon nowadays--among easy-going, liberal-minded people. For the most part, there's no sort of harm, as people say, in them. The two persons concerned are never supposed to think of the passionate love that hovers so close to the friendship, or if they do, then they banish the thought. I think we kept the thought as permanently in exile as any one could do. If it did in odd moments come into our heads we pretended elaborately it wasn't there.

Only we were both very easily jealous of each other's attention, and tremendously insistent upon each other's preference.

I remember once during the Oxford days an intimation that should have set me thinking, and I suppose discreetly disentangling myself. It was one Sunday afternoon, and it must have been about May, for the trees and shrubs of Ridout College were gay with blossom, and fresh with the new sharp greens of spring. I had walked talking with Isabel and a couple of other girls through the wide gardens of the place, seen and criticised the new brick pond, nodded to the daughter of this friend and that in the hammocks under the trees, and picked a way among the scattered tea-parties on the lawn to our

own circle on the grass under a Siberian crab near the great bay window. There I sat and ate great quantities of cake, and discussed the tactics of the Suffragettes. I had made some comments upon the spirit of the movement in an address to the men in Pembroke, and it had got abroad, and a group of girls and women dons were now having it out with me.

I forget the drift of the conversation, or what it was made Isabel interrupt me. She did interrupt me. She had been lying prone on the ground at my right hand, chin on fists, listening thoughtfully, and I was sitting beside old Lady Evershead on a garden seat. I turned to Isabel's voice, and saw her face uplifted, and her dear cheeks and nose and forehead all splashed and barred with sunlight and the shadows of the twigs of the trees behind me. And something--an infinite tenderness, stabbed me. It was a keen physical feeling, like nothing I had ever felt before. It had a quality of tears in it. For the first time in my narrow and concentrated life another human being had really thrust into my being and gripped my very heart.

Our eyes met perplexed for an extraordinary moment. Then I turned back and addressed myself a little stiffly to the substance of her intervention. For some time I couldn't look at her again.

From that time forth I knew I loved Isabel beyond measure.

Yet it is curious that it never occurred to me for a year or so that this was likely to be a matter of passion between us. I have told how definitely I put my imagination into harness in those matters at my marriage, and I was living now in a world of big interests, where there is neither much time nor inclination for deliberate love-making. I suppose there is a large class of men who never meet a girl or a woman without thinking of sex, who meet a friend's daughter and decide: "Mustn't get friendly with her--wouldn't DO," and set invisible bars between themselves and all the wives in the

world. Perhaps that is the way to live. Perhaps there is no other method than this effectual annihilation of half--and the most sympathetic and attractive half--of the human beings in the world, so far as any frank intercourse is concerned. I am quite convinced anyhow that such a qualified intimacy as ours, such a drifting into the sense of possession, such untrammelled conversation with an invisible, implacable limit set just where the intimacy glows, it is no kind of tolerable compromise. If men and women are to go so far together, they must be free to go as far as they may want to go, without the vindictive destruction that has come upon us. On the basis of the accepted codes the jealous people are right, and the liberal-minded ones are playing with fire. If people are not to love, then they must be kept apart. If they are not to be kept apart, then we must prepare for an unprecedented toleration of lovers.

Isabel was as unforeseeing as I to begin with, but sex marches into the life of an intelligent girl with demands and challenges far more urgent than the mere call of curiosity and satiable desire that comes to a young man. No woman yet has dared to tell the story of that unfolding. She attracted men, and she encouraged them, and watched them, and tested them, and dismissed them, and concealed the substance of her thoughts about them in the way that seems instinctive in a natural-minded girl. There was even an engagement--amidst the protests and disapproval of the college authorities. I never saw the man, though she gave me a long history of the affair, to which I listened with a forced and insincere sympathy. She struck me oddly as taking the relationship for a thing in itself, and regardless of its consequences. After a time she became silent about him, and then threw him over; and by that time, I think, for all that she was so much my junior, she knew more about herself and me than I was to know for several years to come.

We didn't see each other for some months after my resignation, but we kept up a frequent correspondence. She said twice over that she

wanted to talk to me, that letters didn't convey what one wanted to say, and I went up to Oxford pretty definitely to see her--though I combined it with one or two other engagements--somewhere in February. Insensibly she had become important enough for me to make journeys for her.

But we didn't see very much of one another on that occasion. There was something in the air between us that made a faint embarrassment; the mere fact, perhaps, that she had asked me to come up.

A year before she would have dashed off with me quite unscrupulously to talk alone, carried me off to her room for an hour with a minute of chaperonage to satisfy the rules. Now there was always some one or other near us that it seemed impossible to exorcise.

We went for a walk on the Sunday afternoon with old Fortescue, K. C., who'd come up to see his two daughters, both great friends of Isabel's, and some mute inglorious don whose name I forget, but who was in a state of marked admiration for her. The six of us played a game of conversational entanglements throughout, and mostly I was impressing the Fortescue girls with the want of mental concentration possible in a rising politician. We went down Carfax, I remember, to Folly Bridge, and inspected the Barges, and then back by way of Merton to the Botanic Gardens and Magdalen Bridge. And in the Botanic Gardens she got almost her only chance with me.

"Last months at Oxford," she said.

"And then?" I asked.

"I'm coming to London," she said.

"To write?"

She was silent for a moment. Then she said abruptly, with that

quick flush of hers and a sudden boldness in her eyes: "I'm going to work with you. Why shouldn't I?"

3

Here, again, I suppose I had a fair warning of the drift of things. I seem to remember myself in the train to Paddington, sitting with a handful of papers--galley proofs for the BLUE WEEKLY, I suppose--on my lap, and thinking about her and that last sentence of hers, and all that it might mean to me.

It is very hard to recall even the main outline of anything so elusive as a meditation. I know that the idea of working with her gripped me, fascinated me. That my value in her life seemed growing filled me with pride and a kind of gratitude. I was already in no doubt that her value in my life was tremendous. It made it none the less, that in those days I was obsessed by the idea that she was transitory, and bound to go out of my life again. It is no good trying to set too fine a face upon this complex business, there is gold and clay and sunlight and savagery in every love story, and a multitude of elvish elements peeped out beneath the fine rich curtain of affection that masked our future. I've never properly weighed how immensely my vanity was gratified by her clear preference for me. Nor can I for a moment determine how much deliberate intention I hide from myself in this affair.

Certainly I think some part of me must have been saying in the train: "Leave go of her. Get away from her. End this now." I can't have been so stupid as not to have had that in my mind. . . .

If she had been only a beautiful girl in love with me, I think I could have managed the situation. Once or twice since my marriage

and before Isabel became of any significance in my life, there had been incidents with other people, flashes of temptation--no telling is possible of the thing resisted. I think that mere beauty and passion would not have taken me. But between myself and Isabel things were incurably complicated by the intellectual sympathy we had, the jolly march of our minds together. That has always mattered enormously. I should have wanted her company nearly as badly if she had been some crippled old lady; we would have hunted shoulder to shoulder, as two men. Only two men would never have had the patience and readiness for one another we two had. I had never for years met any one with whom I could be so carelessly sure of understanding or to whom I could listen so easily and fully. She gave me, with an extraordinary completeness, that rare, precious effect of always saying something fresh, and yet saying it so that it filled into and folded about all the little recesses and corners of my mind with an infinite, soft familiarity. It is impossible to explain that. It is like trying to explain why her voice, her voice heard speaking to any one--heard speaking in another room--pleased my ears.

She was the only Oxford woman who took a first that year. She spent the summer in Scotland and Yorkshire, writing to me continually of all she now meant to do, and stirring my imagination. She came to London for the autumn session. For a time she stayed with old Lady Colbeck, but she fell out with her hostess when it became clear she wanted to write, not novels, but journalism, and then she set every one talking by taking a flat near Victoria and installing as her sole protector an elderly German governess she had engaged through a scholastic agency. She began writing, not in that copious flood the undisciplined young woman of gifts is apt to produce, but in exactly the manner of an able young man, experimenting with forms, developing the phrasing of opinions, taking a definite line. She was, of course, tremendously discussed. She was disapproved of, but she was invited out to dinner. She got rather a reputation for the management of elderly distinguished men. It was an odd experience

to follow Margaret's soft rustle of silk into some big drawing-room and discover my snub-nosed girl in the blue sack transformed into a shining creature in the soft splendour of pearls and ivory-white and lace, and with a silver band about her dusky hair.

For a time we did not meet very frequently, though always she professed an unblushing preference for my company, and talked my views and sought me out. Then her usefulness upon the BLUE WEEKLY began to link us closer. She would come up to the office, and sit by the window, and talk over the proofs of the next week's articles, going through my intentions with a keen investigatory scalpel. Her talk always puts me in mind of a steel blade. Her writing became rapidly very good; she had a wit and a turn of the phrase that was all her own. We seemed to have forgotten the little shadow of embarrassment that had fallen over our last meeting at Oxford. Everything seemed natural and easy between us in those days; a little unconventional, but that made it all the brighter.

We developed something like a custom of walks, about once a week or so, and letters and notes became frequent. I won't pretend things were not keenly personal between us, but they had an air of being innocently mental. She used to call me "Master" in our talks, a monstrous and engaging flattery, and I was inordinately proud to have her as my pupil. Who wouldn't have been? And we went on at that distance for a long time--until within a year of the Handitch election.

After Lady Colbeck threw her up as altogether too "intellectual" for comfortable control, Isabel was taken up by the Balfes in a less formal and compromising manner, and week-ended with them and their cousin Leonora Sparling, and spent large portions of her summer with them in Herefordshire. There was a lover or so in that time, men who came a little timidly at this brilliant young person with the frank manner and the Amazonian mind, and, she declared, received her kindly refusals with manifest relief. And Arnold Shoesmith struck

up a sort of friendship that oddly imitated mine. She took a liking to him because he was clumsy and shy and inexpressive; she embarked upon the dangerous interest of helping him to find his soul. I had some twinges of jealousy about that. I didn't see the necessity of him. He invaded her time, and I thought that might interfere with her work. If their friendship stole some hours from Isabel's writing, it did not for a long while interfere with our walks or our talks, or the close intimacy we had together.

4

Then suddenly Isabel and I found ourselves passionately in love.

The change came so entirely without warning or intention that I find it impossible now to tell the order of its phases. What disturbed pebble started the avalanche I cannot trace. Perhaps it was simply that the barriers between us and this masked aspect of life had been wearing down unperceived.

And there came a change in Isabel. It was like some change in the cycle of nature, like the onset of spring--a sharp brightness, an uneasiness. She became restless with her work; little encounters with men began to happen, encounters not quite in the quality of the earlier proposals; and then came an odd incident of which she told me, but somehow, I felt, didn't tell me completely. She told me all she was able to tell me. She had been at a dance at the Ropers', and a man, rather well known in London, had kissed her. The thing amazed her beyond measure. It was the sort of thing immediately possible between any man and any woman, that one never expects to happen until it happens. It had the surprising effect of a judge generally known to be bald suddenly whipping off his wig in court. No absolutely unexpected revelation could have quite the same

quality of shock. She went through the whole thing to me with a remarkable detachment, told me how she had felt--and the odd things it seemed to open to her.

"I WANT to be kissed, and all that sort of thing," she avowed. "I suppose every woman does."

She added after a pause: "And I don't want any one to do it."

This struck me as queerly expressive of the woman's attitude to these things. "Some one presently will--solve that," I said.

"Some one will perhaps."

I was silent.

"Some one will," she said, almost viciously. "And then we'll have to stop these walks and talks of ours, dear Master. . . . I'll be sorry to give them up."

"It's part of the requirements of the situation," I said, "that he should be--oh, very interesting! He'll start, no doubt, all sorts of new topics, and open no end of attractive vistas. . . . You can't, you know, always go about in a state of pupillage."

"I don't think I can," said Isabel. "But it's only just recently I've begun to doubt about it."

I remember these things being said, but just how much we saw and understood, and just how far we were really keeping opaque to each other then, I cannot remember. But it must have been quite soon after this that we spent nearly a whole day together at Kew Gardens, with the curtains up and the barriers down, and the thing that had happened plain before our eyes. I don't remember we ever made any declaration. We just assumed the new footing. . . .

It was a day early in that year--I think in January, because there was thin, crisp snow on the grass, and we noted that only two other people had been to the Pagoda that day. I've a curious impression of greenish colour, hot, moist air and huge palm fronds about very much of our talk, as though we were nearly all the time in the Tropical House. But I also remember very vividly looking at certain orange and red spray-like flowers from Patagonia, which could not have been there. It is a curious thing that I do not remember we made any profession of passionate love for one another; we talked as though the fact of our intense love for each other had always been patent between us. There was so long and frank an intimacy between us that we talked far more like brother and sister or husband and wife than two people engaged in the war of the sexes. We wanted to know what we were going to do, and whatever we did we meant to do in the most perfect concert. We both felt an extraordinary accession of friendship and tenderness then, and, what again is curious, very little passion. But there was also, in spite of the perplexities we faced, an immense satisfaction about that day. It was as if we had taken off something that had hindered our view of each other, like people who unvizard to talk more easily at a masked ball.

I've had since to view our relations from the standpoint of the ordinary observer. I find that vision in the most preposterous contrast with all that really went on between us. I suppose there I should figure as a wicked seducer, while an unprotected girl succumbed to my fascinations. As a matter of fact, it didn't occur to us that there was any personal inequality between us. I knew her for my equal mentally; in so many things she was beyond comparison cleverer than I; her courage outwent mine. The quick leap of her mind evoked a flash of joy in mine like the response of an induction wire; her way of thinking was like watching sunlight reflected from little waves upon the side of a boat, it was so bright, so mobile, so variously and easily true to its law. In the back of our minds we both had a very definite belief that making love is full of

joyous, splendid, tender, and exciting possibilities, and we had to discuss why we shouldn't be to the last degree lovers.

Now, what I should like to print here, if it were possible, in all the screaming emphasis of red ink, is this: that the circumstances of my upbringing and the circumstances of Isabel's upbringing had left not a shadow of belief or feeling that the utmost passionate love between us was in itself intrinsically WRONG. I've told with the fullest particularity just all that I was taught or found out for myself in these matters, and Isabel's reading and thinking, and the fierce silences of her governesses and the breathless warnings of teachers, and all the social and religious influences that had been brought to bear upon her, had worked out to the same void of conviction. The code had failed with us altogether. We didn't for a moment consider anything but the expediency of what we both, for all our quiet faces and steady eyes, wanted most passionately to do.

Well, here you have the state of mind of whole brigades of people, and particularly of young people, nowadays. The current morality hasn't gripped them; they don't really believe in it at all. They may render it lip-service, but that is quite another thing. There are scarcely any tolerable novels to justify its prohibitions; its prohibitions do, in fact, remain unjustified amongst these ugly suppressions. You may, if you choose, silence the admission of this in literature and current discussion; you will not prevent it working out in lives. People come up to the great moments of passion crudely unaware, astoundingly unprepared as no really civilised and intelligently planned community would let any one be unprepared. They find themselves hedged about with customs that have no organic hold upon them, and mere discretions all generous spirits are disposed to despise.

Consider the infinite absurdities of it! Multitudes of us are trying to run this complex modern community on a basis of "Hush" without explaining to our children or discussing with them anything

about love and marriage at all. Doubt and knowledge creep about in enforced darkneses and silences. We are living upon an ancient tradition which everybody doubts and nobody has ever analysed. We affect a tremendous and cultivated shyness and delicacy about imperatives of the most arbitrary appearance. What ensues? What did ensue with us, for example? On the one hand was a great desire, robbed of any appearance of shame and grossness by the power of love, and on the other hand, the possible jealousy of so and so, the disapproval of so and so, material risks and dangers. It is only in the retrospect that we have been able to grasp something of the effectual case against us. The social prohibition lit by the intense glow of our passion, presented itself as preposterous, irrational, arbitrary, and ugly, a monster fit only for mockery. We might be ruined! Well, there is a phase in every love affair, a sort of heroic hysteria, when death and ruin are agreeable additions to the prospect. It gives the business a gravity, a solemnity. Timid people may hesitate and draw back with a vague instinctive terror of the immensity of the oppositions they challenge, but neither Isabel nor I are timid people.

We weighed what was against us. We decided just exactly as scores of thousands of people have decided in this very matter, that if it were possible to keep this thing to ourselves, there was nothing against it. And so we took our first step. With the hunger of love in us, it was easy to conclude we might be lovers, and still keep everything to ourselves. That cleared our minds of the one persistent obstacle that mattered to us--the haunting presence of Margaret.

And then we found, as all those scores of thousands of people scattered about us have found, that we could not keep it to ourselves. Love will out. All the rest of this story is the chronicle of that. Love with sustained secrecy cannot be love. It is just exactly the point people do not understand.

But before things came to that pass, some months and many phases and a sudden journey to America intervened.

"This thing spells disaster," I said. "You are too big and I am too big to attempt this secrecy. Think of the intolerable possibility of being found out! At any cost we have to stop--even at the cost of parting."

"Just because we may be found out!"

"Just because we may be found out."

"Master, I shouldn't in the least mind being found out with you. I'm afraid--I'd be proud."

"Wait till it happens."

There followed a struggle of immense insincerity between us. It is hard to tell who urged and who resisted.

She came to me one night to the editorial room of the BLUE WEEKLY, and argued and kissed me with wet salt lips, and wept in my arms; she told me that now passionate longing for me and my intimate life possessed her, so that she could not work, could not think, could not endure other people for the love of me. . . .

I fled absurdly. That is the secret of the futile journey to America that puzzled all my friends.

I ran away from Isabel. I took hold of the situation with all my

strength, put in Britten with sketchy, hasty instructions to edit the paper, and started headlong and with luggage, from which, among other things, my shaving things were omitted, upon a tour round the world.

Preposterous flight that was! I remember as a thing almost farcical my explanations to Margaret, and how frantically anxious I was to prevent the remote possibility of her coming with me, and how I crossed in the TUSCAN, a bad, wet boat, and mixed seasickness with ungovernable sorrow. I wept--tears. It was inexpressibly queer and ridiculous--and, good God! how I hated my fellow-passengers!

New York inflamed and excited me for a time, and when things slackened, I whirled westward to Chicago--eating and drinking, I remember, in the train from shoals of little dishes, with a sort of desperate voracity. I did the queerest things to distract myself--no novelist would dare to invent my mental and emotional muddle. Chicago also held me at first, amazing lapse from civilisation that the place is! and then abruptly, with hosts expecting me, and everything settled for some days in Denver, I found myself at the end of my renunciations, and turned and came back headlong to London.

Let me confess it wasn't any sense of perfect and incurable trust and confidence that brought me back, or any idea that now I had strength to refrain. It was a sudden realisation that after all the separation might succeed; some careless phrasing in one of her jealously read letters set that idea going in my mind--the haunting perception that I might return to London and find it empty of the Isabel who had pervaded it. Honour, discretion, the careers of both of us, became nothing at the thought. I couldn't conceive my life resuming there without Isabel. I couldn't, in short, stand it.

I don't even excuse my return. It is inexcusable. I ought to have kept upon my way westward--and held out. I couldn't. I wanted

Isabel, and I wanted her so badly now that everything else in the world was phantom-like until that want was satisfied. Perhaps you have never wanted anything like that. I went straight to her.

But here I come to untellable things. There is no describing the reality of love. The shapes of things are nothing, the actual happenings are nothing, except that somehow there falls a light upon them and a wonder. Of how we met, and the thrill of the adventure, the curious bright sense of defiance, the joy of having dared, I can't tell--I can but hint of just one aspect, of what an amazing LARK--it's the only word--it seemed to us. The beauty which was the essence of it, which justifies it so far as it will bear justification, eludes statement.

What can a record of contrived meetings, of sundering difficulties evaded and overcome, signify here? Or what can it convey to say that one looked deep into two dear, steadfast eyes, or felt a heart throb and beat, or gripped soft hair softly in a trembling hand? Robbed of encompassing love, these things are of no more value than the taste of good wine or the sight of good pictures, or the hearing of music,--just sensuality and no more. No one can tell love--we can only tell the gross facts of love and its consequences. Given love--given mutuality, and one has effected a supreme synthesis and come to a new level of life--but only those who know can know. This business has brought me more bitterness and sorrow than I had ever expected to bear, but even now I will not say that I regret that wilful home-coming altogether. We loved--to the uttermost. Neither of us could have loved any one else as we did and do love one another. It was ours, that beauty; it existed only between us when we were close together, for no one in the world ever to know save ourselves.

My return to the office sticks out in my memory with an extreme vividness, because of the wild eagle of pride that screamed within me. It was Tuesday morning, and though not a soul in London knew of

it yet except Isabel, I had been back in England a week. I came in upon Britten and stood in the doorway.

"GOD!" he said at the sight of me.

"I'm back," I said.

He looked at my excited face with those red-brown eyes of his. Silently I defied him to speak his mind.

"Where did you turn back?" he said at last.

6

I had to tell what were, so far as I can remember my first positive lies to Margaret in explaining that return. I had written to her from Chicago and again from New York, saying that I felt I ought to be on the spot in England for the new session, and that I was coming back--presently. I concealed the name of my boat from her, and made a calculated prevarication when I announced my presence in London. I telephoned before I went back for my rooms to be prepared. She was, I knew, with the Bunting Harblows in Durham, and when she came back to Radnor Square I had been at home a day.

I remember her return so well.

My going away and the vivid secret of the present had wiped out from my mind much of our long estrangement. Something, too, had changed in her. I had had some hint of it in her letters, but now I saw it plainly. I came out of my study upon the landing when I heard the turmoil of her arrival below, and she came upstairs with a quickened gladness. It was a cold March, and she was dressed in unfamiliar

dark furs that suited her extremely and reinforced the delicate flush of her sweet face. She held out both her hands to me, and drew me to her unhesitatingly and kissed me.

"So glad you are back, dear," she said. "Oh! so very glad you are back."

I returned her kiss with a queer feeling at my heart, too undifferentiated to be even a definite sense of guilt or meanness. I think it was chiefly amazement--at the universe--at myself.

"I never knew what it was to be away from you," she said.

I perceived suddenly that she had resolved to end our estrangement. She put herself so that my arm came caressingly about her.

"These are jolly furs," I said.

"I got them for you."

The parlourmaid appeared below dealing with the maid and the luggage cab.

"Tell me all about America," said Margaret. "I feel as though you'd been away six year's."

We went arm in arm into our little sitting-room, and I took off the fur's for her and sat down upon the chintz-covered sofa by the fire. She had ordered tea, and came and sat by me. I don't know what I had expected, but of all things I had certainly not expected this sudden abolition of our distances.

"I want to know all about America," she repeated, with her eyes scrutinising me. "Why did you come back?"

I repeated the substance of my letters rather lamely, and she sat listening.

"But why did you turn back--without going to Denver?"

"I wanted to come back. I was restless."

"Restlessness," she said, and thought. "You were restless in Venice. You said it was restlessness took you to America."

Again she studied me. She turned a little awkwardly to her tea things, and poured needless water from the silver kettle into the teapot. Then she sat still for some moments looking at the equipage with expressionless eyes. I saw her hand upon the edge of the table tremble slightly. I watched her closely. A vague uneasiness possessed me. What might she not know or guess?

She spoke at last with an effort. "I wish you were in Parliament again," she said. "Life doesn't give you events enough."

"If I was in Parliament again, I should be on the Conservative side."

"I know," she said, and was still more thoughtful.

"Lately," she began, and paused. "Lately I've been reading--you."

I didn't help her out with what she had to say. I waited.

"I didn't understand what you were after. I had misjudged. I didn't know. I think perhaps I was rather stupid." Her eyes were suddenly shining with tears. "You didn't give me much chance to understand."

She turned upon me suddenly with a voice full of tears.

"Husband," she said abruptly, holding her two hands out to me, "I want to begin over again!"

I took her hands, perplexed beyond measure. "My dear!" I said.

"I want to begin over again."

I bowed my head to hide my face, and found her hand in mine and kissed it.

"Ah!" she said, and slowly withdrew her hand. She leant forward with her arm on the sofa-back, and looked very intently into my face. I felt the most damnable scoundrel in the world as I returned her gaze. The thought of Isabel's darkly shining eyes seemed like a physical presence between us. . . .

"Tell me," I said presently, to break the intolerable tension, "tell me plainly what you mean by this."

I sat a little away from her, and then took my teacup in hand, with an odd effect of defending myself. "Have you been reading that old book of mine?" I asked.

"That and the paper. I took a complete set from the beginning down to Durham with me. I have read it over, thought it over. I didn't understand--what you were teaching."

There was a little pause.

"It all seems so plain to me now," she said, "and so true."

I was profoundly disconcerted. I put down my teacup, stood up in the middle of the hearthrug, and began talking. "I'm tremendously glad, Margaret, that you've come to see I'm not altogether

perverse," I began. I launched out into a rather trite and windy exposition of my views, and she sat close to me on the sofa, looking up into my face, hanging on my words, a deliberate and invincible convert.

"Yes," she said, "yes." . . .

I had never doubted my new conceptions before; now I doubted them profoundly. But I went on talking. It's the grim irony in the lives of all politicians, writers, public teachers, that once the audience is at their feet, a new loyalty has gripped them. It isn't their business to admit doubt and imperfections. They have to go on talking. And I was now so accustomed to Isabel's vivid interruptions, qualifications, restatements, and confirmations. . . .

Margaret and I dined together at home. She made me open out my political projects to her. "I have been foolish," she said. "I want to help."

And by some excuse I have forgotten she made me come to her room. I think it was some book I had to take her, some American book I had brought back with me, and mentioned in our talk. I walked in with it, and put it down on the table and turned to go.

"Husband!" she cried, and held out her slender arms to me. I was compelled to go to her and kiss her, and she twined them softly about my neck and drew me to her and kissed me. I disentangled them very gently, and took each wrist and kissed it, and the backs of her hands.

"Good-night," I said. There came a little pause. "Good-night, Margaret," I repeated, and walked very deliberately and with a kind of sham preoccupation to the door.

I did not look at her, but I could feel her standing, watching me.

If I had looked up, she would, I knew, have held out her arms to me. . . .

At the very outset that secret, which was to touch no one but Isabel and myself, had reached out to stab another human being.

7

The whole world had changed for Isabel and me; and we tried to pretend that nothing had changed except a small matter between us. We believed quite honestly at that time that it was possible to keep this thing that had happened from any reaction at all, save perhaps through some magically enhanced vigour in our work, upon the world about us! Seen in retrospect, one can realise the absurdity of this belief; within a week I realised it; but that does not alter the fact that we did believe as much, and that people who are deeply in love and unable to marry will continue to believe so to the very end of time. They will continue to believe out of existence every consideration that separates them until they have come together. Then they will count the cost, as we two had to do.

I am telling a story, and not propounding theories in this book; and chiefly I am telling of the ideas and influences and emotions that have happened to me--me as a sort of sounding board for my world. The moralist is at liberty to go over my conduct with his measure and say, "At this point or at that you went wrong, and you ought to have done"--so-and-so. The point of interest to the statesman is that it didn't for a moment occur to us to do so-and-so when the time for doing it came. It amazes me now to think how little either of us troubled about the established rights or wrongs of the situation. We hadn't an atom of respect for them, innate or acquired. The guardians of public morals will say we were very bad

people; I submit in defence that they are very bad guardians--provocative guardians. . . . And when at last there came a claim against us that had an effective validity for us, we were in the full tide of passionate intimacy.

I had a night of nearly sleepless perplexity after Margaret's return. She had suddenly presented herself to me like something dramatically recalled, fine, generous, infinitely capable of feeling. I was amazed how much I had forgotten her. In my contempt for vulgarised and conventionalised honour I had forgotten that for me there was such a reality as honour. And here it was, warm and near to me, living, breathing, unsuspecting. Margaret's pride was my honour, that I had had no right even to imperil.

I do not now remember if I thought at that time of going to Isabel and putting this new aspect of the case before her. Perhaps I did. Perhaps I may have considered even then the possibility of ending what had so freshly and passionately begun. If I did, it vanished next day at the sight of her. Whatever regrets came in the darkness, the daylight brought an obstinate confidence in our resolution again. We would, we declared, "pull the thing off." Margaret must not know. Margaret should not know. If Margaret did not know, then no harm whatever would be done. We tried to sustain that. . . .

For a brief time we had been like two people in a magic cell, magically cut off from the world and full of a light of its own, and then we began to realise that we were not in the least cut off, that the world was all about us and pressing in upon us, limiting us, threatening us, resuming possession of us. I tried to ignore the injury to Margaret of her unreciprocated advances. I tried to maintain to myself that this hidden love made no difference to the now irreparable breach between husband and wife. But I never spoke of it to Isabel or let her see that aspect of our case. How could I? The time for that had gone. . . .

Then in new shapes and relations came trouble. Distressful elements crept in by reason of our unavoidable furtiveness; we ignored them, hid them from each other, and attempted to hide them from ourselves. Successful love is a thing of abounding pride, and we had to be secret. It was delightful at first to be secret, a whispering, warm conspiracy; then presently it became irksome and a little shameful. Her essential frankness of soul was all against the masks and falsehoods that many women would have enjoyed. Together in our secrecy we relaxed, then in the presence of other people again it was tiresome to have to watch for the careless, too easy phrase, to snatch back one's hand from the limitless betrayal of a light, familiar touch.

Love becomes a poor thing, at best a poor beautiful thing, if it develops no continuing and habitual intimacy. We were always meeting, and most gloriously loving and beginning--and then we had to snatch at remorseless ticking watches, hurry to catch trains, and go back to this or that. That is all very well for the intrigues of idle people perhaps, but not for an intense personal relationship. It is like lighting a candle for the sake of lighting it, over and over again, and each time blowing it out. That, no doubt, must be very amusing to children playing with the matches, but not to people who love warm light, and want it in order to do fine and honourable things together. We had achieved--I give the ugly phrase that expresses the increasing discolouration in my mind--"illicit intercourse." To end at that, we now perceived, wasn't in our style. But where were we to end? . . .

Perhaps we might at this stage have given it up. I think if we could have seen ahead and around us we might have done so. But the glow of our cell blinded us. . . . I wonder what might have happened if at that time we had given it up. . . . We propounded it, we met again in secret to discuss it, and our overpowering passion for one another reduced that meeting to absurdity. . . .

Presently the idea of children crept between us. It came in from all our conceptions of life and public service; it was, we found, in the quality of our minds that physical love without children is a little weak, timorous, more than a little shameful. With imaginative people there very speedily comes a time when that realisation is inevitable. We hadn't thought of that before--it isn't natural to think of that before. We hadn't known. There is no literature in English dealing with such things.

There is a necessary sequence of phases in love. These came in their order, and with them, unanticipated tarnishings on the first bright perfection of our relations. For a time these developing phases were no more than a secret and private trouble between us, little shadows spreading by imperceptible degrees across that vivid and luminous cell.

8

The Handitch election flung me suddenly into prominence.

It is still only two years since that struggle, and I will not trouble the reader with a detailed history of events that must be quite sufficiently present in his mind for my purpose already. Huge stacks of journalism have dealt with Handitch and its significance. For the reader very probably, as for most people outside a comparatively small circle, it meant my emergence from obscurity. We obtruded no editor's name in the BLUE WEEKLY; I had never as yet been on the London hoardings. Before Handitch I was a journalist and writer of no great public standing; after Handitch, I was definitely a person, in the little group of persons who stood for the Young Imperialist movement. Handitch was, to a very large

extent, my affair. I realised then, as a man comes to do, how much one can still grow after seven and twenty. In the second election I was a man taking hold of things; at Kinghamstead I had been simply a young candidate, a party unit, led about the constituency, told to do this and that, and finally washed in by the great Anti-Imperialist flood, like a starfish rolling up a beach.

My feminist views had earned the mistrust of the party, and I do not think I should have got the chance of Handitch or indeed any chance at all of Parliament for a long time, if it had not been that the seat with its long record of Liberal victories and its Liberal majority of 3642 at the last election, offered a hopeless contest. The Liberal dissensions and the belated but by no means contemptible Socialist candidate were providential interpositions. I think, however, the conduct of Gane, Crupp, and Tarville in coming down to fight for me, did count tremendously in my favour. "We aren't going to win, perhaps," said Crupp, "but we are going to talk." And until the very eve of victory, we treated Handitch not so much as a battlefield as a hoarding. And so it was the Endowment of Motherhood as a practical form of Eugenics got into English politics.

Plutus, our agent, was scared out of his wits when the thing began.

"They're ascribing all sorts of queer ideas to you about the Family," he said.

"I think the Family exists for the good of the children," I said; "is that queer?"

"Not when you explain it--but they won't let you explain it. And about marriage--?"

"I'm all right about marriage--trust me."

"Of course, if YOU had children," said Plutus, rather inconsiderately. . . .

They opened fire upon me in a little electioneering rag call the HANDITCH SENTINEL, with a string of garbled quotations and misrepresentations that gave me an admirable text for a speech. I spoke for an hour and ten minutes with a more and more crumpled copy of the SENTINEL in my hand, and I made the fullest and completest exposition of the idea of endowing motherhood that I think had ever been made up to that time in England. Its effect on the press was extraordinary. The Liberal papers gave me quite unprecedented space under the impression that I had only to be given rope to hang myself; the Conservatives cut me down or tried to justify me; the whole country was talking. I had had a pamphlet in type upon the subject, and I revised this carefully and put it on the book-stalls within three days. It sold enormously and brought me bushels of letters. We issued over three thousand in Handitch alone. At meeting after meeting I was heckled upon nothing else. Long before polling day Plutus was converted.

"It's catching on like old age pensions," he said. "We've dished the Liberals! To think that such a project should come from our side!"

But it was only with the declaration of the poll that my battle was won. No one expected more than a snatch victory, and I was in by over fifteen hundred. At one bound Cossington's papers passed from apologetics varied by repudiation to triumphant praise. "A renascent England, breeding men," said the leader in his chief daily on the morning after the polling, and claimed that the Conservatives had been ever the pioneers in sanely bold constructive projects.

I came up to London with a weary but rejoicing Margaret by the night train.

CHAPTER THE SECOND

THE IMPOSSIBLE POSITION

1

To any one who did not know of that glowing secret between Isabel and myself, I might well have appeared at that time the most successful and enviable of men. I had recovered rapidly from an uncongenial start in political life; I had become a considerable force through the BLUE WEEKLY, and was shaping an increasingly influential body of opinion; I had re-entered Parliament with quite dramatic distinction, and in spite of a certain faltering on the part of the orthodox Conservatives towards the bolder elements in our propaganda, I had loyal and unenvious associates who were making me a power in the party. People were coming to our group, understandings were developing. It was clear we should play a prominent part in the next general election, and that, given a Conservative victory, I should be assured of office. The world opened out to me brightly and invitingly. Great schemes took shape in my mind, always more concrete, always more practicable; the years ahead seemed falling into order, shining with the credible promise of immense achievement.

And at the heart of it all, unseen and unsuspected, was the secret of my relations with Isabel--like a seed that germinates and thrusts, thrusts relentlessly.

From the onset of the Handitch contest onward, my meetings with her had been more and more pervaded by the discussion of our situation. It had innumerable aspects. It was very present to us that we wanted to be together as much as possible--we were beginning to long

very much for actual living together in the same house, so that one could come as it were carelessly--unawares--upon the other, busy perhaps about some trivial thing. We wanted to feel each other in the daily atmosphere. Preceding our imperatively sterile passion, you must remember, outside it, altogether greater than it so far as our individual lives were concerned, there had grown and still grew an enormous affection and intellectual sympathy between us. We brought all our impressions and all our ideas to each other, to see them in each other's light. It is hard to convey that quality of intellectual unison to any one who has not experienced it. I thought more and more in terms of conversation with Isabel; her possible comments upon things would flash into my mind, oh!--with the very sound of her voice.

I remember, too, the odd effect of seeing her in the distance going about Handitch, like any stranger canvasser; the queer emotion of her approach along the street, the greeting as she passed. The morning of the polling she vanished from the constituency. I saw her for an instant in the passage behind our Committee rooms.

"Going?" said I.

She nodded.

"Stay it out. I want you to see the fun. I remember--the other time."

She didn't answer for a moment or so, and stood with face averted.

"It's Margaret's show," she said abruptly. "If I see her smiling there like a queen by your side--! She did--last time. I remember." She caught at a sob and dashed her hand across her face impatiently. "Jealous fool, mean and petty, jealous fool! . . . Good luck, old man, to you! You're going to win. But I don't want to see the end of it all the same. . . ."

"Good-bye!" said I, clasping her hand as some supporter appeared in the passage. . . .

I came back to London victorious, and a little flushed and coarse with victory; and so soon as I could break away I went to Isabel's flat and found her white and worn, with the stain of secret weeping about her eyes. I came into the room to her and shut the door.

"You said I'd win," I said, and held out my arms.

She hugged me closely for a moment.

"My dear," I whispered, "it's nothing--without you--nothing!"

We didn't speak for some seconds. Then she slipped from my hold. "Look!" she said, smiling like winter sunshine. "I've had in all the morning papers--the pile of them, and you--resounding."

"It's more than I dared hope."

"Or I."

She stood for a moment still smiling bravely, and then she was sobbing in my arms. "The bigger you are--the more you show," she said--" the more we are parted. I know, I know--"

I held her close to me, making no answer.

Presently she became still. "Oh, well," she said, and wiped her eyes and sat down on the little sofa by the fire; and I sat down beside her.

"I didn't know all there was in love," she said, staring at the coals, "when we went love-making."

I put my arm behind her and took a handful of her dear soft hair in my hand and kissed it.

"You've done a great thing this time," she said. "Handitch will make you."

"It opens big chances," I said. "But why are you weeping, dear one?"

"Envy," she said, "and love."

"You're not lonely?"

"I've plenty to do--and lots of people."

"Well?"

"I want you."

"You've got me."

She put her arm about me and kissed me. "I want you," she said, "just as if I had nothing of you. You don't understand--how a woman wants a man. I thought once if I just gave myself to you it would be enough. It was nothing--it was just a step across the threshold. My dear, every moment you are away I ache for you--ache! I want to be about when it isn't love-making or talk. I want to be doing things for you, and watching you when you're not thinking of me. All those safe, careless, intimate things. And something else--" She stopped. "Dear, I don't want to bother you. I just want you to know I love you. . . ."

She caught my head in her hands and kissed it, then stood up abruptly.

I looked up at her, a little perplexed.

"Dear heart," said I, "isn't this enough? You're my councillor, my colleague, my right hand, the secret soul of my life--"

"And I want to darn your socks," she said, smiling back at me.

"You're insatiable."

She smiled "No," she said. "I'm not insatiable, Master. But I'm a woman in love. And I'm finding out what I want, and what is necessary to me--and what I can't have. That's all."

"We get a lot."

"We want a lot. You and I are greedy people for the things we like, Master. It's very evident we've got nearly all we can ever have of one another--and I'm not satisfied."

"What more is there?"

"For you--very little. I wonder. For me--every thing. Yes--everything. You didn't mean it, Master; you didn't know any more than I did when I began, but love between a man and a woman is sometimes very one-sided. Fearfully one-sided! That's all. . . ."

"Don't YOU ever want children?" she said abruptly.

"I suppose I do."

"You don't!"

"I haven't thought of them."

"A man doesn't, perhaps. But I have. . . . I want them--like hunger. YOUR children, and home with you. Really, continually you! That's the trouble. . . . I can't have 'em, Master, and I can't have you."

She was crying, and through her tears she laughed.

"I'm going to make a scene," she said, "and get this over. I'm so discontented and miserable; I've got to tell you. It would come between us if I didn't. I'm in love with you, with everything--with all my brains. I'll pull through all right. I'll be good, Master, never you fear. But to-day I'm crying out with all my being. This election--You're going up; you're going on. In these papers--you're a great big fact. It's suddenly come home to me. At the back of my mind I've always had the idea I was going to have you somehow presently for myself--I mean to have you to go long tramps with, to keep house for, to get meals for, to watch for of an evening. It's a sort of habitual background to my thought of you. And it's nonsense--utter nonsense!" She stopped. She was crying and choking. "And the child, you know--the child!"

I was troubled beyond measure, but Handitch and its intimations were clear and strong.

"We can't have that," I said.

"No," she said, "we can't have that."

"We've got our own things to do."

"YOUR things," she said.

"Aren't they yours too?"

"Because of you," she said.

"Aren't they your very own things?"

"Women don't have that sort of very own thing. Indeed, it's true! And think! You've been down there preaching the goodness of children, telling them the only good thing in a state is happy, hopeful children, working to free mothers and children--"

"And we give our own children to do it?" I said.

"Yes," she said. "And sometimes I think it's too much to give--too much altogether. . . . Children get into a woman's brain--when she mustn't have them, especially when she must never hope for them. Think of the child we might have now!--the little creature with soft, tender skin, and little hands and little feet! At times it haunts me. It comes and says, Why wasn't I given life? I can hear it in the night. . . . The world is full of such little ghosts, dear lover--little things that asked for life and were refused. They clamour to me. It's like a little fist beating at my heart. Love children, beautiful children. Little cold hands that tear at my heart! Oh, my heart and my lord!" She was holding my arm with both her hands and weeping against it, and now she drew herself to my shoulder and wept and sobbed in my embrace. "I shall never sit with your child on my knee and you beside me--never, and I am a woman and your lover! . . ."

2

But the profound impossibility of our relation was now becoming more and more apparent to us. We found ourselves seeking justification, clinging passionately to a situation that was coldly, pitilessly, impossible and fated. We wanted quite intensely to live together

and have a child, but also we wanted very many other things that were incompatible with these desires. It was extraordinarily difficult to weigh our political and intellectual ambitions against those intimate wishes. The weights kept altering according as one found oneself grasping this valued thing or that. It wasn't as if we could throw everything aside for our love, and have that as we wanted it. Love such as we bore one another isn't altogether, or even chiefly, a thing in itself--it is for the most part a value set upon things. Our love was interwoven with all our other interests; to go out of the world and live in isolation seemed to us like killing the best parts of each other; we loved the sight of each other engaged finely and characteristically, we knew each other best as activities. We had no delusions about material facts; we didn't want each other alive or dead, we wanted each other fully alive. We wanted to do big things together, and for us to take each other openly and desperately would leave us nothing in the world to do. We wanted children indeed passionately, but children with every helpful chance in the world, and children born in scandal would be handicapped at every turn. We wanted to share a home, and not a solitude.

And when we were at this stage of realisation, began the intimations that we were found out, and that scandal was afoot against us. . . .

I heard of it first from Esmear, who deliberately mentioned it, with that steady grey eye of his watching me, as an instance of the preposterous falsehoods people will circulate. It came to Isabel almost simultaneously through a married college friend, who made it her business to demand either confirmation or denial. It filled us both with consternation. In the surprise of the moment Isabel admitted her secret, and her friend went off "reserving her freedom of action."

Discovery broke out in every direction. Friends with grave faces and an atmosphere of infinite tact invaded us both. Other friends

ceased to invade either of us. It was manifest we had become--we knew not how--a private scandal, a subject for duologues, an amazement, a perplexity, a vivid interest. In a few brief weeks it seemed London passed from absolute unsuspectingness to a chattering exaggeration of its knowledge of our relations.

It was just the most inappropriate time for that disclosure. The long smouldering antagonism to my endowment of motherhood ideas had flared up into an active campaign in the EXPURGATOR, and it would be altogether disastrous to us if I should be convicted of any personal irregularity. It was just because of the manifest and challenging respectability of my position that I had been able to carry the thing as far as I had done. Now suddenly my fortunes had sprung a leak, and scandal was pouring in. . . . It chanced, too, that a wave of moral intolerance was sweeping through London, one of those waves in which the bitterness of the consciously just finds an ally in the panic of the undiscovered. A certain Father Blodgett had been preaching against social corruption with extraordinary force, and had roused the Church of England people to a kind of competition in denunciation. The old methods of the Anti-Socialist campaign had been renewed, and had offered far too wide a scope and too tempting an opportunity for private animosity, to be restricted to the private affairs of the Socialists. I had intimations of an extensive circulation of "private and confidential" letters. . . .

I think there can be nothing else in life quite like the unnerving realisation that rumour and scandal are afoot about one. Abruptly one's confidence in the solidity of the universe disappears. One walks silenced through a world that one feels to be full of inaudible accusations. One cannot challenge the assault, get it out into the open, separate truth and falsehood. It slinks from you, turns aside its face. Old acquaintances suddenly evaded me, made extraordinary excuses; men who had presumed on the verge of my world and pestered me with an intrusive enterprise, now took the bold step of flat repudiation. I became doubtful about the return of a nod,

retracted all those tentacles of easy civility that I had hitherto spread to the world. I still grow warm with amazed indignation when I recall that Edward Crampton, meeting me full on the steps of the Climax Club, cut me dead. "By God!" I cried, and came near catching him by the throat and wringing out of him what of all good deeds and bad, could hearten him, a younger man than I and empty beyond comparison, to dare to play the judge to me. And then I had an open slight from Mrs. Millingham, whom I had counted on as one counts upon the sunrise. I had not expected things of that sort; they were disconcerting beyond measure; it was as if the world were giving way beneath my feet, as though something failed in the essential confidence of life, as though a hand of wet ice had touched my heart. Similar things were happening to Isabel. Yet we went on working, visiting, meeting, trying to ignore this gathering of implacable forces against us.

For a time I was perplexed beyond measure to account for this campaign. Then I got a clue. The centre of diffusion was the Bailey household. The Baileys had never forgiven me my abandonment of the young Liberal group they had done so much to inspire and organise; their dinner-table had long been a scene of hostile depreciation of the BLUE WEEKLY and all its allies; week after week Altiora proclaimed that I was "doing nothing," and found other causes for our bye-election triumphs; I counted Chambers Street a dangerous place for me. Yet, nevertheless, I was astonished to find them using a private scandal against me. They did. I think Handitch had filled up the measure of their bitterness, for I had not only abandoned them, but I was succeeding beyond even their power of misrepresentation. Always I had been a wasp in their spider's web, difficult to claim as a tool, uncritical, antagonistic. I admired their work and devotion enormously, but I had never concealed my contempt for a certain childish vanity they displayed, and for the frequent puerility of their political intrigues. I suppose contempt galls more than injuries, and anyhow they had me now. They had me. Bailey, I found, was warning fathers

of girls against me as a "reckless libertine," and Altiora, flushed, roguish, and dishevelled, was sitting on her fender curb after dinner, and pledging little parties of five or six women at a time with infinite gusto not to let the matter go further. Our cell was open to the world, and a bleak, distressful daylight streaming in.

I had a gleam of a more intimate motive in Altiora from the reports that came to me. Isabel had been doing a series of five or six articles in the POLITICAL REVIEW in support of our campaign, the POLITICAL REVIEW which had hitherto been loyally Baileyite. Quite her best writing up to the present, at any rate, is in those papers, and no doubt Altiora had had not only to read her in those invaded columns, but listen to her praises in the mouths of the tactless influential. Altiora, like so many people who rely on gesture and vocal insistence in conversation, writes a poor and slovenly prose and handles an argument badly; Isabel has her University training behind her and wrote from the first with the stark power of a clear-headed man. "Now we know," said Altiora, with just a gleam of malice showing through her brightness, "now we know who helps with the writing!"

She revealed astonishing knowledge.

For a time I couldn't for the life of me discover her sources. I had, indeed, a desperate intention of challenging her, and then I bethought me of a youngster named Curmain, who had been my supplemental typist and secretary for a time, and whom I had sent on to her before the days of our breach. "Of course!" said I, "Curmain!" He was a tall, drooping, sidelong youth with sandy hair, a little forward head, and a long thin neck. He stole stamps, and, I suspected, rifled my private letter drawer, and I found him one day on a turn of the stairs looking guilty and ruffled with a pretty Irish housemaid of Margaret's manifestly in a state of hot indignation. I saw nothing, but I felt everything in the air between them. I hate this pestering of servants, but at the same

time I didn't want Curmain wiped out of existence, so I had packed him off without unnecessary discussion to Altiora. He was quick and cheap anyhow, and I thought her general austerity ought to redeem him if anything could; the Chambers Street housemaid wasn't for any man's kissing and showed it, and the stamps and private letters were looked after with an efficiency altogether surpassing mine. And Altiora, I've no doubt left now whatever, pumped this young undesirable about me, and scenting a story, had him to dinner alone one evening to get to the bottom of the matter. She got quite to the bottom of it,--it must have been a queer duologue. She read Isabel's careless, intimate letters to me, so to speak, by this proxy, and she wasn't ashamed to use this information in the service of the bitterness that had sprung up in her since our political breach. It was essentially a personal bitterness; it helped no public purpose of theirs to get rid of me. My downfall in any public sense was sheer waste,--the loss of a man. She knew she was behaving badly, and so, when it came to remonstrance, she behaved worse. She'd got names and dates and places; the efficiency of her information was irresistible. And she set to work at it marvellously. Never before, in all her pursuit of efficient ideals, had Altiora achieved such levels of efficiency. I wrote a protest that was perhaps ill-advised and angry, I went to her and tried to stop her. She wouldn't listen, she wouldn't think, she denied and lied, she behaved like a naughty child of six years old which has made up its mind to be hurtful. It wasn't only, I think, that she couldn't bear our political and social influence; she also--I realised at that interview couldn't bear our loving. It seemed to her the sickliest thing,--a thing quite unendurable. While such things were, the virtue had gone out of her world.

I've the vividest memory of that call of mine. She'd just come in and taken off her hat, and she was grey and dishevelled and tired, and in a business-like dress of black and crimson that didn't suit her and was muddy about the skirts; she'd a cold in her head and sniffed penetratingly, she avoided my eye as she talked and

interrupted everything I had to say; she kept stabbing fiercely at the cushions of her sofa with a long hat-pin and pretending she was overwhelmed with grief at the DEBACLE she was deliberately organising.

"Then part," she cried, "part. If you don't want a smashing up,-- part! You two have got to be parted. You've got never to see each other ever, never to speak." There was a zest in her voice. "We're not circulating stories," she denied. "No! And Curmain never told us anything--Curmain is an EXCELLENT young man; oh! a quite excellent young man. You misjudged him altogether." . . .

I was equally unsuccessful with Bailey. I caught the little wretch in the League Club, and he wriggled and lied. He wouldn't say where he had got his facts, he wouldn't admit he had told any one. When I gave him the names of two men who had come to me astonished and incredulous, he attempted absurdly to make me think they had told HIM. He did his horrible little best to suggest that honest old Quackett, who had just left England for the Cape, was the real scandalmonger. That struck me as mean, even for Bailey. I've still the odd vivid impression of his fluting voice, excusing the inexcusable, his big, shifty face evading me, his perspiration-beaded forehead, the shrugging shoulders, and the would-be exculpatory gestures--Houndsditch gestures--of his enormous ugly hands.

"I can assure you, my dear fellow," he said; "I can assure you we've done everything to shield you--everything." . . .

3

Isabel came after dinner one evening and talked in the office. She

made a white-robed, dusky figure against the deep blues of my big window. I sat at my desk and tore a quill pen to pieces as I talked.

"The Baileys don't intend to let this drop," I said. "They mean that every one in London is to know about it."

"I know."

"Well!" I said.

"Dear heart," said Isabel, facing it, "it's no good waiting for things to overtake us; we're at the parting of the ways."

"What are we to do?"

"They won't let us go on."

"Damn them!"

"They are ORGANISING scandal."

"It's no good waiting for things to overtake us," I echoed; "they have overtaken us." I turned on her. "What do you want to do?"

"Everything," she said. "Keep you and have our work. Aren't we Mates?"

"We can't."

"And we can't!"

"I've got to tell Margaret," I said.

"Margaret!"

"I can't bear the idea of any one else getting in front with it.
I've been wincing about Margaret secretly--"

"I know. You'll have to tell her--and make your peace with her."

She leant back against the bookcases under the window.

"We've had some good times, Master;" she said, with a sigh in her voice.

And then for a long time we stared at one another in silence.

"We haven't much time left," she said.

"Shall we bolt?" I said.

"And leave all this?" she asked, with her eyes going round the room.

"And that?" And her head indicated Westminster. "No!"

I said no more of bolting.

"We've got to screw ourselves up to surrender," she said.

"Something."

"A lot."

"Master," she said, "it isn't all sex and stuff between us?"

"No!"

"I can't give up the work. Our work's my life."

We came upon another long pause.

"No one will believe we've ceased to be lovers--if we simply do," she said.

"We shouldn't."

"We've got to do something more parting than that."

I nodded, and again we paused. She was coming to something.

"I could marry Shoemith," she said abruptly.

"But--" I objected.

"He knows. It wasn't fair. I told him."

"Oh, that explains," I said. "There's been a kind of sulkiness-- But--you told him?"

She nodded. "He's rather badly hurt," she said. "He's been a good friend to me. He's curiously loyal. But something, something he said one day--forced me to let him know. . . . That's been the beastliness of all this secrecy. That's the beastliness of all secrecy. You have to spring surprises on people. But he keeps on. He's steadfast. He'd already suspected. He wants me very badly to marry him. . . ."

"But you don't want to marry him?"

"I'm forced to think of it."

"But does he want to marry you at that? Take you as a present from the world at large?--against your will and desire? . . . I don't understand him."

"He cares for me."

"How?"

"He thinks this is a fearful mess for me. He wants to pull it straight."

We sat for a time in silence, with imaginations that obstinately refused to take up the realities of this proposition.

"I don't want you to marry Shoesmith," I said at last.

"Don't you like him?"

"Not as your husband."

"He's a very clever and sturdy person--and very generous and devoted to me."

"And me?"

"You can't expect that. He thinks you are wonderful--and, naturally, that you ought not to have started this."

"I've a curious dislike to any one thinking that but myself. I'm quite ready to think it myself."

"He'd let us be friends--and meet."

"Let us be friends!" I cried, after a long pause. "You and me!"

"He wants me to be engaged soon. Then, he says, he can go round fighting these rumours, defending us both--and force a quarrel on the Baileys."

"I don't understand him," I said, and added, "I don't understand you."

I was staring at her face. It seemed white and set in the dimness.

"Do you really mean this, Isabel?" I asked.

"What else is there to do, my dear?--what else is there to do at all? I've been thinking day and night. You can't go away with me. You can't smash yourself suddenly in the sight of all men. I'd rather die than that should happen. Look what you are becoming in the country! Look at all you've built up!--me helping. I wouldn't let you do it if you could. I wouldn't let you--if it were only for Margaret's sake. THIS . . . closes the scandal, closes everything."

"It closes all our life together," I cried.

She was silent.

"It never ought to have begun," I said.

She winced. Then abruptly she was on her knees before me, with her hands upon my shoulder and her eyes meeting mine.

"My dear," she said very earnestly, "don't misunderstand me! Don't think I'm retreating from the things we've done! Our love is the best thing I could ever have had from life. Nothing can ever equal it; nothing could ever equal the beauty and delight you and I have had together. Never! You have loved me; you do love me. . . .

No one could ever know how to love you as I have loved you; no one could ever love me as you have loved me, my king. And it's just because it's been so splendid, dear; it's just because I'd die rather than have a tithe of all this wiped out of my life again--for it's made me, it's all I am--dear, it's years since I began loving

you--it's just because of its goodness that I want not to end in wreckage now, not to end in the smashing up of all the big things I understand in you and love in you. . . .

"What is there for us if we keep on and go away?" she went on. "All the big interests in our lives will vanish--everything. We shall become specialised people--people overshadowed by a situation. We shall be an elopement, a romance--all our breadth and meaning gone! People will always think of it first when they think of us; all our work and aims will be warped by it and subordinated to it. Is it good enough, dear? Just to specialise. . . . I think of you. We've got a case, a passionate case, the best of cases, but do we want to spend all our lives defending it and justifying it? And there's that other life. I know now you care for Margaret--you care more than you think you do. You have said fine things of her. I've watched you about her. Little things have dropped from you. She's given her life for you; she's nothing without you. You feel that to your marrow all the time you are thinking about these things. Oh, I'm not jealous, dear. I love you for loving her. I love you in relation to her. But there it is, an added weight against us, another thing worth saving."

Presently, I remember, she sat back on her heels and looked up into my face. "We've done wrong--and parting's paying. It's time to pay. We needn't have paid, if we'd kept to the track. . . . You and I, Master, we've got to be men."

"Yes," I said; "we've got to be men."

4

I was driven to tell Margaret about our situation by my intolerable

dread that otherwise the thing might come to her through some stupid and clumsy informant. She might even meet Altiora, and have it from her.

I can still recall the feeling of sitting at my desk that night in that large study of mine in Radnor Square, waiting for Margaret to come home. It was oddly like the feeling of a dentist's reception-room; only it was for me to do the dentistry with clumsy, cruel hands. I had left the door open so that she would come in to me.

I heard her silken rustle on the stairs at last, and then she was in the doorway. "May I come in?" she said.

"Do," I said, and turned round to her.

"Working?" she said.

"Hard," I answered. "Where have YOU been?"

"At the Vallerys'. Mr. Evesham was talking about you. They were all talking. I don't think everybody knew who I was. Just Mrs. Mumble I'd been to them. Lord Wardenham doesn't like you."

"He doesn't."

"But they all feel you're rather big, anyhow. Then I went on to Park Lane to hear a new pianist and some other music at Eva's."

"Yes."

"Then I looked in at the Brabants' for some midnight tea before I came on here. They'd got some writers--and Grant was there."

"You HAVE been flying round. . . ."

There was a little pause between us.

I looked at her pretty, unsuspecting face, and at the slender grace of her golden-robed body. What gulfs there were between us!

"You've been amused," I said.

"It's been amusing. You've been at the House?"

"The Medical Education Bill kept me." . . .

After all, why should I tell her? She'd got to a way of living that fulfilled her requirements. Perhaps she'd never hear. But all that day and the day before I'd been making up my mind to do the thing.

"I want to tell you something," I said. "I wish you'd sit down for a moment or so." . . .

Once I had begun, it seemed to me I had to go through with it.

Something in the quality of my voice gave her an intimation of unusual gravity. She looked at me steadily for a moment and sat down slowly in my armchair.

"What is it?" she said.

I went on awkwardly. "I've got to tell you--something extraordinarily distressing," I said.

She was manifestly altogether unaware.

"There seems to be a good deal of scandal abroad--I've only recently heard of it--about myself--and Isabel."

"Isabel!"

I nodded.

"What do they say?" she asked.

It was difficult, I found, to speak.

"They say she's my mistress."

"Oh! How abominable!"

She spoke with the most natural indignation. Our eyes met.

"We've been great friends," I said.

"Yes. And to make THAT of it. My poor dear! But how can they?"
She paused and looked at me. It's so incredible. How can any one believe it? I couldn't."

She stopped, with her distressed eyes regarding me. Her expression changed to dread. There was a tense stillness for a second, perhaps.

I turned my face towards the desk, and took up and dropped a handful of paper fasteners.

"Margaret," I said, " I'm afraid you'll have to believe it."

5

Margaret sat very still. When I looked at her again, her face was very white, and her distressed eyes scrutinised me. Her lips quivered as she spoke. "You really mean--THAT?" she said.

I nodded.

"I never dreamt."

"I never meant you to dream."

"And that is why--we've been apart?"

I thought. "I suppose it is."

"Why have you told me now?"

"Those rumours. I didn't want any one else to tell you."

"Or else it wouldn't have mattered?"

"No."

She turned her eyes from me to the fire. Then for a moment she looked about the room she had made for me, and then quite silently, with a childish quivering of her lips, with a sort of dismayed distress upon her face, she was weeping. She sat weeping in her dress of cloth of gold, with her bare slender arms dropped limp over the arms of her chair, and her eyes averted from me, making no effort to stay or staunch her tears. "I am sorry, Margaret," I said. "I was in love. . . . I did not understand. . . ."

Presently she asked: "What are you going to do?"

"You see, Margaret, now it's come to be your affair--I want to know what you--what you want."

"You want to leave me?"

"If you want me to, I must."

"Leave Parliament--leave all the things you are doing,--all this fine movement of yours?"

"No." I spoke sullenly. "I don't want to leave anything. I want to stay on. I've told you, because I think we--Isabel and I, I mean--have got to drive through a storm of scandal anyhow. I don't know how far things may go, how much people may feel, and I can't, I can't have you unconscious, unarmed, open to any revelation--"

She made no answer.

"When the thing began--I knew it was stupid but I thought it was a thing that wouldn't change, wouldn't be anything but itself, wouldn't unfold--consequences. . . . People have got hold of these vague rumours. . . . Directly it reached any one else but--but us two--I saw it had to come to you."

I stopped. I had that distressful feeling I have always had with Margaret, of not being altogether sure she heard, of being doubtful if she understood. I perceived that once again I had struck at her and shattered a thousand unsubstantial pinnacles. And I couldn't get at her, to help her, or touch her mind! I stood up, and at my movement she moved. She produced a dainty little handkerchief, and made an effort to wipe her face with it, and held it to her eyes.

"Oh, my Husband!" she sobbed.

"What do you mean to do?" she said, with her voice muffled by her handkerchief.

"We're going to end it," I said.

Something gripped me tormentingly as I said that. I drew a chair beside her and sat down. "You and I, Margaret, have been partners,"

I began. "We've built up this life of ours together; I couldn't have done it without you. We've made a position, created a work--"

She shook her head. "You," she said.

"You helping. I don't want to shatter it--if you don't want it shattered. I can't leave my work. I can't leave you. I want you to have--all that you have ever had. I've never meant to rob you. I've made an immense and tragic blunder. You don't know how things took us, how different they seemed! My character and accident have conspired--We'll pay--in ourselves, not in our public service."

I halted again. Margaret remained very still.

"I want you to understand that the thing is at an end. It is definitely at an end. We--we talked--yesterday. We mean to end it altogether." I clenched my hands. "She's--she's going to marry Arnold Shoemith."

I wasn't looking now at Margaret any more, but I heard the rustle of her movement as she turned on me.

"It's all right," I said, clinging to my explanation. "We're doing nothing shabby. He knows. He will. It's all as right--as things can be now. We're not cheating any one, Margaret. We're doing things straight--now. Of course, you know. . . . We shall--we shall have to make sacrifices. Give things up pretty completely. Very completely. . . . We shall have not to see each other for a time, you know. Perhaps not a long time. Two or three years. Or write--or just any of that sort of thing ever--"

Some subconscious barrier gave way in me. I found myself crying uncontrollably--as I have never cried since I was a little child. I was amazed and horrified at myself. And wonderfully, Margaret was on her knees beside me, with her arms about me, mingling her weeping

with mine. "Oh, my Husband!" she cried, my poor Husband! Does it hurt you so? I would do anything! Oh, the fool I am! Dear, I love you. I love you over and away and above all these jealous little things!"

She drew down my head to her as a mother might draw down the head of a son. She caressed me, weeping bitterly with me. "Oh! my dear," she sobbed, "my dear! I've never seen you cry! I've never seen you cry. Ever! I didn't know you could. Oh! my dear! Can't you have her, my dear, if you want her? I can't bear it! Let me help you, dear. Oh! my Husband! My Man! I can't bear to have you cry!" For a time she held me in silence.

"I've thought this might happen, I dreamt it might happen. You two, I mean. It was dreaming put it into my head. When I've seen you together, so glad with each other. . . . Oh! Husband mine, believe me! believe me! I'm stupid, I'm cold, I'm only beginning to realise how stupid and cold, but all I want in all the world is to give my life to you." . . .

6

"We can't part in a room," said Isabel.

"We'll have one last talk together," I said, and planned that we should meet for a half a day between Dover and Walmer and talk ourselves out. I still recall that day very well, recall even the curious exaltation of grief that made our mental atmosphere distinctive and memorable. We had seen so much of one another, had become so intimate, that we talked of parting even as we parted with a sense of incredible remoteness. We went together up over the cliffs, and to a place where they fall towards the sea, past the

white, quaint-lanterned lighthouses of the South Foreland. There, in a kind of niche below the crest, we sat talking. It was a spacious day, serenely blue and warm, and on the wrinkled water remotely below a black tender and six hooded submarines came presently, and engaged in mysterious manoeuvres. Shrieking gulls and chattering jackdaws circled over us and below us, and dived and swooped; and a skerry of weedy, fallen chalk appeared, and gradually disappeared again, as the tide fell and rose.

We talked and thought that afternoon on every aspect of our relations. It seems to me now we talked so wide and far that scarcely an issue in the life between man and woman can arise that we did not at least touch upon. Lying there at Isabel's feet, I have become for myself a symbol of all this world-wide problem between duty and conscious, passionate love the world has still to solve. Because it isn't solved; there's a wrong in it either way. . . . The sky, the wide horizon, seemed to lift us out of ourselves until we were something representative and general. She was womanhood become articulate, talking to her lover.

"I ought," I said, "never to have loved you."

"It wasn't a thing planned," she said.

"I ought never to have let our talk slip to that, never to have turned back from America."

"I'm glad we did it," she said. "Don't think I repent."

I looked at her.

"I will never repent," she said. "Never!" as though she clung to her life in saying it.

I remember we talked for a long time of divorce. It seemed to us

then, and it seems to us still, that it ought to have been possible for Margaret to divorce me, and for me to marry without the scandalous and ugly publicity, the taint and ostracism that follow such a readjustment. We went on to the whole perplexing riddle of marriage. We criticised the current code, how muddled and conventionalised it had become, how modified by subterfuges and concealments and new necessities, and the increasing freedom of women. "It's all like Bromstead when the building came," I said; for I had often talked to her of that early impression of purpose dissolving again into chaotic forces. "There is no clear right in the world any more. The world is Byzantine. The justest man to-day must practise a tainted goodness."

These questions need discussion--a magnificent frankness of discussion--if any standards are again to establish an effective hold upon educated people. Discretions, as I have said already, will never hold any one worth holding--longer than they held us. Against every "shalt not" there must be a "why not" plainly put,--the "why not" largest and plainest, the law deduced from its purpose. "You and I, Isabel," I said, "have always been a little disregardful of duty, partly at least because the idea of duty comes to us so ill-clad. Oh! I know there's an extravagant insubordinate strain in us, but that wasn't all. I wish humbugs would leave duty alone. I wish all duty wasn't covered with slime. That's where the real mischief comes in. Passion can always contrive to clothe itself in beauty, strips itself splendid. That carried us. But for all its mean associations there is this duty. . . ."

"Don't we come rather late to it?"

"Not so late that it won't be atrociously hard to do."

"It's queer to think of now," said Isabel. "Who could believe we did all we have done honestly? Well, in a manner honestly. Who could believe we thought this might be hidden? Who could trace it

all step by step from the time when we found that a certain boldness in our talk was pleasing? We talked of love. . . . Master, there's not much for us to do in the way of Apologia that any one will credit. And yet if it were possible to tell the very heart of our story. . . .

"Does Margaret really want to go on with you?" she asked--"shield you--knowing of . . . THIS?"

"I'm certain. I don't understand--just as I don't understand Shoemith, but she does. These people walk on solid ground which is just thin air to us. They've got something we haven't got. Assurances? I wonder." . . .

Then it was, or later, we talked of Shoemith, and what her life might be with him.

"He's good," she said; "he's kindly. He's everything but magic. He's the very image of the decent, sober, honourable life. You can't say a thing against him or I--except that something--something in his imagination, something in the tone of his voice--fails for me. Why don't I love him?--he's a better man than you! Why don't you? IS he a better man than you? He's usage, he's honour, he's the right thing, he's the breed and the tradition,--a gentleman. You're your erring, incalculable self. I suppose we women will trust this sort and love your sort to the very end of time. . . ."

We lay side by side and nibbled at grass stalks as we talked. It seemed enormously unreasonable to us that two people who had come to the pitch of easy and confident affection and happiness that held between us should be obliged to part and shun one another, or murder half the substance of their lives. We felt ourselves crushed and beaten by an indiscriminating machine which destroys happiness in the service of jealousy. "The mass of people don't feel these things in quite the same manner as we feel them," she said. "Is it

because they're different in grain, or educated out of some primitive instinct?"

"It's because we've explored love a little, and they know no more than the gateway," I said. "Lust and then jealousy; their simple conception--and we have gone past all that and wandered hand in hand. . . ."

I remember that for a time we watched two of that larger sort of gull, whose wings are brownish-white, circle and hover against the blue. And then we lay and looked at a band of water mirror clear far out to sea, and wondered why the breeze that rippled all the rest should leave it so serene.

"And in this State of ours," I resumed.

"Eh!" said Isabel, rolling over into a sitting posture and looking out at the horizon. "Let's talk no more of things we can never see. Talk to me of the work you are doing and all we shall do--after we have parted. We've said too little of that. We've had our red life, and it's over. Thank Heaven!--though we stole it! Talk about your work, dear, and the things we'll go on doing--just as though we were still together. We'll still be together in a sense--through all these things we have in common."

And so we talked of politics and our outlook. We were interested to the pitch of self-forgetfulness. We weighed persons and forces, discussed the probabilities of the next general election, the steady drift of public opinion in the north and west away from Liberalism towards us. It was very manifest that in spite of Wardenham and the EXPURGATOR, we should come into the new Government strongly. The party had no one else, all the young men were formally or informally with us; Esmeer would have office, Lord Tarville, I . . . and very probably there would be something for Shoemith. "And for my own part," I said, "I count on backing on the Liberal side. For the

last two years we've been forcing competition in constructive legislation between the parties. The Liberals have not been long in following up our Endowment of Motherhood lead. They'll have to give votes and lip service anyhow. Half the readers of the BLUE WEEKLY, they say, are Liberals. . . .

"I remember talking about things of this sort with old Willersley," I said, "ever so many years ago. It was some place near Locarno, and we looked down the lake that shone weltering--just as now we look over the sea. And then we dreamt in an indistinct featureless way of all that you and I are doing now."

"I!" said Isabel, and laughed.

"Well, of some such thing," I said, and remained for awhile silent, thinking of Locarno.

I recalled once more the largeness, the release from small personal things that I had felt in my youth; statecraft became real and wonderful again with the memory, the gigantic handling of gigantic problems. I began to talk out my thoughts, sitting up beside her, as I could never talk of them to any one but Isabel; began to recover again the purpose that lay under all my political ambitions and adjustments and anticipations. I saw the State, splendid and wide as I had seen it in that first travel of mine, but now it was no mere distant prospect of spires and pinnacles, but populous with fine-trained, bold-thinking, bold-doing people. It was as if I had forgotten for a long time and now remembered with amazement.

At first, I told her, I had been altogether at a loss how I could do anything to battle against the aimless muddle of our world; I had wanted a clue--until she had come into my life questioning, suggesting, unconsciously illuminating. "But I have done nothing," she protested. I declared she had done everything in growing to education under my eyes, in reflecting again upon all the processes

that had made myself, so that instead of abstractions and blue-books and bills and devices, I had realised the world of mankind as a crowd needing before all things fine women and men. We'd spoilt ourselves in learning that, but anyhow we had our lesson. Before her I was in a nineteenth-century darkness, dealing with the nation as if it were a crowd of selfish men, forgetful of women and children and that shy wild thing in the hearts of men, love, which must be drawn upon as it has never been drawn upon before, if the State is to live. I saw now how it is possible to bring the loose factors of a great realm together, to create a mind of literature and thought in it, and the expression of a purpose to make it self-conscious and fine. I had it all clear before me, so that at a score of points I could presently begin. The BLUE WEEKLY was a centre of force. Already we had given Imperialism a criticism, and leavened half the press from our columns. Our movement consolidated and spread. We should presently come into power. Everything moved towards our hands. We should be able to get at the schools, the services, the universities, the church; enormously increase the endowment of research, and organise what was sorely wanted, a criticism of research; contrive a closer contact between the press and creative intellectual life; foster literature, clarify, strengthen the public consciousness, develop social organisation and a sense of the State. Men were coming to us every day, brilliant young peers like Lord Dentonhill, writers like Carnot and Cresswell. It filled me with pride to win such men. "We stand for so much more than we seem to stand for," I said. I opened my heart to her, so freely that I hesitate to open my heart even to the reader, telling of projects and ambitions I cherished, of my consciousness of great powers and widening opportunities. . . .

Isabel watched me as I talked.

She too, I think, had forgotten these things for a while. For it is curious and I think a very significant thing that since we had become lovers, we had talked very little of the broader things that

had once so strongly gripped our imaginations.

"It's good," I said, "to talk like this to you, to get back to youth and great ambitions with you. There have been times lately when politics has seemed the pettiest game played with mean tools for mean ends--and none the less so that the happiness of three hundred million people might be touched by our follies. I talk to no one else like this. . . . And now I think of parting, I think but of how much more I might have talked to you." . . .

Things drew to an end at last, but after we had spoken of a thousand things.

"We've talked away our last half day," I said, staring over my shoulder at the blazing sunset sky behind us. "Dear, it's been the last day of our lives for us. . . . It doesn't seem like the last day of our lives. Or any day."

"I wonder how it will feel?" said Isabel.

"It will be very strange at first--not to be able to tell you things."

"I've a superstition that after--after we've parted--if ever I go into my room and talk, you'll hear. You'll be--somewhere."

"I shall be in the world--yes."

"I don't feel as though these days ahead were real. Here we are, here we remain."

"Yes, I feel that. As though you and I were two immortals, who didn't live in time and space at all, who never met, who couldn't part, and here we lie on Olympus. And those two poor creatures who did meet, poor little Richard Remington and Isabel Rivers, who met

and loved too much and had to part, they part and go their ways, and we lie here and watch them, you and I. She'll cry, poor dear."

"She'll cry. She's crying now!"

"Poor little beasts! I think he'll cry too. He winces. He could-- for tuppence. I didn't know he had lachrymal glands at all until a little while ago. I suppose all love is hysterical--and a little foolish. Poor mites! Silly little pitiful creatures! How we have blundered! Think how we must look to God! Well, we'll pity them, and then we'll inspire him to stiffen up again--and do as we've determined he shall do. We'll see it through,--we who lie here on the cliff. They'll be mean at times, and horrid at times; we know them! Do you see her, a poor little fine lady in a great house,-- she sometimes goes to her room and writes."

"She writes for his BLUE WEEKLY still."

"Yes. Sometimes--I hope. And he's there in the office with a bit of her copy in his hand."

"Is it as good as if she still talked it over with him before she wrote it? Is it?"

"Better, I think. Let's play it's better--anyhow. It may be that talking over was rather mixed with love-making. After all, love-making is joy rather than magic. Don't let's pretend about that even. . . . Let's go on watching him. (I don't see why her writing shouldn't be better. Indeed I don't.) See! There he goes down along the Embankment to Westminster just like a real man, for all that he's smaller than a grain of dust. What is running round inside that speck of a head of his? Look at him going past the Policemen, specks too--selected large ones from the country. I think he's going to dinner with the Speaker--some old thing like that. Is his face harder or commoner or stronger?--I can't quite

see. . . . And now he's up and speaking in the House. Hope he'll hold on to the thread. He'll have to plan his speeches to the very end of his days--and learn the headings."

"Isn't she up in the women's gallery to hear him?"

"No. Unless it's by accident."

"She's there," she said.

"Well, by accident it happens. Not too many accidents, Isabel. Never any more adventures for us, dear, now. No! . . . They play the game, you know. They've begun late, but now they've got to. You see it's not so very hard for them since you and I, my dear, are here always, always faithfully here on this warm cliff of love accomplished, watching and helping them under high heaven. It isn't so VERY hard. Rather good in some ways. Some people HAVE to be broken a little. Can you see Altiora down there, by any chance?"

"She's too little to be seen," she said.

"Can you see the sins they once committed?"

"I can only see you here beside me, dear--for ever. For all my life, dear, till I die. Was that--the sin?" . . .

I took her to the station, and after she had gone I was to drive to Dover, and cross to Calais by the night boat. I couldn't, I felt, return to London. We walked over the crest and down to the little station of Martin Mill side by side, talking at first in broken fragments, for the most part of unimportant things.

"None of this," she said abruptly, "seems in the slightest degree real to me. I've got no sense of things ending."

"We're parting," I said.

"We're parting--as people part in a play. It's distressing. But I don't feel as though you and I were really never to see each other again for years. Do you?"

I thought. "No," I said.

"After we've parted I shall look to talk it over with you."

"So shall I."

"That's absurd."

"Absurd."

"I feel as if you'd always be there, just about where you are now. Invisible perhaps, but there. We've spent so much of our lives juggling elbows." . . .

"Yes. Yes. I don't in the least realise it. I suppose I shall begin to when the train goes out of the station. Are we wanting in imagination, Isabel?"

"I don't know. We've always assumed it was the other way about."

"Even when the train goes out of the station--! I've seen you into so many trains."

"I shall go on thinking of things to say to you--things to put in your letters. For years to come. How can I ever stop thinking in that way now? We've got into each other's brains."

"It isn't real," I said; "nothing is real. The world's no more than a fantastic dream. Why are we parting, Isabel?"

"I don't know. It seems now supremely silly. I suppose we have to. Can't we meet?--don't you think we shall meet even in dreams?"

"We'll meet a thousand times in dreams," I said.

"I wish we could dream at the same time," said Isabel. . . . "Dream walks. I can't believe, dear, I shall never have a walk with you again."

"If I'd stayed six months in America," I said, "we might have walked long walks and talked long talks for all our lives."

"Not in a world of Baileys," said Isabel. "And anyhow--"

She stopped short. I looked interrogation.

"We've loved," she said.

I took her ticket, saw to her luggage, and stood by the door of the compartment. "Good-bye," I said a little stiffly, conscious of the people upon the platform. She bent above me, white and dusky, looking at me very steadfastly.

"Come here," she whispered. "Never mind the porters. What can they know? Just one time more--I must."

She rested her hand against the door of the carriage and bent down upon me, and put her cold, moist lips to mine.

CHAPTER THE THIRD

THE BREAKING POINT

1

And then we broke down. We broke our faith with both Margaret and Shoesmith, flung career and duty out of our lives, and went away together.

It is only now, almost a year after these events, that I can begin to see what happened to me. At the time it seemed to me I was a rational, responsible creature, but indeed I had not parted from her two days before I became a monomaniac to whom nothing could matter but Isabel. Every truth had to be squared to that obsession, every duty. It astounds me to think how I forgot Margaret, forgot my work, forgot everything but that we two were parted. I still believe that with better chances we might have escaped the consequences of the emotional storm that presently seized us both. But we had no foresight of that, and no preparation for it, and our circumstances betrayed us. It was partly Shoesmith's unwisdom in delaying his marriage until after the end of the session--partly my own amazing folly in returning within four days to Westminster. But we were all of us intent upon the defeat of scandal and the complete restoration of appearances. It seemed necessary that Shoesmith's marriage should not seem to be hurried, still more necessary that I should not vanish inexplicably. I had to be visible with Margaret in London just as much as possible; we went to restaurants, we visited the theatre; we could even contemplate the possibility of my presence at the wedding. For that, however, we had schemed a weekend visit to Wales, and a fictitious sprained ankle at the last moment which would justify my absence. . . .

I cannot convey to you the intolerable wretchedness and rebellion of my separation from Isabel. It seemed that in the past two years all my thoughts had spun commisures to Isabel's brain and I could think of nothing that did not lead me surely to the need of the one intimate I had found in the world. I came back to the House and the office and my home, I filled all my days with appointments and duty, and it did not save me in the least from a lonely emptiness such as I had never felt before in all my life. I had little sleep. In the daytime I did a hundred things, I even spoke in the House on two occasions, and by my own low standards spoke well, and it seemed to me that I was going about in my own brain like a hushed survivor in a house whose owner lies dead upstairs.

I came to a crisis after that wild dinner of Tarvrille's. Something in that stripped my soul bare.

It was an occasion made absurd and strange by the odd accident that the house caught fire upstairs while we were dining below. It was a men's dinner--" A dinner of all sorts," said Tarvrille, when he invited me; "everything from Evesham and Gane to Wilkins the author, and Heaven knows what will happen!" I remember that afterwards Tarvrille was accused of having planned the fire to make his dinner a marvel and a memory. It was indeed a wonderful occasion, and I suppose if I had not been altogether drenched in misery, I should have found the same wild amusement in it that glowed in all the others. There were one or two university dons, Lord George Fester, the racing man, Panmure, the artist, two or three big City men, Weston Massinghay and another prominent Liberal whose name I can't remember, the three men Tarvrille had promised and Esmeer, Lord Wrassleton, Waulsort, the member for Monckton, Neal and several others. We began a little coldly, with duologues, but the conversation was already becoming general--so far as such a long table permitted--when the fire asserted itself.

It asserted itself first as a penetrating and emphatic smell of burning rubber,--it was caused by the fusing of an electric wire. The reek forced its way into the discussion of the Peking massacres that had sprung up between Evesham, Waulsort, and the others at the end of the table. "Something burning," said the man next to me.

"Something must be burning," said Panmure.

Tarville hated undignified interruptions. He had a particularly imperturbable butler with a cadaverous sad face and an eye of rigid disapproval. He spoke to this individual over his shoulder. "Just see, will you," he said, and caught up the pause in the talk to his left.

Wilkins was asking questions, and I, too, was curious. The story of the siege of the Legations in China in the year 1900 and all that followed upon that, is just one of those disturbing interludes in history that refuse to join on to that general scheme of protestation by which civilisation is maintained. It is a break in the general flow of experience as disconcerting to statecraft as the robbery of my knife and the scuffle that followed it had been to me when I was a boy at Penge. It is like a tear in a curtain revealing quite unexpected backgrounds. I had never given the business a thought for years; now this talk brought back a string of pictures to my mind; how the reliefs arrived and the plundering began, how section after section of the International Army was drawn into murder and pillage, how the infection spread upward until the wives of Ministers were busy looting, and the very sentinels stripped and crawled like snakes into the Palace they were set to guard. It did not stop at robbery, men were murdered, women, being plundered, were outraged, children were butchered, strong men had found themselves with arms in a lawless, defenceless city, and this had followed. Now it was all recalled.

"Respectable ladies addicted to district visiting at home were as

bad as any one," said Panmure. "Glazebrook told me of one--flushed like a woman at a bargain sale, he said--and when he pointed out to her that the silk she'd got was bloodstained, she just said, 'Oh, bother!' and threw it aside and went back. . . ."

We became aware that Tarvrille's butler had returned. We tried not to seem to listen.

"Beg pardon, m'lord," he said. "The house IS on fire, m'lord."

"Upstairs, m'lord."

"Just overhead, m'lord."

"The maids are throwing water, m'lord, and I've telephoned FIRE."

"No, m'lord, no immediate danger."

"It's all right," said Tarvrille to the table generally. Go on! It's not a general conflagration, and the fire brigade won't be five minutes. Don't see that it's our affair. The stuff's insured. They say old Lady Paskershortly was dreadful. Like a harpy. The Dowager Empress had shown her some little things of hers. Pet things--hidden away. Susan went straight for them--used to take an umbrella for the silks. Born shoplifter."

It was evident he didn't want his dinner spoilt, and we played up loyally.

"This is recorded history," said Wilkins,--" practically. It makes one wonder about unrecorded history. In India, for example."

But nobody touched that.

"Thompson," said Tarvrille to the imperturbable butler, and

indicating the table generally, "champagne. Champagne. Keep it going."

"M'lord," and Thompson marshalled his assistants.

Some man I didn't know began to remember things about Mandalay. "It's queer," he said, "how people break out at times;" and told his story of an army doctor, brave, public-spirited, and, as it happened, deeply religious, who was caught one evening by the excitement of plundering--and stole and hid, twisted the wrist of a boy until it broke, and was afterwards overcome by wild remorse.

I watched Evesham listening intently. "Strange," he said, "very strange. We are such stuff as thieves are made of. And in China, too, they murdered people--for the sake of murdering. Apart, so to speak, from mercenary considerations. I'm afraid there's no doubt of it in certain cases. No doubt at all. Young soldiers fresh from German high schools and English homes!"

"Did OUR people?" asked some patriot.

"Not so much. But I'm afraid there were cases. . . . Some of the Indian troops were pretty bad."

Gane picked up the tale with confirmations.

It is all printed in the vividest way as a picture upon my memory, so that were I a painter I think I could give the deep rich browns and warm greys beyond the brightly lit table, the various distinguished faces, strongly illuminated, interested and keen, above the black and white of evening dress, the alert menservants with their heavier, clean-shaved faces indistinctly seen in the dimness behind. Then this was coloured emotionally for me by my aching sense of loss and sacrifice, and by the chance trend of our talk to the breaches and unrealities of the civilised scheme. We

seemed a little transitory circle of light in a universe of darkness and violence; an effect to which the diminishing smell of burning rubber, the trampling of feet overhead, the swish of water, added enormously. Everybody--unless, perhaps, it was Evesham--drank rather carelessly because of the suppressed excitement of our situation, and talked the louder and more freely.

"But what a flimsy thing our civilisation is!" said Evesham; "a mere thin net of habits and associations!"

"I suppose those men came back," said Wilkins.

"Lady Paskershortly did!" chuckled Evesham.

"How do they fit it in with the rest of their lives?" Wilkins speculated. "I suppose there's Pekin-stained police officers, Pekin-stained J. P.'s--trying petty pilferers in the severest manner." . . .

Then for a time things became preposterous. There was a sudden cascade of water by the fireplace, and then absurdly the ceiling began to rain upon us, first at this point and then that. "My new suit!" cried some one. "Perrrrrr-up pe-rr"--a new vertical line of blackened water would establish itself and form a spreading pool upon the gleaming cloth. The men nearest would arrange catchment areas of plates and flower bowls. "Draw up!" said Tarvrille, "draw up. That's the bad end of the table!" He turned to the imperturbable butler. "Take round bath towels," he said; and presently the men behind us were offering--with inflexible dignity--"Port wine, Sir. Bath towel, Sir!" Waulsort, with streaks of blackened water on his forehead, was suddenly reminded of a wet year when he had followed the French army manoeuvres. An animated dispute sprang up between him and Neal about the relative efficiency of the new French and German field guns. Wrassleton joined in and a little drunken shrivelled Oxford don of some sort with a black-

splashed shirt front who presently silenced them all by the immensity and particularity of his knowledge of field artillery. Then the talk drifted to Sedan and the effect of dead horses upon drinking-water, which brought Wrassleton and Weston Massinghay into a dispute of great vigour and emphasis. "The trouble in South Africa," said Weston Massinghay, "wasn't that we didn't boil our water. It was that we didn't boil our men. The Boers drank the same stuff we did. THEY didn't get dysentery."

That argument went on for some time. I was attacked across the table by a man named Burshort about my Endowment of Motherhood schemes, but in the gaps of that debate I could still hear Weston Massinghay at intervals repeat in a rather thickened voice: "THEY didn't get dysentery."

I think Evesham went early. The rest of us clustered more and more closely towards the drier end of the room, the table was pushed along, and the area beneath the extinguished conflagration abandoned to a tinkling, splashing company of pots and pans and bowls and baths. Everybody was now disposed to be hilarious and noisy, to say startling and aggressive things; we must have sounded a queer clamour to a listener in the next room. The devil inspired them to begin baiting me. "Ours isn't the Tory party any more," said Burshort. "Remington has made it the Obstetric Party."

"That's good!" said Weston Massinghay, with all his teeth gleaming; "I shall use that against you in the House!"

"I shall denounce you for abusing private confidences if you do," said Tarvrille.

"Remington wants us to give up launching Dreadnoughts and launch babies instead," Burshort urged. "For the price of one Dreadnought--"

The little shrivelled don who had been omniscient about guns joined

in the baiting, and displayed himself a venomous creature. Something in his eyes told me he knew Isabel and hated me for it. "Love and fine thinking," he began, a little thickly, and knocking over a wine-glass with a too easy gesture. "Love and fine thinking. Two things don't go together. No philosophy worth a damn ever came out of excesses of love. Salt Lake City--Piggott--Ag--Agapemone again--no works to matter."

Everybody laughed.

"Got to rec'nise these facts," said my assailant. "Love and fine think'n pretty phrase--attractive. Suitable for p'litical dec'rations. Postcard, Christmas, gilt lets, in a wreath of white flow's. Not oth'wise valu'ble."

I made some remark, I forget what, but he overbore me.

Real things we want are Hate--Hate and COARSE think'n. I b'long to the school of Mrs. F's Aunt--"

"What?" said some one, intent.

"In 'Little Dorrit,'" explained Tarvrille; "go on!"

"Hate a fool," said my assailant.

Tarvrille glanced at me. I smiled to conceal the loss of my temper.

"Hate," said the little man, emphasising his point with a clumsy fist. "Hate's the driving force. What's m'rality?--hate of rotten goings on. What's patriotism?--hate of int'loping foreigners. What's Radicalism?--hate of lords. What's Toryism?--hate of disturbance. It's all hate--hate from top to bottom. Hate of a mess. Remington owned it the other day, said he hated a mu'll. There you are! If you couldn't get hate into an election, damn it

(hic) people wou'n't poll. Poll for love!--no' me!"

He paused, but before any one could speak he had resumed.

"Then this about fine thinking. Like going into a bear pit armed with a tagle--talgent--talgent galv'nometer. Like going to fight a mad dog with Shasepear and the Bible. Fine thinking--what we want is the thickest thinking we can get. Thinking that stands up alone. Taf Reform means work for all, thassort of thing."

The gentleman from Cambridge paused. "YOU a flag!" he said. "I'd as soon go to ba'ell und' wet tissue paper!"

My best answer on the spur of the moment was:

"The Japanese did." Which was absurd.

I went on to some other reply, I forget exactly what, and the talk of the whole table drew round me. It was an extraordinary revelation to me. Every one was unusually careless and outspoken, and it was amazing how manifestly they echoed the feeling of this old Tory spokesman. They were quite friendly to me, they regarded me and the BLUE WEEKLY as valuable party assets for Toryism, but it was clear they attached no more importance to what were my realities than they did to the remarkable therapeutic claims of Mrs. Eddy. They were flushed and amused, perhaps they went a little too far in their resolves to draw me, but they left the impression on my mind of men irrevocably set upon narrow and cynical views of political life. For them the political struggle was a game, whose counters were human hate and human credulity; their real aim was just every one's aim, the preservation of the class and way of living to which their lives were attuned. They did not know how tired I was, how exhausted mentally and morally, nor how cruel their convergent attack on me chanced to be. But my temper gave way, I became tart and fierce, perhaps my replies were a trifle absurd, and Tarville,

with that quick eye and sympathy of his, came to the rescue. Then for a time I sat silent and drank port wine while the others talked. The disorder of the room, the still dripping ceiling, the noise, the displaced ties and crumpled shirts of my companions, jarred on my tormented nerves. . . .

It was long past midnight when we dispersed. I remember Tarville coming with me into the hall, and then suggesting we should go upstairs to see the damage. A manservant carried up two flickering candles for us. One end of the room was gutted, curtains, hangings, several chairs and tables were completely burnt, the panelling was scorched and warped, three smashed windows made the candles flare and gutter, and some scraps of broken china still lay on the puddled floor.

As we surveyed this, Lady Tarville appeared, back from some party, a slender, white-cloaked, satin-footed figure with amazed blue eyes beneath her golden hair. I remember how stupidly we laughed at her surprise.

2

I parted from Panmure at the corner of Aldington Street, and went my way alone. But I did not go home, I turned westward and walked for a long way, and then struck northward aimlessly. I was too miserable to go to my house.

I wandered about that night like a man who has discovered his Gods are dead. I can look back now detached yet sympathetic upon that wild confusion of moods and impulses, and by it I think I can understand, oh! half the wrongdoing and blundering in the world.

I do not feel now the logical force of the process that must have convinced me then that I had made my sacrifice and spent my strength in vain. At no time had I been under any illusion that the Tory party had higher ideals than any other party, yet it came to me like a thing newly discovered that the men I had to work with had for the most part no such dreams, no sense of any collective purpose, no atom of the faith I held. They were just as immediately intent upon personal ends, just as limited by habits of thought, as the men in any other group or party. Perhaps I had slipped unawares for a time into the delusions of a party man--but I do not think so.

No, it was the mood of profound despondency that had followed upon the abrupt cessation of my familiar intercourse with Isabel, that gave this fact that had always been present in my mind its quality of devastating revelation. It seemed as though I had never seen before nor suspected the stupendous gap between the chaotic aims, the routine, the conventional acquiescences, the vulgarisations of the personal life, and that clearly conscious development and service of a collective thought and purpose at which my efforts aimed. I had thought them but a little way apart, and now I saw they were separated by all the distance between earth and heaven. I saw now in myself and every one around me, a concentration upon interests close at hand, an inability to detach oneself from the provocations, tenderesses, instinctive hates, dumb lusts and shy timidities that touched one at every point; and, save for rare exalted moments, a regardlessness of broader aims and remoter possibilities that made the white passion of statecraft seem as unearthly and irrelevant to human life as the story an astronomer will tell, half proven but altogether incredible, of habitable planets and answering intelligences, suns' distances uncounted across the deep. It seemed to me I had aspired too high and thought too far, had mocked my own littleness by presumption, had given the uttermost dear reality of life for a theoriser's dream.

All through that wandering agony of mine that night a dozen threads

of thought interwove; now I was a soul speaking in protest to God against a task too cold and high for it, and now I was an angry man, scorned and pointed upon, who had let life cheat him of the ultimate pride of his soul. Now I was the fool of ambition, who opened his box of gold to find blank emptiness, and now I was a spinner of flimsy thoughts, whose web tore to rags at a touch. I realised for the first time how much I had come to depend upon the mind and faith of Isabel, how she had confirmed me and sustained me, how little strength I had to go on with our purposes now that she had vanished from my life. She had been the incarnation of those great abstractions, the saving reality, the voice that answered back. There was no support that night in the things that had been. We were alone together on the cliff for ever more!--that was very pretty in its way, but it had no truth whatever that could help me now, no ounce of sustaining value. I wanted Isabel that night, no sentiment or memory of her, but Isabel alive,--to talk to me, to touch me, to hold me together. I wanted unendurably the dusky gentleness of her presence, the consolation of her voice.

We were alone together on the cliff! I startled a passing cabman into interest by laughing aloud at that magnificent and characteristic sentimentality. What a lie it was, and how satisfying it had been! That was just where we shouldn't remain. We of all people had no distinction from that humanity whose lot is to forget. We should go out to other interests, new experiences, new demands. That tall and intricate fabric of ambitious understandings we had built up together in our intimacy would be the first to go; and last perhaps to endure with us would be a few gross memories of sights and sounds, and trivial incidental excitements. . . .

I had a curious feeling that night that I had lost touch with life for a long time, and had now been reminded of its quality. That infernal little don's parody of my ruling phrase, "Hate and coarse thinking," stuck in my thoughts like a poisoned dart, a centre of inflammation. Just as a man who is debilitated has no longer the

vitality to resist an infection, so my mind, slackened by the crisis of my separation from Isabel, could find no resistance to his emphatic suggestion. It seemed to me that what he had said was overpoweringly true, not only of contemporary life, but of all possible human life. Love is the rare thing, the treasured thing; you lock it away jealously and watch, and well you may; hate and aggression and force keep the streets and rule the world. And fine thinking is, in the rough issues of life, weak thinking, is a balancing indecisive process, discovers with disloyal impartiality a justice and a defect on each disputing side. "Good honest men," as Dayton calls them, rule the world, with a way of thinking out decisions like shooting cartloads of bricks, and with a steadfast pleasure in hostility. Dayton liked to call his antagonists "blaggards and scoundrels"--it justified his opposition--the Lords were "scoundrels," all people richer than he were "scoundrels," all Socialists, all troublesome poor people; he liked to think of jails and justice being done. His public spirit was saturated with the sombre joys of conflict and the pleasant thought of condign punishment for all recalcitrant souls. That was the way of it, I perceived. That had survival value, as the biologists say. He was fool enough in politics to be a consistent and happy politician. . . .

Hate and coarse thinking; how the infernal truth of the phrase beat me down that night! I couldn't remember that I had known this all along, and that it did not really matter in the slightest degree. I had worked it all out long ago in other terms, when I had seen how all parties stood for interests inevitably, and how the purpose in life achieves itself, if it achieves itself at all, as a by-product of the war of individuals and classes. Hadn't I always known that science and philosophy elaborate themselves in spite of all the passion and narrowness of men, in spite of the vanities and weakness of their servants, in spite of all the heated disorder of contemporary things? Wasn't it my own phrase to speak of "that greater mind in men, in which we are but moments and transitorily lit cells?" Hadn't I known that the spirit of man still speaks like

a thing that struggles out of mud and slime, and that the mere effort to speak means choking and disaster? Hadn't I known that we who think without fear and speak without discretion will not come to our own for the next two thousand years?

It was the last was most forgotten of all that faith mislaid. Before mankind, in my vision that night, stretched new centuries of confusion, vast stupid wars, hastily conceived laws, foolish temporary triumphs of order, lapses, set-backs, despairs, catastrophes, new beginnings, a multitudinous wilderness of time, a night plotless drama of wrong-headed energies. In order to assuage my parting from Isabel we had set ourselves to imagine great rewards for our separation, great personal rewards; we had promised ourselves success visible and shining in our lives. To console ourselves in our separation we had made out of the BLUE WEEKLY and our young Tory movement preposterously enormous things-as though those poor fertilising touches at the soil were indeed the germinating seeds of the millennium, as though a million lives such as ours had not to contribute before the beginning of the beginning. That poor pretence had failed. That magnificent proposition shrivelled to nothing in the black loneliness of that night.

I saw that there were to be no such compensations. So far as my real services to mankind were concerned I had to live an unrecognised and unrewarded life. If I made successes it would be by the way. Our separation would alter nothing of that. My scandal would cling to me now for all my life, a thing affecting relationships, embarrassing and hampering my spirit. I should follow the common lot of those who live by the imagination, and follow it now in infinite loneliness of soul; the one good comforter, the one effectual familiar, was lost to me for ever; I should do good and evil together, no one caring to understand; I should produce much weary work, much bad-spirited work, much absolute evil; the good in me would be too often ill-expressed and missed or misinterpreted. In the end I might leave one gleaming

flake or so amidst the slag heaps for a moment of postmortem sympathy. I was afraid beyond measure of my derelict self. Because I believed with all my soul in love and fine thinking that did not mean that I should necessarily either love steadfastly or think finely. I remember how I fell talking to God--I think I talked out loud. "Why do I care for these things?" I cried, "when I can do so little! Why am I apart from the jolly thoughtless fighting life of men? These dreams fade to nothingness, and leave me bare!"

I scolded. "Why don't you speak to a man, show yourself? I thought I had a gleam of you in Isabel,--and then you take her away. Do you really think I can carry on this game alone, doing your work in darkness and silence, living in muddled conflict, half living, half dying?"

Grotesque analogies arose in my mind. I discovered a strange parallelism between my now tattered phrase of "Love and fine thinking" and the "Love and the Word" of Christian thought. Was it possible the Christian propaganda had at the outset meant just that system of attitudes I had been feeling my way towards from the very beginning of my life? Had I spent a lifetime making my way back to Christ? It mocks humanity to think how Christ has been overlaid. I went along now, recalling long-neglected phrases and sentences; I had a new vision of that great central figure preaching love with hate and coarse thinking even in the disciples about Him, rising to a tidal wave at last in that clamour for Barabbas, and the public satisfaction in His fate. . . .

It's curious to think that hopeless love and a noisy disordered dinner should lead a man to these speculations, but they did. "He DID mean that!" I said, and suddenly thought of what a bludgeon they'd made of His Christianity. Athwart that perplexing, patient enigma sitting inaudibly among publicans and sinners, danced and gibbered a long procession of the champions of orthodoxy. "He wasn't human," I said, and remembered that last despairing cry, "My

God! My God! why hast Thou forsaken Me?"

"Oh, HE forsakes every one," I said, flying out as a tired mind will, with an obvious repartee. . . .

I passed at a bound from such monstrous theology to a towering rage against the Baileys. In an instant and with no sense of absurdity I wanted--in the intervals of love and fine thinking--to fling about that strenuously virtuous couple; I wanted to kick Keyhole of the PEEPSHOW into the gutter and make a common massacre of all the prosperous rascaldom that makes a trade and rule of virtue. I can still feel that transition. In a moment I had reached that phase of weakly decisive anger which is for people of my temperament the concomitant of exhaustion.

"I will have her," I cried. "By Heaven! I WILL have her! Life mocks me and cheats me. Nothing can be made good to me again. . . . Why shouldn't I save what I can? I can't save myself without her. . . ."

I remember myself--as a sort of anti-climax to that--rather tediously asking my way home. I was somewhere in the neighbourhood of Holland Park. . . .

It was then between one and two. I felt that I could go home now without any risk of meeting Margaret. It had been the thought of returning to Margaret that had sent me wandering that night. It is one of the ugliest facts I recall about that time of crisis, the intense aversion I felt for Margaret. No sense of her goodness, her injury and nobility, and the enormous generosity of her forgiveness, sufficed to mitigate that. I hope now that in this book I am able to give something of her silvery splendour, but all through this crisis I felt nothing of that. There was a triumphant kindness about her that I found intolerable. She meant to be so kind to me, to offer unstinted consolation, to meet my needs, to supply just all

she imagined Isabel had given me.

When I left Tarville's, I felt I could anticipate exactly how she would meet my homecoming. She would be perplexed by my crumpled shirt front, on which I had spilt some drops of wine; she would overlook that by an effort, explain it sentimentally, resolve it should make no difference to her. She would want to know who had been present, what we had talked about, show the alertest interest in whatever it was--it didn't matter what. . . . No, I couldn't face her.

So I did not reach my study until two o'clock.

There, I remember, stood the new and very beautiful old silver candlesticks that she had set there two days since to please me--the foolish kindness of it! But in her search for expression, Margaret heaped presents upon me. She had fitted these candlesticks with electric lights, and I must, I suppose, have lit them to write my note to Isabel. "Give me a word--the world aches without you," was all I scrawled, though I fully meant that she should come to me. I knew, though I ought not to have known, that now she had left her flat, she was with the Balfes--she was to have been married from the Balfes--and I sent my letter there. And I went out into the silent square and posted the note forthwith, because I knew quite clearly that if I left it until morning I should never post it at all.

3

I had a curious revulsion of feeling that morning of our meeting. (Of all places for such a clandestine encounter she had chosen the bridge opposite Buckingham Palace.) Overnight I had been full of self pity, and eager for the comfort of Isabel's presence. But the

ill-written scrawl in which she had replied had been full of the suggestion of her own weakness and misery. And when I saw her, my own selfish sorrows were altogether swept away by a wave of pitiful tenderness. Something had happened to her that I did not understand. She was manifestly ill. She came towards me wearily, she who had always borne herself so bravely; her shoulders seemed bent, and her eyes were tired, and her face white and drawn. All my life has been a narrow self-centred life; no brothers, no sisters or children or weak things had ever yet made any intimate appeal to me, and suddenly--I verily believe for the first time in my life!--I felt a great passion of protective ownership; I felt that here was something that I could die to shelter, something that meant more than joy or pride or splendid ambitions or splendid creation to me, a new kind of hold upon me, a new power in the world. Some sealed fountain was opened in my breast. I knew that I could love Isabel broken, Isabel beaten, Isabel ugly and in pain, more than I could love any sweet or delightful or glorious thing in life. I didn't care any more for anything in the world but Isabel, and that I should protect her. I trembled as I came near her, and could scarcely speak to her for the emotion that filled me. . . .

"I had your letter," I said.

"I had yours."

"Where can we talk?"

I remember my lame sentences. "We'll have a boat. That's best here."

I took her to the little boat-house, and there we hired a boat, and I rowed in silence under the bridge and into the shade of a tree. The square grey stone masses of the Foreign Office loomed through the twigs, I remember, and a little space of grass separated us from the pathway and the scrutiny of passers-by. And there we talked.

"I had to write to you," I said.

"I had to come."

"When are you to be married?"

"Thursday week."

"Well?" I said. "But--can we?"

She leant forward and scrutinised my face with eyes wide open.
"What do you mean?" she said at last in a whisper.

"Can we stand it? After all?"

I looked at her white face. "Can you?" I said.

She whispered. "Your career?"

Then suddenly her face was contorted,--she wept silently, exactly as
a child tormented beyond endurance might suddenly weep. . . .

"Oh! I don't care," I cried, "now. I don't care. Damn the whole
system of things! Damn all this patching of the irrevocable! I
want to take care of you, Isabel! and have you with me."

"I can't stand it," she blubbered.

"You needn't stand it. I thought it was best for you. . . . I
thought indeed it was best for you. I thought even you wanted it
like that."

"Couldn't I live alone--as I meant to do?"

"No," I said, "you couldn't. You're not strong enough. I've thought of that; I've got to shelter you."

"And I want you," I went on. "I'm not strong enough--I can't stand life without you."

She stopped weeping, she made a great effort to control herself, and looked at me steadfastly for a moment. "I was going to kill myself," she whispered. "I was going to kill myself quietly--somehow. I meant to wait a bit and have an accident. I thought--you didn't understand. You were a man, and couldn't understand. . . ."

"People can't do as we thought we could do," I said. "We've gone too far together."

"Yes," she said, and I stared into her eyes.

"The horror of it," she whispered. "The horror of being handed over. It's just only begun to dawn upon me, seeing him now as I do. He tries to be kind to me. . . . I didn't know. I felt adventurous before. . . . It makes me feel like all the women in the world who have ever been owned and subdued. . . . It's not that he isn't the best of men, it's because I'm a part of you. . . . I can't go through with it. If I go through with it, I shall be left--robbed of pride--outraged--a woman beaten. . . ."

"I know," I said, "I know."

"I want to live alone. . . . I don't care for anything now but just escape. If you can help me. . . ."

"I must take you away. There's nothing for us but to go away together."

"But your work," she said; "your career! Margaret! Our promises!"

"We've made a mess of things, Isabel--or things have made a mess of us. I don't know which. Our flags are in the mud, anyhow. It's too late to save those other things! They have to go. You can't make terms with defeat. I thought it was Margaret needed me most. But it's you. And I need you. I didn't think of that either. I haven't a doubt left in the world now. We've got to leave everything rather than leave each other. I'm sure of it. Now we have gone so far. We've got to go right down to earth and begin again. . . . Dear, I WANT disgrace with you. . . ."

So I whispered to her as she sat crumpled together on the faded cushions of the boat, this white and weary young woman who had been so valiant and careless a girl. "I don't care," I said. "I don't care for anything, if I can save you out of the wreckage we have made together."

4

The next day I went to the office of the BLUE WEEKLY in order to get as much as possible of its affairs in working order before I left London with Isabel. I just missed Shoemith in the lower office. Upstairs I found Britten amidst a pile of outside articles, methodically reading the title of each and sometimes the first half-dozen lines, and either dropping them in a growing heap on the floor for a clerk to return, or putting them aside for consideration. I interrupted him, squatted on the window-sill of the open window, and sketched out my ideas for the session.

"You're far-sighted," he remarked at something of mine which reached out ahead.

"I like to see things prepared," I answered.

"Yes," he said, and ripped open the envelope of a fresh aspirant.

I was silent while he read.

"You're going away with Isabel Rivers," he said abruptly.

"Well!" I said, amazed.

"I know," he said, and lost his breath. "Not my business. Only--"

It was queer to find Britten afraid to say a thing.

"It's not playing the game," he said.

"What do you know?"

"Everything that matters."

"Some games," I said, "are too hard to play."

There came a pause between us.

"I didn't know you were watching all this," I said.

"Yes," he answered, after a pause, "I've watched."

"Sorry--sorry you don't approve."

"It means smashing such an infernal lot of things, Remington."

I did not answer.

"You're going away then?"

"Yes."

"Soon?"

"Right away."

"There's your wife."

"I know."

"Shoemith--whom you're pledged to in a manner. You've just picked him out and made him conspicuous. Every one will know. Oh! of course--it's nothing to you. Honour--"

"I know."

"Common decency."

I nodded.

"All this movement of ours. That's what I care for most. . . .
It's come to be a big thing, Remington."

"That will go on."

"We have a use for you--no one else quite fills it. No one. . . .
I'm not sure it will go on."

"Do you think I haven't thought of all these things?"

He shrugged his shoulders, and rejected two papers unread.

"I knew," he remarked, "when you came back from America. You were alight with it." Then he let his bitterness gleam for a moment.

"But I thought you would stick to your bargain."

"It's not so much choice as you think," I said.

"There's always a choice."

"No," I said.

He scrutinised my face.

"I can't live without her--I can't work. She's all mixed up with this--and everything. And besides, there's things you can't understand. There's feelings you've never felt. . . . You don't understand how much we've been to one another."

Britten frowned and thought.

"Some things one's GOT to do," he threw out.

"Some things one can't do."

"These infernal institutions--"

"Some one must begin," I said.

He shook his head. "Not YOU," he said. "No!"

He stretched out his hands on the desk before him, and spoke again.

"Remington," he said, "I've thought of this business day and night too. It matters to me. It matters immensely to me. In a way--it's a thing one doesn't often say to a man--I've loved you. I'm the sort of man who leads a narrow life. . . . But you've been something fine and good for me, since that time, do you remember? when we talked about Mecca together."

I nodded.

"Yes. And you'll always be something fine and good for me anyhow. I know things about you,--qualities--no mere act can destroy them. . . . Well, I can tell you, you're doing wrong. You're going on now like a man who is hypnotised and can't turn round. You're piling wrong on wrong. It was wrong for you two people ever to be lovers."

He paused.

"It gripped us hard," I said.

"Yes!--but in your position! And hers! It was vile!"

"You've not been tempted."

"How do you know? Anyhow--having done that, you ought to have stood the consequences and thought of other people. You could have ended it at the first pause for reflection. You didn't. You blundered again. You kept on. You owed a certain secrecy to all of us! You didn't keep it. You were careless. You made things worse. This engagement and this publicity!--Damn it, Remington!"

"I know," I said, with smarting eyes. "Damn it ! with all my heart! It came of trying to patch. . . . You CAN'T patch."

"And now, as I care for anything under heaven, Remington, you two ought to stand these last consequences--and part. You ought to part. Other people have to stand things! Other people have to part. You ought to. You say--what do you say? It's loss of so much life to lose each other. So is losing a hand or a leg. But it's what you've incurred. Amputate. Take your punishment--After all, you chose it."

"Oh, damn!" I said, standing up and going to the window.

"Damn by all means. I never knew a topic so full of justifiable damns. But you two did choose it. You ought to stick to your undertaking."

I turned upon him with a snarl in my voice. "My dear Britten!" I cried. "Don't I KNOW I'm doing wrong? Aren't I in a net? Suppose I don't go! Is there any right in that? Do you think we're going to be much to ourselves or any one after this parting? I've been thinking all last night of this business, trying it over and over again from the beginning. How was it we went wrong? Since I came back from America--I grant you THAT--but SINCE, there's never been a step that wasn't forced, that hadn't as much right in it or more, as wrong. You talk as though I was a thing of steel that could bend this way or that and never change. You talk as though Isabel was a cat one could give to any kind of owner. . . . We two are things that change and grow and alter all the time. We're--so interwoven that being parted now will leave us just misshapen cripples. . . . You don't know the motives, you don't know the rush and feel of things, you don't know how it was with us, and how it is with us. You don't know the hunger for the mere sight of one another; you don't know anything."

Britten looked at his finger-nails closely. His red face puckered to a wry frown. "Haven't we all at times wanted the world put back?" he grunted, and looked hard and close at one particular nail.

There was a long pause.

"I want her," I said, "and I'm going to have her. I'm too tired for balancing the right or wrong of it any more. You can't separate them. I saw her yesterday. . . . She's--ill. . . . I'd take her now, if death were just outside the door waiting for us."

"Torture?"

I thought. "Yes."

"For her?"

"There isn't," I said.

"If there was?"

I made no answer.

"It's blind Want. And there's nothing ever been put into you to stand against it. What are you going to do with the rest of your lives?"

"No end of things."

"Nothing."

"I don't believe you are right," I said. "I believe we can save something--"

Britten shook his head. "Some scraps of salvage won't excuse you," he said.

His indignation rose. "In the middle of life!" he said. "No man has a right to take his hand from the plough!"

He leant forward on his desk and opened an argumentative palm. "You know, Remington," he said, "and I know, that if this could be fended off for six months--if you could be clapped in prison, or got out of the way somehow,--until this marriage was all over and settled down for a year, say--you know then you two could meet, curious, happy, as friends. Saved! You KNOW it."

I turned and stared at him. "You're wrong, Britten," I said. "And does it matter if we could?"

I found that in talking to him I could frame the apologetics I had not been able to find for myself alone.

"I am certain of one thing, Britten. It is our duty not to hush up this scandal."

He raised his eyebrows. I perceived now the element of absurdity in me, but at the time I was as serious as a man who is burning.

"It's our duty," I went on, "to smash now openly in the sight of every one. Yes! I've got that as clean and plain--as prison whitewash. I am convinced that we have got to be public to the uttermost now--I mean it--until every corner of our world knows this story, knows it fully, adds it to the Parnell story and the Ashton Dean story and the Carmel story and the Witterslea story, and all the other stories that have picked man after man out of English public life, the men with active imaginations, the men of strong initiative. To think this tottering old-woman ridden Empire should dare to waste a man on such a score! You say I ought to be penitent--"

Britten shook his head and smiled very faintly.

"I'm boiling with indignation," I said. "I lay in bed last night and went through it all. What in God's name was to be expected of us but what has happened? I went through my life bit by bit last night, I recalled all I've had to do with virtue and women, and all I was told and how I was prepared. I was born into cowardice and debasement. We all are. Our generation's grimy with hypocrisy. I came to the most beautiful things in life--like peeping Tom of Coventry. I was never given a light, never given a touch of natural

manhood by all this dingy, furtive, canting, humbugging English world. Thank God! I'll soon be out of it! The shame of it! The very savages in Australia initiate their children better than the English do to-day. Neither of us was ever given a view of what they call morality that didn't make it show as shabby subservience, as the meanest discretion, an abject submission to unreasonable prohibitions! meek surrender of mind and body to the dictation of pedants and old women and fools. We weren't taught--we were mumbled at! And when we found that the thing they called unclean, unclean, was Pagan beauty--God! it was a glory to sin, Britten, it was a pride and splendour like bathing in the sunlight after dust and grime!"

"Yes," said Britten. "That's all very well--"

I interrupted him. "I know there's a case--I'm beginning to think it a valid case against us; but we never met it! There's a steely pride in self restraint, a nobility of chastity, but only for those who see and think and act--untrammelled and unafraid. The other thing, the current thing, why! it's worth as much as the chastity of a monkey kept in a cage by itself!" I put my foot in a chair, and urged my case upon him. "This is a dirty world, Britten, simply because it is a muddled world, and the thing you call morality is dirtier now than the thing you call immorality. Why don't the moralists pick their stuff out of the slime if they care for it, and wipe it?--damn them! I am burning now to say: 'Yes, we did this and this,' to all the world. All the world! . . . I will!"

Britten rubbed the palm of his hand on the corner of his desk. "That's all very well, Remington," he said. "You mean to go."

He stopped and began again. "If you didn't know you were in the wrong you wouldn't be so damned rhetorical. You're in the wrong. It's as plain to you as it is to me. You're leaving a big work, you're leaving a wife who trusted you, to go and live with your

jolly mistress. . . . You won't see you're a statesman that matters, that no single man, maybe, might come to such influence as you in the next ten years. You're throwing yourself away and accusing your country of rejecting you."

He swung round upon his swivel at me. "Remington," he said, "have you forgotten the immense things our movement means?"

I thought. "Perhaps I am rhetorical," I said.

"But the things we might achieve! If you'd only stay now--even now! Oh! you'd suffer a little socially, but what of that? You'd be able to go on--perhaps all the better for hostility of the kind you'd get. You know, Remington--you KNOW."

I thought and went back to his earlier point. "If I am rhetorical, at any rate it's a living feeling behind it. Yes, I remember all the implications of our aims--very splendid, very remote. But just now it's rather like offering to give a freezing man the sunlit Himalayas from end to end in return for his camp-fire. When you talk of me and my jolly mistress, it isn't fair. That misrepresents everything. I'm not going out of this--for delights. That's the sort of thing men like Snuffles and Keyhole imagine--that excites them! When I think of the things these creatures think! Ugh! But YOU know better? You know that physical passion that burns like a fire--ends clean. I'm going for love, Britten--if I sinned for passion. I'm going, Britten, because when I saw her the other day she HURT me. She hurt me damnably, Britten. . . . I've been a cold man--I've led a rhetorical life--you hit me with that word!--I put things in a windy way, I know, but what has got hold of me at last is her pain. She's ill. Don't you understand? She's a sick thing--a weak thing. She's no more a goddess than I'm a god. . . . I'm not in love with her now; I'm RAW with love for her. I feel like a man that's been flayed. I have been flayed. . . . You don't begin to imagine the sort of helpless solicitude. . . . She's not going

to do things easily; she's ill. Her courage fails. . . . It's hard to put things when one isn't rhetorical, but it's this, Britten--there are distresses that matter more than all the delights or achievements in the world. . . . I made her what she is--as I never made Margaret. I've made her--I've broken her. . . . I'm going with my own woman. The rest of my life and England, and so forth, must square itself to that. . . ."

For a long time, as it seemed, we remained silent and motionless. We'd said all we had to say. My eyes caught a printed slip upon the desk before him, and I came back abruptly to the paper.

I picked up this galley proof. It was one of Winter's essays. "This man goes on doing first-rate stuff," I said. "I hope you will keep him going."

He did not answer for a moment or so. "I'll keep him going," he said at last with a sigh.

5

I have a letter Margaret wrote me within a week of our flight. I cannot resist transcribing some of it here, because it lights things as no word of mine can do. It is a string of nearly inconsecutive thoughts written in pencil in a fine, tall, sprawling hand. Its very inconsecutiveness is essential. Many words are underlined. It was in answer to one from me; but what I wrote has passed utterly from my mind. . . .

"Certainly," she says, "I want to hear from you, but I do not want to see you. There's a sort of abstract YOU that I want to go on with. Something I've made out of you. . . . I want to know things

about you--but I don't want to see or feel or imagine. When some day I have got rid of my intolerable sense of proprietorship, it may be different. Then perhaps we may meet again. I think it is even more the loss of our political work and dreams that I am feeling than the loss of your presence. Aching loss. I thought so much of the things we were DOING for the world--had given myself so unreservedly. You've left me with nothing to DO. I am suddenly at loose ends. . . .

"We women are trained to be so dependent on a man. I've got no life of my own at all. It seems now to me that I wore my clothes even for you and your schemes. . . .

"After I have told myself a hundred times why this has happened, I ask again, 'Why did he give things up? Why did he give things up?' . . .

"It is just as though you were wilfully dead. . . .

"Then I ask again and again whether this thing need have happened at all, whether if I had had a warning, if I had understood better, I might not have adapted myself to your restless mind and made this catastrophe impossible. . . .

"Oh, my dear! why hadn't you the pluck to hurt me at the beginning, and tell me what you thought of me and life? You didn't give me a chance; not a chance. I suppose you couldn't. All these things you and I stood away from. You let my first repugnances repel you. . . .

"It is strange to think after all these years that I should be asking myself, do I love you? have I loved you? In a sense I think I HATE you. I feel you have taken my life, dragged it in your wake for a time, thrown it aside. I am resentful. Unfairly resentful, for why should I exact that you should watch and understand my life, when clearly I have understood so little of yours. But I am savage--

savage at the wrecking of all you were to do.

"Oh, why--why did you give things up?

"No human being is his own to do what he likes with. You were not only pledged to my tiresome, ineffectual companionship, but to great purposes. They ARE great purposes. . . .

"If only I could take up your work as you leave it, with the strength you had--then indeed I feel I could let you go--you and your young mistress. . . . All that matters so little to me. . . .

"Yet I think I must indeed love you yourself in my slower way. At times I am mad with jealousy at the thought of all I hadn't the wit to give you. . . . I've always hidden my tears from you--and what was in my heart. It's my nature to hide--and you, you want things brought to you to see. You are so curious as to be almost cruel. You don't understand reserves. You have no mercy with restraints and reservations. You are not really a CIVILISED man at all. You hate pretences--and not only pretences but decent coverings. . . .

"It's only after one has lost love and the chance of loving that slow people like myself find what they might have done. Why wasn't I bold and reckless and abandoned? It's as reasonable to ask that, I suppose, as to ask why my hair is fair. . . .

"I go on with these perhapses over and over again here when I find myself alone. . . .

"My dear, my dear, you can't think of the desolation of things--I shall never go back to that house we furnished together, that was to have been the laboratory (do you remember calling it a laboratory?) in which you were to forge so much of the new order. . . .

"But, dear, if I can help you--even now--in any way--help both of

you, I mean. . . . It tears me when I think of you poor and discredited. You will let me help you if I can--it will be the last wrong not to let me do that. . . .

"You had better not get ill. If you do, and I hear of it--I shall come after you with a troupe of doctor's and nurses. If I am a failure as a wife, no one has ever said I was anything but a success as a district visitor. . . ."

There are other sheets, but I cannot tell whether they were written before or after the ones from which I have quoted. And most of them have little things too intimate to set down. But this oddly penetrating analysis of our differences must, I think, be given.

"There are all sorts of things I can't express about this and want to. There's this difference that has always been between us, that you like nakedness and wildness, and I, clothing and restraint. It goes through everything. You are always TALKING of order and system, and the splendid dream of the order that might replace the muddled system you hate, but by a sort of instinct you seem to want to break the law. I've watched you so closely. Now I want to obey laws, to make sacrifices, to follow rules. I don't want to make, but I do want to keep. You are at once makers and rebels, you and Isabel too. You're bad people--criminal people, I feel, and yet full of something the world must have. You're so much better than me, and so much viler. It may be there is no making without destruction, but it seems to me sometimes that it is nothing but an instinct for lawlessness that drives you. You remind me--do you remember?--of that time we went from Naples to Vesuvius, and walked over the hot new lava there. Do you remember how tired I was? I know it disappointed you that I was tired. One walked there in spite of the heat because there was a crust; like custom, like law. But directly a crust forms on things, you are restless to break down to the fire again. You talk of beauty, both of you, as something terrible, mysterious, imperative. YOUR beauty is something

altogether different from anything I know or feel. It has pain in it. Yet you always speak as though it was something I ought to feel and am dishonest not to feel. MY beauty is a quiet thing. You have always laughed at my feeling for old-fashioned chintz and blue china and Sheraton. But I like all these familiar USED things. My beauty is STILL beauty, and yours, is excitement. I know nothing of the fascination of the fire, or why one should go deliberately out of all the decent fine things of life to run dangers and be singed and tormented and destroyed. I don't understand. . . ."

6

I remember very freshly the mood of our departure from London, the platform of Charing Cross with the big illuminated clock overhead, the bustle of porters and passengers with luggage, the shouting of newsboys and boys with flowers and sweets, and the groups of friends seeing travellers off by the boat train. Isabel sat very quiet and still in the compartment, and I stood upon the platform with the door open, with a curious reluctance to take the last step that should sever me from London's ground. I showed our tickets, and bought a handful of red roses for her. At last came the guards crying: "Take your seats," and I got in and closed the door on me. We had, thank Heaven! a compartment to ourselves. I let down the window and stared out.

There was a bustle of final adieux on the platform, a cry of "Stand away, please, stand away!" and the train was gliding slowly and smoothly out of the station.

I looked out upon the river as the train rumbled with slowly gathering pace across the bridge, and the bobbing black heads of the pedestrians in the footway, and the curve of the river and the

glowing great hotels, and the lights and reflections and blacknesses of that old, familiar spectacle. Then with a common thought, we turned our eyes westward to where the pinnacles of Westminster and the shining clock tower rose hard and clear against the still, luminous sky.

"They'll be in Committee on the Reformatory Bill to-night," I said, a little stupidly.

"And so," I added, "good-bye to London!"

We said no more, but watched the south-side streets below--bright gleams of lights and movement, and the dark, dim, monstrous shapes of houses and factories. We ran through Waterloo Station, London Bridge, New Cross, St. John's. We said never a word. It seemed to me that for a time we had exhausted our emotions. We had escaped, we had cut our knot, we had accepted the last penalty of that headlong return of mine from Chicago a year and a half ago. That was all settled. That harvest of feelings we had reaped. I thought now only of London, of London as the symbol of all we were leaving and all we had lost in the world. I felt nothing now but an enormous and overwhelming regret. . . .

The train swayed and rattled on its way. We ran through old Bromstead, where once I had played with cities and armies on the nursery floor. The sprawling suburbs with their scattered lights gave way to dim tree-set country under a cloud-veiled, intermittently shining moon. We passed Cardcaster Place. Perhaps old Wardingham, that pillar of the old Conservatives, was there, fretting over his unsuccessful struggle with our young Toryism. Little he recked of this new turn of the wheel and how it would confirm his contempt of all our novelties. Perhaps some faint intimation drew him to the window to see behind the stems of the young fir trees that bordered his domain, the little string of lighted carriage windows gliding southward. . . .

Suddenly I began to realise just what it was we were doing.

And now, indeed, I knew what London had been to me, London where I had been born and educated, the slovenly mother of my mind and all my ambitions, London and the empire! It seemed to me we must be going out to a world that was utterly empty. All our significance fell from us--and before us was no meaning any more. We were leaving London; my hand, which had gripped so hungrily upon its complex life, had been forced from it, my fingers left their hold. That was over. I should never have a voice in public affairs again. The inexorable unwritten law which forbids overt scandal sentenced me. We were going out to a new life, a life that appeared in that moment to be a mere shrivelled remnant of me, a mere residuum of sheltering and feeding and seeing amidst alien scenery and the sound of unfamiliar tongues. We were going to live cheaply in a foreign place, so cut off that I meet now the merest stray tourist, the commonest tweed-clad stranger with a mixture of shyness and hunger. . . . And suddenly all the schemes I was leaving appeared fine and adventurous and hopeful as they had never done before. How great was this purpose I had relinquished, this bold and subtle remaking of the English will! I had doubted so many things, and now suddenly I doubted my unimportance, doubted my right to this suicidal abandonment. Was I not a trusted messenger, greatly trusted and favoured, who had turned aside by the way? Had I not, after all, stood for far more than I had thought; was I not filching from that dear great city of my birth and life, some vitally necessary thing, a key, a link, a reconciling clue in her political development, that now she might seek vaguely for in vain? What is one life against the State? Ought I not to have sacrificed Isabel and all my passion and sorrow for Isabel, and held to my thing--stuck to my thing?

I heard as though he had spoken it in the carriage Britten's "It WAS a good game. No end of a game. And for the first time I imagined the faces and voices of Crupp and Esmeer and Gane when they learnt

of this secret flight, this flight of which they were quite unwarned. And Shoesmith might he there in the house,--Shoesmith who was to have been married in four days--the thing might hit him full in front of any kind of people. Cruel eyes might watch him. Why the devil hadn't I written letters to warn them all? I could have posted them five minutes before the train started. I had never thought to that moment of the immense mess they would be in; how the whole edifice would clatter about their ears. I had a sudden desire to stop the train and go back for a day, for two days, to set that negligence right. My brain for a moment brightened, became animated and prolific of ideas. I thought of a brilliant line we might have taken on that confounded Reformatory Bill. . . .

That sort of thing was over. . . .

What indeed wasn't over? I passed to a vaguer, more multitudinous perception of disaster, the friends I had lost already since Altiora began her campaign, the ampler remnant whom now I must lose. I thought of people I had been merry with, people I had worked with and played with, the companions of talkative walks, the hostesses of houses that had once glowed with welcome for us both. I perceived we must lose them all. I saw life like a tree in late autumn that had once been rich and splendid with friends--and now the last brave dears would be hanging on doubtfully against the frosty chill of facts, twisting and tortured in the universal gale of indignation, trying to evade the cold blast of the truth. I had betrayed my party, my intimate friend, my wife, the wife whose devotion had made me what I was. For awhile the figure of Margaret, remote, wounded, shamed, dominated my mind, and the thought of my immense ingratitude. Damn them! they'd take it out of her too. I had a feeling that I wanted to go straight back and grip some one by the throat, some one talking ill of Margaret. They'd blame her for not keeping me, for letting things go so far. . . . I wanted the whole world to know how fine she was. I saw in imagination the busy, excited dinner tables at work upon us all, rather pleasantly

excited, brightly indignant, merciless.

Well, it's the stuff we are! . . .

Then suddenly, stabbing me to the heart, came a vision of Margaret's tears and the sound of her voice saying, "Husband mine! Oh! husband mine! To see you cry!" . . .

I came out of a cloud of thoughts to discover the narrow compartment, with its feeble lamp overhead, and our rugs and hand-baggage swaying on the rack, and Isabel, very still in front of me, gripping my wilting red roses tightly in her bare and ringless hand.

For a moment I could not understand her attitude, and then I perceived she was sitting bent together with her head averted from the light to hide the tears that were streaming down her face. She had not got her handkerchief out for fear that I should see this, but I saw her tears, dark drops of tears, upon her sleeve. . . .

I suppose she had been watching my expression, divining my thoughts.

For a time I stared at her and was motionless, in a sort of still and weary amazement. Why had we done this injury to one another? WHY? Then something stirred within me.

"ISABEL!" I whispered.

She made no sign.

"Isabel!" I repeated, and then crossed over to her and crept closely to her, put my arm about her, and drew her wet cheek to mine.

PREFACE

THE WORLD SET FREE was written in 1913 and published early in 1914, and it is the latest of a series of three fantasias of possibility, stories which all turn on the possible developments in the future of some contemporary force or group of forces. The World Set Free was written under the immediate shadow of the Great War. Every intelligent person in the world felt that disaster was impending and knew no way of averting it, but few of us realised in the earlier half of 1914 how near the crash was to us. The reader will be amused to find that here it is put off until the year 1956. He may naturally want to know the reason for what will seem now a quite extraordinary delay. As a prophet, the author must confess he has always been inclined to be rather a slow prophet. The war aeroplane in the world of reality, for example, beat the forecast in Anticipations by about twenty years or so. I suppose a desire not to shock the sceptical reader's sense of use and wont and perhaps a less creditable disposition to hedge, have something to do with this dating forward of one's main events, but in the particular case of The World Set Free there was, I think, another motive in holding the

Great War back, and that was to allow the chemist to get well forward with his discovery of the release of atomic energy. 1956--or for that matter 2056--may be none too late for that crowning revolution in human potentialities. And apart from this procrastination of over forty years, the guess at the opening phase of the war was fairly lucky; the forecast of an alliance of the Central Empires, the opening campaign through the Netherlands, and the despatch of the British Expeditionary Force were all justified before the book had been published six months. And the opening section of Chapter the Second remains now, after the reality has happened, a fairly adequate diagnosis of the essentials of the matter. One happy hit (in Chapter the Second, Section 2), on which the writer may congratulate himself, is the forecast that under modern conditions it would be quite impossible for any great general to emerge to supremacy and concentrate the enthusiasm of the armies of either side. There could be no Alexanders or Napoleons. And we soon heard the scientific corps muttering, 'These old fools,' exactly as it is here foretold.

These, however, are small details, and the misses in the story far outnumber the hits. It is the main thesis which is still of interest now; the thesis that because of the development of scientific knowledge, separate sovereign states and separate sovereign empires are no longer possible in the world, that to attempt to keep on with the old system is to heap disaster upon disaster for mankind and perhaps to destroy our race altogether. The remaining interest of this book now is the sustained validity of this thesis and the discussion of the possible ending of war on the earth. I have supposed a sort of epidemic of sanity to break out among the rulers of states and the leaders of mankind. I have represented the native common sense of the French mind and of the English mind--for manifestly King Egbert is meant to be 'God's Englishman'--leading mankind towards a bold and resolute effort of salvage and reconstruction. Instead of which, as the

school book footnotes say, compare to-day's newspaper. Instead of a frank and honourable gathering of leading men, Englishman meeting German and Frenchman Russian, brothers in their offences and in their disaster, upon the hills of Brissago, beheld in Geneva at the other end of Switzerland a poor little League of (Allied) Nations (excluding the United States, Russia, and most of the 'subject peoples' of the world), meeting obscurely amidst a world-wide disregard to make impotent gestures at the leading problems of the debacle. Either the disaster has not been vast enough yet or it has not been swift enough to inflict the necessary moral shock and achieve the necessary moral revulsion. Just as the world of 1913 was used to an increasing prosperity and thought that increase would go on for ever, so now it would seem the world is growing accustomed to a steady glide towards social disintegration, and thinks that that too can go on continually and never come to a final bump. So soon do use and wont establish themselves, and the most flaming and thunderous of lessons pale into disregard.

The question whether a Leblanc is still possible, the question whether it is still possible to bring about an outbreak of creative sanity in mankind, to avert this steady glide to destruction, is now one of the most urgent in the world. It is clear that the writer is temperamentally disposed to hope that there is such a possibility. But he has to confess that he sees few signs of any such breadth of understanding and steadfastness of will as an effectual effort to turn the rush of human affairs demands. The inertia of dead ideas and old institutions carries us on towards the rapids. Only in one direction is there any plain recognition of the idea of a human commonweal as something overriding any national and patriotic consideration, and that is in the working class movement throughout the world. And labour internationalism is closely bound up with conceptions of a profound social revolution. If world peace is to be attained through labour internationalism, it will have to be attained at

the price of the completest social and economic reconstruction and by passing through a phase of revolution that will certainly be violent, that may be very bloody, which may be prolonged through a long period, and may in the end fail to achieve anything but social destruction. Nevertheless, the fact remains that it is in the labour class, and the labour class alone, that any conception of a world rule and a world peace has so far appeared. The dream of *The World Set Free*, a dream of highly educated and highly favoured leading and ruling men, voluntarily setting themselves to the task of reshaping the world, has thus far remained a dream.

THE SUN SNARERS

Section I

THE history of mankind is the history of the attainment of external power. Man is the tool-using, fire-making animal. From the outset of his terrestrial career we find him supplementing the natural strength and bodily weapons of a beast by the heat of burning and the rough implement of stone. So he passed beyond the ape. From that he expands. Presently he added to himself the power of the horse and the ox, he borrowed the carrying strength of water and the driving force of the wind, he quickened his fire by blowing, and his simple tools, pointed first with copper and then with iron, increased and varied and became more elaborate and efficient. He sheltered his heat in houses and made his way easier by paths and roads. He complicated his social relationships and increased his efficiency by the division of labour. He began to store up knowledge. Contrivance followed contrivance, each making it possible for a man to do more. Always down the lengthening record, save for a set-back ever and again, he is doing more.... A quarter of a million years ago the utmost man was a savage, a being scarcely articulate, sheltering in holes in the rocks, armed with a rough-hewn flint or a fire-pointed stick, naked, living in small family groups, killed by some younger man so soon as his first virile activity declined. Over most of the great wildernesses of earth you would have sought him in vain; only in a few temperate and sub-tropical river valleys would you have found the squatting lairs of his little herds, a male, a few females, a child or so.

He knew no future then, no kind of life except the life he led. He fled the cave-bear over the rocks full of iron ore and the promise of sword and spear; he froze to death upon a ledge of

coal; he drank water muddy with the clay that would one day make cups of porcelain; he chewed the ear of wild wheat he had plucked and gazed with a dim speculation in his eyes at the birds that soared beyond his reach. Or suddenly he became aware of the scent of another male and rose up roaring, his roars the formless precursors of moral admonitions. For he was a great individualist, that original, he suffered none other than himself.

So through the long generations, this heavy precursor, this ancestor of all of us, fought and bred and perished, changing almost imperceptibly.

Yet he changed. That keen chisel of necessity which sharpened the tiger's claw age by age and fined down the clumsy Orchippus to the swift grace of the horse, was at work upon him--is at work upon him still. The clumsier and more stupidly fierce among him were killed soonest and oftenest; the finer hand, the quicker eye, the bigger brain, the better balanced body prevailed; age by age, the implements were a little better made, the man a little more delicately adjusted to his possibilities. He became more social; his herd grew larger; no longer did each man kill or drive out his growing sons; a system of taboos made them tolerable to him, and they revered him alive and soon even after he was dead, and were his allies against the beasts and the rest of mankind. (But they were forbidden to touch the women of the tribe, they had to go out and capture women for themselves, and each son fled from his stepmother and hid from her lest the anger of the Old Man should be roused. All the world over, even to this day, these ancient inevitable taboos can be traced.) And now instead of caves came huts and hovels, and the fire was better tended and there were wrappings and garments; and so aided, the creature spread into colder climates, carrying food with him, storing food--until sometimes the neglected grass-seed sprouted again and gave a first hint of agriculture.

And already there were the beginnings of leisure and thought.

Man began to think. There were times when he was fed, when his lusts and his fears were all appeased, when the sun shone upon the squatting-place and dim stirrings of speculation lit his eyes. He scratched upon a bone and found resemblance and pursued it and began pictorial art, moulded the soft, warm clay of the river brink between his fingers, and found a pleasure in its patternings and repetitions, shaped it into the form of vessels, and found that it would hold water. He watched the streaming river, and wondered from what bountiful breast this incessant water came; he blinked at the sun and dreamt that perhaps he might snare it and spear it as it went down to its resting-place amidst the distant hills. Then he was roused to convey to his brother that once indeed he had done so--at least that some one had done so--he mixed that perhaps with another dream almost as daring, that one day a mammoth had been beset; and therewith began fiction--pointing a way to achievement--and the august prophetic procession of tales.

For scores and hundreds of centuries, for myriads of generations that life of our fathers went on. From the beginning to the ripening of that phase of human life, from the first clumsy eolith of rudely chipped flint to the first implements of polished stone, was two or three thousand centuries, ten or fifteen thousand generations. So slowly, by human standards, did humanity gather itself together out of the dim intimations of the beast. And that first glimmering of speculation, that first story of achievement, that story-teller bright-eyed and flushed under his matted hair, gesticulating to his gaping, incredulous listener, gripping his wrist to keep him attentive, was the most marvellous beginning this world has ever seen. It doomed the mammoths, and it began the setting of that snare that shall catch the sun.

Section 2

That dream was but a moment in a man's life, whose proper business it seemed was to get food and kill his fellows and beget after the manner of all that belongs to the fellowship of the beasts. About him, hidden from him by the thinnest of veils, were the untouched sources of Power, whose magnitude we scarcely do more than suspect even to-day, Power that could make his every conceivable dream come real. But the feet of the race were in the way of it, though he died blindly unknowing.

At last, in the generous levels of warm river valleys, where food is abundant and life very easy, the emerging human overcoming his earlier jealousies, becoming, as necessity persecuted him less urgently, more social and tolerant and amenable, achieved a larger community. There began a division of labour, certain of the older men specialised in knowledge and direction, a strong man took the fatherly leadership in war, and priest and king began to develop their roles in the opening drama of man's history. The priest's solicitude was seed-time and harvest and fertility, and the king ruled peace and war. In a hundred river valleys about the warm, temperate zone of the earth there were already towns and temples, a score of thousand years ago. They flourished unrecorded, ignoring the past and unsuspecting of the future, for as yet writing had still to begin.

Very slowly did man increase his demand upon the illimitable wealth of Power that offered itself on every hand to him. He tamed certain animals, he developed his primordially haphazard agriculture into a ritual, he added first one metal to his resources and then another, until he had copper and tin and iron and lead and gold and silver to supplement his stone, he hewed and carved wood, made pottery, paddled down his river until he came to the sea, discovered the wheel and made the first roads.

But his chief activity for a hundred centuries and more, was the subjugation of himself and others to larger and larger societies. The history of man is not simply the conquest of external power; it is first the conquest of those distrusts and fiercenesses, that self-concentration and intensity of animalism, that tie his hands from taking his inheritance. The ape in us still resents association. From the dawn of the age of polished stone to the achievement of the Peace of the World, man's dealings were chiefly with himself and his fellow man, trading, bargaining, law-making, propitiating, enslaving, conquering, exterminating, and every little increment in Power, he turned at once and always turns to the purposes of this confused elaborate struggle to socialise. To incorporate and comprehend his fellow men into a community of purpose became the last and greatest of his instincts. Already before the last polished phase of the stone age was over he had become a political animal. He made astonishingly far-reaching discoveries within himself, first of counting and then of writing and making records, and with that his town communities began to stretch out to dominion; in the valleys of the Nile, the Euphrates, and the great Chinese rivers, the first empires and the first written laws had their beginnings. Men specialised for fighting and rule as soldiers and knights. Later, as ships grew seaworthy, the Mediterranean which had been a barrier became a highway, and at last out of a tangle of pirate polities came the great struggle of Carthage and Rome. The history of Europe is the history of the victory and breaking up of the Roman Empire. Every ascendant monarch in Europe up to the last, aped Caesar and called himself Kaiser or Tsar or Emperor or Kasir-i-Hind. Measured by the duration of human life it is a vast space of time between that first dynasty in Egypt and the coming of the aeroplane, but by the scale that looks back to the makers of the eoliths, it is all of it a story of yesterday.

Now during this period of two hundred centuries or more, this

period of the warring states, while men's minds were chiefly preoccupied by politics and mutual aggression, their progress in the acquirement of external Power was slow--rapid in comparison with the progress of the old stone age, but slow in comparison with this new age of systematic discovery in which we live. They did not very greatly alter the weapons and tactics of warfare, the methods of agriculture, seamanship, their knowledge of the habitable globe, or the devices and utensils of domestic life between the days of the early Egyptians and the days when Christopher Columbus was a child. Of course, there were inventions and changes, but there were also retrogressions; things were found out and then forgotten again; it was, on the whole, a progress, but it contained no steps; the peasant life was the same, there were already priests and lawyers and town craftsmen and territorial lords and rulers doctors, wise women, soldiers and sailors in Egypt and China and Assyria and south-eastern Europe at the beginning of that period, and they were doing much the same things and living much the same life as they were in Europe in A.D. 1500. The English excavators of the year A.D. 1900 could delve into the remains of Babylon and Egypt and disinter legal documents, domestic accounts, and family correspondence that they could read with the completest sympathy. There were great religious and moral changes throughout the period, empires and republics replaced one another, Italy tried a vast experiment in slavery, and indeed slavery was tried again and again and failed and failed and was still to be tested again and rejected again in the New World; Christianity and Mohammedanism swept away a thousand more specialised cults, but essentially these were progressive adaptations of mankind to material conditions that must have seemed fixed for ever. The idea of revolutionary changes in the material conditions of life would have been entirely strange to human thought through all that time.

Yet the dreamer, the story-teller, was there still, waiting for

his opportunity amidst the busy preoccupations, the comings and goings, the wars and processions, the castle building and cathedral building, the arts and loves, the small diplomacies and incurable feuds, the crusades and trading journeys of the middle ages. He no longer speculated with the untrammelled freedom of the stone-age savage; authoritative explanations of everything barred his path; but he speculated with a better brain, sat idle and gazed at circling stars in the sky and mused upon the coin and crystal in his hand. Whenever there was a certain leisure for thought throughout these times, then men were to be found dissatisfied with the appearances of things, dissatisfied with the assurances of orthodox belief, uneasy with a sense of unread symbols in the world about them, questioning the finality of scholastic wisdom. Through all the ages of history there were men to whom this whisper had come of hidden things about them. They could no longer lead ordinary lives nor content themselves with the common things of this world once they had heard this voice. And mostly they believed not only that all this world was as it were a painted curtain before things unguessed at, but that these secrets were Power. Hitherto Power had come to men by chance, but now there were these seekers seeking, seeking among rare and curious and perplexing objects, sometimes finding some odd utilisable thing, sometimes deceiving themselves with fancied discovery, sometimes pretending to find. The world of every day laughed at these eccentric beings, or found them annoying and ill-treated them, or was seized with fear and made saints and sorcerers and warlocks of them, or with covetousness and entertained them hopefully; but for the greater part heeded them not at all. Yet they were of the blood of him who had first dreamt of attacking the mammoth; every one of them was of his blood and descent; and the thing they sought, all unwittingly, was the snare that will some day catch the sun.

Section 3

Such a man was that Leonardo da Vinci, who went about the court of Sforza in Milan in a state of dignified abstraction. His common-place books are full of prophetic subtlety and ingenious anticipations of the methods of the early aviators. Durer was his parallel and Roger Bacon--whom the Franciscans silenced--of his kindred. Such a man again in an earlier city was Hero of Alexandria, who knew of the power of steam nineteen hundred years before it was first brought into use. And earlier still was Archimedes of Syracuse, and still earlier the legendary Daedalus of Cnossos. All up and down the record of history whenever there was a little leisure from war and brutality the seekers appeared. And half the alchemists were of their tribe.

When Roger Bacon blew up his first batch of gunpowder one might have supposed that men would have gone at once to the explosive engine. But they could see nothing of the sort. They were not yet beginning to think of seeing things; their metallurgy was all too poor to make such engines even had they thought of them. For a time they could not make instruments sound enough to stand this new force even for so rough a purpose as hurling a missile. Their first guns had barrels of coopered timber, and the world waited for more than five hundred years before the explosive engine came.

Even when the seekers found, it was at first a long journey before the world could use their findings for any but the roughest, most obvious purposes. If man in general was not still as absolutely blind to the unconquered energies about him as his paleolithic precursor, he was at best purblind.

Section 4

The latent energy of coal and the power of steam waited long on the verge of discovery, before they began to influence human lives.

There were no doubt many such devices as Hero's toys devised and forgotten, time after time, in courts and palaces, but it needed that coal should be mined and burning with plenty of iron at hand before it dawned upon men that here was something more than a curiosity. And it is to be remarked that the first recorded suggestion for the use of steam was in war; there is an Elizabethan pamphlet in which it is proposed to fire shot out of corked iron bottles full of heated water. The mining of coal for fuel, the smelting of iron upon a larger scale than men had ever done before, the steam pumping engine, the steam-engine and the steam-boat, followed one another in an order that had a kind of logical necessity. It is the most interesting and instructive chapter in the history of the human intelligence, the history of steam from its beginning as a fact in human consciousness to the perfection of the great turbine engines that preceded the utilisation of intra-molecular power. Nearly every human being must have seen steam, seen it incuriously for many thousands of years; the women in particular were always heating water, boiling it, seeing it boil away, seeing the lids of vessels dance with its fury; millions of people at different times must have watched steam pitching rocks out of volcanoes like cricket balls and blowing pumice into foam, and yet you may search the whole human record through, letters, books, inscriptions, pictures, for any glimmer of a realisation that here was force, here was strength to borrow and use.... Then suddenly man woke up to it, the railways spread like a network over the globe, the ever enlarging iron steamships began their staggering fight against wind and wave.

Steam was the first-comer in the new powers, it was the beginning of the Age of Energy that was to close the long history of the Warring States.

But for a long time men did not realise the importance of this

novelty. They would not recognise, they were not able to recognise that anything fundamental had happened to their immemorial necessities. They called the steam-engine the 'iron horse' and pretended that they had made the most partial of substitutions. Steam machinery and factory production were visibly revolutionising the conditions of industrial production, population was streaming steadily in from the country-side and concentrating in hitherto unthought-of masses about a few city centres, food was coming to them over enormous distances upon a scale that made the one sole precedent, the corn ships of imperial Rome, a petty incident; and a huge migration of peoples between Europe and Western Asia and America was in Progress, and--nobody seems to have realised that something new had come into human life, a strange swirl different altogether from any previous circling and mutation, a swirl like the swirl when at last the lock gates begin to open after a long phase of accumulating water and eddying inactivity....

The sober Englishman at the close of the nineteenth century could sit at his breakfast-table, decide between tea from Ceylon or coffee from Brazil, devour an egg from France with some Danish ham, or eat a New Zealand chop, wind up his breakfast with a West Indian banana, glance at the latest telegrams from all the world, scrutinise the prices current of his geographically distributed investments in South Africa, Japan, and Egypt, and tell the two children he had begotten (in the place of his father's eight) that he thought the world changed very little. They must play cricket, keep their hair cut, go to the old school he had gone to, shirk the lessons he had shirked, learn a few scraps of Horace and Virgil and Homer for the confusion of cads, and all would be well with them....

Section 5

Electricity, though it was perhaps the earlier of the two to be

studied, invaded the common life of men a few decades after the exploitation of steam. To electricity also, in spite of its provocative nearness all about him, mankind had been utterly blind for incalculable ages. Could anything be more emphatic than the appeal of electricity for attention? It thundered at man's ears, it signalled to him in blinding flashes, occasionally it killed him, and he could not see it as a thing that concerned him enough to merit study. It came into the house with the cat on any dry day and crackled insinuatingly whenever he stroked her fur. It rotted his metals when he put them together.... There is no single record that any one questioned why the cat's fur crackles or why hair is so unruly to brush on a frosty day, before the sixteenth century. For endless years man seems to have done his very successful best not to think about it at all; until this new spirit of the Seeker turned itself to these things.

How often things must have been seen and dismissed as unimportant, before the speculative eye and the moment of vision came! It was Gilbert, Queen Elizabeth's court physician, who first puzzled his brains with rubbed amber and bits of glass and silk and shellac, and so began the quickening of the human mind to the existence of this universal presence. And even then the science of electricity remained a mere little group of curious facts for nearly two hundred years, connected perhaps with magnetism--a mere guess that--perhaps with the lightning. Frogs' legs must have hung by copper hooks from iron railings and twitched upon countless occasions before Galvani saw them. Except for the lightning conductor, it was 250 years after Gilbert before electricity stepped out of the cabinet of scientific curiosities into the life of the common man.... Then suddenly, in the half-century between 1880 and 1930, it ousted the steam-engine and took over traction, it ousted every other form of household heating, abolished distance with the perfected wireless telephone and the telephotograph....

Section 6

And there was an extraordinary mental resistance to discovery and invention for at least a hundred years after the scientific revolution had begun. Each new thing made its way into practice against a scepticism that amounted at times to hostility. One writer upon these subjects gives a funny little domestic conversation that happened, he says, in the year 1898, within ten years, that is to say, of the time when the first aviators were fairly on the wing. He tells us how he sat at his desk in his study and conversed with his little boy.

His little boy was in profound trouble. He felt he had to speak very seriously to his father, and as he was a kindly little boy he did not want to do it too harshly.

This is what happened.

'I wish, Daddy,' he said, coming to his point, 'that you wouldn't write all this stuff about flying. The chaps rot me.'

'Yes!' said his father.

'And old Broomie, the Head I mean, he rots me. Everybody rots me.'

'But there is going to be flying--quite soon.'

The little boy was too well bred to say what he thought of that. 'Anyhow,' he said, 'I wish you wouldn't write about it.'

'You'll fly--lots of times--before you die,' the father assured him.

The little boy looked unhappy.

The father hesitated. Then he opened a drawer and took out a blurred and under-developed photograph. 'Come and look at this,' he said.

The little boy came round to him. The photograph showed a stream and a meadow beyond, and some trees, and in the air a black, pencil-like object with flat wings on either side of it. It was the first record of the first apparatus heavier than air that ever maintained itself in the air by mechanical force. Across the margin was written: 'Here we go up, up, up--from S. P. Langley, Smithsonian Institution, Washington.'

The father watched the effect of this reassuring document upon his son. 'Well?' he said.

'That,' said the schoolboy, after reflection, 'is only a model.'

'Model to-day, man to-morrow.'

The boy seemed divided in his allegiance. Then he decided for what he believed quite firmly to be omniscience. 'But old Broomie,' he said, 'he told all the boys in his class only yesterday, "no man will ever fly." No one, he says, who has ever shot grouse or pheasants on the wing would ever believe anything of the sort....'

Yet that boy lived to fly across the Atlantic and edit his father's reminiscences.

Section 7

At the close of the nineteenth century as a multitude of passages in the literature of that time witness, it was thought that the fact that man had at last had successful and profitable dealings

with the steam that scalded him and the electricity that flashed and banged about the sky at him, was an amazing and perhaps a culminating exercise of his intelligence and his intellectual courage. The air of 'Nunc Dimittis' sounds in some of these writings. 'The great things are discovered,' wrote Gerald Brown in his summary of the nineteenth century. 'For us there remains little but the working out of detail.' The spirit of the seeker was still rare in the world; education was unskilled, unstimulating, scholarly, and but little valued, and few people even then could have realised that Science was still but the flimsiest of trial sketches and discovery scarcely beginning. No one seems to have been afraid of science and its possibilities. Yet now where there had been but a score or so of seekers, there were many thousands, and for one needle of speculation that had been probing the curtain of appearances in 1800, there were now hundreds. And already Chemistry, which had been content with her atoms and molecules for the better part of a century, was preparing herself for that vast next stride that was to revolutionise the whole life of man from top to bottom.

One realises how crude was the science of that time when one considers the case of the composition of air. This was determined by that strange genius and recluse, that man of mystery, that disembowelled intelligence, Henry Cavendish, towards the end of the eighteenth century. So far as he was concerned the work was admirably done. He separated all the known ingredients of the air with a precision altogether remarkable; he even put it upon record that he had some doubt about the purity of the nitrogen. For more than a hundred years his determination was repeated by chemists all the world over, his apparatus was treasured in London, he became, as they used to say, 'classic,' and always, at every one of the innumerable repetitions of his experiment, that sly element argon was hiding among the nitrogen (and with a little helium and traces of other substances, and indeed all the hints that might have led to the new departures of

the twentieth-century chemistry), and every time it slipped unobserved through the professorial fingers that repeated his procedure.

Is it any wonder then with this margin of inaccuracy, that up to the very dawn of the twentieth-century scientific discovery was still rather a procession of happy accidents than an orderly conquest of nature?

Yet the spirit of seeking was spreading steadily through the world. Even the schoolmaster could not check it. For the mere handful who grew up to feel wonder and curiosity about the secrets of nature in the nineteenth century, there were now, at the beginning of the twentieth, myriads escaping from the limitations of intellectual routine and the habitual life, in Europe, in America, North and South, in Japan, in China, and all about the world.

It was in 1910 that the parents of young Holsten, who was to be called by a whole generation of scientific men, 'the greatest of European chemists,' were staying in a villa near Santo Domenico, between Fiesole and Florence. He was then only fifteen, but he was already distinguished as a mathematician and possessed by a savage appetite to understand. He had been particularly attracted by the mystery of phosphorescence and its apparent unrelatedness to every other source of light. He was to tell afterwards in his reminiscences how he watched the fireflies drifting and glowing among the dark trees in the garden of the villa under the warm blue night sky of Italy; how he caught and kept them in cages, dissected them, first studying the general anatomy of insects very elaborately, and how he began to experiment with the effect of various gases and varying temperature upon their light. Then the chance present of a little scientific toy invented by Sir William Crookes, a toy called the spintharoscope, on which radium particles impinge upon sulphide of zinc and make it luminous,

induced him to associate the two sets of phenomena. It was a happy association for his inquiries. It was a rare and fortunate thing, too, that any one with the mathematical gift should have been taken by these curiosities.

Section 8

And while the boy Holsten was mooning over his fireflies at Fiesole, a certain professor of physics named Rufus was giving a course of afternoon lectures upon Radium and Radio-Activity in Edinburgh. They were lectures that had attracted a very considerable amount of attention. He gave them in a small lecture-theatre that had become more and more congested as his course proceeded. At his concluding discussion it was crowded right up to the ceiling at the back, and there people were standing, standing without any sense of fatigue, so fascinating did they find his suggestions. One youngster in particular, a chuckle-headed, scrub-haired lad from the Highlands, sat hugging his knee with great sand-red hands and drinking in every word, eyes aglow, cheeks flushed, and ears burning.

'And so,' said the professor, 'we see that this Radium, which seemed at first a fantastic exception, a mad inversion of all that was most established and fundamental in the constitution of matter, is really at one with the rest of the elements. It does noticeably and forcibly what probably all the other elements are doing with an imperceptible slowness. It is like the single voice crying aloud that betrays the silent breathing multitude in the darkness. Radium is an element that is breaking up and flying to pieces. But perhaps all elements are doing that at less perceptible rates. Uranium certainly is; thorium--the stuff of this incandescent gas mantle--certainly is; actinium. I feel that we are but beginning the list. And we know now that the atom, that once we thought hard and impenetrable, and indivisible and final and--lifeless--lifeless, is really a reservoir of

immense energy. That is the most wonderful thing about all this work. A little while ago we thought of the atoms as we thought of bricks, as solid building material, as substantial matter, as unit masses of lifeless stuff, and behold! these bricks are boxes, treasure boxes, boxes full of the intensest force. This little bottle contains about a pint of uranium oxide; that is to say, about fourteen ounces of the element uranium. It is worth about a pound. And in this bottle, ladies and gentlemen, in the atoms in this bottle there slumbers at least as much energy as we could get by burning a hundred and sixty tons of coal. If at a word, in one instant I could suddenly release that energy here and now it would blow us and everything about us to fragments; if I could turn it into the machinery that lights this city, it could keep Edinburgh brightly lit for a week. But at present no man knows, no man has an inkling of how this little lump of stuff can be made to hasten the release of its store. It does release it, as a burn trickles. Slowly the uranium changes into radium, the radium changes into a gas called the radium emanation, and that again to what we call radium A, and so the process goes on, giving out energy at every stage, until at last we reach the last stage of all, which is, so far as we can tell at present, lead. But we cannot hasten it.'

'I take ye, man,' whispered the chuckle-headed lad, with his red hands tightening like a vice upon his knee. 'I take ye, man. Go on! Oh, go on!'

The professor went on after a little pause. 'Why is the change gradual?' he asked. 'Why does only a minute fraction of the radium disintegrate in any particular second? Why does it dole itself out so slowly and so exactly? Why does not all the uranium change to radium and all the radium change to the next lowest thing at once? Why this decay by dribblets; why not a decay en masse? . . . Suppose presently we find it is possible to quicken that decay?'

The chuckle-headed lad nodded rapidly. The wonderful inevitable idea was coming. He drew his knee up towards his chin and swayed in his seat with excitement. 'Why not?' he echoed, 'why not?'

The professor lifted his forefinger.

'Given that knowledge,' he said, 'mark what we should be able to do! We should not only be able to use this uranium and thorium; not only should we have a source of power so potent that a man might carry in his hand the energy to light a city for a year, fight a fleet of battleships, or drive one of our giant liners across the Atlantic; but we should also have a clue that would enable us at last to quicken the process of disintegration in all the other elements, where decay is still so slow as to escape our finest measurements. Every scrap of solid matter in the world would become an available reservoir of concentrated force. Do you realise, ladies and gentlemen, what these things would mean for us?'

The scrub head nodded. 'Oh! go on. Go on.'

'It would mean a change in human conditions that I can only compare to the discovery of fire, that first discovery that lifted man above the brute. We stand to-day towards radio-activity as our ancestor stood towards fire before he had learnt to make it. He knew it then only as a strange thing utterly beyond his control, a flare on the crest of the volcano, a red destruction that poured through the forest. So it is that we know radio-activity to-day. This--this is the dawn of a new day in human living. At the climax of that civilisation which had its beginning in the hammered flint and the fire-stick of the savage, just when it is becoming apparent that our ever-increasing needs cannot be borne indefinitely by our present sources of energy, we discover suddenly the possibility of an

entirely new civilisation. The energy we need for our very existence, and with which Nature supplies us still so grudgingly, is in reality locked up in inconceivable quantities all about us. We cannot pick that lock at present, but----'

He paused. His voice sank so that everybody strained a little to hear him.

'----we will.'

He put up that lean finger again, his solitary gesture.

'And then,' he said. . . .

'Then that perpetual struggle for existence, that perpetual struggle to live on the bare surplus of Nature's energies will cease to be the lot of Man. Man will step from the pinnacle of this civilisation to the beginning of the next. I have no eloquence, ladies and gentlemen, to express the vision of man's material destiny that opens out before me. I see the desert continents transformed, the poles no longer wildernesses of ice, the whole world once more Eden. I see the power of man reach out among the stars....'

He stopped abruptly with a catching of the breath that many an actor or orator might have envied.

The lecture was over, the audience hung silent for a few seconds, sighed, became audible, stirred, fluttered, prepared for dispersal. More light was turned on and what had been a dim mass of figures became a bright confusion of movement. Some of the people signalled to friends, some crowded down towards the platform to examine the lecturer's apparatus and make notes of his diagrams. But the chuckle-headed lad with the scrub hair wanted no such detailed frittering away of the thoughts that had

inspired him. He wanted to be alone with them; he elbowed his way out almost fiercely, he made himself as angular and bony as a cow, fearing lest some one should speak to him, lest some one should invade his glowing sphere of enthusiasm.

He went through the streets with a rapt face, like a saint who sees visions. He had arms disproportionately long, and ridiculous big feet.

He must get alone, get somewhere high out of all this crowding of commonness, of everyday life.

He made his way to the top of Arthur's Seat, and there he sat for a long time in the golden evening sunshine, still, except that ever and again he whispered to himself some precious phrase that had stuck in his mind.

'If,' he whispered, 'if only we could pick that lock. . . .'

The sun was sinking over the distant hills. Already it was shorn of its beams, a globe of ruddy gold, hanging over the great banks of cloud that would presently engulf it.

'Eh!' said the youngster. 'Eh!'

He seemed to wake up at last out of his entrancement, and the red sun was there before his eyes. He stared at it, at first without intelligence, and then with a gathering recognition. Into his mind came a strange echo of that ancestral fancy, that fancy of a Stone Age savage, dead and scattered bones among the drift two hundred thousand years ago.

'Ye auld thing,' he said--and his eyes were shining, and he made a kind of grabbing gesture with his hand; 'ye auld red thing.... We'll have ye YET.'

CHAPTER THE FIRST

THE NEW SOURCE OF ENERGY

Section I

The problem which was already being mooted by such scientific men as Ramsay, Rutherford, and Soddy, in the very beginning of the twentieth century, the problem of inducing radio-activity in the heavier elements and so tapping the internal energy of atoms, was solved by a wonderful combination of induction, intuition, and luck by Holsten so soon as the year 1933. From the first detection of radio-activity to its first subjugation to human purpose measured little more than a quarter of a century. For twenty years after that, indeed, minor difficulties prevented any striking practical application of his success, but the essential thing was done, this new boundary in the march of human progress was crossed, in that year. He set up atomic disintegration in a minute particle of bismuth; it exploded with great violence into a heavy gas of extreme radio-activity, which disintegrated in its turn in the course of seven days, and it was only after another year's work that he was able to show practically that the last result of this rapid release of energy was gold. But the thing was done--at the cost of a blistered chest and an injured finger, and from the moment when the invisible speck of bismuth flashed into riving and rending energy, Holsten knew that he had opened a way for mankind, however narrow and dark it might still be, to worlds of limitless power. He recorded as much in the strange diary biography he left the world, a diary that was up to that particular moment a mass of speculations and calculations, and which suddenly became for a space an amazingly minute and human record of sensations and emotions that all humanity might

understand.

He gives, in broken phrases and often single words, it is true, but none the less vividly for that, a record of the twenty-four hours following the demonstration of the correctness of his intricate tracery of computations and guesses. 'I thought I should not sleep,' he writes--the words he omitted are supplied in brackets--(on account of) 'pain in (the) hand and chest and (the) wonder of what I had done.... Slept like a child.'

He felt strange and disconcerted the next morning; he had nothing to do, he was living alone in apartments in Bloomsbury, and he decided to go up to Hampstead Heath, which he had known when he was a little boy as a breezy playground. He went up by the underground tube that was then the recognised means of travel from one part of London to another, and walked up Heath Street from the tube station to the open heath. He found it a gully of planks and scaffoldings between the hoardings of house-wreckers. The spirit of the times had seized upon that narrow, steep, and winding thoroughfare, and was in the act of making it commodious and interesting, according to the remarkable ideals of Neo-Georgian aestheticism. Such is the illogical quality of humanity that Holsten, fresh from work that was like a petard under the seat of current civilisation, saw these changes with regret. He had come up Heath Street perhaps a thousand times, had known the windows of all the little shops, spent hours in the vanished cinematograph theatre, and marvelled at the high-flung early Georgian houses upon the westward bank of that old gully of a thoroughfare; he felt strange with all these familiar things gone. He escaped at last with a feeling of relief from this choked alley of trenches and holes and cranes, and emerged upon the old familiar scene about the White Stone Pond. That, at least, was very much as it used to be.

There were still the fine old red-brick houses to left and right

of him; the reservoir had been improved by a portico of marble, the white-fronted inn with the clustering flowers above its portico still stood out at the angle of the ways, and the blue view to Harrow Hill and Harrow spire, a view of hills and trees and shining waters and wind-driven cloud shadows, was like the opening of a great window to the ascending Londoner. All that was very reassuring. There was the same strolling crowd, the same perpetual miracle of motors dodging through it harmlessly, escaping headlong into the country from the Sabbatical stuffiness behind and below them. There was a band still, a women's suffrage meeting--for the suffrage women had won their way back to the tolerance, a trifle derisive, of the populace again--socialist orators, politicians, a band, and the same wild uproar of dogs, frantic with the gladness of their one blessed weekly release from the back yard and the chain. And away along the road to the Spaniards strolled a vast multitude, saying, as ever, that the view of London was exceptionally clear that day.

Young Holsten's face was white. He walked with that uneasy affectation of ease that marks an overstrained nervous system and an under-exercised body. He hesitated at the White Stone Pond whether to go to the left of it or the right, and again at the fork of the roads. He kept shifting his stick in his hand, and every now and then he would get in the way of people on the footpath or be jostled by them because of the uncertainty of his movements. He felt, he confesses, 'inadequate to ordinary existence.' He seemed to himself to be something inhuman and mischievous. All the people about him looked fairly prosperous, fairly happy, fairly well adapted to the lives they had to lead--a week of work and a Sunday of best clothes and mild promenading--and he had launched something that would disorganise the entire fabric that held their contentments and ambitions and satisfactions together. 'Felt like an imbecile who has presented a box full of loaded revolvers to a Creche,' he notes.

He met a man named Lawson, an old school-fellow, of whom history now knows only that he was red-faced and had a terrier. He and Holsten walked together and Holsten was sufficiently pale and jumpy for Lawson to tell him he overworked and needed a holiday. They sat down at a little table outside the County Council house of Golders Hill Park and sent one of the waiters to the Bull and Bush for a couple of bottles of beer, no doubt at Lawson's suggestion. The beer warmed Holsten's rather dehumanised system. He began to tell Lawson as clearly as he could to what his great discovery amounted. Lawson feigned attention, but indeed he had neither the knowledge nor the imagination to understand. 'In the end, before many years are out, this must eventually change war, transit, lighting, building, and every sort of manufacture, even agriculture, every material human concern----'

Then Holsten stopped short. Lawson had leapt to his feet. 'Damn that dog!' cried Lawson. 'Look at it now. Hi! Here! Phewoo--phewoo phewoo! Come HERE, Bobs! Come HERE!'

The young scientific man, with his bandaged hand, sat at the green table, too tired to convey the wonder of the thing he had sought so long, his friend whistled and bawled for his dog, and the Sunday people drifted about them through the spring sunshine. For a moment or so Holsten stared at Lawson in astonishment, for he had been too intent upon what he had been saying to realise how little Lawson had attended.

Then he remarked, 'WELL!' and smiled faintly, and--finished the tankard of beer before him.

Lawson sat down again. 'One must look after one's dog,' he said, with a note of apology. 'What was it you were telling me?'

Section 2

In the evening Holsten went out again. He walked to Saint Paul's Cathedral, and stood for a time near the door listening to the evening service. The candles upon the altar reminded him in some odd way of the fireflies at Fiesole. Then he walked back through the evening lights to Westminster. He was oppressed, he was indeed scared, by his sense of the immense consequences of his discovery. He had a vague idea that night that he ought not to publish his results, that they were premature, that some secret association of wise men should take care of his work and hand it on from generation to generation until the world was riper for its practical application. He felt that nobody in all the thousands of people he passed had really awakened to the fact of change, they trusted the world for what it was, not to alter too rapidly, to respect their trusts, their assurances, their habits, their little accustomed traffics and hard-won positions.

He went into those little gardens beneath the over-hanging, brightly-lit masses of the Savoy Hotel and the Hotel Cecil. He sat down on a seat and became aware of the talk of the two people next to him. It was the talk of a young couple evidently on the eve of marriage. The man was congratulating himself on having regular employment at last; 'they like me,' he said, 'and I like the job. If I work up--in'r dozen years or so I ought to be gettin' somethin' pretty comfortable. That's the plain sense of it, Hetty. There ain't no reason whatsoever why we shouldn't get along very decently--very decently indeed.'

The desire for little successes amidst conditions securely fixed! So it struck upon Holsten's mind. He added in his diary, 'I had a sense of all this globe as that....'

By that phrase he meant a kind of clairvoyant vision of this populated world as a whole, of all its cities and towns and villages, its high roads and the inns beside them, its gardens and farms and upland pastures, its boatmen and sailors, its ships

coming along the great circles of the ocean, its time-tables and appointments and payments and dues as it were one unified and progressive spectacle. Sometimes such visions came to him; his mind, accustomed to great generalisations and yet acutely sensitive to detail, saw things far more comprehensively than the minds of most of his contemporaries. Usually the teeming sphere moved on to its predestined ends and circled with a stately swiftness on its path about the sun. Usually it was all a living progress that altered under his regard. But now fatigue a little deadened him to that incessancy of life, it seemed now just an eternal circling. He lapsed to the commoner persuasion of the great fixities and recurrences of the human routine. The remoter past of wandering savagery, the inevitable changes of to-morrow were veiled, and he saw only day and night, seed-time and harvest, loving and begetting, births and deaths, walks in the summer sunlight and tales by the winter fireside, the ancient sequence of hope and acts and age perennially renewed, eddying on for ever and ever, save that now the impious hand of research was raised to overthrow this drowsy, gently humming, habitual, sunlit spinning-top of man's existence....

For a time he forgot wars and crimes and hates and persecutions, famine and pestilence, the cruelties of beasts, weariness and the bitter wind, failure and insufficiency and retrocession. He saw all mankind in terms of the humble Sunday couple upon the seat beside him, who schemed their inglorious outlook and improbable contentments. 'I had a sense of all this globe as that.'

His intelligence struggled against this mood and struggled for a time in vain. He reassured himself against the invasion of this disconcerting idea that he was something strange and inhuman, a loose wanderer from the flock returning with evil gifts from his sustained unnatural excursions amidst the darkneses and phosphorescences beneath the fair surfaces of life. Man had not been always thus; the instincts and desires of the little home,

the little plot, was not all his nature; also he was an adventurer, an experimenter, an unresting curiosity, an insatiable desire. For a few thousand generations indeed he had tilled the earth and followed the seasons, saying his prayers, grinding his corn and trampling the October winepress, yet not for so long but that he was still full of restless stirrings.

'If there have been home and routine and the field,' thought Holsten, 'there have also been wonder and the sea.'

He turned his head and looked up over the back of the seat at the great hotels above him, full of softly shaded lights and the glow and colour and stir of feasting. Might his gift to mankind mean simply more of that? . . .

He got up and walked out of the garden, surveyed a passing tram-car, laden with warm light, against the deep blues of evening, dripping and trailing long skirts of shining reflection; he crossed the Embankment and stood for a time watching the dark river and turning ever and again to the lit buildings and bridges. His mind began to scheme conceivable replacements of all those clustering arrangements. . . .

'It has begun,' he writes in the diary in which these things are recorded. 'It is not for me to reach out to consequences I cannot foresee. I am a part, not a whole; I am a little instrument in the armoury of Change. If I were to burn all these papers, before a score of years had passed, some other man would be doing this. . .

Section 3

Holsten, before he died, was destined to see atomic energy dominating every other source of power, but for some years yet a vast network of difficulties in detail and application kept the

new discovery from any effective invasion of ordinary life. The path from the laboratory to the workshop is sometimes a tortuous one; electro-magnetic radiations were known and demonstrated for twenty years before Marconi made them practically available, and in the same way it was twenty years before induced radio-activity could be brought to practical utilisation. The thing, of course, was discussed very much, more perhaps at the time of its discovery than during the interval of technical adaptation, but with very little realisation of the huge economic revolution that impended. What chiefly impressed the journalists of 1933 was the production of gold from bismuth and the realisation albeit upon unprofitable lines of the alchemist's dreams; there was a considerable amount of discussion and expectation in that more intelligent section of the educated publics of the various civilised countries which followed scientific development; but for the most part the world went about its business--as the inhabitants of those Swiss villages which live under the perpetual threat of overhanging rocks and mountains go about their business--just as though the possible was impossible, as though the inevitable was postponed for ever because it was delayed.

It was in 1953 that the first Holsten-Roberts engine brought induced radio-activity into the sphere of industrial production, and its first general use was to replace the steam-engine in electrical generating stations. Hard upon the appearance of this came the Dass-Tata engine--the invention of two among the brilliant galaxy of Bengali inventors the modernisation of Indian thought was producing at this time--which was used chiefly for automobiles, aeroplanes, waterplanes, and such-like, mobile purposes. The American Kemp engine, differing widely in principle but equally practicable, and the Krupp-Erlanger came hard upon the heels of this, and by the autumn of 1954 a gigantic replacement of industrial methods and machinery was in progress all about the habitable globe. Small wonder was this when the

cost, even of these earliest and clumsiest of atomic engines, is compared with that of the power they superseded. Allowing for lubrication the Dass-Tata engine, once it was started cost a penny to run thirty-seven miles, and added only nine and quarter pounds to the weight of the carriage it drove. It made the heavy alcohol-driven automobile of the time ridiculous in appearance as well as preposterously costly. For many years the price of coal and every form of liquid fuel had been clambering to levels that made even the revival of the draft horse seem a practicable possibility, and now with the abrupt relaxation of this stringency, the change in appearance of the traffic upon the world's roads was instantaneous. In three years the frightful armoured monsters that had hooted and smoked and thundered about the world for four awful decades were swept away to the dealers in old metal, and the highways thronged with light and clean and shimmering shapes of silvered steel. At the same time a new impetus was given to aviation by the relatively enormous power for weight of the atomic engine, it was at last possible to add Redmayne's ingenious helicopter ascent and descent engine to the vertical propeller that had hitherto been the sole driving force of the aeroplane without overweighting the machine, and men found themselves possessed of an instrument of flight that could hover or ascend or descend vertically and gently as well as rush wildly through the air. The last dread of flying vanished. As the journalists of the time phrased it, this was the epoch of the Leap into the Air. The new atomic aeroplane became indeed a mania; every one of means was frantic to possess a thing so controllable, so secure and so free from the dust and danger of the road, and in France alone in the year 1943 thirty thousand of these new aeroplanes were manufactured and licensed, and soared humming softly into the sky.

And with an equal speed atomic engines of various types invaded industrialism. The railways paid enormous premiums for priority in the delivery of atomic traction engines, atomic smelting was

embarked upon so eagerly as to lead to a number of disastrous explosions due to inexperienced handling of the new power, and the revolutionary cheapening of both materials and electricity made the entire reconstruction of domestic buildings a matter merely dependent upon a reorganisation of the methods of the builder and the house-furnisher. Viewed from the side of the new power and from the point of view of those who financed and manufactured the new engines and material it required the age of the Leap into the Air was one of astonishing prosperity.

Patent-holding companies were presently paying dividends of five or six hundred per cent. and enormous fortunes were made and fantastic wages earned by all who were concerned in the new developments. This prosperity was not a little enhanced by the fact that in both the Dass-Tata and Holsten-Roberts engines one of the recoverable waste products was gold--the former disintegrated dust of bismuth and the latter dust of lead--and that this new supply of gold led quite naturally to a rise in prices throughout the world.

This spectacle of feverish enterprise was productivity, this crowding flight of happy and fortunate rich people--every great city was as if a crawling ant-hill had suddenly taken wing--was the bright side of the opening phase of the new epoch in human history. Beneath that brightness was a gathering darkness, a deepening dismay. If there was a vast development of production there was also a huge destruction of values. These glaring factories working night and day, these glittering new vehicles swinging noiselessly along the roads, these flights of dragon-flies that swooped and soared and circled in the air, were indeed no more than the brightnesses of lamps and fires that gleam out when the world sinks towards twilight and the night. Between these high lights accumulated disaster, social catastrophe. The coal mines were manifestly doomed to closure at no very distant date, the vast amount of capital invested in oil was becoming unsaleable, millions of coal miners, steel workers

upon the old lines, vast swarms of unskilled or under-skilled labourers in innumerable occupations, were being flung out of employment by the superior efficiency of the new machinery, the rapid fall in the cost of transit was destroying high land values at every centre of population, the value of existing house property had become problematical, gold was undergoing headlong depreciation, all the securities upon which the credit of the world rested were slipping and sliding, banks were tottering, the stock exchanges were scenes of feverish panic;--this was the reverse of the spectacle, these were the black and monstrous under-consequences of the Leap into the Air.

There is a story of a demented London stockbroker running out into Threadneedle Street and tearing off his clothes as he ran. 'The Steel Trust is scrapping the whole of its plant,' he shouted. 'The State Railways are going to scrap all their engines. Everything's going to be scrapped--everything. Come and scrap the mint, you fellows, come and scrap the mint!'

In the year 1955 the suicide rate for the United States of America quadrupled any previous record. There was an enormous increase also in violent crime throughout the world. The thing had come upon an unprepared humanity; it seemed as though human society was to be smashed by its own magnificent gains.

For there had been no foresight of these things. There had been no attempt anywhere even to compute the probable dislocations this flood of inexpensive energy would produce in human affairs. The world in these days was not really governed at all, in the sense in which government came to be understood in subsequent years. Government was a treaty, not a design; it was forensic, conservative, disputatious, unseeing, unthinking, uncreative; throughout the world, except where the vestiges of absolutism still sheltered the court favourite and the trusted servant, it was in the hands of the predominant caste of lawyers, who had an

enormous advantage in being the only trained caste. Their professional education and every circumstance in the manipulation of the fantastically naive electoral methods by which they clambered to power, conspired to keep them contemptuous of facts, conscientiously unimaginative, alert to claim and seize advantages and suspicious of every generosity. Government was an obstructive business of energetic fractions, progress went on outside of and in spite of public activities, and legislation was the last crippling recognition of needs so clamorous and imperative and facts so aggressively established as to invade even the dingy seclusions of the judges and threaten the very existence of the otherwise inattentive political machine.

The world was so little governed that with the very coming of plenty, in the full tide of an incalculable abundance, when everything necessary to satisfy human needs and everything necessary to realise such will and purpose as existed then in human hearts was already at hand, one has still to tell of hardship, famine, anger, confusion, conflict, and incoherent suffering. There was no scheme for the distribution of this vast new wealth that had come at last within the reach of men; there was no clear conception that any such distribution was possible. As one attempts a comprehensive view of those opening years of the new age, as one measures it against the latent achievement that later years have demonstrated, one begins to measure the blindness, the narrowness, the insensate unimaginative individualism of the pre-atomic time. Under this tremendous dawn of power and freedom, under a sky ablaze with promise, in the very presence of science standing like some bountiful goddess over all the squat darkneses of human life, holding patiently in her strong arms, until men chose to take them, security, plenty, the solution of riddles, the key of the bravest adventures, in her very presence, and with the earnest of her gifts in court, the world was to witness such things as the squalid spectacle of the Dass-Tata patent litigation.

There in a stuffy court in London, a grimy oblong box of a room, during the exceptional heat of the May of 1956, the leading counsel of the day argued and shouted over a miserable little matter of more royalties or less and whether the Dass-Tata company might not bar the Holsten-Roberts' methods of utilising the new power. The Dass-Tata people were indeed making a strenuous attempt to secure a world monopoly in atomic engineering. The judge, after the manner of those times, sat raised above the court, wearing a preposterous gown and a foolish huge wig, the counsel also wore dirty-looking little wigs and queer black gowns over their usual costume, wigs and gowns that were held to be necessary to their pleading, and upon unclean wooden benches stirred and whispered artful-looking solicitors, busily scribbling reporters, the parties to the case, expert witnesses, interested people, and a jostling confusion of subpoenaed persons, briefless young barristers (forming a style on the most esteemed and truculent examples) and casual eccentric spectators who preferred this pit of iniquity to the free sunlight outside. Every one was damply hot, the examining King's Counsel wiped the perspiration from his huge, clean-shaven upper lip; and into this atmosphere of grasping contention and human exhalations the daylight filtered through a window that was manifestly dirty. The jury sat in a double pew to the left of the judge, looking as uncomfortable as frogs that have fallen into an ash-pit, and in the witness-box lied the would-be omnivorous Dass, under cross-examination....

Holsten had always been accustomed to publish his results so soon as they appeared to him to be sufficiently advanced to furnish a basis for further work, and to that confiding disposition and one happy flash of adaptive invention the alert Dass owed his claim....

But indeed a vast multitude of such sharp people were clutching,

patenting, pre-empting, monopolising this or that feature of the new development, seeking to subdue this gigantic winged power to the purposes of their little lusts and avarice. That trial is just one of innumerable disputes of the same kind. For a time the face of the world festered with patent legislation. It chanced, however, to have one oddly dramatic feature in the fact that Holsten, after being kept waiting about the court for two days as a beggar might have waited at a rich man's door, after being bullied by ushers and watched by policemen, was called as a witness, rather severely handled by counsel, and told not to 'quibble' by the judge when he was trying to be absolutely explicit.

The judge scratched his nose with a quill pen, and sneered at Holsten's astonishment round the corner of his monstrous wig. Holsten was a great man, was he? Well, in a law-court great men were put in their places.

'We want to know has the plaintiff added anything to this or hasn't he?' said the judge, 'we don't want to have your views whether Sir Philip Dass's improvements were merely superficial adaptations or whether they were implicit in your paper. No doubt--after the manner of inventors--you think most things that were ever likely to be discovered are implicit in your papers. No doubt also you think too that most subsequent additions and modifications are merely superficial. Inventors have a way of thinking that. The law isn't concerned with that sort of thing. The law has nothing to do with the vanity of inventors. The law is concerned with the question whether these patent rights have the novelty the plaintiff claims for them. What that admission may or may not stop, and all these other things you are saying in your overflowing zeal to answer more than the questions addressed to you--none of these things have anything whatever to do with the case in hand. It is a matter of constant astonishment to me in this court to see how you scientific men, with all your

extraordinary claims to precision and veracity, wander and wander so soon as you get into the witness-box. I know no more unsatisfactory class of witness. The plain and simple question is, has Sir Philip Dass made any real addition to existing knowledge and methods in this matter or has he not? We don't want to know whether they were large or small additions nor what the consequences of your admission may be. That you will leave to us.'

Holsten was silent.

'Surely?' said the judge, almost pityingly.

'No, he hasn't,' said Holsten, perceiving that for once in his life he must disregard infinitesimals.

'Ah!' said the judge, 'now why couldn't you say that when counsel put the question? . . .'

An entry in Holsten's diary-autobiography, dated five days later, runs: 'Still amazed. The law is the most dangerous thing in this country. It is hundreds of years old. It hasn't an idea. The oldest of old bottles and this new wine, the most explosive wine. Something will overtake them.'

Section 4

There was a certain truth in Holsten's assertion that the law was 'hundreds of years old.' It was, in relation to current thought and widely accepted ideas, an archaic thing. While almost all the material and methods of life had been changing rapidly and were now changing still more rapidly, the law-courts and the legislatures of the world were struggling desperately to meet modern demands with devices and procedures, conceptions of rights and property and authority and obligation that dated from the

rude compromises of relatively barbaric times. The horse-hair wigs and antic dresses of the British judges, their musty courts and overbearing manners, were indeed only the outward and visible intimations of profounder anachronisms. The legal and political organisation of the earth in the middle twentieth century was indeed everywhere like a complicated garment, outworn yet strong, that now fettered the governing body that once it had protected.

Yet that same spirit of free-thinking and outspoken publication that in the field of natural science had been the beginning of the conquest of nature, was at work throughout all the eighteenth and nineteenth centuries preparing the spirit of the new world within the degenerating body of the old. The idea of a greater subordination of individual interests and established institutions to the collective future, is traceable more and more clearly in the literature of those times, and movement after movement fretted itself away in criticism of and opposition to first this aspect and then that of the legal, social, and political order. Already in the early nineteenth century Shelley, with no scrap of alternative, is denouncing the established rulers of the world as Anarchs, and the entire system of ideas and suggestions that was known as Socialism, and more particularly its international side, feeble as it was in creative proposals or any method of transition, still witnesses to the growth of a conception of a modernised system of inter-relationships that should supplant the existing tangle of proprietary legal ideas.

The word 'Sociology' was invented by Herbert Spencer, a popular writer upon philosophical subjects, who flourished about the middle of the nineteenth century, but the idea of a state, planned as an electric-traction system is planned, without reference to pre-existing apparatus, upon scientific lines, did not take a very strong hold upon the popular imagination of the world until the twentieth century. Then, the growing impatience

of the American people with the monstrous and socially paralysing party systems that had sprung out of their absurd electoral arrangements, led to the appearance of what came to be called the 'Modern State' movement, and a galaxy of brilliant writers, in America, Europe, and the East, stirred up the world to the thought of bolder rearrangements of social interaction, property, employment, education, and government, than had ever been contemplated before. No doubt these Modern State ideas were very largely the reflection upon social and political thought of the vast revolution in material things that had been in progress for two hundred years, but for a long time they seemed to be having no more influence upon existing institutions than the writings of Rousseau and Voltaire seemed to have had at the time of the death of the latter. They were fermenting in men's minds, and it needed only just such social and political stresses as the coming of the atomic mechanisms brought about, to thrust them forward abruptly into crude and startling realisation.

Section 5

Frederick Barnet's *Wander Jahre* is one of those autobiographical novels that were popular throughout the third and fourth decades of the twentieth century. It was published in 1970, and one must understand *Wander Jahre* rather in a spiritual and intellectual than in a literal sense. It is indeed an allusive title, carrying the world back to the *Wilhelm Meister* of Goethe, a century and a half earlier.

Its author, Frederick Barnet, gives a minute and curious history of his life and ideas between his nineteenth and his twenty-third birthdays. He was neither a very original nor a very brilliant man, but he had a trick of circumstantial writing; and though no authentic portrait was to survive for the information of posterity, he betrays by a score of casual phrases that he was short, sturdy, inclined to be plump, with a 'rather blobby' face,

and full, rather projecting blue eyes. He belonged until the financial debacle of 1956 to the class of fairly prosperous people, he was a student in London, he aeroplaned to Italy and then had a pedestrian tour from Genoa to Rome, crossed in the air to Greece and Egypt, and came back over the Balkans and Germany. His family fortunes, which were largely invested in bank shares, coal mines, and house property, were destroyed. Reduced to penury, he sought to earn a living. He suffered great hardship, and was then caught up by the war and had a year of soldiering, first as an officer in the English infantry and then in the army of pacification. His book tells all these things so simply and at the same time so explicitly, that it remains, as it were, an eye by which future generations may have at least one man's vision of the years of the Great Change.

And he was, he tells us, a 'Modern State' man 'by instinct' from the beginning. He breathed in these ideas in the class rooms and laboratories of the Carnegie Foundation school that rose, a long and delicately beautiful facade, along the South Bank of the Thames opposite the ancient dignity of Somerset House. Such thought was interwoven with the very fabric of that pioneer school in the educational renaissance in England. After the customary exchange years in Heidelberg and Paris, he went into the classical school of London University. The older so-called 'classical' education of the British pedagogues, probably the most paralysing, ineffective, and foolish routine that ever wasted human life, had already been swept out of this great institution in favour of modern methods; and he learnt Greek and Latin as well as he had learnt German, Spanish, and French, so that he wrote and spoke them freely, and used them with an unconscious ease in his study of the foundation civilisations of the European system to which they were the key. (This change was still so recent that he mentions an encounter in Rome with an 'Oxford don' who 'spoke Latin with a Wiltshire accent and manifest discomfort, wrote Greek letters with his tongue out, and

seemed to think a Greek sentence a charm when it was a quotation and an impropriety when it wasn't.)

Barnet saw the last days of the coal-steam engines upon the English railways and the gradual cleansing of the London atmosphere as the smoke-creating sea-coal fires gave place to electric heating. The building of laboratories at Kensington was still in progress, and he took part in the students' riots that delayed the removal of the Albert Memorial. He carried a banner with 'We like Funny Statuary' on one side, and on the other 'Seats and Canopies for Statues, Why should our Great Departed Stand in the Rain?' He learnt the rather athletic aviation of those days at the University grounds at Sydenham, and he was fined for flying over the new prison for political libellers at Wormwood Scrubs, 'in a manner calculated to exhilarate the prisoners while at exercise.' That was the time of the attempted suppression of any criticism of the public judicature and the place was crowded with journalists who had ventured to call attention to the dementia of Chief Justice Abrahams. Barnet was not a very good aviator, he confesses he was always a little afraid of his machine--there was excellent reason for every one to be afraid of those clumsy early types--and he never attempted steep descents or very high flying. He also, he records, owned one of those oil-driven motor-bicycles whose clumsy complexity and extravagant filthiness still astonish the visitors to the museum of machinery at South Kensington. He mentions running over a dog and complains of the ruinous price of 'spatchcocks' in Surrey. 'Spatchcocks,' it seems, was a slang term for crushed hens.

He passed the examinations necessary to reduce his military service to a minimum, and his want of any special scientific or technical qualification and a certain precocious corpulence that handicapped his aviation indicated the infantry of the line as his sphere of training. That was the most generalised form of

soldiering. The development of the theory of war had been for some decades but little assisted by any practical experience. What fighting had occurred in recent years, had been fighting in minor or uncivilised states, with peasant or barbaric soldiers and with but a small equipment of modern contrivances, and the great powers of the world were content for the most part to maintain armies that sustained in their broader organisation the traditions of the European wars of thirty and forty years before. There was the infantry arm to which Barnett belonged and which was supposed to fight on foot with a rifle and be the main portion of the army. There were cavalry forces (horse soldiers), having a ratio to the infantry that had been determined by the experiences of the Franco-German war in 1871. There was also artillery, and for some unexplained reason much of this was still drawn by horses; though there were also in all the European armies a small number of motor-guns with wheels so constructed that they could go over broken ground. In addition there were large developments of the engineering arm, concerned with motor transport, motor-bicycle scouting, aviation, and the like.

No first-class intelligence had been sought to specialise in and work out the problem of warfare with the new appliances and under modern conditions, but a succession of able jurists, Lord Haldane, Chief Justice Briggs, and that very able King's Counsel, Philbrick, had reconstructed the army frequently and thoroughly and placed it at last, with the adoption of national service, upon a footing that would have seemed very imposing to the public of 1900. At any moment the British Empire could now put a million and a quarter of arguable soldiers upon the board of Welt-Politik. The traditions of Japan and the Central European armies were more princely and less forensic; the Chinese still refused resolutely to become a military power, and maintained a small standing army upon the American model that was said, so far as it went, to be highly efficient, and Russia, secured by a stringent administration against internal criticism, had scarcely

altered the design of a uniform or the organisation of a battery since the opening decades of the century. Barnett's opinion of his military training was manifestly a poor one, his Modern State ideas disposed him to regard it as a bore, and his common sense condemned it as useless. Moreover, his habit of body made him peculiarly sensitive to the fatigues and hardships of service.

'For three days in succession we turned out before dawn and--for no earthly reason--without breakfast,' he relates. 'I suppose that is to show us that when the Day comes the first thing will be to get us thoroughly uncomfortable and rotten. We then proceeded to Kriegspiel, according to the mysterious ideas of those in authority over us. On the last day we spent three hours under a hot if early sun getting over eight miles of country to a point we could have reached in a motor omnibus in nine minutes and a half--I did it the next day in that--and then we made a massed attack upon entrenchments that could have shot us all about three times over if only the umpires had let them. Then came a little bayonet exercise, but I doubt if I am sufficiently a barbarian to stick this long knife into anything living. Anyhow in this battle I shouldn't have had a chance. Assuming that by some miracle I hadn't been shot three times over, I was far too hot and blown when I got up to the entrenchments even to lift my beastly rifle. It was those others would have begun the sticking....

'For a time we were watched by two hostile aeroplanes; then our own came up and asked them not to, and--the practice of aerial warfare still being unknown--they very politely desisted and went away and did dives and circles of the most charming description over the Fox Hills.'

All Barnett's accounts of his military training were written in the same half-contemptuous, half-protesting tone. He was of opinion that his chances of participating in any real warfare

were very slight, and that, if after all he should participate, it was bound to be so entirely different from these peace manoeuvres that his only course as a rational man would be to keep as observantly out of danger as he could until he had learnt the tricks and possibilities of the new conditions. He states this quite frankly. Never was a man more free from sham heroics.

Section 6

Barnet welcomed the appearance of the atomic engine with the zest of masculine youth in all fresh machinery, and it is evident that for some time he failed to connect the rush of wonderful new possibilities with the financial troubles of his family. 'I knew my father was worried,' he admits. That cast the smallest of shadows upon his delighted departure for Italy and Greece and Egypt with three congenial companions in one of the new atomic models. They flew over the Channel Isles and Touraine, he mentions, and circled about Mont Blanc--'These new helicopters, we found,' he notes, 'had abolished all the danger and strain of sudden drops to which the old-time aeroplanes were liable'--and then he went on by way of Pisa, Paestum, Ghirgenti, and Athens, to visit the pyramids by moonlight, flying thither from Cairo, and to follow the Nile up to Khartum. Even by later standards, it must have been a very gleeful holiday for a young man, and it made the tragedy of his next experiences all the darker. A week after his return his father, who was a widower, announced himself ruined, and committed suicide by means of an unscheduled opiate.

At one blow Barnet found himself flung out of the possessing, spending, enjoying class to which he belonged, penniless and with no calling by which he could earn a living. He tried teaching and some journalism, but in a little while he found himself on the underside of a world in which he had always reckoned to live in the sunshine. For innumerable men such an experience has meant mental and spiritual destruction, but Barnet, in spite of

his bodily gravitation towards comfort, showed himself when put to the test, of the more valiant modern quality. He was saturated with the creative stoicism of the heroic times that were already dawning, and he took his difficulties and discomforts stoutly as his appointed material, and turned them to expression.

Indeed, in his book, he thanks fortune for them. 'I might have lived and died,' he says, 'in that neat fool's paradise of secure lavishness above there. I might never have realised the gathering wrath and sorrow of the ousted and exasperated masses. In the days of my own prosperity things had seemed to me to be very well arranged.' Now from his new point of view he was to find they were not arranged at all; that government was a compromise of aggressions and powers and lassitudes, and law a convention between interests, and that the poor and the weak, though they had many negligent masters, had few friends.

'I had thought things were looked after,' he wrote. 'It was with a kind of amazement that I tramped the roads and starved--and found that no one in particular cared.'

He was turned out of his lodging in a backward part of London.

'It was with difficulty I persuaded my landlady--she was a needy widow, poor soul, and I was already in her debt--to keep an old box for me in which I had locked a few letters, keepsakes, and the like. She lived in great fear of the Public Health and Morality Inspectors, because she was sometimes too poor to pay the customary tip to them, but at last she consented to put it in a dark tiled place under the stairs, and then I went forth into the world--to seek first the luck of a meal and then shelter.'

He wandered down into the thronging gayer parts of London, in which a year or so ago he had been numbered among the spenders.

London, under the Visible Smoke Law, by which any production of visible smoke with or without excuse was punishable by a fine, had already ceased to be the sombre smoke-darkened city of the Victorian time; it had been, and indeed was, constantly being rebuilt, and its main streets were already beginning to take on those characteristics that distinguished them throughout the latter half of the twentieth century. The insanitary horse and the plebeian bicycle had been banished from the roadway, which was now of a resilient, glass-like surface, spotlessly clean; and the foot passenger was restricted to a narrow vestige of the ancient footpath on either side of the track and forbidden at the risk of a fine, if he survived, to cross the roadway. People descended from their automobiles upon this pavement and went through the lower shops to the lifts and stairs to the new ways for pedestrians, the Rows, that ran along the front of the houses at the level of the first story, and, being joined by frequent bridges, gave the newer parts of London a curiously Venetian appearance. In some streets there were upper and even third-story Rows. For most of the day and all night the shop windows were lit by electric light, and many establishments had made, as it were, canals of public footpaths through their premises in order to increase their window space.

Barnet made his way along this night-scene rather apprehensively since the police had power to challenge and demand the Labour Card of any indigent-looking person, and if the record failed to show he was in employment, dismiss him to the traffic pavement below.

But there was still enough of his former gentility about Barnet's appearance and bearing to protect him from this; the police, too, had other things to think of that night, and he was permitted to reach the galleries about Leicester Square--that great focus of London life and pleasure.

He gives a vivid description of the scene that evening. In the centre was a garden raised on arches lit by festoons of lights and connected with the Rows by eight graceful bridges, beneath which hummed the interlacing streams of motor traffic, pulsating as the current alternated between east and west and north and south. Above rose great frontages of intricate rather than beautiful reinforced porcelain, studded with lights, barred by bold illuminated advertisements, and glowing with reflections. There were the two historical music halls of this place, the Shakespeare Memorial Theatre, in which the municipal players revolved perpetually through the cycle of Shakespeare's plays, and four other great houses of refreshment and entertainment whose pinnacles streamed up into the blue obscurity of the night. The south side of the square was in dark contrast to the others; it was still being rebuilt, and a lattice of steel bars surmounted by the frozen gestures of monstrous cranes rose over the excavated sites of vanished Victorian buildings.

This framework attracted Barnet's attention for a time to the exclusion of other interests. It was absolutely still, it had a dead rigidity, a stricken inaction, no one was at work upon it and all its machinery was quiet; but the constructor's globes of vacuum light filled its every interstice with a quivering green moonshine and showed alert but motionless--soldier sentinels!

He asked a passing stroller, and was told that the men had struck that day against the use of an atomic riveter that would have doubled the individual efficiency and halved the number of steel workers.

'Shouldn't wonder if they didn't get chucking bombs,' said Barnet's informant, hovered for a moment, and then went on his way to the Alhambra music hall.

Barnet became aware of an excitement in the newspaper kiosks at

the corners of the square. Something very sensational had been flashed upon the transparencies. Forgetting for a moment his penniless condition, he made his way over a bridge to buy a paper, for in those days the papers, which were printed upon thin sheets of metallic foil, were sold at determinate points by specially licensed purveyors. Half over, he stopped short at a change in the traffic below; and was astonished to see that the police signals were restricting vehicles to the half roadway. When presently he got within sight of the transparencies that had replaced the placards of Victorian times, he read of the Great March of the Unemployed that was already in progress through the West End, and so without expenditure he was able to understand what was coming.

He watched, and his book describes this procession which the police had considered it unwise to prevent and which had been spontaneously organised in imitation of the Unemployed Processions of earlier times. He had expected a mob but there was a kind of sullen discipline about the procession when at last it arrived. What seemed for a time an unending column of men marched wearily, marched with a kind of implacable futility, along the roadway underneath him. He was, he says, moved to join them, but instead he remained watching. They were a dingy, shabby, ineffective-looking multitude, for the most part incapable of any but obsolete and superseded types of labour. They bore a few banners with the time-honoured inscription: 'Work, not Charity,' but otherwise their ranks were unadorned.

They were not singing, they were not even talking, there was nothing truculent nor aggressive in their bearing, they had no definite objective they were just marching and showing themselves in the more prosperous parts of London. They were a sample of that great mass of unskilled cheap labour which the now still cheaper mechanical powers had superseded for evermore. They were being 'scrapped'--as horses had been 'scrapped.'

Barnet leant over the parapet watching them, his mind quickened by his own precarious condition. For a time, he says, he felt nothing but despair at the sight; what should be done, what could be done for this gathering surplus of humanity? They were so manifestly useless--and incapable--and pitiful.

What were they asking for?

They had been overtaken by unexpected things. Nobody had foreseen----

It flashed suddenly into his mind just what the multitudinous shambling enigma below meant. It was an appeal against the unexpected, an appeal to those others who, more fortunate, seemed wiser and more powerful, for something--for INTELLIGENCE. This mute mass, weary footed, rank following rank, protested its persuasion that some of these others must have foreseen these dislocations--that anyhow they ought to have foreseen--and arranged.

That was what this crowd of wreckage was feeling and seeking so dumbly to assert.

'Things came to me like the turning on of a light in a darkened room,' he says. 'These men were praying to their fellow creatures as once they prayed to God! The last thing that men will realise about anything is that it is inanimate. They had transferred their animation to mankind. They still believed there was intelligence somewhere, even if it was careless or malignant.... It had only to be aroused to be conscience-stricken, to be moved to exertion.... And I saw, too, that as yet THERE WAS NO SUCH INTELLIGENCE. The world waits for intelligence. That intelligence has still to be made, that will

for good and order has still to be gathered together, out of scraps of impulse and wandering seeds of benevolence and whatever is fine and creative in our souls, into a common purpose. It's something still to come....'

It is characteristic of the widening thought of the time that this not very heroic young man who, in any previous age, might well have been altogether occupied with the problem of his own individual necessities, should be able to stand there and generalise about the needs of the race.

But upon all the stresses and conflicts of that chaotic time there was already dawning the light of a new era. The spirit of humanity was escaping, even then it was escaping, from its extreme imprisonment in individuals. Salvation from the bitter intensities of self, which had been a conscious religious end for thousands of years, which men had sought in mortifications, in the wilderness, in meditation, and by innumerable strange paths, was coming at last with the effect of naturalness into the talk of men, into the books they read, into their unconscious gestures, into their newspapers and daily purposes and everyday acts. The broad horizons, the magic possibilities that the spirit of the seeker had revealed to them, were charming them out of those ancient and instinctive preoccupations from which the very threat of hell and torment had failed to drive them. And this young man, homeless and without provision even for the immediate hours, in the presence of social disorganisation, distress, and perplexity, in a blazing wilderness of thoughtless pleasure that blotted out the stars, could think as he tells us he thought.

'I saw life plain,' he wrote. 'I saw the gigantic task before us, and the very splendour of its intricate and immeasurable difficulty filled me with exaltation. I saw that we have still to discover government, that we have still to discover education, which is the necessary reciprocal of government, and that all

this--in which my own little speck of a life was so manifestly overwhelmed--this and its yesterday in Greece and Rome and Egypt were nothing, the mere first dust swirls of the beginning, the movements and dim murmurings of a sleeper who will presently be awake....'

Section 7

And then the story tells, with an engaging simplicity, of his descent from this ecstatic vision of reality.

'Presently I found myself again, and I was beginning to feel cold and a little hungry.'

He bethought himself of the John Burns Relief Offices which stood upon the Thames Embankment. He made his way through the galleries of the booksellers and the National Gallery, which had been open continuously day and night to all decently dressed people now for more than twelve years, and across the rose-gardens of Trafalgar Square, and so by the hotel colonnade to the Embankment. He had long known of these admirable offices, which had swept the last beggars and matchsellers and all the casual indigent from the London streets, and he believed that he would, as a matter of course, be able to procure a ticket for food and a night's lodgings and some indication of possible employment.

But he had not reckoned upon the new labour troubles, and when he got to the Embankment he found the offices hopelessly congested and besieged by a large and rather unruly crowd. He hovered for a time on the outskirts of the waiting multitude, perplexed and dismayed, and then he became aware of a movement, a purposive trickling away of people, up through the arches of the great buildings that had arisen when all the railway stations were removed to the south side of the river, and so to the covered

ways of the Strand. And here, in the open glare of midnight, he found unemployed men begging, and not only begging, but begging with astonishing assurance, from the people who were emerging from the small theatres and other such places of entertainment which abounded in that thoroughfare.

This was an altogether unexampled thing. There had been no begging in London streets for a quarter of a century. But that night the police were evidently unwilling or unable to cope with the destitute who were invading those well-kept quarters of the town. They had become stonily blind to anything but manifest disorder.

Barnet walked through the crowd, unable to bring himself to ask; indeed his bearing must have been more valiant than his circumstances, for twice he says that he was begged from. Near the Trafalgar Square gardens, a girl with reddened cheeks and blackened eyebrows, who was walking alone, spoke to him with a peculiar friendliness.

'I'm starving,' he said to her abruptly.

'Oh! poor dear!' she said; and with the impulsive generosity of her kind, glanced round and slipped a silver piece into his hand....

It was a gift that, in spite of the precedent of De Quincey, might under the repressive social legislation of those times, have brought Barnet within reach of the prison lash. But he took it, he confesses, and thanked her as well as he was able, and went off very gladly to get food.

Section 8

A day or so later--and again his freedom to go as he pleased upon

the roads may be taken as a mark of increasing social disorganisation and police embarrassment--he wandered out into the open country. He speaks of the roads of that plutocratic age as being 'fenced with barbed wire against unpropertied people,' of the high-walled gardens and trespass warnings that kept him to the dusty narrowness of the public ways. In the air, happy rich people were flying, heedless of the misfortunes about them, as he himself had been flying two years ago, and along the road swept the new traffic, light and swift and wonderful. One was rarely out of earshot of its whistles and gongs and siren cries even in the field paths or over the open downs. The officials of the labour exchanges were everywhere overworked and infuriated, the casual wards were so crowded that the surplus wanderers slept in ranks under sheds or in the open air, and since giving to wayfarers had been made a punishable offence there was no longer friendship or help for a man from the rare foot passenger or the wayside cottage....

'I wasn't angry,' said Barnet. 'I saw an immense selfishness, a monstrous disregard for anything but pleasure and possession in all those people above us, but I saw how inevitable that was, how certainly if the richest had changed places with the poorest, that things would have been the same. What else can happen when men use science and every new thing that science gives, and all their available intelligence and energy to manufacture wealth and appliances, and leave government and education to the rustling traditions of hundreds of years ago? Those traditions come from the dark ages when there was really not enough for every one, when life was a fierce struggle that might be masked but could not be escaped. Of course this famine grabbing, this fierce dispossession of others, must follow from such a disharmony between material and training. Of course the rich were vulgar and the poor grew savage and every added power that came to men made the rich richer and the poor less necessary and less free. The men I met in the casual wards and the relief offices were all

smouldering for revolt, talking of justice and injustice and revenge. I saw no hope in that talk, nor in anything but patience....'

But he did not mean a passive patience. He meant that the method of social reconstruction was still a riddle, that no effectual rearrangement was possible until this riddle in all its tangled aspects was solved. 'I tried to talk to those discontented men,' he wrote, 'but it was hard for them to see things as I saw them. When I talked of patience and the larger scheme, they answered, "But then we shall all be dead"--and I could not make them see, what is so simple to my own mind, that that did not affect the question. Men who think in lifetimes are of no use to statesmanship.'

He does not seem to have seen a newspaper during those wanderings, and a chance sight of the transparency of a kiosk in the market-place at Bishop's Stortford announcing a 'Grave International Situation' did not excite him very much. There had been so many grave international situations in recent years.

This time it was talk of the Central European powers suddenly attacking the Slav Confederacy, with France and England going to the help of the Slavs.

But the next night he found a tolerable meal awaiting the vagrants in the casual ward, and learnt from the workhouse master that all serviceable trained men were to be sent back on the morrow to their mobilisation centres. The country was on the eve of war. He was to go back through London to Surrey. His first feeling, he records, was one of extreme relief that his days of 'hopeless battering at the underside of civilisation' were at an end. Here was something definite to do, something definitely provided for. But his relief was greatly modified when he found that the mobilisation arrangements had been made so hastily and

carelessly that for nearly thirty-six hours at the improvised depot at Epsom he got nothing either to eat or to drink but a cup of cold water. The depot was absolutely unprovisioned, and no one was free to leave it.

CHAPTER THE SECOND

THE LAST WAR

Section I

Viewed from the standpoint of a sane and ambitious social order, it is difficult to understand, and it would be tedious to follow, the motives that plunged mankind into the war that fills the histories of the middle decades of the twentieth century.

It must always be remembered that the political structure of the world at that time was everywhere extraordinarily behind the collective intelligence. That is the central fact of that history. For two hundred years there had been no great changes in political or legal methods and pretensions, the utmost change had been a certain shifting of boundaries and slight readjustment of procedure, while in nearly every other aspect of life there had been fundamental revolutions, gigantic releases, and an enormous enlargement of scope and outlook. The absurdities of courts and the indignities of representative parliamentary government, coupled with the opening of vast fields of opportunity in other directions, had withdrawn the best intelligences more and more from public affairs. The ostensible governments of the world in the twentieth century were following in the wake of the ostensible religions. They were ceasing to command the services of any but second-rate men. After the middle of the eighteenth century there are no more great ecclesiastics upon the world's memory, after the opening of the twentieth no more statesmen. Everywhere one finds an energetic, ambitious, short-sighted, common-place type in the seats of authority, blind to the new possibilities and litigiously reliant upon the traditions of the past.

Perhaps the most dangerous of those outworn traditions were the

boundaries of the various 'sovereign states,' and the conception of a general predominance in human affairs on the part of some one particular state. The memory of the empires of Rome and Alexander squatted, an unlaid carnivorous ghost, in the human imagination--it bored into the human brain like some grisly parasite and filled it with disordered thoughts and violent impulses. For more than a century the French system exhausted its vitality in belligerent convulsions, and then the infection passed to the German-speaking peoples who were the heart and centre of Europe, and from them onward to the Slavs. Later ages were to store and neglect the vast insane literature of this obsession, the intricate treaties, the secret agreements, the infinite knowingness of the political writer, the cunning refusals to accept plain facts, the strategic devices, the tactical manoeuvres, the records of mobilisations and counter-mobilisations. It ceased to be credible almost as soon as it ceased to happen, but in the very dawn of the new age their state craftsmen sat with their historical candles burning, and, in spite of strange, new reflections and unfamiliar lights and shadows, still wrangling and planning to rearrange the maps of Europe and the world.

It was to become a matter for subtle inquiry how far the millions of men and women outside the world of these specialists sympathised and agreed with their portentous activities. One school of psychologists inclined to minimise this participation, but the balance of evidence goes to show that there were massive responses to these suggestions of the belligerent schemer. Primitive man had been a fiercely combative animal; innumerable generations had passed their lives in tribal warfare, and the weight of tradition, the example of history, the ideals of loyalty and devotion fell in easily enough with the incitements of the international mischief-maker. The political ideas of the common man were picked up haphazard, there was practically nothing in such education as he was given that was ever intended

to fit him for citizenship as such (that conception only appeared, indeed, with the development of Modern State ideas), and it was therefore a comparatively easy matter to fill his vacant mind with the sounds and fury of exasperated suspicion and national aggression.

For example, Barnett describes the London crowd as noisily patriotic when presently his battalion came up from the depot to London, to entrain for the French frontier. He tells of children and women and lads and old men cheering and shouting, of the streets and rows hung with the flags of the Allied Powers, of a real enthusiasm even among the destitute and unemployed. The Labour Bureaux were now partially transformed into enrolment offices, and were centres of hotly patriotic excitement. At every convenient place upon the line on either side of the Channel Tunnel there were enthusiastic spectators, and the feeling in the regiment, if a little stiffened and darkened by grim anticipations, was none the less warlike.

But all this emotion was the fickle emotion of minds without established ideas; it was with most of them, Barnett says, as it was with himself, a natural response to collective movement, and to martial sounds and colours, and the exhilarating challenge of vague dangers. And people had been so long oppressed by the threat of and preparation for war that its arrival came with an effect of positive relief.

Section 2

The plan of campaign of the Allies assigned the defence of the lower Meuse to the English, and the troop-trains were run direct from the various British depots to the points in the Ardennes where they were intended to entrench themselves.

Most of the documents bearing upon the campaign were destroyed

during the war, from the first the scheme of the Allies seems to have been confused, but it is highly probable that the formation of an aerial park in this region, from which attacks could be made upon the vast industrial plant of the lower Rhine, and a flanking raid through Holland upon the German naval establishments at the mouth of the Elbe, were integral parts of the original project. Nothing of this was known to such pawns in the game as Barnet and his company, whose business it was to do what they were told by the mysterious intelligences at the direction of things in Paris, to which city the Whitehall staff had also been transferred. From first to last these directing intelligences remained mysterious to the body of the army, veiled under the name of 'Orders.' There was no Napoleon, no Caesar to embody enthusiasm. Barnet says, 'We talked of Them. THEY are sending us up into Luxembourg. THEY are going to turn the Central European right.'

Behind the veil of this vagueness the little group of more or less worthy men which constituted Headquarters was beginning to realise the enormity of the thing it was supposed to control....

In the great hall of the War Control, whose windows looked out across the Seine to the Trocadero and the palaces of the western quarter, a series of big-scale relief maps were laid out upon tables to display the whole seat of war, and the staff-officers of the control were continually busy shifting the little blocks which represented the contending troops, as the reports and intelligence came drifting in to the various telegraphic bureaux in the adjacent rooms. In other smaller apartments there were maps of a less detailed sort, upon which, for example, the reports of the British Admiralty and of the Slav commanders were recorded as they kept coming to hand. Upon these maps, as upon chessboards, Marshal Dubois, in consultation with General Viard and the Earl of Delhi, was to play the great game for world supremacy against the Central European powers. Very probably he

had a definite idea of his game; very probably he had a coherent and admirable plan.

But he had reckoned without a proper estimate either of the new strategy of aviation or of the possibilities of atomic energy that Holsten had opened for mankind. While he planned entrenchments and invasions and a frontier war, the Central European generalship was striking at the eyes and the brain. And while, with a certain diffident hesitation, he developed his gambit that night upon the lines laid down by Napoleon and Moltke, his own scientific corps in a state of mutinous activity was preparing a blow for Berlin. "These old fools!" was the key in which the scientific corps was thinking.

The War Control in Paris, on the night of July the second, was an impressive display of the paraphernalia of scientific military organisation, as the first half of the twentieth century understood it. To one human being at least the consulting commanders had the likeness of world-wielding gods.

She was a skilled typist, capable of nearly sixty words a minute, and she had been engaged in relay with other similar women to take down orders in duplicate and hand them over to the junior officers in attendance, to be forwarded and filed. There had come a lull, and she had been sent out from the dictating room to take the air upon the terrace before the great hall and to eat such scanty refreshment as she had brought with her until her services were required again.

From her position upon the terrace this young woman had a view not only of the wide sweep of the river below her, and all the eastward side of Paris from the Arc de Triomphe to Saint Cloud, great blocks and masses of black or pale darkness with pink and golden flashes of illumination and endless interlacing bands of dotted lights under a still and starless sky, but also the whole

spacious interior of the great hall with its slender pillars and gracious arching and clustering lamps was visible to her. There, over a wilderness of tables, lay the huge maps, done on so large a scale that one might fancy them small countries; the messengers and attendants went and came perpetually, altering, moving the little pieces that signified hundreds and thousands of men, and the great commander and his two consultants stood amidst all these things and near where the fighting was nearest, scheming, directing. They had but to breathe a word and presently away there, in the world of reality, the punctual myriads moved. Men rose up and went forward and died. The fate of nations lay behind the eyes of these three men. Indeed they were like gods.

Most godlike of the three was Dubois. It was for him to decide; the others at most might suggest. Her woman's soul went out to this grave, handsome, still, old man, in a passion of instinctive worship.

Once she had taken words of instruction from him direct. She had awaited them in an ecstasy of happiness--and fear. For her exaltation was made terrible by the dread that some error might dishonour her....

She watched him now through the glass with all the unpenetrating minuteness of an impassioned woman's observation.

He said little, she remarked. He looked but little at the maps. The tall Englishman beside him was manifestly troubled by a swarm of ideas, conflicting ideas; he craned his neck at every shifting of the little red, blue, black, and yellow pieces on the board, and wanted to draw the commander's attention to this and that. Dubois listened, nodded, emitted a word and became still again, brooding like the national eagle.

His eyes were so deeply sunken under his white eyebrows that she

could not see his eyes; his moustache overhung the mouth from which those words of decision came. Viard, too, said little; he was a dark man with a drooping head and melancholy, watchful eyes. He was more intent upon the French right, which was feeling its way now through Alsace to the Rhine. He was, she knew, an old colleague of Dubois; he knew him better, she decided, he trusted him more than this unfamiliar Englishman....

Not to talk, to remain impassive and as far as possible in profile; these were the lessons that old Dubois had mastered years ago. To seem to know all, to betray no surprise, to refuse to hurry--itself a confession of miscalculation; by attention to these simple rules, Dubois had built up a steady reputation from the days when he had been a promising junior officer, a still, almost abstracted young man, deliberate but ready. Even then men had looked at him and said: 'He will go far.' Through fifty years of peace he had never once been found wanting, and at manoeuvres his impassive persistence had perplexed and hypnotised and defeated many a more actively intelligent man. Deep in his soul Dubois had hidden his one profound discovery about the modern art of warfare, the key to his career. And this discovery was that **NOBODY KNEW**, that to act therefore was to blunder, that to talk was to confess; and that the man who acted slowly and steadfastly and above all silently, had the best chance of winning through. Meanwhile one fed the men. Now by this same strategy he hoped to shatter those mysterious unknowns of the Central European command. Delhi might talk of a great flank march through Holland, with all the British submarines and hydroplanes and torpedo craft pouring up the Rhine in support of it; Viard might crave for brilliance with the motor bicycles, aeroplanes, and ski-men among the Swiss mountains, and a sudden swoop upon Vienna; the thing was to listen--and wait for the other side to begin experimenting. It was all experimenting. And meanwhile he remained in profile, with an air of assurance--like a man who sits in an automobile after the chauffeur has had his directions.

And every one about him was the stronger and surer for that quiet face, that air of knowledge and unruffled confidence. The clustering lights threw a score of shadows of him upon the maps, great bunches of him, versions of a commanding presence, lighter or darker, dominated the field, and pointed in every direction. Those shadows symbolised his control. When a messenger came from the wireless room to shift this or that piece in the game, to replace under amended reports one Central European regiment by a score, to draw back or thrust out or distribute this or that force of the Allies, the Marshal would turn his head and seem not to see, or look and nod slightly, as a master nods who approves a pupil's self-correction. 'Yes, that's better.'

How wonderful he was, thought the woman at the window, how wonderful it all was. This was the brain of the western world, this was Olympus with the warring earth at its feet. And he was guiding France, France so long a resentful exile from imperialism, back to her old predominance.

It seemed to her beyond the desert of a woman that she should be privileged to participate....

It is hard to be a woman, full of the stormy impulse to personal devotion, and to have to be impersonal, abstract, exact, punctual. She must control herself....

She gave herself up to fantastic dreams, dreams of the days when the war would be over and victory enthroned. Then perhaps this harshness, this armour would be put aside and the gods might unbend. Her eyelids drooped....

She roused herself with a start. She became aware that the night outside was no longer still. That there was an excitement down below on the bridge and a running in the street and a flickering

of searchlights among the clouds from some high place away beyond the Trocadero. And then the excitement came surging up past her and invaded the hall within.

One of the sentinels from the terrace stood at the upper end of the room, gesticulating and shouting something.

And all the world had changed. A kind of throbbing. She couldn't understand. It was as if all the water-pipes and concealed machinery and cables of the ways beneath, were beating--as pulses beat. And about her blew something like a wind--a wind that was dismay.

Her eyes went to the face of the Marshal as a frightened child might look towards its mother.

He was still serene. He was frowning slightly, she thought, but that was natural enough, for the Earl of Delhi, with one hand gauntly gesticulating, had taken him by the arm and was all too manifestly disposed to drag him towards the great door that opened on the terrace. And Viard was hurrying towards the huge windows and doing so in the strangest of attitudes, bent forward and with eyes upturned.

Something up there?

And then it was as if thunder broke overhead.

The sound struck her like a blow. She crouched together against the masonry and looked up. She saw three black shapes swooping down through the torn clouds, and from a point a little below two of them, there had already started curling trails of red....

Everything else in her being was paralysed, she hung through moments that seemed infinities, watching those red missiles whirl

down towards her.

She felt torn out of the world. There was nothing else in the world but a crimson-purple glare and sound, deafening, all-embracing, continuing sound. Every other light had gone out about her and against this glare hung slanting walls, pirouetting pillars, projecting fragments of cornices, and a disorderly flight of huge angular sheets of glass. She had an impression of a great ball of crimson-purple fire like a maddened living thing that seemed to be whirling about very rapidly amidst a chaos of falling masonry, that seemed to be attacking the earth furiously, that seemed to be burrowing into it like a blazing rabbit . . .

She had all the sensations of waking up out of a dream.

She found she was lying face downward on a bank of mould and that a little rivulet of hot water was running over one foot. She tried to raise herself and found her leg was very painful. She was not clear whether it was night or day nor where she was; she made a second effort, wincing and groaning, and turned over and got into a sitting position and looked about her.

Everything seemed very silent. She was, in fact, in the midst of a vast uproar, but she did not realise this because her hearing had been destroyed.

At first she could not join on what she saw to any previous experience.

She seemed to be in a strange world, a soundless, ruinous world, a world of heaped broken things. And it was lit--and somehow this was more familiar to her mind than any other fact about her--by a flickering, purplish-crimson light. Then close to her, rising above a confusion of debris, she recognised the Trocadero; it was changed, something had gone from it, but its outline was

unmistakable. It stood out against a streaming, whirling uprush of red-lit steam. And with that she recalled Paris and the Seine and the warm, overcast evening and the beautiful, luminous organisation of the War Control....

She drew herself a little way up the slope of earth on which she lay, and examined her surroundings with an increasing understanding....

The earth on which she was lying projected like a cape into the river. Quite close to her was a brimming lake of dammed-up water, from which these warm rivulets and torrents were trickling. Wisps of vapour came into circling existence a foot or so from its mirror-surface. Near at hand and reflected exactly in the water was the upper part of a familiar-looking stone pillar. On the side of her away from the water the heaped ruins rose steeply in a confused slope up to a glaring crest. Above and reflecting this glare towered pillowed masses of steam rolling swiftly upward to the zenith. It was from this crest that the livid glow that lit the world about her proceeded, and slowly her mind connected this mound with the vanished buildings of the War Control.

'Mais!' she whispered, and remained with staring eyes quite motionless for a time, crouching close to the warm earth.

Then presently this dim, broken human thing began to look about it again. She began to feel the need of fellowship. She wanted to question, wanted to speak, wanted to relate her experience. And her foot hurt her atrociously. There ought to be an ambulance. A little gust of querulous criticisms blew across her mind. This surely was a disaster! Always after a disaster there should be ambulances and helpers moving about....

She craned her head. There was something there. But everything

was so still!

'Monsieur!' she cried. Her ears, she noted, felt queer, and she began to suspect that all was not well with them.

It was terribly lonely in this chaotic strangeness, and perhaps this man--if it was a man, for it was difficult to see--might for all his stillness be merely insensible. He might have been stunned....

The leaping glare beyond sent a ray into his corner and for a moment every little detail was distinct. It was Marshal Dubois. He was lying against a huge slab of the war map. To it there stuck and from it there dangled little wooden objects, the symbols of infantry and cavalry and guns, as they were disposed upon the frontier. He did not seem to be aware of this at his back, he had an effect of inattention, not indifferent attention, but as if he were thinking....

She could not see the eyes beneath his shaggy brows, but it was evident he frowned. He frowned slightly, he had an air of not wanting to be disturbed. His face still bore that expression of assured confidence, that conviction that if things were left to him France might obey in security....

She did not cry out to him again, but she crept a little nearer. A strange surmise made her eyes dilate. With a painful wrench she pulled herself up so that she could see completely over the intervening lumps of smashed-up masonry. Her hand touched something wet, and after one convulsive movement she became rigid.

It was not a whole man there; it was a piece of a man, the head and shoulders of a man that trailed down into a ragged darkness and a pool of shining black....

And even as she stared the mound above her swayed and crumbled, and a rush of hot water came pouring over her. Then it seemed to her that she was dragged downward....

Section 3

When the rather brutish young aviator with the bullet head and the black hair close-cropped en brosse, who was in charge of the French special scientific corps, heard presently of this disaster to the War Control, he was so wanting in imagination in any sphere but his own, that he laughed. Small matter to him that Paris was burning. His mother and father and sister lived at Caudebec; and the only sweetheart he had ever had, and it was poor love-making then, was a girl in Rouen. He slapped his second-in-command on the shoulder. 'Now,' he said, 'there's nothing on earth to stop us going to Berlin and giving them tit-for-tat.... Strategy and reasons of state--they're over.... Come along, my boy, and we'll just show these old women what we can do when they let us have our heads.'

He spent five minutes telephoning and then he went out into the courtyard of the chateau in which he had been installed and shouted for his automobile. Things would have to move quickly because there was scarcely an hour and a half before dawn. He looked at the sky and noted with satisfaction a heavy bank of clouds athwart the pallid east.

He was a young man of infinite shrewdness, and his material and aeroplanes were scattered all over the country-side, stuck away in barns, covered with hay, hidden in woods. A hawk could not have discovered any of them without coming within reach of a gun. But that night he only wanted one of the machines, and it was handy and quite prepared under a tarpaulin between two ricks not a couple of miles away; he was going to Berlin with that and just

one other man. Two men would be enough for what he meant to do....

He had in his hands the black complement to all those other gifts science was urging upon unregenerate mankind, the gift of destruction, and he was an adventurous rather than a sympathetic type....

He was a dark young man with something negroid about his gleaming face. He smiled like one who is favoured and anticipates great pleasures. There was an exotic richness, a chuckling flavour, about the voice in which he gave his orders, and he pointed his remarks with the long finger of a hand that was hairy and exceptionally big.

'We'll give them tit-for-tat,' he said. 'We'll give them tit-for-tat. No time to lose, boys....'

And presently over the cloud-banks that lay above Westphalia and Saxony the swift aeroplane, with its atomic engine as noiseless as a dancing sunbeam and its phosphorescent gyroscopic compass, flew like an arrow to the heart of the Central European hosts.

It did not soar very high; it skimmed a few hundred feet above the banked darknesses of cumulus that hid the world, ready to plunge at once into their wet obscurities should some hostile flier range into vision. The tense young steersman divided his attention between the guiding stars above and the level, tumbled surfaces of the vapour strata that hid the world below. Over great spaces those banks lay as even as a frozen lava-flow and almost as still, and then they were rent by ragged areas of translucency, pierced by clear chasms, so that dim patches of the land below gleamed remotely through abysses. Once he saw quite distinctly the plan of a big railway station outlined in lamps and signals, and once the flames of a burning rick showing livid

through a boiling drift of smoke on the side of some great hill. But if the world was masked it was alive with sounds. Up through that vapour floor came the deep roar of trains, the whistles of horns of motor-cars, a sound of rifle fire away to the south, and as he drew near his destination the crowing of cocks....

The sky above the indistinct horizons of this cloud sea was at first starry and then paler with a light that crept from north to east as the dawn came on. The Milky Way was invisible in the blue, and the lesser stars vanished. The face of the adventurer at the steering-wheel, darkly visible ever and again by the oval greenish glow of the compass face, had something of that firm beauty which all concentrated purpose gives, and something of the happiness of an idiot child that has at last got hold of the matches. His companion, a less imaginative type, sat with his legs spread wide over the long, coffin-shaped box which contained in its compartments the three atomic bombs, the new bombs that would continue to explode indefinitely and which no one so far had ever seen in action. Hitherto Carolinum, their essential substance, had been tested only in almost infinitesimal quantities within steel chambers embedded in lead. Beyond the thought of great destruction slumbering in the black spheres between his legs, and a keen resolve to follow out very exactly the instructions that had been given him, the man's mind was a blank. His aquiline profile against the starlight expressed nothing but a profound gloom.

The sky below grew clearer as the Central European capital was approached.

So far they had been singularly lucky and had been challenged by no aeroplanes at all. The frontier scouts they must have passed in the night; probably these were mostly under the clouds; the world was wide and they had had luck in not coming close to any soaring sentinel. Their machine was painted a pale gray, that

lay almost invisibly over the cloud levels below. But now the east was flushing with the near ascent of the sun, Berlin was but a score of miles ahead, and the luck of the Frenchmen held. By imperceptible degrees the clouds below dissolved....

Away to the north-eastward, in a cloudless pool of gathering light and with all its nocturnal illuminations still blazing, was Berlin. The left finger of the steersman verified roads and open spaces below upon the mica-covered square of map that was fastened by his wheel. There in a series of lake-like expansions was the Havel away to the right; over by those forests must be Spandau; there the river split about the Potsdam island; and right ahead was Charlottenburg cleft by a great thoroughfare that fell like an indicating beam of light straight to the imperial headquarters. There, plain enough, was the Thiergarten; beyond rose the imperial palace, and to the right those tall buildings, those clustering, beflagged, bemasted roofs, must be the offices in which the Central European staff was housed. It was all coldly clear and colourless in the dawn.

He looked up suddenly as a humming sound grew out of nothing and became swiftly louder. Nearly overhead a German aeroplane was circling down from an immense height to challenge him. He made a gesture with his left arm to the gloomy man behind and then gripped his little wheel with both hands, crouched over it, and twisted his neck to look upward. He was attentive, tightly strung, but quite contemptuous of their ability to hurt him. No German alive, he was assured, could outfly him, or indeed any one of the best Frenchmen. He imagined they might strike at him as a hawk strikes, but they were men coming down out of the bitter cold up there, in a hungry, spiritless, morning mood; they came slanting down like a sword swung by a lazy man, and not so rapidly but that he was able to slip away from under them and get between them and Berlin. They began challenging him in German with a megaphone when they were still perhaps a mile away. The

words came to him, rolled up into a mere blob of hoarse sound. Then, gathering alarm from his grim silence, they gave chase and swept down, a hundred yards above him perhaps, and a couple of hundred behind. They were beginning to understand what he was. He ceased to watch them and concentrated himself on the city ahead, and for a time the two aeroplanes raced....

A bullet came tearing through the air by him, as though some one was tearing paper. A second followed. Something tapped the machine.

It was time to act. The broad avenues, the park, the palaces below rushed widening out nearer and nearer to them. 'Ready!' said the steersman.

The gaunt face hardened to grimness, and with both hands the bomb-thrower lifted the big atomic bomb from the box and steadied it against the side. It was a black sphere two feet in diameter. Between its handles was a little celluloid stud, and to this he bent his head until his lips touched it. Then he had to bite in order to let the air in upon the inducive. Sure of its accessibility, he craned his neck over the side of the aeroplane and judged his pace and distance. Then very quickly he bent forward, bit the stud, and hoisted the bomb over the side.

'Round,' he whispered inaudibly.

The bomb flashed blinding scarlet in mid-air, and fell, a descending column of blaze eddying spirally in the midst of a whirlwind. Both the aeroplanes were tossed like shuttlecocks, hurled high and sideways and the steersman, with gleaming eyes and set teeth, fought in great banking curves for a balance. The gaunt man clung tight with hand and knees; his nostrils dilated, his teeth biting his lips. He was firmly strapped....

When he could look down again it was like looking down upon the crater of a small volcano. In the open garden before the Imperial castle a shuddering star of evil splendour spurted and poured up smoke and flame towards them like an accusation. They were too high to distinguish people clearly, or mark the bomb's effect upon the building until suddenly the facade tottered and crumbled before the flare as sugar dissolves in water. The man stared for a moment, showed all his long teeth, and then staggered into the cramped standing position his straps permitted, hoisted out and bit another bomb, and sent it down after its fellow.

The explosion came this time more directly underneath the aeroplane and shot it upward edgewise. The bomb box tipped to the point of disgorgement, and the bomb-thrower was pitched forward upon the third bomb with his face close to its celluloid stud. He clutched its handles, and with a sudden gust of determination that the thing should not escape him, bit its stud. Before he could hurl it over, the monoplane was slipping sideways. Everything was falling sideways. Instinctively he gave himself up to gripping, his body holding the bomb in its place.

Then that bomb had exploded also, and steersman, thrower, and aeroplane were just flying rags and splinters of metal and drops of moisture in the air, and a third column of fire rushed eddying down upon the doomed buildings below....

Section 4

Never before in the history of warfare had there been a continuing explosive; indeed, up to the middle of the twentieth century the only explosives known were combustibles whose explosiveness was due entirely to their instantaneousness; and these atomic bombs which science burst upon the world that night were strange even to the men who used them. Those used by the

Allies were lumps of pure Carolinum, painted on the outside with unoxidised cydonator inducive enclosed hermetically in a case of membranum. A little celluloid stud between the handles by which the bomb was lifted was arranged so as to be easily torn off and admit air to the inducive, which at once became active and set up radio-activity in the outer layer of the Carolinum sphere. This liberated fresh inducive, and so in a few minutes the whole bomb was a blazing continual explosion. The Central European bombs were the same, except that they were larger and had a more complicated arrangement for animating the inducive.

Always before in the development of warfare the shells and rockets fired had been but momentarily explosive, they had gone off in an instant once for all, and if there was nothing living or valuable within reach of the concussion and the flying fragments then they were spent and over. But Carolinum, which belonged to the beta group of Hyslop's so-called 'suspended degenerator' elements, once its degenerative process had been induced, continued a furious radiation of energy and nothing could arrest it. Of all Hyslop's artificial elements, Carolinum was the most heavily stored with energy and the most dangerous to make and handle. To this day it remains the most potent degenerator known. What the earlier twentieth-century chemists called its half period was seventeen days; that is to say, it poured out half of the huge store of energy in its great molecules in the space of seventeen days, the next seventeen days' emission was a half of that first period's outpouring, and so on. As with all radio-active substances this Carolinum, though every seventeen days its power is halved, though constantly it diminishes towards the imperceptible, is never entirely exhausted, and to this day the battle-fields and bomb fields of that frantic time in human history are sprinkled with radiant matter, and so centres of inconvenient rays.

What happened when the celluloid stud was opened was that the

inducive oxidised and became active. Then the surface of the Carolinum began to degenerate. This degeneration passed only slowly into the substance of the bomb. A moment or so after its explosion began it was still mainly an inert sphere exploding superficially, a big, inanimate nucleus wrapped in flame and thunder. Those that were thrown from aeroplanes fell in this state, they reached the ground still mainly solid, and, melting soil and rock in their progress, bored into the earth. There, as more and more of the Carolinum became active, the bomb spread itself out into a monstrous cavern of fiery energy at the base of what became very speedily a miniature active volcano. The Carolinum, unable to disperse, freely drove into and mixed up with a boiling confusion of molten soil and superheated steam, and so remained spinning furiously and maintaining an eruption that lasted for years or months or weeks according to the size of the bomb employed and the chances of its dispersal. Once launched, the bomb was absolutely unapproachable and uncontrollable until its forces were nearly exhausted, and from the crater that burst open above it, puffs of heavy incandescent vapour and fragments of viciously punitive rock and mud, saturated with Carolinum, and each a centre of scorching and blistering energy, were flung high and far.

Such was the crowning triumph of military science, the ultimate explosive that was to give the 'decisive touch' to war....

Section 5

A recent historical writer has described the world of that time as one that 'believed in established words and was invincibly blind to the obvious in things.' Certainly it seems now that nothing could have been more obvious to the people of the earlier twentieth century than the rapidity with which war was becoming impossible. And as certainly they did not see it. They did not see it until the atomic bombs burst in their fumbling hands. Yet

the broad facts must have glared upon any intelligent mind. All through the nineteenth and twentieth centuries the amount of energy that men were able to command was continually increasing. Applied to warfare that meant that the power to inflict a blow, the power to destroy, was continually increasing. There was no increase whatever in the ability to escape. Every sort of passive defence, armour, fortifications, and so forth, was being outmastered by this tremendous increase on the destructive side. Destruction was becoming so facile that any little body of malcontents could use it; it was revolutionising the problems of police and internal rule. Before the last war began it was a matter of common knowledge that a man could carry about in a handbag an amount of latent energy sufficient to wreck half a city. These facts were before the minds of everybody; the children in the streets knew them. And yet the world still, as the Americans used to phrase it, 'fooled around' with the paraphernalia and pretensions of war.

It is only by realising this profound, this fantastic divorce between the scientific and intellectual movement on the one hand, and the world of the lawyer-politician on the other, that the men of a later time can hope to understand this preposterous state of affairs. Social organisation was still in the barbaric stage. There were already great numbers of actively intelligent men and much private and commercial civilisation, but the community, as a whole, was aimless, untrained and unorganised to the pitch of imbecility. Collective civilisation, the 'Modern State,' was still in the womb of the future....

Section 6

But let us return to Frederick Barnet's *Wander Jahre* and its account of the experiences of a common man during the war time. While these terrific disclosures of scientific possibility were happening in Paris and Berlin, Barnet and his company were

industriously entrenching themselves in Belgian Luxembourg.

He tells of the mobilisation and of his summer day's journey through the north of France and the Ardennes in a few vivid phrases. The country was browned by a warm summer, the trees a little touched with autumnal colour, and the wheat already golden. When they stopped for an hour at Hirson, men and women with tricolour badges upon the platform distributed cakes and glasses of beer to the thirsty soldiers, and there was much cheerfulness. 'Such good, cool beer it was,' he wrote. 'I had had nothing to eat nor drink since Epsom.'

A number of monoplanes, 'like giant swallows,' he notes, were scouting in the pink evening sky.

Barnet's battalion was sent through the Sedan country to a place called Virton, and thence to a point in the woods on the line to Jemelle. Here they detrained, bivouacked uneasily by the railway--trains and stores were passing along it all night--and next morning he: marched eastward through a cold, overcast dawn, and a morning, first cloudy and then blazing, over a large spacious country-side interspersed by forest towards Arlon.

There the infantry were set to work upon a line of masked entrenchments and hidden rifle pits between St Hubert and Virton that were designed to check and delay any advance from the east upon the fortified line of the Meuse. They had their orders, and for two days they worked without either a sight of the enemy or any suspicion of the disaster that had abruptly decapitated the armies of Europe, and turned the west of Paris and the centre of Berlin into blazing miniatures of the destruction of Pompeii.

And the news, when it did come, came attenuated. 'We heard there had been mischief with aeroplanes and bombs in Paris,' Barnet relates; 'but it didn't seem to follow that "They" weren't still

somewhere elaborating their plans and issuing orders. When the enemy began to emerge from the woods in front of us, we cheered and blazed away, and didn't trouble much more about anything but the battle in hand. If now and then one cocked up an eye into the sky to see what was happening there, the rip of a bullet soon brought one down to the horizontal again....

That battle went on for three days all over a great stretch of country between Louvain on the north and Longwy to the south. It was essentially a rifle and infantry struggle. The aeroplanes do not seem to have taken any decisive share in the actual fighting for some days, though no doubt they effected the strategy from the first by preventing surprise movements. They were aeroplanes with atomic engines, but they were not provided with atomic bombs, which were manifestly unsuitable for field use, nor indeed had they any very effective kind of bomb. And though they manoeuvred against each other, and there was rifle shooting at them and between them, there was little actual aerial fighting. Either the airmen were indisposed to fight or the commanders on both sides preferred to reserve these machines for scouting....

After a day or so of digging and scheming, Barnett found himself in the forefront of a battle. He had made his section of rifle pits chiefly along a line of deep dry ditch that gave a means of inter-communication, he had had the earth scattered over the adjacent field, and he had masked his preparations with tussocks of corn and poppy. The hostile advance came blindly and unsuspectingly across the fields below and would have been very cruelly handled indeed, if some one away to the right had not opened fire too soon.

'It was a queer thrill when these fellows came into sight,' he confesses; 'and not a bit like manoeuvres. They halted for a time on the edge of the wood and then came forward in an open line. They kept walking nearer to us and not looking at us, but

away to the right of us. Even when they began to be hit, and their officers' whistles woke them up, they didn't seem to see us. One or two halted to fire, and then they all went back towards the wood again. They went slowly at first, looking round at us, then the shelter of the wood seemed to draw them, and they trotted. I fired rather mechanically and missed, then I fired again, and then I became earnest to hit something, made sure of my sighting, and aimed very carefully at a blue back that was dodging about in the corn. At first I couldn't satisfy myself and didn't shoot, his movements were so spasmodic and uncertain; then I think he came to a ditch or some such obstacle and halted for a moment. "GOT you," I whispered, and pulled the trigger.

'I had the strangest sensations about that man. In the first instance, when I felt that I had hit him I was irradiated with joy and pride....

'I sent him spinning. He jumped and threw up his arms....

'Then I saw the corn tops waving and had glimpses of him flapping about. Suddenly I felt sick. I hadn't killed him....

'In some way he was disabled and smashed up and yet able to struggle about. I began to think....

'For nearly two hours that Prussian was agonising in the corn. Either he was calling out or some one was shouting to him....

'Then he jumped up--he seemed to try to get up upon his feet with one last effort; and then he fell like a sack and lay quite still and never moved again.

'He had been unendurable, and I believe some one had shot him dead. I had been wanting to do so for some time....'

The enemy began sniping the rifle pits from shelters they made for themselves in the woods below. A man was hit in the pit next to Barnet, and began cursing and crying out in a violent rage. Barnet crawled along the ditch to him and found him in great pain, covered with blood, frantic with indignation, and with the half of his right hand smashed to a pulp. 'Look at this,' he kept repeating, hugging it and then extending it. 'Damned foolery! Damned foolery! My right hand, sir! My right hand!'

For some time Barnet could do nothing with him. The man was consumed by his tortured realisation of the evil silliness of war, the realisation which had come upon him in a flash with the bullet that had destroyed his skill and use as an artificer for ever. He was looking at the vestiges with a horror that made him impenetrable to any other idea. At last the poor wretch let Barnet tie up his bleeding stump and help him along the ditch that conducted him deviously out of range....

When Barnet returned his men were already calling out for water, and all day long the line of pits suffered greatly from thirst. For food they had chocolate and bread.

'At first,' he says, 'I was extraordinarily excited by my baptism of fire. Then as the heat of the day came on I experienced an enormous tedium and discomfort. The flies became extremely troublesome, and my little grave of a rifle pit was invaded by ants. I could not get up or move about, for some one in the trees had got a mark on me. I kept thinking of the dead Prussian down among the corn, and of the bitter outcries of my own man. Damned foolery! It WAS damned foolery. But who was to blame? How had we got to this? . . .

'Early in the afternoon an aeroplane tried to dislodge us with dynamite bombs, but she was hit by bullets once or twice, and suddenly dived down over beyond the trees.

' "From Holland to the Alps this day," I thought, "there must be crouching and lying between half and a million of men, trying to inflict irreparable damage upon one another. The thing is idiotic to the pitch of impossibility. It is a dream. Presently I shall wake up." . . .

'Then the phrase changed itself in my mind. "Presently mankind will wake up."

'I lay speculating just how many thousands of men there were among these hundreds of thousands, whose spirits were in rebellion against all these ancient traditions of flag and empire. Weren't we, perhaps, already in the throes of the last crisis, in that darkest moment of a nightmare's horror before the sleeper will endure no more of it--and wakes?

'I don't know how my speculations ended. I think they were not so much ended as distracted by the distant thudding of the guns that were opening fire at long range upon Namur.'

Section 7

But as yet Barnett had seen no more than the mildest beginnings of modern warfare. So far he had taken part only in a little shooting. The bayonet attack by which the advanced line was broken was made at a place called Croix Rouge, more than twenty miles away, and that night under cover of the darkness the rifle pits were abandoned and he got his company away without further loss.

His regiment fell back unpressed behind the fortified lines between Namur and Sedan, entrained at a station called Mettet, and was sent northward by Antwerp and Rotterdam to Haarlem. Hence they marched into North Holland. It was only after the

march into Holland that he began to realise the monstrous and catastrophic nature of the struggle in which he was playing his undistinguished part.

He describes very pleasantly the journey through the hills and open land of Brabant, the repeated crossing of arms of the Rhine, and the change from the undulating scenery of Belgium to the flat, rich meadows, the sunlit dyke roads, and the countless windmills of the Dutch levels. In those days there was unbroken land from Alkmaar and Leiden to the Dollart. Three great provinces, South Holland, North Holland, and Zuiderzeeland, reclaimed at various times between the early tenth century and 1945 and all many feet below the level of the waves outside the dykes, spread out their lush polders to the northern sun and sustained a dense industrious population. An intricate web of laws and custom and tradition ensured a perpetual vigilance and a perpetual defence against the beleaguering sea. For more than two hundred and fifty miles from Walcheren to Friesland stretched a line of embankments and pumping stations that was the admiration of the world.

If some curious god had chosen to watch the course of events in those northern provinces while that flanking march of the British was in progress, he would have found a convenient and appropriate seat for his observation upon one of the great cumulus clouds that were drifting slowly across the blue sky during all these eventful days before the great catastrophe. For that was the quality of the weather, hot and clear, with something of a breeze, and underfoot dry and a little inclined to be dusty. This watching god would have looked down upon broad stretches of sunlit green, sunlit save for the creeping patches of shadow cast by the clouds, upon sky-reflecting meres, fringed and divided up by masses of willow and large areas of silvery weeds, upon white roads lying bare to the sun and upon a tracery of blue canals. The pastures were alive with cattle, the roads had a busy

traffic, of beasts and bicycles and gaily coloured peasants' automobiles, the hues of the innumerable motor barges in the canal vied with the eventfulness of the roadways; and everywhere in solitary steadings, amidst ricks and barns, in groups by the wayside, in straggling villages, each with its fine old church, or in compact towns laced with canals and abounding in bridges and clipped trees, were human habitations.

The people of this country-side were not belligerents. The interests and sympathies alike of Holland had been so divided that to the end she remained undecided and passive in the struggle of the world powers. And everywhere along the roads taken by the marching armies clustered groups and crowds of impartially observant spectators, women and children in peculiar white caps and old-fashioned sabots, and elderly, clean-shaven men quietly thoughtful over their long pipes. They had no fear of their invaders; the days when 'soldiering' meant bands of licentious looters had long since passed away....

That watcher among the clouds would have seen a great distribution of khaki-uniformed men and khaki-painted material over the whole of the sunken area of Holland. He would have marked the long trains, packed with men or piled with great guns and war material, creeping slowly, alert for train-wreckers, along the north-going lines; he would have seen the Scheldt and Rhine choked with shipping, and pouring out still more men and still more material; he would have noticed halts and provisionings and detrainments, and the long, bustling caterpillars of cavalry and infantry, the maggot-like wagons, the huge beetles of great guns, crawling under the poplars along the dykes and roads northward, along ways lined by the neutral, unmolested, ambiguously observant Dutch. All the barges and shipping upon the canals had been requisitioned for transport. In that clear, bright, warm weather, it would all have looked from above like some extravagant festival of animated toys.

As the sun sank westward the spectacle must have become a little indistinct because of a golden haze; everything must have become warmer and more glowing, and because of the lengthening of the shadows more manifestly in relief. The shadows of the tall churches grew longer and longer, until they touched the horizon and mingled in the universal shadow; and then, slow, and soft, and wrapping the world in fold after fold of deepening blue, came the night--the night at first obscurely simple, and then with faint points here and there, and then jewelled in darkling splendour with a hundred thousand lights. Out of that mingling of darkness and ambiguous glares the noise of an unceasing activity would have arisen, the louder and plainer now because there was no longer any distraction of sight.

It may be that watcher drifting in the pellucid gulf beneath the stars watched all through the night; it may be that he dozed. But if he gave way to so natural a proclivity, assuredly on the fourth night of the great flank march he was aroused, for that was the night of the battle in the air that decided the fate of Holland. The aeroplanes were fighting at last, and suddenly about him, above and below, with cries and uproar rushing out of the four quarters of heaven, striking, plunging, oversetting, soaring to the zenith and dropping to the ground, they came to assail or defend the myriads below.

Secretly the Central European power had gathered his flying machines together, and now he threw them as a giant might fling a handful of ten thousand knives over the low country. And amidst that swarming flight were five that drove headlong for the sea walls of Holland, carrying atomic bombs. From north and west and south, the allied aeroplanes rose in response and swept down upon this sudden attack. So it was that war in the air began. Men rode upon the whirlwind that night and slew and fell like archangels. The sky rained heroes upon the astonished earth.

Surely the last fights of mankind were the best. What was the heavy pounding of your Homeric swordsmen, what was the creaking charge of chariots, beside this swift rush, this crash, this giddy triumph, this headlong swoop to death?

And then athwart this whirling rush of aerial duels that swooped and locked and dropped in the void between the lamp-lights and the stars, came a great wind and a crash louder than thunder, and first one and then a score of lengthening fiery serpents plunged hungrily down upon the Dutchmen's dykes and struck between land and sea and flared up again in enormous columns of glare and crimsoned smoke and steam.

And out of the darkness leapt the little land, with its spires and trees, aghast with terror, still and distinct, and the sea, tumbled with anger, red-foaming like a sea of blood....

Over the populous country below went a strange multitudinous crying and a flurry of alarm bells... .

The surviving aeroplanes turned about and fled out of the sky, like things that suddenly know themselves to be wicked....

Through a dozen thunderously flaming gaps that no water might quench, the waves came roaring in upon the land....

Section 8

'We had cursed our luck,' says Barnet, 'that we could not get to our quarters at Alkmaar that night. There, we were told, were provisions, tobacco, and everything for which we craved. But the main canal from Zaandam and Amsterdam was hopelessly jammed with craft, and we were glad of a chance opening that enabled us to get out of the main column and lie up in a kind of little harbour very much neglected and weedgrown before a deserted house. We

broke into this and found some herrings in a barrel, a heap of cheeses, and stone bottles of gin in the cellar; and with this I cheered my starving men. We made fires and toasted the cheese and grilled our herrings. None of us had slept for nearly forty hours, and I determined to stay in this refuge until dawn and then if the traffic was still choked leave the barge and march the rest of the way into Alkmaar.

'This place we had got into was perhaps a hundred yards from the canal and underneath a little brick bridge we could see the flotilla still, and hear the voices of the soldiers. Presently five or six other barges came through and lay up in the meer near by us, and with two of these, full of men of the Antrim regiment, I shared my find of provisions. In return we got tobacco. A large expanse of water spread to the westward of us and beyond were a cluster of roofs and one or two church towers. The barge was rather cramped for so many men, and I let several squads, thirty or forty perhaps altogether, bivouac on the bank. I did not let them go into the house on account of the furniture, and I left a note of indebtedness for the food we had taken. We were particularly glad of our tobacco and fires, because of the numerous mosquitoes that rose about us.

'The gate of the house from which we had provisioned ourselves was adorned with the legend, *Vreugde bij Vrede*, "Joy with Peace," and it bore every mark of the busy retirement of a comfort-loving proprietor. I went along his garden, which was gay and delightful with big bushes of rose and sweet brier, to a quaint little summer-house, and there I sat and watched the men in groups cooking and squatting along the bank. The sun was setting in a nearly cloudless sky.

'For the last two weeks I had been a wholly occupied man, intent only upon obeying the orders that came down to me. All through this time I had been working to the very limit of my mental and

physical faculties, and my only moments of rest had been devoted to snatches of sleep. Now came this rare, unexpected interlude, and I could look detachedly upon what I was doing and feel something of its infinite wonderfulness. I was irradiated with affection for the men of my company and with admiration at their cheerful acquiescence in the subordination and needs of our positions. I watched their proceedings and heard their pleasant voices. How willing those men were! How ready to accept leadership and forget themselves in collective ends! I thought how manfully they had gone through all the strains and toil of the last two weeks, how they had toughened and shaken down to comradeship together, and how much sweetness there is after all in our foolish human blood. For they were just one casual sample of the species--their patience and readiness lay, as the energy of the atom had lain, still waiting to be properly utilised. Again it came to me with overpowering force that the supreme need of our race is leading, that the supreme task is to discover leading, to forget oneself in realising the collective purpose of the race. Once more I saw life plain....'

Very characteristic is that of the 'rather too corpulent' young officer, who was afterwards to set it all down in the *Wander Jahre*. Very characteristic, too, it is of the change in men's hearts that was even then preparing a new phase of human history.

He goes on to write of the escape from individuality in science and service, and of his discovery of this 'salvation.' All that was then, no doubt, very moving and original; now it seems only the most obvious commonplace of human life.

The glow of the sunset faded, the twilight deepened into night. The fires burnt the brighter, and some Irishmen away across the meer started singing. But Barnett's men were too weary for that sort of thing, and soon the bank and the barge were heaped with sleeping forms.

'I alone seemed unable to sleep. I suppose I was over-weary, and after a little feverish slumber by the tiller of the barge I sat up, awake and uneasy....

'That night Holland seemed all sky. There was just a little black lower rim to things, a steeple, perhaps, or a line of poplars, and then the great hemisphere swept over us. As at first the sky was empty. Yet my uneasiness referred itself in some vague way to the sky.

'And now I was melancholy. I found something strangely sorrowful and submissive in the sleepers all about me, those men who had marched so far, who had left all the established texture of their lives behind them to come upon this mad campaign, this campaign that signified nothing and consumed everything, this mere fever of fighting. I saw how little and feeble is the life of man, a thing of chances, preposterously unable to find the will to realise even the most timid of its dreams. And I wondered if always it would be so, if man was a doomed animal who would never to the last days of his time take hold of fate and change it to his will. Always, it may be, he will remain kindly but jealous, desirous but discursive, able and unwisely impulsive, until Saturn who begot him shall devour him in his turn....

'I was roused from these thoughts by the sudden realisation of the presence of a squadron of aeroplanes far away to the north-east and very high. They looked like little black dashes against the midnight blue. I remember that I looked up at them at first rather idly--as one might notice a flight of birds. Then I perceived that they were only the extreme wing of a great fleet that was advancing in a long line very swiftly from the direction of the frontier and my attention tightened.

'Directly I saw that fleet I was astonished not to have seen it

before.

'I stood up softly, undesirous of disturbing my companions, but with my heart beating now rather more rapidly with surprise and excitement. I strained my ears for any sound of guns along our front. Almost instinctively I turned about for protection to the south and west, and peered; and then I saw coming as fast and much nearer to me, as if they had sprung out of the darkness, three banks of aeroplanes; a group of squadrons very high, a main body at a height perhaps of one or two thousand feet, and a doubtful number flying low and very indistinct. The middle ones were so thick they kept putting out groups of stars. And I realised that after all there was to be fighting in the air.

'There was something extraordinarily strange in this swift, noiseless convergence of nearly invisible combatants above the sleeping hosts. Every one about me was still unconscious; there was no sign as yet of any agitation among the shipping on the main canal, whose whole course, dotted with unsuspecting lights and fringed with fires, must have been clearly perceptible from above. Then a long way off towards Alkmaar I heard bugles, and after that shots, and then a wild clamour of bells. I determined to let my men sleep on for as long as they could....

'The battle was joined with the swiftness of dreaming. I do not think it can have been five minutes from the moment when I first became aware of the Central European air fleet to the contact of the two forces. I saw it quite plainly in silhouette against the luminous blue of the northern sky. The allied aeroplanes--they were mostly French--came pouring down like a fierce shower upon the middle of the Central European fleet. They looked exactly like a coarser sort of rain. There was a crackling sound--the first sound I heard--it reminded one of the Aurora Borealis, and I supposed it was an interchange of rifle shots. There were flashes like summer lightning; and then all the sky became a

whirling confusion of battle that was still largely noiseless. Some of the Central European aeroplanes were certainly charged and upset; others seemed to collapse and fall and then flare out with so bright a light that it took the edge off one's vision and made the rest of the battle disappear as though it had been snatched back out of sight.

'And then, while I still peered and tried to shade these flames from my eyes with my hand, and while the men about me were beginning to stir, the atomic bombs were thrown at the dykes. They made a mighty thunder in the air, and fell like Lucifer in the picture, leaving a flaring trail in the sky. The night, which had been pellucid and detailed and eventful, seemed to vanish, to be replaced abruptly by a black background to these tremendous pillars of fire....

'Hard upon the sound of them came a roaring wind, and the sky was filled with flickering lightnings and rushing clouds....

'There was something discontinuous in this impact. At one moment I was a lonely watcher in a sleeping world; the next saw every one about me afoot, the whole world awake and amazed....

'And then the wind had struck me a buffet, taken my helmet and swept aside the summerhouse of Vreugde bij Vrede, as a scythe sweeps away grass. I saw the bombs fall, and then watched a great crimson flare leap responsive to each impact, and mountainous masses of red-lit steam and flying fragments clamber up towards the zenith. Against the glare I saw the country-side for miles standing black and clear, churches, trees, chimneys. And suddenly I understood. The Central Europeans had burst the dykes. Those flares meant the bursting of the dykes, and in a little while the sea-water would be upon us....'

He goes on to tell with a certain prolixity of the steps he

took--and all things considered they were very intelligent steps--to meet this amazing crisis. He got his men aboard and hailed the adjacent barges; he got the man who acted as barge engineer at his post and the engines working, he cast loose from his moorings. Then he bethought himself of food, and contrived to land five men, get in a few dozen cheeses, and ship his men again before the inundation reached them.

He is reasonably proud of this piece of coolness. His idea was to take the wave head-on and with his engines full speed ahead. And all the while he was thanking heaven he was not in the jam of traffic in the main canal. He rather, I think, overestimated the probable rush of waters; he dreaded being swept away, he explains, and smashed against houses and trees.

He does not give any estimate of the time it took between the bursting of the dykes and the arrival of the waters, but it was probably an interval of about twenty minutes or half an hour. He was working now in darkness--save for the light of his lantern--and in a great wind. He hung out head and stern lights....

Whirling torrents of steam were pouring up from the advancing waters, which had rushed, it must be remembered, through nearly incandescent gaps in the sea defences, and this vast uprush of vapour soon veiled the flaring centres of explosion altogether.

'The waters came at last, an advancing cascade. It was like a broad roller sweeping across the country. They came with a deep, roaring sound. I had expected a Niagara, but the total fall of the front could not have been much more than twelve feet. Our barge hesitated for a moment, took a dose over her bows, and then lifted. I signalled for full speed ahead and brought her head upstream, and held on like grim death to keep her there.

'There was a wind about as strong as the flood, and I found we were pounding against every conceivable buoyant object that had been between us and the sea. The only light in the world now came from our lamps, the steam became impenetrable at a score of yards from the boat, and the roar of the wind and water cut us off from all remoter sounds. The black, shining waters swirled by, coming into the light of our lamps out of an ebony blackness and vanishing again into impenetrable black. And on the waters came shapes, came things that flashed upon us for a moment, now a half-submerged boat, now a cow, now a huge fragment of a house's timberings, now a muddle of packing-cases and scaffolding. The things clapped into sight like something shown by the opening of a shutter, and then bumped shatteringly against us or rushed by us. Once I saw very clearly a man's white face....

'All the while a group of labouring, half-submerged trees remained ahead of us, drawing very slowly nearer. I steered a course to avoid them. They seemed to gesticulate a frantic despair against the black steam clouds behind. Once a great branch detached itself and tore shuddering by me. We did, on the whole, make headway. The last I saw of Vreugde bij Vrede before the night swallowed it, was almost dead astern of us....'

Section 9

Morning found Barnet still afloat. The bows of his barge had been badly strained, and his men were pumping or baling in relays. He had got about a dozen half-drowned people aboard whose boat had capsized near him, and he had three other boats in tow. He was afloat, and somewhere between Amsterdam and Alkmaar, but he could not tell where. It was a day that was still half night. Gray waters stretched in every direction under a dark gray sky, and out of the waves rose the upper parts of houses, in many cases ruined, the tops of trees, windmills, in fact the upper third of all the familiar Dutch scenery; and on it there drifted

a dimly seen flotilla of barges, small boats, many overturned, furniture, rafts, timbering, and miscellaneous objects.

The drowned were under water that morning. Only here and there did a dead cow or a stiff figure still clinging stoutly to a box or chair or such-like buoy hint at the hidden massacre. It was not till the Thursday that the dead came to the surface in any quantity. The view was bounded on every side by a gray mist that closed overhead in a gray canopy. The air cleared in the afternoon, and then, far away to the west under great banks of steam and dust, the flaming red eruption of the atomic bombs came visible across the waste of water.

They showed flat and sullen through the mist, like London sunsets. 'They sat upon the sea,' says Barnet, 'like frayed-out waterlilies of flame.'

Barnet seems to have spent the morning in rescue work along the track of the canal, in helping people who were adrift, in picking up derelict boats, and in taking people out of imperilled houses. He found other military barges similarly employed, and it was only as the day wore on and the immediate appeals for aid were satisfied that he thought of food and drink for his men, and what course he had better pursue. They had a little cheese, but no water. 'Orders,' that mysterious direction, had at last altogether disappeared. He perceived he had now to act upon his own responsibility.

'One's sense was of a destruction so far-reaching and of a world so altered that it seemed foolish to go in any direction and expect to find things as they had been before the war began. I sat on the quarter-deck with Mylius my engineer and Kemp and two others of the non-commissioned officers, and we consulted upon our line of action. We were foodless and aimless. We agreed that our fighting value was extremely small, and that our first

duty was to get ourselves in touch with food and instructions again. Whatever plan of campaign had directed our movements was manifestly smashed to bits. Mylius was of opinion that we could take a line westward and get back to England across the North Sea. He calculated that with such a motor barge as ours it would be possible to reach the Yorkshire coast within four-and-twenty hours. But this idea I overruled because of the shortness of our provisions, and more particularly because of our urgent need of water.

'Every boat we drew near now hailed us for water, and their demands did much to exasperate our thirst. I decided that if we went away to the south we should reach hilly country, or at least country that was not submerged, and then we should be able to land, find some stream, drink, and get supplies and news. Many of the barges adrift in the haze about us were filled with British soldiers and had floated up from the Nord See Canal, but none of them were any better informed than ourselves of the course of events. "Orders" had, in fact, vanished out of the sky.

' "Orders" made a temporary reappearance late that evening in the form of a megaphone hail from a British torpedo boat, announcing a truce, and giving the welcome information that food and water were being hurried down the Rhine and were to be found on the barge flotilla lying over the old Rhine above Leiden.' . . .

We will not follow Barnet, however, in the description of his strange overland voyage among trees and houses and churches by Zaandam and between Haarlem and Amsterdam, to Leiden. It was a voyage in a red-lit mist, in a world of steamy silhouette, full of strange voices and perplexity, and with every other sensation dominated by a feverish thirst. 'We sat,' he says, 'in a little huddled group, saying very little, and the men forward were mere knots of silent endurance. Our only continuing sound was the persistent mewling of a cat one of the men had rescued from a

floating hayrick near Zaandam. We kept a southward course by a watch-chain compass Mylius had produced....

'I do not think any of us felt we belonged to a defeated army, nor had we any strong sense of the war as the dominating fact about us. Our mental setting had far more of the effect of a huge natural catastrophe. The atomic bombs had dwarfed the international issues to complete insignificance. When our minds wandered from the preoccupations of our immediate needs, we speculated upon the possibility of stopping the use of these frightful explosives before the world was utterly destroyed. For to us it seemed quite plain that these bombs and the still greater power of destruction of which they were the precursors might quite easily shatter every relationship and institution of mankind.

' "What will they be doing," asked Mylius, "what will they be doing? It's plain we've got to put an end to war. It's plain things have to be run some way. THIS--all this--is impossible."

'I made no immediate answer. Something--I cannot think what--had brought back to me the figure of that man I had seen wounded on the very first day of actual fighting. I saw again his angry, tearful eyes, and that poor, dripping, bloody mess that had been a skilful human hand five minutes before, thrust out in indignant protest. "Damned foolery," he had stormed and sobbed, "damned foolery. My right hand, sir! My RIGHT hand. . . ."

'My faith had for a time gone altogether out of me. "I think we are too--too silly," I said to Mylius, "ever to stop war. If we'd had the sense to do it, we should have done it before this. I think this----" I pointed to the gaunt black outline of a smashed windmill that stuck up, ridiculous and ugly, above the blood-lit waters--"this is the end." '

Section 10

But now our history must part company with Frederick Barnet and his barge-load of hungry and starving men.

For a time in western Europe at least it was indeed as if civilisation had come to a final collapse. These crowning buds upon the tradition that Napoleon planted and Bismarck watered, opened and flared 'like waterlilies of flame' over nations destroyed, over churches smashed or submerged, towns ruined, fields lost to mankind for ever, and a million weltering bodies. Was this lesson enough for mankind, or would the flames of war still burn amidst the ruins?

Neither Barnet nor his companions, it is clear, had any assurance in their answers to that question. Already once in the history of mankind, in America, before its discovery by the whites, an organised civilisation had given way to a mere cult of warfare, specialised and cruel, and it seemed for a time to many a thoughtful man as if the whole world was but to repeat on a larger scale this ascendancy of the warrior, this triumph of the destructive instincts of the race.

The subsequent chapters of Barnet's narrative do but supply body to this tragic possibility. He gives a series of vignettes of civilisation, shattered, it seemed, almost irreparably. He found the Belgian hills swarming with refugees and desolated by cholera; the vestiges of the contending armies keeping order under a truce, without actual battles, but with the cautious hostility of habit, and a great absence of plan everywhere.

Overhead aeroplanes went on mysterious errands, and there were rumours of cannibalism and hysterical fanaticisms in the valleys of the Semoy and the forest region of the eastern Ardennes. There was the report of an attack upon Russia by the Chinese and

Japanese, and of some huge revolutionary outbreak in America. The weather was stormier than men had ever known it in those regions, with much thunder and lightning and wild cloud-bursts of rain....

CHAPTER THE THIRD

THE ENDING OF WAR

Section 1

On the mountain-side above the town of Brissago and commanding two long stretches of Lake Maggiore, looking eastward to Bellinzona, and southward to Luino, there is a shelf of grass meadows which is very beautiful in springtime with a great multitude of wild flowers. More particularly is this so in early June, when the slender asphodel Saint Bruno's lily, with its spike of white blossom, is in flower. To the westward of this delightful shelf there is a deep and densely wooded trench, a great gulf of blue some mile or so in width out of which arise great precipices very high and wild. Above the asphodel fields the mountains climb in rocky slopes to solitudes of stone and sunlight that curve round and join that wall of cliffs in one common skyline. This desolate and austere background contrasts very vividly with the glowing serenity of the great lake below, with the spacious view of fertile hills and roads and villages and islands to south and east, and with the hotly golden rice flats of the Val Maggia to the north. And because it was a remote and insignificant place, far away out of the crowding tragedies of that year of disaster, away from burning cities and starving multitudes, bracing and tranquillising and hidden, it was here that there gathered the conference of rulers that was to arrest, if possible, before it was too late, the debacle of civilisation. Here, brought together by the indefatigable energy of that impassioned humanitarian, Leblanc, the French ambassador at Washington, the chief Powers of the world were to meet in a last desperate conference to 'save humanity.'

Leblanc was one of those ingenuous men whose lot would have been insignificant in any period of security, but who have been caught

up to an immortal role in history by the sudden simplification of human affairs through some tragical crisis, to the measure of their simplicity. Such a man was Abraham Lincoln, and such was Garibaldi. And Leblanc, with his transparent childish innocence, his entire self-forgetfulness, came into this confusion of distrust and intricate disaster with an invincible appeal for the manifest sanities of the situation. His voice, when he spoke, was 'full of remonstrance.' He was a little bald, spectacled man, inspired by that intellectual idealism which has been one of the peculiar gifts of France to humanity. He was possessed of one clear persuasion, that war must end, and that the only way to end war was to have but one government for mankind. He brushed aside all other considerations. At the very outbreak of the war, so soon as the two capitals of the belligerents had been wrecked, he went to the president in the White House with this proposal. He made it as if it was a matter of course. He was fortunate to be in Washington and in touch with that gigantic childishness which was the characteristic of the American imagination. For the Americans also were among the simple peoples by whom the world was saved. He won over the American president and the American government to his general ideas; at any rate they supported him sufficiently to give him a standing with the more sceptical European governments, and with this backing he set to work--it seemed the most fantastic of enterprises--to bring together all the rulers of the world and unify them. He wrote innumerable letters, he sent messages, he went desperate journeys, he enlisted whatever support he could find; no one was too humble for an ally or too obstinate for his advances; through the terrible autumn of the last wars this persistent little visionary in spectacles must have seemed rather like a hopeful canary twittering during a thunderstorm. And no accumulation of disasters daunted his conviction that they could be ended.

For the whole world was flaring then into a monstrous phase of destruction. Power after Power about the armed globe sought to

anticipate attack by aggression. They went to war in a delirium of panic, in order to use their bombs first. China and Japan had assailed Russia and destroyed Moscow, the United States had attacked Japan, India was in anarchistic revolt with Delhi a pit of fire spouting death and flame; the redoubtable King of the Balkans was mobilising. It must have seemed plain at last to every one in those days that the world was slipping headlong to anarchy. By the spring of 1959 from nearly two hundred centres, and every week added to their number, roared the unquenchable crimson conflagrations of the atomic bombs, the flimsy fabric of the world's credit had vanished, industry was completely disorganised and every city, every thickly populated area was starving or trembled on the verge of starvation. Most of the capital cities of the world were burning; millions of people had already perished, and over great areas government was at an end. Humanity has been compared by one contemporary writer to a sleeper who handles matches in his sleep and wakes to find himself in flames.

For many months it was an open question whether there was to be found throughout all the race the will and intelligence to face these new conditions and make even an attempt to arrest the downfall of the social order. For a time the war spirit defeated every effort to rally the forces of preservation and construction. Leblanc seemed to be protesting against earthquakes, and as likely to find a spirit of reason in the crater of Etna. Even though the shattered official governments now clamoured for peace, bands of irreconcilables and invincible patriots, usurpers, adventurers, and political desperadoes, were everywhere in possession of the simple apparatus for the disengagement of atomic energy and the initiation of new centres of destruction. The stuff exercised an irresistible fascination upon a certain type of mind. Why should any one give in while he can still destroy his enemies? Surrender? While there is still a chance of blowing them to dust? The power of destruction which

had once been the ultimate privilege of government was now the only power left in the world--and it was everywhere. There were few thoughtful men during that phase of blazing waste who did not pass through such moods of despair as Barnett describes, and declare with him: 'This is the end....'

And all the while Leblanc was going to and fro with glittering glasses and an inexhaustible persuasiveness, urging the manifest reasonableness of his view upon ears that ceased presently to be inattentive. Never at any time did he betray a doubt that all this chaotic conflict would end. No nurse during a nursery uproar was ever so certain of the inevitable ultimate peace. From being treated as an amiable dreamer he came by insensible degrees to be regarded as an extravagant possibility. Then he began to seem even practicable. The people who listened to him in 1958 with a smiling impatience, were eager before 1959 was four months old to know just exactly what he thought might be done. He answered with the patience of a philosopher and the lucidity of a Frenchman. He began to receive responses of a more and more hopeful type. He came across the Atlantic to Italy, and there he gathered in the promises for this congress. He chose those high meadows above Brissago for the reasons we have stated. 'We must get away,' he said, 'from old associations.' He set to work requisitioning material for his conference with an assurance that was justified by the replies. With a slight incredulity the conference which was to begin a new order in the world, gathered itself together. Leblanc summoned it without arrogance, he controlled it by virtue of an infinite humility. Men appeared upon those upland slopes with the apparatus for wireless telegraphy; others followed with tents and provisions; a little cable was flung down to a convenient point upon the Locarno road below. Leblanc arrived, sedulously directing every detail that would affect the tone of the assembly. He might have been a courier in advance rather than the originator of the gathering. And then there arrived, some by the cable, most by aeroplane, a

few in other fashions, the men who had been called together to confer upon the state of the world. It was to be a conference without a name. Nine monarchs, the presidents of four republics, a number of ministers and ambassadors, powerful journalists, and such-like prominent and influential men, took part in it. There were even scientific men; and that world-famous old man, Holsten, came with the others to contribute his amateur statecraft to the desperate problem of the age. Only Leblanc would have dared so to summon figure heads and powers and intelligence, or have had the courage to hope for their agreement....

Section 2

And one at least of those who were called to this conference of governments came to it on foot. This was King Egbert, the young king of the most venerable kingdom in Europe. He was a rebel, and had always been of deliberate choice a rebel against the magnificence of his position. He affected long pedestrian tours and a disposition to sleep in the open air. He came now over the Pass of Sta Maria Maggiore and by boat up the lake to Brissago; thence he walked up the mountain, a pleasant path set with oaks and sweet chestnut. For provision on the walk, for he did not want to hurry, he carried with him a pocketful of bread and cheese. A certain small retinue that was necessary to his comfort and dignity upon occasions of state he sent on by the cable car, and with him walked his private secretary, Firmin, a man who had thrown up the Professorship of World Politics in the London School of Sociology, Economics, and Political Science, to take up these duties. Firmin was a man of strong rather than rapid thought, he had anticipated great influence in this new position, and after some years he was still only beginning to apprehend how largely his function was to listen. Originally he had been something of a thinker upon international politics, an authority upon tariffs and strategy, and a valued contributor to various of the higher organs of public opinion, but the atomic bombs had

taken him by surprise, and he had still to recover completely from his pre-atomic opinions and the silencing effect of those sustained explosives.

The king's freedom from the trammels of etiquette was very complete. In theory--and he abounded in theory--his manners were purely democratic. It was by sheer habit and inadvertency that he permitted Firmin, who had discovered a rucksack in a small shop in the town below, to carry both bottles of beer. The king had never, as a matter of fact, carried anything for himself in his life, and he had never noted that he did not do so.

'We will have nobody with us,' he said, 'at all. We will be perfectly simple.'

So Firmin carried the beer.

As they walked up--it was the king made the pace rather than Firmin--they talked of the conference before them, and Firmin, with a certain want of assurance that would have surprised him in himself in the days of his Professorship, sought to define the policy of his companion. 'In its broader form, sir,' said Firmin; 'I admit a certain plausibility in this project of Leblanc's, but I feel that although it may be advisable to set up some sort of general control for International affairs--a sort of Hague Court with extended powers--that is no reason whatever for losing sight of the principles of national and imperial autonomy.'

'Firmin,' said the king, 'I am going to set my brother kings a good example.'

Firmin intimated a curiosity that veiled a dread.

'By chucking all that nonsense,' said the king.

He quickened his pace as Firmin, who was already a little out of breath, betrayed a disposition to reply.

'I am going to chuck all that nonsense,' said the king, as Firmin prepared to speak. 'I am going to fling my royalty and empire on the table--and declare at once I don't mean to haggle. It's haggling--about rights--has been the devil in human affairs, for--always. I am going to stop this nonsense.'

Firmin halted abruptly. 'But, sir!' he cried.

The king stopped six yards ahead of him and looked back at his adviser's perspiring visage.

'Do you really think, Firmin, that I am here as--as an infernal politician to put my crown and my flag and my claims and so forth in the way of peace? That little Frenchman is right. You know he is right as well as I do. Those things are over. We--we kings and rulers and representatives have been at the very heart of the mischief. Of course we imply separation, and of course separation means the threat of war, and of course the threat of war means the accumulation of more and more atomic bombs. The old game's up. But, I say, we mustn't stand here, you know. The world waits. Don't you think the old game's up, Firmin?'

Firmin adjusted a strap, passed a hand over his wet forehead, and followed earnestly. 'I admit, sir,' he said to a receding back, 'that there has to be some sort of hegemony, some sort of Amphictyonic council----'

'There's got to be one simple government for all the world,' said the king over his shoulder.

'But as for a reckless, unqualified abandonment, sir----'

'BANG!' cried the king.

Firmin made no answer to this interruption. But a faint shadow of annoyance passed across his heated features.

'Yesterday,' said the king, by way of explanation, 'the Japanese very nearly got San Francisco.'

'I hadn't heard, sir.'

'The Americans ran the Japanese aeroplane down into the sea and there the bomb got busted.'

'Under the sea, sir?'

'Yes. Submarine volcano. The steam is in sight of the Californian coast. It was as near as that. And with things like this happening, you want me to go up this hill and haggle. Consider the effect of that upon my imperial cousin--and all the others!'

'HE will haggle, sir.'

'Not a bit of it,' said the king.

'But, sir.'

'Leblanc won't let him.'

Firmin halted abruptly and gave a vicious pull at the offending strap. 'Sir, he will listen to his advisers,' he said, in a tone that in some subtle way seemed to implicate his master with the trouble of the knapsack.

The king considered him.

'We will go just a little higher,' he said. 'I want to find this unoccupied village they spoke of, and then we will drink that beer. It can't be far. We will drink the beer and throw away the bottles. And then, Firmin, I shall ask you to look at things in a more generous light.... Because, you know, you must....'

He turned about and for some time the only sound they made was the noise of their boots upon the loose stones of the way and the irregular breathing of Firmin.

At length, as it seemed to Firmin, or quite soon, as it seemed to the king, the gradient of the path diminished, the way widened out, and they found themselves in a very beautiful place indeed. It was one of those upland clusters of sheds and houses that are still to be found in the mountains of North Italy, buildings that were used only in the high summer, and which it was the custom to leave locked up and deserted through all the winter and spring, and up to the middle of June. The buildings were of a soft-toned gray stone, buried in rich green grass, shadowed by chestnut trees and lit by an extraordinary blaze of yellow broom. Never had the king seen broom so glorious; he shouted at the light of it, for it seemed to give out more sunlight even than it received; he sat down impulsively on a lichenous stone, tugged out his bread and cheese, and bade Firmin thrust the beer into the shaded weeds to cool.

'The things people miss, Firmin,' he said, 'who go up into the air in ships!'

Firmin looked around him with an ungenial eye. 'You see it at its best, sir,' he said, 'before the peasants come here again and make it filthy.'

'It would be beautiful anyhow,' said the king.

'Superficially, sir,' said Firmin. 'But it stands for a social order that is fast vanishing away. Indeed, judging by the grass between the stones and in the huts, I am inclined to doubt if it is in use even now.'

'I suppose,' said the king, 'they would come up immediately the hay on this flower meadow is cut. It would be those slow, creamy-coloured beasts, I expect, one sees on the roads below, and swarthy girls with red handkerchiefs over their black hair.... It is wonderful to think how long that beautiful old life lasted. In the Roman times and long ages before ever the rumour of the Romans had come into these parts, men drove their cattle up into these places as the summer came on.... How haunted is this place! There have been quarrels here, hopes, children have played here and lived to be old crones and old gaffers, and died, and so it has gone on for thousands of lives. Lovers, innumerable lovers, have caressed amidst this golden broom....'

He meditated over a busy mouthful of bread and cheese.

'We ought to have brought a tankard for that beer,' he said.

Firmin produced a folding aluminium cup, and the king was pleased to drink.

'I wish, sir,' said Firmin suddenly, 'I could induce you at least to delay your decision----'

'It's no good talking, Firmin,' said the king. 'My mind's as clear as daylight.'

'Sire,' protested Firmin, with his voice full of bread and cheese and genuine emotion, 'have you no respect for your kingship?'

The king paused before he answered with unwonted gravity. 'It's just because I have, Firmin, that I won't be a puppet in this game of international politics.' He regarded his companion for a moment and then remarked: 'Kingship!--what do YOU know of kingship, Firmin?

'Yes,' cried the king to his astonished counsellor. 'For the first time in my life I am going to be a king. I am going to lead, and lead by my own authority. For a dozen generations my family has been a set of dummies in the hands of their advisers. Advisers! Now I am going to be a real king--and I am going to--to abolish, dispose of, finish, the crown to which I have been a slave. But what a world of paralysing shams this roaring stuff has ended! The rigid old world is in the melting-pot again, and I, who seemed to be no more than the stuffing inside a regal robe, I am a king among kings. I have to play my part at the head of things and put an end to blood and fire and idiot disorder.'

'But, sir,' protested Firmin.

'This man Leblanc is right. The whole world has got to be a Republic, one and indivisible. You know that, and my duty is to make that easy. A king should lead his people; you want me to stick on their backs like some Old Man of the Sea. To-day must be a sacrament of kings. Our trust for mankind is done with and ended. We must part our robes among them, we must part our kingship among them, and say to them all, now the king in every one must rule the world.... Have you no sense of the magnificence of this occasion? You want me, Firmin, you want me to go up there and haggle like a damned little solicitor for some price, some compensation, some qualification....'

Firmin shrugged his shoulders and assumed an expression of despair. Meanwhile, he conveyed, one must eat.

For a time neither spoke, and the king ate and turned over in his mind the phrases of the speech he intended to make to the conference. By virtue of the antiquity of his crown he was to preside, and he intended to make his presidency memorable. Reassured of his eloquence, he considered the despondent and sulky Firmin for a space.

'Firmin,' he said, 'you have idealised kingship.' 'It has been my dream, sir,' said Firmin sorrowfully, 'to serve.'

'At the levers, Firmin,' said the king.

'You are pleased to be unjust,' said Firmin, deeply hurt.

'I am pleased to be getting out of it,' said the king.

'Oh, Firmin,' he went on, 'have you no thought for me? Will you never realise that I am not only flesh and blood but an imagination--with its rights. I am a king in revolt against that fetter they put upon my head. I am a king awake. My reverend grandparents never in all their august lives had a waking moment. They loved the job that you, you advisers, gave them; they never had a doubt of it. It was like giving a doll to a woman who ought to have a child. They delighted in processions and opening things and being read addresses to, and visiting triplets and nonagenarians and all that sort of thing. Incredibly. They used to keep albums of cuttings from all the illustrated papers showing them at it, and if the press-cutting parcels grew thin they were worried. It was all that ever worried them. But there is something atavistic in me; I hark back to unconstitutional monarchs. They christened me too retrogressively, I think. I wanted to get things done. I was bored. I might have fallen into vice, most intelligent and energetic princes do, but the palace precautions were unusually thorough. I was brought up in the purest court the world has ever seen. . . . Alertly pure.... So I

read books, Firmin, and went about asking questions. The thing was bound to happen to one of us sooner or later. Perhaps, too, very likely I'm not vicious. I don't think I am.'

He reflected. 'No,' he said.

Firmin cleared his throat. 'I don't think you are, sir,' he said. 'You prefer----'

He stopped short. He had been going to say 'talking.' He substituted 'ideas.'

'That world of royalty!' the king went on. 'In a little while no one will understand it any more. It will become a riddle....'

'Among other things, it was a world of perpetual best clothes. Everything was in its best clothes for us, and usually wearing bunting. With a cinema watching to see we took it properly. If you are a king, Firmin, and you go and look at a regiment, it instantly stops whatever it is doing, changes into full uniform and presents arms. When my august parents went in a train the coal in the tender used to be whitened. It did, Firmin, and if coal had been white instead of black I have no doubt the authorities would have blackened it. That was the spirit of our treatment. People were always walking about with their faces to us. One never saw anything in profile. One got an impression of a world that was insanely focused on ourselves. And when I began to poke my little questions into the Lord Chancellor and the archbishop and all the rest of them, about what I should see if people turned round, the general effect I produced was that I wasn't by any means displaying the Royal Tact they had expected of me....'

He meditated for a time.

'And yet, you know, there is something in the kingship, Firmin. It stiffened up my august little grandfather. It gave my grandmother a kind of awkward dignity even when she was cross--and she was very often cross. They both had a profound sense of responsibility. My poor father's health was wretched during his brief career; nobody outside the circle knows just how he screwed himself up to things. "My people expect it," he used to say of this tiresome duty or that. Most of the things they made him do were silly--it was part of a bad tradition, but there was nothing silly in the way he set about them.... The spirit of kingship is a fine thing, Firmin; I feel it in my bones; I do not know what I might not be if I were not a king. I could die for my people, Firmin, and you couldn't. No, don't say you could die for me, because I know better. Don't think I forget my kingship, Firmin, don't imagine that. I am a king, a kingly king, by right divine. The fact that I am also a chattering young man makes not the slightest difference to that. But the proper text-book for kings, Firmin, is none of the court memoirs and Welt-Politik books you would have me read; it is old Fraser's Golden Bough. Have you read that, Firmin?'

Firmin had. 'Those were the authentic kings. In the end they were cut up and a bit given to everybody. They sprinkled the nations--with Kingship.'

Firmin turned himself round and faced his royal master.

'What do you intend to do, sir?' he asked. 'If you will not listen to me, what do you propose to do this afternoon?'

The king flicked crumbs from his coat.

'Manifestly war has to stop for ever, Firmin. Manifestly this can only be done by putting all the world under one government. Our crowns and flags are in the way. Manifestly they must go.'

'Yes, sir,' interrupted Firmin, 'but WHAT government? I don't see what government you get by a universal abdication!'

'Well,' said the king, with his hands about his knees, 'WE shall be the government.'

'The conference?' exclaimed Firmin.

'Who else?' asked the king simply.

'It's perfectly simple,' he added to Firmin's tremendous silence.

'But,' cried Firmin, 'you must have sanctions! Will there be no form of election, for example?'

'Why should there be?' asked the king, with intelligent curiosity.

'The consent of the governed.'

'Firmin, we are just going to lay down our differences and take over government. Without any election at all. Without any sanction. The governed will show their consent by silence. If any effective opposition arises we shall ask it to come in and help. The true sanction of kingship is the grip upon the sceptre. We aren't going to worry people to vote for us. I'm certain the mass of men does not want to be bothered with such things.... We'll contrive a way for any one interested to join in. That's quite enough in the way of democracy. Perhaps later--when things don't matter.... We shall govern all right, Firmin. Government only becomes difficult when the lawyers get hold of it, and since these troubles began the lawyers are shy. Indeed, come to think of it, I wonder where all the lawyers are.... Where are they? A lot, of course, were bagged, some of the worst ones, when they

blew up my legislature. You never knew the late Lord Chancellor.

. . .

'Necessities bury rights. And create them. Lawyers live on dead rights disinterred.... We've done with that way of living. We won't have more law than a code can cover and beyond that government will be free....

'Before the sun sets to-day, Firmin, trust me, we shall have made our abdications, all of us, and declared the World Republic, supreme and indivisible. I wonder what my august grandmother would have made of it! All my rights! . . . And then we shall go on governing. What else is there to do? All over the world we shall declare that there is no longer mine or thine, but ours. China, the United States, two-thirds of Europe, will certainly fall in and obey. They will have to do so. What else can they do? Their official rulers are here with us. They won't be able to get together any sort of idea of not obeying us.... Then we shall declare that every sort of property is held in trust for the Republic....'

'But, sir!' cried Firmin, suddenly enlightened. 'Has this been arranged already?'

'My dear Firmin, do you think we have come here, all of us, to talk at large? The talking has been done for half a century. Talking and writing. We are here to set the new thing, the simple, obvious, necessary thing, going.'

He stood up.

Firmin, forgetting the habits of a score of years, remained seated.

'WELL,' he said at last. 'And I have known nothing!'

The king smiled very cheerfully. He liked these talks with Firmin.

Section 3

That conference upon the Brissago meadows was one of the most heterogeneous collections of prominent people that has ever met together. Principalities and powers, stripped and shattered until all their pride and mystery were gone, met in a marvellous new humility. Here were kings and emperors whose capitals were lakes of flaming destruction, statesmen whose countries had become chaos, scared politicians and financial potentates. Here were leaders of thought and learned investigators dragged reluctantly to the control of affairs. Altogether there were ninety-three of them, Leblanc's conception of the head men of the world. They had all come to the realisation of the simple truths that the indefatigable Leblanc had hammered into them; and, drawing his resources from the King of Italy, he had provisioned his conference with a generous simplicity quite in accordance with the rest of his character, and so at last was able to make his astonishing and entirely rational appeal. He had appointed King Egbert the president, he believed in this young man so firmly that he completely dominated him, and he spoke himself as a secretary might speak from the president's left hand, and evidently did not realise himself that he was telling them all exactly what they had to do. He imagined he was merely recapitulating the obvious features of the situation for their convenience. He was dressed in ill-fitting white silk clothes, and he consulted a dingy little packet of notes as he spoke. They put him out. He explained that he had never spoken from notes before, but that this occasion was exceptional.

And then King Egbert spoke as he was expected to speak, and Leblanc's spectacles moistened at that flow of generous

sentiment, most amiably and lightly expressed. 'We haven't to stand on ceremony,' said the king, 'we have to govern the world. We have always pretended to govern the world and here is our opportunity.'

'Of course,' whispered Leblanc, nodding his head rapidly, 'of course.'

'The world has been smashed up, and we have to put it on its wheels again,' said King Egbert. 'And it is the simple common sense of this crisis for all to help and none to seek advantage. Is that our tone or not?'

The gathering was too old and seasoned and miscellaneous for any great displays of enthusiasm, but that was its tone, and with an astonishment that somehow became exhilarating it began to resign, repudiate, and declare its intentions. Firmin, taking notes behind his master, heard everything that had been foretold among the yellow broom, come true. With a queer feeling that he was dreaming, he assisted at the proclamation of the World State, and saw the message taken out to the wireless operators to be throbbled all round the habitable globe. 'And next,' said King Egbert, with a cheerful excitement in his voice, 'we have to get every atom of Carolinum and all the plant for making it, into our control....'

Firman was not alone in his incredulity. Not a man there who was not a very amiable, reasonable, benevolent creature at bottom; some had been born to power and some had happened upon it, some had struggled to get it, not clearly knowing what it was and what it implied, but none was irreconcilably set upon its retention at the price of cosmic disaster. Their minds had been prepared by circumstances and sedulously cultivated by Leblanc; and now they took the broad obvious road along which King Egbert was leading them, with a mingled conviction of strangeness and necessity.

Things went very smoothly; the King of Italy explained the arrangements that had been made for the protection of the camp from any fantastic attack; a couple of thousand of aeroplanes, each carrying a sharpshooter, guarded them, and there was an excellent system of relays, and at night all the sky would be searched by scores of lights, and the admirable Leblanc gave luminous reasons for their camping just where they were and going on with their administrative duties forthwith. He knew of this place, because he had happened upon it when holiday-making with Madame Leblanc twenty years and more ago. 'There is very simple fare at present,' he explained, 'on account of the disturbed state of the countries about us. But we have excellent fresh milk, good red wine, beef, bread, salad, and lemons. . . . In a few days I hope to place things in the hands of a more efficient caterer....'

The members of the new world government dined at three long tables on trestles, and down the middle of these tables Leblanc, in spite of the barrenness of his menu, had contrived to have a great multitude of beautiful roses. There was similar accommodation for the secretaries and attendants at a lower level down the mountain. The assembly dined as it had debated, in the open air, and over the dark crags to the west the glowing June sunset shone upon the banquet. There was no precedence now among the ninety-three, and King Egbert found himself between a pleasant little Japanese stranger in spectacles and his cousin of Central Europe, and opposite a great Bengali leader and the President of the United States of America. Beyond the Japanese was Holsten, the old chemist, and Leblanc was a little way down the other side.

The king was still cheerfully talkative and abounded in ideas. He fell presently into an amiable controversy with the American, who seemed to feel a lack of impressiveness in the occasion.

It was ever the Transatlantic tendency, due, no doubt, to the necessity of handling public questions in a bulky and striking manner, to over-emphasise and over-accentuate, and the president was touched by his national failing. He suggested now that there should be a new era, starting from that day as the first day of the first year.

The king demurred.

'From this day forth, sir, man enters upon his heritage,' said the American.

'Man,' said the king, 'is always entering upon his heritage. You Americans have a peculiar weakness for anniversaries--if you will forgive me saying so. Yes--I accuse you of a lust for dramatic effect. Everything is happening always, but you want to say this or this is the real instant in time and subordinate all the others to it.'

The American said something about an epoch-making day.

'But surely,' said the king, 'you don't want us to condemn all humanity to a world-wide annual Fourth of July for ever and ever more. On account of this harmless necessary day of declarations. No conceivable day could ever deserve that. Ah! you do not know, as I do, the devastations of the memorable. My poor grandparents were--RUBRICATED. The worst of these huge celebrations is that they break up the dignified succession of one's contemporary emotions. They interrupt. They set back. Suddenly out come the flags and fireworks, and the old enthusiasms are furbished up--and it's sheer destruction of the proper thing that ought to be going on. Sufficient unto the day is the celebration thereof. Let the dead past bury its dead. You see, in regard to the calendar, I am for democracy and you are for aristocracy. All things I hold, are august, and have a right to be lived through

on their merits. No day should be sacrificed on the grave of departed events. What do you think of it, Wilhelm?'

'For the noble, yes, all days should be noble.'

'Exactly my position,' said the king, and felt pleased at what he had been saying.

And then, since the American pressed his idea, the king contrived to shift the talk from the question of celebrating the epoch they were making to the question of the probabilities that lay ahead. Here every one became diffident. They could see the world unified and at peace, but what detail was to follow from that unification they seemed indisposed to discuss. This diffidence struck the king as remarkable. He plunged upon the possibilities of science. All the huge expenditure that had hitherto gone into unproductive naval and military preparations, must now, he declared, place research upon a new footing. 'Where one man worked we will have a thousand.' He appealed to Holsten. 'We have only begun to peep into these possibilities,' he said. 'You at any rate have sounded the vaults of the treasure house.'

'They are unfathomable,' smiled Holsten.

'Man,' said the American, with a manifest resolve to justify and reinstate himself after the flickering contradictions of the king, 'Man, I say, is only beginning to enter upon his heritage.'

'Tell us some of the things you believe we shall presently learn, give us an idea of the things we may presently do,' said the king to Holsten.

Holsten opened out the vistas....

'Science,' the king cried presently, 'is the new king of the

world.'

'OUR view,' said the president, 'is that sovereignty resides with the people.'

'No!' said the king, 'the sovereign is a being more subtle than that. And less arithmetical. Neither my family nor your emancipated people. It is something that floats about us, and above us, and through us. It is that common impersonal will and sense of necessity of which Science is the best understood and most typical aspect. It is the mind of the race. It is that which has brought us here, which has bowed us all to its demands....'

He paused and glanced down the table at Leblanc, and then re-opened at his former antagonist.

'There is a disposition,' said the king, 'to regard this gathering as if it were actually doing what it appears to be doing, as if we ninety-odd men of our own free will and wisdom were unifying the world. There is a temptation to consider ourselves exceptionally fine fellows, and masterful men, and all the rest of it. We are not. I doubt if we should average out as anything abler than any other casually selected body of ninety-odd men. We are no creators, we are consequences, we are salvagers--or salvagees. The thing to-day is not ourselves but the wind of conviction that has blown us hither....'

The American had to confess he could hardly agree with the king's estimate of their average.

'Holster, perhaps, and one or two others, might lift us a little,' the king conceded. 'But the rest of us?'

His eyes flitted once more towards Leblanc.

'Look at Leblanc,' he said. 'He's just a simple soul. There are hundreds and thousands like him. I admit, a certain dexterity, a certain lucidity, but there is not a country town in France where there is not a Leblanc or so to be found about two o'clock in its principal cafe. It's just that he isn't complicated or Super-Mannish, or any of those things that has made all he has done possible. But in happier times, don't you think, Wilhelm, he would have remained just what his father was, a successful epicier, very clean, very accurate, very honest. And on holidays he would have gone out with Madame Leblanc and her knitting in a punt with a jar of something gentle and have sat under a large reasonable green-lined umbrella and fished very neatly and successfully for gudgeon....'

The president and the Japanese prince in spectacles protested together.

'If I do him an injustice,' said the king, 'it is only because I want to elucidate my argument. I want to make it clear how small are men and days, and how great is man in comparison....'

Section 4

So it was King Egbert talked at Brissago after they had proclaimed the unity of the world. Every evening after that the assembly dined together and talked at their ease and grew accustomed to each other and sharpened each other's ideas, and every day they worked together, and really for a time believed that they were inventing a new government for the world. They discussed a constitution. But there were matters needing attention too urgently to wait for any constitution. They attended to these incidentally. The constitution it was that waited. It was presently found convenient to keep the constitution waiting indefinitely as King Egbert had foreseen,

and meanwhile, with an increasing self-confidence, that council went on governing....

On this first evening of all the council's gatherings, after King Egbert had talked for a long time and drunken and praised very abundantly the simple red wine of the country that Leblanc had procured for them, he fathered about him a group of congenial spirits and fell into a discourse upon simplicity, praising it above all things and declaring that the ultimate aim of art, religion, philosophy, and science alike was to simplify. He instanced himself as a devotee to simplicity. And Leblanc he instanced as a crowning instance of the splendour of this quality. Upon that they all agreed.

When at last the company about the tables broke up, the king found himself brimming over with a peculiar affection and admiration for Leblanc, he made his way to him and drew him aside and broached what he declared was a small matter. There was, he said, a certain order in his gift that, unlike all other orders and decorations in the world, had never been corrupted. It was reserved for elderly men of supreme distinction, the acuteness of whose gifts was already touched to mellowness, and it had included the greatest names of every age so far as the advisers of his family had been able to ascertain them. At present, the king admitted, these matters of stars and badges were rather obscured by more urgent affairs, for his own part he had never set any value upon them at all, but a time might come when they would be at least interesting, and in short he wished to confer the Order of Merit upon Leblanc. His sole motive in doing so, he added, was his strong desire to signalise his personal esteem. He laid his hand upon the Frenchman's shoulder as he said these things, with an almost brotherly affection. Leblanc received this proposal with a modest confusion that greatly enhanced the king's opinion of his admirable simplicity. He pointed out that eager as he was to snatch at the proffered distinction, it might at the

present stage appear invidious, and he therefore suggested that the conferring of it should be postponed until it could be made the crown and conclusion of his services. The king was unable to shake this resolution, and the two men parted with expressions of mutual esteem.

The king then summoned Firmin in order to make a short note of a number of things that he had said during the day. But after about twenty minutes' work the sweet sleepiness of the mountain air overcame him, and he dismissed Firmin and went to bed and fell asleep at once, and slept with extreme satisfaction. He had had an active, agreeable day.

Section 5

The establishment of the new order that was thus so humanly begun, was, if one measures it by the standard of any preceding age, a rapid progress. The fighting spirit of the world was exhausted. Only here or there did fierceness linger. For long decades the combative side in human affairs had been monstrously exaggerated by the accidents of political separation. This now became luminously plain. An enormous proportion of the force that sustained armaments had been nothing more aggressive than the fear of war and warlike neighbours. It is doubtful if any large section of the men actually enlisted for fighting ever at any time really hungered and thirsted for bloodshed and danger. That kind of appetite was probably never very strong in the species after the savage stage was past. The army was a profession, in which killing had become a disagreeable possibility rather than an eventful certainty. If one reads the old newspapers and periodicals of that time, which did so much to keep militarism alive, one finds very little about glory and adventure and a constant harping on the disagreeableness of invasion and subjugation. In one word, militarism was funk. The belligerent resolution of the armed Europe of the twentieth century was the

resolution of a fiercely frightened sheep to plunge. And now that its weapons were exploding in its hands, Europe was only too eager to drop them, and abandon this fancied refuge of violence.

For a time the whole world had been shocked into frankness; nearly all the clever people who had hitherto sustained the ancient belligerent separations had now been brought to realise the need for simplicity of attitude and openness of mind; and in this atmosphere of moral renaissance, there was little attempt to get negotiable advantages out of resistance to the new order. Human beings are foolish enough no doubt, but few have stopped to haggle in a fire-escape. The council had its way with them. The band of 'patriots' who seized the laboratories and arsenal just outside Osaka and tried to rouse Japan to revolt against inclusion in the Republic of Mankind, found they had miscalculated the national pride and met the swift vengeance of their own countrymen. That fight in the arsenal was a vivid incident in this closing chapter of the history of war. To the last the 'patriots' were undecided whether, in the event of a defeat, they would explode their supply of atomic bombs or not. They were fighting with swords outside the iridium doors, and the moderates of their number were at bay and on the verge of destruction, only ten, indeed, remained unwounded, when the republicans burst in to the rescue....

Section 6

One single monarch held out against the general acquiescence in the new rule, and that was that strange survival of mediaevalism, the 'Slavic Fox,' the King of the Balkans. He debated and delayed his submissions. He showed an extraordinary combination of cunning and temerity in his evasion of the repeated summonses from Brissago. He affected ill-health and a great preoccupation with his new official mistress, for his semi-barbaric court was arranged on the best romantic models. His tactics were ably

seconded by Doctor Pestovitch, his chief minister. Failing to establish his claims to complete independence, King Ferdinand Charles annoyed the conference by a proposal to be treated as a protected state. Finally he professed an unconvincing submission, and put a mass of obstacles in the way of the transfer of his national officials to the new government. In these things he was enthusiastically supported by his subjects, still for the most part an illiterate peasantry, passionately if confusedly patriotic, and so far with no practical knowledge of the effect of atomic bombs. More particularly he retained control of all the Balkan aeroplanes.

For once the extreme naivete of Leblanc seems to have been mitigated by duplicity. He went on with the general pacification of the world as if the Balkan submission was made in absolute good faith, and he announced the disbandment of the force of aeroplanes that hitherto guarded the council at Brissago upon the approaching fifteenth of July. But instead he doubled the number upon duty on that eventful day, and made various arrangements for their disposition. He consulted certain experts, and when he took King Egbert into his confidence there was something in his neat and explicit foresight that brought back to that ex-monarch's mind his half-forgotten fantasy of Leblanc as a fisherman under a green umbrella.

About five o'clock in the morning of the seventeenth of July one of the outer sentinels of the Brissago fleet, which was soaring unobtrusively over the lower end of the lake of Garda, sighted and hailed a strange aeroplane that was flying westward, and, failing to get a satisfactory reply, set its wireless apparatus talking and gave chase. A swarm of consorts appeared very promptly over the westward mountains, and before the unknown aeroplane had sighted Como, it had a dozen eager attendants closing in upon it. Its driver seems to have hesitated, dropped down among the mountains, and then turned southward in flight,

only to find an intercepting biplane sweeping across his bows. He then went round into the eye of the rising sun, and passed within a hundred yards of his original pursuer.

The sharpshooter therein opened fire at once, and showed an intelligent grasp of the situation by disabling the passenger first. The man at the wheel must have heard his companion cry out behind him, but he was too intent on getting away to waste even a glance behind. Twice after that he must have heard shots. He let his engine go, he crouched down, and for twenty minutes he must have steered in the continual expectation of a bullet. It never came, and when at last he glanced round, three great planes were close upon him, and his companion, thrice hit, lay dead across his bombs. His followers manifestly did not mean either to upset or shoot him, but inexorably they drove him down, down. At last he was curving and flying a hundred yards or less over the level fields of rice and maize. Ahead of him and dark against the morning sunrise was a village with a very tall and slender campanile and a line of cable bearing metal standards that he could not clear. He stopped his engine abruptly and dropped flat. He may have hoped to get at the bombs when he came down, but his pitiless pursuers drove right over him and shot him as he fell.

Three other aeroplanes curved down and came to rest amidst grass close by the smashed machine. Their passengers descended, and ran, holding their light rifles in their hands towards the debris and the two dead men. The coffin-shaped box that had occupied the centre of the machine had broken, and three black objects, each with two handles like the ears of a pitcher, lay peacefully amidst the litter.

These objects were so tremendously important in the eyes of their captors that they disregarded the two dead men who lay bloody and broken amidst the wreckage as they might have disregarded dead frogs by a country pathway.

'By God,' cried the first. 'Here they are!'

'And unbroken!' said the second.

'I've never seen the things before,' said the first.

'Bigger than I thought,' said the second.

The third comer arrived. He stared for a moment at the bombs and then turned his eyes to the dead man with a crushed chest who lay in a muddy place among the green stems under the centre of the machine.

'One can take no risks,' he said, with a faint suggestion of apology.

The other two now also turned to the victims. 'We must signal,' said the first man. A shadow passed between them and the sun, and they looked up to see the aeroplane that had fired the last shot. 'Shall we signal?' came a megaphone hail.

'Three bombs,' they answered together.

'Where do they come from?' asked the megaphone.

The three sharpshooters looked at each other and then moved towards the dead men. One of them had an idea. 'Signal that first,' he said, 'while we look.' They were joined by their aviators for the search, and all six men began a hunt that was necessarily brutal in its haste, for some indication of identity. They examined the men's pockets, their bloodstained clothes, the machine, the framework. They turned the bodies over and flung them aside. There was not a tattoo mark. . . . Everything was elaborately free of any indication of its origin.

'We can't find out!' they called at last.

'Not a sign?'

'Not a sign.'

'I'm coming down,' said the man overhead....

Section 7

The Slavic fox stood upon a metal balcony in his picturesque Art Nouveau palace that gave upon the precipice that overhung his bright little capital, and beside him stood Pestovitch, grizzled and cunning, and now full of an ill-suppressed excitement. Behind them the window opened into a large room, richly decorated in aluminium and crimson enamel, across which the king, as he glanced ever and again over his shoulder with a gesture of inquiry, could see through the two open doors of a little azure walled antechamber the wireless operator in the turret working at his incessant transcription. Two pompously uniformed messengers waited listlessly in this apartment. The room was furnished with a stately dignity, and had in the middle of it a big green baize-covered table with the massive white metal inkpots and antiquated sandboxes natural to a new but romantic monarchy. It was the king's council chamber and about it now, in attitudes of suspended intrigue, stood the half-dozen ministers who constituted his cabinet. They had been summoned for twelve o'clock, but still at half-past twelve the king loitered in the balcony and seemed to be waiting for some news that did not come.

The king and his minister had talked at first in whispers; they had fallen silent, for they found little now to express except a vague anxiety. Away there on the mountain side were the white metal roofs of the long farm buildings beneath which the bomb

factory and the bombs were hidden. (The chemist who had made all these for the king had died suddenly after the declaration of Brissago.) Nobody knew of that store of mischief now but the king and his adviser and three heavily faithful attendants; the aviators who waited now in the midday blaze with their bomb-carrying machines and their passenger bomb-throwers in the exercising grounds of the motor-cyclist barracks below were still in ignorance of the position of the ammunition they were presently to take up. It was time they started if the scheme was to work as Pestovitch had planned it. It was a magnificent plan. It aimed at no less than the Empire of the World. The government of idealists and professors away there at Brissago was to be blown to fragments, and then east, west, north, and south those aeroplanes would go swarming over a world that had disarmed itself, to proclaim Ferdinand Charles, the new Caesar, the Master, Lord of the Earth. It was a magnificent plan. But the tension of this waiting for news of the success of the first blow was--considerable.

The Slavic fox was of a pallid fairness, he had a remarkably long nose, a thick, short moustache, and small blue eyes that were a little too near together to be pleasant. It was his habit to worry his moustache with short, nervous tugs whenever his restless mind troubled him, and now this motion was becoming so incessant that it irked Pestovitch beyond the limits of endurance.

'I will go,' said the minister, 'and see what the trouble is with the wireless. They give us nothing, good or bad.'

Left to himself, the king could worry his moustache without stint; he leant his elbows forward on the balcony and gave both of his long white hands to the work, so that he looked like a pale dog gnawing a bone. Suppose they caught his men, what should he do? Suppose they caught his men?

The clocks in the light gold-capped belfries of the town below presently intimated the half-hour after midday.

Of course, he and Pestovitch had thought it out. Even if they had caught those men, they were pledged to secrecy.... Probably they would be killed in the catching.... One could deny anyhow, deny and deny.

And then he became aware of half a dozen little shining specks very high in the blue.... Pestovitch came out to him presently. 'The government messages, sire, have all dropped into cipher,' he said. 'I have set a man----'

'LOOK!' interrupted the king, and pointed upward with a long, lean finger.

Pestovitch followed that indication and then glanced for one questioning moment at the white face before him.

'We have to face it out, sire,' he said.

For some moments they watched the steep spirals of the descending messengers, and then they began a hasty consultation....

They decided that to be holding a council upon the details of an ultimate surrender to Brissago was as innocent-looking a thing as the king could well be doing, and so, when at last the ex-king Egbert, whom the council had sent as its envoy, arrived upon the scene, he discovered the king almost theatrically posed at the head of his councillors in the midst of his court. The door upon the wireless operators was shut.

The ex-king from Brissago came like a draught through the curtains and attendants that gave a wide margin to King

Ferdinand's state, and the familiar confidence of his manner belied a certain hardness in his eye. Firmin trotted behind him, and no one else was with him. And as Ferdinand Charles rose to greet him, there came into the heart of the Balkan king again that same chilly feeling that he had felt upon the balcony--and it passed at the careless gestures of his guest. For surely any one might outwit this foolish talker who, for a mere idea and at the command of a little French rationalist in spectacles, had thrown away the most ancient crown in all the world.

One must deny, deny....

And then slowly and quite tiresomely he realised that there was nothing to deny. His visitor, with an amiable ease, went on talking about everything in debate between himself and Brissago except----.

Could it be that they had been delayed? Could it be that they had had to drop for repairs and were still uncaptured? Could it be that even now while this fool babbled, they were over there among the mountains heaving their deadly charge over the side of the aeroplane?

Strange hopes began to lift the tail of the Slavic fox again.

What was the man saying? One must talk to him anyhow until one knew. At any moment the little brass door behind him might open with the news of Brissago blown to atoms. Then it would be a delightful relief to the present tension to arrest this chatterer forthwith. He might be killed perhaps. What?

The king was repeating his observation. 'They have a ridiculous fancy that your confidence is based on the possession of atomic bombs.'

King Ferdinand Charles pulled himself together. He protested.

'Oh, quite so,' said the ex-king, 'quite so.'

'What grounds?' The ex-king permitted himself a gesture and the ghost of a chuckle--why the devil should he chuckle? 'Practically none,' he said. 'But of course with these things one has to be so careful.'

And then again for an instant something--like the faintest shadow of derision--gleamed out of the envoy's eyes and recalled that chilly feeling to King Ferdinand's spine.

Some kindred depression had come to Pestovitch, who had been watching the drawn intensity of Firmin's face. He came to the help of his master, who, he feared, might protest too much.

'A search!' cried the king. 'An embargo on our aeroplanes.'

'Only a temporary expedient,' said the ex-king Egbert, 'while the search is going on.'

The king appealed to his council.

'The people will never permit it, sire,' said a bustling little man in a gorgeous uniform.

'You'll have to make 'em,' said the ex-king, genially addressing all the councillors.

King Ferdinand glanced at the closed brass door through which no news would come.

'When would you want to have this search?'

The ex-king was radiant. 'We couldn't possibly do it until the day after to-morrow,' he said.

'Just the capital?'

'Where else?' asked the ex-king, still more cheerfully.

'For my own part,' said the ex-king confidentially, 'I think the whole business ridiculous. Who would be such a fool as to hide atomic bombs? Nobody. Certain hanging if he's caught--certain, and almost certain blowing up if he isn't. But nowadays I have to take orders like the rest of the world. And here I am.'

The king thought he had never met such detestable geniality. He glanced at Pestovitch, who nodded almost imperceptibly. It was well, anyhow, to have a fool to deal with. They might have sent a diplomatist. 'Of course,' said the king, 'I recognise the overpowering force--and a kind of logic--in these orders from Brissago.'

'I knew you would,' said the ex-king, with an air of relief, 'and so let us arrange----'

They arranged with a certain informality. No Balkan aeroplane was to adventure into the air until the search was concluded, and meanwhile the fleets of the world government would soar and circle in the sky. The towns were to be placarded with offers of reward to any one who would help in the discovery of atomic bombs....

'You will sign that,' said the ex-king.

'Why?'

'To show that we aren't in any way hostile to you.'

Pestovitch nodded 'yes' to his master.

'And then, you see,' said the ex-king in that easy way of his, 'we'll have a lot of men here, borrow help from your police, and run through all your things. And then everything will be over. Meanwhile, if I may be your guest....' When presently Pestovitch was alone with the king again, he found him in a state of jangling emotions. His spirit was tossing like a wind-whipped sea. One moment he was exalted and full of contempt for 'that ass' and his search; the next he was down in a pit of dread. 'They will find them, Pestovitch, and then he'll hang us.'

'Hang us?'

The king put his long nose into his councillor's face. 'That grinning brute WANTS to hang us,' he said. 'And hang us he will, if we give him a shadow of a chance.'

'But all their Modern State Civilisation!'

'Do you think there's any pity in that crew of Godless, Vivisecting Prigs?' cried this last king of romance. 'Do you think, Pestovitch, they understand anything of a high ambition or a splendid dream? Do you think that our gallant and sublime adventure has any appeal to them? Here am I, the last and greatest and most romantic of the Caesars, and do you think they will miss the chance of hanging me like a dog if they can, killing me like a rat in a hole? And that renegade! He who was once an anointed king! . . .

'I hate that sort of eye that laughs and keeps hard,' said the king.

'I won't sit still here and be caught like a fascinated rabbit,'

said the king in conclusion. 'We must shift those bombs.'

'Risk it,' said Pestovitch. 'Leave them alone.'

'No,' said the king. 'Shift them near the frontier. Then while they watch us here--they will always watch us here now--we can buy an aeroplane abroad, and pick them up....'

The king was in a feverish, irritable mood all that evening, but he made his plans nevertheless with infinite cunning. They must get the bombs away; there must be a couple of atomic hay lorries, the bombs could be hidden under the hay.... Pestovitch went and came, instructing trusty servants, planning and replanning.... The king and the ex-king talked very pleasantly of a number of subjects. All the while at the back of King Ferdinand Charles's mind fretted the mystery of his vanished aeroplane. There came no news of its capture, and no news of its success. At any moment all that power at the back of his visitor might crumble away and vanish....

It was past midnight, when the king, in a cloak and slouch hat that might equally have served a small farmer, or any respectable middle-class man, slipped out from an inconspicuous service gate on the eastward side of his palace into the thickly wooded gardens that sloped in a series of terraces down to the town. Pestovitch and his guard-valet Peter, both wrapped about in a similar disguise, came out among the laurels that bordered the pathway and joined him. It was a clear, warm night, but the stars seemed unusually little and remote because of the aeroplanes, each trailing a searchlight, that drove hither and thither across the blue. One great beam seemed to rest on the king for a moment as he came out of the palace; then instantly and reassuringly it had swept away. But while they were still in the palace gardens another found them and looked at them.

'They see us,' cried the king.

'They make nothing of us,' said Pestovitch.

The king glanced up and met a calm, round eye of light, that seemed to wink at him and vanish, leaving him blinded....

The three men went on their way. Near the little gate in the garden railings that Pestovitch had caused to be unlocked, the king paused under the shadow of an arch and looked back at the place. It was very high and narrow, a twentieth-century rendering of mediaevalism, mediaevalism in steel and bronze and sham stone and opaque glass. Against the sky it splashed a confusion of pinnacles. High up in the eastward wing were the windows of the apartments of the ex-king Egbert. One of them was brightly lit now, and against the light a little black figure stood very still and looked out upon the night.

The king snarled.

'He little knows how we slip through his fingers,' said Pestovitch.

And as he spoke they saw the ex-king stretch out his arms slowly, like one who yawns, knock his eyes and turn inward--no doubt to his bed.

Down through the ancient winding back streets of his capital hurried the king, and at an appointed corner a shabby atomic-automobile waited for the three. It was a hackney carriage of the lowest grade, with dented metal panels and deflated cushions. The driver was one of the ordinary drivers of the capital, but beside him sat the young secretary of Pestovitch, who knew the way to the farm where the bombs were hidden.

The automobile made its way through the narrow streets of the old town, which were still lit and uneasy--for the fleet of airships overhead had kept the cafes open and people abroad--over the great new bridge, and so by straggling outskirts to the country. And all through his capital the king who hoped to outdo Caesar, sat back and was very still, and no one spoke. And as they got out into the dark country they became aware of the searchlights wandering over the country-side like the uneasy ghosts of giants. The king sat forward and looked at these flitting whitenesses, and every now and then peered up to see the flying ships overhead.

'I don't like them,' said the king.

Presently one of these patches of moonlight came to rest about them and seemed to be following their automobile. The king drew back.

'The things are confoundedly noiseless,' said the king. 'It's like being stalked by lean white cats.'

He peered again. 'That fellow is watching us,' he said.

And then suddenly he gave way to panic. 'Pestovitch,' he said, clutching his minister's arm, 'they are watching us. I'm not going through with this. They are watching us. I'm going back.'

Pestovitch remonstrated. 'Tell him to go back,' said the king, and tried to open the window. For a few moments there was a grim struggle in the automobile; a gripping of wrists and a blow. 'I can't go through with it,' repeated the king, 'I can't go through with it.'

'But they'll hang us,' said Pestovitch.

'Not if we were to give up now. Not if we were to surrender the bombs. It is you who brought me into this....'

At last Pestovitch compromised. There was an inn perhaps half a mile from the farm. They could alight there and the king could get brandy, and rest his nerves for a time. And if he still thought fit to go back he could go back.

'See,' said Pestovitch, 'the light has gone again.'

The king peered up. 'I believe he's following us without a light,' said the king.

In the little old dirty inn the king hung doubtful for a time, and was for going back and throwing himself on the mercy of the council. 'If there is a council,' said Pestovitch. 'By this time your bombs may have settled it.

'But if so, these infernal aeroplanes would go.'

'They may not know yet.'

'But, Pestovitch, why couldn't you do all this without me?'

Pestovitch made no answer for a moment. 'I was for leaving the bombs in their place,' he said at last, and went to the window. About their conveyance shone a circle of bright light. Pestovitch had a brilliant idea. 'I will send my secretary out to make a kind of dispute with the driver. Something that will make them watch up above there. Meanwhile you and I and Peter will go out by the back way and up by the hedges to the farm....'

It was worthy of his subtle reputation and it answered passing well.

In ten minutes they were tumbling over the wall of the farm-yard, wet, muddy, and breathless, but unobserved. But as they ran towards the barns the king gave vent to something between a groan and a curse, and all about them shone the light--and passed.

But had it passed at once or lingered for just a second?

'They didn't see us,' said Peter.

'I don't think they saw us,' said the king, and stared as the light went swooping up the mountain side, hung for a second about a hayrick, and then came pouring back.

'In the barn!' cried the king.

He bruised his shin against something, and then all three men were inside the huge steel-girdered barn in which stood the two motor hay lorries that were to take the bombs away. Kurt and Abel, the two brothers of Peter, had brought the lorries thither in daylight. They had the upper half of the loads of hay thrown off, ready to cover the bombs, so soon as the king should show the hiding-place. 'There's a sort of pit here,' said the king. 'Don't light another lantern. This key of mine releases a ring....'

For a time scarcely a word was spoken in the darkness of the barn. There was the sound of a slab being lifted and then of feet descending a ladder into a pit. Then whispering and then heavy breathing as Kurt came struggling up with the first of the hidden bombs.

'We shall do it yet,' said the king. And then he gasped. 'Curse that light. Why in the name of Heaven didn't we shut the barn door?' For the great door stood wide open and all the empty,

lifeless yard outside and the door and six feet of the floor of the barn were in the blue glare of an inquiring searchlight.

'Shut the door, Peter,' said Pestovitch.

'No,' cried the king, too late, as Peter went forward into the light. 'Don't show yourself!' cried the king. Kurt made a step forward and plucked his brother back. For a time all five men stood still. It seemed that light would never go and then abruptly it was turned off, leaving them blinded. 'Now,' said the king uneasily, 'now shut the door.'

'Not completely,' cried Pestovitch. 'Leave a chink for us to go out by....'

It was hot work shifting those bombs, and the king worked for a time like a common man. Kurt and Abel carried the great things up and Peter brought them to the carts, and the king and Pestovitch helped him to place them among the hay. They made as little noise as they could....

'Ssh!' cried the king. 'What's that?'

But Kurt and Abel did not hear, and came blundering up the ladder with the last of the load.

'Ssh!' Peter ran forward to them with a whispered remonstrance. Now they were still.

The barn door opened a little wider, and against the dim blue light outside they saw the black shape of a man.

'Any one here?' he asked, speaking with an Italian accent.

The king broke into a cold perspiration. Then Pestovitch

answered: 'Only a poor farmer loading hay,' he said, and picked up a huge hay fork and went forward softly.

'You load your hay at a very bad time and in a very bad light,' said the man at the door, peering in. 'Have you no electric light here?'

Then suddenly he turned on an electric torch, and as he did so Pestovitch sprang forward. 'Get out of my barn!' he cried, and drove the fork full at the intruder's chest. He had a vague idea that so he might stab the man to silence. But the man shouted loudly as the prongs pierced him and drove him backward, and instantly there was a sound of feet running across the yard.

'Bombs,' cried the man upon the ground, struggling with the prongs in his hand, and as Pestovitch staggered forward into view with the force of his own thrust, he was shot through the body by one of the two new-comers.

The man on the ground was badly hurt but plucky. 'Bombs,' he repeated, and struggled up into a kneeling position and held his electric torch full upon the face of the king. 'Shoot them,' he cried, coughing and spitting blood, so that the halo of light round the king's head danced about.

For a moment in that shivering circle of light the two men saw the king kneeling up in the cart and Peter on the barn floor beside him. The old fox looked at them sideways--snared, a white-faced evil thing. And then, as with a faltering suicidal heroism, he leant forward over the bomb before him, they fired together and shot him through the head.

The upper part of his face seemed to vanish.

'Shoot them,' cried the man who had been stabbed. 'Shoot them

all!

And then his light went out, and he rolled over with a groan at the feet of his comrades.

But each carried a light of his own, and in another moment everything in the barn was visible again. They shot Peter even as he held up his hands in sign of surrender.

Kurt and Abel at the head of the ladder hesitated for a moment, and then plunged backward into the pit. 'If we don't kill them,' said one of the sharpshooters, 'they'll blow us to rags. They've gone down that hatchway. Come! . . .

'Here they are. Hands up! I say. Hold your light while I shoot....'

Section 8

It was still quite dark when his valet and Firmin came together and told the ex-king Egbert that the business was settled.

He started up into a sitting position on the side of his bed.

'Did he go out?' asked the ex-king.

'He is dead,' said Firmin. 'He was shot.'

The ex-king reflected. 'That's about the best thing that could have happened,' he said. 'Where are the bombs? In that farm-house on the opposite hill-side! Why! the place is in sight! Let us go. I'll dress. Is there any one in the place, Firmin, to get us a cup of coffee?'

Through the hungry twilight of the dawn the ex-king's automobile

carried him to the farm-house where the last rebel king was lying among his bombs. The rim of the sky flashed, the east grew bright, and the sun was just rising over the hills when King Egbert reached the farm-yard. There he found the hay lorries drawn out from the barn with the dreadful bombs still packed upon them. A couple of score of aviators held the yard, and outside a few peasants stood in a little group and stared, ignorant as yet of what had happened. Against the stone wall of the farm-yard five bodies were lying neatly side by side, and Pestovitch had an expression of surprise on his face and the king was chiefly identifiable by his long white hands and his blonde moustache. The wounded aeronaut had been carried down to the inn. And after the ex-king had given directions in what manner the bombs were to be taken to the new special laboratories above Zurich, where they could be unpacked in an atmosphere of chlorine, he turned to these five still shapes.

Their five pairs of feet stuck out with a curious stiff unanimity....

'What else was there to do?' he said in answer to some internal protest.

'I wonder, Firmin, if there are any more of them?'

'Bombs, sir?' asked Firmin.

'No, such kings....

'The pitiful folly of it!' said the ex-king, following his thoughts. 'Firmin,' as an ex-professor of International Politics, I think it falls to you to bury them. There? . . . No, don't put them near the well. People will have to drink from that well. Bury them over there, some way off in the field.'

CHAPTER THE FOURTH

THE NEW PHASE

Section 1

The task that lay before the Assembly of Brissago, viewed as we may view it now from the clarifying standpoint of things accomplished, was in its broad issues a simple one. Essentially it was to place social organisation upon the new footing that the swift, accelerated advance of human knowledge had rendered necessary. The council was gathered together with the haste of a salvage expedition, and it was confronted with wreckage; but the wreckage was irreparable wreckage, and the only possibilities of the case were either the relapse of mankind to the agricultural barbarism from which it had emerged so painfully or the acceptance of achieved science as the basis of a new social order. The old tendencies of human nature, suspicion, jealousy, particularism, and belligerency, were incompatible with the monstrous destructive power of the new appliances the inhuman logic of science had produced. The equilibrium could be restored only by civilisation destroying itself down to a level at which modern apparatus could no longer be produced, or by human nature adapting itself in its institutions to the new conditions. It was for the latter alternative that the assembly existed.

Sooner or later this choice would have confronted mankind. The sudden development of atomic science did but precipitate and render rapid and dramatic a clash between the new and the customary that had been gathering since ever the first flint was chipped or the first fire built together. From the day when man contrived himself a tool and suffered another male to draw near him, he ceased to be altogether a thing of instinct and

untroubled convictions. From that day forth a widening breach can be traced between his egotistical passions and the social need. Slowly he adapted himself to the life of the homestead, and his passionate impulses widened out to the demands of the clan and the tribe. But widen though his impulses might, the latent hunter and wanderer and wonderer in his imagination outstripped their development. He was never quite subdued to the soil nor quite tamed to the home. Everywhere it needed teaching and the priest to keep him within the bounds of the plough-life and the beast-tending. Slowly a vast system of traditional imperatives superposed itself upon his instincts, imperatives that were admirably fitted to make him that cultivator, that cattle-mincer, who was for twice ten thousand years the normal man.

And, unpremeditated, undesired, out of the accumulations of his tilling came civilisation. Civilisation was the agricultural surplus. It appeared as trade and tracks and roads, it pushed boats out upon the rivers and presently invaded the seas, and within its primitive courts, within temples grown rich and leisurely and amidst the gathering medley of the seaport towns rose speculation and philosophy and science, and the beginning of the new order that has at last established itself as human life. Slowly at first, as we traced it, and then with an accumulating velocity, the new powers were fabricated. Man as a whole did not seek them nor desire them; they were thrust into his hand. For a time men took up and used these new things and the new powers inadvertently as they came to him, recking nothing of the consequences. For endless generations change led him very gently. But when he had been led far enough, change quickened the pace. It was with a series of shocks that he realised at last that he was living the old life less and less and a new life more and more.

Already before the release of atomic energy the tensions between the old way of living and the new were intense. They were far

intenser than they had been even at the collapse of the Roman imperial system. On the one hand was the ancient life of the family and the small community and the petty industry, on the other was a new life on a larger scale, with remoter horizons and a strange sense of purpose. Already it was growing clear that men must live on one side or the other. One could not have little tradespeople and syndicated businesses in the same market, sleeping carters and motor trolleys on the same road, bows and arrows and aeroplane sharpshooters in the same army, or illiterate peasant industries and power-driven factories in the same world. And still less it was possible that one could have the ideas and ambitions and greed and jealousy of peasants equipped with the vast appliances of the new age. If there had been no atomic bombs to bring together most of the directing intelligence of the world to that hasty conference at Brissago, there would still have been, extended over great areas and a considerable space of time perhaps, a less formal conference of responsible and understanding people upon the perplexities of this world-wide opposition. If the work of Holsten had been spread over centuries and imparted to the world by imperceptible degrees, it would nevertheless have made it necessary for men to take counsel upon and set a plan for the future. Indeed already there had been accumulating for a hundred years before the crisis a literature of foresight; there was a whole mass of 'Modern State' scheming available for the conference to go upon. These bombs did but accentuate and dramatise an already developing problem.

Section 2

This assembly was no leap of exceptional minds and super-intelligences into the control of affairs. It was teachable, its members trailed ideas with them to the gathering, but these were the consequences of the 'moral shock' the bombs had given humanity, and there is no reason for supposing its

individual personalities were greatly above the average. It would be possible to cite a thousand instances of error and inefficiency in its proceedings due to the forgetfulness, irritability, or fatigue of its members. It experimented considerably and blundered often. Excepting Holsten, whose gift was highly specialised, it is questionable whether there was a single man of the first order of human quality in the gathering. But it had a modest fear of itself, and a consequent directness that gave it a general distinction. There was, of course, a noble simplicity about Leblanc, but even of him it may be asked whether he was not rather good and honest-minded than in the fuller sense great.

The ex-king had wisdom and a certain romantic dash, he was a man among thousands, even if he was not a man among millions, but his memoirs, and indeed his decision to write memoirs, give the quality of himself and his associates. The book makes admirable but astonishing reading. Therein he takes the great work the council was doing for granted as a little child takes God. It is as if he had no sense of it at all. He tells amusing trivialities about his cousin Wilhelm and his secretary Firmin, he pokes fun at the American president, who was, indeed, rather a little accident of the political machine than a representative American, and he gives a long description of how he was lost for three days in the mountains in the company of the only Japanese member, a loss that seems to have caused no serious interruption of the work of the council....

The Brissago conference has been written about time after time, as though it were a gathering of the very flower of humanity. Perched up there by the freak or wisdom of Leblanc, it had a certain Olympian quality, and the natural tendency of the human mind to elaborate such a resemblance would have us give its members the likenesses of gods. It would be equally reasonable to compare it to one of those enforced meetings upon the

mountain-tops that must have occurred in the opening phases of the Deluge. The strength of the council lay not in itself but in the circumstances that had quickened its intelligence, dispelled its vanities, and emancipated it from traditional ambitions and antagonisms. It was stripped of the accumulation of centuries, a naked government with all that freedom of action that nakedness affords. And its problems were set before it with a plainness that was out of all comparison with the complicated and perplexing intimations of the former time.

Section 3

The world on which the council looked did indeed present a task quite sufficiently immense and altogether too urgent for any wanton indulgence in internal dissension. It may be interesting to sketch in a few phrases the condition of mankind at the close of the period of warring states, in the year of crisis that followed the release of atomic power. It was a world extraordinarily limited when one measures it by later standards, and it was now in a state of the direst confusion and distress.

It must be remembered that at this time men had still to spread into enormous areas of the land surface of the globe. There were vast mountain wildernesses, forest wildernesses, sandy deserts, and frozen lands. Men still clung closely to water and arable soil in temperate or sub-tropical climates, they lived abundantly only in river valleys, and all their great cities had grown upon large navigable rivers or close to ports upon the sea. Over great areas even of this suitable land flies and mosquitoes, armed with infection, had so far defeated human invasion, and under their protection the virgin forests remained untouched. Indeed, the whole world even in its most crowded districts was filthy with flies and swarming with needless insect life to an extent which is now almost incredible. A population map of the world in 1950 would have followed seashore and river course so closely in its

darker shading as to give an impression that homo sapiens was an amphibious animal. His roads and railways lay also along the lower contours, only here and there to pierce some mountain barrier or reach some holiday resort did they clamber above 3000 feet. And across the ocean his traffic passed in definite lines; there were hundreds of thousands of square miles of ocean no ship ever traversed except by mischance.

Into the mysteries of the solid globe under his feet he had not yet pierced for five miles, and it was still not forty years since, with a tragic pertinacity, he had clambered to the poles of the earth. The limitless mineral wealth of the Arctic and Antarctic circles was still buried beneath vast accumulations of immemorial ice, and the secret riches of the inner zones of the crust were untapped and indeed unsuspected. The higher mountain regions were known only to a sprinkling of guide-led climbers and the frequenters of a few gaunt hotels, and the vast rainless belts of land that lay across the continental masses, from Gobi to Sahara and along the backbone of America, with their perfect air, their daily baths of blazing sunshine, their nights of cool serenity and glowing stars, and their reservoirs of deep-lying water, were as yet only desolations of fear and death to the common imagination.

And now under the shock of the atomic bombs, the great masses of population which had gathered into the enormous dingy town centres of that period were dispossessed and scattered disastrously over the surrounding rural areas. It was as if some brutal force, grown impatient at last at man's blindness, had with the deliberate intention of a rearrangement of population upon more wholesome lines, shaken the world. The great industrial regions and the large cities that had escaped the bombs were, because of their complete economic collapse, in almost as tragic plight as those that blazed, and the country-side was disordered by a multitude of wandering and

lawless strangers. In some parts of the world famine raged, and in many regions there was plague.... The plains of north India, which had become more and more dependent for the general welfare on the railways and that great system of irrigation canals which the malignant section of the patriots had destroyed, were in a state of peculiar distress, whole villages lay dead together, no man heeding, and the very tigers and panthers that preyed upon the emaciated survivors crawled back infected into the jungle to perish. Large areas of China were a prey to brigand bands....

It is a remarkable thing that no complete contemporary account of the explosion of the atomic bombs survives. There are, of course, innumerable allusions and partial records, and it is from these that subsequent ages must piece together the image of these devastations.

The phenomena, it must be remembered, changed greatly from day to day, and even from hour to hour, as the exploding bomb shifted its position, threw off fragments or came into contact with water or a fresh texture of soil. Barnet, who came within forty miles of Paris early in October, is concerned chiefly with his account of the social confusion of the country-side and the problems of his command, but he speaks of heaped cloud masses of steam. 'All along the sky to the south-west' and of a red glare beneath these at night. Parts of Paris were still burning, and numbers of people were camped in the fields even at this distance watching over treasured heaps of salvaged loot. He speaks too of the distant rumbling of the explosion--'like trains going over iron bridges.'

Other descriptions agree with this; they all speak of the 'continuous reverberations,' or of the 'thudding and hammering,' or some such phrase; and they all testify to a huge pall of steam, from which rain would fall suddenly in torrents and amidst which lightning played. Drawing nearer to Paris an observer

would have found the salvage camps increasing in number and blocking up the villages, and large numbers of people, often starving and ailing, camping under improvised tents because there was no place for them to go. The sky became more and more densely overcast until at last it blotted out the light of day and left nothing but a dull red glare 'extraordinarily depressing to the spirit.' In this dull glare, great numbers of people were still living, clinging to their houses and in many cases subsisting in a state of partial famine upon the produce in their gardens and the stores in the shops of the provision dealers.

Coming in still closer, the investigator would have reached the police cordon, which was trying to check the desperate enterprise of those who would return to their homes or rescue their more valuable possessions within the 'zone of imminent danger.'

That zone was rather arbitrarily defined. If our spectator could have got permission to enter it, he would have entered also a zone of uproar, a zone of perpetual thunderings, lit by a strange purplish-red light, and quivering and swaying with the incessant explosion of the radio-active substance. Whole blocks of buildings were alight and burning fiercely, the trembling, ragged flames looking pale and ghastly and attenuated in comparison with the full-bodied crimson glare beyond. The shells of other edifices already burnt rose, pierced by rows of window sockets against the red-lit mist.

Every step farther would have been as dangerous as a descent within the crater of an active volcano. These spinning, boiling bomb centres would shift or break unexpectedly into new regions, great fragments of earth or drain or masonry suddenly caught by a jet of disruptive force might come flying by the explorer's head, or the ground yawn a fiery grave beneath his feet. Few who adventured into these areas of destruction and survived attempted any repetition of their experiences. There are stories of puffs

of luminous, radio-active vapour drifting sometimes scores of miles from the bomb centre and killing and scorching all they overtook. And the first conflagrations from the Paris centre spread westward half-way to the sea.

Moreover, the air in this infernal inner circle of red-lit ruins had a peculiar dryness and a blistering quality, so that it set up a soreness of the skin and lungs that was very difficult to heal....

Such was the last state of Paris, and such on a larger scale was the condition of affairs in Chicago, and the same fate had overtaken Berlin, Moscow, Tokio, the eastern half of London, Toulon, Kiel, and two hundred and eighteen other centres of population or armament. Each was a flaming centre of radiant destruction that only time could quench, that indeed in many instances time has still to quench. To this day, though indeed with a constantly diminishing uproar and vigour, these explosions continue. In the map of nearly every country of the world three or four or more red circles, a score of miles in diameter, mark the position of the dying atomic bombs and the death areas that men have been forced to abandon around them. Within these areas perished museums, cathedrals, palaces, libraries, galleries of masterpieces, and a vast accumulation of human achievement, whose charred remains lie buried, a legacy of curious material that only future generations may hope to examine....

Section 4

The state of mind of the dispossessed urban population which swarmed and perished so abundantly over the country-side during the dark days of the autumnal months that followed the Last War, was one of blank despair. Barnet gives sketch after sketch of groups of these people, camped among the vineyards of Champagne, as he saw them during his period of service with the army of

pacification.

There was, for example, that 'man-milliner' who came out from a field beside the road that rises up eastward out of Epernay, and asked how things were going in Paris. He was, says Barnet, a round-faced man, dressed very neatly in black--so neatly that it was amazing to discover he was living close at hand in a tent made of carpets--and he had 'an urbane but insistent manner,' a carefully trimmed moustache and beard, expressive eyebrows, and hair very neatly brushed.

'No one goes into Paris,' said Barnet.

'But, Monsieur, that is very unenterprising,' the man by the wayside submitted.

'The danger is too great. The radiations eat into people's skins.'

The eyebrows protested. 'But is nothing to be done?'

'Nothing can be done.'

'But, Monsieur, it is extraordinarily inconvenient, this living in exile and waiting. My wife and my little boy suffer extremely. There is a lack of amenity. And the season advances. I say nothing of the expense and difficulty in obtaining provisions. . . . When does Monsieur think that something will be done to render Paris--possible?'

Barnet considered his interlocutor.

'I'm told,' said Barnet, 'that Paris is not likely to be possible again for several generations.'

'Oh! but this is preposterous! Consider, Monsieur! What are people like ourselves to do in the meanwhile? I am a costumier. All my connections and interests, above all my style, demand Paris. . . .'

Barnet considered the sky, from which a light rain was beginning to fall, the wide fields about them from which the harvest had been taken, the trimmed poplars by the wayside.

'Naturally,' he agreed, 'you want to go to Paris. But Paris is over.'

'Over!'

'Finished.'

'But then, Monsieur--what is to become--of ME?'

Barnet turned his face westward, whither the white road led.

'Where else, for example, may I hope to find--opportunity?'

Barnet made no reply.

'Perhaps on the Riviera. Or at some such place as Homburg. Or some plague perhaps.'

'All that,' said Barnet, accepting for the first time facts that had lain evident in his mind for weeks; 'all that must be over, too.'

There was a pause. Then the voice beside him broke out. 'But, Monsieur, it is impossible! It leaves--nothing.'

'No. Not very much.'

'One cannot suddenly begin to grow potatoes!'

'It would be good if Monsieur could bring himself----'

'To the life of a peasant! And my wife----You do not know the distinguished delicacy of my wife, a refined helplessness, a peculiar dependent charm. Like some slender tropical creeper--with great white flowers.... But all this is foolish talk. It is impossible that Paris, which has survived so many misfortunes, should not presently revive.'

'I do not think it will ever revive. Paris is finished. London, too, I am told--Berlin. All the great capitals were stricken....'

'But----! Monsieur must permit me to differ.'

'It is so.'

'It is impossible. Civilisations do not end in this manner. Mankind will insist.'

'On Paris?'

'On Paris.'

'Monsieur, you might as well hope to go down the Maelstrom and resume business there.'

'I am content, Monsieur, with my own faith.'

'The winter comes on. Would not Monsieur be wiser to seek a house?'

'Farther from Paris? No, Monsieur. But it is not possible, Monsieur, what you say, and you are under a tremendous mistake.... Indeed you are in error.... I asked merely for information....'

'When last I saw him,' said Barnet, 'he was standing under the signpost at the crest of the hill, gazing wistfully, yet it seemed to me a little doubtfully, now towards Paris, and altogether heedless of a drizzling rain that was wetting him through and through....'

Section 5

This effect of chill dismay, of a doom as yet imperfectly apprehended deepens as Barnet's record passes on to tell of the approach of winter. It was too much for the great mass of those unwilling and incompetent nomads to realise that an age had ended, that the old help and guidance existed no longer, that times would not mend again, however patiently they held out. They were still in many cases looking to Paris when the first snowflakes of that pitiless January came swirling about them. The story grows grimmer....

If it is less monstrously tragic after Barnet's return to England, it is, if anything, harder. England was a spectacle of fear-embittered householders, hiding food, crushing out robbery, driving the starving wanderers from every faltering place upon the roads lest they should die inconveniently and reproachfully on the doorsteps of those who had failed to urge them onward....

The remnants of the British troops left France finally in March, after urgent representations from the provisional government at Orleans that they could be supported no longer. They seem to have been a fairly well-behaved, but highly parasitic force throughout, though Barnet is clearly of opinion that they did

much to suppress sporadic brigandage and maintain social order. He came home to a famine-stricken country, and his picture of the England of that spring is one of miserable patience and desperate expedients. The country was suffering much more than France, because of the cessation of the overseas supplies on which it had hitherto relied. His troops were given bread, dried fish, and boiled nettles at Dover, and marched inland to Ashford and paid off. On the way thither they saw four men hanging from the telegraph posts by the roadside, who had been hung for stealing swedes. The labour refuges of Kent, he discovered, were feeding their crowds of casual wanderers on bread into which clay and sawdust had been mixed. In Surrey there was a shortage of even such fare as that. He himself struck across country to Winchester, fearing to approach the bomb-poisoned district round London, and at Winchester he had the luck to be taken on as one of the wireless assistants at the central station and given regular rations. The station stood in a commanding position on the chalk hill that overlooks the town from the east....

Thence he must have assisted in the transmission of the endless cipher messages that preceded the gathering at Brissago, and there it was that the Brissago proclamation of the end of the war and the establishment of a world government came under his hands.

He was feeling ill and apathetic that day, and he did not realise what it was he was transcribing. He did it mechanically, as a part of his tedious duty.

Afterwards there came a rush of messages arising out of the declaration that strained him very much, and in the evening when he was relieved, he ate his scanty supper and then went out upon the little balcony before the station, to smoke and rest his brains after this sudden and as yet inexplicable press of duty. It was a very beautiful, still evening. He fell talking to a fellow operator, and for the first time, he declares, 'I began to

understand what it was all about. I began to see just what enormous issues had been under my hands for the past four hours. But I became incredulous after my first stimulation. "This is some sort of Bunkum," I said very sagely.

'My colleague was more hopeful. "It means an end to bomb-throwing and destruction," he said. "It means that presently corn will come from America."

' "Who is going to send corn when there is no more value in money?" I asked.

'Suddenly we were startled by a clashing from the town below. The cathedral bells, which had been silent ever since I had come into the district, were beginning, with a sort of rheumatic difficulty, to ring. Presently they warmed a little to the work, and we realised what was going on. They were ringing a peal. We listened with an unbelieving astonishment and looking into each other's yellow faces.

' "They mean it," said my colleague.

' "But what can they do now?" I asked. "Everything is broken down...." '

And on that sentence, with an unexpected artistry, Barnet abruptly ends his story.

Section 6

From the first the new government handled affairs with a certain greatness of spirit. Indeed, it was inevitable that they should act greatly. From the first they had to see the round globe as one problem; it was impossible any longer to deal with it piece by piece. They had to secure it universally from any fresh

outbreak of atomic destruction, and they had to ensure a permanent and universal pacification. On this capacity to grasp and wield the whole round globe their existence depended. There was no scope for any further performance.

So soon as the seizure of the existing supplies of atomic ammunition and the apparatus for synthesising Carolinum was assured, the disbanding or social utilisation of the various masses of troops still under arms had to be arranged, the salvation of the year's harvests, and the feeding, housing, and employment of the drifting millions of homeless people. In Canada, in South America, and Asiatic Russia there were vast accumulations of provision that was immovable only because of the breakdown of the monetary and credit systems. These had to be brought into the famine districts very speedily if entire depopulation was to be avoided, and their transportation and the revival of communications generally absorbed a certain proportion of the soldiery and more able unemployed. The task of housing assumed gigantic dimensions, and from building camps the housing committee of the council speedily passed to constructions of a more permanent type. They found far less friction than might have been expected in turning the loose population on their hands to these things. People were extraordinarily tamed by that year of suffering and death; they were disillusioned of their traditions, bereft of once obstinate prejudices; they felt foreign in a strange world, and ready to follow any confident leadership. The orders of the new government came with the best of all credentials, rations. The people everywhere were as easy to control, one of the old labour experts who had survived until the new time witnesses, 'as gangs of emigrant workers in a new land.' And now it was that the social possibilities of the atomic energy began to appear. The new machinery that had come into existence before the last wars increased and multiplied, and the council found itself not only with millions of hands at its disposal but with power and apparatus that made its first conceptions of the

work it had to do seem pitifully timid. The camps that were planned in iron and deal were built in stone and brass; the roads that were to have been mere iron tracks became spacious ways that insisted upon architecture; the cultivations of foodstuffs that were to have supplied emergency rations, were presently, with synthesisers, fertilisers, actinic light, and scientific direction, in excess of every human need.

The government had begun with the idea of temporarily reconstituting the social and economic system that had prevailed before the first coming of the atomic engine, because it was to this system that the ideas and habits of the great mass of the world's dispossessed population was adapted. Subsequent rearrangement it had hoped to leave to its successors--whoever they might be. But this, it became more and more manifest, was absolutely impossible. As well might the council have proposed a revival of slavery. The capitalist system had already been smashed beyond repair by the onset of limitless gold and energy; it fell to pieces at the first endeavour to stand it up again. Already before the war half of the industrial class had been out of work, the attempt to put them back into wages employment on the old lines was futile from the outset--the absolute shattering of the currency system alone would have been sufficient to prevent that, and it was necessary therefore to take over the housing, feeding, and clothing of this worldwide multitude without exacting any return in labour whatever. In a little while the mere absence of occupation for so great a multitude of people everywhere became an evident social danger, and the government was obliged to resort to such devices as simple decorative work in wood and stone, the manufacture of hand-woven textiles, fruit-growing, flower-growing, and landscape gardening on a grand scale to keep the less adaptable out of mischief, and of paying wages to the younger adults for attendance at schools that would equip them to use the new atomic machinery.... So quite insensibly the council drifted into a complete reorganisation of

urban and industrial life, and indeed of the entire social system.

Ideas that are unhampered by political intrigue or financial considerations have a sweeping way with them, and before a year was out the records of the council show clearly that it was rising to its enormous opportunity, and partly through its own direct control and partly through a series of specific committees, it was planning a new common social order for the entire population of the earth. 'There can be no real social stability or any general human happiness while large areas of the world and large classes of people are in a phase of civilisation different from the prevailing mass. It is impossible now to have great blocks of population misunderstanding the generally accepted social purpose or at an economic disadvantage to the rest.' So the council expressed its conception of the problem it had to solve. The peasant, the field-worker, and all barbaric cultivators were at an 'economic disadvantage' to the more mobile and educated classes, and the logic of the situation compelled the council to take up systematically the supersession of this stratum by a more efficient organisation of production. It developed a scheme for the progressive establishment throughout the world of the 'modern system' in agriculture, a system that should give the full advantages of a civilised life to every agricultural worker, and this replacement has been going on right up to the present day. The central idea of the modern system is the substitution of cultivating guilds for the individual cultivator, and for cottage and village life altogether. These guilds are associations of men and women who take over areas of arable or pasture land, and make themselves responsible for a certain average produce. They are bodies small enough as a rule to be run on a strictly democratic basis, and large enough to supply all the labour, except for a certain assistance from townspeople during the harvest, needed upon the land farmed. They have watchers' bungalows or chalets on the ground cultivated, but

the ease and the costlessness of modern locomotion enables them to maintain a group of residences in the nearest town with a common dining-room and club house, and usually also a guild house in the national or provincial capital. Already this system has abolished a distinctively 'rustic' population throughout vast areas of the old world, where it has prevailed immemorially. That shy, unstimulated life of the lonely hovel, the narrow scandals and petty spites and persecutions of the small village, that hoarding, half inanimate existence away from books, thought, or social participation and in constant contact with cattle, pigs, poultry, and their excrement, is passing away out of human experience. In a little while it will be gone altogether. In the nineteenth century it had already ceased to be a necessary human state, and only the absence of any collective intelligence and an imagined need for tough and unintelligent soldiers and for a prolific class at a low level, prevented its systematic replacement at that time....

And while this settlement of the country was in progress, the urban camps of the first phase of the council's activities were rapidly developing, partly through the inherent forces of the situation and partly through the council's direction, into a modern type of town....

Section 7

It is characteristic of the manner in which large enterprises forced themselves upon the Brissago council, that it was not until the end of the first year of their administration and then only with extreme reluctance that they would take up the manifest need for a lingua franca for the world. They seem to have given little attention to the various theoretical universal languages which were proposed to them. They wished to give as little trouble to hasty and simple people as possible, and the world-wide distribution of English gave them a bias for it from

the beginning. The extreme simplicity of its grammar was also in its favour.

It was not without some sacrifices that the English-speaking peoples were permitted the satisfaction of hearing their speech used universally. The language was shorn of a number of grammatical peculiarities, the distinctive forms for the subjunctive mood for example and most of its irregular plurals were abolished; its spelling was systematised and adapted to the vowel sounds in use upon the continent of Europe, and a process of incorporating foreign nouns and verbs commenced that speedily reached enormous proportions. Within ten years from the establishment of the World Republic the New English Dictionary had swelled to include a vocabulary of 250,000 words, and a man of 1900 would have found considerable difficulty in reading an ordinary newspaper. On the other hand, the men of the new time could still appreciate the older English literature.... Certain minor acts of uniformity accompanied this larger one. The idea of a common understanding and a general simplification of intercourse once it was accepted led very naturally to the universal establishment of the metric system of weights and measures, and to the disappearance of the various makeshift calendars that had hitherto confused chronology. The year was divided into thirteen months of four weeks each, and New Year's Day and Leap Year's Day were made holidays, and did not count at all in the ordinary week. So the weeks and the months were brought into correspondence. And moreover, as the king put it to Firmin, it was decided to 'nail down Easter.' . . . In these matters, as in so many matters, the new civilisation came as a simplification of ancient complications; the history of the calendar throughout the world is a history of inadequate adjustments, of attempts to fix seed-time and midwinter that go back into the very beginning of human society; and this final rectification had a symbolic value quite beyond its practical convenience. But the council would have no rash nor harsh

innovations, no strange names for the months, and no alteration in the numbering of the years.

The world had already been put upon one universal monetary basis. For some months after the accession of the council, the world's affairs had been carried on without any sound currency at all. Over great regions money was still in use, but with the most extravagant variations in price and the most disconcerting fluctuations of public confidence. The ancient rarity of gold upon which the entire system rested was gone. Gold was now a waste product in the release of atomic energy, and it was plain that no metal could be the basis of the monetary system again. Henceforth all coins must be token coins. Yet the whole world was accustomed to metallic money, and a vast proportion of existing human relationships had grown up upon a cash basis, and were almost inconceivable without that convenient liquidating factor. It seemed absolutely necessary to the life of the social organisation to have some sort of currency, and the council had therefore to discover some real value upon which to rest it. Various such apparently stable values as land and hours of work were considered. Ultimately the government, which was now in possession of most of the supplies of energy-releasing material, fixed a certain number of units of energy as the value of a gold sovereign, declared a sovereign to be worth exactly twenty marks, twenty-five francs, five dollars, and so forth, with the other current units of the world, and undertook, under various qualifications and conditions, to deliver energy upon demand as payment for every sovereign presented. On the whole, this worked satisfactorily. They saved the face of the pound sterling. Coin was rehabilitated, and after a phase of price fluctuations, began to settle down to definite equivalents and uses again, with names and everyday values familiar to the common run of people....

Section 8

As the Brissago council came to realise that what it had supposed to be temporary camps of refugees were rapidly developing into great towns of a new type, and that it was remoulding the world in spite of itself, it decided to place this work of redistributing the non-agricultural population in the hands of a compactor and better qualified special committee. That committee is now, far more than the council of any other of its delegated committees, the active government of the world. Developed from an almost invisible germ of 'town-planning' that came obscurely into existence in Europe or America (the question is still in dispute) somewhere in the closing decades of the nineteenth century, its work, the continual active planning and replanning of the world as a place of human habitation, is now so to speak the collective material activity of the race. The spontaneous, disorderly spreadings and recessions of populations, as aimless and mechanical as the trickling of spilt water, which was the substance of history for endless years, giving rise here to congestions, here to chronic devastating wars, and everywhere to a discomfort and disorderliness that was at its best only picturesque, is at an end. Men spread now, with the whole power of the race to aid them, into every available region of the earth. Their cities are no longer tethered to running water and the proximity of cultivation, their plans are no longer affected by strategic considerations or thoughts of social insecurity. The aeroplane and the nearly costless mobile car have abolished trade routes; a common language and a universal law have abolished a thousand restraining inconveniences, and so an astonishing dispersal of habitations has begun. One may live anywhere. And so it is that our cities now are true social gatherings, each with a character of its own and distinctive interests of its own, and most of them with a common occupation. They lie out in the former deserts, these long wasted sun-baths of the race, they tower amidst eternal snows, they hide in remote islands, and bask on broad lagoons. For a time the whole tendency of mankind was to desert the river valleys in which the race had been cradled for

half a million years, but now that the War against Flies has been waged so successfully that this pestilential branch of life is nearly extinct, they are returning thither with a renewed appetite for gardens laced by watercourses, for pleasant living amidst islands and houseboats and bridges, and for nocturnal lanterns reflected by the sea.

Man who is ceasing to be an agricultural animal becomes more and more a builder, a traveller, and a maker. How much he ceases to be a cultivator of the soil the returns of the Redistribution Committee showed. Every year the work of our scientific laboratories increases the productivity and simplifies the labour of those who work upon the soil, and the food now of the whole world is produced by less than one per cent. of its population, a percentage which still tends to decrease. Far fewer people are needed upon the land than training and proclivity dispose towards it, and as a consequence of this excess of human attention, the garden side of life, the creation of groves and lawns and vast regions of beautiful flowers, has expanded enormously and continues to expand. For, as agricultural method intensifies and the quota is raised, one farm association after another, availing itself of the 1975 regulations, elects to produce a public garden and pleasaunce in the place of its former fields, and the area of freedom and beauty is increased. And the chemists' triumphs of synthesis, which could now give us an entirely artificial food, remain largely in abeyance because it is so much more pleasant and interesting to eat natural produce and to grow such things upon the soil. Each year adds to the variety of our fruits and the delightfulness of our flowers.

Section 9

The early years of the World Republic witnessed a certain recrudescence of political adventure. There was, it is rather curious to note, no revival of separatism after the face of King

Ferdinand Charles had vanished from the sight of men, but in a number of countries, as the first urgent physical needs were met, there appeared a variety of personalities having this in common, that they sought to revive political trouble and clamber by its aid to positions of importance and satisfaction. In no case did they speak in the name of kings, and it is clear that monarchy must have been far gone in obsolescence before the twentieth century began, but they made appeals to the large survivals of nationalist and racial feeling that were everywhere to be found, they alleged with considerable justice that the council was overriding racial and national customs and disregarding religious rules. The great plain of India was particularly prolific in such agitators. The revival of newspapers, which had largely ceased during the terrible year because of the dislocation of the coinage, gave a vehicle and a method of organisation to these complaints. At first the council disregarded this developing opposition, and then it recognised it with an entirely devastating frankness.

Never, of course, had there been so provisional a government. It was of an extravagant illegality. It was, indeed, hardly more than a club, a club of about a hundred persons. At the outset there were ninety-three, and these were increased afterwards by the issue of invitations which more than balanced its deaths, to as many at one time as one hundred and nineteen. Always its constitution has been miscellaneous. At no time were these invitations issued with an admission that they recognised a right. The old institution or monarchy had come out unexpectedly well in the light of the new regime. Nine of the original members of the first government were crowned heads who had resigned their separate sovereignty, and at no time afterwards did the number of its royal members sink below six. In their case there was perhaps a kind of attenuated claim to rule, but except for them and the still more infinitesimal pretensions of one or two ex-presidents of republics, no member of the council had even the shade of a

right to his participation in its power. It was natural, therefore, that its opponents should find a common ground in a clamour for representative government, and build high hopes upon a return, to parliamentary institutions.

The council decided to give them everything they wanted, but in a form that suited ill with their aspirations. It became at one stroke a representative body. It became, indeed, magnificently representative. It became so representative that the politicians were drowned in a deluge of votes. Every adult of either sex from pole to pole was given a vote, and the world was divided into ten constituencies, which voted on the same day by means of a simple modification of the world post. Membership of the government, it was decided, must be for life, save in the exceptional case of a recall; but the elections, which were held quinquennially, were arranged to add fifty members on each occasion. The method of proportional representation with one transferable vote was adopted, and the voter might also write upon his voting paper in a specially marked space, the name of any of his representatives that he wished to recall. A ruler was recallable by as many votes as the quota by which he had been elected, and the original members by as many votes in any constituency as the returning quotas in the first election.

Upon these conditions the council submitted itself very cheerfully to the suffrages of the world. None of its members were recalled, and its fifty new associates, which included twenty-seven which it had seen fit to recommend, were of an altogether too miscellaneous quality to disturb the broad trend of its policy. Its freedom from rules or formalities prevented any obstructive proceedings, and when one of the two newly arrived Home Rule members for India sought for information how to bring in a bill, they learnt simply that bills were not brought in. They asked for the speaker, and were privileged to hear much ripe wisdom from the ex-king Egbert, who was now consciously

among the seniors of the gathering. Thereafter they were baffled men....

But already by that time the work of the council was drawing to an end. It was concerned not so much for the continuation of its construction as for the preservation of its accomplished work from the dramatic instincts of the politician.

The life of the race becomes indeed more and more independent of the formal government. The council, in its opening phase, was heroic in spirit; a dragon-slaying body, it slashed out of existence a vast, knotted tangle of obsolete ideas and clumsy and jealous proprietorships; it secured by a noble system of institutional precautions, freedom of inquiry, freedom of criticism, free communications, a common basis of education and understanding, and freedom from economic oppression. With that its creative task was accomplished. It became more and more an established security and less and less an active intervention. There is nothing in our time to correspond with the continual petty making and entangling of laws in an atmosphere of contention that is perhaps the most perplexing aspect of constitutional history in the nineteenth century. In that age they seem to have been perpetually making laws when we should alter regulations. The work of change which we delegate to these scientific committees of specific general direction which have the special knowledge needed, and which are themselves dominated by the broad intellectual process of the community, was in those days inextricably mixed up with legislation. They fought over the details; we should as soon think of fighting over the arrangement of the parts of a machine. We know nowadays that such things go on best within laws, as life goes on between earth and sky. And so it is that government gathers now for a day or so in each year under the sunshine of Brissago when Saint Bruno's lilies are in flower, and does little more than bless the work of its committees. And even these committees are less originaive and

more expressive of the general thought than they were at first. It becomes difficult to mark out the particular directive personalities of the world. Continually we are less personal. Every good thought contributes now, and every able brain falls within that informal and dispersed kingship which gathers together into one purpose the energies of the race.

Section 10

It is doubtful if we shall ever see again a phase of human existence in which 'politics,' that is to say a partisan interference with the ruling sanities of the world, will be the dominant interest among serious men. We seem to have entered upon an entirely new phase in history in which contention as distinguished from rivalry, has almost abruptly ceased to be the usual occupation, and has become at most a subdued and hidden and discredited thing. Contentious professions cease to be an honourable employment for men. The peace between nations is also a peace between individuals. We live in a world that comes of age. Man the warrior, man the lawyer, and all the bickering aspects of life, pass into obscurity; the grave dreamers, man the curious learner, and man the creative artist, come forward to replace these barbaric aspects of existence by a less ignoble adventure.

There is no natural life of man. He is, and always has been, a sheath of varied and even incompatible possibilities, a palimpsest of inherited dispositions. It was the habit of many writers in the early twentieth century to speak of competition and the narrow, private life of trade and saving and suspicious isolation as though such things were in some exceptional way proper to the human constitution, and as though openness of mind and a preference for achievement over possession were abnormal and rather unsubstantial qualities. How wrong that was the history of the decades immediately following the establishment of

the world republic witnesses. Once the world was released from the hardening insecurities of a needless struggle for life that was collectively planless and individually absorbing, it became apparent that there was in the vast mass of people a long, smothered passion to make things. The world broke out into making, and at first mainly into aesthetic making. This phase of history, which has been not inaptly termed the 'Efflorescence,' is still, to a large extent, with us. The majority of our population consists of artists, and the bulk of activity in the world lies no longer with necessities but with their elaboration, decoration, and refinement. There has been an evident change in the quality of this making during recent years. It becomes more purposeful than it was, losing something of its first elegance and prettiness and gaining in intensity; but that is a change rather of hue than of nature. That comes with a deepening philosophy and a sounder education. For the first joyous exercises of fancy we perceive now the deliberation of a more constructive imagination. There is a natural order in these things, and art comes before science as the satisfaction of more elemental needs must come before art, and as play and pleasure come in a human life before the development of a settled purpose....

For thousands of years this gathering impulse to creative work must have struggled in man against the limitations imposed upon him by his social ineptitude. It was a long smouldering fire that flamed out at last in all these things. The evidence of a pathetic, perpetually thwarted urgency to make something, is one of the most touching aspects of the relics and records of our immediate ancestors. There exists still in the death area about the London bombs, a region of deserted small homes that furnish the most illuminating comment on the old state of affairs. These homes are entirely horrible, uniform, square, squat, hideously proportioned, uncomfortable, dingy, and in some respects quite filthy, only people in complete despair of anything better could

have lived in them, but to each is attached a ridiculous little rectangle of land called 'the garden,' containing usually a prop for drying clothes and a loathsome box of offal, the dustbin, full of egg-shells, cinders, and such-like refuse. Now that one may go about this region in comparative security--for the London radiations have dwindled to inconsiderable proportions--it is possible to trace in nearly every one of these gardens some effort to make. Here it is a poor little plank summer-house, here it is a 'fountain' of bricks and oyster-shells, here a 'rockery,' here a 'workshop.' And in the houses everywhere there are pitiful little decorations, clumsy models, feeble drawings. These efforts are almost incredibly inept, like the drawings of blindfolded men, they are only one shade less harrowing to a sympathetic observer than the scratchings one finds upon the walls of the old prisons, but there they are, witnessing to the poor buried instincts that struggled up towards the light. That god of joyous expression our poor fathers ignorantly sought, our freedom has declared to us....

In the old days the common ambition of every simple soul was to possess a little property, a patch of land, a house uncontrolled by others, an 'independence' as the English used to put it. And what made this desire for freedom and prosperity so strong, was very evidently the dream of self-expression, of doing something with it, of playing with it, of making a personal delightfulness, a distinctiveness. Property was never more than a means to an end, nor avarice more than a perversion. Men owned in order to do freely. Now that every one has his own apartments and his own privacy secure, this disposition to own has found its release in a new direction. Men study and save and strive that they may leave behind them a series of panels in some public arcade, a row of carven figures along a terrace, a grove, a pavilion. Or they give themselves to the penetration of some still opaque riddle in phenomena as once men gave themselves to the accumulation of riches. The work that was once the whole substance of social

existence--for most men spent all their lives in earning a living--is now no more than was the burden upon one of those old climbers who carried knapsacks of provisions on their backs in order that they might ascend mountains. It matters little to the easy charities of our emancipated time that most people who have made their labour contribution produce neither new beauty nor new wisdom, but are simply busy about those pleasant activities and enjoyments that reassure them that they are alive. They help, it may be, by reception and reverberation, and they hinder nothing.
...

Section 11

Now all this phase of gigantic change in the contours and appearances of human life which is going on about us, a change as rapid and as wonderful as the swift ripening of adolescence to manhood after the barbaric boyish years, is correlated with moral and mental changes at least as unprecedented. It is not as if old things were going out of life and new things coming in, it is rather that the altered circumstances of men are making an appeal to elements in his nature that have hitherto been suppressed, and checking tendencies that have hitherto been over-stimulated and over-developed. He has not so much grown and altered his essential being as turned new aspects to the light. Such turnings round into a new attitude the world has seen on a less extensive scale before. The Highlanders of the seventeenth century, for example, were cruel and bloodthirsty robbers, in the nineteenth their descendants were conspicuously trusty and honourable men. There was not a people in Western Europe in the early twentieth century that seemed capable of hideous massacres, and none that had not been guilty of them within the previous two centuries. The free, frank, kindly, gentle life of the prosperous classes in any European country before the years of the last wars was in a different world of thought and feeling from that of the dingy, suspicious, secretive, and uncharitable existence of the

respectable poor, or the constant personal violence, the squalor and naive passions of the lowest stratum. Yet there were no real differences of blood and inherent quality between these worlds; their differences were all in circumstances, suggestion, and habits of mind. And turning to more individual instances the constantly observed difference between one portion of a life and another consequent upon a religious conversion, were a standing example of the versatile possibilities of human nature.

The catastrophe of the atomic bombs which shook men out of cities and businesses and economic relations shook them also out of their old established habits of thought, and out of the lightly held beliefs and prejudices that came down to them from the past. To borrow a word from the old-fashioned chemists, men were made nascent; they were released from old ties; for good or evil they were ready for new associations. The council carried them forward for good; perhaps if his bombs had reached their destination King Ferdinand Charles might have carried them back to an endless chain of evils. But his task would have been a harder one than the council's. The moral shock of the atomic bombs had been a profound one, and for a while the cunning side of the human animal was overpowered by its sincere realisation of the vital necessity for reconstruction. The litigious and trading spirits cowered together, scared at their own consequences; men thought twice before they sought mean advantages in the face of the unusual eagerness to realise new aspirations, and when at last the weeds revived again and 'claims' began to sprout, they sprouted upon the stony soil of law-courts reformed, of laws that pointed to the future instead of the past, and under the blazing sunshine of a transforming world. A new literature, a new interpretation of history were springing into existence, a new teaching was already in the schools, a new faith in the young. The worthy man who forestalled the building of a research city for the English upon the Sussex downs by buying up a series of estates, was dispossessed and laughed out of court when he made

his demand for some preposterous compensation; the owner of the discredited Dass patents makes his last appearance upon the scroll of history as the insolvent proprietor of a paper called *The Cry for Justice*, in which he duns the world for a hundred million pounds. That was the ingenuous Dass's idea of justice, that he ought to be paid about five million pounds annually because he had annexed the selvage of one of Holsten's discoveries. Dass came at last to believe quite firmly in his right, and he died a victim of conspiracy mania in a private hospital at Nice. Both of these men would probably have ended their days enormously wealthy, and of course ennobled in the England of the opening twentieth century, and it is just this novelty of their fates that marks the quality of the new age.

The new government early discovered the need of a universal education to fit men to the great conceptions of its universal rule. It made no wrangling attacks on the local, racial, and sectarian forms of religious profession that at that time divided the earth into a patchwork of hatreds and distrusts; it left these organisations to make their peace with God in their own time; but it proclaimed as if it were a mere secular truth that sacrifice was expected from all, that respect had to be shown to all; it revived schools or set them up afresh all around the world, and everywhere these schools taught the history of war and the consequences and moral of the Last War; everywhere it was taught not as a sentiment but as a matter of fact that the salvation of the world from waste and contention was the common duty and occupation of all men and women. These things which are now the elementary commonplaces of human intercourse seemed to the councillors of Brissago, when first they dared to proclaim them, marvellously daring discoveries, not untouched by doubt, that flushed the cheek and fired the eye.

The council placed all this educational reconstruction in the hands of a committee of men and women, which did its work during

the next few decades with remarkable breadth and effectiveness. This educational committee was, and is, the correlative upon the mental and spiritual side of the redistribution committee. And prominent upon it, and indeed for a time quite dominating it, was a Russian named Karenin, who was singular in being a congenital cripple. His body was bent so that he walked with difficulty, suffered much pain as he grew older, and had at last to undergo two operations. The second killed him. Already malformation, which was to be seen in every crowd during the middle ages so that the crippled beggar was, as it were, an essential feature of the human spectacle, was becoming a strange thing in the world. It had a curious effect upon Karenin's colleagues; their feeling towards him was mingled with pity and a sense of inhumanity that it needed usage rather than reason to overcome. He had a strong face, with little bright brown eyes rather deeply sunken and a large resolute thin-lipped mouth. His skin was very yellow and wrinkled, and his hair iron gray. He was at all times an impatient and sometimes an angry man, but this was forgiven him because of the hot wire of suffering that was manifestly thrust through his being. At the end of his life his personal prestige was very great. To him far more than to any contemporary is it due that self-abnegation, self-identification with the world spirit, was made the basis of universal education. That general memorandum to the teachers which is the key-note of the modern educational system, was probably entirely his work.

'Whosoever would save his soul shall lose it,' he wrote. 'That is the device upon the seal of this document, and the starting point of all we have to do. It is a mistake to regard it as anything but a plain statement of fact. It is the basis for your work. You have to teach self-forgetfulness, and everything else that you have to teach is contributory and subordinate to that end. Education is the release of man from self. You have to widen the horizons of your children, encourage and intensify their curiosity and their creative impulses, and cultivate and enlarge

their sympathies. That is what you are for. Under your guidance and the suggestions you will bring to bear on them, they have to shed the old Adam of instinctive suspicions, hostilities, and passions, and to find themselves again in the great being of the universe. The little circles of their egotisms have to be opened out until they become arcs in the sweep of the racial purpose. And this that you teach to others you must learn also sedulously yourselves. Philosophy, discovery, art, every sort of skill, every sort of service, love: these are the means of salvation from that narrow loneliness of desire, that brooding preoccupation with self and egotistical relationships, which is hell for the individual, treason to the race, and exile from God....'

Section 12

As things round themselves off and accomplish themselves, one begins for the first time to see them clearly. From the perspectives of a new age one can look back upon the great and widening stream of literature with a complete understanding. Things link up that seemed disconnected, and things that were once condemned as harsh and aimless are seen to be but factors in the statement of a gigantic problem. An enormous bulk of the sincerer writing of the eighteenth, nineteenth, and twentieth centuries falls together now into an unanticipated unanimity; one sees it as a huge tissue of variations upon one theme, the conflict of human egotism and personal passion and narrow imaginations on the one hand, against the growing sense of wider necessities and a possible, more spacious life.

That conflict is in evidence in so early a work as Voltaire's *Candide*, for example, in which the desire for justice as well as happiness beats against human contrariety and takes refuge at last in a forced and inconclusive contentment with little things. *Candide* was but one of the pioneers of a literature of uneasy

complaint that was presently an innumerable multitude of books. The novels more particularly of the nineteenth century, if one excludes the mere story-tellers from our consideration, witness to this uneasy realisation of changes that call for effort and of the lack of that effort. In a thousand aspects, now tragically, now comically, now with a funny affectation of divine detachment, a countless host of witnesses tell their story of lives fretting between dreams and limitations. Now one laughs, now one weeps, now one reads with a blank astonishment at this huge and almost unpremeditated record of how the growing human spirit, now warily, now eagerly, now furiously, and always, as it seems, unsuccessfully, tried to adapt itself to the maddening misfit of its patched and ancient garments. And always in these books as one draws nearer to the heart of the matter there comes a disconcerting evasion. It was the fantastic convention of the time that a writer should not touch upon religion. To do so was to rouse the jealous fury of the great multitude of professional religious teachers. It was permitted to state the discord, but it was forbidden to glance at any possible reconciliation. Religion was the privilege of the pulpit....

It was not only from the novels that religion was omitted. It was ignored by the newspapers; it was pedantically disregarded in the discussion of business questions, it played a trivial and apologetic part in public affairs. And this was done not out of contempt but respect. The hold of the old religious organisations upon men's respect was still enormous, so enormous that there seemed to be a quality of irreverence in applying religion to the developments of every day. This strange suspension of religion lasted over into the beginnings of the new age. It was the clear vision of Marcus Karenin much more than any other contemporary influence which brought it back into the texture of human life. He saw religion without hallucinations, without superstitious reverence, as a common thing as necessary as food and air, as land and energy to the life of man and the well-being of the

Republic. He saw that indeed it had already percolated away from the temples and hierarchies and symbols in which men had sought to imprison it, that it was already at work anonymously and obscurely in the universal acceptance of the greater state. He gave it clearer expression, rephrased it to the lights and perspectives of the new dawn....

But if we return to our novels for our evidence of the spirit of the times it becomes evident as one reads them in their chronological order, so far as that is now ascertainable, that as one comes to the latter nineteenth and the earlier twentieth century the writers are much more acutely aware of secular change than their predecessors were. The earlier novelists tried to show 'life as it is,' the latter showed life as it changes. More and more of their characters are engaged in adaptation to change or suffering from the effects of world changes. And as we come up to the time of the Last Wars, this newer conception of the everyday life as a reaction to an accelerated development is continually more manifest. Barnet's book, which has served us so well, is frankly a picture of the world coming about like a ship that sails into the wind. Our later novelists give a vast gallery of individual conflicts in which old habits and customs, limited ideas, ungenerous temperaments, and innate obsessions are pitted against this great opening out of life that has happened to us. They tell us of the feelings of old people who have been wrenched away from familiar surroundings, and how they have had to make peace with uncomfortable comforts and conveniences that are still strange to them. They give us the discord between the opening egotisms of youths and the ill-defined limitations of a changing social life. They tell of the universal struggle of jealousy to capture and cripple our souls, of romantic failures and tragical misconceptions of the trend of the world, of the spirit of adventure, and the urgency of curiosity, and how these serve the universal drift. And all their stories lead in the end either to happiness missed or happiness won, to disaster or salvation. The

clearer their vision and the subtler their art, the more certainly do these novels tell of the possibility of salvation for all the world. For any road in life leads to religion for those upon it who will follow it far enough....

It would have seemed a strange thing to the men of the former time that it should be an open question as it is to-day whether the world is wholly Christian or not Christian at all. But assuredly we have the spirit, and as surely have we left many temporary forms behind. Christianity was the first expression of world religion, the first complete repudiation of tribalism and war and disputation. That it fell presently into the ways of more ancient rituals cannot alter that. The common sense of mankind has toiled through two thousand years of chastening experience to find at last how sound a meaning attaches to the familiar phrases of the Christian faith. The scientific thinker as he widens out to the moral problems of the collective life, comes inevitably upon the words of Christ, and as inevitably does the Christian, as his thought grows clearer, arrive at the world republic. As for the claims of the sects, as for the use of a name and successions, we live in a time that has shaken itself free from such claims and consistencies.

CHAPTER THE FIFTH

THE LAST DAYS OF MARCUS KARENIN

Section 1

The second operation upon Marcus Karenin was performed at the new station for surgical work at Paran, high in the Himalayas above the Sutlej Gorge, where it comes down out of Thibet.

It is a place of such wildness and beauty as no other scenery in the world affords. The granite terrace which runs round the four sides of the low block of laboratories looks out in every direction upon mountains. Far below in the hidden depths of a shadowy blue cleft, the river pours down in its tumultuous passage to the swarming plains of India. No sound of its roaring haste comes up to those serenities. Beyond that blue gulf, in which whole forests of giant deodars seem no more than small patches of moss, rise vast precipices of many-coloured rock, fretted above, lined by snowfalls, and jagged into pinnacles. These are the northward wall of a towering wilderness of ice and snow which clambers southward higher and wilder and vaster to the culminating summits of our globe, to Dhaulagiri and Everest. Here are cliffs of which no other land can show the like, and deep chasms in which Mt. Blanc might be plunged and hidden. Here are icefields as big as inland seas on which the tumbled boulders lie so thickly that strange little flowers can bloom among them under the untempered sunshine. To the northward, and blocking out any vision of the uplands of Thibet, rises that citadel of porcelain, that gothic pile, the Lio Porgyul, walls, towers, and peaks, a clear twelve thousand feet of veined and splintered rock above the river. And beyond it and eastward and westward rise peaks behind peaks, against the dark blue Himalayan sky. Far away below to the south the clouds of the Indian rains pile up abruptly and are stayed by an invisible hand.

Hither it was that with a dreamlike swiftness Karenin flew high over the irrigations of Rajputana and the towers and cupolas of the ultimate Delhi; and the little group of buildings, albeit the southward wall dropped nearly five hundred feet, seemed to him as he soared down to it like a toy lost among these mountain wildernesses. No road came up to this place; it was reached only by flight.

His pilot descended to the great courtyard, and Karenin assisted by his secretary clambered down through the wing fabric and made his way to the officials who came out to receive him.

In this place, beyond infections and noise and any distractions, surgery had made for itself a house of research and a healing fastness. The building itself would have seemed very wonderful to eyes accustomed to the flimsy architecture of an age when power was precious. It was made of granite, already a little roughened on the outside by frost, but polished within and of a tremendous solidity. And in a honeycomb of subtly lit apartments, were the spotless research benches, the operating tables, the instruments of brass, and fine glass and platinum and gold. Men and women came from all parts of the world for study or experimental research. They wore a common uniform of white and ate at long tables together, but the patients lived in an upper part of the buildings, and were cared for by nurses and skilled attendants....

The first man to greet Karenin was Ciana, the scientific director of the institution. Beside him was Rachel Borken, the chief organiser. 'You are tired?' she asked, and old Karenin shook his head.

'Cramped,' he said. 'I have wanted to visit such a place as this.'

He spoke as if he had no other business with them.

There was a little pause.

'How many scientific people have you got here now?' he asked.

'Just three hundred and ninety-two,' said Rachel Borken.

'And the patients and attendants and so on?'

'Two thousand and thirty.'

'I shall be a patient,' said Karenin. 'I shall have to be a patient. But I should like to see things first. Presently I will be a patient.'

'You will come to my rooms?' suggested Ciana.

'And then I must talk to this doctor of yours,' said Karenin. 'But I would like to see a bit of this place and talk to some of your people before it comes to that.'

He winced and moved forward.

'I have left most of my work in order,' he said.

'You have been working hard up to now?' asked Rachel Borken.

'Yes. And now I have nothing more to do--and it seems strange.... And it's a bother, this illness and having to come down to oneself. This doorway and the row of windows is well done; the gray granite and just the line of gold, and then those mountains beyond through that arch. It's very well done....'

Section 2

Karenin lay on the bed with a soft white rug about him, and Fowler, who was to be his surgeon sat on the edge of the bed and talked to him. An assistant was seated quietly in the shadow behind the bed. The examination had been made, and Karenin knew what was before him. He was tired but serene.

'So I shall die,' he said, 'unless you operate?'

Fowler assented. 'And then,' said Karenin, smiling, 'probably I shall die.'

'Not certainly.'

'Even if I do not die; shall I be able to work?'

'There is just a chance....'

'So firstly I shall probably die, and if I do not, then perhaps I shall be a useless invalid?'

'I think if you live, you may be able to go on--as you do now.'

'Well, then, I suppose I must take the risk of it. Yet couldn't you, Fowler, couldn't you drug me and patch me instead of all this--vivisection? A few days of drugged and active life--and then the end?'

Fowler thought. 'We are not sure enough yet to do things like that,' he said.

'But a day is coming when you will be certain.'

Fowler nodded.

'You make me feel as though I was the last of deformity--Deformity is uncertainty--inaccuracy. My body works doubtfully, it is not even sure that it will die or live. I suppose the time is not far off when such bodies as mine will no longer be born into the world.'

'You see,' said Fowler, after a little pause, 'it is necessary that spirits such as yours should be born into the world.'

'I suppose,' said Karenin, 'that my spirit has had its use. But if you think that is because my body is as it is I think you are mistaken. There is no peculiar virtue in defect. I have always chafed against--all this. If I could have moved more freely and lived a larger life in health I could have done more. But some day perhaps you will be able to put a body that is wrong altogether right again. Your science is only beginning. It's a subtler thing than physics and chemistry, and it takes longer to produce its miracles. And meanwhile a few more of us must die in patience.'

'Fine work is being done and much of it,' said Fowler. 'I can say as much because I have nothing to do with it. I can understand a lesson, appreciate the discoveries of abler men and use my hands, but those others, Pigou, Masterton, Lie, and the others, they are clearing the ground fast for the knowledge to come. Have you had time to follow their work?'

Karenin shook his head. 'But I can imagine the scope of it,' he said.

'We have so many men working now,' said Fowler. 'I suppose at present there must be at least a thousand thinking hard, observing, experimenting, for one who did so in nineteen hundred.'

'Not counting those who keep the records?'

'Not counting those. Of course, the present indexing of research is in itself a very big work, and it is only now that we are getting it properly done. But already we are feeling the benefit of that. Since it ceased to be a paid employment and became a devotion we have had only those people who obeyed the call of an aptitude at work upon these things. Here--I must show you it to-day, because it will interest you--we have our copy of the encyclopaedic index--every week sheets are taken out and replaced by fresh sheets with new results that are brought to us by the aeroplanes of the Research Department. It is an index of knowledge that grows continually, an index that becomes continually truer. There was never anything like it before.'

'When I came into the education committee,' said Karenin, 'that index of human knowledge seemed an impossible thing. Research had produced a chaotic mountain of results, in a hundred languages and a thousand different types of publication. . . .' He smiled at his memories. 'How we groaned at the job!'

'Already the ordering of that chaos is nearly done. You shall see.'

'I have been so busy with my own work----Yes, I shall be glad to see.'

The patient regarded the surgeon for a time with interested eyes.

'You work here always?' he asked abruptly.

'No,' said Fowler.

'But mostly you work here?'

'I have worked about seven years out of the past ten. At times I go away--down there. One has to. At least I have to. There is a sort of grayness comes over all this, one feels hungry for life, real, personal passionate life, love-making, eating and drinking for the fun of the thing, jostling crowds, having adventures, laughter--above all laughter----'

'Yes,' said Karenin understandingly.

'And then one day, suddenly one thinks of these high mountains again....'

'That is how I would have lived, if it had not been for my--defects,' said Karenin. 'Nobody knows but those who have borne it the exasperation of abnormality. It will be good when you have nobody alive whose body cannot live the wholesome everyday life, whose spirit cannot come up into these high places as it wills.'

'We shall manage that soon,' said Fowler.

'For endless generations man has struggled upward against the indignities of his body--and the indignities of his soul. Pains, incapacities, vile fears, black moods, despairs. How well I've known them. They've taken more time than all your holidays. It is true, is it not, that every man is something of a cripple and something of a beast? I've dipped a little deeper than most; that's all. It's only now when he has fully learnt the truth of that, that he can take hold of himself to be neither beast nor cripple. Now that he overcomes his servitude to his body, he can for the first time think of living the full life of his body.... Before another generation dies you'll have the thing in hand. You'll do as you please with the old Adam and all the vestiges from the brutes and reptiles that lurk in his body and spirit.'

Isn't that so?'

'You put it boldly,' said Fowler.

Karenin laughed cheerfully at his caution.... 'When,' asked Karenin suddenly, 'when will you operate?'

'The day after to-morrow,' said Fowler. 'For a day I want you to drink and eat as I shall prescribe. And you may think and talk as you please.'

'I should like to see this place.'

'You shall go through it this afternoon. I will have two men carry you in a litter. And to-morrow you shall lie out upon the terrace. Our mountains here are the most beautiful in the world....'

Section 3

The next morning Karenin got up early and watched the sun rise over the mountains, and breakfasted lightly, and then young Gardener, his secretary, came to consult him upon the spending of his day. Would he care to see people? Or was this gnawing pain within him too much to permit him to do that?

'I'd like to talk,' said Karenin. 'There must be all sorts of lively-minded people here. Let them come and gossip with me. It will distract me--and I can't tell you how interesting it makes everything that is going on to have seen the dawn of one's own last day.'

'Your last day!'

'Fowler will kill me.'

'But he thinks not.'

'Fowler will kill me. If he does not he will not leave very much of me. So that this is my last day anyhow, the days afterwards if they come at all to me, will be refuse. I know....'

Gardener was about to speak when Karenin went on again.

'I hope he kills me, Gardener. Don't be--old-fashioned. The thing I am most afraid of is that last rag of life. I may just go on--a scarred salvage of suffering stuff. And then--all the things I have hidden and kept down or discounted or set right afterwards will get the better of me. I shall be peevish. I may lose my grip upon my own egotism. It's never been a very firm grip. No, no, Gardener, don't say that! You know better, you've had glimpses of it. Suppose I came through on the other side of this affair, belittled, vain, and spiteful, using the prestige I have got among men by my good work in the past just to serve some small invalid purpose....'

He was silent for a time, watching the mists among the distant precipices change to clouds of light, and drift and dissolve before the searching rays of the sunrise.

'Yes,' he said at last, 'I am afraid of these anaesthetics and these fag ends of life. It's life we are all afraid of. Death!--nobody minds just death. Fowler is clever--but some day surgery will know its duty better and not be so anxious just to save something . . . provided only that it quivers. I've tried to hold my end up properly and do my work. After Fowler has done with me I am certain I shall be unfit for work--and what else is there for me? . . . I know I shall not be fit for work....'

'I do not see why life should be judged by its last trailing

thread of vitality.... I know it for the splendid thing it is--I who have been a diseased creature from the beginning. I know it well enough not to confuse it with its husks. Remember that, Gardener, if presently my heart fails me and I despair, and if I go through a little phase of pain and ingratitude and dark forgetfulness before the end.... Don't believe what I may say at the last.... If the fabric is good enough the selvage doesn't matter. It can't matter. So long as you are alive you are just the moment, perhaps, but when you are dead then you are all your life from the first moment to the last....'

Section 4

Presently, in accordance with his wish, people came to talk to him, and he could forget himself again. Rachel Borken sat for a long time with him and talked chiefly of women in the world, and with her was a girl named Edith Haydon who was already very well known as a cytologist. And several of the younger men who were working in the place and a patient named Kahn, a poet, and Edwards, a designer of plays and shows, spent some time with him. The talk wandered from point to point and came back upon itself, and became now earnest and now trivial as the chance suggestions determined. But soon afterwards Gardener wrote down notes of things he remembered, and it is possible to put together again the outlook of Karenin upon the world and how he thought and felt about many of the principal things in life.

'Our age,' he said, 'has been so far an age of scene-shifting. We have been preparing a stage, clearing away the setting of a drama that was played out and growing tiresome.... If I could but sit out the first few scenes of the new spectacle....'

'How encumbered the world had become! It was ailing as I am ailing with a growth of unmeaning things. It was entangled, feverish, confused. It was in sore need of release, and I suppose

that nothing less than the violence of those bombs could have released it and made it a healthy world again. I suppose they were necessary. Just as everything turns to evil in a fevered body so everything seemed turning to evil in those last years of the old time. Everywhere there were obsolete organisations seizing upon all the new fine things that science was giving to the world, nationalities, all sorts of political bodies, the churches and sects, proprietorship, seizing upon those treat powers and limitless possibilities and turning them to evil uses. And they would not suffer open speech, they would not permit of education, they would let no one be educated to the needs of the new time.... You who are younger cannot imagine the mixture of desperate hope and protesting despair in which we who could believe in the possibilities of science lived in those years before atomic energy came....

'It was not only that the mass of people would not attend, would not understand, but that those who did understand lacked the power of real belief. They said the things, they saw the things, and the things meant nothing to them....

'I have been reading some old papers lately. It is wonderful how our fathers bore themselves towards science. They hated it. They feared it. They permitted a few scientific men to exist and work--a pitiful handful.... "Don't find out anything about us," they said to them; "don't inflict vision upon us, spare our little ways of life from the fearful shaft of understanding. But do tricks for us, little limited tricks. Give us cheap lighting. And cure us of certain disagreeable things, cure us of cancer, cure us of consumption, cure our colds and relieve us after repletion...." We have changed all that, Gardener. Science is no longer our servant. We know it for something greater than our little individual selves. It is the awakening mind of the race, and in a little while----In a little while----I wish indeed I could watch for that little while, now that the curtain has

risen....

'While I lie here they are clearing up what is left of the bombs in London,' he said. 'Then they are going to repair the ruins and make it all as like as possible to its former condition before the bombs fell. Perhaps they will dig out the old house in St John's Wood to which my father went after his expulsion from Russia.... That London of my memories seems to me like a place in another world. For you younger people it must seem like a place that could never have existed.'

'Is there much left standing?' asked Edith Haydon.

'Square miles that are scarcely shaken in the south and north-west, they say; and most of the bridges and large areas of dock. Westminster, which held most of the government offices, suffered badly from the small bomb that destroyed the Parliament, there are very few traces of the old thoroughfare of Whitehall or the Government region thereabout, but there are plentiful drawings to scale of its buildings, and the great hole in the east of London scarcely matters. That was a poor district and very like the north and the south. . . . It will be possible to reconstruct most of it. . . . It is wanted. Already it becomes difficult to recall the old time--even for us who saw it.'

'It seems very distant to me,' said the girl.

'It was an unwholesome world,' reflected Karenin. 'I seem to remember everybody about my childhood as if they were ill. They were ill. They were sick with confusion. Everybody was anxious about money and everybody was doing uncongenial things. They ate a queer mixture of foods, either too much or too little, and at odd hours. One sees how ill they were by their advertisements. All this new region of London they are opening up now is plastered with advertisements of pills. Everybody must have been

taking pills. In one of the hotel rooms in the Strand they have found the luggage of a lady covered up by falling rubble and unburnt, and she was equipped with nine different sorts of pill and tabloid. The pill-carrying age followed the weapon-carrying age. They are equally strange to us. People's skins must have been in a vile state. Very few people were properly washed; they carried the filth of months on their clothes. All the clothes they wore were old clothes; our way of pulping our clothes again after a week or so of wear would have seemed fantastic to them. Their clothing hardly bears thinking about. And the congestion of them! Everybody was jostling against everybody in those awful towns. In an uproar. People were run over and crushed by the hundred; every year in London the cars and omnibuses alone killed or disabled twenty thousand people, in Paris it was worse; people used to fall dead for want of air in the crowded ways. The irritation of London, internal and external, must have been maddening. It was a maddened world. It is like thinking of a sick child. One has the same effect of feverish urgencies and acute irrational disappointments.

'All history,' he said, 'is a record of a childhood....'

'And yet not exactly a childhood. There is something clean and keen about even a sick child--and something touching. But so much of the old times makes one angry. So much they did seems grossly stupid, obstinately, outrageously stupid, which is the very opposite to being fresh and young.'

'I was reading only the other day about Bismarck, that hero of nineteenth-century politics, that sequel to Napoleon, that god of blood and iron. And he was just a beery, obstinate, dull man. Indeed, that is what he was, the commonest, coarsest man, who ever became great. I looked at his portraits, a heavy, almost froggish face, with projecting eyes and a thick moustache to hide a poor mouth. He aimed at nothing but Germany, Germany

emphasised, indurated, enlarged; Germany and his class in Germany; beyond that he had no ideas, he was inaccessible to ideas; his mind never rose for a recorded instant above a bumpkin's elaborate cunning. And he was the most influential man in the world, in the whole world, no man ever left so deep a mark on it, because everywhere there were gross men to resonate to the heavy notes he emitted. He trampled on ten thousand lovely things, and a kind of malice in these louts made it pleasant to them to see him trample. No--he was no child; the dull, national aggressiveness he stood for, no childishness. Childhood is promise. He was survival.

'All Europe offered its children to him, it sacrificed education, art, happiness and all its hopes of future welfare to follow the clatter of his sabre. The monstrous worship of that old fool's "blood and iron" passed all round the earth. Until the atomic bombs burnt our way to freedom again. . . .'

'One thinks of him now as one thinks of the megatherium,' said one of the young men.

'From first to last mankind made three million big guns and a hundred thousand complicated great ships for no other purpose but war.'

'Were there no sane men in those days,' asked the young man, 'to stand against that idolatry?'

'In a state of despair,' said Edith Haydon.

'He is so far off--and there are men alive still who were alive when Bismarck died!' . . . said the young man....

Section 5

'And yet it may be I am unjust to Bismarck,' said Karenin, following his own thoughts. 'You see, men belong to their own age; we stand upon a common stock of thought and we fancy we stand upon the ground. I met a pleasant man the other day, a Maori, whose great-grandfather was a cannibal. It chanced he had a daguerreotype of the old sinner, and the two were marvellously alike. One felt that a little juggling with time and either might have been the other. People are cruel and stupid in a stupid age who might be gentle and splendid in a gracious one. The world also has its moods. Think of the mental food of Bismarck's childhood; the humiliations of Napoleon's victories, the crowded, crowning victory of the Battle of the Nations.... Everybody in those days, wise or foolish, believed that the division of the world under a multitude of governments was inevitable, and that it was going on for thousands of years more. It WAS inevitable until it was impossible. Any one who had denied that inevitability publicly would have been counted--oh! a SILLY fellow. Old Bismarck was only just a little--forcible, on the lines of the accepted ideas. That is all. He thought that since there had to be national governments he would make one that was strong at home and invincible abroad. Because he had fed with a kind of rough appetite upon what we can see now were very stupid ideas, that does not make him a stupid man. We've had advantages; we've had unity and collectivism blasted into our brains. Where should we be now but for the grace of science? I should have been an embittered, spiteful, downtrodden member of the Russian Intelligenza, a conspirator, a prisoner, or an assassin. You, my dear, would have been breaking dingy windows as a suffragette.'

'NEVER,' said Edith stoutly....

For a time the talk broke into humorous personalities, and the young people giped at each other across the smiling old administrator, and then presently one of the young scientific men gave things a new turn. He spoke like one who was full to the

brim.

'You know, sir, I've a fancy--it is hard to prove such things--that civilisation was very near disaster when the atomic bombs came banging into it, that if there had been no Holsten and no induced radio-activity, the world would have--smashed--much as it did. Only instead of its being a smash that opened a way to better things, it might have been a smash without a recovery. It is part of my business to understand economics, and from that point of view the century before Holsten was just a hundred years' crescendo of waste. Only the extreme individualism of that period, only its utter want of any collective understanding or purpose can explain that waste. Mankind used up material--insanely. They had got through three-quarters of all the coal in the planet, they had used up most of the oil, they had swept away their forests, and they were running short of tin and copper. Their wheat areas were getting weary and populous, and many of the big towns had so lowered the water level of their available hills that they suffered a drought every summer. The whole system was rushing towards bankruptcy. And they were spending every year vaster and vaster amounts of power and energy upon military preparations, and continually expanding the debt of industry to capital. The system was already staggering when Holsten began his researches. So far as the world in general went there was no sense of danger and no desire for inquiry. They had no belief that science could save them, nor any idea that there was a need to be saved. They could not, they would not, see the gulf beneath their feet. It was pure good luck for mankind at large that any research at all was in progress. And as I say, sir, if that line of escape hadn't opened, before now there might have been a crash, revolution, panic, social disintegration, famine, and--it is conceivable--complete disorder. . . . The rails might have rusted on the disused railways by now, the telephone poles have rotted and fallen, the big liners dropped into sheet-iron in the ports; the burnt, deserted cities become

the ruinous hiding-places of gangs of robbers. We might have been brigands in a shattered and attenuated world. Ah, you may smile, but that had happened before in human history. The world is still studded with the ruins of broken-down civilisations. Barbaric bands made their fastness upon the Acropolis, and the tomb of Hadrian became a fortress that warred across the ruins of Rome against the Colosseum.... Had all that possibility of reaction ended so certainly in 1940? Is it all so very far away even now?'

'It seems far enough away now,' said Edith Haydon.

'But forty years ago?'

'No,' said Karenin with his eyes upon the mountains, 'I think you underrate the available intelligence in those early decades of the twentieth century. Officially, I know, politically, that intelligence didn't tell--but it was there. And I question your hypothesis. I doubt if that discovery could have been delayed. There is a kind of inevitable logic now in the progress of research. For a hundred years and more thought and science have been going their own way regardless of the common events of life. You see--they have got loose. If there had been no Holsten there would have been some similar man. If atomic energy had not come in one year it would have come in another. In decadent Rome the march of science had scarcely begun.... Nineveh, Babylon, Athens, Syracuse, Alexandria, these were the first rough experiments in association that made a security, a breathing-space, in which inquiry was born. Man had to experiment before he found out the way to begin. But already two hundred years ago he had fairly begun.... The politics and dignities and wars of the nineteenth and twentieth centuries were only the last phoenix blaze of the former civilisation flaring up about the beginnings of the new. Which we serve.... 'Man lives in the dawn for ever,' said Karenin. 'Life is beginning and nothing else but beginning. It

begins everlastingly. Each step seems vaster than the last, and does but gather us together for the nest. This Modern State of ours, which would have been a Utopian marvel a hundred years ago, is already the commonplace of life. But as I sit here and dream of the possibilities in the mind of man that now gather to a head beneath the shelter of its peace, these great mountains here seem but little things....'

Section 6

About eleven Karenin had his midday meal, and afterwards he slept among his artificial furs and pillows for two hours. Then he awoke and some tea was brought to him, and he attended to a small difficulty in connection with the Moravian schools in the Labrador country and in Greenland that Gardener knew would interest him. He remained alone for a little while after that, and then the two women came to him again. Afterwards Edwards and Kahn joined the group, and the talk fell upon love and the place of women in the renascent world. The cloudbanks of India lay under a quivering haze, and the blaze of the sun fell full upon the eastward precipices. Ever and again as they talked, some vast splinter of rock would crack and come away from these, or a wild rush of snow and ice and stone, pour down in thunder, hang like a wet thread into the gulfs below, and cease....

Section 7

For a time Karenin said very little, and Kahn, the popular poet, talked of passionate love. He said that passionate, personal love had been the abiding desire of humanity since ever humanity had begun, and now only was it becoming a possible experience. It had been a dream that generation after generation had pursued, that always men had lost on the verge of attainment. To most of those who had sought it obstinately it had brought tragedy. Now, lifted above sordid distresses, men and women might hope for

realised and triumphant love. This age was the Dawn of Love....

Karenin remained downcast and thoughtful while Kahn said these things. Against that continued silence Kahn's voice presently seemed to beat and fail. He had begun by addressing Karenin, but presently he was including Edith Haydon and Rachel Borken in his appeal. Rachel listened silently; Edith watched Karenin and very deliberately avoided Kahn's eyes.

'I know,' said Karenin at last, 'that many people are saying this sort of thing. I know that there is a vast release of love-making in the world. This great wave of decoration and elaboration that has gone about the world, this Efflorescence, has of course laid hold of that. I know that when you say that the world is set free, you interpret that to mean that the world is set free for love-making. Down there,--under the clouds, the lovers foregather. I know your songs, Kahn, your half-mystical songs, in which you represent this old hard world dissolving into a luminous haze of love--sexual love.... I don't think you are right or true in that. You are a young, imaginative man, and you see life--ardently--with the eyes of youth. But the power that has brought man into these high places under this blue-veiled blackness of the sky and which beckons us on towards the immense and awful future of our race, is riper and deeper and greater than any such emotions....

'All through my life--it has been a necessary part of my work--I have had to think of this release of sexual love and the riddles that perfect freedom and almost limitless power will put to the soul of our race. I can see now, all over the world, a beautiful ecstasy of waste; "Let us sing and rejoice and be lovely and wonderful." . . . The orgy is only beginning, Kahn.... It was inevitable--but it is not the end of mankind....

'Think what we are. It is but a yesterday in the endlessness of

time that life was a dreaming thing, dreaming so deeply that it forgot itself as it dreamt, its lives, its individual instincts, its moments, were born and wondered and played and desired and hungered and grew weary and died. Incalculable successions of vision, visions of sunlit jungle, river wilderness, wild forest, eager desire, beating hearts, soaring wings and creeping terror flamed hotly and then were as though they had never been. Life was an uneasiness across which lights played and vanished. And then we came, man came, and opened eyes that were a question and hands that were a demand and began a mind and memory that dies not when men die, but lives and increases for ever, an over-mind, a dominating will, a question and an aspiration that reaches to the stars.... Hunger and fear and this that you make so much of, this sex, are but the elementals of life out of which we have arisen. All these elementals, I grant you, have to be provided for, dealt with, satisfied, but all these things have to be left behind.'

'But Love,' said Kahn.

'I speak of sexual love and the love of intimate persons. And that is what you mean, Kahn.'

Karenin shook his head. 'You cannot stay at the roots and climb the tree,' he said....

'No,' he said after a pause, 'this sexual excitement, this love story, is just a part of growing up and we grow out of it. So far literature and art and sentiment and all our emotional forms have been almost altogether adolescent, plays and stories, delights and hopes, they have all turned on that marvellous discovery of the love interest, but life lengthens out now and the mind of adult humanity detaches itself. Poets who used to die at thirty live now to eighty-five. You, too, Kahn! There are endless years yet for you--and all full of learning.... We carry an excessive

burden of sex and sexual tradition still, and we have to free ourselves from it. We do free ourselves from it. We have learnt in a thousand different ways to hold back death, and this sex, which in the old barbaric days was just sufficient to balance our dying, is now like a hammer that has lost its anvil, it plunges through human life. You poets, you young people want to turn it to delight. Turn it to delight. That may be one way out. In a little while, if you have any brains worth thinking about, you will be satisfied, and then you will come up here to the greater things. The old religions and their new offsets want still, I see, to suppress all these things. Let them suppress. If they can suppress. In their own people. Either road will bring you here at last to the eternal search for knowledge and the great adventure of power.'

'But incidentally,' said Rachel Borken; 'incidentally you have half of humanity, you have womankind, very much specialised for--for this love and reproduction that is so much less needed than it was.'

'Both sexes are specialised for love and reproduction,' said Karenin.

'But the women carry the heavier burden.'

'Not in their imaginations,' said Edwards.

'And surely,' said Kahn, 'when you speak of love as a phase--isn't it a necessary phase? Quite apart from reproduction the love of the sexes is necessary. Isn't it love, sexual love, which has released the imagination? Without that stir, without that impulse to go out from ourselves, to be reckless of ourselves and wonderful, would our lives be anything more than the contentment of the stalled ox?'

'The key that opens the door,' said Karenin, 'is not the goal of the journey.'

'But women!' cried Rachel. 'Here we are! What is our future--as women? Is it only that we have unlocked the doors of the imagination for you men? Let us speak of this question now. It is a thing constantly in my thoughts, Karenin. What do you think of us? You who must have thought so much of these perplexities.'

Karenin seemed to weigh his words. He spoke very deliberately. 'I do not care a rap about your future--as women. I do not care a rap about the future of men--as males. I want to destroy these peculiar futures. I care for your future as intelligences, as parts of and contribution to the universal mind of the race. Humanity is not only naturally over-specialised in these matters, but all its institutions, its customs, everything, exaggerate, intensify this difference. I want to unspecialise women. No new idea. Plato wanted exactly that. I do not want to go on as we go now, emphasising this natural difference; I do not deny it, but I want to reduce it and overcome it.'

'And--we remain women,' said Rachel Borken. 'Need you remain thinking of yourselves as women?'

'It is forced upon us,' said Edith Haydon.

'I do not think a woman becomes less of a woman because she dresses and works like a man,' said Edwards. 'You women here, I mean you scientific women, wear white clothing like the men, twist up your hair in the simplest fashion, go about your work as though there was only one sex in the world. You are just as much women, even if you are not so feminine, as the fine ladies down below there in the plains who dress for excitement and display, whose only thoughts are of lovers, who exaggerate every difference.... Indeed we love you more.'

'But we go about our work,' said Edith Haydon.

'So does it matter?' asked Rachel.

'If you go about your work and if the men go about their work then for Heaven's sake be as much woman as you wish,' said Karenin. 'When I ask you to unspecialise, I am thinking not of the abolition of sex, but the abolition of the irksome, restricting, obstructive obsession with sex. It may be true that sex made society, that the first society was the sex-cemented family, the first state a confederacy of blood relations, the first laws sexual taboos. Until a few years ago morality meant proper sexual behaviour. Up to within a few years of us the chief interest and motive of an ordinary man was to keep and rule a woman and her children and the chief concern of a woman was to get a man to do that. That was the drama, that was life. And the jealousy of these demands was the master motive in the world. You said, Kahn, a little while ago that sexual love was the key that let one out from the solitude of self, but I tell you that so far it has only done so in order to lock us all up again in a solitude of two.... All that may have been necessary but it is necessary no longer. All that has changed and changes still very swiftly. Your future, Rachel, AS WOMEN, is a diminishing future.'

'Karenin?' asked Rachel, 'do you mean that women are to become men?'

'Men and women have to become human beings.'

'You would abolish women? But, Karenin, listen! There is more than sex in this. Apart from sex we are different from you. We take up life differently. Forget we are--females, Karenin, and still we are a different sort of human being with a different use. In some things we are amazingly secondary. Here am I in

this place because of my trick of management, and Edith is here because of her patient, subtle hands. That does not alter the fact that nearly the whole body of science is man made; that does not alter the fact that men do so predominately make history, that you could nearly write a complete history of the world without mentioning a woman's name. And on the other hand we have a gift of devotion, of inspiration, a distinctive power for truly loving beautiful things, a care for life and a peculiar keen close eye for behaviour. You know men are blind beside us in these last matters. You know they are restless--and fitful. We have a steadfastness. We may never draw the broad outlines nor discover the new paths, but in the future isn't there a confirming and sustaining and supplying role for us? As important, perhaps, as yours? Equally important. We hold the world up, Karenin, though you may have raised it.'

'You know very well, Rachel, that I believe as you believe. I am not thinking of the abolition of woman. But I do want to abolish--the heroine, the sexual heroine. I want to abolish the woman whose support is jealousy and whose gift possession. I want to abolish the woman who can be won as a prize or locked up as a delicious treasure. And away down there the heroine flares like a divinity.'

'In America,' said Edwards, 'men are fighting duels over the praises of women and holding tournaments before Queens of Beauty.'

'I saw a beautiful girl in Lahore,' said Kahn, 'she sat under a golden canopy like a goddess, and three fine men, armed and dressed like the ancient paintings, sat on steps below her to show their devotion. And they wanted only her permission to fight for her.'

'That is the men's doing,' said Edith Haydon.

'I SAID,' cried Edwards, 'that man's imagination was more specialised for sex than the whole being of woman. What woman would do a thing like that? Women do but submit to it or take advantage of it.'

'There is no evil between men and women that is not a common evil,' said Karenin. 'It is you poets, Kahn, with your love songs which turn the sweet fellowship of comrades into this woman-centred excitement. But there is something in women, in many women, which responds to these provocations; they succumb to a peculiarly self-cultivating egotism. They become the subjects of their own artistry. They develop and elaborate themselves as scarcely any man would ever do. They LOOK for golden canopies. And even when they seem to react against that, they may do it still. I have been reading in the old papers of the movements to emancipate women that were going on before the discovery of atomic force. These things which began with a desire to escape from the limitations and servitude of sex, ended in an inflamed assertion of sex, and women more heroines than ever. Helen of Holloway was at last as big a nuisance in her way as Helen of Troy, and so long as you think of yourselves as women'--he held out a finger at Rachel and smiled gently--'instead of thinking of yourselves as intelligent beings, you will be in danger of--Helenism. To think of yourselves as women is to think of yourselves in relation to men. You can't escape that consequence. You have to learn to think of yourselves--for our sakes and your own sakes--in relation to the sun and stars. You have to cease to be our adventure, Rachel, and come with us upon our adventures. ...' He waved his hand towards the dark sky above the mountain crests.

Section 8

'These questions are the next questions to which research will

bring us answers,' said Karenin. 'While we sit here and talk idly and inexactly of what is needed and what may be, there are hundreds of keen-witted men and women who are working these things out, dispassionately and certainly, for the love of knowledge. The next sciences to yield great harvests now will be psychology and neural physiology. These perplexities of the situation between man and woman and the trouble with the obstinacy of egotism, these are temporary troubles, the issue of our own times. Suddenly all these differences that seem so fixed will dissolve, all these incompatibles will run together, and we shall go on to mould our bodies and our bodily feelings and personal reactions as boldly as we begin now to carve mountains and set the seas in their places and change the currents of the wind.'

'It is the next wave,' said Fowler, who had come out upon the terrace and seated himself silently behind Karenin's chair.

'Of course, in the old days,' said Edwards, 'men were tied to their city or their country, tied to the homes they owned or the work they did....'

'I do not see,' said Karenin, 'that there is any final limit to man's power of self-modification.'

'There is none,' said Fowler, walking forward and sitting down upon the parapet in front of Karenin so that he could see his face. 'There is no absolute limit to either knowledge or power.... I hope you do not tire yourself talking.'

'I am interested,' said Karenin. 'I suppose in a little while men will cease to be tired. I suppose in a little time you will give us something that will hurry away the fatigue products and restore our jaded tissues almost at once. This old machine may be made to run without slacking or cessation.'

'That is possible, Karenin. But there is much to learn.'

'And all the hours we give to digestion and half living; don't you think there will be some way of saving these?'

Fowler nodded assent.

'And then sleep again. When man with his blazing lights made an end to night in his towns and houses--it is only a hundred years or so ago that that was done--then it followed he would presently resent his eight hours of uselessness. Shan't we presently take a tabloid or lie in some field of force that will enable us to do with an hour or so of slumber and rise refreshed again?'

'Frobisher and Ameer Ali have done work in that direction.'

'And then the inconveniences of age and those diseases of the system that come with years; steadily you drive them back and you lengthen and lengthen the years that stretch between the passionate tumults of youth and the contractions of senility. Man who used to weaken and die as his teeth decayed now looks forward to a continually lengthening, continually fuller term of years. And all those parts of him that once gathered evil against him, the vestigial structures and odd, treacherous corners of his body, you know better and better how to deal with. You carve his body about and leave it re-modelled and unscarred. The psychologists are learning how to mould minds, to reduce and remove bad complexes of thought and motive, to relieve pressures and broaden ideas. So that we are becoming more and more capable of transmitting what we have learnt and preserving it for the race. The race, the racial wisdom, science, gather power continually to subdue the individual man to its own end. Is that not so?'

Fowler said that it was, and for a time he was telling Karenin of new work that was in progress in India and Russia. 'And how is it with heredity?' asked Karenin.

Fowler told them of the mass of inquiry accumulated and arranged by the genius of Tchen, who was beginning to define clearly the laws of inheritance and how the sex of children and the complexions and many of the parental qualities could be determined.

'He can actually DO----?'

'It is still, so to speak, a mere laboratory triumph,' said Fowler, 'but to-morrow it will be practicable.'

'You see,' cried Karenin, turning a laughing face to Rachel and Edith, 'while we have been theorising about men and women, here is science getting the power for us to end that old dispute for ever. If woman is too much for us, we'll reduce her to a minority, and if we do not like any type of men and women, we'll have no more of it. These old bodies, these old animal limitations, all this earthly inheritance of gross inevitabilities falls from the spirit of man like the shrivelled cocoon from an imago. And for my own part, when I hear of these things I feel like that--like a wet, crawling new moth that still fears to spread its wings. Because where do these things take us?'

'Beyond humanity,' said Kahn.

'No,' said Karenin. 'We can still keep our feet upon the earth that made us. But the air no longer imprisons us, this round planet is no longer chained to us like the ball of a galley slave....'

'In a little while men who will know how to bear the strange gravitations, the altered pressures, the attenuated, unfamiliar gases and all the fearful strangenesses of space will be venturing out from this earth. This ball will be no longer enough for us; our spirit will reach out.... Cannot you see how that little argosy will go glittering up into the sky, twinkling and glittering smaller and smaller until the blue swallows it up. They may succeed out there; they may perish, but other men will follow them....

'It is as if a great window opened,' said Karenin.

Section 9

As the evening drew on Karenin and those who were about him went up upon the roof of the buildings, so that they might the better watch the sunset and the flushing of the mountains and the coming of the afterglow. They were joined by two of the surgeons from the laboratories below, and presently by a nurse who brought Karenin refreshment in a thin glass cup. It was a cloudless, windless evening under the deep blue sky, and far away to the north glittered two biplanes on the way to the observatories on Everest, two hundred miles distant over the precipices to the east. The little group of people watched them pass over the mountains and vanish into the blue, and then for a time they talked of the work that the observatory was doing. From that they passed to the whole process of research about the world, and so Karenin's thoughts returned again to the mind of the world and the great future that was opening upon man's imagination. He asked the surgeons many questions upon the detailed possibilities of their science, and he was keenly interested and excited by the things they told him. And as they talked the sun touched the mountains, and became very swiftly a blazing and indented hemisphere of liquid flame and sank.

Karenin looked blinking at the last quivering rim of incandescence, and shaded his eyes and became silent.

Presently he gave a little start.

'What?' asked Rachel Borken.

'I had forgotten,' he said.

'What had you forgotten?'

'I had forgotten about the operation to-morrow. I have been so interested as Man to-day that I have nearly forgotten Marcus Karenin. Marcus Karenin must go under your knife to-morrow, Fowler, and very probably Marcus Karenin will die.' He raised his slightly shrivelled hand. 'It does not matter, Fowler. It scarcely matters even to me. For indeed is it Karenin who has been sitting here and talking; is it not rather a common mind, Fowler, that has played about between us? You and I and all of us have added thought to thought, but the thread is neither you nor me. What is true we all have; when the individual has altogether brought himself to the test and winnowing of expression, then the individual is done. I feel as though I had already been emptied out of that little vessel, that Marcus Karenin, which in my youth held me so tightly and completely. Your beauty, dear Edith, and your broad brow, dear Rachel, and you, Fowler, with your firm and skilful hands, are now almost as much to me as this hand that beats the arm of my chair. And as little me. And the spirit that desires to know, the spirit that resolves to do, that spirit that lives and has talked in us to-day, lived in Athens, lived in Florence, lives on, I know, for ever....

'And you, old Sun, with your sword of flame searing these poor eyes of Marcus for the last time of all, beware of me! You think

I die--and indeed I am only taking off one more coat to get at you. I have threatened you for ten thousand years, and soon I warn you I shall be coming. When I am altogether stripped and my disguises thrown away. Very soon now, old Sun, I shall launch myself at you, and I shall reach you and I shall put my foot on your spotted face and tug you about by your fiery locks. One step I shall take to the moon, and then I shall leap at you. I've talked to you before, old Sun, I've talked to you a million times, and now I am beginning to remember. Yes--long ago, long ago, before I had stripped off a few thousand generations, dust now and forgotten, I was a hairy savage and I pointed my hand at you and--clearly I remember it!--I saw you in a net. Have you forgotten that, old Sun? . . .

'Old Sun, I gather myself together out of the pools of the individual that have held me dispersed so long. I gather my billion thoughts into science and my million wills into a common purpose. Well may you slink down behind the mountains from me, well may you cower....'

Section 10

Karenin desired that he might dream alone for a little while before he returned to the cell in which he was to sleep. He was given relief for a pain that began to trouble him and wrapped warmly about with furs, for a great coldness was creeping over all things, and so they left him, and he sat for a long time watching the afterglow give place to the darkness of night.

It seemed to those who had to watch over him unobtrusively lest he should be in want of any attention, that he mused very deeply.

The white and purple peaks against the golden sky sank down into cold, blue remoteness, glowed out again and faded again, and the burning cressets of the Indian stars, that even the moonrise

cannot altogether quench, began their vigil. The moon rose behind the towering screen of dark precipices to the east, and long before it emerged above these, its slanting beams had filled the deep gorges below with luminous mist and turned the towers and pinnacles of Lio Porgyul to a magic dreamcastle of radiance and wonder....

Came a great uprush of ghostly light above the black rim of rocks, and then like a bubble that is blown and detaches itself the moon floated off clear into the unfathomable dark sky....

And then Karenin stood up. He walked a few paces along the terrace and remained for a time gazing up at that great silver disc, that silvery shield that must needs be man's first conquest in outer space....

Presently he turned about and stood with his hands folded behind him, looking at the northward stars. . . .

At length he went to his own cell. He lay down there and slept peacefully till the morning. And early in the morning they came to him and the anaesthetic was given him and the operation performed.

It was altogether successful, but Karenin was weak and he had to lie very still; and about seven days later a blood clot detached itself from the healing scar and travelled to his heart, and he died in an instant in the night.

THE PRELUDE

ON FEAR AND ARISTOCRACY

1

The story of William Porphyry Benham is the story of a man who was led into adventure by an idea. It was an idea that took possession of his imagination quite early in life, it grew with him and changed with him, it interwove at last completely with his being. His story is its story. It was traceably germinating in the schoolboy; it was manifestly present in his mind at the very last moment of his adventurous life. He belonged to that fortunate minority who are independent of daily necessities, so that he was free to go about the world under its direction. It led him far. It led him into situations that bordered upon the fantastic, it made him ridiculous, it came near to making him sublime. And this idea of his was of such a nature that in several aspects he could document it. Its logic forced him to introspection and to the making of a record.

An idea that can play so large a part in a life must necessarily have something of the complication and protean quality of life itself. It is not to be stated justly in any formula, it is not to be rendered by an epigram. As well one might show a man's skeleton for his portrait. Yet, essentially, Benham's idea was simple. He had an incurable, an almost innate persuasion that he had to live life nobly and thoroughly. His commoner expression for that thorough living is "the aristocratic life." But by "aristocratic" he meant something very different from the quality of a Russian prince, let us say, or an English peer. He meant an intensity, a

clearness. . . . Nobility for him was to get something out of his individual existence, a flame, a jewel, a splendour--it is a thing easier to understand than to say.

One might hesitate to call this idea "innate," and yet it comes soon into a life when it comes at all. In Benham's case we might trace it back to the Day Nursery at Seagate, we might detect it stirring already at the petticoat stage, in various private struttings and valiant dreamings with a helmet of pasteboard and a white-metal sword. We have most of us been at least as far as that with Benham. And we have died like Horatius, slaying our thousands for our country, or we have perished at the stake or faced the levelled muskets of the firing party--"No, do not bandage my eyes"--because we would not betray the secret path that meant destruction to our city. But with Benham the vein was stronger, and it increased instead of fading out as he grew to manhood. It was less obscured by those earthy acquiescences, those discretions, that saving sense of proportion, which have made most of us so satisfactorily what we are. "Porphyry," his mother had discovered before he was seventeen, "is an excellent boy, a brilliant boy, but, I begin to see, just a little unbalanced."

The interest of him, the absurdity of him, the story of him, is that.

Most of us are--balanced; in spite of occasional reveries we do come to terms with the limitations of life, with those desires and dreams and discretions that, to say the least of it, qualify our nobility, we take refuge in our sense of humour and congratulate ourselves on a certain amiable freedom from priggishness or presumption, but for Benham that easy declension to a humorous acceptance of life as it is did not occur. He found his limitations soon enough; he was perpetually rediscovering them, but out of these interments of the spirit he rose again--remarkably. When we others have decided that, to be plain about it, we are not going to lead the noble life at

all, that the thing is too ambitious and expensive even to attempt, we have done so because there were other conceptions of existence that were good enough for us, we decided that instead of that glorious impossible being of ourselves, we would figure in our own eyes as jolly fellows, or sly dogs, or sane, sound, capable men or brilliant successes, and so forth--practicable things. For Benham, exceptionally, there were not these practicable things. He blundered, he fell short of himself, he had--as you will be told--some astonishing rebuffs, but they never turned him aside for long. He went by nature for this preposterous idea of nobility as a linnet hatched in a cage will try to fly.

And when he discovered--and in this he was assisted not a little by his friend at his elbow--when he discovered that Nobility was not the simple thing he had at first supposed it to be, he set himself in a mood only slightly disconcerted to the discovery of Nobility. When it dawned upon him, as it did, that one cannot be noble, so to speak, IN VACUO, he set himself to discover a Noble Society. He began with simple beliefs and fine attitudes and ended in a conscious research. If he could not get through by a stride, then it followed that he must get through by a climb. He spent the greater part of his life studying and experimenting in the noble possibilities of man. He never lost his absurd faith in that conceivable splendour. At first it was always just round the corner or just through the wood; to the last it seemed still but a little way beyond the distant mountains.

For this reason this story has been called THE RESEARCH MAGNIFICENT.

It was a real research, it was documented. In the rooms in Westhaven Street that at last were as much as one could call his home, he had accumulated material for--one hesitates to call it a book--let us say it was an analysis of, a guide to the noble life. There after his tragic death came his old friend White, the journalist and novelist, under a promise, and found these papers; he

found them to the extent of a crammed bureau, half a score of patent files quite distended and a writing-table drawer-full, and he was greatly exercised to find them. They were, White declares, they are still after much experienced handling, an indigestible aggregation. On this point White is very assured. When Benham thought he was gathering together a book he was dreaming, White says. There is no book in it. . . .

Perhaps too, one might hazard, Benham was dreaming when he thought the noble life a human possibility. Perhaps man, like the ape and the hyaena and the tapeworm and many other of God's necessary but less attractive creatures, is not for such exalted ends. That doubt never seems to have got a lodgment in Benham's skull; though at times one might suppose it the basis of White's thought. You will find in all Benham's story, if only it can be properly told, now subdued, now loud and amazed and distressed, but always traceable, this startled, protesting question, "BUT WHY THE DEVIL AREN'T WE?"

As though necessarily we ought to be. He never faltered in his persuasion that behind the dingy face of this world, the earthy stubbornness, the baseness and dulness of himself and all of us, lurked the living jewels of heaven, the light of glory, things unspeakable. At first it seemed to him that one had only just to hammer and will, and at the end, after a life of willing and hammering, he was still convinced there was something, something in the nature of an Open Sesame, perhaps a little more intricate than one had supposed at first, a little more difficult to secure, but still in that nature, which would suddenly roll open for mankind the magic cave of the universe, that precious cave at the heart of all things, in which one must believe.

And then life--life would be the wonder it so perplexingly just isn't. . . .

Benham did not go about the world telling people of this consuming research. He was not the prophet or preacher of his idea. It was too living and intricate and uncertain a part of him to speak freely about. It was his secret self; to expose it casually would have shamed him. He drew all sorts of reserves about him, he wore his manifest imperfections turned up about him like an overcoat in bitter wind. He was content to be inexplicable. His thoughts led him to the conviction that this magnificent research could not be, any more than any other research can be, a solitary enterprise, but he delayed expression; in a mighty writing and stowing away of these papers he found a relief from the unpleasant urgency to confess and explain himself prematurely. So that White, though he knew Benham with the intimacy of an old schoolfellow who had renewed his friendship, and had shared his last days and been a witness of his death, read the sheets of manuscript often with surprise and with a sense of added elucidation.

And, being also a trained maker of books, White as he read was more and more distressed that an accumulation so interesting should be so entirely unshaped for publication. "But this will never make a book," said White with a note of personal grievance. His hasty promise in their last moments together had bound him, it seemed, to a task he now found impossible. He would have to work upon it tremendously; and even then he did not see how it could be done.

This collection of papers was not a story, not an essay, not a confession, not a diary. It was--nothing definable. It went into no conceivable covers. It was just, White decided, a proliferation. A vast proliferation. It wanted even a title. There were signs that Benham had intended to call it **THE ARISTOCRATIC LIFE**, and that he had tried at some other time the title of **AN ESSAY ON**

ARISTOCRACY. Moreover, it would seem that towards the end he had been disposed to drop the word "aristocratic" altogether, and adopt some such phrase as THE LARGER LIFE. Once it was LIFE SET FREE. He

had fallen away more and more from nearly everything that one associates with aristocracy--at the end only its ideals of fearlessness and generosity remained.

Of all these titles THE ARISTOCRATIC LIFE seemed at first most like a clue to White. Benham's erratic movements, his sudden impulses, his angers, his unaccountable patiences, his journeys to strange places, and his lapses into what had seemed to be pure adventurousness, could all be put into system with that. Before White had turned over three pages of the great fascicle of manuscript that was called Book Two, he had found the word "Bushido" written with a particularly flourishing capital letter and twice repeated. "That was inevitable," said White with the comforting regret one feels for a friend's banalities. "And it dates . . . [unreadable] this was early. . . ."

"Modern aristocracy, the new aristocracy," he read presently, "has still to be discovered and understood. This is the necessary next step for mankind. As far as possible I will discover and understand it, and as far as I know it I will be it. This is the essential disposition of my mind. God knows I have appetites and sloths and habits and blindnesses, but so far as it is in my power to release myself I will escape to this. . . ."

3

White sat far into the night and for several nights turning over papers and rummaging in untidy drawers. Memories came back to him

of his dead friend and pieced themselves together with other memories and joined on to scraps in this writing. Bold yet convincing guesses began to leap across the gaps. A story shaped itself. . . .

The story began with the schoolfellow he had known at Minchinghampton School.

Benham had come up from his father's preparatory school at Seagate. He had been a boy reserved rather than florid in his acts and manners, a boy with a pale face, incorrigible hair and brown eyes that went dark and deep with excitement. Several times White had seen him excited, and when he was excited Benham was capable of tensely daring things. On one occasion he had insisted upon walking across a field in which was an aggressive bull. It had been put there to prevent the boys taking a short cut to the swimming place. It had bellowed tremendously and finally charged him. He had dodged it and got away; at the time it had seemed an immense feat to White and the others who were safely up the field. He had walked to the fence, risking a second charge by his deliberation. Then he had sat on the fence and declared his intention of always crossing the field so long as the bull remained there. He had said this with white intensity, he had stopped abruptly in mid-sentence, and then suddenly he had dropped to the ground, clutched the fence, struggled with heaving shoulders, and been sick.

The combination of apparently stout heart and manifestly weak stomach had exercised the Minchinghampton intelligence profoundly.

On one or two other occasions Benham had shown courage of the same rather screwed-up sort. He showed it not only in physical but in mental things. A boy named Prothero set a fashion of religious discussion in the school, and Benham, after some self-examination, professed an atheistical republicanism rather in the manner of Shelley. This brought him into open conflict with Roddles, the

History Master. Roddles had discovered these theological controversies in some mysterious way, and he took upon himself to talk at Benham and Prothero. He treated them to the common misapplication of that fool who "hath said in his heart there is no God." He did not perceive there was any difference between the fool who says a thing in his heart and one who says it in the dormitory. He revived that delectable anecdote of the Eton boy who professed disbelief and was at once "soundly flogged" by his head master. "Years afterwards that boy came back to thank ----"

"Gurr," said Prothero softly. "STEW--ard!"

"Your turn next, Benham," whispered an orthodox controversialist.

"Good Lord! I'd like to see him," said Benham with a forced loudness that could scarcely be ignored.

The subsequent controversy led to an interview with the head. From it Benham emerged more whitely strung up than ever. "He said he would certainly swish me if I deserved it, and I said I would certainly kill him if he did."

"And then?"

"He told me to go away and think it over. Said he would preach about it next Sunday. . . . Well, a swishing isn't a likely thing anyhow. But I would. . . . There isn't a master here I'd stand a thrashing from--not one. . . . And because I choose to say what I think! . . . I'd run amuck."

For a week or so the school was exhilarated by a vain and ill-concealed hope that the head might try it just to see if Benham would. It was tantalizingly within the bounds of possibility. . . .

These incidents came back to White's mind as he turned over the

newspapers in the upper drawer of the bureau. The drawer was labelled "Fear--the First Limitation," and the material in it was evidently designed for the opening volume of the great unfinished book. Indeed, a portion of it was already arranged and written up.

As White read through this manuscript he was reminded of a score of schoolboy discussions Benham and he and Prothero had had together. Here was the same old toughness of mind, a kind of intellectual hardihood, that had sometimes shocked his schoolfellows. Benham had been one of those boys who do not originate ideas very freely, but who go out to them with a fierce sincerity. He believed and disbelieved with emphasis. Prothero had first set him doubting, but it was Benham's own temperament took him on to denial. His youthful atheism had been a matter for secret consternation in White. White did not believe very much in God even then, but this positive disbelieving frightened him. It was going too far. There had been a terrible moment in the dormitory, during a thunderstorm, a thunderstorm so vehement that it had awakened them all, when Latham, the humourist and a quietly devout boy, had suddenly challenged Benham to deny his Maker.

"NOW say you don't believe in God?"

Benham sat up in bed and repeated his negative faith, while little Hopkins, the Bishop's son, being less certain about the accuracy of Providence than His aim, edged as far as he could away from Benham's cubicle and rolled his head in his bedclothes.

"And anyhow," said Benham, when it was clear that he was not to be struck dead forthwith, "you show a poor idea of your God to think he'd kill a schoolboy for honest doubt. Even old Roddles--"

"I can't listen to you," cried Latham the humourist, "I can't listen to you. It's--HORRIBLE."

"Well, who began it?" asked Benham.

A flash of lightning lit the dormitory and showed him to White white-faced and ablaze with excitement, sitting up with the bedclothes about him. "Oh WOW!" wailed the muffled voice of little Hopkins as the thunder burst like a giant pistol overhead, and he buried his head still deeper in the bedclothes and gave way to unappeasable grief.

Latham's voice came out of the darkness. "This ATHEISM that you and Billy Prothero have brought into the school--"

He started violently at another vivid flash, and every one remained silent, waiting for the thunder. . . .

But White remembered no more of the controversy because he had made a frightful discovery that filled and blocked his mind. Every time the lightning flashed, there was a red light in Benham's eyes. . . .

It was only three days after when Prothero discovered exactly the same phenomenon in the School House boothole and talked of cats and cattle, that White's confidence in their friend was partially restored. . . .

4

"Fear, the First Limitation"--his title indicated the spirit of Benham's opening book very clearly. His struggle with fear was the very beginning of his soul's history. It continued to the end. He had hardly decided to lead the noble life before he came bump against the fact that he was a physical coward. He felt fear acutely. "Fear," he wrote, "is the foremost and most persistent of

the shepherding powers that keep us in the safe fold, that drive us back to the beaten track and comfort and--futility. The beginning of all aristocracy is the subjugation of fear."

At first the struggle was so great that he hated fear without any qualification; he wanted to abolish it altogether.

"When I was a boy," he writes, "I thought I would conquer fear for good and all, and never more be troubled by it. But it is not to be done in that way. One might as well dream of having dinner for the rest of one's life. Each time and always I have found that it has to be conquered afresh. To this day I fear, little things as well as big things. I have to grapple with some little dread every day--urge myself. . . . Just as I have to wash and shave myself every day. . . . I believe it is so with every one, but it is difficult to be sure; few men who go into dangers care very much to talk about fear. . . ."

Later Benham found some excuses for fear, came even to dealings with fear. He never, however, admits that this universal instinct is any better than a kindly but unintelligent nurse from whose fostering restraints it is man's duty to escape. Discretion, he declared, must remain; a sense of proportion, an "adequacy of enterprise," but the discretion of an aristocrat is in his head, a tactical detail, it has nothing to do with this visceral sinking, this ebb in the nerves. "From top to bottom, the whole spectrum of fear is bad, from panic fear at one extremity down to that mere disinclination for enterprise, that reluctance and indolence which is its lowest phase. These are things of the beast, these are for creatures that have a settled environment, a life history, that spin in a cage of instincts. But man is a beast of that kind no longer, he has left his habitat, he goes out to limitless living. . . ."

This idea of man going out into new things, leaving securities, habits, customs, leaving his normal life altogether behind him,

underlay all Benham's aristocratic conceptions. And it was natural that he should consider fear as entirely inconvenient, treat it indeed with ingratitude, and dwell upon the immense liberations that lie beyond for those who will force themselves through its remonstrances. . . .

Benham confessed his liability to fear quite freely in these notes. His fear of animals was ineradicable. He had had an overwhelming dread of bears until he was twelve or thirteen, the child's irrational dread of impossible bears, bears lurking under the bed and in the evening shadows. He confesses that even up to manhood he could not cross a field containing cattle without keeping a wary eye upon them--his bull adventure rather increased than diminished that disposition--he hated a strange dog at his heels and would manoeuvre himself as soon as possible out of reach of the teeth or heels of a horse. But the peculiar dread of his childhood was tigers. Some gaping nursemaid confronted him suddenly with a tiger in a cage in the menagerie annexe of a circus. "My small mind was overwhelmed."

"I had never thought," White read, "that a tiger was much larger than a St. Bernard dog. . . . This great creature! . . . I could not believe any hunter would attack such a monster except by stealth and with weapons of enormous power. . . .

"He jerked himself to and fro across his cramped, rickety cage and looked over my head with yellow eyes--at some phantom far away. Every now and then he snarled. The contempt of his detestable indifference sank deeper and deeper into my soul. I knew that were the cage to vanish I should stand there motionless, his helpless prey. I knew that were he at large in the same building with me I should be too terror-stricken to escape him. At the foot of a ladder leading clear to escape I should have awaited him paralyzed. At last I gripped my nurse's hand. 'Take me away,' I whispered.

"In my dreams that night he stalked me. I made my frozen flight

from him, I slammed a door on him, and he thrust his paw through a panel as though it had been paper and clawed for me. The paw got longer and longer. . . .

"I screamed so loudly that my father came up from his study.

"I remember that he took me in his arms.

"'It's only a big sort of pussy, Poff,' he said. FELIS TIGRIS. FELIS, you know, means cat.'

"But I knew better. I was in no mood then for my father's insatiable pedagoguery.

"'And my little son mustn't be a coward.' . . .

"After that I understood I must keep silence and bear my tigers alone.

"For years the thought of that tiger's immensity haunted my mind. In my dreams I cowered before it a thousand times; in the dusk it rarely failed me. On the landing on my way to bed there was a patch of darkness beyond a chest that became a lurking horror for me, and sometimes the door of my father's bedroom would stand open and there was a long buff and crimson-striped shape, by day indeed an ottoman, but by night--. Could an ottoman crouch and stir in the flicker of a passing candle? Could an ottoman come after you noiselessly, and so close that you could not even turn round upon it? No!"

5

When Benham was already seventeen and, as he supposed, hardened

against his fear of beasts, his friend Prothero gave him an account of the killing of an old labouring man by a stallion which had escaped out of its stable. The beast had careered across a field, leapt a hedge and come upon its victim suddenly. He had run a few paces and stopped, trying to defend his head with the horse rearing over him. It beat him down with two swift blows of its fore hoofs, one, two, lifted him up in its long yellow teeth and worried him as a terrier does a rat--the poor old wretch was still able to make a bleating sound at that--dropped him, trampled and kicked him as he tried to crawl away, and went on trampling and battering him until he was no more than a bloody inhuman bundle of clothes and mire. For more than half an hour this continued, and then its animal rage was exhausted and it desisted, and went and grazed at a little distance from this misshapen, hoof-marked, torn, and muddy remnant of a man. No one it seems but a horror-stricken child knew what was happening. . . .

This picture of human indignity tortured Benham's imagination much more than it tortured the teller of the tale. It filled him with shame and horror. For three or four years every detail of that circumstantial narrative seemed unforgettable. A little lapse from perfect health and the obsession returned. He could not endure the neighing of horses: when he saw horses galloping in a field with him his heart stood still. And all his life thereafter he hated horses.

6

A different sort of fear that also greatly afflicted Benham was due to a certain clumsiness and insecurity he felt in giddy and unstable places. There he was more definitely balanced between the hopelessly rash and the pitifully discreet.

He had written an account of a private struggle between himself and a certain path of planks and rock edges called the Bisse of Leysin. This happened in his adolescence. He had had a bad attack of influenza and his doctor had sent him to a little hotel--the only hotel it was in those days--at Montana in Valais. There, later, when he had picked up his strength, his father was to join him and take him mountaineering, that second-rate mountaineering which is so dear to dons and schoolmasters. When the time came he was ready for that, but he had had his experiences. He had gone through a phase of real cowardice. He was afraid, he confessed, before even he reached Montana; he was afraid of the steepness of the mountains. He had to drive ten or twelve miles up and up the mountain-side, a road of innumerable hairpin bends and precipitous banks, the horse was gaunt and ugly with a disposition to shy, and he confesses he clutched the side of the vehicle and speculated how he should jump if presently the whole turnout went tumbling over. . . .

"And afterwards I dreamt dreams of precipices. I made strides over precipices, I fell and fell with a floating swiftness towards remote valleys, I was assailed by eagles upon a perilous ledge that crumbled away and left me clinging by my nails to nothing."

The Bisse of Leysin is one of those artificial water-courses which bring water from some distant source to pastures that have an insufficient or uncertain supply. It is a little better known than most because of a certain exceptional boldness in its construction; for a distance of a few score yards it runs supported by iron staples across the front of a sheer precipice, and for perhaps half a mile it hangs like an eyebrow over nearly or quite vertical walls of pine-set rock. Beside it, on the outer side of it, runs a path, which becomes an offhand gangway of planking at the overhanging places. At one corner, which gives the favourite picture postcard from Montana, the rocks project so sharply above the water that the passenger on the gangway must crouch down upon the bending plank as he walks. There is no hand-hold at all.

A path from Montana takes one over a pine-clad spur and down a precipitous zig-zag upon the middle of the Bisse, and thither Benham came, fascinated by the very fact that here was something of which the mere report frightened him. He had to walk across the cold clear rush of the Bisse upon a pine log, and then he found himself upon one of the gentler interludes of the Bisse track. It was a scrambling path nearly two feet wide, and below it were slopes, but not so steep as to terrify. At a vast distance below he saw through tree-stems and blue haze a twisted strand of bright whiteness, the river that joins the Rhone at Sion. It looped about and passed out of sight remotely beneath his feet. He turned to the right, and came to a corner that overhung a precipice. He craned his head round this corner and saw the evil place of the picture-postcards.

He remained for a long time trying to screw himself up to walk along the jagged six-inch edge of rock between cliff and torrent into which the path has shrunk, to the sagging plank under the overhanging rock beyond.

He could not bring himself to do that.

"It happened that close to the corner a large lump of rock and earth was breaking away, a cleft was opening, so that presently, it seemed possible at any moment, the mass would fall headlong into the blue deeps below. This impending avalanche was not in my path along the Bisse, it was no sort of danger to me, but in some way its insecurity gave a final touch to my cowardice. I could not get myself round that corner."

He turned away. He went and examined the planks in the other direction, and these he found less forbidding. He crossed one precipitous place, with a fall of twoscore feet or less beneath him, and found worse ahead. There also he managed. A third place was still more disagreeable. The plank was worn and thin, and sagged

under him. He went along it supporting himself against the rock above the Bisse with an extended hand. Halfway the rock fell back, so that there was nothing whatever to hold. He stopped, hesitating whether he should go back--but on this plank there was no going back because no turning round seemed practicable. While he was still hesitating there came a helpful intervention. Behind him he saw a peasant appearing and disappearing behind trees and projecting rock masses, and coming across the previous plank at a vigorous trot. . . .

Under the stimulus of a spectator Benham got to the end of this third place without much trouble. Then very politely he stood aside for the expert to go ahead so that he could follow at his own pace.

There were, however, more difficulties yet to come, and a disagreeable humiliation. That confounded peasant developed a parental solicitude. After each crossing he waited, and presently began to offer advice and encouragement. At last came a place where everything was overhanging, where the Bisse was leaking, and the plank wet and slippery. The water ran out of the leak near the brim of the wooden channel and fell in a long shivering thread of silver. **THERE WAS NO SOUND OF ITS FALL.** It just fell--into a void.

Benham

wished he had not noted that. He groaned, but faced the plank; he knew this would be the slowest affair of all.

The peasant surveyed him from the further side.

"Don't be afraid!" cried the peasant in his clumsy Valaisian French, and returned, returning along the plank that seemed quite sufficiently loaded without him, extending a charitable hand.

"Damn!" whispered Benham, but he took the hand.

Afterwards, rather ignobly, he tried to explain in his public-school French. "Pas de peur," he said. "Pas de peur. Mais la tete, n'a

pas l'habitude."

The peasant, failing to understand, assured him again that there was no danger.

("Damn!")

Benham was led over all the other planks, he was led as if he was an old lady crossing a glacier. He was led into absolute safety, and shamefacedly he rewarded his guide. Then he went a little way and sat down, swore softly, and watched the honest man go striding and plunging down towards Lens until he was out of sight.

"Now," said Benham to himself, "if I do not go back along the planks my secret honour is gone for ever."

He told himself that he had not a good head, that he was not well, that the sun was setting and the light no longer good, that he had a very good chance indeed of getting killed. Then it came to him suddenly as a clear and simple truth, as something luminously plain, that it is better to get killed than go away defeated by such fears and unsteadiness as his. The change came into his mind as if a white light were suddenly turned on--where there had been nothing but shadows and darkness. He rose to his feet and went swiftly and intently the whole way back, going with a kind of temperate recklessness, and, because he was no longer careful, easily. He went on beyond his starting place toward the corner, and did that supreme bit, to and fro, that bit where the lump was falling away, and he had to crouch, as gaily as the rest. Then he recrossed the Bisse upon the pine log, clambered up through the pines to the crest, and returned through the meadows to his own hotel.

After that he should have slept the sleep of contentment, but instead he had quite dreadful nightmares, of hanging in frozen fear above incredible declivities, of ill-aimed leaps across chasms to

slippery footholds, of planks that swayed and broke suddenly in the middle and headed him down and down. . . .

The next day in the sunshine he walked the Bisse again with those dreams like trailing mists in his mind, and by comparison the path of the Bisse was nothing, it was like walking along a kerbstone, it was an exercise for young ladies. . . .

7

In his younger days Benham had regarded Fear as a shameful secret and as a thing to be got rid of altogether. It seemed to him that to feel fear was to fall short of aristocracy, and in spite of the deep dreads and disgusts that haunted his mind, he set about the business of its subjugation as if it were a spiritual amputation. But as he emerged from the egotism of adolescence he came to realize that this was too comprehensive an operation; every one feels fear, and your true aristocrat is not one who has eliminated, but one who controls or ignores it. Brave men are men who do things when they are afraid to do them, just as Nelson, even when he was seasick, and he was frequently seasick, was still master of the sea. Benham developed two leading ideas about fear; one that it is worse at the first onset, and far worse than any real experience, and the other that fear is essentially a social instinct. He set himself upon these lines to study--what can we call it?--the taming of fear, the nature, care, and management of fear. . . .

"Fear is very like pain in this, that it is a deterrent thing. It is superficial. Just as a man's skin is infinitely more sensitive than anything inside. . . . Once you have forced yourself or have been forced through the outward fear into vivid action or experience, you feel very little. The worst moment is before things

happen. Rowe, the African sportsman, told me that he had seen cowardice often enough in the presence of lions, but he had never seen any one actually charged by a lion who did not behave well. I have heard the same thing of many sorts of dangers.

"I began to suspect this first in the case of falling or jumping down. Giddiness may be an almost intolerable torture, and falling nothing of the sort. I once saw the face of an old man who had flung himself out of a high window in Rome, and who had been killed instantly on the pavement; it was not simply a serene face, it was glad, exalted. I suspect that when we have broken the shell of fear, falling may be delightful. Jumping down is, after all, only a steeper tobogganing, and tobogganing a milder jumping down. Always I used to funk at the top of the Cresta run. I suffered sometimes almost intolerably; I found it almost impossible to get away. The first ten yards was like being slashed open with a sharp sword. But afterwards there was nothing but joyful thrills. All instinct, too, fought against me when I tried high diving. I managed it, and began to like it. I had to give it up because of my ears, but not until I had established the habit of stepping through that moment of disinclination.

"I was Challoner's passenger when he was killed at Sheerness. That was a queer unexpected experience, you may have supposed it an agony of terror, but indeed there was no fear in it at all. At any rate, I do not remember a moment of fear; it has gone clean out of my memory if ever it was there. We were swimming high and fast, three thousand feet or so, in a clear, sweet air over the town of Sheerness. The river, with a string of battleships, was far away to the west of us, and the endless grey-blue flats of the Thames to the north. The sun was low behind a bank of cloud. I was watching a motor-car, which seemed to be crawling slowly enough, though, no doubt, it was making a respectable pace, between two hedges down below. It is extraordinary how slowly everything seems to be going when one sees it from such an height.

"Then the left wing of the monoplane came up like a door that slams, some wires whistled past my head, and one whipped off my helmet, and then, with the seat slipping away from me, down we went. I snatched unavailingly for the helmet, and then gripped the sides. It was like dropping in a boat suddenly into the trough of a wave--and going on dropping. We were both strapped, and I got my feet against the side and clung to the locked second wheel.

"The sensation was as though something like an intermittent electric current was pouring through me. It's a ridiculous image to use, I can't justify it, but it was as if I was having cold blue light squirted through every pore of my being. There was an astonishment, a feeling of confirmation. 'Of course these things do happen sometimes,' I told myself. I don't remember that Challoner looked round or said anything at all. I am not sure that I looked at him. . . .

"There seemed to be a long interval of intensely excited curiosity, and I remember thinking, 'Lord, but we shall come a smash in a minute!' Far ahead I saw the grey sheds of Eastchurch and people strolling about apparently unaware of our disaster. There was a sudden silence as Challoner stopped the engine. . . .

"But the point I want to insist upon is that I did not feel afraid. I was simply enormously, terribly INTERESTED. . . .

"There came a tremendous jolt and a lunge, and we were both tipped forward, so that we were hanging forehead down by our straps, and it looked as if the sheds were in the sky, then I saw nothing but sky, then came another vast swerve, and we were falling sideways, sideways. . . .

"I was altogether out of breath and PHYSICALLY astonished, and I remember noting quite intelligently as we hit the ground how the

green grass had an effect of POURING OUT in every direction from below us. . . .

"Then I remember a jerk and a feeling that I was flying up again. I was astonished by a tremendous popping--fabric, wires, everything seemed going pop, pop, pop, like a machine-gun, and then came a flash of intense pain as my arm crumpled up. It was quite impersonal pain. As impersonal as seeing intense colour. SPLINTERS! I remember the word came into my head instantly. I remember that very definitely.

"I thought, I suppose, my arm was in splinters. Or perhaps of the scraps and ends of rods and wires flying about us. It is curious that while I remember the word I cannot recall the idea. . . .

"When I became conscious again the chief thing present in my mind was that all those fellows round were young soldiers who wouldn't at all understand bad behaviour. My arm was--orchestral, but still far from being real suffering IN me. Also I wanted to know what Challoner had got. They wouldn't understand my questions, and then I twisted round and saw from the negligent way his feet came out from under the engine that he must be dead. And dark red stains with bright red froth--

"Of course!

"There again the chief feeling was a sense of oddity. I wasn't sorry for him any more than I was for myself.

"It seemed to me that it was all right with us both, remarkable, vivid, but all right. . . ."

"But though there is little or no fear in an aeroplane, even when it is smashing up, there is fear about aeroplanes. There is something that says very urgently, 'Don't,' to the man who looks up into the sky. It is very interesting to note how at a place like Eastchurch or Brooklands the necessary discretion trails the old visceral feeling with it, and how men will hang about, ready to go up, resolved to go up, but delaying. Men of indisputable courage will get into a state between dread and laziness, and waste whole hours of flying weather on any excuse or no excuse. Once they are up that inhibition vanishes. The man who was delaying and delaying half an hour ago will now be cutting the most venturesome capers in the air. Few men are in a hurry to get down again. I mean that quite apart from the hesitation of landing, they like being up there."

Then, abruptly, Benham comes back to his theory.

"Fear, you see, is the inevitable janitor, but it is not the ruler of experience. That is what I am driving at in all this. The bark of danger is worse than its bite. Inside the portals there may be events and destruction, but terror stays defeated at the door. It may be that when that old man was killed by a horse the child who watched suffered more than he did. . . .

"I am sure that was so. . . ."

9

As White read Benham's notes and saw how his argument drove on, he was reminded again and again of those schoolboy days and Benham's hardihood, and his own instinctive unreasonable reluctance to follow

those gallant intellectual leads. If fear is an ancient instinctive boundary that the modern life, the aristocratic life, is bound to ignore and transcend, may this not also be the case with pain? We do a little adventure into the "life beyond fear"; may we not also think of adventuring into the life beyond pain? Is pain any saner a warning than fear? May not pain just as much as fear keep us from possible and splendid things? But why ask a question that is already answered in principle in every dentist's chair? Benham's idea, however, went much further than that, he was clearly suggesting that in pain itself, pain endured beyond a certain pitch, there might come pleasure again, an intensity of sensation that might have the colour of delight. He betrayed a real anxiety to demonstrate this possibility, he had the earnestness of a man who is sensible of dissentient elements within. He hated the thought of pain even more than he hated fear. His arguments did not in the least convince White, who stopped to poke the fire and assure himself of his own comfort in the midst of his reading.

Young people and unseasoned people, Benham argued, are apt to imagine that if fear is increased and carried to an extreme pitch it becomes unbearable, one will faint or die; given a weak heart, a weak artery or any such structural defect and that may well happen, but it is just as possible that as the stimulation increases one passes through a brief ecstasy of terror to a new sane world, exalted but as sane as normal existence. There is the calmness of despair. Benham had made some notes to enforce this view, of the observed calm behaviour of men already hopelessly lost, men on sinking ships, men going to execution, men already maimed and awaiting the final stroke, but for the most part these were merely references to books and periodicals. In exactly the same way, he argued, we exaggerate the range of pain as if it were limitless. We think if we are unthinking that it passes into agony and so beyond endurance to destruction. It probably does nothing of the kind. Benham compared pain to the death range of the electric current. At a certain voltage it thrills, at a greater it torments and

convulses, at a still greater it kills. But at enormous voltages, as Tesla was the first to demonstrate, it does no injury. And following on this came memoranda on the recorded behaviour of martyrs, on the self-torture of Hindoo ascetics, of the defiance of Red Indian prisoners.

"These things," Benham had written, "are much more horrible when one considers them from the point of view of an easy-chair";--White gave an assenting nod--"ARE THEY REALLY HORRIBLE AT ALL? Is it possible

that these charred and slashed and splintered persons, those Indians hanging from hooks, those walkers in the fiery furnace, have had glimpses through great windows that were worth the price they paid for them? Haven't we allowed those checks and barriers that are so important a restraint upon childish enterprise, to creep up into and distress and distort adult life? . . .

"The modern world thinks too much as though painlessness and freedom from danger were ultimate ends. It is fear-haunted, it is troubled by the thoughts of pain and death, which it has never met except as well-guarded children meet these things, in exaggerated and untestable forms, in the menagerie or in nightmares. And so it thinks the discovery of anaesthetics the crowning triumph of civilization, and cosiness and innocent amusement, those ideals of the nursery, the whole purpose of mankind. . . ."

"Mm," said White, and pressed his lips together and knotted his brows and shook his head.

But the bulk of Benham's discussion of fear was not concerned with

this perverse and overstrained suggestion of pleasure reached through torture, this exaggeration of the man resolved not to shrink at anything; it was an examination of the present range and use of fear that led gradually to something like a theory of control and discipline. The second of his two dominating ideas was that fear is an instinct arising only in isolation, that in a crowd there may be a collective panic, but that there is no real individual fear.

Fear, Benham held, drives the man back to the crowd, the dog to its master, the wolf to the pack, and when it is felt that the danger is pooled, then fear leaves us. He was quite prepared to meet the objection that animals of a solitary habit do nevertheless exhibit fear. Some of this apparent fear, he argued, was merely discretion, and what is not discretion is the survival of an infantile characteristic. The fear felt by a tiger cub is certainly a social emotion, that drives it back to the other cubs, to its mother and the dark hiding of the lair. The fear of a fully grown tiger sends it into the reeds and the shadows, to a refuge, that must be "still reminiscent of the maternal lair." But fear has very little hold upon the adult solitary animal, it changes with extreme readiness to resentment and rage.

"Like most inexperienced people," ran his notes, "I was astonished at the reported feats of men in war; I believed they were exaggerated, and that there was a kind of unpremeditated conspiracy of silence about their real behaviour. But when on my way to visit India for the third time I turned off to see what I could of the fighting before Adrianople, I discovered at once that a thousand casually selected conscripts will, every one of them, do things together that not one of them could by any means be induced to do alone. I saw men not merely obey orders that gave them the nearly certain prospect of death, but I saw them exceeding orders; I saw men leap out of cover for the mere sake of defiance, and fall shot through and smashed by a score of bullets. I saw a number of Bulgarians in the hands of the surgeon, several quite frightfully wounded, refuse chloroform merely to impress the English onlooker,

some of their injuries I could scarcely endure to see, and I watched a line of infantry men go on up a hill and keep on quite manifestly cheerful with men dropping out and wriggling, and men dropping out and lying still until every other man was down. . . . Not one man would have gone up that hill alone, without onlookers. . . ."

Rowe, the lion hunter, told Benham that only on one occasion in his life had he given way to ungovernable fear, and that was when he was alone. Many times he had been in fearful situations in the face of charging lions and elephants, and once he had been bowled over and carried some distance by a lion, but on none of these occasions had fear demoralized him. There was no question of his general pluck. But on one occasion he was lost in rocky waterless country in Somaliland. He strayed out in the early morning while his camels were being loaded, followed some antelope too far, and lost his bearings. He looked up expecting to see the sun on his right hand and found it on his left. He became bewildered. He wandered some time and then fired three signal shots and got no reply. Then losing his head he began shouting. He had only four or five more cartridges and no water-bottle. His men were accustomed to his going on alone, and might not begin to remark upon his absence until sundown. . . . It chanced, however, that one of the shikari noted the water-bottle he had left behind and organized a hunt for him.

Long before they found him he had passed to an extremity of terror. The world had become hideous and threatening, the sun was a pitiless glare, each rocky ridge he clambered became more dreadful than the last, each new valley into which he looked more hateful and desolate, the cramped thorn bushes threatened him gauntly, the rocks had a sinister lustre, and in every blue shadow about him the night and death lurked and waited. There was no hurry for them, presently they would spread out again and join and submerge him, presently in the confederated darkness he could be stalked and seized and slain. Yes, this he admitted was real fear. He had cracked his voice, yelling as a child yells. And then he had become afraid of his own

voice. . . .

"Now this excess of fear in isolation, this comfort in a crowd, in support and in a refuge, even when support or refuge is quite illusory, is just exactly what one would expect of fear if one believed it to be an instinct which has become a misfit. In the case of the soldier fear is so much a misfit that instead of saving him for the most part it destroys him. Raw soldiers under fire bunch together and armies fight in masses, men are mowed down in swathes, because only so is the courage of the common men sustained, only so can they be brave, albeit spread out and handling their weapons as men of unqualified daring would handle them they would be infinitely safer and more effective. . . .

"And all of us, it may be, are restrained by this misfit fear from a thousand bold successful gestures of mind and body, we are held back from the attainment of mighty securities in pitiful temporary shelters that are perhaps in the end no better than traps. . . ."

From such considerations Benham went on to speculate how far the crowd can be replaced in a man's imagination, how far some substitute for that social backing can be made to serve the same purpose in neutralizing fear. He wrote with the calm of a man who weighs the probabilities of a riddle, and with the zeal of a man lost to every material consideration. His writing, it seemed to White, had something of the enthusiastic whiteness of his face, the enthusiastic brightness of his eyes. We can no more banish fear from our being at present than we can carve out the fleshy pillars of the heart or the pineal gland in the brain. It is deep in our inheritance. As deep as hunger. And just as we have to satisfy hunger in order that it should leave us free, so we have to satisfy the unconquerable importunity of fear. We have to reassure our faltering instincts. There must be something to take the place of lair and familiars, something not ourselves but general, that we must carry with us into the lonely places. For it is true that man

has now not only to learn to fight in open order instead of in a phalanx, but he has to think and plan and act in open order, to live in open order. . . .

Then with one of his abrupt transitions Benham had written, "This brings me to God."

"The devil it does!" said White, roused to a keener attention.

"By no feat of intention can we achieve courage in loneliness so long as we feel indeed alone. An isolated man, an egoist, an Epicurean man, will always fail himself in the solitary place. There must be something more with us to sustain us against this vast universe than the spark of life that began yesterday and must be extinguished to-morrow. There can be no courage beyond social courage, the sustaining confidence of the herd, until there is in us the sense of God. But God is a word that covers a multitude of meanings. When I was a boy I was a passionate atheist, I defied God, and so far as God is the mere sanction of social traditions and pressures, a mere dressing up of the crowd's will in canonicals, I do still deny him and repudiate him. That God I heard of first from my nursemaid, and in very truth he is the proper God of all the nursemaids of mankind. But there is another God than that God of obedience, God the immortal adventurer in me, God who calls men from home and country, God scourged and crowned with thorns, who rose in a nail-pierced body out of death and came not to bring peace but a sword."

With something bordering upon intellectual consternation, White, who was a decent self-respecting sceptic, read these last clamberings of Benham's spirit. They were written in pencil; they were unfinished when he died.

(Surely the man was not a Christian!)

"You may be heedless of death and suffering because you think you cannot suffer and die, or you may be heedless of death and pain because you have identified your life with the honour of mankind and the insatiable adventurousness of man's imagination, so that the possible death is negligible and the possible achievement altogether outweighs it." . . .

White shook his head over these pencilled fragments.

He was a member of the Rationalist Press Association, and he had always taken it for granted that Benham was an orthodox unbeliever. But this was hopelessly unsound, heresy, perilous stuff; almost, it seemed to him, a posthumous betrayal. . . .

11

One night when he was in India the spirit of adventure came upon Benham. He had gone with Kepple, of the forestry department, into the jungle country in the hills above the Tapti. He had been very anxious to see something of that aspect of Indian life, and he had snatched at the chance Kepple had given him. But they had scarcely started before the expedition was brought to an end by an accident, Kepple was thrown by a pony and his ankle broken. He and Benham bandaged it as well as they could, and a litter was sent for, and meanwhile they had to wait in the camp that was to have been the centre of their jungle raids. The second day of this waiting was worse for Kepple than the first, and he suffered much from the pressure of this amateurish bandaging. In the evening Benham got cool water from the well and rearranged things better; the two men dined and smoked under their thatched roof beneath the big banyan, and then Kepple, tired out by his day of pain, was carried to his tent. Presently he fell asleep and Benham was left to himself.

Now that the heat was over he found himself quite indisposed to sleep. He felt full of life and anxious for happenings.

He went back and sat down upon the iron bedstead beneath the banyan, that Kepple had lain upon through the day, and he watched the soft immensity of the Indian night swallow up the last lingering colours of the world. It left the outlines, it obliterated nothing, but it stripped off the superficial reality of things. The moon was full and high overhead, and the light had not so much gone as changed from definition and the blazing glitter and reflections of solidity to a translucent and unsubstantial clearness. The jungle that bordered the little encampment north, south, and west seemed to have crept a little nearer, enriched itself with blackness, taken to itself voices.

(Surely it had been silent during the day.)

A warm, faintly-scented breeze just stirred the dead grass and the leaves. In the day the air had been still.

Immediately after the sunset there had been a great crying of peacocks in the distance, but that was over now; the crickets, however, were still noisy, and a persistent sound had become predominant, an industrious unmistakable sound, a sound that took his mind back to England, in midsummer. It was like a watchman's rattle--a nightjar!

So there were nightjars here in India, too! One might have expected something less familiar. And then came another cry from far away over the heat-stripped tree-tops, a less familiar cry. It was repeated. Was that perhaps some craving leopard, a tiger cat, a panther?--

"HUNT, HUNT"; that might be a deer.

Then suddenly an angry chattering came from the dark trees quite close at hand. A monkey? . . .

These great, scarce visible, sweeping movements through the air were bats. . . .

Of course, the day jungle is the jungle asleep. This was its waking hour. Now the deer were arising from their forms, the bears creeping out of their dens amidst the rocks and blundering down the gullies, the tigers and panthers and jungle cats stalking noiselessly from their lairs in the grass. Countless creatures that had hidden from the heat and pitiless exposure of the day stood now awake and alertly intent upon their purposes, grazed or sought water, flitting delicately through the moonlight and shadows. The jungle was awakening. Again Benham heard that sound like the belling of a stag. . . .

This was the real life of the jungle, this night life, into which man did not go. Here he was on the verge of a world that for all the stuffed trophies of the sportsman and the specimens of the naturalist is still almost as unknown as if it was upon another planet. What intruders men are, what foreigners in the life of this ancient system!

He looked over his shoulder, and there were the two little tents, one that sheltered Kepple and one that awaited him, and beyond, in an irregular line, glowed the ruddy smoky fires of the men. One or two turbaned figures still flitted about, and there was a voice--low, monotonous--it must have been telling a tale. Further, sighing and stirring ever and again, were tethered beasts, and then a great pale space of moonlight and the clumsy outlines of the village well. The clustering village itself slept in darkness beyond the mango trees, and still remoter the black encircling jungle closed in. One might have fancied this was the encampment of newly-come invaders,

were it not for the larger villages that are overgrown with thickets and altogether swallowed up again in the wilderness, and for the deserted temples that are found rent asunder by the roots of trees and the ancient embankments that hold water only for the drinking of the sambur deer. . . .

Benham turned his face to the dim jungle again. . . .

He had come far out of his way to visit this strange world of the ancient life, that now recedes and dwindles before our new civilization, that seems fated to shrivel up and pass altogether before the dry advance of physical science and material organization. He was full of unsatisfied curiosities about its fierce hungers and passions, its fears and cruelties, its instincts and its well-nigh incommunicable and yet most precious understandings. He had long ceased to believe that the wild beast is wholly evil, and safety and plenty the ultimate good for men. . . .

Perhaps he would never get nearer to this mysterious jungle life than he was now.

It was intolerably tantalizing that it should be so close at hand and so inaccessible. . . .

As Benham sat brooding over his disappointment the moon, swimming on through the still circle of the hours, passed slowly over him. The lights and shadows about him changed by imperceptible gradations and a long pale alley where the native cart track drove into the forest, opened slowly out of the darkness, slowly broadened, slowly lengthened. It opened out to him with a quality of invitation. . . .

There was the jungle before him. Was it after all so inaccessible?

"Come!" the road said to him.

Benham rose and walked out a few paces into the moonlight and stood motionless.

Was he afraid?

Even now some hungry watchful monster might lurk in yonder shadows, watching with infinite still patience. Kepple had told him how they would sit still for hours--staring unblinkingly as cats stare at a fire--and then crouch to advance. Beneath the shrill overtone of the nightjars, what noiseless grey shapes, what deep breathings and cracklings and creepings might there not be? . . .

Was he afraid?

That question determined him to go.

He hesitated whether he should take a gun. A stick? A gun, he knew, was a dangerous thing to an inexperienced man. No! He would go now, even as he was with empty hands. At least he would go as far as the end of that band of moonlight. If for no other reason than because he was afraid. NOW!

For a moment it seemed to him as though his feet were too heavy to lift and then, hands in pockets, khaki-clad, an almost invisible figure, he strolled towards the cart-track.

Come to that, he halted for a moment to regard the distant fires of the men. No one would miss him. They would think he was in his tent. He faced the stirring quiet ahead. The cart-track was a rutted path of soft, warm sand, on which he went almost noiselessly. A bird squabbled for an instant in a thicket. A great white owl floated like a flake of moonlight across the track and vanished without a sound among the trees.

Along the moonlit path went Benham, and when he passed near trees

his footsteps became noisy with the rustle and crash of dead leaves. The jungle was full of moonlight; twigs, branches, creepers, grass-clumps came out acutely vivid. The trees and bushes stood in pools of darkness, and beyond were pale stretches of misty moonshine and big rocks shining with an unearthly lustre. Things seemed to be clear and yet uncertain. It was as if they dissolved or retired a little and then returned to solidity.

A sudden chattering broke out overhead, and black across the great stars soared a flying squirrel and caught a twig, and ran for shelter. A second hesitated in a tree-top and pursued. They chased each other and vanished abruptly. He forgot his sense of insecurity in the interest of these active little silhouettes. And he noted how much bigger and more wonderful the stars can look when one sees them through interlacing branches.

Ahead was darkness; but not so dark when he came to it that the track was invisible. He was at the limit of his intention, but now he saw that that had been a childish project. He would go on, he would walk right into the jungle. His first disinclination was conquered, and the soft intoxication of the subtropical moonshine was in his blood. . . . But he wished he could walk as a spirit walks, without this noise of leaves. . . .

Yes, this was very wonderful and beautiful, and there must always be jungles for men to walk in. Always there must be jungles. . . .

Some small beast snarled and bolted from under his feet. He stopped sharply. He had come into a darkness under great boughs, and now he stood still as the little creature scuttled away. Beyond the track emerged into a dazzling whiteness. . . .

In the stillness he could hear the deer belling again in the distance, and then came a fuss of monkeys in a group of trees near at hand. He remained still until this had died away into

mutterings.

Then on the verge of movement he was startled by a ripe mango that slipped from its stalk and fell out of the tree and struck his hand. It took a little time to understand that, and then he laughed, and his muscles relaxed, and he went on again.

A thorn caught at him and he disentangled himself.

He crossed the open space, and the moon was like a great shield of light spread out above him. All the world seemed swimming in its radiance. The stars were like lamps in a mist of silvery blue.

The track led him on across white open spaces of shrivelled grass and sand, amidst trees where shadows made black patternings upon the silver, and then it plunged into obscurities. For a time it lifted, and then on one hand the bush fell away, and he saw across a vast moonlit valley wide undulations of open cultivation, belts of jungle, copses, and a great lake as black as ebony. For a time the path ran thus open, and then the jungle closed in again and there were more thickets, more levels of grass, and in one place far overhead among the branches he heard and stood for a time perplexed at a vast deep humming of bees. . . .

Presently a black monster with a hunched back went across his path heedless of him and making a great noise in the leaves. He stood quite still until it had gone. He could not tell whether it was a boar or hyaena; most probably, he thought, a boar because of the heaviness of its rush.

The path dropped downhill for a time, crossed a ravine, ascended. He passed a great leafless tree on which there were white flowers. On the ground also, in the darkness under the tree, there were these flowers; they were dropping noiselessly, and since they were visible in the shadows, it seemed to him that they must be phosphorescent.

And they emitted a sweetish scent that lay heavily athwart the path. Presently he passed another such tree. Then he became aware of a tumult ahead of him, a smashing of leaves, a snorting and slobbering, grunting and sucking, a whole series of bestial sounds. He halted for a little while, and then drew nearer, picking his steps to avoid too great a noise. Here were more of those white-blossomed trees, and beneath, in the darkness, something very black and big was going to and fro, eating greedily. Then he found that there were two and then more of these black things, three or four of them.

Curiosity made Benham draw nearer, very softly.

Presently one showed in a patch of moonlight, startlingly big, a huge, black hairy monster with a long white nose on a grotesque face, and he was stuffing armfuls of white blossom into his mouth with his curved fore claws. He took not the slightest notice of the still man, who stood perhaps twenty yards away from him. He was too blind and careless. He snorted and smacked his slobbering lips, and plunged into the shadows again. Benham heard him root among the leaves and grunt appreciatively. The air was heavy with the reek of the crushed flowers.

For some time Benham remained listening to and peering at these preoccupied gluttons. At last he shrugged his shoulders, and left them and went on his way. For a long time he could hear them, then just as he was on the verge of forgetting them altogether, some dispute arose among them, and there began a vast uproar, squeals, protests, comments, one voice ridiculously replete and authoritative, ridiculously suggestive of a drunken judge with his mouth full, and a shrill voice of grievance high above the others. . . .

The uproar of the bears died away at last, almost abruptly, and left the jungle to the incessant night-jars. . . .

For what end was this life of the jungle?

All Benham's senses were alert to the sounds and appearances about him, and at the same time his mind was busy with the perplexities of that riddle. Was the jungle just an aimless pool of life that man must drain and clear away? Or is it to have a use in the greater life of our race that now begins? Will man value the jungle as he values the precipice, for the sake of his manhood? Will he preserve it?

Man must keep hard, man must also keep fierce. Will the jungle keep him fierce?

For life, thought Benham, there must be insecurity. . . .

He had missed the track. . . .

He was now in a second ravine. He was going downward, walking on silvery sand amidst great boulders, and now there was a new sound in the air--. It was the croaking of frogs. Ahead was a solitary gleam. He was approaching a jungle pool. . . .

Suddenly the stillness was alive, in a panic uproar. "HONK!" cried a great voice, and "HONK!" There was a clatter of hoofs, a wild rush--a rush as it seemed towards him. Was he being charged? He backed against a rock. A great pale shape leaped by him, an antlered shape. It was a herd of big deer bolting suddenly out of the stillness. He heard the swish and smash of their retreat grow distant, disperse. He remained standing with his back to the rock.

Slowly the strophe and antistrophe of frogs and goat-suckers resumed possession of his consciousness. But now some primitive instinct perhaps or some subconscious intimation of danger made him meticulously noiseless.

He went on down a winding sound-deadening path of sand towards the drinking-place. He came to a wide white place that was almost level, and beyond it under clustering pale-stemmed trees shone the mirror surface of some ancient tank, and, sharp and black, a dog-like beast sat on its tail in the midst of this space, started convulsively and went slinking into the undergrowth. Benham paused for a moment and then walked out softly into the light, and, behold! as if it were to meet him, came a monster, a vast dark shape drawing itself lengthily out of the blackness, and stopped with a start as if it had been instantly changed to stone.

It had stopped with one paw advanced. Its striped mask was light and dark grey in the moonlight, grey but faintly tinged with ruddiness; its mouth was a little open, its fangs and a pendant of viscous saliva shone vivid. Its great round-pupilled eyes regarded him stedfastly. At last the nightmare of Benham's childhood had come true, and he was face to face with a tiger, uncaged, uncontrolled.

For some moments neither moved, neither the beast nor the man. They stood face to face, each perhaps with an equal astonishment, motionless and soundless, in that mad Indian moonlight that makes all things like a dream.

Benham stood quite motionless, and body and mind had halted together. That confrontation had an interminableness that had nothing to do with the actual passage of time. Then some trickle of his previous thoughts stirred in the frozen quiet of his mind.

He spoke hoarsely. "I am Man," he said, and lifted a hand as he spoke. "The Thought of the world."

His heart leapt within him as the tiger moved. But the great beast went sideways, gardant, only that its head was low, three noiseless instantaneous strides it made, and stood again watching him.

"Man," he said, in a voice that had no sound, and took a step forward.

"Wough!" With two bounds the monster had become a great grey streak that crackled and rustled in the shadows of the trees. And then it had vanished, become invisible and inaudible with a kind of instantaneousness.

For some seconds or some minutes Benham stood rigid, fearlessly expectant, and then far away up the ravine he heard the deer repeat their cry of alarm, and understood with a new wisdom that the tiger had passed among them and was gone. . . .

He walked on towards the deserted tank and now he was talking aloud.

"I understand the jungle. I understand. . . . If a few men die here, what matter? There are worse deaths than being killed. . . .

"What is this fool's trap of security?

"Every time in my life that I have fled from security I have fled from death. . . .

"Let men stew in their cities if they will. It is in the lonely places, in jungles and mountains, in snows and fires, in the still observatories and the silent laboratories, in those secret and dangerous places where life probes into life, it is there that the masters of the world, the lords of the beast, the rebel sons of Fate come to their own. . . .

"You sleeping away there in the cities! Do you know what it means for you that I am here to-night?

"Do you know what it means to you?

"I am just one--just the precursor.

"Presently, if you will not budge, those hot cities must be burnt about you. You must come out of them. . . ."

He wandered now uttering his thoughts as they came to him, and he saw no more living creatures because they fled and hid before the sound of his voice. He wandered until the moon, larger now and yellow tinged, was low between the black bars of the tree stems. And then it sank very suddenly behind a hilly spur and the light failed swiftly.

He stumbled and went with difficulty. He could go no further among these rocks and ravines, and he sat down at the foot of a tree to wait for day.

He sat very still indeed.

A great stillness came over the world, a velvet silence that wrapped about him, as the velvet shadows wrapped about him. The corncrakes had ceased, all the sounds and stir of animal life had died away, the breeze had fallen. A drowsing comfort took possession of him. He grew more placid and more placid still. He was enormously content to find that fear had fled before him and was gone. He drifted into that state of mind when one thinks without ideas, when one's mind is like a starless sky, serene and empty.

12

Some hours later Benham found that the trees and rocks were growing visible again, and he saw a very bright star that he knew must be

Lucifer rising amidst the black branches. He was sitting upon a rock at the foot of a slender-stemmed leafless tree. He had been asleep, and it was daybreak. Everything was coldly clear and colourless.

He must have slept soundly.

He heard a cock crow, and another answer--jungle fowl these must be, because there could be no village within earshot--and then far away and bringing back memories of terraced houses and ripe walled gardens, was the scream of peacocks. And some invisible bird was making a hollow beating sound among the trees near at hand. TUNK. . . . TUNK, and out of the dry grass came a twittering.
